***20:*** The psionicist can't stop the power; he maintains it until he runs out of PSPs.

| **Lend Health** | |
|---|---|
| Power Score: | Con -1 |
| Initial Cost: | 4 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | none |

Lend health is a power of healing. The psionicist who makes a succesful power check can transfer his own hit points to someone else he is touching. Each hit point transferred heals one point of damage. The character can transfer as many points as he wants to in a single round. If the psionicist tries to transfer hit points when he has fewer than five remaining, he must make another power check. If this fails, he cannot transfer the points. In any case, he cannot transfer hit points if he has only one remaining. The beneficiary of this power can never exceed his normal, healthy total of hit points.
***Power Score:*** Every point drained from the psionicist heals two hit points in the beneficiary.
***20:*** The psionicist suffers all the wounds which his target currently has. No one is healed.

| **Mind Over Body** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | na |
| Maintenance Cost: | IO/day |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | none |

Mind over body allows the user to suppress his body's need for food, water, and sleep. In exchange for one hour of meditation per day, all of the psionicists physical needs are over- come. He does not feel hunger, exhaustion, or thirst, nor does he suffer any ability reductions for privation. The psionicist can also suppress the basic needs of others while suppressing his own. To do so, he must pay an additional 10 PSPs per person and spend an additional hour of meditation per person. Each person being aided must be in physical contact with the psionicist throughout the entire period of meditation. Usually, all the characters hold hands, forming a continuous line or circle. The psionicist can survive in this fashion for a number of days equal to his experience level, or five days, whichever is more. At the end of that time, he collapses from exhaustion. He must then rest one day for every two days spent sublimating his body's needs. Or he can be restored through 24 hours of complete healing. These rules also apply to any characters the psionicist has aided.
***Power Score:*** The psionicist need not rest after using this power.

***20:*** The power fails, but the psionicist collapses with exhaustion and must rest for 24 hours.

| **Reduction** | |
|---|---|
| Power Score: | Con -2 |

| Maintenance Cost: | I/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

This power is the reverse of expansion. The psionicist can reduce his body's dimensions along any or all axes: height, length, width, or thickness. The change amounts to I foot per PSP spent, until the dimension being affected is I foot or less. After that, the psionicist can halve his dimensions each time he spends a PSP. For example, lets assume Magnilda (a dual-class psionicist and warrior maiden) stands 6 feet tall. Five strength points reduce her height to I foot. Three more strength points halve her size three times: to 6 inches, then 3 inches, and finally to 1.5 inches. Now let's assume Magnilda only wants to make her arm thin enough to slide through a keyhole. At its thickest point, her arm measures 4 inches across. Three strength points will reduce the thickness of her arm to ^2 inch (from 4 to 2, then to I, then to V2) without altering its length at all. She can now slide her arm through the keyhole and unlock the door from the inside.

***Power Score:*** Each PSP spent results in twice the described effect (if desired).

***20:*** The psionicist doubles in size, and stays this big for an hour or until he uses this power again successfully.

| **Share Strength** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 6 |
| Maintenance Cost: | 2/round |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | none |

The psionicist can effectively lend his physical Strength to another character. The psionicist sacrifices two of his own Strength points (ability points, not PSPs) for every single point the recipient gains. This transfer remains in effect until the psionicist stops paying the devotion's maintenance cost; then all points return in one round. If the recipient is killed before the psionicist gets his Strength points back, the psionicist's Strength score is permanently reduced. If the psionicist's die roll is a I, he must expend three points for each point his pal gains, instead of two for one.

***Power Score:*** The point transfer is 1:1.

***20:*** The psionicist loses one Strength point for a day. If he fails a save vs. paralyzation, the loss is permanent.

| **Suspend Animation** |
|---|

| | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 12 |
| Maintenance Cost: | na |
| Range: | O/touch |
| Preparation Time: | 5 |
| Area of Effect: | individual |
| Prerequisites: | none |

With this power a psionicist can "play dead"-bringing all life functions to a virtual halt. Only the most careful examination will show that the character is still alive. Even psi-onic powers such as life detection and ESP will not turn up any evidence of life unless those powers are maintained for at least three minutes. Use of the probe power will detect life immediately. The psionicist can remain in suspended animation for a number of weeks equal to the results of his power check-or less. When he wishes to put himself to sleep, he first decides when he wants to wake. Then he makes his power check. If the number rolled is less than the time he hoped to be "suspended," he awakens prematurely. Another willing character can also be suspended for the same PSP cost (not at the same time as the psionicist, however). This has a preparation time of one hour and a range of touch.

***Power Score:*** The psionicist remains aware of his surroundings and can wake at any time he chooses.
***20:*** The psionicist falls unconscious and only violent slapping can revive him.

# Psychoportive Sciences

| Banishment | |
|---|---|
| Power Score: | Int -1 |
| Initial Cost: | 30 |
| Maintenance Cost: | 10/round |
| Range: | 5 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | teleport |

With this power, the psionicist can teleport a creature against its will to a pocket dimension and hold it there. The creature being banished must be extremely close-within 5 yards. The pocket dimension is a featureless area with a benign environment-it may be ' hot or cold, dark or light, but not so much that it will cause injury. Banishment has a boomerang feature. If the psionicist fails to pay the maintenance cost, the banished creature automatically returns to its original location. The creature cannot reappear in a location that now contains other matter, however (e.g., to a doorway that has been closed, or to a spot that now has a sharp stakes upon it). If this happens, the creature returns to the nearest open space. In other words, psionicists cannot rely on the boomerang feature to kill or harm a creature. As long as the psionicist pays the maintenance cost, the creature will not automatically return. If the creature has access to the astral or ethereal planes, or it can teleport between planes, it could try to return that way. If the banisher is still maintaining the power, however, a psychic contest takes place. If the banisher wins, the victim is prevented from returning.

***Power Score:*** The banished figure cannot return of its own accord; it must wait until it is allowed to return.

***20:*** Both the intended victim and the psionicist are banished to the same place. The other figure bounces back when the psionicist stops paying the maintenance cost, but the psionicist himself must return via some other method: teleportation, probability travel, etc.

| Probability Travel | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 20 |
| Maintenance Cost: | 8/hour |
| Range: | unlimited |
| Preparation Time: | 2 |
| Area of Effect: | individual + |
| Prerequisites: | none |

With probability travel, a psionicist can traverse the astral plane physically as if he's in astral form. This power has a distinct advantage over magical astral travel. When a wizard uses the astral spell, he forms an astral body, which remains connected to his material body by a silvery cord. In contrast, a psionicist using probability travel never leaves his physical form; he brings it along. He has no cord, so, unlike the wizard, he can never die because his cord has been severed. (On the other hand, he can still be blown to

bits.) The astral plane boasts nothing that would attract tourists, but its two-dimensional color pools serve as highways to the outer planes. These pools, scattered randomly throughout the astral plane, provide connections to all surface layers of the outer planes. Travel through the astral plane is speedy: 10 yards per minute per Intelligence point. However, distance on the astral plane does not equate to distance on other planes. After ld6+6 hours of travel, the traveler reaches the color pool he sought. There is a flat 75% chance that this pool leads to the exact destination the character wants. Otherwise, it is at least 10 miles off target-maybe more. The psionicist can take other persons (as defined by the charm person spell) along on his probability trip. Each passenger costs 12 extra PSPs initially, plus 4 extra PSPs per hour, and adds one-half hour to the time needed to find the correct color pool. Passengers must travel voluntarily; this power cannot drag a character into the astral plane against his will. Combat on the astral plane is unusual. The traveler's physical body cannot affect astral bodies in any way. However, psionic powers do work against the minds of astral travelers. Most magical items do not work in the astral plane. Magical items which are keyed to a particular plane do function there, often with enhanced effect. If the psionicist simply turns off this power while in the astral plane, he doesn't leave. Instead, he's stranded, unable to move except by physically pushing off of solid objects (which are extremely rare in the astral plane). He's also stranded if he runs out of PSPs or is knocked unconscious on the astral plane. The only exit from this plane is a color pool. If you'd like to learn more about traveling on the astral plane, see the new PLANESCAPE" accessory.

***Power Score:*** The color pool is right where the character wants it to be.

***20:*** The character attracts the attention of an astral creature, which may or may not be hostile, at the DMs discretion.

| **Summon Planar Creature** | |
|---|---|
| Power Score: | Int -4 |
| Initial Cost: | 45/90 |
| Maintenance Cost: | na |
| Range: | 200 yards |
| Preparation Time: | 12 |
| Area of Effect: | one creature |
| Prerequisites: | teleport |

This science allows the psionicist to reach into another plane, grab whatever creature he happens to find there, and teleport it to his own plane. The victim will be disoriented for one round after arriving; as a result, he suffers a two-point penalty on die rolls for initiative, attacks, and saving throws. A magical summons offers some control over a planar creature, and usually returns that creature to its home automatically. This psionic power does neither; it merely teleports something. To be rid of the creature, the psionicist must banish it, teleport it again, kill it, or control it somehow. If the creature is intelligent, the psionicist might reason with it. However, the creature is almost certain to fly into a murderous rage when it discovers its plight. The psionicist can make the summoned creature materialize anywhere within 200 yards of his present position. This is a tremendous advantage, since the creature, at least initially, has no idea who summoned it. Its anger is likely to be vented against the first target it finds. However, if the psionicist's power check result was a 2, this range is reduced to 50 yards. If the result was a I, the creature pops in within 10 yards. Obviously, some risk is involved. The psionicist chooses the plane from which the creature will come. He does not choose the creature, however; that's determined at random. A creature from one of the elemental planes usually will be an elemental of the appropriate type. A creature

from an outer plane probably will be a native of that particular plane, but it could also be a visitor, or even an adventurer who happened to be in the wrong place at the right time. In contrast, the astral or ethereal planes are a cornucopia of creatures, frequented by beings of every imaginable description. In any event, the DM decides which creature is summoned, drawing from the monsters for which he has game statistics. This book describes some extraplanar creatures. Many more are covered in the Manual of the Planes and various MONSTROUS COMPENDIUMR Volumes, especially the appendix featuring outer planar creatures. It costs 45 PSPs to summon a creature from the astral or ethereal plane. If the psionicist is dipping into an inner or outer plane, the cost soars to 90 PSPs.
***Power Score:*** The creature summoned enjoys this sort of thing and won't be angry with the psionicist.
***20:*** The psionicist attracts the attention of a powerful, extraplanar creature without summoning it.

| **Teleport** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 10+ |
| Maintenance Cost: | na |
| Range: | infinite |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

Teleport is the essential power within this discipline. It allows the psionicist to teleport to a familiar spot. The destination must be a place that the character knows and can picture mentally-even if he's never actually been there. For example, a psionicist may still know a location that he has seen through a crystal ball, via a sight link, or even by scanning someone elses mind for the information. The psionicist can still teleport to a place even if it has somehow changed from the way he pictures it. For example, if a room has been rearranged, or is currently on fire, such changes won't affect the teleport. Teleports always take characters to a fixed location. For example, if a character tries to teleport into a gypsy wagon which is on the move, he'll arrive at the wagon's location when he last knew it. The wagon itself may be miles away by then. Also, if the character was picturing the wagon's interior, he will teleport to the space corresponding to the wagon's interior-which is several feet off the ground! Because the wagon itself has moved, the tele-porter will fall when he arrives. (Imagine tele-porting to a room on the fifth floor of a tower, only to discover the tower has been razed by marauders since your last visit.) Teleportation is instantaneous. The tele-porting character simply ceases to exist in his previous location and springs into being at the destination. There is a slight, audible "pop" at both ends, as air rushes into the sudden vac-uum or is instantly displaced. Restraints do not affect teleportation. A character who is tied up, shackled to a wall, or buried up to his neck can still teleport. The restraints remain behind. Clothing, on the other hand, does accompany a character who teleports. He may also carry small items in his grasp or wear equipment (e.g., armor) on his person, not exceeding one-fifth of his own body mass. If he doubles the amount of PSPs expended, he can carry up to three times his body mass, or take along one or two other characters on whom he has a firm grasp. A character can teleport any distance, but as the distance increases, so does the chance of failure and the cost in PSPs. Ranges, point costs, and power score modifiers are shown below. If the teleportation die roll is a 1 or 2, the character and anyone else with him are momentarily disoriented by the jump. They can do nothing during the round which immediately follows the teleport. After that, they suffer a 2-point penalty to the following for ld6 rounds: initiative die rolls, psionic power checks, and attack rolls.

| Distance | Initial Cost | Power Score Modifier |
|---|---|---|
| 10 yards | 10 | +1 |
| 100 yards | 20 | 0 |
| 1,000 yards | 30 | -1 |
| 10 miles | 40 | -2 |
| 100 miles | 50 | -3 |
| 1,000 miles | 60 | -4 |
| 10,000 miles | 70 | -5 |
| planet to planet* | 100 | -6 |

* Players with the SPELLJAMMERR boxed set should note that interplanetary teleports are possible only within the same crystal sphere. It is impossible to teleport between crystal spheres or different planes of existence.

***Power Score:*** The PSP cost is reduced by 20 percent, rounded up.

***20:*** No effect.

| **Teleport Other** | |
|---|---|
| Power Score: | Int -2 |
| Initial Cost: | 10+ |
| Maintenance Cost: | na |
| Range: | 10 yards |
| Preparation Time: | 0 |
| Area of Effect: | na |
| Prerequisites: | teleport |

This power is identical to the one listed directly above, except it is used to teleport other characters. The psionicist stays where he is while someone else is teleported. The character must be willing to be teleported, or unconscious. PSP costs and power score modifications are the same as for teleporta-tion. (In other words, cost and difficulty increase with distance.) If the psionicist pays twice the usual PSP cost, he can teleport up to three characters, provided they are firmly grasping one another.

***Power Score:*** The PSP cost is reduced by 20 percent, rounded up.

***20:*** All would-be teleporters are seriously disoriented. They cannot cast spells and suffer a -4 penalty on all die rolls for ld4 turns.

## Psychoportive Devotions

| **Astral Projection** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 6 |
| Maintenance Cost: | 2/hour |
| Range: | na |

| | |
|---|---|
| Preparation Time: | 1 |
| Area of Effect: | personal |
| Prerequisites: | none |

Astral projection is similar to probability travel, except the traveler is not accompanied by his physical body. Instead, an astral body is created. This astral body immediately leaps into the astral plane. Only creatures or characters who are also on the astral plane can see it. A silvery cord connects the astral body to the physical body. Nearly all astral travelers have such a cord. It is visible as a translucent string which stretches 10 feet from the astral body, and then becomes invisible and intangible. If the cord is severed, both bodies die (so does the character). The silvery cord is nearly indestructible, however. Usually it can be severed only by the psychic wind at its most powerful, or by the silver swords of the githyanki. Since the astral plane is a highway leading to other planes, a character who uses this power usually has another destination in mind-either a distant point on the prime material plane or an outerplanar locale. When the traveler reaches his destination, a temporary physical body is formed there. This body resembles the character's real body in every respect, and the two are still connected by the invisible, silvery cord. If either the astral body or the temporary physical body is killed, the cord returns to the real body. This second physical body is not formed if the character travels to another location on the same plane where his real physical body is located. He can view that plane in astral form, but cannot affect it or even enter it physically, nor can he direct magical or psi-onic powers into it. Magical items can be taken into the astral plane, but most lose their magical properties temporarily while in that plane. If you'd like more detail on astral travel and the astral plane, see the new PLANESCAPP" accessory for the AD&DR game.
***Power Score:*** The first color pool found is precisely where the psionicist wants it.
***20:*** The psionicist attracts the attention of a powerful creature in the astral plane.

| **Dimensional Door** | |
|---|---|
| Power Score: | Con -1 |
| Initial Cost: | 4 |
| Maintenance Cost: | 2/round |
| Range: | 50 yards+ |
| Preparation Time: | 0 |
| Area of Effect: | na |
| Prerequisites: | none |

Like teleportation, a dimensional door takes a character from one location to another. The similarity stops there, however. With dimensional door, the psionicist opens a man-sized portal which leads to the edge of another dimension. The edge acts as a lightning-quick transit system, carrying travelers to a destination chosen by the psionicist who uses this power. When the psionicist uses this devotion, he creates a door leading into the alternate dimension. The door is a vaguely outlined portal, which appears in front of the psionicist. At the same time, an identical portal appears wherever he wants it, within range (see below). The door can have whatever orientation the psionicist chooses. If someone (including the psionicist) steps into either portal, he immediately steps out of the other. Both doors remain in place for as long as the psionicist maintains the power. The dimension accessed by this power is not fully understood. Clearly, it has very different qualities of time and space, such that motion is greatly accelerated. For many years this transit was thought to be instantaneous, but arduous experiments by Larue d'jar Azif of Dhaztanar have proved that a very tiny bit of time does elapse. What this means is

still unknown. Travel via this power is disorienting. Presumably, exposure to the alternate dimension traumatizes the body in some way. As a result, a traveler is dazed and cannot attack or move for one round after stepping through a dimensional skip portal. Quick transit is advisable. People who shove only an arm through a portal suffer intense pain. Fools who poke their head through a portal must make a system shock roll; failure means they lose 50% of their current hit points and pass out. Inanimate objects are not affected by exposure to the dimension's edge. In fact, a character can throw or fire objects through a portal, and they'll come out on the other side. Attackers suffer a -4 penalty on their to-hit rolls against targets on the other side of the dimension's edge.

**Range:** The normal range of this power- i.e., the maximum distance between the two portals-is 50 yards. The distance can be extended only with severe reductions to the characters power score, as shown below. Increasing the range does not increase the PSP cost, however.

| Distance Between Doors | Power Score Modifier |
|---|---|
| 50 yards | 0 |
| 75 yards | -2 |
| 100 yards | -5 |
| 150 yards | -8 |
| 200 yards | -12 |

***Power Score:*** Transit does not cause disorientation.

***20:*** The psionicist is momentarily exposed to the transit dimension and is disoriented as if he had stepped through the portal.

| **Dimension Walk** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 8 |
| Maintenance Cost: | 4/turn |
| Range: | na |
| Preparation Time: | 2 |
| Area of Effect: | personal |
| Prerequisites: | none |

With dimension walk, a psionicist can travel from place to place in his own dimension by piercing other dimensions at right angles. This has two advantages over a dimensional door: 1) a dimension walk is not physically traumatizing and 2) the range of travel is greater. On the other hand, dimension walk only allows the psionicist himself to travel, and he can easily get lost. The dimension walker opens up a vaguely shimmering portal. Only the psionicist who opened the portal can enter it. As soon as he does, the portal closes behind him. He finds himself engulfed by an inky grayness that is virtually without features. The effect is one of extreme sensory deprivation. The psionicist can travel through this gray realm at a speed of 7 leagues (21 miles) per turn. He cannot see where he is or where he's going while in the realm. He has only his instinct to guide him, and must make a Wisdom check every turn. If these checks succeed, he'll find himself at his chosen destination when he steps out of the realm. If any single Wisdom check fails, however, the character will stray off course by several miles. When the walker steps

out of the gray realm, the DM can place him in any location, within the maximum distance from his starting point (e.g., if the psionicist walked for 10 rounds, he must be within 21 miles of his origin). It's up to the psionicist to figure out his location; this power doesn't help him gain his bearings. Aside from getting lost, dimension walking is completely safe. Apparently anything that lives in the other dimensions crossed cannot interact with dimensional travelers. (Larue d'jar Azif of Dhaztanar postulated that these other dimensions teem with life just as much as our own, but because the traveler is crossing them "against the grain", as it were, they do not register on his senses.) The character can bring along as much as he can carry, but *bags of holding* and other dimensional storage devices spill their contents immediately if taken into this space.

***Power Score:*** The psionicist receives a + 2 bonus when making his Wisdom checks.

***20:*** Overcome with vertigo, the character can do nothing but retch for three rounds.

| **Dream Travel** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 1/25 miles |
| Maintenance Cost: | na |
| Range: | 500 miles |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

Dream travel is a powerful but unreliable means of getting from here to there. The traveler journeys in his dreams, and awakes wherever his nocturnal wandering carried him. The psionicist can even take other characters with him, although its more difficult than traveling alone. (See "Passengers" below.) To use dream travel, the psionicist must be asleep. Once asleep, he begins fashioning a dream that involves traveling from his present location to his intended destination. At the beginning of the journey, the DM secretly makes a power check for the character. If the check succeeds, the psionicist will reach his destination. If the check fails, the character will fall short 10% for each point that the die roll exceeded the power score. If the DM wants, this power check is all that's required to handle dream travel during a game. However, it's far more satisfying to actually role-play the dream. The player creates the setting and describes his intentions, with the DM interrupting to change things arbitrarily and throw obstacles in the character's path. If the player overcomes the obstacles and solves problems inventively, the DM is justified in giving a bonus to the character's power check. If the dream is dull and lifeless, the DM can also penalize the power check. The DM should remember that this is a dream; terrain on the journey may not resemble actual terrain, the character may be completely different, and the world may be completely strange. The length of the dream journey should be approximately the same as the real distance, however, and the final destination should be at least similar to the real des- tination. Such dream adventures should minimize combat and maximize problems, puzzles, and surreal atmosphere. If combat does occur, it has no effect on the character physically, but if he is killed, he wakes up, right where he started. All dream journeys take approximately eight hours to complete, successful or not. Passengers: The psionicist can bring other characters along with him in the dream. His power score is reduced by one for each passenger he carries. Passengers must also be sleeping. A single power check launches everyone on the dream journey. If the check fails, they still attempt the dream journey but fall short of their target. The psionicist must pay the PSP cost of the trip individually for each character accompanying him in the dream. Intelligent animals can also be drawn into the dream, but normal animals (horses, dogs, falcons,

whatever) are very difficult to bring along. The psionicist must make a separate power check to draw in each animal and his power score is halved, rounded down, when making this check. When the dream travelers reach their destination, they awaken. In the place where they lay sleeping, their bodies and any equipment carried or worn fades away. At the same time, they fade into being at their new location, still in sleeping posture, but fully awake.
***Power Score:*** No additional effect.
***20:*** The dream is nightmarish. The psionicist must save vs. paralyzation or appear dead until violently struck.

| **Teleport Trigger** | |
|---|---|
| Power Score: | Int +1 |
| Initial Cost: | 0 |
| Maintenance Cost: | 2/hour |
| Range: | infinite |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | teleport |

A teleport trigger is a programmed event which causes the psionicist to instantly and reflexively teleport to a safe location. After making a successful power check, the psionicist must specify where he intends to go. He must also define very specifically what conditions will trigger the teleportation. These can be anything he wants, but the teleport will not be triggered unless he is aware that the conditions have been met. A volcanic eruption 500 miles away will not trigger teleportation unless the character has some way to know that the volcano is erupting. For example, here are three typical triggers: being reduced to 10 or fewer hit points, seeing a mind flayer, and being attacked by a magic missile spell. When such predetermined conditions are fulfilled, the character instantly tele-ports to the programmed location. When the teleport is triggered, the character must have enough PSPs remaining to teleport to that location, because he pays the cost just as if he were performing a normal teleport. (See "teleport.") He must also make a teleport power check, with penalties based on the distance traveled. If this power check fails, so does the programmed teleport. No PSPs are spent when the trigger is defined, but the character spends two points per hour from that time just to maintain the trigger. The trigger remains in effect until the character stops paying the maintenance cost.
***Power Score:*** The character can ignore power score penalties for distance.
***20:*** No other effect.

| **Time Shift** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 16 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | teleport |

Time shifting allows the psionicist to travel up to three rounds into the future and observe things until time catches up with him. He sees everything frozen around him just as it will be when that moment in the future actually arrives. The psionicist enters a different reality when he uses this power. No one in the "still life" that surrounds him can see or detect him in any way. He can move freely through the environment, putting himself wherever he wants to be when he returns to normal time. But he cannot affect anything around him, nor can anything affect him. Even two time-shifted characters are completely invisible to each other. To the people in real time, the character simply vanishes and then reappears sometime later. The character does not exist for any normal game purpose during the period when he is time shifted. If, for example, a fireball spell detonates in the room while the character is time shifted, the character is completely protected against its effects. In fact, unless the blast leaves visible effects (charred walls or corpses or sulfurous fumes), the character won't even know it happened. He sees none of the intervening events. This power cannot help a character escape contact, however. If someone has established contact or tangents (see Chapter 2) with the time shifter-and continues paying their maintenance cost-then the tangents or contact will still be in effect when the character returns to normal time. Time shifting offers an obvious advantage in combat. A psionicist can leap one round into the future and maneuver into position for an attack. In that case, the shifter receives a +4 bonus to his attack roll. With enough time, he could even escape. How long does a time shift last? If the psionicist travels one round forward, then he has one round in which to maneuver. If he travels two rounds forward, then it takes two rounds for reality to catch up. Three rounds is the limit. The farther (or longer) the trip, the more difficult it is to make, as shown in the table below.

| Time Shifted | Psionic Strength Cost | Power Score Modifier |
|---|---|---|
| 1 round | 3 | 0 |
| 2 rounds | 6 | -2 |
| 3 rounds | 12 | -6 |

***Power Score:*** No other effect.
***20:*** The psionicist is disoriented, and suffers a - 2 penalty on all die rolls for as many rounds as he intended to shift.

| **Time/Space Anchor** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 5 |
| Maintenance Cost: | 1/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 3 yards |
| Prerequisites: | none |

This power protects psionicists against unwanted teleportation. When a time/space anchor is in effect, the psionicist cannot be teleported against his will unless he loses a psychic contest. Anyone and anything else inside the 3-yard radius is also protected using the psionicists power score. Items are protected automatically, but living creatures or characters are protected only if the psionicist wants them to be.

Each additional creature protected costs another PSP per round. This power cannot prevent someone from teleporting himself away; it only prevents teleporting from an outside source.
***Power Score:*** The psionicist receives a + 2 bonus in any resulting psychic contests.
***20:*** The psionicist is rooted to the spot for 1d6 rounds. During that time his AC is penalized 5 points.

---

# Telepathic Sciences

| Domination | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | contact |
| Maintenance Cost: | varies |
| Range: | 30 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | mindlink, contact |

With domination, a psionicist can project signals from his own mind into the mind of one other person or creature. As a result, the subject is forced to do nearly anything the psionicist wishes. The dominated subject knows what is happening, but he cannot resist the psionicists will. Commands are given mentally and automatically. The victims abilities are neither diminished nor enhanced by this power. The subject can be forced to use any power or ability he normally can-assuming the psionicist knows about it. Domination does not reveal facts or secrets about a victim. As soon as domination is attempted, the victim makes a saving throw vs. spells. If this saving throw succeeds, the victim is not dominated. If it fails, the victim has fallen under the psionicists control. However, if the victim is later forced to do something completely abhorrent (against his alignment), he can make another saving throw to regain his free will. Domination can exact a high price in PSPs. The cost to establish and maintain this power equals twice the cost to contact the victim.

***Power Score:*** The maintenance cost is halved.

***20:*** The victim knows that someone attempted to dominate him.

| Ejection | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | varies |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

Ejection is the final defense against unwanted contact. If one psionicist has forced contact with another's mind, or has been granted contact and is now doing things he should not be, he can be ejected. The cost of ejection is twice the opponent's contact power score (even if contact was established through combat). Ejection is risky for the user. If the power check result is 8 or less, consult the table below to see what "side effects" the psionicist suffers.

1. Lose access to all sciences for 1d10 hours
2. Lose access to one discipline, selected by the DM, for 1d10 hours
3. Lose 1d10 +10 additional PSPs

4. Lose 1d10 additional PSPs
5. Lose 1 point of Constitution permanently
6. Lose 1d10 hit points
7. Sever only one portion of contact (one successful attack reestablishes it)
8. Sever only two portions of contact (two successful attacks reestablish it)

***Power Score:*** Roll 1d6 on the table above. The result applies to the ejected being.
***20:*** Ejection fails, but the psionicist still makes a d6 roll on the table above.

| **Fate Link** | |
|---|---|
| Power Score: | Con -5 |
| Initial Cost: | contact |
| Maintenance Cost: | 5/turn |
| Range: | 2 miles |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

This power enables the telepath to intertwine his own fate with that of another creature. If either being experiences pain, both feel it. When one loses hit points, both lose the same amount. If either dies, the other must immediately make a saving throw vs. death to avoid the same fate.
***Power Score:*** Range is unlimited.
***20:*** Social regression. The psionicist loses 1d6 points of Charisma for a day.

| **Mass Domination** | |
|---|---|
| Power Score: | Wis -6 |
| Initial Cost: | contact |
| Maintenance Cost: | varies |
| Range: | 40 yards |
| Preparation Time: | 2 |
| Area of Effect: | up to 5 creatures |
| Prerequisite: | mindlink, contact,domination |

This power is identical to domination except the psionicist can control up to five creatures simultaneously. Each one must be contacted and dominated individually. The maintenance cost-twice the victim's level or hit dice-must be paid for each dominated figure.
***Power Score:*** The range is extended to 100 yards.
***20:*** The intended targets are aware of the psionicist's efforts.

| **Mindlink** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | contact |
| Maintenance Cost: | 8/round |

| | |
|---|---|
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | contact |

Mindlink allows the user to communicate wordlessly with any intelligent creature he can contact (Intelligence 5 or greater on a human scale). This is two-way communication. It is not the same as mind-reading because the psionicist only receives thoughts which the other party wants to send. Language is not a barrier. Distance affects the telepath's ability to make contact, but it has no other effect (see "contact").

***Power Score:*** The mindlink allows one probing question (see probe).

***20:*** The psionicist must save vs. petrifica-tion or be stunned for 1d4 rounds.

| **Mindwipe** | |
|---|---|
| Power Score: | Int -6 |
| Initial Cost: | contact |
| Maintenance Cost: | 8/round |
| Range: | touch |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Mindwiping is a crude form of psychic surgery which affects the subjects IQ. (It's like a temporary lobotomy.) The telepath systematically seals off portions of the subject's mind, making whatever knowledge was contained there inaccessible. When a mindwipe is attempted, the victim saves vs. spells. If he succeeds, the mindwipe is thwarted for one round, but next round the psionicist can try again. Each round of mindwiping has two important, immediate effects. First, it reduces the victim's Intelligence and Wisdom scores by I point. Second, it reduces his experience level or hit dice by I point. These reductions have considerable impact. All characters may lose languages or proficiencies and their magical defense adjustment. Experience level and hit dice losses affect everything except hit points. The victim keeps all of his hit points regardless of what is wiped from his mind. Intelligence and Wisdom losses affect wizards and clerics as if those losses were permanent. Clerics lose bonus spells, their chance of spell failure rises, and eventually they cannot cast spells. Wizards suffer reductions in their maximum spell level, their chance to learn spells, and their maximum spells per level. When the number of available spells at a spell-level drops, a character must make an ability check before casting a spell of that level. Wizards roll an Intelligence check. Clerics roll a Wisdom check. Both use current scores. If the check succeeds, the character can cast the spell. If it fails, he has forgotten the spell and can't cast any spell that round. Mindwipe only seals off information; it doesn't erase it. All of a characters lost Wisdom, Intelligence, and experience levels can be restored through psychic surgery (q.v.). This power has no effect against creatures with neither stats nor hit dice.

***Power Score:*** No saving throw allowed.

***20:*** The power affects the psionicist instead of his intended victim.

| **Probe** |
|---|

| | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | contact |
| Maintenance Cost: | 9/round |
| Range: | 2 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | ESP, contact |

A probe is similar to ESP (a telepathic devotion), but a probe allows psionicists to dig much deeper into a subjects subconscious. If the subject fails a saving throw vs. spells, then all his memories and knowledge are accessible to the prober-from memories deep below the surface to those still fresh in the subject's mind. The information gained is not necessarily true, but it is true as far as the subject knows. The telepath can learn the answer to one question per round. DMs have some discretion in determining this rate. If the questions (or answers) become too complicated, each may take longer than one round to resolve. Telepaths can probe a subject who is conscious, as well as one who resists. A probe can even be carried out in the midst of melee, provided the telepath can get close enough. If a probed wizard or cleric tries casting a spell, the telepath knows both that a spell is being cast and what the general effects of that spell are.

***Power Score:*** Two questions may be asked per round.

***20:*** The subject knows about the probe attempt and is not pleased.

| **Psionic Blast** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | 20/40/60 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | none |

Psionic blast is a wave of brain force which can jolt a subject's mind like shocking news. This is one of the five telepathic attacks used to establish contact with another psionicist. (An illithids mind blast is not the same.) If this power is used against a mind that has already been contacted, the subject must save vs. death. Failure means he loses 80% of his remaining hit points, but only in his mind. The hit points are still there; he only thinks they're gone. He will pass out when the remaining 20% of his hit points are gone butwon't die unless all of them are actually lost. In any case, this effect wears off after six turns. At that time, an unconscious character awakens. This power has three ranges: short, medium, and long. At medium range, the psioni-cist's power score is reduced by two. At long range, it is reduced by five.

***Power Score:*** A victim who fails his save passes out for one turn.

***20:*** No other effect.

| **Superior Invisibility** | |
|---|---|
| Power Score: | Int -5 |
| Initial Cost: | contact |

| | |
|---|---|
| Maintenance Cost: | 5/round/creature |
| Range: | 100 yards |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | mindlink, contact invisibility |

Superior invisibility is like invisibility, but it masks the character completely. The psionicist makes no sound and has no smell, though he can still be felt if touched. If he attacks someone physically, he automatically breaks contact with that character.

***Power Score:*** Opponents affected by this power cannot detect the psionicist even if he touches or physically attacks them.

***20:*** Everyone contacted becomes aware of the psionicist and his desire to be invisible.

| **Switch Personality** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | contact +30 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 3 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Some psionicists can literally put themselves in another man's (or woman's) shoes. This science allows the psionicist to switch his own mind with someone elses. In effect, they exchange bodies. The other person's mind inhabits the psionicist's body, while the psioni-cist's mind inhabits his subject's body. The switch is permanent, and lasts until the psionicist uses this power to reverse it. Each character gains the other's physical attributes. However, both minds retain all their own knowledge and knowledge-based abilities. For example, a telepath who switches minds with a 10th level fighter gains a body with that fighter's hit points and physical attributes (Strength, Constitution, and Dexterity). However, he retains his own THACO, proficiencies, and so forth. The switch takes a turn to complete, and the process is quite traumatic. At the end of the turn, both characters must make system shock saving throws using their new Constitution scores. A character who fails this roll lapses into a coma for 1-100 hours. Bodies that have undergone a personality switch tend to degenerate. Both characters must make a Constitution ability check every day. If a check fails, the character loses one point of Constitution. If his Constitution drops to zero, he dies. This Constitution loss is temporary, but it does not reverse itself until the personalities are restored to their proper bodies. At that point, both bodies recover one point of Constitution per day. The psionicist does not lose his psionic powers if his Constitution drops below II. However, if a power score is based on Constitution-like this power's score is-the score drops accordingly.

***Power Score:*** System shock rolls automatically succeed, and the Constitution checks are made only once a week.

***20:*** The psionicist lapses into a coma for 1d100 hours.

| **Tower of Iron Will** | |
|---|---|
| Power Score: | Wis -2 |

| | |
|---|---|
| Initial Cost: | 6 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 1 yard |
| Prerequisites: | none |

Tower of iron will is one of the five telepath-ic defenses against unwanted contact. It relies only upon the superego to build an unassailable haven for the brain. Like intellect fortress (a telepathic devotion), tower of iron will has an area of effect beyond the psionicists mind. At 3 feet, its very limited. A psionicist can initiate one other psionic power during the round in which he uses the tower of iron will.
***Power Score:*** The area of effect increases to 10 feet.
***20:*** The psionicist is "lost inside himself" and cannot engage in psionic activity for 1d4 hours.

## Telepathic Devotions

| **Attraction** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | contact |
| Maintenance Cost: | 8/round |
| Range: | 200 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

The opposite of aversion (see below), this power creates an overwhelming attraction to a particular person or thing-be it an item, creature, action, or event. A victim of this power will do whatever seems reasonable to get close to the object of his attraction. The key word is "reasonable" The victim is completely fascinated, but he doesn't suffer from blind obsession. He won't leap into a fire or over a cliff, for example, or climb into the arms of a tarrasque (a bipedal killing machine). He can still recognize danger, but he will not flee unless the threat is strong and immediate. And if the danger is not apparent, (such as poison in a goblet of wine), the character could easily destroy himself in pursuit of the attraction.
***Power Score:*** The effect borders on an obsession; the victim takes serious risks.
***20:*** No additional effect.

| **Aversion** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | contact |
| Maintenance Cost: | 8/turn |
| Range: | 200 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |

| Prerequisite: | mindlink, contact |
|---|---|

The victim of this power gains an aversion to a particular person, place, action, or event. He will do everything he can to avoid the object of his aversion. He will not approach within 20 yards, and if he is already within 20 yards, he will back away at the first opportunity. The aversion is "planted" in the victim's brain for one turn. It cannot be maintained for another turn unless the psionicist maintains contact throughout that turn.
***Power Score:*** The object of aversion affects the victim like a fear spell.
***20:*** No additional effect.

| **Awe** | |
|---|---|
| Power Score: | Cha -2 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 20 yards |
| Prerequisite: | mindlink, contact |

A psionicist can use this power to make others hold him in awe. Each character contacted must make a saving throw vs. spells. Characters who fail are mentally cowed; they sense the telepath's "awesome might" They have no desire to serve or befriend him, but they won't attack him unless forced to do so. (For example, someone says, "You kill him or I'll kill you") They'll do whatever they can to avoid angering or upsetting the psionicist. If possible, they'll avoid him altogether, and take the first opportunity to escape him.
***Power Score:*** The save automatically fails.
***20:*** All contacted characters view the psionicist as pathetic and ridiculous.

| **Conceal Thoughts** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 5 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 3 yards |
| Prerequisite: | none |

This defensive devotion protects the psionicist against psionic or magical ESP, probes, mindlink, life detection, and other powers or spells which read or detect thoughts. To overcome thought concealment, an attacker must wage and win a psychic contest.
***Power Score:*** All related psychic contests will automatically be won by the defender.
***20:*** No additional effect.

| **Contact** | |
|---|---|
| Power Score: | Wis |

| | |
|---|---|
| Initial Cost: | varies |
| Maintenance Cost: | I/round |
| Range: | special |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | none |

Contact must be established before virtually any telepathic power can be used on another character or creature. It is just what its name implies-contact between the minds of the tel-epath and another character or creature. Contact does not allow communication by itself; it is merely the conduit for other telepathic exchanges. Many telepathic powers list "contact" as their initial cost. That means contact must be established in a previous round before those powers can be used. As long as contact is maintained, the psionicist can use other powers which require it, and can even switch (using attraction and then mindlink on the same subject after contact was established, for example). A psionicist can maintain contact with more than one subject at a time, but he must contact each one individually, and pay a maintenance cost for each use of the power. For example, if a psionicist wishes to inspire awe in two subjects, he must establish and maintain contact with each one separately. Once contact is established, it costs 1 PSP per round to maintain. The psionicist can perform any other action while maintaining contact. *If he uses another telepathic power on the same subject while maintaining contact, the contact power is "free".* (The cost of maintaining contact is covered by the other power's cost.)

**Establishing Contact:** The initial cost of contact is based on the target's level or hit dice, as shown below.

| | |
|---|---|
| 1-5 levels or hit dice | 3PSPs |
| 6-10 levels or hit dice | 5PSPs |
| 11-15 levels or hit dice | 13 PSPs |
| 16-20 levels or hit dice | 18 PSPs |

A psionicist cannot contact a subject that he knows nothing about. In other words, he can't use this power to scan around and "see what's out there." He must either have his subject in sight or know specifically who or what he is looking for. He cannot, for example, try to contact any random ore which may or may not be standing behind a closed door. However, he can try to contact a particular ore which he has seen before. If a psionicist fails to establish contact, he can try again the next round. Failure doesn't necessarily mean the targets mind cannot be contacted. Rather, it means the target has not been found yet. The psionicist can continue searching. Several factors can make telepathic contact difficult to establish:

- how far the target is (distance)
- resistance by the target-especially if the target is a psionicist
- whether or not the target is an intelligent mammal

Each factor is described below.

**Distance:** The greater the distance between the two minds, the more difficult it usually becomes to make contact. If the psionicist can see the target-either with normal vision or by using psionic powers-distance is not a factor. If the psionicist cannot see his target, normal range modifiers apply. Simply knowing where to look does not constitute "seeing the target"

| Separation Distance | Power Score Modifier |
|---|---|
| Line-of-sight | 0 |
| 1 mile | -1 |
| 10 miles | -3 |
| 100 miles | -5 |
| 1,000 miles | -7 |
| 10,000 miles | -9 |

The maximum range for establishing contact is 10,000 miles when a psionicist cannot view his subject. Contact can be maintained across any distance, however; it is not broken if a contacted subject moves out of range. There is one exception: contact cannot be extended beyond a crystal sphere.

**Resistance:** An untrained character-i.e., a nonpsionicist-can actively resist intrusion, resulting in a-2 modifier to the psionicist's power score. To resist, the character fills his mind with a barrage of thoughts and emotions-much as a child avoids a lecture by plugging his ears and yelling. For example, a character might repeat a poem ad nauseam, or scream battle cries. However, even these efforts won't work unless 1) the character is specifically resisting psychic intrusion, and 2) resisting intrusion is his sole activity. If the character tries to fight or cast a spell, for example, his psychic defense has too many "holes" to be useful. Unless a wild talent knows a telepathic defense mode, he is as vulnerable to contact as any nonpsionicist. Psionicists (and psionic creatures) are much better at resisting contact. In fact, this power won't work against them unless they intentionally drop their natural defenses. They must allow another psionicist to use contact on them, and can exclude some contacts while remaining open to others. If a psionicist resists, contact can only be established through mental attacks: psychic crush, ego whip, id insinuation, mind thrust, or psionic blast. See Chapter 2, "Psionic Combat," for more information.

**Unusual Subjects:** Contact can also be established with nonhuman minds, even plants. The further the subject is removed from mammals, the more difficult it becomes to establish contact. Modifiers that affect power scores are listed on the following page.

| Life Order | Contact Score Modifier |
|---|---|
| Mammal (except marsupial) | -1 |
| Marsupial | -2 |
| Bird | -3 |
| Reptile, amphibian | -4 |
| Fish | -5 |
| Arachnid, insect | -6 |
| Monster | -7 |
| Plant | -8 |

These modifiers are in addition to any distance modifiers that may apply. That means contacting a distant plant or monster is an uncertain proposition at best.

**Breaking Contact:** Contact is not severed until the psionicist breaks it off (fails to maintain it). If the person contacted is a psionicist, he may also do something to sever it. A psionicist often can eject an

unwanted intruder (see "ejection").
**Optional Rule:** The minds of very intelligent beings are more difficult to latch onto. Increase the cost of contact by adding the creature's "# of Languages," minus two, as shown on Table 4 in Chapter I of the Player's Handbook. For example, a creature with Intelligence 17 knows six languages. The cost of contacting this creatures mind is increased by four.
***Power Score:*** The contact is maintained for four rounds for free.
***20:*** Further contact with this mind is impossible at this experience level. Daydream Power Score: Wis Initial Cost: contact Maintenance Cost: 3/round Range: unlimited Preparation Time: 0 Area of Effect: individual Prerequisite: mindlink, contact By using this power, the telepath causes someone's mind to wander. This is only effective against characters with Intelligence 14 or less who are not concentrating hard on the task before them, but are just going about their business in a casual, relaxed manner. Once affected, the daydreamer pays little attention to his surroundings, making it much easier for someone to pick his pocket, slip past him unobserved, or otherwise escape his notice. Thieves gain a 20% bonus on their pick pockets, move silently, and hide in shadows scores. Other characters can perform these tasks as an average 4th level thief (pick pockets, 45%; move silently, 33%; hide in shadows, 25%). The DM can assign chances for success to other types of skulking and skullduggery.
***Power Score:*** Increase the bonuses to 30% for thieves and 5th level for others.
***20:*** The victim realizes someone is toying with his mind.

| **Ego Whip** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 4 |
| Maintenance Cost: | na |
| Range: | 40/80/120 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | mindlink, contact |

Ego whip is one of the five telepathic attacks used to establish contact with another psioni-cist's mind. (See Chapter 2.) The power assaults the victim's ego, leaving him with feelings of inferiority and worthlessness. If used against a contacted mind, the target is dazed for 1-4 rounds, during which all of his die rolls (psionic attacks, melee attacks, saving throws, etc.) are penalized five points (or 25%) and he cannot cast any spells above third level. This power has three ranges: short, medium, and long. At medium range, the psioni-cists power score is reduced by two. At long range, it is reduced by five.
***Power Score:*** No additional effect.
***20:*** No additional effect.

| **Empathy** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | contact (or 1*) |
| Maintenance Cost: | 1/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | 20 ft. x 20 ft. |

| | |
|---|---|
| Prerequisites: | contact |

By using empathy, a psionicist can sense the basic needs, drives, and/or emotions generated by any mind. Thirst, hunger, fear, fatigue, pain, rage, hatred, uncertainty, curiosity, hostility, friendliness, love-all these and more can be sensed.

*When used against nonpsionic targets, contact is not required.

***Power Score:*** The subject of the emotion is revealed.

***20:*** The target senses the attempt.

| **ESP** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | contact |
| Maintenance Cost: | 6/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | contact |

Extrasensory perception, or ESP, allows a psionicist to read someone else's mind (as the power is treated here). The telepath can only perceive surface or active thoughts. He cannot use ESP to explore someone's memories or delve into their subconscious. Most intelligent creatures tend to think in words, so language is a barrier to understanding. Unintelligent creatures think in pictures. Magical thought, such as a wizard uses in casting spells, is also unintelligible. However, a telepath can easily recognize such thoughts as part of the spell-casting process.

***Power Score:*** The first round of maintenance is free.

***20:*** The psionicist develops a splitting headache and suffers a -1 penalty on all tele-pathic power scores for one hour.

| **False Sensory Input** | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

This devotion allows the psionicist to falsify someone's sensory input-making the victim think that he sees, hears, smells, tastes, or feels something other than he really does. The falsehoods are somewhat limited. Nothing can be completely hidden or made to disappear, and everything must retain its general size and intensity. For example, a human could be made to look like a dwarf, but not like a parrot. A slamming door could be made to sound like a thunderclap or a cough, but not like rustling paper. Oil could be made to taste like garlic, but not like water.

***Power Score:*** Almost any false perception can be achieved.

***20:*** The psionicist cannot see, hear, or otherwise sense the intended victim for 1d4 rounds, except psionically.

| Id Insinuation | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 5 |
| Maintenance Cost: | na |
| Range: | 60/120/180 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | mindlink, contact |

Id insinuation is one of the five telepathic attack modes. 'It seeks to unleash the uncontrolled subconscious of the defender, pitting it against his superego. The attack leaves the victim in a state of moral uproar.Technically speaking, this power drives him nuts, at least temporarily. His id-the seat of primitive needs, animal drives, cruelty, and ferocity-seeks to launch him into a rage of violence and desire. His superego-the seat of moral conscience and the "civilized" part of his brain-struggles to maintain the upper hand. If this power is used against a contacted mind, the target can do nothing for ld4 rounds. Id insinuation has three ranges: short, medium, and long. At medium range, the tele-path's power score is reduced by two. At long range, it is reduced by five.
***Power Score:*** The victims id overpowers his superego and he turns against his allies for 1d4 rounds.
***20:*** The psionicists id is unleashed; the resulting rage imposes a -I penalty on all his attack rolls and power checks for one turn.

| Identity Penetration | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | contact |
| Maintenance Cost: | 6/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | contact |

Identity penetration allows the user to determine the target's true identity in spite of polymorphs, illusions, disguises, etc.
***Power Score:*** No additional effect.
***20:*** Until he gains another level, the telepath cannot penetrate the identity of the current target.

| Incarnation Awareness | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | contact |
| Maintenance Cost: | 13/round |
| Range: | unlimited |

| | |
|---|---|
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | contact |

By applying this power to another character, the psionicist can gain knowledge about past lives. One past life can be explored per round, starting with the most powerful personalities (usually these are also the most famous, but not always). The psionicist also knows immediately how many times this particular personality has been killed and raised from the dead. It is up to the players to put this information to use.
***Power Score:*** All past life information is gained in one quick mental blast.
***20:*** Overwhelmed, the psionicist lapses into a trance until jolted or slapped-or for 1d4 hours, whichever comes first.

| **Inflict Pain** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | contact |
| Maintenance Cost: | 2/round |
| Range: | touch |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

This is a particularly nasty form of torture. It causes no actual harm to the subject and leaves no marks or scars, but causes excruciating pain of any sort the telepath desires. Only evil characters can learn this power freely; others find their alignments twisting toward evil if they wish to inflict pain. If the victim is an NPC who is being questioned, he must make a saving throw vs. para-lyzation to withstand this agony. If the psionicist finds a way to use this power in combat, the victim must also make a saving throw vs. paralyzation. Success means he grits his teeth and keeps on fighting. Failure means the pain imposes a four-point penalty on the character's attack rolls that round, or disrupts and ruins a spell.
***Power Score:*** The pain is so excruciating that the victim passes out for 1d10 rounds.
***20:*** This particular contact is broken.

| **Intellect Fortress** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 4 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 3-yd. radius |
| Prerequisites: | none |

Intellect fortress is one of five telepathic defenses against unwanted contact. It calls forth the powers of the ego and superego to stop attacks. Unlike most other defenses, intellect fortress has an area of effect beyond the psioni-cists mind, offering protection to other minds within that radius. Every mind within that area defends against telepathic attack with the psionicist's intellect fortress power score. A psionicist

can initiate one other psionic power in the same round that he uses intellect fortress.
***Power Score:*** No additional effect.
***20:*** This defense falters and is not usable again for 1d4 rounds.

| **Invincible Foes** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | contact |
| Maintenance Cost: | 5/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

The victim of this devotion believes that any blow struck against him will cripple or kill him. Even if the blow actually causes just one point of damage, the victim thinks he's dying, and that he can no longer fight. He falls to the ground in horrible pain. A character who is struck while under the effect of this power won't recover until a turn later, even if the psionicist stops concentrating on him and turns his attention elsewhere. As long as the character was under this effect when the blow was struck, he's out for 10 rounds. Even if the victim of this power is never actually struck, his behavior is likely to change. Fully expecting the next blow to kill him, he may stop attacking and simply parry, or try to flee, or even surrender and beg for quarter. If the character has not been struck, however, the psionicist must keep renewing the power every round; otherwise future blows will affect him normally. "Invincible foes" can also work in reverse. In other words, an attacker can be made to believe that every blow he strikes is fatal. The belief is strong enough to create an illusion: even if the attacker barely scratches his foe, he sees the "victim" lying down, mortally wounded. He will continue to imagine that opponent lying on the ground until the opponent attacks again (it doesn't matter whom he attacks; any attack breaks the illusion). . This reversal has several consequences. Characters who have been "killed"-i.e., struck-can simply walk away from the fight, leaving their "corpses" behind. Or they can move into position and attack again, gaining a +2 bonus to hit. After this happens three times, the affected character must make a saving throw vs. spells. If it fails, he becomes convinced that his foes are unkillable and reacts accordingly. (PCs, of course, are free to react as they see fit.)
***Power Score:*** No other effect.
***20:*** No other effect.

| **Invisibility** | |
|---|---|
| Power Score: | Int -5 |
| Initial Cost: | contact |
| Maintenance Cost: | 2 / round / creature |
| Range: | 100 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Psionic invisibility differs significantly from magical invisibility. To make himself invisible, the

psionicist must individually contact each mind that he wants deceive. Once they are all contacted, he makes himself invisible to them only. He can still see himself, as can anyone who was not contacted. Only characters within 100 yards of the psionicist can be affected by this power. Invisibility is a delusion affecting one or more select characters, not an illusion affecting everyone. The only real change occurs in the mind of the psionicist's targets. For this reason, the psionicist can make anyone invisible-not just himself. The "invisible" being must be approximately man-sized (or smaller), however. The psionicist must make a separate power check for each delusion, and pay a separate maintenance cost for each. In this case, a delusion is one "invisible" creature or character, as perceived by one other character. For example, if the psionicist wants to make two things invisible to two people, he must make four separate power checks. This power affects vision only. Observers may still be able to hear or smell "invisible" creatures.

***Power Score:*** The power works like superior invisibility (a telepathic science).

***20:*** All contacts are broken.

| **Life Detection** | |
|---|---|
| Power Score: | Int -2 |
| Initial Cost: | 3 |
| Maintenance Cost: | 3/round |
| Range: | 100 yards |
| Preparation Time: | 0 |
| Area of Effect: | varies |
| Prerequisite: | none |

A telepath can detect the presence of living, thinking creatures within a limited area. He must scan like radar. If he is scanning at short range, he can cover a large angle. At long range, the angle is significantly reduced. He can scan through 180 degrees to a range of 40 yards, 90 degrees to a range of 60 yards, or 30 degrees to a range of 100 yards. One round of scanning will detect humans, dernihumans, humanoids, mammals, and monsters with eight or more hit dice. A second round of scanning will detect birds, reptiles, amphibians, fish, and monsters with less than eight hit dice. In either case the character gets an accurate count of the creatures. The DM should make this power check and keep the result secret from the player. If the psionicist doesn't detect anything, the player won't know whether that means there's nothing there, or the power didn't work. If the roll is I, the psionicist gets faulty information. He detects what is there, but gets the numbers wrong by +/-50 %.

***Power Score:*** The psionicist can instantly detect everything within 100 yards, in every direction.

***20:*** The telepath detects 1d6 creatures which aren't there.

| **Mental Barrier** | |
|---|---|
| Power Score: | Wis -2 |
| Initial Cost: | 3 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

Mental barrier is one of five telepathic defenses against unwanted contact. It is a carefully built wall of thought repetition which exposes only one small area of the mind at a time. A psionicist can initiate one other psionic power in the same round that he uses mental barrier.
***Power Score:*** Contact during this round and the next is impossible.
***20:*** The barrier fails, and the mental attempt disrupts any currently active powers.

| **Mind Bar** | |
|---|---|
| Power Score: | Int -2 |
| Initial Cost: | 6 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

Mind bar is a magician's bane and the telepath's boon. It gives the psionicist 75% magic resistance against *charm, confusion, ESP, fear, feeblemind, magic jar, sleep, and suggestion* spells. It also offers complete protection against possession of any sort. In addition, mind bar protects a psionicist against all telepathic powers, except the five contact-establishing attacks. No telepathic power can affect a barred mind unless the telepathic attack prevails in a psychic contest. (The defender uses mind bar.)
***Power Score:*** The telepath gains a +5 bonus to his power score when defending in a psychic contest.
***20:*** The telepath's saving throws vs. the spells listed above have a - 4 penalty for one hour.

| **Mind Blank** | |
|---|---|
| Power Score: | Wis -7 |
| Initial Cost: | 0 |
| Maintenance Cost: | 0 |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

Mind blank is one of five telepathic defenses against unwanted contact. It attempts to hide the mind from attack, making its parts unidentifiable. This defense is particularly effective against a psionic blast and id insinuation. (See Chapter 2, "Psionic Combat," for details.) Mind blank is unique. Unlike the other four defense modes, it costs nothing to maintain. *In fact, a character can still recover PSPs while using this power*. That's because mind blank is almost instinctual; if a character knows it, it's nearly always active, even when he's sleeping or meditating. The power is inactive only if 1) the player announces it, or 2) the character uses another defense mode. Even though mind blank has no PSP cost, it *still constitutes psionic activity*. If the power is active, a character is vulnerable to detection. He still may attract psionic feeders, or suffer some other unpleasant effect. A psionicist can use one other psionic power (but not another defense mode) in the same round that he uses mind blank.
***Power Score:*** No other effect.

***20:*** The character cannot use mind blank for 1d4 hours.

| Mind Thrust | |
|---|---|
| Power Score: | Wis -2 |
| Initial Cost: | 2 |
| Maintenance Cost: | na |
| Range: | 30/60/90 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | mindlink, contact |

Mind thrust is one of the five telepathic attacks used to establish contact with another psionicist's mind. It is a stabbing attack which seeks to "short" the synapses of the defender. If the subject's mind has already been contacted, and he has psionic powers, then this power can do some damage. The subject loses the use of one power, chosen randomly, for 2d6 days. Beyond establishing contact, mind thrust has no effect on creatures or characters without psionic powers. This power has three ranges: short, medium, and long. At medium range, the psionicist's power score is reduced by two. At long range, it's reduced by five.
***Power Score:*** No other effect.
***20:*** The telepath loses all tangents, but not contacts.

| Phobia Amplification | |
|---|---|
| Power Score: | Wis -2 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

This power allows the psionicist to reach into someone's mind and discover his greatest fear, then amplify it to the point of irrationality. A victim who fails a saving throw vs. spells believes he is imminently threatened by the object of this fear, even if it is completely absurd. A character with a fear of falling, for example, is convinced he could pitch over a cliff at any moment-even while on an endless prairie- unless he stands absolutely still. The reaction of the frightened character depends on the fear. He will defend himself if attacked (unless defending himself is somehow tied in to his phobia). A wizard may teleport away or use other spells to guarantee his safety. Other characters might freeze in place or flee for their lives. But all of their actions will be geared toward protecting against the fearsome object or situation. This fear lasts as long as the psionicist maintains the effect. Once he stops, the fear fades back to its normal proportions, probably leaving the character slightly shaken and more than slightly chagrined.
***Power Score:*** The target's save vs. spells automatically fails.
***20:*** The subject has no detectable phobias.

| Post-Hypnotic Suggestion |
|---|

| | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | contact |
| Maintenance Cost: | I/level or hit die |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | 1 creature |
| Prerequisites: | mindlink, contact |

Any creature with an Intelligence between 7 and 17 can receive a post-hypnotic suggestion. (Very dim or very brilliant creatures are not susceptible.) The psionicist plants a suggestion of some reasonable course of action in the creature's subconscious, along with the situation that will trigger this action. When that situation arises, the DM makes a power check against the psionicists post-hypnotic suggestion score, with a -1 penalty for each day that has passed since the suggestion was planted. A "reasonable course of action" is one that does not violate the creatures alignment or class restrictions. It can be something that he would not normally do, but if it is too strange, he just won't do it. The maintenance cost for this power is a one-time-only payment, made when the suggestion is implanted.
***Power Score:*** The psionicists power score is not reduced for the passage of time.
***20:*** The intended victim is aware of the attempt.

| **Psychic Crush** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 7 |
| Maintenance Cost: | na |
| Range: | 50 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | mindlink |

Psychic crush is one of the five telepathic attacks used to establish contact with another psionicist's mind. It is a massive assault upon all neurons in the brain, attempting to destroy all by a massive overload of signals. If this attack is used against any mind that the psionicist has contacted, the victim must make a saving throw vs. paralyzation. Failure costs the target ld8 hit points.
***Power Score:*** The save automatically fails.
***20:*** The victim is immune to further crushes by this psionicist for 24 hours.

| **Psychic Impersonation** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 10 |
| Maintenance Cost: | 3/hour |
| Range: | 0 |
| Preparation Time: | 1 turn |
| Area of Effect: | personal |

| Prerequisite: | probe |
|---|---|

This power enables a psionicist to mask his own aura and thought patterns, and make them match someone else's perfectly. To accomplish this, the psionicist must first probe the subject he wishes to impersonate. Psychic impersonation does not alter any of the psionicist's other features. It only changes his identity to other creatures with psionic powers. Even then, a psychic contest with identity penetration or probe can penetrate the disguise. While psychic impersonation is in effect, all of the user's psionic power scores are reduced by one.

***Power Score:*** The disguise cannot be detected psionically and power scores are not decreased.

***20:*** Until the psionicist reaches a new experience level, he cannot impersonate that subject.

| **Psychic Messenger** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 4 |
| Maintenance Cost: | 3/round |
| Range: | 200 miles |
| Preparation Time: | 2 |
| Area of Effect: | 1 sq. yd. |
| Prerequisite: | none |

This power allows a character to create an insubstantial, 3-D image of himself, which can appear anywhere within 200 miles and deliver a message. Everyone present can see and hear the messenger. Communication is oneway. The telepath has no idea what is happening around his messenger unless he's using some other power.

***Power Score:*** The psionicist can make the messenger's appearance differ from his own.

***20:*** No effect.

| **Repugnance** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | contact |
| Maintenance Cost: | 8/round |
| Range: | 200 yards |
| Preparation Time: | 0 |
| Area of Effect- | individual |
| Prerequisite: | mindlink, contact |

With this power, a psionicist makes something-a particular person, place, or object-completely repugnant to another character. That character is overwhelmed with loathing for the "thing," and he will seek to destroy it as completely and quickly as possible. If this destruction is strongly against the character's alignment (such as making a temple repugnant to its cleric), the character gets to make a saving throw vs. spells to shake off the effect.

***Power Score:*** No save is allowed.

***20:*** The victim is aware of the attempt.

| **Send Thoughts** |
|---|

| Power Score: | Int -1 |
|---|---|
| Initial Cost: | contact |
| Maintenance Cost: | 2/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | contact |

This is one-way communication, allowing the telepath to send his own thoughts to someone elses mind. The telepath can send information or simply distract the target. If the target is a wizard casting a spell, he must make a saving throw vs. spells. The wizard applies a modifier to the save: the difference between his Intelligence and the telepaths power score. (If the wizards Intelligence is higher, its a bonus; if it's lower, it's a penalty. ) If this save fails, the wizard's concentration is broken and the spell is spoiled. If the target being distracted is someone involved in melee, he has a two-point penalty on all attack rolls (but not damage rolls).

***Power Score:*** Wizards cannot make the saving throw.

***20:*** If the receiver is a friend, he is distracted.

| **Sight Link** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | contact |
| Maintenance Cost: | 5/turn |
| Range: | unlimited |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Sight link allows the telepath to tap into another character's optical system. The telepath sees whatever his link sees. (His own vision is unaffected.) If the linked creature is subjected to a gaze attack, the telepath must make the appropriate saving throw or also be affected by the gaze.

***Power Score:*** Sound link is also gained.

***20:*** The psionicist is blinded for 1d4 hours.

| **Sound Link** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/turn |
| Range: | unlimited |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

By means of a sound link, the telepath taps into the auditory system of another person or creature. He

hears whatever his link hears. If the linked creature is subjected to an auditory attack (by sirens, shriekers, etc.), the telepath must make the appropriate saving throw or also be affected.
***Power Score:*** Sight link is also gained.
***20:*** The psionicist is deaf for ld4 hours.

| **Synaptic Static** | |
|---|---|
| Power Score: | Int -4 |
| Initial Cost: | 15 |
| Maintenance Cost: | IO/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 20/50/90 yds |
| Prerequisite: | mindlink |

Synaptic static interferes with all psionic activity within a given area. Even the psionicist is affected; when he creates static, he cannot use any other power simultaneously. However, he may also prevent others from using their powers. Anyone who tries to use a psionic power within the area of effect must fight the static's creator in a psychic contest. If an opponent succeeds, his power functions normally. If not, his power fails. Exposure to synaptic static for more than five rounds will give anyone a splitting headache. This has no game effect, but it will make NPCs and animals irritable. This power has three ranges: short, medium, and long. At medium range, the character's power score is reduced by two. At long range, it is reduced by five.
***Power Score:*** The psionicist receives a +1 bonus in all psychic contests prompted by the current use of static.
***20:*** The character has injured himself trying to create static. He immediately loses 1d20 PSPs and 1d6 hps.

| **Taste Link** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/turn |
| Range: | unlimited |
| Preparation Time: | 1 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Could this be a dieter's dream? Taste link allows the telepath to tap into the flavor senses of another person or creature. The psionicist tastes whatever his link tastes. If the linked creature takes poison orally, the telepath must make a saving throw vs. poison to avoid passing out and severing the link. The psionicist can't actually be poisoned this way, however.
***Power Score:*** Scent link is also gained (not a defined power).
***20:*** The psionicist has a bitter taste in his mouth, but no other effect occurs.

| **Telempathic Projection** |
|---|

| | |
|---|---|
| Power Score: | Wis -2 |
| Initial Cost: | contact |
| Maintenance Cost: | 4/round |
| Range: | unlimited |
| Preparation Time: | 1 |
| Area of Effect: | 10 yard diam |
| Prerequisite: | mindlink, contact |

Telempathic projection allows the user to send emotions to everyone who has been contacted within a common 10-yard diameter. This power cannot radically change a character's emotional state, however. A character who is very angry could be made only slightly angry, for example, but not happy. Empathic changes are a matter of degrees, no more.

***Power Score:*** Emotions can be drastically altered (love to hatred, etc.) while this power is maintained.

***20:*** All affected characters experience strong negative emotions toward the psionicist for ld6 rounds.

| **Thought Shield** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 1 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

Thought shield is one of five telepathic defenses against unwanted contact. It clouds the mind so as to hide first one part, then another. A psionicist can initiate one other psionic power during the same round in which he uses thought shield.

***Power Score:*** No other effect.

***20:*** No other effect.

| **Truthear** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 4 |
| Maintenance Cost: | 2/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | hearing |
| Prerequisite: | mindlink |

When a psionicist uses truthear, he can tell whether other people intentionally lie. He does not hear their words translated into truth; he merely knows whether or not speakers believe they are lying.

***Power Score:*** The psionicist recognizes a falsehood even when the speaker does not.

***20:*** The psionicist can't use this power effectively against this subject for ld6 days.

# Metapsionic Sciences

| Appraise | |
|---|---|
| Power Score: | Int -4 |
| Initial Cost: | 14 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

With this power, a psionicist can determine the likelihood that a specific course of action will succeed. He focuses on a course of action and examines the possibilities. He assigns probabilities. Then he mentally processes enormous calculations to arrive at an overall probability of success. In game play, the character must first pass a power check. If he does, the DM must reveal the percentage chance for the plan or actions success. Exact odds may be difficult or impossible to determine, but the DM should provide his most accurate, honest appraisal. No one, not even a psionicist, can foresee the future with assured accuracy. Like precognition, the success of this power depends on how closely the characters adhere to their plans. Do they act as they intended? React as they intended? What factors did they fail to foresee? Every deviation steers events away from the predicted path. If this power is used, the DM should give the best answer he can, based on information the characters have. Factors they don't know about, and therefore can't take into account while forming a plan, can change things dramatically.
***Power Score:*** The player is allowed to reroll any three die rolls to help make his character's forecast more accurate.
***20:*** The psionicist can't use this power successfully again for ld4 days.

| Aura Alteration | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 5 |
| Area of Effect- | individual |
| Prerequisites: | psychic surgery, 5th level |

With aura alteration, a psionicist can temporarily disguise a person's alignment, disguise his level, or remove aura afflictions like curses, geases, and quests. Disguising a character's alignment or level is the easiest to do. The disguise is temporary, lasting only 1-6 hours. It has no effect on the character's real alignment or class, but a psionicist with aura sight will be fooled by the fake aura. Because curses, geases, and quests are imprinted on the character's aura, they can be removed with this power. A psionicist who tries this suffers a -6 penalty to his power score and must expend 20 PSPs instead of 10. If the die roll is I, the psionicist's patient must make a saving throw vs. spells to avoid losing one experience level. (A slip of the psychic scalpel can close off vital parts of the brain.)

***Power Score:*** No other effect.
***20:*** The full PSP cost of the power must be paid despite the lack of success, and this psionicist cannot alter this aura until he achieves a higher experience level.

| **Empower** | |
|---|---|
| Power Score: | Wis -12 |
| Initial Cost: | varies |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | 1 item |
| Prerequisites: | 10th level |

This is not a tool for weak or inexperienced characters. Empower allows a psionicist to im- bue an item with rudimentary intelligence and psionic ability. The process, which requires extraodinary time and effort, is described below. Item Requirements. An item must meet two requirements before it can be empowered. First, it must be of exceptional quality-worth 250% to 500% of the normal cost for an item of its type. Second, it must be new. The process of empowering must begin within 48 hours after the item is manufactured. If it is delayed longer, the item cannot be empowered. (If the psionicist still tries, he automatically fails Step One below, expending 50 PSPs.) If the item meets these two requirements, the psionicist can begin the empowerment.
**Step One.** At the start of each day, the psionicist must first prepare the item to receive psionic power. This costs 50 PSPs and requires a power check. If this check fails, the day is wasted; no further progress can be made until the next day.
**Step Two.** If the item has been prepared, the psionicist can give it access to a discipline. It can have access to only one discipline, never more, and the psionicist himself must have access to it. This step costs 100 PSPs and requires a power check.
**Step Three.** The psionicist can attempt to empower the item with any single power he knows within the chosen discipline. (The item must have been properly prepared on the same day.) The psionicist must make two successful power checks: first, a check for the chosen power (using the appropriate power score), and second, another empower check. If both checks succeed, the item has that psionic power, with a score two points below the psionicist's. If Step Three is successful, the psionicist expends another 100 PSPs. (Failure means he expends half that amount, as usual.)
**Step Four.** The psionicist can imbue the item with other powers by repeating Step Three. The item can acquire one power per day, provided it has been properly prepared (see Step One).
**Step Five.** When the item has acquired all the powers which the psionicist intends to give it, the psionicist can seal those powers within the item. To do this, he must prepare the item one more time (expending 50 PSPs), and make an endowment power check one last time. If the item is sealed successfully, it can never gain any additional powers-but it can't lose them, either. An item that has not been sealed will lose one power per month until it is just a normal object again. An empowered object has 8 PSPs per devotion and 12 per science. It has Intelligence equal to its maker's Intelligence minus ld6 points, with a minimum of 12. Its ego is 2 points per devotion and 3 points per science. Unless it was empowered with another telepathic power, it communicates as indicated on Table 113, "Weapon Intelligence and Capabilities" in the AD&D 2nd Edition DMG (p. 186). Its alignment matches its creator's. The weapon has its own personality, however, and like all intelligent weapons, it will try to

assert its independence at every opportunity. The empowering process must be unbroken. *If a day passes in which the psionicist does not at least try to prepare the object, it is finished as is*. He cannot even try to seal the powers; they will wear off over the course of time.
***Power Score:*** No other effect.
***20:*** If three 20's are rolled during the empowering process, the item is a complete and utter failure.

| **Psychic Clone** | |
|---|---|
| Power Score: | Wis -8 |
| Initial Cost: | 50 |
| Maintenance Cost: | 5/round |
| Range: | 60 feet |
| Preparation Time: | 10 rounds |
| Area of Effect: | special |
| Prerequisites: | clairaudience, clairvoyance, psychic messenger, 5th level |

When this power is initiated, a clone of the psionicist steps out of his body. It is in everyway identical to the original form, except that it has no substance. The psionicist can see and hear what the clone sees and hears. The clone will do anything the psionicist wants it to (as if it were actually him). Furthermore, the psioni-cist's psyche goes with the clone, thus enabling it to perform all of his psionic powers. This power has a serious drawback. As long as the clone exists, the psionicist himself is practically a turnip. He retains only three senses: smell, taste, and touch. He cannot move, see, or hear. All his psionic powers are transferred to the clone. In effect, the immobile character is no longer a psionicist; not even psionic sense will reveal his true nature. He can be slain without any combat rolls if an opponent wishes to do so. The clone can travel up to 60 feet from the psionicist. It can go anywhere the psionicist himself could go. For example, it can walk down a corridor, walk across acid (the clone has no substance and cannot be hurt), and swim (provided the psionicist can). Because the psionicist could walk through an unlocked door, so can the clone-although the clone passes through like a ghost. However, a clone cannot travel through walls or walk on water, because the psionicist could not either. The clone is impervious to all forms of attack and damage except psionic or mental attack (which will affect the psionicist).
***Power Score:*** The clone can travel through walls and other solid objects.
***20:*** No other effect.

| **Psychic Surgery** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | contact |
| Maintenance Cost: | IO/turn |
| Range: | touch |
| Preparation Time: | 10 |
| Area of Effect: | individual |
| Prerequisite: | mindlink, contact |

Psychic surgery allows a telepath to repair psychic damage. He can even operate on him- self if need be, though his power score is reduced by 5 in this case. Phobias, aversions, idiocy, comas, seizures-all these

psychic ailments can be treated and cured, as well as several others. Curses or magical conditions-such as geases and charms-cannot be cured. This power cannot cure possession, either. However, psychic surgery can confirm that the problem really is possession, and can force the possessing entity into psionic combat if the surgeon desires. This may be risky, since creatures capable of possession are often quite powerful and the psionicist cannot ascertain their power beforehand. On the other hand, psychic surgery could cure the possession indirectly by forcing a psionically weak entity to flee rather than face combat. Most psychic ailments can be cured in one turn or less. However, if the psionicist's power check result equals I or 2, the problem is particularly tricky and requires another turn to repair. If the power check fails, the problem is too great for the psionicist to fix. He can try again after gaining another experience level.

**Special Operations:** Psychic surgery has two special uses. First, the surgeon can use this power to help nonpsionicists unleash their wild powers. If the psionicist performs this kind of operation successfully, the patient gains a -2 bonus to his wild talent roll. (See Chapter 1.) The second operation can make the effect of any power in the telepathy discipline permanent with no maintenance cost. The patient is rarely grateful, because the power is not bestowed on the subject, only its effect. In this way, a person can be permanently dominated or fate-linked, for example. The following restrictions apply:

1. The power must be maintainable (i.e., it must have a maintenance cost).
2. The power must have a range of other than zero.
3. The surgeon must know the power and use it successfully on the patient.
4. A psionicist cannot use this type of surgery on himself or on another psionicist. If he tries, nothing happens.
5. At most, only one power can made permanent per turn. If the result of the power check is I or 2, the procedure takes two turns instead of one. This procedure can also be reversed; i.e., psychic surgery can be used to remove a permanently implanted telepathic effect.
   ***Power Score:*** The surgery takes only 5 rounds per "implanted" power.
   ***20:*** The surgeon cannot use this power successfully again for 1d4 days.

| **Split Personality** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 40 |
| Maintenance Cost: | 6/round |
| Range: | 0 |
| Preparation Time: | 1 |
| Area of Effect: | personal |
| Prerequisites: | psychic surgery, 10th level |

This is not a psychosis; it's the power to divide one's mind into two independent parts. Each part functions in complete autonomy, like two characters in one body. Both parts communicate fully. Both can use psionic powers, even at the same time. That means a split personality can use twice as many psionic powers per round. (The character's total number of PSPs remains the same, however, with both personalities drawing from it.) Alternately, one personality can use psionic powers while the other does something else-e.g., converse, ponder a puzzle, or control the body in melee. Thus, split personality allows a character to fight physically and psionically at the same time. Mental attacks directed against the psionicist affect only half of the mind. Contact must be

established separately with each half. If one half is destroyed, controlled, or subdued somehow, the other half can continue fighting independently and retains control of the body. Before he attempts to make his personality whole again, the psionicist must make a saving throw vs. paralyzation if any of the following is true: 1) he does not control both portions of his mind, 2) he has unrepaired psychic damage, or 3) is suffering unwanted contact. A successful save means that his mind returns to complete health and throws off all undesired influences. Failure means that the afflicted portion of his mind becomes dominant and he passes out for ld6 turns, but regains consciousness free of undesired influences.
***Power Score:*** The mind splits into three parts instead of two.
***20:*** The character passes out for 1d6 turns.

| **Ultrablast** | |
|---|---|
| Power Score: | Wis -10 |
| Initial Cost: | 75 |
| Maintenance Cost: | 0 |
| Range: | 0 |
| Preparation Time: | 3 |
| Area of Effect: | 50' radius |
| Prerequisites: | 10th level |

A character using psionic ultrablast can overwhelm and damage nearby psyches. To do this, he casts thought waves in all directions. In laymen's terms, the psionicist "grumbles" psychically for three rounds. Then his consciousness bursts forth and a horrid, psychic scream penetrates all minds within 50 feet. Victims may never be the same again. All characters within 50 feet of the psionic ultrablast must save vs. paralyzation. Failure means they pass out for 2d6 turns. Those who pass out must immediately save vs. paralyzation again. If they fail a second time, they lose all psionic power. Only psychic surgery can help them recover this loss. Although the blast does not affect the initiator, the risks are great. If the power check fails, he becomes comatose for ldIO days. Some characters may think he's dead.
***Power Score:*** Creatures of 3 hit dice or less die if they fail their save.
***20:*** The initiator must save vs. paralyza-tion or die. If he lives, he loses the use of all his psionic powers for 2d6 days.

## Metapsioitic Devotions

| **Cannibalize** | |
|---|---|
| Power Score: | Con |
| Initial Cost: | 0 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | 5th level |

This power allows the character to cannibalize his own body for extra PSPs. When it is used, the character can take any number of Constitution points and convert them directly to PSPs at a ratio of 1:8. (One Constitution point becomes eight psionic strength points.) The psionicist can use these points anytime, as if they were part of his total. The Constitution reduction is not permanent, but it is debilitating and long-lasting. The character immediately loses bonus hit points. His system shock and resurrection survival chances are reduced. Most importantly, all of his psionic power scores which are based on Constitution are reduced by the appropriate amount. A psionicist can recover one cannibalized point of Constitution per week of rest. Rest means staying quietly at home (safely indoors). Adventuring is not allowed.

***Power Score:*** The psionicist gains 8 PSPs without reducing his Constitution.

***20:*** The character loses 1d4 Constitution points, but can regain them by resting.

| **Convergence** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 8 |
| Maintenance Cost: | 0 |
| Range: | 10 yards |
| Preparation Time: | 1 |
| Area of Effect: | 10 yards |
| Prerequisites: | contact, 4th level |

When psionicists put their heads together, the results can be impressive. Convergence allows psionicists to link their minds into one synergetic being-an entity more powerful than the sum of the individual parts. There is no limit to the number of psionicists who join minds. Each participating psionicist must know the convergence power, however, and each must make a successful power check in the same round. Then they are linked. All their PSPs flow into a single pool, from which each draws his strength. If one participant knows a power, now anyone in the group can use it. Each participant can use psionic powers at the normal rate per turn: one defense and one other power per round. If the group is attacked psionically, the attack must overcome every working defense. If it does, the attack . affects every character in the convergence, or as many as possible. When the convergence is discontinued, PSPs that remain in the pool are evenly divided among all the participants. Fractions are rounded down, and no individual can exceed his usual maximum (extra points are lost).

***Power Score:*** No other effect.

***20:*** The participant loses 1d20 PSPs.

| **Enhancement** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 30 |
| Maintenance Cost: | 8/round |
| Range: | 0 |
| Preparation Time: | 5 |
| Area of Effect: | personal |
| Prerequisites: | 6th level |

This power yields the same results as the Meditative Focus proficiency, in less time. When a psionicist learns this power, he selects one discipline to enhance. As long as he maintains the enhancement power, all of his power scores within the chosen discipline are increased by two. At the same time, all other power scores are reduced by one.
***Power Score:*** Other scores are not reduced.
***20:*** All power scores in the chosen discipline are reduced by one for 24 hours.

| **Gird** | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | 0 |
| Maintenance Cost: | 2 x maintenance |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | 3rd level |

Each time a psionicist girds another power, he can maintain that power automatically- i.e., without mental concentration. Thus, a psionicist who is maintaining only girded powers can sleep without disrupting those powers. To use gird, the psionicist must first initiate and maintain the power he intends to affect. Then he must make a girding power check. If he succeeds, he automatically pays twice the normal maintenance cost for the girded power-or a minimum of I PSP per hour. To remove the girding, he must consciously decide to do so (no power check is required). Otherwise, the girding remains in place until the psionicist runs out of PSPs. That means a psionicist who's unconscious or sleeping could awaken to find all his psionic strength girded away. If the psionicist wishes to reestablish a gird that he discontinued, he must make a new power check.
***Power Score:*** No other effect.
***20:*** The gird attempt disrupts the power.

| **Intensify** | |
|---|---|
| Power Score: | Affected -3 |
| Initial Cost: | 5/increase |
| Maintenance Cost: | I/round |
| Range: | 0 |
| Preparation Time: | I/increase |
| Area of Effect: | personal |
| Prerequisites: | 3rd level |

Intensify allows the psionicist to improve either his Constitution, his Intelligence, or his Wisdom for psionic applications. To improve one-for psionic purposes only-he must weaken the other two-for all purposes. Each point of increase in the targeted ability decreases the other two abilities by the same amount. In addition, each point of increase costs 5 PSPs. For example, Zenita is a psionicist with Con 15, Int 16, and Wis 17. She wants to intensify her Intelligence by 4 points. To do so, she must spend 20 PSPs initially (5 PSPs for each bonus point of Intelligence). Her

Intelligence is raised 4 points to 20. Meanwhile, her Constitution and Wisdom scores drop 4 points (to II and 13, respectively). The increase in Intelligence affects psionic powers only. The drop in Constitution and Wisdom affects everything applicable except psionic strength points: psionic power scores, hps, system shock rolls, saving throws, spell bonuses, spell failure, etc. A psionicist can raise an ability score to a maximum of 25, provided he has enough PSPs and no other score is reduced below zero.

***Power Score:*** The character's ability is raised to the level he intended, but the cost of this power is reduced to 3 PSPs per increased point.

***20:*** The psionicist must make a system shock roll or the ability he intended to boost decreases by I point for 24 hours.

| **Magnify** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 25 x magnification |
| Maintenance Cost: | magnification / round |
| Range: | 0 |
| Preparation Time: | 5 |
| Area of Effect: | personal |
| Prerequisites: | 6th level |

Magnify allows the psionicist to magnify the effects of another power in all conceivable ways-e.g., double damage, double range, double modifiers, and so on. However, the affected power's initial cost is proportionately magnified, as is its maintenance cost. The psionicist initiates the magnify power first. At the same time, he must designate which power he intends to improve. Unless he maintains the magnification, he must immediately use the power he wishes to improve (in the same round). Otherwise he can maintain the magnification until he uses the affected power (a costly endeavor). Once the power has been performed, magnify must be reinitiated to perform again. The amount of magnification depends upon the psionicist's level, as follows:

| | |
|---|---|
| Levels 6-10 | X2 |
| Levels 11-15 | X3 |
| Levels 16-20 | X4 |

***Power Score:*** The magnification factor is one greater, with no additional cost.

***20:*** The affected power becomes inoperative for a day.

| **Martial Trance** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 7 |
| Maintenance Cost: | 0 (free) |
| Range: | 0 |
| Preparation Time: | 1 |
| Area of Effect: | personal |

| Prerequisite: | 3rd level |
|---|---|

In some situations, the psionicist may find it useful to enter a trance before engaging in psi-onic combat. This trance focuses the character's complete attention on his psionic activity and tunes out all other distractions. While in the trance, he gains a +1 bonus on all of his Telepathy scores (all powers in the discipline). The martial trance ends whenever the character chooses to end it. It is not deep; the character is brought out of it by any blow, shake, or slap. His attention is completely occupied, so any melee attack against him hits automatically and causes maximum damage.
***Power Score:*** He manages to maintain enough awareness to dodge melee attacks.
***20:*** No other effect.

| **Prolong** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 5 |
| Maintenance Cost: | 2/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | 4th level |

When this power is in effect, the range of all powers is increased by 50%, as is the radius of their areas of effect. This has no effect on powers with a range of zero or individual, nor does it alter personal, or single-item areas of effect. It does alter powers that affect a quantity of stuff; prolonged disintegration, for example, destroys up to 12 cubic feet of material instead of 8.
***Power Score:*** The increase is 100%.
***20:*** All ranges/areas of effect are halved for 1d4 hours.

| **Psionic Inflation** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 20 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 1 |
| Area of Effect: | 100-foot radius |
| Prerequisites: | 3rd level |

When a psionicist invokes this power, he sends out a powerful ring of psionic noise (extending to 100 feet). All psionic activity within this area requires twice the normal initial cost and maintenance. The initiating psionicist is not affected; the noise actually begins about an inch beyond his aura, creating a bubble of relative quiet around him. Other psionicists in the area of effect will not realize anything is wrong until they have actually used a power. If they are maintaining a power, they discover the inflated rate after paying twice the normal maintenance cost. If two psionicists initiate psionic inflation in the same area, the psionicists must conduct a psychic contest. The loser's psionic inflation ceases. If both characters fail, then both cease their

power maintenance. Reroll ties.
***Power Score:*** All psionic activity within the area requires three times the normal initial cost and maintenance.
***20:*** The psionicist cannot recover PSPs for two hours.

| **Psionic Sense** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 4 |
| Maintenance Cost: | 1/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 200-yard radius |
| Prerequisites: | mindlink |

With psionic sense, a character can detect psionic activity anywhere within 200 yards. Any expenditure of PSPs constitutes psionic activity, even if it is only to maintain a power. Use of the mind blank power is psionic activity, too, even though it expends no PSPs. When the character makes his first successful power check, he learns whether or not someone-or something-is psionically active within range. If the psionicist makes a another successful power check in the following round, he also learns 1) how many PSPs are being spent, and 2) where the psionic activity is occuring (direction and distance). If psionic activity is occurring in more than one place, the psionicist gets a fix on all of it within 200 yards.
***Power Score:*** Second-round information is gained in the first round.
***20:*** This power cannot be used effectively for one turn.

| **Psychic Drain** | |
|---|---|
| Power Score: | Wis -6 |
| Initial Cost: | IO/person + contact |
| Maintenance Cost: | none |
| Range: | 30 yards |
| Preparation Time: | 0 |
| Area of Effect: | up to 6 minds |
| Prerequisites: | mindlink, contact, 6th level |

Psychic drain enables the psionicist to tap into the personal, psychic energy of other people to augment his own psionic strength. Up to six people can be tapped at one time. Each subject, who is often called a host, must first be asleep. Next, the psionicist must make contact with the person's mind. Then he expends another 10 PSPs and makes a psychic drain power check. If he succeeds, the host falls into a trance which lasts 4-9 (ld6+3) hours. The character can be awakened with some difficulty before then, but he'll be groggy and disoriented for another hour. While the host is in the trance, the psionicist can siphon psychic energy. Just as a vampire draws blood to grow strong, the psionicistdrains Wisdom, Intelligence, and Constitution points. He can drain as much as he desires. For every ability point the psionicist drains, he gains 10 PSPs. Any PSPs gained cannot be banked (added to the psionicist's total). They cannot be siphoned any faster than they are used.

In other words, when the psionicist expends PSPs, he automatically draws these points from his host(s)-unless he specifies otherwise. The psionicist must remain within range of the entranced characters in order to draw strength points from them. If he exercises moderation, the psionicist does not harm his hosts. A host only begins to suffer ill effects when he loses more than 50% of his psionic potential. (Potential depends on Wisdom, Intelligence, and Constitution scores. See "Psionic Strength Points" in Chapter 1.) The table below shows the effects of excessive depletion. Psychic surgery can correct these problems.

| **Potential Lost** | Effect on host |
|---|---|
| 51-60% | Temporary amnesia (2-12 weeks) |
| 61-70% | Permanent amnesia |
| 71-80% | Intelligence reduced to 4 |
| 81-90% | Intelligence reduced to 4; put in coma for 1-12 days, must make system shock roll every day or die |
| 91-100% | Save vs. death or die; if subject lives. Intelligence, Wisdom, and Constitution each reduced to 3, permanently |

***Power Score:*** The psionicist does not harm the subject(s) this time, regardless of how much he drains.
***20:*** Contact broken.

| **Receptacle** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 0 |
| Maintenance Cost: | 0 |
| Range: | touch |
| Preparation Time: | 1 round/point |
| Area of Effect: | one item |
| Prerequisites: | empower or valuable gem |

This power allows a psionicist to store psionic energy in a special receptacle. The psionicist can draw upon the energy later to fuel his other psionic powers. He cannot use these points when his total pool of psionic strength is at its maximum. However, he can keep the stored PSPs on hand until he's running low on psionic energy, and then use them immediately. (It's like storing a pint of your own blood at a hospital. With a little time, your body replaces the pint. Later, if you should lose blood in an accident or operation, you can use the stored blood to recover the loss quickly.) Before powers can be stored, a receptacle must be prepared. Two types of containers are appropriate: a vessel prepared with empower (a metapsionic science), or a valuable gem that has been specially prepared using the receptacle power. **Empowered Vessel.** Any vessel can serve as a receptacle for psionic energy if it is empowered first. The psionicist must perform the initial preparation and final sealing described earlier under "empower." He does not do anything further;

the vessel needs no additional powers. It can hold PSPs equal to his psionic potential, multiplied by his experience level. **Valuable Gem.** A gem can hold 1 PSP for every 100 gold pieces of its worth, rounded down. For example, a gem worth 650 gold pieces can hold 6 PSPs, and a gem worth 1,000 gold pieces can hold 10 PSPs. The gem still requires preparation, however. To do this, the psionicist must slowly fill the gem with PSPs-1 per turn-until the gem reaches maximum capacity ($^1/_{100}$ of its value). The psionicist can do nothing else while filling the gem. When the task is complete, the psionicist must make a power check. If he fails, only one-half of the gem's capacity is useable. **Storing Points.** Using his receptacle power, he can automatically place I PSP into a properly prepared container per round. When he is finished, the psionicist must make a receptacle power check. If it succeeds, all is well; if it fails, only half the points he expended are stored in the receptacle, while the rest are merely spent. **Using Stored Points.** The psionicist can retrieve stored points automatically. The receptacle must be in contact with his flesh. He can never retrieve more points than the receptacle currently holds, *nor can he retrieve so many that it raises his current psionic point total above his maximum.* No matter how many receptacles he has, a psionicist can never store more PSPs than his maximum total. (For example, if his usual maximum is 100 PSPs, he can store no more than 100.) Only the psionicist who placed the points in the item can use them. The danger of this power is receptacle loss. If the receptacle is damaged or destroyed, its contents (PSPs) are instantly subtracted from the psionicist's total possible points. This loss is temporary, but until the psionicist is once again back up to his full PSP score he recovers PSPs only half as fast as normal.
***Power Score:*** No other effect.
***20:*** No other effect.

| **Retrospection** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 120 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 10 |
| Area of Effect: | personal |
| Prerequisites: | convergence, 7th level |

Retrospection is a kind of psionic seance. It allows psionicists to delve into the past and locate memories that have been loosed from other minds. A psionicist must join at least two other psionicists in a convergence before he can use this power. He-or one of the other participants in the convergence-then poses a question regarding a specific event in the past. To find the answer, the psionicist must make a successful power check. When retrospection succeeds, the characters tap into a universal, pervasive memory. They have access to any information that ever existed in anyone's memory regarding the incident they are investigating. The amount of detail that comes to mind depends on power check results:

| | |
|---|---|
| 1 | extremely vague and fragmentary |
| 2 | vague or incomplete |
| 3-5 | complete but not very specific |

| | |
|---|---|
| 6+ | reasonably complete and specific |

Memories bear the mark of the personalities who created them. The DM should role-play the memories accordingly, not just recite information. If the psionicists' alignments differ significantly from the memories' alignments, reaction rolls are in order. Memories can be polite and helpful, or they can be cantankerous and downright rude. Memories which have lain undisturbed for centuries may be angered by the intrusion, or they may be delighted for the chance to air themselves out and bring the truth to light.

***Power Score:*** No other effect.

***20:*** No other effect.

| **Splice** | |
|---|---|
| Power Score: | Int-(2 x # spliced) |
| Initial Cost: | 5 x # spliced |
| Maintenance Cost: | # spliced/round |
| Range: | 0 |
| Preparation Time: | # spliced |
| Area of Effect: | personal |
| Prerequisites: | 2 + level (see below) |

Splicing psionic powers is tremendously useful. In effect, the psionicist is splicing to-gether two or more separate powers into one psionic release. This is very difficult, however, and it requires great precision. The more powers the psionicist attempts to splice, the more likely he is to fail. First, the character must make a successful splice check. His power score is decreased 2 points for each power being spliced. For example, if he is splicing two powers, his score equals Intelligence -4. The initial cost of this endeavor is 5 PSPs for every power being spliced. If the character passes this first power check, he must then initiate each spliced power in succession-without interruption. He does not have to make a separate splicing check for each of these powers, but he still pays their initial costs. Furthermore, each spliced power has absolutely no effect at this time. Once all the powers have been initiated, the psionicist must make a second splice check. (His power score is still reduced two points for each power being spliced.) If he fails this check, all his efforts are lost; the PSPs he spent are gone, and none of the powers works. If the power check succeeds, the psionicist can maintain the splice by expending I PSP per spliced power per round. At any later time (during which the splice has been maintained), the psionicist can unleash the spliced series of powers. In effect, he performs all of the spliced powers simultaneously-or with split second separations if desired. Success is not automatic. The psionicist must perform the individual power checks for these spliced powers when he releases them. He does not have to pay their initial costs again, however. The maximum number of powers that a psionicist can splice equals his experience level. For example, a 2nd level psionicist can splice up to two powers, and a 3rd level psionicist can splice up to three. A complex splice is a long shot at best, however. As noted above, a psionicist's power score decreases two points for every power he attempts to splice. That means a character who attempts a five-power splice has a score of Int -10. Many psionicists use splice to combine just two powers: contact, and another power that requires contact. This is the most common combination.

***Power Score:*** The character receives a + 2 bonus on power checks when unleashing the spliced

powers.
***20:*** No other effect.

| Stasis Field | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 20 |
| Maintenance Cost: | 20/round or I/round |
| Range: | 0 |
| Preparation Time: | 3 |
| Area of Effect: | max. 1 yard/level |
| Prerequisites: | 8th level |

A stasis field is a region in which time slows to a crawl and energy is reduced to a meaningless fizzle. When created, the stasis field surrounds the psionicist like a bubble. It can have any radius he desires, up to a maximum of I yard per each level of his experience. For example, a 10th level psionicist can create a field with up to a 10-yard radius. From the outside, the stasis field looks like a slightly shimmering, completely smooth silver globe. When something presses against the edge, it gives slight resistance, but the object passes through. Inside the field, all is murky and dim. Light filters through from the outside, but it turns gray. A light source inside is only about one-fourth as bright as usual. Time is 60 times slower in a stasis field. That is, for every round (or minute) that passes inside, an hour elapses outside. (This dilation is not apparent to those inside the field, however. ) Each round the psionicist spends inside, he must pay 20 points to maintain the stasis field. Energy and motion also change inside a stasis field. Energy magicks-e.g., fireball, magic missile, cone of cold, and flamestrike-have no effect; the spells appear and then fizzle in midair. Movement is slowed down visibly, and swift objects are affected more than slow objects. Character and creature movement rates are halved. A dagger can easily be pushed through someone, but a lightninglike slash with a sword is slowed to a graceful arc, almost like slow motion. A missile weapon is useless; the missile drifts lazily through the air, only to bounce off an unwary target or be dodged by a target who's looking. If the psionicist keeps the stasis field centered on himself, it moves with him. He can transfer the focal point of the field to anything he touches, however. Then he can move freely within the field, or even leave it. If he does leave the field, the cost to maintain it is reduced to I point per round. (From one perspective, this is actually an increase in cost, since it equals 60 points for every round which passes inside. Remember, one hour outside equals one round inside.) While outside the field, the psionicist can roam up to 100 yards from it and still maintain the field. However, he cannot move the field from the outside. To move it again, he must re-enter it.
***Power Score:*** No other effect.
***20:*** The psionicist pays the full initial PSP cost.

| Wrench | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 15 |
| Maintenance Cost: | 8/round |
| Range: | 30 yards |

| | |
|---|---|
| Preparation Time: | 0 |
| Area of Effect: | 1 undead |
| Prerequisites: | none |

This power affects only creatures which exist simultaneously on the Prime Material and another plane of existence. This includes most undead in the MONSTROUS COMPENDIUM volumes. It specifically excludes gods, demigods, and avatars. When such a creature is wrenched, it is forced entirely into one plane or the other, at the psionicist's option. If the creature is forced out of the Prime Material plane, it is trapped in the other plane for 2d6 turns. It can return to the Prime Material when that time has elapsed. If the creature is wrenched entirely into the Prime Material plane, it is trapped only as long as the psionicist continues paying the maintenance cost. As soon as he stops, the creature's dual existence is immediately reestablished. Except where contradicted by the monster's description, a creature wrenched onto the Prime Material plane suffers any or all of the following effects, at the DMs option:

- Its armor class is penalized ld6 points.
- Undead lose the ability to drain life energy.
- Magical pluses required to hit the creature are reduced by 1.
- The creature is killed permanently if it loses all of its hit points.

The DM should impose any other penalties which seem appropriate, considering the creature and the other plane involved.

***Power Score:*** The creature is momentarily dazed. It has a -2 initiative penalty in the first subsequent round.

***20:*** No other effect.

*Dungeon Master® Guide Rules Supplement*

# The Complete Book of Necromancers

***By Steve Kurtz***

## Table of Contents

**Introduction**
How to Use This Book
Necromancy and the PC
What You Will Need
**Chapter 1: Necromancers**
***The Standard Necromancer***
- Ability Scores
- Race
- Experience Level Advancement
- Spells
- Spell Restrictions
- Magic Item Restrictions
- Proficiencies

**Chapter 6: The Priest Sphere**
***New Priest Spells***
- 1st-Level Spells
- 2nd-Level Spells
- 3rd-Level Spells
- 4th-Level Spells
- 5th-Level Spells
- 6th-Level Spells
- 7th-Level Spells

**Chapter 7: Allies**
***Apprentices***
***Henchmen***
***Familiars***

***New Necromancer Wizard Kits***
Archetypal Necromancer
Anatomist
Deathslayer
Philosopher
Undead Master
***Other Necromancer Kits***
Witch
Ghul Lord
***New Nonweapon Proficiencies***
Anatomy
Necrology
Netherworld Knowledge
Spirit Lore
Venom Handling
**Chapter 2: Dark Gifts**
***Dual-Classed Characters***
Fighter/Necromancer
Thief / Necromancer
Cleric/Necromancer
Psionicist/Necromancer
***Wild Talents***
***Vile Pacts and Dark Gifts***
***Nonhuman Necromancers***
Humanoid Necromancers
Drow Necromancers
Draconic Necromancers
Githyanki Necromancers
***Sorcerers Immortal***
Undead Necromancers and Death Priests
**Chapter 3: The Price**
***The Social Stigma***
***Punishments and Handicaps***
Physical Deformity
Bodily Afflictions
Insanity and Madness
Unholy Compulsions
***Paid In Full***
**Chapter 4: The Dark Art**
***Spell Selection for the Wizard***
***Undying Minions***
***Secret Societies***
The Cult of Worms
The Scabrous Society
The Cult of Pain
The Anatomical Academy
**Chapter 8: Tools of the Trade**
***Poisons and Potions***
***Magic Items***
***Necromantic Lore***
**Chapter 9: The Campaign**
***Isle of the Necromancer Kings***
The Twin Villages of Misbahd and Jinutt
The Iron Spires of Ereshkigal
The Colossus of Uruk
The Tower of Pizentios
Capital of the Necromancer Kings
Uruk's Summer Palace
The Garden of Eternity
***Adventure Hooks***
The Pirate Necromancers
Bhakau's Return
The Scourge of Thasmudyan
Lich Hunting
***Necrophiles***
Dr. Ellandra Tolbert
Kazerabet(Zaribel)
Master Pizentios
Sarzec the Broken
Talib the Magnificent
Vermissa the Undying
Mistress Yola
**Appendix 1: Common Spells for Necromancers**
**Appendix 2: Wizard Spells In the School of Necromancy**
**Appendix 3: Priest Spells In the Necromantic Sphere**
**Appendix 4: Master Index of Necromantic Priest and Wizard Spells**

Criminal or Black Necromancy
Gray or Neutral Necromancy
Benign or White Necromancy
***New Wizard Spells***
1st-Level Spells
2nd-Level Spells
3rd-Level Spells
4th-Level Spells
5th-Level Spells
6th-Level Spells
7th-Level Spells
8th-Level Spells
9th-Level Spells
**Chapter 5: Death Priests**
***Necromantic Priesthoods***
The God of the Dead
The Goddess of Murder
The God of Pestilence
The God of Suffering
The Lord of Undead
***Other Priestly Resources***

**List of Tables**

1: Pregenerated Ability Scores for Necromancers
2: Extended Necromancer Advancement Spells, and Level Improvements
3: Wild Psionic Devotions for Necromancers
4: Wild Psionic Sciences for Necromancers
5: Special Powers for Necromancers
6: Psionic Progression for Githyanki Necromancers
7: Assorted Physical Deformities
8: Disease Check Modifiers
9: Unholy Compulsions and Curses
10: Forbidden Spells of Black Necromancy
11: Spirit Summoning Modifiers
12: Extended Death Priest Advancement, Spells, and Level Improvements

# Introduction

*The ruins of Ysawis were cloaked by the jungle when I rediscovered the broken city walls with my first husband, Sumulael. That was in the early years of our marriage, when my devotion to the Forbidden Arts ran strong with the careless impetuousness of youth. We had been led to the city by disgruntled spirits, in search of a legendary talisman. Even with our ghostly guides, the ruins of the vine-choked city were extensive, and the exact location of our prize eluded us.*

*At first, when my husband and I beheld the bones of the city's former citizens, we amused ourselves by raising the moldering remains to attend us as ghastly servants, skeletal porters, and shadowy messengers. When the quest for the talisman yielded nothing immediately, we animated more of the city's dead to expand the search. Before long, our new slaves uncovered royal cemeteries where the kings and queens of Ysawis had been buried for centuries before the city's disastrous end. I remember quite vividly my delight at this discovery. With a wave of my hand, I cracked open the tombs' monolithic stone doors, while Sumulael, cackling with wicked glee, called forth the city's ancient royalty, commanding even the oldest of padishahs to stumble forth, wrapped in their worm-eaten shrouds or burial robes, from the corrupted depths of the crypts and into our eternal slavery. And while the dead gave up their age-corrupted treasures, none carried my coveted talisman.*

*Thus Sumulael and I raised up the inhabitants of Ysawis from their crypts and tombs to serve us. We lived there like exiled royalty for many years, until my husband's insanity and revolting habits grew intolerable. I ended up killing the monster, eventually, with the help of adventurers who had discovered my secluded city in the wilderness. That is how I met my second husband, Talib. He was one of the explorers who assisted me in destroying Sumulael and helped me find my long-sought talisman.*

*I soon came to love Talib, after a fashion. I taught him all of my hidden secrets. We were happy together in Ysawis, rebuilding the city to its former glory. But in the end, that marriage also failed, for 1 found that you cannot practice the Art when you are happy, nor advance in its study if you are content. So I left behind my beloved, to write this book in solitude and focus my mind on the difficult road ahead. Come join me on this path of knowledge and self-discovery. Let us explore the Art of Necromancy together.*

-Foreword to Kazerabet's *Art of Necromancy*

Death is the final arbiter. It claims everyone, regardless of class or station, fame or notoriety, gentleness or depravity. In some cultures, death is regarded as the threshold to an elevated spiritual existence or as the doorway leading to another mortal life in a never-ending cycle of reincarnations In other societies, death is believed to be the ultimate ending of awareness, marking complete annihilation and utter oblivion.

Since ancient times, scholars and priests have devoted their entire lives to studying, explaining, and revering the final chapter in human life. For some individuals, however, death has become an obsession, a source of magical power, or even an object of religious adoration. These beings are necromancers, and they are universally feared and loathed as the purveyors of unremitting evil.

According to popular myth, the necromancer practices vile and forbidden arts. He is the macabre sorcerer who roots about in graveyards, searching out moldering components for his obscene spells. She is the evil priestess who calls upon restless, tormented spirits of the long-deceased, seeking their immortal arcana. In their dark and secluded lairs, the mute undead, the monstrous familiar, and the ravening fiend serve the necromancers in their ghoulish endeavors. In the literature of fantasy and horror, the necromancer is usually portrayed as the consummate villain.

Yet there is another side to the necromancer and the death priest. Consider the compassionate ghost-hunter who lays tormented undead to rest, or the dutiful priest of the Dead who helps guide spirits on their eternal voyage to the netherworld. Necromancers can also have a constructive and positive role in the campaign.

This book is devoted to exploring both aspects of necromancers and death priests. We explore their varied roles as not only villains, but also as healers, mentors, and patrons. These spellcasters are among the most complex, versatile, and powerful characters available in the ADVANCED DUNGEONS & DRAGONS® game. This tome reveals all of their secrets and powers so that you - as the Dungeon Master (DM) - can bring these master wizards and priests to life for the players under your care.

## How to Use this Book

*The Complete Book of Necromancers* has been designed for DMs who wish to create complex and memorable spellcasting foes for their unique campaigns. The book is divided into three main sections, each of which the DM may read separately, in any order. The chapters within each individual section should be taken in sequence. They contain introductory material (such as Kazerabet's foreword) which may be read to players, serve as inspiration for adventure hooks, or used in any other way which helps add a further dimension of realism to the campaign.

The first four chapters are devoted to the necromancer nonplayer character (NPC). Chapter One discusses the rules for creating a basic wizard necromancer as a separate and independent sub-class, starting from the basics outlined in the *Player's Handbook*. It explores five new kits - the Archetype, Anatomist, Deathslayer, Philosopher, and Undead Master - each with a different role for the campaign. Chapter Two extends the powers of a necromancer by adding dual classes, psionic Wild Talents, and special powers from the patronage of dark gods. We also discuss some undead or monstrous variants of the necromancer to challenge the most powerful (or foolhardy) groups of adventurers. Chapter Three discusses some of the harsh sacrifices that necromancers must make if they wish to pursue the Forbidden Arts. In Chapter Four, we greatly expand the school of Necromancy, discussing both the beneficial and harmful aspects of the Art.

The next section is devoted to the death priest: the clerical equivalent of the necromancer, who has been given far too little attention in the past. Unlike the wizard, who studies death, the death priest fervently worships it. These clerics belong to distinct priesthoods, each with unique roles, granted powers, spells, and goals for the campaign. Chapter Five explores five of these necromantic priesthoods who serve the Gods of the Dead, Murder, Pestilence, Suffering, and Undead. Chapter Six expands the necromantic priest sphere, providing many more spells for the distinctive necromantic priesthoods.

The final section of the book builds the necromancer and death priest into leaders and active participants in the campaign. Chapter Seven fleshes out a necromancer's entourage with students, henchmen, familiars, and undead minions. Chapter Eight discusses their primary tools, including deadly poisons, necromantic magical items, and books of forbidden lore. Chapter Nine details the Isle of the Necromancer Kings, providing the DM with adventure hooks and introductory scenarios for a campaign. This chapter also includes the descriptions of seven detailed NPCs who can be used as examples and easily dropped into an existing campaign. Finally, the Appendices contain tables, indexes, and a reference list to help the DM gather necromantic material together from other sources.

## Necromancy and the PC

In general, the material presented in this tome is for the Dungeon Master's eyes only. The necromancer put forward herein is a maverick - he or she operates by a set of nasty rules that are completely beyond the realm of most "normal" player characters. These rules must be kept strictly hidden from the players, even if they are adamant about portraying a necromancer.

The most obvious hindrance for a PC necromancer is alignment. While some practitioners of the Art have a scrupulous code of ethics, the number of benevolent necromancers is deplorably rare. At the very least, the majority of necromancers should be considered rigidly neutral. The large remainder of necromantic practitioners are profoundly evil.

Necromancer PCs will face moral challenges from the onset of their career, starting probably with their mentor. Consider Talib, an example of a good and heroic necromancer (highlighted in a number of the chapter introductions and presented in detail in Chapter Nine). Before poor Talib the Apprentice was permitted to advance to 1st level, his Master forced him through a brutal initiation by drugging his food, tying him down to a cold stone altar, and sacrificing him to the Goddess of Murder. Using a *ring of spell storing* from an allied death priest, the Master then raised Talib back from the dead (no hard feelings) to see if his potential pupil had the requisite strength of body and mind to practice necromancy. Since he survived the ordeal, Talib only lost a point of Constitution, the first small price for the privilege of practicing the Art.

Obviously, the young Talib fled his Master at the earliest opportunity. However, whenever he needed to train after gaining levels or to learn new spells, the necromancers he sought out were sometimes more black-hearted than his original Master, and they always demanded a terrible price (moral, physical, or financial) for his continuing education. Since Talib retained his initially lofty ideals, he was usually forced to train himself, requiring much greater expense and time than his other ad venturing compatriots. As the DM, you should make certain that a necromancer PC will confront as many difficult obstacles as possible during his or her own career.

A necromancer PC that reaches 9th level becomes a potential threat to game balance once he or she gains the ability to cast animate dead. Scary enough in the hands of NPCs, this spell can be a monumental inconvenience to the DM in the hands of a crafty player character. On the way out to a dungeon outside a village, for instance, a necromancer PC might raid the local cemetery for a few nights, raising a few "kamikaze" hirelings. The other PCs in the group, if they are smart, will wait patiently while the necromancer completes these preparations.

Afterward, half of the adventure will be reduced to the necromancer sending minions into the dungeon. "Zombie, open that door! Zombie, open that chest! Zombie, walk into that room! Zombie, walk across that checkered and suspicious floor!" Though this scenario can be somewhat morbidly amusing for an evening or two, over an entire series of adventures, it can completely ruin a campaign's carefully cultivated atmosphere of danger, mystery, and suspense. The animated zombies can also put the party thief out of business because of their unfailing ability to detect and harmlessly disarm traps. So what if a zombie takes a ballista bolt in its chest while opening a treasure-filled coffer? The industrious necromancer PC will have plenty of zombies on hand to thwart the array of traps in a dungeon.

Necromancer PCs are already powerful enough (especially at high level) given the basics from the *Player's Handbook*. They have no need of the additional powers and abilities described in this book. Since a properly played necromancer PC can significantly unbalance a campaign, only experienced DMs should consider allowing them the abilities outlined in Chapter Two. At the same time, necromancer PCs are completely subject to the dangers of the Art. Feel free to impose any of the penalties in Chapter Three to keep a necromancer PC from monopolizing every gaming session.

Keep in mind that you - as DM - must choose an appropriate power and penalties for the character, taking into account game balance and role-playing potential before making a final decision. In general, the DM should try to keep as much of this information from the players as possible (especially necromancers' players). If anything, the general aura of mystery, the anticipation of future power, and the dread of the next personal price of increased ability will add a more exciting ambiance to the campaign. , Provided necromancer PCs can be kept in check by an alert DM, they unquestionably add an interesting element of moral tension to the role-playing. Because of their troubling background, questionable practices, and ofttimes dubious sanity, necromancer PCs can be considered to be the roguish equivalent of the common wizard. Since his or her Art will be considered either repugnant (at the very least) or criminal (more likely) by the general populace, the necromancer has the "black sheep" appeal of the outcast or outlaw. Despite this quasi-romantic allure, however, the necromancer deals in cold death, pure and simple The DM should delight in reminding the player of this rather unglamorous fact whenever necessary.

## What You Will Need

This handbook is a supplement for the AD&D® role-playing game, and it assumes that the DM has the *DUNGEON MASTER® Guide (DMG)*, the *Player's Handbook (PHB)*, and the either the first two *MONSTROUS COMPENDIUM®* appendices *(MC)* or the hardcover *Monstrous Manual* tome *(MM)*. Given the limited space and the tremendous breadth of the topic involved, it has not been possible to include every single necromantic kit, priesthood, spell, and magical item ever printed by TSR in this product. It would be convenient if the DM had access to the *Tome of Magic (TOM), Complete Sha'ir's Handbook (SH), Complete Wizard's Handbook (WH), Complete Priest's Handbook (CPrH), Arabian Adventures (AA)*, and the *FORGOTTEN REALM® Adventures (FOR)* hardcover, but these resources should not prove strictly necessary. In this book, necromantic spells and magical items from these sources will be designated by the appropriate abbreviation. If the DM does not have access to these resources, feel free to substitute another item or spell.

# Chapter 1: Necromancers

*Master P., My Lord,*
*M. spotted our unwelcome visitors, and 1 am writing to report our first confrontation. By the time this message reaches you, I will have raised up more bodies for another attempt. With M. to guide me, I expect no difficulty in locating them again.*
*The first battle started auspiciously, exactly as you predicted. K. and I first eliminated their battle mage with lightning and mage bolts, while the zombies lurched towards the massed fighters. (There must be some way of enhancing their speed - they make unwieldy tools in battle!) K. and I hurled more mage bolts and dead-hands at their formation, dropping three warriors.*
*But Captain 0. had a handglyph - he must have stolen it from B.'s library - and with it he crushed half the bodies in a cone of lightning. That was the turning point. His priestess T. - the same one who caused my current affliction - managed to place a hold on K., so he could no longer reinforce my assaults. While I was still attempting a riposte, she disrupted all of the wordings I had woven with K. to protect us.*
*The moment of decision had passed. 0. and his remaining warriors dispatched the rest of the bodies, then turned on me. In desperation, I called down the mist of death with your scroll, and though I gladly report it claimed T.'s life, it could not stop them all. My spells exhausted, stripped of my defenses, I drank the potion and withdrew. Although I managed to recover my grimoire and funds, I could not save K., the incompetent. I doubt 0. will spare him.*
*The battle was not a complete loss, however: M. has confirmed that we eliminated all their spellcasters and four of their warriors. (He brought me T.'s eye as a token!) Only 0. and a handful of his party remain. I would like your permission to seek them out once again. With what you left me. I can still raise up more bodies to assist me. I eagerly await your decision.*
*Your Most Humble and Obedient Servant,*
*S., the Broken*

As Sarzec's letter demonstrates, necromancer NPCs can make ideal nemeses for a party of adventurers. In addition to their role as villains - a capacity in which they perform most admirably - they also have the potential to serve as unique and memorable employers, mentors, or allies during the campaign. This chapter explores both the common attributes and diverse professions of these specialist wizards.
One of the main purposes of this book is to facilitate NPC generation for the DM. To this end, we begin by summarizing the general requirements and abilities of wizards specializing in the "Art" of necromancy. (Detractors of this school more commonly refer to necromancy as the "Dark," "Black," or "Forbidden Arts.") After establishing the necromancers' common attributes, we turn to the varied roles of the specialists in the campaign. These diverse professions are encapsulated into separate kits which serve as role-playing aids for the DM and player alike. Finally, we conclude with a few new nonweapon proficiencies appropriate for necromancers.

## The Standard Necromancer

The necromancer shares many attributes in common with unspecialized mages as described in the PHB. As with all characters, the DM must first establish the specialist's ability scores, race, experience, spell abilities, and proficiencies. These game statistics provide the most basic "skeletal" outline of the wizard, which will be expanded throughout this book.

**Ability Scores**

Not all wizards can become necromancers. Masters of the Dark Art must possess utmost self-control and mental stability in order to successfully control the powerful energies at their disposal. Frequent trafficking with the spirits of the dead and more powerful creatures from the Lower Planes can exact a terrible price on the sanity of these mages; weak-willed individuals have little chance of emerging from such encounters with their mental faculties unimpaired. As we shall see in Chapter Three, insanity and madness are of paramount concern, even for the most wise and experienced practitioners of the Dark Art.

Consequently, only wizards with a minimum Wisdom of 16 may specialize in necromancy. As with most mages, they must also have a minimum Intelligence of 9 (their prime requisite). The character's ability scores may be determined by one of the six methods outlined in the PHB (page 13), though not all procedures are equally likely to generate a character with the requisite high wisdom and intelligence. Methods I and III are least likely to generate a necromancer character (roughly a 2-4% chance, based on random generations of 1000 or more sets of ability scores). The chances improve somewhat for Methods II, IV, and V (roughly 8%, 11%, and 15% chance, respectively). Only Method VI offers about 90-100% certainty.

There are a few different strategies that the DM can use when generating ability scores for an NPC. The quickest method is for the DM to simply make up the ability scores. The DM can also roll up the scores using the same method chosen for the adventurers in the campaign. These approaches are best-suited for low-level henchmen, hirelings, or other individuals of minor importance in the long-term campaign.

However, if a necromancer is going to have a pivotal role during an extended series of adventures, the DM may want to tailor the ability scores to properly complement or challenge the party of player characters. In a heroic campaign, where the adventurers themselves have unusually high ability scores, should not their archnemesis be similarly endowed? One might argue that the party's archnemesis should have superior ability scores in most respects to those of the typical PC. Where is the challenge in fighting a weak enemy? The party will derive a much greater sense of accomplishment in triumphing over a superior foe than an inferior one.

Given the "superior nemesis makes for better gaming" theory, the DM may use the following alternative dice-rolling methods to generate ability scores for necromancer wizards (in addition to Methods I- VI of the *PHB*):

*Method VII*: This method is a quick way to generate standard statistics for an NPC. Each ability score starts with 10, modified by the roll of ld8 (each score thus varies from 11 to 18, with an average ability score around 14-15). The DM can speedily generate six ability scores and rearrange them to best compliment the particular character. This method insures about a 75% chance for randomly generating a necromancer NPC.

*Method VIII*: As Method VII, except give the necromancer a +1 bonus on Intelligence and +1 bonus on Wisdom (18 maximum in each score). With these bonuses, the probability increases to roughly the same as Method VI (90-100%).

To avoid overbalancing the campaign with countless "super villains," the DM should use these last two methods sparingly and only for NPCs (player characters should be restricted to Methods I-VI). For most "average" NPC wizards, the DM should simply make up the score? or use Methods I-V1 from the PHB. Examples of ability scores generated using each of these methods are presented in Table 1 (on page 10). The DM is encouraged to use these pregenerated sets to expedite character creation, either by choosing or random die roll (d6). This table may also be used for random player character generation, though only with the DM's permission (the DM should choose the appropriate Method (I-VI) for the campaign).

**Table 1:** Pregenerated Ability Scores for Necromancer Wizards by Methods (I-VI) from the *Player's Handbook* (page 13).

| **Method I** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 13 | 10 | 17 | 11 | 10 | 5 |
| 2. | 10 | 9 | 16 | 10 | 11 | 13 |

| **Method IV** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 12 | 16 | 17 | 14 | 14 | 12 |
| 2. | 14 | 17 | 16 | 14 | 15 | 14 |

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | 5 | 9 | 16 | 14 | 16 | 10 |
| 4. | 7 | 12 | 16 | 13 | 16 | 12 |
| 5. | 15 | 9 | 16 | 6 | 9 | 7 |
| 6. | 7 | 11 | 16 | 13 | 15 | 13 |

| | | | | | | |
|---|---|---|---|---|---|---|
| 3. | 10 | 17 | 16 | 14 | 14 | 12 |
| 4. | 11 | 16 | 16 | 12 | 12 | 12 |
| 5. | 13 | 18 | 16 | 13 | 15 | 13 |
| 6. | 11 | 16 | 17 | 15 | 13 | 11 |

| **Method II** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 17 | 12 | 17 | 12 | 11 | 12 |
| 2. | 13 | 10 | 16 | 14 | 12 | 12 |
| 3. | 12 | 16 | 16 | 7 | 13 | 12 |
| 4. | 11 | 14 | 16 | 11 | 12 | 13 |
| 5. | 8 | 10 | 18 | 12 | 8 | 9 |
| 6. | 7 | 17 | 16 | 13 | 10 | 11 |

| **Method V** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 9 | 17 | 16 | 11 | 14 | 11 |
| 2. | 10 | 17 | 16 | 15 | 16 | 13 |
| 3. | 10 | 18 | 16 | 11 | 13 | 10 |
| 4. | 12 | 16 | 16 | 14 | 15 | 14 |
| 5. | 12 | 17 | 16 | 14 | 14 | 13 |
| 6. | 11 | 17 | 17 | 13 | 15 | 12 |

| **Method III** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 6 | 17 | 16 | 9 | 10 | 6 |
| 2. | 10 | 17 | 16 | 13 | 14 | 10 |
| 3. | 9 | 17 | 16 | 13 | 15 | 11 |
| 4. | 6 | 17 | 16 | 11 | 14 | 9 |
| 5. | 5 | 16 | 16 | 9 | 13 | 6 |
| 6. | 8 | 18 | 16 | 10 | 11 | 13 |

| **Method VI** | **Str** | **Int** | **Wis** | **Dex** | **Con** | **Cha** |
|---|---|---|---|---|---|---|
| 1. | 8 | 17 | 16 | 10 | 16 | 8 |
| 2. | 8 | 18 | 16 | 17 | 8 | 8 |
| 3. | 9 | 13 | 16 | 11 | 12 | 10 |
| 4. | 8 | 14 | 16 | 16 | 11 | 8 |
| 5. | 9 | 14 | 16 | 15 | 10 | 11 |
| 6. | 10 | 15 | 17 | 8 | 15 | 9 |

**Race**

As noted in the *PHB*, of those races open to player characters, only humans may normally specialize in the Dark Art. Compared with other demihuman races, humans have by far the shortest life span and are hence more likely to be concerned (or in the case of necromancers, obsessed) with death. Indeed, many human societies have revolved around a preoccupation with death and the afterlife, and one might argue that the study of necromancy was instigated by certain humans to help prolong their own lives. Other demihuman races, such as the elves and dwarves, have such long lives that death (of natural causes, at least) is usually a much less pressing concern. However, as we shall see in Chapter Two, this rule can be relaxed for some of the monster races when creating powerful NPCs to challenge a high-level party.

**Experience Level Advancement**

Necromancers advance in levels like most specialists, as outlined in the *PHB*. While most player characters could spend their entire careers reaching 20th level, NPC wizards created by the DM can be far more powerful. Unlike many other character classes, the spell abilities of mages continue to progress beyond 20th level, and wizards continue to gain 1 hp per level advanced after 20th.
An expanded level advancement table is provided in Table 2. As with most wizards, necromancers with an intelligence of 16 or greater gain a 10% bonus on experience points, though this is normally not of much concern for the NPC, whose experience is designated by the DM.

**Table 2:** Extended Necromancer (Wizard) Advancement, Spells, and Level Improvements.

| Level | Experience | Hit Dice (d4) | THACO | Spell Levels | | | | | | | | | Proficiencies | | Saving Throws | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | NW | W | PPDM | RSW | PP | BW | S |
| 1 | 0 | 1 | 20 | 2 | - | - | - | - | - | - | - | - | 4 | 1 | 14 | 11 | 13 | 15 | 12 |
| 2 | 2,500 | 2 | 20 | 3 | - | - | - | - | - | - | - | - | 4 | 1 | 14 | 11 | 13 | 15 | 12 |
| 3 | 5,000 | 3 | 20 | 3 | 2 | - | - | - | - | - | - | - | 5 | 1 | 14 | 11 | 13 | 15 | 12 |
| 4 | 10,000 | 4 | 19 | 4 | 3 | - | - | - | - | - | - | - | 5 | 1 | 14 | 11 | 13 | 15 | 12 |
| 5 | 20,000 | 5 | 19 | 5 | 3 | 2 | - | - | - | - | - | - | 5 | 1 | 14 | 11 | 13 | 15 | 12 |
| 6 | 40,000 | 6 | 19 | 5 | 3 | 3 | - | - | - | - | - | - | 6 | 2 | 13 | 9 | 11 | 13 | 10 |
| 7 | 60,000 | 7 | 18 | 5 | 4 | 3 | 2 | - | - | - | - | - | 6 | 2 | 13 | 9 | 11 | 13 | 10 |
| 8 | 90,000 | 8 | 18 | 5 | 4 | 4 | 3 | - | - | - | - | - | 6 | 2 | 13 | 9 | 11 | 13 | 10 |
| 9 | 135,000 | 9 | 18 | 5 | 4 | 4 | 3 | 2 | - | - | - | - | 7 | 2 | 13 | 9 | 11 | 13 | 10 |
| 10 | 250,000 | 10 | 17 | 5 | 5 | 4 | 3 | 3 | - | - | - | - | 7 | 2 | 13 | 9 | 11 | 13 | 10 |
| 11 | 375,000 | 10+1 | 17 | 5 | 5 | 5 | 4 | 4 | - | - | - | - | 7 | 2 | 11 | 7 | 9 | 11 | 8 |
| 12 | 750,000 | 10+2 | 17 | 5 | 5 | 5 | 5 | 5 | 2 | - | - | - | 8 | 3 | 11 | 7 | 9 | 11 | 8 |
| 13 | 1,125,000 | 10+3 | 16 | 6 | 6 | 6 | 5 | 5 | 3 | - | - | - | 8 | 3 | 11 | 7 | 9 | 11 | 8 |
| 14 | 1,500,000 | 10+4 | 16 | 6 | 6 | 6 | 5 | 5 | 3 | 2 | - | - | 8 | 3 | 11 | 7 | 9 | 11 | 8 |
| 15 | 1,875,000 | 10+5 | 16 | 6 | 6 | 6 | 6 | 6 | 3 | 2 | - | - | 9 | 3 | 11 | 7 | 9 | 11 | 8 |
| 16 | 2,250,000 | 10+6 | 15 | 6 | 6 | 6 | 6 | 6 | 4 | 3 | 2 | - | 9 | 3 | 10 | 5 | 7 | 9 | 6 |
| 17 | 2,625,000 | 10+7 | 15 | 6 | 6 | 6 | 6 | 6 | 4 | 4 | 3 | - | 9 | 3 | 10 | 5 | 7 | 9 | 6 |
| 18 | 3,000,000 | 10+8 | 15 | 6 | 6 | 6 | 6 | 6 | 4 | 4 | 3 | 2 | 10 | 4 | 10 | 5 | 7 | 9 | 6 |
| 19 | 3,375,000 | 10+9 | 14 | 6 | 6 | 6 | 6 | 6 | 4 | 4 | 4 | 2 | 10 | 4 | 10 | 5 | 7 | 9 | 6 |
| 20 | 3,750,000 | 10+10 | 14 | 6 | 6 | 6 | 6 | 6 | 5 | 4 | 4 | 3 | 10 | 4 | 10 | 5 | 7 | 9 | 6 |
| 21 | 4,125,000 | 10+11 | 14 | 6 | 6 | 6 | 6 | 6 | 5 | 5 | 5 | 3 | 11 | 4 | 8 | 3 | 5 | 7 | 4 |
| 22 | 4,500,000 | 10+12 | 14 | 6 | 6 | 6 | 6 | 6 | 6 | 5 | 5 | 4 | 11 | 4 | 8 | 3 | 5 | 7 | 4 |
| 23 | 4,875,000 | 10+13 | 14 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 4 | 11 | 4 | 8 | 3 | 5 | 7 | 4 |
| 24 | 5,250,000 | 10+14 | 14 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 5 | 12 | 5 | 8 | 3 | 5 | 7 | 4 |
| 25 | 5,625,000 | 10+15 | 14 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 12 | 5 | 8 | 3 | 5 | 7 | 4 |
| 26 | 6,000,000 | 10+16 | 14 | 7 | 7 | 7 | 7 | 6 | 6 | 6 | 6 | 6 | 12 | 5 | 7 | 3 | 5 | 7 | 4 |
| 27 | 6,375,000 | 10+17 | 14 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 6 | 6 | 13 | 5 | 7 | 3 | 5 | 7 | 4 |
| 28 | 6,750,000 | 10+18 | 14 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 13 | 5 | 7 | 3 | 5 | 7 | 4 |
| 29 | 7,125,000 | 10+19 | 14 | 8 | 8 | 8 | 8 | 7 | 7 | 7 | 7 | 7 | 13 | 5 | 7 | 3 | 5 | 7 | 4 |
| 30 | 7,500,000 | 10+20 | 14 | 8 | 8 | 8 | 8 | 8 | 8 | 8 | 7 | 7 | 14 | 6 | 7 | 3 | 5 | 7 | 4 |

**NW**: Nonweapon Proficiency slots; **W**: Weapon Proficiency slots; **PPDM**: Paralyzation, Poison, or Death Magic; **RSW**: Rod, Staff, or Wand; **PP**: Petrification or Polymorph; **BW**: Breath Weapon; **S**: Spells.

**Spells**

As will be closely explored in Chapter Four, the greatest powers of the necromancer arise from spellcasting. Like all specialists, they gain an additional spell for each available spell level, when compared with generalist mages.

This bonus spell is reflected in Table 2 (which appears on page 11) and must be devoted to memorizing a spell from the school of Necromancy (listed in Appendix 2 at the end of the book), or else it is forfeit. Thus, at 1st level, a necromancer could memorize two 1st-level spells (whereas general mages can memorize only one), provided that the bonus spell was from the school of Necromancy.

Due to their advanced understanding of the Art, necromancers gain a +1 bonus to saving throws against necromantic spells. Likewise, other characters suffer a -1 penalty on their saves against necromantic spells when cast by these specialists. The adjustments are cumulative, so two necromancers employing the Art against each other effectively negate these factors.

Another range of benefits applies to learning spells, though these are not normally a concern for the DM. For instance, they gain a +15% bonus to learning spells in the school of Necromancy, one bonus spell added to their spell books upon advancing to a new spell level, and the ability to create new spells as if they were one spell level less (see page 32 in the *PHB* for details). In general, these arc of little practical use for the NPC, whose spells are usually chosen directly by the DM.

**Spell Restrictions**

Necromancers do pay a price for their devotion to the Art. Because of the concentration in necromancy, they forgo all training in the schools of Illusion and Enchantment/Charm. As a result, they cannot cast spells from these neglected schools, unless the spell also falls under the jurisdiction of the six permissible schools. Consider the 6th-level spell *enchant an item*, for example. Although it belongs to Enchantment/Charm school, the spell may be learned by a necromancer since it is also taught in the school of Invocation.

Of course, necromancers do have a more difficult time with studying spells outside the Art for the first time (-15% chance to learn spells from permissible schools except necromancy). However, despite all these restrictions, the necromancer has a huge potential repertoire of spells at hand, limited only by the character's intelligence and diligence at spell research. Appendix 1 lists many spells available to necromancers, arranged by level and application.

**Magic Item Restrictions**

In addition to spell restrictions, the necromancer is slightly limited in the choice of magical items. Since this specialist lacks a formal background in the schools of Enchantment/Charm and Illusion, the Necromancer cannot employ the few specialized magical items based exclusively on these spells. As a general rule, if the magical item can only be employed by a wizard and it involves either spells or spell-like effects from the Enchantment/Charm or Illusion school, then this device could not normally be employed by a necromancer. Thus only a few items from the *DMG* and *TOM* are forbidden: all wizard scrolls with spells exclusively from Enchantment/Charm or Illusion schools, *rod of beguiling, staff of command, wands of fear and illusion, robe of scintillating colors, and eyes of charming.*

Magical items available to all classes, which operate without specialized knowledge in the restricted schools, are generally allowed to specialists (including the necromancer). For instance, a *potion of invisibility* will work whether it is imbibed by a necromancer, an invoker, or even a troll. Similarly, the necromancer can easily employ rings of *human influence* and *invisibility, rods of splendor and terror, cloaks of displacement*, and all other items without class restrictions.

**Proficiencies**

To round out the necromancer's skills, the DM should choose weapon and nonweapon proficiencies for the character. These should depend on the necromancer's kit, as detailed later. The DM should also refer to the new nonweapon proficiencies discussed in this chapter. In this section, we describe only how to determine the total number of proficiency slots available to the wizard.

The base number of weapon and nonweapon proficiencies depends on the character's experience level. These are summarized on Table 2. It is suggested that the DM employ the optional rule that transfers the number of languages to proficiency slots (page 16, *PHB*). Note that these bonus slots may be applied to either weapon or nonweapon proficiencies, as desired.

A highly intelligent, powerful wizard will tend to have many nonweapon proficiencies. Normally, the DM should only bother to assign these skills if there is some chance that they might augment a role-playing situation. For instance, there is almost no point in assigning nonweapon proficiencies to the evil archivallain of a campaign, whose only purpose is to torment and attack the PCs. As a short cut, the DM should only chose weapon proficiencies for such a character and simply assume that the NPC knows any skills necessary to carry out his or her fiendish plans. However, for those NPCs who might interact with the party outside of direct, antagonistic combat (perhaps serving as a mentor, teacher, henchman, or temporary hireling) the DM should take the time to carefully choose their selection of nonweapon and weapon proficiencies, based upon their kits. These skills might help to further develop the character and make role-playing situations more vivid for everyone involved.

## New Necromancer Wizard Kits

Kits are role-playing aids that help the DM (or player) further define a character. The following kits represent distinct sub-classes of the necromancer wizard, each with its own goals, qualifications, and roles for the campaign. With the DM's permission, a select few (such as the Anatomist, Deathslayer, or Philosopher) may be made available to PC wizards, subject to the concerns raised in the Introduction.

### Archetypal Necromancer

Archetypal necromancers employ the Art only for their own twisted and evil ends. They revel in animating the dead and forcing the corrupted remains to serve their perverse appetites. Because of the Archetype's vile excesses, necromancers as a profession arc universally reviled in most civilized societies.

The Archetypal necromancer was perhaps best captured in the short stories of dark Ashton Smith. The decadent Mmatmuor and Sodosma from "The Empire of the Necromancers", powerful Vacharn, and his treacherous sons Vokal and Uldulla from "Necromancy in Naat", the vengeful Nathaire from "the Colossus of Ylourgne", and finally the perverted Abnon-Tha with his timid assistants, Narghai and Vemba-Tsith, from "The Chamel God." All these vile and repugnant personalities serve to clearly illustrate the Archetype at its lowest form.

In more recent fantasy literature, Sauron (Tolkien's *Lord of the Rings*), Roxanne (the *Thieves' World* anthologies), and the Forsaken (Robert Jordan's *Wheel of Time* series) are good examples of this kit.

**Requirements**: The Archetype is the classic malevolent wizard (any evil alignment will do). Black clothes are a must (or at the very least, some somber attire).

**Role**: Stereotypical necromancers are consummate villains, foul-hearted wizards of the basest sort. As a result of their violently unrelenting and unrepentant evil, these wizards are either promptly stamped out of existence by the righteous arm of society, or they are eventually driven out of civilization into the wilderness. Most tend to be short-sighted, petty scoundrels with few ambitions save to capture unwary travelers, kill them in gruesome tortures, and later animate them as a form of sick amusement. Others plot in seclusion to gain the coveted boon of lichdom so they can prolong their depravity beyond the grave. The most dangerous ones harbor secret, long-range plans to subvert or destroy the society that exiled them.

The Archetype is an unsympathetic villain, and Master Pizentios (the cryptic Master P. in Sarzec's letter at the beginning of this chapter) provides the DM with an example of such a dastardly character. This wizard is featured in the introductions of Chapters Seven and Eight, and his NPC sheet appears in Chapter Nine. As we shall see in the sample campaign of the Isle of the Necromancer Kings (Chapter Nine), Pizentios makes a dangerous nemesis for even an experienced party of adventurers.

**Preferred Spells**: An Archetype like Pizentios embraces the Black Arts, though much of the wizard's notoriety

arises from the perverted abuse of gray necromancy (which includes animating the dead—see Chapter Four). Otherwise, an Archetype is a jack-of-all-trades when it comes to necromancy, adopting any (offensive) spells which further his or her plans.

**Weapon Proficiencies**: The Archetype is generally limited much like a standard wizard and can normally choose from among the dagger, dart, staff, knife, or sling. However, at the discretion of the DM, these villainous wizards may learn a single special weapon outside their restricted selection, at the expense of two slots. The necromancers of dark Ashton Smith, for instance, rarely traveled far without strapping on their scimitars. The Archetype can learn only one special weapon, chosen from among the following: battle axe, bow (any), crossbow (any), javelin, spear, sword (any), and warhammer. While these are not normally allowed to wizard characters, they tend to be common among Archetypes (especially at low levels).

**Nonweapon Proficiencies**: Required: none. Recommended: (General) any; (Warrior, these take 3 slots): endurance, survival; (Rogue) any; (Wizard) anatomy, languages (ancient), ancient history, necrology, netherworld lore, reading/writing, venom handling. Forbidden: all Priest.

**Equipment**: Archetypes may own any equipment, including a dagger, knife, dart, staff, sling, or their chosen special weapon. Like all wizards, they cannot wear armor when casting spells.

**Special Benefits**: Due to his or her devotion to black necromancy, the Archetype typically gains 1-3 special abilities as outlined in Chapter Two (DM's discretion). These supernatural powers invariably result from the wizard's heinous practices, which usually include foul and unspeakable pacts with evil gods.

**Special Hindrances**: Most Archetypal necromancers pay a terrible personal price for their evil powers. By embracing the Black Arts, they subject themselves to countless dangerous side effects, the least of which include curses, disease, physical deformity, and madness (the DM should refer to Chapter Three for details).

**Anatomist**

Anatomists devote their careers to the scientific study of the body, often using magical means to aid or inform their research. These wizards are profoundly fascinated by the seemingly infinite mysteries of the human form. Anatomists gain their knowledge after years of extensive research, typically performed on cadavers. Their exhaustive experience makes them vastly superior doctors when compared with the typical village healers who rely chiefly on herbal medicine to cure the sick.

While some Anatomists use their knowledge to heal, a most adopt this profession to further their own dark motives. Some, falling into the "insane scientist" category, using their expertise to create blasphemous experiments, the least repellent of which include the creation of cadaveric automatons, like flesh golems. Others, who delight only in inflicting pain, practice their skill on living subjects rather than cadavers. These vivisectionists make the most exquisite torturers and are sometimes found in the employ of despotic rulers.

The Anatomist is chiefly inspired by the physicians of the 15th-19th centuries who increasingly turned to the dissection of cadavers to improve their medical expertise. Because of laws which prohibited exhumation and mutilation of the dead, physicians resorted to unsavory grave robbers to supply them with fresh corpses for study. As a result of public beliefs in divine or supernatural retribution for mutilating the dead, these dissections took place in the most secret confines of the universities, reinforcing the notion that physicians took part in arcane, cabalistic practices. Mary Shelly's *Frankenstein* - written in 1817 (before England's Anatomy Act of 1832, which for the first time legally provided British physicians with cadavers for study) - drew further parallels between the genius physician and the experimenting necromancer.

The Anatomist works best in campaigns with a Renaissance background or a 16th-century historical setting such as the one proposed in *A Mighty Fortress*. An evil Anatomist would perfectly suit a RAVENLOFT® campaign replete with "mad scientists" and their abhorrent creations. For ideas on the more twisted aspects of the kit, the DM may refer to the classic *Frankenstein*, numerous B, horror movies, and *Van Richten's Guide to the Created*. A short story from the fantasy *Thieves' World* anthology, "The Vivisectionist," more closely explores the theme of the torturer-scientist.

**Requirements**: The Anatomist may be of any alignment.

**Role**: Some Anatomists use their specialized knowledge for the good of humanity, serving as skilled physicians and healers. However, because of the taboo and stigma associated with the dissection of corpses, almost all Anatomists must keep their experiments secret from their clientele. Thus, the Anatomist usually fosters the appearance of being an "ordinary" doctor or wizard who gains his or her knowledge from ancient texts and university lectures.

Despite the public opprobrium. Anatomists have no desire to flee society. Indeed, their entire profession is based on the close proximity of civilization. It would prove impossible, for instance, to practice their calling in the desolate wilderness (at least not without considerable assistance from henchmen or allies). Anatomists need a constant supply of fresh cadavers on which to experiment, and these can only be safely secured in a large town or city.

Dr. Ellandra Tolbert, whose detailed NPC sheet appears in Chapter Nine, is an example of how an Anatomist can easily fill the roles of mentor, employer, or nemesis (Ellandra makes further appearances in Chapters Two and Four). Because of her position in the Anatomical Academy (a secret society of Anatomists, detailed in Chapter Seven), Ellandra is in a perfect position to hire a party of adventurers to help her secure a new supply of corpses for study, clear out a secret, new meeting house for the Academy, or thwart an official investigation by the local authorities. If the party does not have access to a cleric, Ellandra could effectively treat their wounds, mend broken bones, reattach severed limbs, or even bring a dead character back to some semblance of life. Finally, she can serve as a powerful ally (or nemesis) in combat. The DM can thus easily introduce an Anatomist into just about any campaign.

**Preferred Spells**: The Anatomist prefers necromantic spells that directly affect the physical body, either before or after death (like *corpse link, embalm, delay death, empathic wound transfer, bone growth,* and *graft flesh*). They have little interest in the netherworld or undead (except perhaps as a convenient means of transporting corpses to their laboratory for study). An Anatomist such as Ellandra is hardly defenseless in combat. While she may hesitate to employ the Black Arts to incapacitate her foes, since this magic tends to make a corpse unsuitable for later study, she always keeps one death spell memorized in case of dire emergency.

**Weapon Proficiencies**: The Anatomist is a mistress of small edged or cutting weapons, though this wizard rarely practices such skills on the living. The Anatomist's first weapon is a knife, with which she or he automatically gains specialization at 6th level as a special benefit (this fills the second weapon slot). This skill entitles the wizard to multiple attacks and the customary +1 to hit and +2 on damage bonuses. After specializing in the knife, the wizard may learn either the dagger, dart, cutlass, or short sword.

**Nonweapon Proficiencies**: Required: healing (this takes up two slots only) and anatomy. Recommended: (General) animal handling, animal training, artistic ability, brewing; (Warrior) animal lore, hunting, set snares; (Rogue) disguise, forgery; (Priest) local history; (Wizard) herbalism, reading/writing, spellcraft, venom handling. Forbidden: None.

**Equipment**: In addition to wearing the robes and mantle of a physician or scholar, the Anatomist usually carries all of his or her necessary surgical tools (knives, saws, scalpels, retractors, and such) in a characteristic black leather bag or small box.

**Special Benefits**: Through their studies, Anatomists gain knowledge to help the living.

*Improved Healing*: Anatomists make excellent doctors, gaining a +2 on their ability checks for the healing nonweapon proficiency. Patients resting under their care restore damage at an accelerated rate of 3 hp per day (4 hp per day with the herbalism nonweapon proficiency). The healing rate is slowed by 1 hp per day if the patient engages in strenuous physical activity or adventuring. A single Anatomist can care for up to 12 people in this fashion. When treating poisons or diseases (even those of magical origin), their patients are entitled to a second saving throw with a +4 bonus to resist the affliction.

*Autopsy*: Another useful skill of the Anatomist is the ability to divine the cause and time of death by thoroughly examining a corpse. This involves a careful dissection taking 1-6 turns minus 1 round per level. The wizard has a base 60% chance, plus 2% per level, of learning the specific reason and approximate time of death (90% maximum, one roll required for each check). This autopsy can reveal whether death resulted from normal

processes (like old age or natural disease) or foul play (such as a wound, poison, spell, or magical disease). The accuracy of the estimated moment of death decreases with elapsed time since the actual event. For instance, if the subject died an hour before the autopsy, the time of death can be fixed to within 1-4 rounds (after one day, the estimate is only accurate to within 1-4 hours, and so on).

**Special Hindrances**: The Anatomist must regularly practice his or her skills or lose all the unique benefits of the kit (namely the autopsy and improved healing abilities). At the very least, the wizard must perform one dissection on a human subject per month in order to prevent these specialized skills from atrophying. If the Anatomist lapses in the dissection schedule for more than a month, he or she temporarily reverts to a standard specialist. The former status may be easily regained, however, simply by performing twice the minimum number of dissections that were missed. Each formal study requires one complete day which cannot be spent in adventuring, spell research, or other pursuits.

For instance, when Dr. Tolbert takes a month-long sea voyage from Neverwinter to Calimshan, she has no opportunity to dissect human subjects. When she finally arrives, she has lost her kit abilities and become a standard specialist necromancer. Once fresh subjects are available, Ellandra must undertake at least two thorough dissections, requiring two days to complete, to regain her kit-related skills.

**Deathslayer**

The Deathslayer devotes his or her life to the destruction of undead, striving always to rid the living world of their abominable existence. By mastering the Art, a wizard gains a greater understanding of these creatures which are neither fully living nor entirely dead. The Deathslayer's militant opposition to all forms of undead frequently places him or her in direct conflict with other necromancers, such as the Archetype and the Undead Master, who delight in creating zombies, skeletons, ghouls, and other undying monstrosities.

As Deathslayers gain power and experience, however, they eventually seek out increasingly dangerous undead, namely ghosts, vampires and liches. Not surprisingly, few survive for long in their chosen profession.

In addition to various *Van Richten's Guides*, the original Dr. Van Helsing (on whom Van Richten's character is based) from Bram Stoker's *Dracula*, and Parl Dro, the Ghost-Killer from Tanith Lee's *Kill the Dead*. are sources of inspiration for this kit. The popular comic-book hero Batman provides an interesting example of the Deathslayer's personality. As a child, Bruce Wayne's parents were murdered by street thugs, inspiring him to devote his life to combating criminals. As a hero. Batman never killed the "bad guys" (he may have smacked them around a bit, but he never killed them). The interesting thing about Batman's character, of course, is that he wants to kill all the evil villains he defeats. He craves revenge, but must continually fight an inner struggle to master his darker desires.

The theme of evil (or a twisted form of good) fighting evil has become increasingly popular in modem fantasy. Michael Moorcock's Elric of Melnibone, perhaps the first fantasy anti-hero, makes pacts with evil gods and employs black necromancy to save his beloved, only to inadvertently slay her with an malevolent artifact. In the recent film *The Crow*, the revenant is little different from his murderers, whom the vengeful spirit hunts down and brutally kills. Ultimately, nothing prevents the Deathslayer from adopting the same loathsome practices as his or her enemies.

**Requirements**: While it might seem that only good characters would be attracted to this kit, in reality, it is open to wizards of all alignments who seek combat or revenge against undead. In addition to the usual 9 Int and 16 Wis, a wizard must have a 13 Str to become a Deathslayer.

**Spell Preferences**: Since these necromancers tend to be involved in countless battles, they prefer offensive and defensive spells (see Appendix Three), especially those that detect or disable undead, such as *corpselight, chill touch, detect undead, hold undead, bind undead,* and so on.

**Role**: At some time in their lives, almost all Deathslayers have experienced a terrifying attack by some form of undead, either directed against them personally or a loved one or family member. The celebrated Van Richten, for instance, lost both his parents to a vampire, inspiring him to become the famous "Vampire-Killer" of Ravenloft. Indeed, the vast majority of Deathslayers are driven by strikingly similar motives: an overpowering

desire for revenge, mixed with righteous indignation and a good dose of moral superiority.
Of course, the Deathslayer need not be such a tormented and macabre individual. A lawful good ghost hunter, for instance, may view this terrible, yet strangely honorable profession as laying disturbed spirits to rest, releasing them from their bondage to the physical .world. The character's actions are motivated by compassion and selfless sacrifice, not hatred or revenge.
On the other hand, the Deathslayer need not have a such developed sense of morality. Neither is the wizard required to be entirely sane. After all, the Deathslayer's most common enemy is undead. Who needs to be merciful, kind, or sane when habitually dealing with such abominations?
A real moral dilemma arises when undead are attended by a living master (usually another necromancer) or other living monster. Will the Deathslayer use black necromancy to destroy these living beings along with the undead? Unless the Deathslayer has a pure and noble heart, the path of righteous vengeance can quickly lead to great evil, madness, and despair.
Talib the Lich-Killer, whose detailed NPC sheet appears in Chapter Nine, is a heroic necromancer, possibly serving as a memorable role model for necromancer heroes in the campaign. Talib is a wily old Deathslayer - an interesting potential ally for an unbalanced party. Talib is also mentioned in the Introduction, Chapters Two and Three. In Chapter Nine, an adventure hook including Talib further illustrates the potential role of a Deathslayer in the campaign.
**Weapon Proficiencies**: The Deathslayer may learn any of the standard wizard's weapons (the dagger, dart, knife, sling, and staff).
**Nonweapon Proficiencies**: Required: necrology. Recommended: (General) any; (Warrior) hunting, set snares, tracking; (Priest) any; (Wizard) ancient history, astrology, herbalism, languages (ancient), netherworld knowledge, reading/writing, religion, spellcraft, spirit lore. Forbidden: all Rogue.
**Equipment**: Though they may not wear armor, Deathslayers may otherwise choose any other type of equipment which will help them in their battles against the enemy.
**Special Benefits**: At the start of his or her career, a Deathslayer chooses a single type of undead against which to focus his or her efforts. Typical choices include the mummy, spectre, banshee, ghost, vampire, or lich (lesser, more easily defeated undead make for unchallenging nemeses at higher levels). This choice of an enemy is permanent and cannot be changed during the wizard's life.
The Deathslayer gains powerful benefits when fighting his or her chosen undead enemy:
*Mental fortitude*: Because of the wizard's extensive study and preparation, the Deathslayer gains a +2 bonus on saving throws against mental attacks (if any) caused by the Enemy, including *charms* and *fear*.
*Battle Prowess*: The Deathslayer also gains a +2 bonus on attacks against the enemy. This applies not only to melee weapons, but also touch-delivered spells and undead-specific special attacks (such as a driving the stake through a vampire's heart or, in the case of Talib, destroying a lich's phylactery).
*Spell Prowess*: The Deathslayer targets spells effectively against the Enemy, subjecting this type of undead to a -2 penalty on saving throws. This applies to all spells cast by the Deathslayer on the chosen undead and is cumulative with the usual -1 penalty applied to necromancy (thus, the selected enemy makes saves at -3 vs. the 'slayer's necromantic spells, and at -2 vs. spells from other schools).
**Special Hindrances**: The Deathslayer never relents in the pursuit of the enemy. This fanatical wizard is driven, as if by compulsion or *geas*, on an endless quest to seek out and destroy undead. In combat, a Deathslayer like Talib will always seek out and destroy undead in preference over living targets. If the wizard encounters a mixed group of undead and living creatures (like an Undead Master with a contingent of skeletons), he or she will deal with the undead opponents first, even if they pose less of a threat. A Deathslayer who willingly ignores this kit responsibility automatically forgoes any experience points he or she normally would have gained for the encounter (or adventure).
The obsession to eradicate undead borders on mania, and a few members of this kit are not the sanest of individuals. The horrors of continually battling powerful undead can erode the mental health of even the most strong-willed heroes. Even if they retain a fragile hold on their sanity, Deathslayers are usually harsh and grim in their dealings with others.

**Philosopher**

The Philosopher studies necromancy out of an overpowering desire to master the forbidden and secret arts shunned by the rest of world. Indeed, if necromancy were not publicly reviled or a topic of social taboo, the Philosopher would not give this school of magic more than a cursory thought. The Philosopher is curious about the forbidden, fascinated by the obscure. The Black Arts are especially tempting to this wizard, who craves to unravel all the dark, hidden mysteries of the universe.

The Philosopher is a theoretician, not an experimenter like the Anatomist. Instead, this wizard gains almost all knowledge from the ancient (often banned) books, scrolls, and magical spells at his or her disposal. When trying to resolve a particularly knotty problem, the wizard may correspond with other Philosophers or summon an agent from the lower planes for interrogation. Knowledge and understanding are always the foremost goals of this kit.

Numerous examples of this kit can be found in the short stories of H. P. Lovecraft and his literary successors, for whom this character became something of a stereotype. Lovecraft was noted for creating the fictional Necronomicon, a book of black necromancy and baneful summonings supposedly written by the Mad Arab, Abdul Alhazred, an insane wizard who delved too deeply into his forbidden researches. Many horror writers have expanded on Lovecraft's notion of the demented scholar or sage (see "Return of the Sorcerer" and "Ubbo-Sathla" by dark Ashton Smith, "The Dweller in Darkness" and "Beyond the Threshold" by August Derlith, "Shambler from the Stars" and "The Shadow from the Steeple" by Robert Bloch, "The Terror from the Depths" by Fritz Leiber, and "Rising with Surtsey" by Brian Lumley). The DM should have little difficulty locating source material for this type of necromancer.

**Requirements**: Because of their fascination with the darker side of necromancy. Philosophers may only be of any neutral, non-good alignment (only N, CN, LN, or NE). A Philosopher must have a minimum 14 Int, besides the usual minimum 16 Wis.

**Spell Preferences**: This wizard favors spells from the spheres of necromancy (all categories), conjuration/summoning, and divination. During their research, they have little use for alteration or invocation spells.

**Role**: The Philosopher is a demented and outcast scholar, forced to pursue his or her dangerous studies on the fringes of civilization. This wizard lives like a recluse, always residing in the outskirts of town or in the wilderness. The Philosopher's sinister habits and fiendish summonings would repulse the uninitiated, inflame neighbors, and quickly bring an eviction by the local authorities. It is far easier to live alone, attended by a few trusted henchmen or familiars who respect and occasionally assist in the work.

This wizard is not prone to adventuring and rarely leaves the library, except when lured by the prospect of gaming ancient books, necromantic scrolls, or magical items for study. Except for seeking out these new arcane materials, the Philosopher remains almost always at home. The most fanatical scholars set up a bed in a corner of their library so they may work on their research during all waking hours.

The most probable role of this character in the campaign will be that of an NPC sage or scholar who must be contacted by the party during the course of a quest or adventure. Kazerabet, for instance, is a reclusive Philosopher with a passion for ancient history. Her NPC sheet appears in Chapter Nine. The famous author of the *Art of Necromancy*, her work has been quoted in the Introduction and the final chapter of this book. In the campaign of the Isle of the Necromancer Kings (see Chapter Nine), she serves as a neutral source of antique lore for the adventurers, providing them with background information for the adventure. Locating the Philosopher, intruding on her realm, and obtaining the desired knowledge should prove to be an opportunity for lively role-playing, given the eccentricities of the Kit.

**Weapon Proficiencies**: A Philosopher like Kazerabet has little experience or need for weapons, relying almost exclusively on her wits or spells during an encounter. The wizard may only choose small weapons that can easily be learned indoors (the dagger, dart, or knife).

**Nonweapon Proficiencies**: Required: netherworld knowledge, reading/writing. Recommended: (General) artistic ability, etiquette, heraldry, languages (modern); (Priest) local history; (Wizard) ancient history, astrology,

herbalism, languages (ancient), necrology, religion, spellcraft, spirit lore. Forbidden: all Rogue and Warrior.
**Equipment**: This wizard has little or no concern for physical appearance or personal possessions (unless magical, of course). As a result, the Philosopher will typically be poorly equipped, wearing unkempt and unfashionable clothing, and carrying little besides spell components and a small weapon. Of course, Kazerabet is an exception to this generality because of her past history as a former queen.
**Special Benefits**: The Philosopher has the knowledge of a sage regarding spells in the school of Necromancy, necromantic magical items, and the netherworld (particularly the Lower Planes). When questioned on this topic, the wizard has a base 5% chance per level of immediately knowing the answer, as if he or she had cast *legend lore*. As with the 6th- level spell, the DM must decide on the specific nature of any details learned by this ability. Since most of the Philosopher's knowledge will be based on the partly coherent ramblings of partially demented necromancers (like him- or herself), there Is little to assure that the answer to any specific question will be meaningful or even comprehensible. If the wizard does not directly know the answer to a typical question, the Philosopher is constrained by the typical rules for the sage, outlined on pages 106-108 in the DMG.
If the DM allows psionics in the campaign, the Philosopher may possess one or more wild talents (see Chapter Two for more on this). These unusual psychic abilities result from the wizard's peripheral researches on the hidden powers of the human mind, an interesting subtopic of necromancy (see the 4th-level spell *brainkill* in Chapter Four). The Philosopher's unique mental powers will certainly complement his or her demented or slightly insane nature (see below).
Along with the usual benefits of the specialist, the Philosopher gains a +30% chance (total) when learning spells from the school of Necromancy. Unlike most other necromantic kits, this wizard devotes considerable time to magical research and thus is likely to have a very large repertoire of (mostly necromantic) spells at his or her disposal.
**Special Hindrances**: Perhaps the greatest hindrance of this character is a tenuous grasp on reality. Normally, scholars attempt to retain an objective or unbiased view of their research. With black necromancy, however, such an emotionless and impartial perspective is extremely difficult to maintain. Because of the internal contradictions involved, spurred by tamperings with extraplanar forces beyond mortal reckoning, a Philosopher like Kazerabet loses a sane perspective on the normal world around her. Her attitude about life is somewhat distorted by the terrible secrets she has learned, and the cumulative burden of these inexplicable mysteries can be unbearable. Not surprisingly. Philosophers may become insane (see Chapter Three), though rarely in a manner that impedes their scholarly research. Even the mighty Kazerabet is not without her paranoia and her irrational need for privacy (although these are possibly not bad traits for a necromancer).
Finally, because of the wizard's extensive research in necromancy, spells from other schools are much more difficult to learn for the Philosopher, resulting in a -30% penalty. Otherwise, the Philosopher has the usual restrictions regarding forbidden schools and magical items.

**Undead Master**

The Undead Master specializes in the creation of undying minions and the summoning of extraplanar allies. Above all, this necromancer craves power over others, reveling in the thrill of commanding obedient servants. The mindless undead, as unthinking and ever-faithful automatons, make perfect and unquestioning slaves that will shoulder even the most loathsome burdens without hesitation. The Undead Master enjoys dominating the feeble will of the living, subverting the dead, and controlling the fiendishly powerful.
Examples of this kit can be found in a few of dark Ashton Smith's stories. The necromancer Malygris from "The Last Incantation" and "The Death of Malygris" and the vengeful Namirrha from "The Dark Eidolon" make ideal models for this kit. Also, the DM might check out Glen Cook's *Black Company* series, which involves a necromancer known as the Dark Lady, who subjugates her living apprentices, creating the infamous Ten Who Were Taken.
**Requirements**: Members of this kit may be of any non-good alignment.

**Spell Preferences**: First and foremost, these wizards are avid practitioners of necromancy that creates, augments, or controls undead. At higher levels, these wizards eventually turn to powerful spells from the Conjuration/Summoning school that call upon extraplanar creatures.

Unlike most necromancers, *the Undead Master has access to the school of Enchantment/Charm*, enabling this specialist to dominate the minds of the living as well as the dead.

**Role**: The Undead Master is a variant of the Archetypal Necromancer and, as such, makes a dangerous villain for the campaign. However, unlike the Archetype, who tends to be a solitary menace, the Master is always surrounded by a host of undead servants, summoned fiends, bound genies, and charmed monsters. These wizards arc never encountered without a large entourage of minions, making members of this kit especially terrible foes in combat.

The Undead Master may be encountered both in the wilderness and in the midst of society. In the abandoned hinterlands, many Masters establish petty domains where they can rule over legions of undead with impunity. Eventually, the most powerful Masters gravitate back to human society, where they attempt to impose their will over the living. Sometimes, they magically establish a tower in the center of a city, replete with their most powerful guardians. The presence of an Undead Master in a city directly challenges the authority of the local aristocracy, who will seek to remove the wizard, regardless of the cost (providing a good opportunity for adventurers). Of course, the Master is always well prepared for such "welcoming parties."

Sarzec the Broken (the author of the letter at the beginning of this chapter) is an example of a low- level Undead Master for the campaign. Along with his associate Pizentios, he illustrates how a group of allied necromancers can band together with deadly results. This necromancer is featured again in the introductory anecdotes for Chapters Seven and Eight, and his detailed character sheet has been included in Chapter Nine. Despite his low level, his alliance with his former mentor Pizentios makes him an extremely dangerous adversary.

**Weapon Proficiencies**: The Master may choose only *one* of the regular weapons available to the wizard (namely the dagger, dart, staff, sling, or knife). At higher levels, additional weapon slots must be invested in nonweapon proficiencies. A wizard like Sarzec almost never enters into melee personally, as he relies on his minions for protection in battle.

**Nonweapon Proficiencies**: Required: necrology, netherworld knowledge. Recommended: (General) etiquette, heraldry; (Wizard) ancient history, astrology, languages (ancient), reading/writing, religion, spellcraft, spirit lore. Forbidden: all Priest, Rogue, and Warrior.

**Equipment**: Although the Undead Master is typically outfitted like any wizard, this kind of character tends to be vain, so he or she usually only obtains possessions of the highest quality. Indeed, powerful Undead Masters may consider themselves to be on par with royalty (no matter how humble their birth). A low-level wizard like Sarzec relishes a position of authority such as commanding a ship of undead as a captain. These attitudes are clearly reflected in their choice of dress and accouterments.

Once they reach a sufficiently high level, Undead Masters devote considerable attention to properly outfitting their numerous followers, from the lowliest skeleton to the most powerful fiend. Only the uncouth Archetype will send skeletons into battle with their bony claws as weapons. Masters care not only about the combat potential (weapons) of their servants, but about their physical appearance as well. Sometimes, the equipment of an archmage's servants will approach the extravagance and quality of a royal guard.

**Special Benefits**: All Masters are able to command undead creatures, exactly as if they were priests of the same level. Their ability to command undead also extends to fiends and extraplanar creatures, which are treated as undead with the same hit dice (without considering any hit point modifiers). This special benefit results from the wizard's complete mastery of the baneful rites and conjurations that control or bind not only the cold undead, but also the sinister inhabitants of the netherworld. For example, Sarzec, a 6th-level Master, can command undead and up to 6-HD extraplanar creatures, exactly like a 6th- level priest.

**Special Hindrances**: In return for knowledge of Necromancy, Conjuration/Summoning, and Enchantment/Charm, the Undead Master neglects study in other schools of magic. The Master is restricted from casting spells which are exclusively taught in the schools of Alteration, Illusion, and Major Divination. This significantly reduces the wizard's repertoire of spells when compared with other necromancers (gaining the

Enchantment/Charm school is more than offset by the loss of Alteration and Major Divination).
The Master may also not use specialized, wizardly items that draw exclusively from these restricted schools of magic, including wizard scrolls of any restricted spells, *wands of illusion or polymorphic, robes of eyes, scintillating colors, or repetition (TOM), crystal balls, amulets of far-reaching, extension, or meta- spell influence (TOM), medallions of spell exchange (TOM), talismans of memorization (TOM), Nefradina's identifier (TOM), or Tenser's portmanteau of frugality (TOM).* However, magical items which are available to all classes (such as a *potion of polymorphing*), that operate without specialized knowledge of the restricted schools, can be employed.
Finally, the greatest hindrance of this kit is the wizard's own self-centered personality, which often borders on madness. Undead Masters tend to be megalomaniacs of the highest degree. They always consider themselves, their experiences, their feelings, and their quests for power above those of others. They demand to be the center of attention, ruthlessly subverting (or even eliminating) those who contest their supremacy. The Undead Masters' overwhelming need to be in complete control of every situation and to dominate everyone around them results in their most obvious weakness. Anyone who can successfully stand up to them will shatter their composure and possibly provoke an irrational or poorly-conceived response, even when it runs contrary to the wizard's established, long-term interests. Finally, the DM should feel free to impose any additional penalties from Chapter Three, to more distinctively round out the Undead Master's twisted character.

## Other Necromancer Kits

In addition to the new wizard kits described herein, a few kits outlined in the *Complete Wizard's Handbook (WH)* and the *Complete Sha'ir's Handbook (SH)* may be appropriate for a necromancer: specifically, the Academician, Militant Wizard, Peasant Wizard, Savage Wizard, and the Witch (from the *WH*), and the Astrologer, Ghul Lord, and the Mystic of Nog (from the *SH*). Of all the wizard kits outlined in these two resources, the Witch and Ghul Lord stand out as particularly interesting and distinctive roles for the necromancer in the campaign. The full details of these kits can be found in the *WH* and *SH*, respectively. Only a few remarks about each profession are offered as inspiration for the DM.

#### Witch

The Witch specializes in communicating with the dead. Because of the wizard's contact with invisible spirits, he or she learns many hidden secrets of about the physical world. In a campaign, the Witch (also known as a Medium or Spirit Channeler) can serve as both a beneficial ally or as a frightening nemesis.
This is an interesting and distinctive kit for a necromancer. Spells arc taught to the Witch by spirits rather than by a living mentor or by reading a book of spells. The Witch is basically an envoy or intermediary between the living and the dead, serving the needs of both groups. Unlike the Deathslayer, who may seek to lay undead spirits to rest, the Witch has no such obsession (unless, of course, a spirit either threatens her personally or asks for assistance).
In many ancient societies, consultation of the dead (through a witch or medium) was a common practice. The Greek and Celtic equivalents, usually male, would wrap themselves in the freshly skinned pelt of a magical animal (that of a lamb in Greek society or that of a bull among the Celts) and seek the counsel of spirits in the lonely places of the wilderness, usually on mountain tops or by waterfalls.
In Roman times, the witch served as a diviner for the community (like the witch of Endor from the Old Testament). During the Middle Ages, the witch gained a negative and evil stereotype, living on the fringes of society like an outcast for consorting with dark spirits (consider the three witches from *Macbeth*). Since their profession conflicted directly with one of the chief purposes of the official or mainstream priesthood, witches were outlawed in almost every period since the height of the Roman Empire.

With these widely variant historical interpretations of the witch, the DM should have plenty of ideas for incorporating such a character into the campaign.

**Ghul Lord**

Ghul Lords are necromancers who channel the dangerous energies of the Negative Material Plane. These necromancers do not cast spells like normal wizards. Instead, they employ raw manipulations of negative energy that can be used to attack, defend, provide transport, and yield information. These manipulations are not like normal spells, and are powered by the wizard's own life force. However, since their powers come from the Negative Material Plane, Ghul Lords can only duplicate the effects of spells from the school of Necromancy. Once they reach 10th level, they also gain a limited ability to turn or command undead.

These considerable powers do have a drawback. The Ghul Lord pays a terrible price for them. The negative energy slowly twists and corrupts the user's body, eventually turning it into a hideous monstrosity as the wizard progresses in experience. In addition, since the Ghul Lord's powers involve the channeling of negative energies, the wizard cannot try manipulations that duplicate spells outside the school of Necromancy.

Since the Ghul Lord does not memorize and cast spells in the standard fashion, he or she is a unique type of necromancer, akin to the sha'ir wizard native to the Land of Fate (of course, the DM can easily transplant the Ghul Lord to any arid or desert climate). While he or she might serve as a spooky "speaker of the dead" for a secluded village or town, the wizard will usually be a reclusive loner because of his or her progressively horrendous, undead appearance. As the kit's name implies, the mysterious wizard will probably be encountered in the wild, commanding a pack of ghouls.

Like the Arabian sha'ir, the Ghul Lord is at a disadvantage in melee when compared with standard wizards who need only a few moments to unleash a memorized spell. The Ghul Lord, in contrast, needs at least one round of uninterrupted concentration to prepare a manipulation. When designing a combat encounter, make sure to include numerous allies (undead or otherwise) to protect the Ghul Lord while the wizard prepares his or her manipulations.

## New Nonweapon Proficiencies

The following new nonweapon proficiencies are suitable for use by NPC necromancers (and death priests) in the campaign. At the DM's discretion, these skills also may be made available to player characters, providing they find an appropriate tutor (a necromancer or death priest) willing to teach them. Open possessors of these skills are viewed with considerable alarm by mainstream society, which normally regards such knowledge as unspeakable or taboo.

**Anatomy (1 slot, Int)**

This proficiency involves the knowledge of the secret mysteries and intricacies of the human body, including the structure, function, and location of bones, muscles, organs, and other soft tissues. This skill provides the scholarly foundation for the Anatomist's special abilities. This proficiency also comes in handy with certain necromantic spells (such as *corpse link*, *spectral voice*, and *graft flesh*), which require fresh body parts that have been carefully harvested from cadavers.

This proficiency also has some less gruesome bene fits. A detailed knowledge of anatomy can help with both the treatment of disease and the accurate artistic representation of the human body. Characters with the anatomy nonweapon proficiency automatically increase their skill with healing and artistic ability proficiencies (+2 bonus to both ability checks).

**Necrology (1 slot, Wis)**

A character with this skill is well versed in the lore of undead creatures. This proficiency may be used to help determine the probable lairs, dining habits, and history of such creatures (no ability check needed). Whenever a character with this skill confronts an undead, he or she may be able to specifically identify the creature (discerning between a ghast and a common ghoul, for instance). In addition, providing the character makes another successful ability check, he or she recalls the creature's specific weaknesses and natural defenses or immunities. At the DM's discretion, a failed ability check (in either of these cases) will reveal misleading or even completely erroneous information which may actually strengthen or otherwise benefit the undead.

**Netherworld Knowledge (1 slot, Wls-3)**

With this proficiency, a character learns about the cosmology and organization of the AD&D® game multiverse, focusing primarily on the ultimate destination of spirits after death: the Outer Planes. In addition, the character learns about behavior of the dangerous creatures that inhabit the nether regions, including such fiends as the tanar'ri and the baatezu. As with necrology (which applies exclusively to undead), netherworld knowledge can reveal the specific weaknesses and natural immunities of beings from the Outer Planes. The proficiency can also be used to classify the exact type of extraplanar creature encountered. Both of these abilities require an ability check, however.

**Spirit Lore (2 slots, Cha-4)**

A character with the spirit lore proficiency knows methods to contact spirits, deities, and extraplanar powers. He or she can more easily communicate with these beings, gaining a +5% chance of success (no ability check necessary) when attempting divinatory spells such as *augury, contact other plane, commune, divination, speak with dead, summon spirits*, and so on.

This ability may also be used to contact the dead without resorting to magic (handy for low-level characters and individuals who do not know magic, such as psionicists). Using pyromancy (divination by candles), tarot cards, and other mystical rites, the character can ask questions of these powers as if using a *summon spirit* or *speak with dead* spell (no body required, and there is no applicable time limit).

Before beginning the contact, the character must prepare for half an hour, making sure that the area has no spirits around to confuse readings. Contact with the dead is established if a successful check is made. A failed roll reveals nothing. If the roll is 10 more under the number needed, a specific spirit can be contacted. A roll of four or more above the needed number (or a 20) reveals incorrect information, perhaps from an evil spirit. Individuals with the psionic ability of spirit sense gain +2 to ability checks.

The summoner can ask questions of these spirits, but the spirits are not obliged to answer. If annoyed, the spirits can sever the link at will. The questioner can ask 1-3 questions, plus one for every slot above two spent on this proficiency. Contact may not be made more than once per day and is inadvisable more than once per week. The dead do not appreciate being disturbed and may take revenge. The DM can refer to the new 4th-level spell summon spirits for more details about interacting with the dead.

**Venom Handling (1 slot, Wis-2)**

With this proficiency, a character learns how to safely use both magical and mundane poisons. There is no danger of such a character accidentally stabbing someone with a poisoned weapon. Also, the character can identify a poison and a possible antidote by visual inspection of the venom or its symptoms in a victim (with an ability check). In addition, a character can identify naturally occurring animals, plants, or monsters that are poisonous (with an ability check). Any roll which fails by 4 or more results in a misidentification of both the poison and its antidote.

At the DM's discretion, characters with also the animal handling, herbalism, and brewing nonweapon proficiencies may be able to manufacture some of the more deadly poisons listed on page 73 of the DMG. The

cost and time required for such an activity should be adjudicated by the DM, but providing all of the components are personally harvested by the character, it should take no less than 1-6 days to make one dose of poison. Magical poisons cannot be manufactured using this ability. *Long before Talib began to formally study the Art, Jal' and*

# Chapter 2: Dark Gifts

*I knew that we had been kissed by Fate and could perceive things invisible to others. Many times, when we were still children, I would test my brother by placing a stolen turban in his hands, asking him to describe its owner. And he often would stare at the unwrapped linen, gradually outlining the facial features and mannerisms of a strong caravan handler or some dashingly handsome scribe.*
*But as my brother grew older, his visions became darker and more frightening. Once, when I placed the purse of a young porter in his hands, my brother described a much older and frail man, who appeared to be a merchant of sorts. I laughed and told him his mysterious powers had failed him, but Talib kept staring at the small velvet pouch, and went on to describe how the older merchant had been surprised on the streets one night, while returning home from the evening prayer. In chilling detail, my brother recounted the merchant's murder at the hands of the young porter from whom I had obtained the purse in the bazaar. That night, the game stopped being fun. We never played it again.*
*Talib's unusual talents continued to mature after he started learning the Art. He recoiled from cemeteries, even by daylight, for he would drown in the latent sorrow and sometimes glimpse pale shadows fluttering amidst the sepulchers. He could feel death around him, even after he learned how to shield his mind from the visions.*
*One evening, after we stopped for the night at the house of our friend Salim the pearl trader, Talib woke us all at midnight with his screams. We found him mopping the azure tile floor with his linen night shirt, moaning incoherently about a river of blood and the dead woman in his bed. Of course, his bed was empty and the floor was bone dry, but our host Salim paled visibly at these word, and ushered our troubled brother into another chamber for the remainder of the evening. We learned the next morning, much to our sorrow, that Salim's wife had died in that room many years ago, bearing their first child. And for many days afterwards, the servants had labored - apparently in vain - to remove the taint of blood from the once beautiful blue tile floor.*

- From *Leyla's Lost Journal*

Not all necromancers are created equal. Indeed, it would be dangerous for player characters to assume that a wizard's powers were limited simply to the spells at his or her disposal. Just as the necromancer's "average" abilities were detailed in the previous chapter, this section describes a necromancer's unusual, salient abilities, sometimes known as "Dark Gifts," implying some connection with the mysterious evil powers that patronize black necromancy.
The necromancer's mysterious skills include a wide assortment of powers, such as dual-class-related skills, wild talents, and strange magical powers. Not all of these abilities (except the latter) require direct intervention by an evil, extraplanar power. For instance, abilities earned as a dual-classed character or gained through mental or psionic prowess are attained chiefly through individual skill and achievement. Regardless of their origin, however, these abilities should enable the DM to generate unique NPCs that will surprise and challenge players for countless gaming sessions. The variety of possibilities is quite broad.
Given a necromancer's potential to unbalance a campaign, the DM should use the suggestions from this chapter sparingly. Not every corrupt wizard in the campaign should be entitled to a salient ability, as the adventurers would be quickly overwhelmed by encountering such potent adversaries at every turn. Only the most ambitious and pivotal characters (such as the principal archvillain) will typically attain more than one of these highly unusual attributes at a time. Use them sparingly.

# Dual-Classed Characters

Perhaps the easiest way to unbalance an NPC - without modifying any of the basic rules of the campaign and introducing the notion of lower-planar powers - is for the DM to assign dual-classed abilities to a particular character. In practice, DMs rarely adopt this approach when creating NPCs because the process can be quite time consuming. As we shall see, for the special case of necromancer wizards, the creation of a dual class can be relatively easy.

For simplicity, since the character's principal profession is assumed to be necromancy, the DM must only worry about determining the NPC's original profession. In other words, the DM can suppose that NPC advanced in a primary career up to a certain point and then abandoned that profession in favor of taking up the vocation of necromancy. The DM's first task, then, is to determine the necromancer's original profession. The obvious obstacle to this approach involves ability score restrictions. According to the *PHB* (page 45), the character must have an Intelligence of 17 (a necromancer's prime requisite) and a score of 15 in the prime attribute of the original profession. The easiest way to select a potential first profession, then, would be to inspect the necromancer's ability scores.

**Fighter/Necromancer**

This combination requires the character to have a 15 Str and 17 Int. Along with the minimum 16 Wis of the necromancer, this combination can be hard to generate using the standard character generation procedures from the *PHB*. Although fightcr/necromancers cannot wear armor, they retain their original fighter kit abilities, weapon proficiencies, excellent hit points, and THACO. The character retains the ability to use of all weapons and magical items (including a *girdle of giant strength* and so on) that he or she enjoyed as a warrior. These benefits make the character a much more difficult opponent in physical combat (quite handy for an archvillain).

Of all the dual-classed characters, this is perhaps the easiest for the DM (or another player) to effectively role-play and justify. Consider the case of Talib the Magnificent, a 5th-level warrior/16th-level necromancer. Because of his physical strength, the character embarked on a career as a warrior of the desert until he encountered a mentor in the wilderness who recognized his "true calling" as a necromancer. From then on, Talib devoted his life to the Art, forsaking his earlier profession, except when it best served his purposes to appear like a fighter. Early in his magical career, when his supply of spells was frightfully limited, Talib's specialization with the scimitar helped him in many battles.

Except in special circumstances, a dual-classed character will generally not have advanced to name (9th) level as a warrior before adapting necromancy. If the character had attained fame and notoriety as a warrior/ there would have been little reason for him or her to switch professions! For simplicity, the DM may determine the character's level of experience as a fighter by rolling 2d4 (resulting in 2nd to 8th level).

**Thief/Necromancer**

To be a dual-classed thief/necromancer, the character must have a minimum 15 Dex and 17 Int (including, of course, the minimum 16 Wis of the necromancer). This combination does not have many advantages, though. From the character's perspective, the combat abilities (hit points and THACO) of the rogue are only marginally better than that of the wizard. In addition, even at low levels, a wizard's spells

can dramatically overshadow a thief's mundane abilities. For instance, who would not prefer a *spider climb* spell over the usual climb walls ability? Why pick a lock when you can *knock*?
The trap detection and lock picking abilities of a thief would greatly benefit a subtle necromancer who enjoyed tomb robbing, but remember that once the wizard can *animate dead*, the importance of such skills may be greatly reduced (as noted in the Introduction). Perhaps another exception to this rule is the Anatomist or any other necromancer who must regularly work at the heart of civilization. For the Anatomist, who needs a steady supply of stolen bodies, a rogue's skills might prove indispensable. Moving silently and hiding in shadows, for instance, are practically impossible to duplicate without spells from the Illusion school (which is forbidden to all necromancers).
From the DM's perspective, a rogue's percentage ability scores are considerably more difficult to generate than those of the warrior. As with the fighter, a dual-classed thief/necromancer character will not have advanced to name (10th) level before changing professions. The DM can quickly determine the character's level of experience as a thief by rolling ld8+1 (resulting in 2nd to 9th level).

**Cleric/Necromancer**

Any necromancer, providing he or she has an Intelligence of 17 or greater, may have previously been a member of the priesthood (the minimum 16 Wis needed to be a necromancer is naturally the prime requisite of a priest). This combination would seem to be a great benefit to the character, but it raises a number of concerns (chiefly philosophical) about a fundamental difference and incompatibility between wizards and priests, especially those that worship death. Of all combinations, the cleric/necromancer is the rarest, most time-consuming to generate and the most difficult to role-play.
Unlike fighting, thieving, or wizardry, which may be chosen out of convenience, serving in the priesthood usually involves a sense of "calling" by a specific god and a profound personal piety. Priests that do not put the needs of their god or religion above their own personal desires simply do not advance far in that order. In this context, the cleric/necromancer may be considered to be an "outcast" priest who did not possess the enough faith to devote his or her entire existence to serving a particular god, regardless of the alignment involved. As a result, the character did not progress far in the priesthood, certainly not to 9th level, the stage at which clerics gain a parish. The DM can quickly determine a character's level as a priest by rolling ld6+l (2nd to 7th level).
At the other extreme of the spectrum, certain religions may condone or even encourage their members to learn the wizard's Art of necromancy. Religions devoted to gaining knowledge or spreading evil might allow their most intelligent and well- trained high-priests (9th-level minimum) to switch classes and become wizard necromancers. Of the new cleric priesthoods detailed in Chapter Five, those worshiping the deities of Pestilence and Undead would probably condone such training.
Such a change in professions would only be permitted after two specific conditions had been met. First, the chosen individual must display absolute and unswerving loyalty to his or her deity. Second, the chosen individual's wizardry training, once complete, must be put to immediate use in serving the religion.
These "fanatical" priest/necromancers will typically only be encountered in an established temple or on a mission of importance to their god or religion. The DM is referred to the AL-QADIM Ruined Kingdoms boxed set, which describes an fanatical cult of priest/wizards called Geomancers, who employed a variety of evil magics (including necromancy) to further their organization's ends.
Finally, the cleric/necromancer can be unusually challenging for the DM. The priests' proficiencies, religion, specialty powers, and spells greatly increase the character's complexity, especially at high

levels. Of course, the priest's improved combat abilities (hit points and THACO) will dramatically increase a wizard's strength in direct melee. For all these reasons, the character can be difficult to role-play properly, even for experienced DMs.

**Psionicist/Necromancer**

This combination has interesting possibilities. Many psionic disciplines (particularly psychometabolism) include abilities which affect the processes of healing, disease, and death - perfect powers for the necromancer. For instance, Tanith Lee's novel *Kill the Dead* explores the theme of a psychic ghost hunter whose mental powers enable him to sense and manipulate spiritual forces. Indeed, it is easy to imagine how dabbling with such psychic skills could lead to a wizard's career in the Art.
If the DM is interested in further exploring the theme of the necromantic psionicist, refer to DRAGON® #200, where "The Even More Complete Psionicist" details the Spiritualist Kit: a psionicist who specializes in communicating with the spirits of the dead. The Spiritualist could play a similar in role in a campaign to the Witch necromancer who serves primarily as a diviner. For more psionicist kits and further ideas to flesh out a dual-classed necromancer/psionicist, see also "Open Your Mind" in DRAGON #191.
Along with the requisite 17 Int, this dual-classed character would require a 15 Con (in addition to the usual 16 Wis). An NPC's level of experience as a psionicist may be quickly determined by rolling 2d4 (resulting in 2nd to 8th level). While the character would undoubtedly benefit from a psionicist's wide range of mental abilities (as detailed in the *Complete Psionics Handbook*), the added complexity could render the NPC difficult to role-play effectively. Those DM's wishing to integrate psionics with the necromancer in a more limited and manageable fashion may care to employ wild talents rather than full-fledged psionicists.

## Wild Talents

Because of their association with forbidden and mysterious powers, it is not surprising that some necromancers might develop unusual mental abilities. After all, most necromancers, by right of their unusual mental faculties - high Intelligence and Wisdom - already have a natural aptitude for psychic disciplines. In the campaign, these skills may greatly increase a NPC's mystique and perceived level of ability. For instance, players may take alarmed note of a necromancer's Ist-level apprentice who can apparently sense their thoughts without visibly casting a single spell. With a single wild talent, an otherwise minor necromancer can appear to have strange and exotic powers without resorting to dangerous pacts with evil, lower-planar entities and the terrible consequences of such bargains.
As discussed in the *Complete Psionics Handbook (CPH)*, the base chance for gaining a wild talent is 1%, subject to these modifiers:

| | |
|---|---|
| Each Int, Wis, or Con score of 18 | +3% |
| Each Int, Wis, or Con score of 17 | +2% |
| Each Int, Wis, or Con score of 16 | +1% |
| Character is 5th-8th level | +1% |
| Character is 9th level or higher | +2% |

| | |
|---|---|
| Character is a wizard or priest | x l.5 |

Thus a 10th-level necromancer, with a 17 Int and a 16 Wis has a (1% (base) + 2% (Int) + 1% (Wis) + 2% (>9th level) = 6%) x 1.5 (wizard) = 9% total chance.

In campaigns which heavily involve psionics, the DM may allow entitle certain necromancers (such as the Philosopher) to make a wild talent check each time they advance a level of experience. In this way, a necromancer could have a wider range of wild talents, which would add further to the character's mystique and reputation. These few additional abilities are much easier to manage than those of a dual-classed necromancer/psionicist.

Ordinarily, tampering with the forces of the mind involves grave risks. Each time the necromancer attempts to unlock his or her psychic potential, there is a flat 3% chance that something will go terribly wrong in the process, irreparably damaging the character's body or mind. The *CPH* (page 20) proposes a number of penalties for failing a wild talent check. The DM may care to impose a different penalty for a failed check: a necromancer may simply fall into madness (see Chapter Three). Despite these dangers, the risk of suffering some permanent disability is remarkably small, especially when compared with the certain sacrifices that result when dealing with lower-planar powers.

**Table 3:** Wild Devotions for Necromancers.

| Roll | Devotion | Discipline |
|---|---|---|
| 01-03 | Absorb Disease | (Psychometabolism) |
| 04 | Adrenaline Control | (Psychometabolism) |
| 05-06 | Aging | (Psychometabolism) |
| 07 | All-Around Vision | (Clairsentience) |
| 08 | Animate Object | (Psychokinetics) |
| 09-12 | Astral Protection | (Psychoportation) |
| 13 | Awe | (Telepathy) |
| 14-15 | Ballistic Attack | (Psychokinetics) |
| 16-18 | Body Control | (Psychometabolism) |
| 19 | Body Equilibrium | (Psychometabolism) |
| 20-22 | Cause Decay | (Psychometabolism) |
| 23-26 | Cell Adjustment | (Psychometabolism) |
| 27-28 | Combat Mind | (Clairsentience) |
| 29-31 | Conceal Thoughts | (Telepathy) |
| 32-33 | Control Body | (Psychokinetics) |

**Table 4:** Wild Sciences for Necromancers.

| Roll | Science | Discipline |
|---|---|---|
| 01-04 | Aura Sight | {Clairsentience) |
| 05-09 | Banishment | (Psychoportation) |
| 10-13 | Clairaudience | (Clairsentience) |
| 14-18 | Clairvoyance | (Clairsentience) |
| 19-23 | Complete Healing | (Psychometabolism) |
| 24-28 | Death Field | (Psychometabolism) |
| 29-32 | Detonate | (Psychokinesis) |
| 33-36 | Disintegrate | (Psychokinesis) |
| 37-40 | Domination | (Telepathy) |
| 41-44 | Energy Containment | (Psychometabolism) |
| 45-49 | Life Draining | (Psychometabolism) |
| 50-52 | Mindlink | (Telepathy) |
| 53-55 | Mindwipe | (Telepathy) |
| 56-58 | Object Reading | (Clairsentience) |
| 59-62 | Probability Travel | (Psychoportation) |
| 63-65 | Project Force | (Psychokinesis) |
| 66-68 | Shadow-form | (Psychometabolism) |

| | | |
|---|---|---|
| 34 | Danger Sense | (Clairsentience) |
| 35 | Dimension Door | (Psychoportation) |
| 36 | Double Pain | (Psychometabolism) |
| 37-38 | Ectoplasmic Form | (Psychometabolism) |
| 39 | Empathy | (Telepathy) |
| 40 | Enhanced Strength | (Psychometabolism) |
| 41-44 | ESP | (Telepathy) |
| 45-47 | Heightened Senses | (Psychometabolism) |
| 48-50 | Inflict Pain | (Telepathy) |
| 51 | Invincible Foes | (Telepathy) |
| 52 | Know Direction | (Clairsentience) |
| 53 | Know Location | (Clairsentience) |
| 54-57 | Life Detection | (Telepathy) |
| 58-60 | Mind Bar | (Telepathy) |
| 61-62 | Mind Over Body | (Psychometabolism) |
| 63-66 | Poison Sense | (Clairsentience) |
| 67 | Repugnance | (Telepathy) |
| 68-69 | Send Thoughts | (Telepathy) |
| 70 | Sight Link | (Telepathy) |
| 71 | Sound Link | (Telepathy) |
| 72-76 | Spirit Sense | (Clairsentience) |
| 77 | Taste Link | (Telepathy) |
| 78-79 | Telempathic Projection | (Telepathy) |
| 80 | Truthhear | (Telepathy) |
| 81-90 | Choose any Devotion Above | |
| 91-95 | Choose any Devotion and Roll Again | |
| 96-00 | Choose any Devotion and Roll on Table 4 | |

| | | |
|---|---|---|
| 69-73 | Summon Planar Creature | (Psychoportation) |
| 74-75 | Switch Personality | (Telepathy) |
| 76-77 | (Telekinesis) | (Psychokinesis) |
| 78-80 | Teleport | (Psychoportation) |
| 81-90 | Choose any science or devotion | |
| 91-94 | Choose any science and two devotions | |
| 95-98 | Choose any science and three devotions | |
| 99-100 | Choose two sciences and four devotions | |

**Table 5:** Special Powers for Necromancers.

| ld20 | Special Power | ld20 | Special Power |
|---|---|---|---|
| 1 | Animal Form | 11 | Magic Resistance |
| 2 | Animate Dead by Touch | 12 | Regeneration |
| 3 | Augmented Hit Points | 13 | Scabrous Touch |
| 4 | Augmented Spellcasting | 14 | Shadow Form |
| 5 | Bestow Dying Curse | 15 | Skull Scry |
| 6 | Chilling Touch | 16 | Somnolent Gaze |
| 7 | Command Undead | 17 | Spell Immunities |
| 8 | Enhanced Vision | 18 | Unholy Blessing |
| 9 | Fear Aura | 19 | Unnatural Ability Scores |
| 10 | Food Corruption | 20 | Weapon Immunities |

## Vile Pacts and Dark Gifts

Sooner or later, wizards who employ black necromancy with some regularity are noticed by the dark and mysterious deities that patronize such evil sorceries. In some locales, such as Ravenloft, the fabled Realm of Terror, any wizard who employs the Art - whether for good or ill purpose - runs the risk of attracting the sinister attention of malign entities known only as the Dark Powers. Like all patrons of forbidden and evil magic, these fiendish gods seek to subvert mortal spellcasters, turning them into often unwitting instruments of the gods' will. To further corrupt and entice mortals into their service, the Dark Powers often grant strange and fabulous abilities to living wizards, thereby encouraging their continued practice of black necromancy.

Awesome supernatural powers are rarely gained without some terrible, personal cost to the individual involved. As we shall see in the following chapter, each beneficial Dark Gift (and even the practice of the Black Arts by itself) exacts a baneful and unavoidable price on the necromancer. Indeed, the price often outweighs the merit of the Dark Gift itself. But to the wicked and the ambitious, the price is of little consequence. Such characters are concerned only with attaining power and dominion over others, regardless of the actual cast.

The RAVENLOFT rules system (see Chapter Four in the *Realm of Terror* booklet in the new *RAVENLOFT* boxed set) already includes detailed provisions for gaining salient abilities which are expressly granted by the Dark Powers that rule the demi-plane. In that campaign setting, each time a character employs a necromantic spell (whether a wizard or priest), there is a flat 1% chance that this act will be noticed by the demi-plane's fiendish rulers. The RAVENLOFT rules system does not distinguish between white or black necromancy - any spells which draw upon a being's life force may attract their attention, regardless of the caster's intent. However, there is enough latitude in the "powers check" that the DM can increase the chance of attracting unwanted divine attention, from 1-10%, depending upon the specific nature of an evil act. Outside of the RAVENLOFT campaign setting, the DM may wish to retain the concept of the powers check, though it may apply only when a character willingly practices the Black Arts or employs gray necromancy for an evil purpose.

Keep in mind that the concept of a powers check only applies to player characters dabbling in evil affairs beyond their puny mortal understanding. Such restrictions need not apply to NPCs generated by the DM. Certainly the villainous and wicked archnemesis of the campaign will have no compunction about willingly allying him- or herself with the dark and terrible powers from the Lower Planes. Even if the NPC does not explicitly enter into a specific contract with such evil powers, however, the necromancer may unknowingly serve their will in the mortal world, simply by employing the darker aspects of necromancy.

Salient abilities represent a third way in which the DM can bolster an evil NPC's repertoire of powers. To preserve game balance, these Dark Gifts should only be bestowed on rare wizard NPCs who play a pivotal role in the campaign. In general, the DM should rarely assign more than a few (1-3) special powers to a single NPC (a good rule of thumb is one salient ability for every four experience levels of the character). Each special power also incurs a baneful punishment. Thus a wizard with three salient abilities has three special punishments (see Chapter Three for details). In most cases, only one or two special powers should be sufficient to create a unique and memorable NPC villain for the campaign. Keep in mind that these salient abilities are intended to provide an increased challenge (or a nasty surprise) for an experienced party of adventurers. They are definitely *not* intended for player characters.

Not just necromancers can benefit from the salient abilities outlined in this chapter. Death priests (introduced in Chapter Five) arc also candidates for such powers and, because of their allied affiliation, they are unlikely to suffer from as many punishments as a wizard. This is especially true when the fact that the powers of a wizard often intrude upon those bestowed upon a priest by his or her deity is

considered.
Because of their strong alliance with the gods that grant such powers, evil death priests, once they reach at least 9th level in experience, are much more likely candidates for salient abilities than wizards. For simplicity, in the power descriptions that follow, references to necromancers should be taken to mean "necromancers and death priests," except when stated specifically otherwise.
When creating an NPC with salient abilities, the DM may choose from the following list or determine the (1-3) powers randomly by rolling ld20 and consulting Table 5. Unless stated otherwise, the following abilities can be invoked at will by the necromancer. While some powers are similar to spells, none of the powers require any verbal or somatic components. The DM is encouraged to tailor the following powers to suit the flavor of the campaign.

**Animal Form**

This magical ability enables the necromancer to adopt a chosen animal form as if transformed by the wizard spell *polymorph self*. The chosen animal, bird, or fish must either be a natural predator or otherwise associated with death. Examples include the cheetah, bat, panther, wolf, vulture, tiger, bear, rat, shark, barracuda, killer whale, raven, or falcon. For every six levels of experience, the wizard can adopt one chosen animal form into which he or she can polymorph up to three times per day. The transformation occurs in a single round and includes all of the wizard's carried or worn possessions.

**Animate Dead by Touch**

Three times per day, the necromancer can cause skeletons and zombies of humans, demihumans, or humanoids to arise with but a mere touch. These mindless undead can serve the necromancer during the same round in which they were animated. Two skeletons or one zombie can be animated per level of the wizard. The remains of larger creatures can be animated, though they only fight as if they possessed 2 hit dice. In most other respects, this power functions similar to the 5th-level spell *animate dead*.

**Augmented Hit Points**

The necromancer can withstand greater amounts of physical damage than a regular, mortal wizard. The wizard gains +1 hp per level of experience (in addition to any bonuses due to high constitution). Furthermore, the character does not lose consciousness or perish when reduced to zero hit points. The necromancer can remain conscious and functional (even in combat) until reduced to -10 hp, similar to the 3rd-level spell *delay death (WH)*.

**Augmented Spellcasting**

The necromancer is able to memorize double the amount of normally available, low-level spells. For every six levels of experience, the necromancer gains augmented abilities for a new spell level (starting with 1st-level spells). Thus a 6th-level necromancer can memorize twice as many 1st-level spells. At 12th level, the wizard gains double 1st and 2nd-level spells. At 18th level, double 1st to 3rd-level spells, and so on. These extra spells must be chosen from the school of Necromancy.

**Bestow Dying Curse**

In order for this unusual ability to function, the necromancer must have suffered direct physical harm as a result of another creature's willing actions. Once wounded for 1 hp of damage or more, the necromancer can pronounce a dying curse on up to one creature per level of experience, providing the victims are within 200 yards of the wizard. The curse only takes effect once the necromancer dies, and it can be used as an "insurance policy" to ensure the wizard's survival. Declaration of a dying curse is always made in a grand, theatrical gesture (it has little effect as a deterrent if the victims are unaware of its power). Normally, there is no saving throw to avoid this sort of curse's effect, as the victims willingly accept the curse when they destroy the necromancer (it's the price that they pay). If the wizard does not pronounce the curse before his or her death, then the victims may be entitled to a save vs. spells {-4 penalty). The curse is permanent unless reversed by a wizard or priest of greater level than the necromancer that bestowed it.
The new *RAVENLOFT* boxed set contains a whole chapter on the subject of inventing creative curses for the campaign (*Realm of Terror* booklet, pages 54-65). At the very least, a dying curse may be similar to the afflictions outlined in Chapter Three or like the spells *bestow curse* or *plague curse*. The dying curse should be tailored by the DM to suit the mood and personality of the necromancer. Note that a dying curse, when fatal, does not necessarily slay the victim quickly or painlessly. It can be a slow, excruciating process, similar to the effects of a *cause disease* spell or mummy rot.

**Chilling Touch**

The necromancer can cause his or her hands to glow with a blue, flickering aura. This frigid radiance can both drain and paralyze the wizard's victims. First, any living creature touched by the icy hands suffers the effect of a modified *chill touch* spell. If the victim fails his or her saving throw, the touch causes 2d4 points of damage and (temporarily) drains 1 point of both Strength and Constitution. If the saving throw is successful, though, the victim only loses ld4 points of damage and just 1 point of Strength. Second, if the necromancer is at least 16th level, the victim must make a second save or be paralyzed for 3-12 rounds.
The necromancer can activate or deactivate this power at will. It never interferes with spellcasting. Also, the cold blue aura provides light like a dim torch (certainly enough light to walk or read by).

**Command Undead**

This power enables the necromancer to command undead like an evil priest with half as many levels of experience. Thus an I8th-level necromancer controls undead as a 9th-level priest. Certain necromancer kits and some necromantic priesthoods already have authority over undead (the DM should choose another salient ability for such characters).

**Enhanced Vision**

The necromancer gains the ability to perceive radiations and auras beyond normal human vision. At low levels (up to 5th level), the wizard can see normally under the night sky. While indoors (in conditions of total darkness), the wizard can still perceive objects normally, up to a range of 30 feet. This does not hinder the wizard's eyesight at all.
For every six levels of experience, the wizard gains another divinatory power based on the wizard spell

of the same name (the DM may roll a d8 or choose): *1) detect magic: 2) detect invisibility; 3) detect good/evil; 4) know alignment; 5) wizard sight (TOM); 6) infravision; 7) clairvoyance; 8) detect life (WH).*
Except for night vision, these powers do not operate continuously. The necromancer must visually concentrate on the subject (or area) for them to work. While the enhanced vision is active, the wizard's eyes light up with a malevolent, reddish glow. Normally, it takes one full round to scan an object, person, or area with the magical, enhanced vision.

**Fear Aura**

The necromancer can surround him- or herself with an aura of fear similar to (though less powerful than) that of a lich. Any creature with fewer than 3 HD (or levels of experience) who views this palpable, black aura must make a saving throw vs. spells or flee in terror for 2-12 rounds. Creatures with more than 4 HD are entitled to a +4 bonus and only flee for 1-6 rounds if they fail the save. Beings of equal or greater hit dice than the necromancer are unaffected. Unlike the regular fear spell, this necromantic aura has a more gradual and numbing effect. Affected creatures are thus unlikely to drop carried items.

**Food Corruption**

Three times per day, a necromancer can exude a mystical, poisonous radiance that taints nearby food or drink. Two types of food corruption are possible: one that induces a comatose slumber (available to wizards of any level), or another that brings a slow and excruciating death (granted to necromancers of 13th level or higher). In both cases, the food corruption requires a physical act of will on the part of the necromancer; it is not a continuously operating aura. The victims of both types of corruption are allowed a saving throw vs. poison.
The first, sleep-inducing type of corruption is difficult to detect in food or drink and has an onset time of only one round. This form of corruption can be created in food simply by the necromancer being within 30 feet of the food. The sleep lasts for up to one turn per level, but is automatically broken by any attempt to physically harm the slumbering individual.
The latter, deadly type of corruption results in a faint physical discoloring or putrefaction of the food. There is a 5% chance per level of the victim that the food's taint will be noticed before it has been consumed. Once tasted, however, the symptoms become quickly apparent. Severe stomach cramps begin in a few minutes, and an agonizing death results in another 2-12 rounds. This corruption can only be created in openly displayed food (such as a buffet table, an uncovered plate or a stand in a market) within 1-3 feet of the necromancer.
Food corrupted in this manner radiates a faint necromantic aura. The symptoms in a victim can be arrested or completely reversed by *slow poison, neutralize poison, heal*, or possibly by a character proficient in the healing nonweapon proficiency. Food can be cleansed of the corruption either by casting *purify food and drink* or *dispel magic*.

**Magic Resistance**

The necromancer gains a slight resistance to all forms of magic. The wizard's base magic resistance is 10%, plus an additional 2% per level. Thus, a 20th- level necromancer with this ability would have a 50% magic resistance.
Note that this magic resistance operates continuously and cannot be consciously controlled by the

wizard. It does not, however, adversely affect the necromancer's ability to cast spells or employ magical items of any kind.

**Regeneration**

The necromancer is able to regenerate two hit points per round. This ability continues to operate regardless of circumstances. Severed limbs continue to twitch and move under the wizard's direction, and they immediately reattach if brought into contact with the body (similar to a troll's powers). The wizard's body continues to regenerate after death, even if the remains were destroyed and reduced by fire or add. If the body is dismembered and the parts buried separately, it will take the necromancer one month to regenerate completely for every 100 feet distance of separation between the various parts. Alternatively, if the body is burned or dissolved in acid, the remains may be scattered over a wide area, delaying the regeneration time by one month for every 10-foot-square region of disposal area.
Necromancers with such regenerative powers can be terribly difficult to kill permanently. The DM may care to devise a special ritual (or a minor adventure) which must be completed in order for the wizard's death to be final. For instance, a certain necromancer's remains might need to be dissolved in aqua regia and then cast into the Lake of Winter Spirits during an annual solstice. Another wizard might keep his life force safe in a receptacle or phylactery which must be destroyed before the necromancer can be killed. Certainly the rite of final destruction will vary from necromancer to necromancer and must be adjudicated by the DM.

**Scabrous Touch**

With the touch of a bare hand, the necromancer can infect a victim with a deadly disease (see Chapter Three for notes on the plague and leprosy, or the description for *cure disease* in the *PHB*). Alternatively, the necromancer's touch may inflict mummy rot or a permanent version of *contagion*. The DM must decide on the single effect of a scabrous touch.
This power operates continuously and cannot be controlled (ordinarily, the wizard will wear a glove over the deadly hand to protect those nearby). The first symptoms of the disease appear 1-10 rounds after physical contact occurs with the wizard's deadly hand, though it may take weeks (or, in the case of leprosy, much longer) for the disease to run its full course. This magical disease may only be cured by a wizard, priest, or paladin of higher level than the necromancer.

**Shadow Form**

This ability enables the necromancer to shift his or her form into the plane of shadow, becoming a two-dimensional, subslanceless form, capable of slipping under doors and through tiny cracks. While in this shadowy state, the wizard cannot cast spells or otherwise physically attack other creatures, and is limited to his or her normal movement (possibly augmented by magical items or any spells which were cast prior to entering the shadowy state). Refer to the wizard spell *shadowform (WH)* for this form's limitations. The wizard can maintain this shadowy state almost indefinitely, provided that he or she stays fully alert and conscious and remains exclusively in an area of shadows. The wizard can be forced out of this shadowy state by exposure to bright light or complete darkness. This power may be used up to three times per day.

**Skull Scry**

This ability enables the necromancer to see or hear activity through any skull or cadaveric head. The skull or head must not be attached to a spine, nor can it be animated. The necromancer can scry through any disembodied skull or head (at a known location) that is up to one mile away per point of the wizard's Intelligence. In some cases, other types of sensory links may be used with the skull scry ability. The DM should refer to the spells *spectral voice* and *corpse link* in Chapter Four for further inspiration.

**Somnolent Gaze**

With this ability, a necromancer can immediately stupefy and cloud the mind any single living creature under his or her regard. If the subject fails a saving throw vs. spells (at a -4 penalty), he or she feels a profound form of lethargy and disorientation, similar in effect to a slow spell, except that the condition lasts for up to one turn per level of the wizard. The necromancer may call upon this power once per round, at will, and can also break its effect at any time (it can also be terminated prematurely by a successful *dispel magic*).

**Spell Immunities**

A necromancer with this ability is completely immune to all spells from the Enchantment/Charm school of magic. In addition, the wizard gains an immunity to *enfeeblement*, *polymorphing*, *cold*, *electricity*, and *death* spells. These immunities are typical for undead and would be most appropriate for a necromancer seeking to achieve lichdom.

**Unholy Blessing**

The necromancer benefits from an unholy blessing that helps protect him or her from danger. The wizard gains a +2 bonus on all saving throws and a -2 bonus to AC. This simple ability functions continuously, like the special benefits of a paladin.

**Unnatural Ability Scores**

The necromancer has engaged in research to augment his or her physical and mental attributes, raising them above their normal scores (by means of discovered wishes, magical tomes, enchanted pools, and so on). This research results in a total of 1-3 additional point, which may be distributed by the DM among the necromancer's ability scores. Alternatively, the DM may distribute each additional ability point by randomly rolling a dl2: 1) Strength; 2-5) Intelligence; 6-7) Wisdom; 8-9) Dexterity; 10-11) Constitution; 12) Charisma.

**Weapon Immunities**

Because of their affiliation with dark and terrible powers, certain necromancers lose their ability to be harmed by mundane weapons. Such wizards, when less than 12th level of experience, can only be harmed by magical weapons or slashing or thrusting weapons of cold iron or silver. Necromancers of 13th level or greater with this ability can only be harmed by magical weapons of +1 or greater

enchantment.

## Nonhuman Necromancers

*Long ago, when my beloved Gerard was still alive, we used to ride into the most distant hills of our estate during the cool weeks after Greengrass, accompanied only by our most trusted retainers. One day, when we camped near a rustic town called Soulbar, the burgers told us of a wyrm that had been ravaging caravans up and down the Trade Way for the past several months.*
*This dragon, which the villagers had named Shadowspawn, only attacked after nightfall and left behind not a trace of its victims - nor their goods, for that matter. It was as if the unfortunates had been snatched up or swallowed by the very night, or so the villagers claimed. Weeks after the attacks began, some of the dragon's victims were spotted by woodcutters in the Forest of Wyrms, but these were only animated shells, mere zombies of the victims which had been raised up by the dragon for her perverse pleasure and then cast loose into the forest once they ceased to amuse her. This much the town had learned when Soulbar's clerics called back the victims' spirits from the zombie remains, asking them about their murderer.*
*Thus warned, my husband I returned home, for we were ill-equipped to deal with a draconic necromancer. I later learned that several adventuring companies had gone up against the beast (and been added to the undead wandering the forest) before a victorious band of hunters put an end to that loathsome abomination. Those few who survived claimed that the dragon employed many spells of criminal necromancy against them.*
*With suitable monetary encouragement, I was ultimately able to purchase the dragon's spellbook from the triumphant Blades. The grimoire was an enormous, iron- bound book inscribed with notes that revealed a frightening understanding of the Art, surpassing in many ways my own knowledge! How that creature accomplished such mastery in relative isolation is beyond my comprehension. Perhaps a human wizard passed along his secrets to the wyrm or it discovered the key in some erudite tome of necromantic lore. My heart trembles at the thought of other creatures like Shadowspawn, with but a fraction of its talent for necromancy!*

—From the diary of Doctor Ellandra Tolbert

Although human wizards constitute the overwhelming majority of necromancers, exceptions do occur and can make for a nasty surprise for adventurers. Certainly members of other races can learn necromantic spells - but in general, only humans can specialize in the Art. However, as an added twist for an adventure or campaign, the nasty DM may decide to create unique NPC necromancers of the select few, evil monster races that employ magic.
Certain humanoids (specifically orcs), drow, dragons, and githyanki all have the potential to specialize in necromancy. In orcish witch doctors, this inherent potential is only realized by a scant few members of their race, constituting a tiny minority. Among the warlike drow and the githyanki - two races with a powerful talent for magic - necromancers tend to be as common as among humans. Finally, a few varieties of magic-using dragons - especially the shadow dragon - possess both the talent and interest to specialize in the Art.
All of these monsters are suitable for powerful NPC nemeses, providing suitable challenges for an experienced party of adventurers. Dragons make an excellent example of standard monsters that can be given a new twist by allowing them to focus their inherent magical talents in necromancy. The DM may extend the practice of necromancy to other magic-using creatures (like the shade) or possibly even create

new monsters that exclusively practice the Art.

**Humanoid Necromancers**

Humanoid cultures, such as the orcs, bugbears, gnolls, hobgoblins, and goblins, embrace violence and death, surpassing even humans in this respect. Their societies arc usually organized along tribal lines, with the clan chief ruling as the undisputed leader in temporal affairs. The clan priest or shaman takes care of the tribe's spiritual matters.

Finally, the tribal wizard (a member of the Savage Wizard kit from the *WH*) oversees the purely magical rituals and protections for the tribe. In most cases, the role of the shaman conflicts with that of the witch doctor, since at low levels the powers of a wizard can hardly compare with those of a priest. Indeed, few humanoid races have much talent for wizardry, making the witch doctor's role almost superfluous unless the shaman is absent.

Many of the humanoid races are widely known to have witch doctors as permanent members of a tribal community. Witch doctors almost never rise above the 4th level of experience, but rare individuals capable of casting 3rd-level spells have been reported in the more heavily populated humanoid areas, like the Sword Coast in the Realms.

As noted earlier, the odds of randomly generating a human necromancer with the requisite ability scores are at least 2%. Among ores, this probability would be even lower. According to the *Monstrous Manual*, the odds of encountering an orcish witch doctor (let alone a *necromancer* witch doctor) are 5 in 1000! Except in a major orcish city, the likelihood of encountering an orcish necromancer is small indeed.

**Drow Necromancers**

The elegantly evil race of dark elves make perfect candidates for necromancers. Unlike their surface-dwelling cousins, the drow embrace death and necromancy to the very core of their mainstream society, enshrined in the worship of their sinister mother-goddess Lolth. Wizardry is one of the few avenues for male advancement and prestige in the matriarchal theocracy of the dark elves. Necromancy is a popular school of magic among drow specialists (others favorites include invocation and alteration). Drow necromancers adopt either the Archetype, Philosopher, or Undead Master kits.

The dark elves arc unquestionably a magically talented race. Even the most mundane citizen has innate magic resistance and some sort of minimal talent with wizardry, so it perhaps not surprising that they can advance as far as humans in this regard. Certainly, every drow city can boast of at least one archmage capable of casting the most powerful spells.

All drow wizards (necromancers included) either operate strictly within the matriarchal confines of their society or live completely outside them. Those drow who remain in their own communities emerge into outer layers of the Underdark (or more rarely, to the surface) only for training or war parties. Wizards chosen for these missions are thus rarely more powerful than 9th to 11th level of experience (and usually far weaker).

The most powerful drow necromancers place themselves above such petty tasks, residing exclusively in subterranean cities where they serve the constantly broiling, internecine quarrels relished by the various noble houses. The most powerful wizards, who choose to remain above the political maneuvering, still must serve the community by teaching in the colleges of sorcery. These institutions play a fundamental role in the training of young drow warriors and priests.

To question their role in the female hierarchy spells certain disaster for male drow wizards. The priesthood ruthlessly twists any progressive free thinkers into hideous driders. These half-arachnid,

half-drew monstrosities retain their former command of necromancy and are usually between the 6th and 8th level in experience.
Those lucky enough to escape such punishment flee deep into the bowels of the Underdark, forsaking all protection by their house and society. Life as a rogue mage is far from easy. The priesthood sends relentless war parries to eliminate such mavericks lest their example be emulated by others, and the horrific denizens of the Underdark can be much less than hospitable to a single, traveling drow. Rogue necromancers among the drow must therefore be extremely powerful and resourceful in order to survive alone for long in the harsh environment (at least 12th level).

**Draconic Necromancers**

The dragon symbolizes power, magic, and destruction, so it should not difficult to imagine them gaining mastery over necromancy, given their eonic life spans. Draconic culture and religion is highly advanced, focusing primarily on greed and acquisitiveness. Dragons also embrace many of the same concepts as human society, including a fascination with death.
Certain dragons worship a unique death god called Null the Reaver, also known as the Deathwyrm or Guardian of the Lost. This deity embraces not only the destructive and evil aspect of taking life, but also the protective function of shepherding draconic spirits to their final destination in the afterlife. Thus, it might be possible for dragons to be either necromancer wizards or death priests.
Restricting our discussion to wizardry, not all dragons possess the intellect, magical ability, and self-discipline necessary to specialize in the Art. Silver and gold dragons have quite developed magical abilities, but their good nature makes them unlikely candidates for necromancy (except as Deathslayers). Blue, brown, deep, green, red, and yellow dragons possess the necessary wit and brutal nature to learn black necromancy, usually adopting the Archetype kit. Amethyst, myst, and steel dragons make excellent Philosophers. Finally, shadow dragons have the greatest inherent mastery of the Art, favoring the Undead Master kit. All of the remaining draconic races have neither the intelligence nor the slightest care to specialize in necromancy.
Dragons specializing in necromancy are entitled to the usual saving throw bonuses, additional spell per spell level, special abilities, and hindrances (including Dark Gifts and prices) of their regular human counterparts. The main difference is that the dragon's spells are learned as inate abilities and are not memorized, like a human wizard's or cleric's. In addition, dragons cast their spells completely differently from humans. Draconic spells can be triggered solely by an act of will. Humans need complex and lengthy verbal, somatic, and material components.
The biggest disadvantage to specializing in necromancy (from the dragon's perspective) involves restricted spell access. Draconic necromancers, like their human counterparts, are restricted to certain permissible schools of magic (as dictated by their specific kit). More importantly, however, these dragons lose all ability to cast priest spells. Instead, this spell potential is transferred over to additional wizard spells of the same number and level. For example, Shadowspawn - the shadow dragon mentioned earlier in Dr. Tolbert's diary - can normally learn (Wiz 2 2 2 2 2 / Pr 2); if it specializes, the dragon could only learn (Wiz 5 3 3 3 3), taking into account the bonus spell per spell level and the shift of the 1st-level priest spells to wizardry.

**Githyanki Necromancers**

The Githyanki are a militant and xenophobic race, descended from humans, that dwell on the Astral Plane and pay eternal homage to an undying necromancer queen. In their strictly regimented society,

organized into martial hierarchies of command, specialized wizards - including necromancers - play an important role. Every githyanki command structure, from the smallest platoon to the mightiest citadel, contains at least one necromancer capable of devastating opponents on the field or manipulating the dead to fight for the living.

Unlike the wizards in drow society, githyanki necromancers have a respected rank and high status in their civilization. Githyanki wizards tend to be female in honor of their lich-queen. Although of slightly inferior rank to an acting captain, they are independent of the military chain of command and lend their support in a battle where it is needed.

On the Prime Material Plane, githyanki necromancers are always encountered supporting a larger war party consisting of at least 2-7 other individuals. The party might be hunting for sport, engaging in a serious training mission (human blasting), performing reconnaissance for an upcoming outpost or stronghold, or seeking to recover a lost necromantic artifact (probably a silver sword capable of severing a mortal's silver cord in the Astral Plane). Like other members of their race, actively serving githyanki necromancers vary in power from the 4th to 11th levels of experience. However, once they reach the 12th level, githyanki are brought before their paranoid and pitiless queen, who greedily devours their life force in a solemn ritual known as "retirement."

In addition to their magical and racial powers, all githyanki possess powerful psionic abilities which vary according to class and level of ability. Table 6 presents a suggested regimen of psionic abilities for githyanki wizards. The mental strength of such mages increases with level, starting with a base 150 Psionic Strength Points (PSPs) and increasing by 10 PSPs per level (maximum of 250 PSPs at llth level). Githyanki necromancers can make devastating opponents, especially when supporting a contingent of comrades. Individually, they prepare for battle by initiating flesh armor, adrenaline control (to boost constitution), and displacement (wizards of 6th level and above can do this in a single round using splice). Along with the knights (see *MM*), githyanki wizards of 8th level or higher have the responsibility of seeking out psionic threats in combat (with psionic sense) and eliminating them.

Wizards initiate psychic contests in combat. Once contact has been established with an opponent's mind, wizards will use id insinuation to quickly stun their adversary, employing spells on subsequent rounds to finish off their helpless opponent. An organized band of githyanki fortified by a necromancer in their midst can decimate even a powerful, well- balanced party of adventurers.

**Table 6:** Psionic Progression for Githyanki Necromancers.

| Level | Discipline | Science | Devotion |
|---|---|---|---|
| 1st | Metabolism | Energy Containment | Body Weaponry<br>Flesh Armor<br>Mind Over Body |
| 2nd | | | Craft Weapon<br>Displacement |
| 3rd | Telepathy | Life Draining | Contact<br>ESP |
| 4th | | Double Pain | Adrenaline Control |
| 5lh | | Death Field | Cell Adjustment |
| 6th | Metapsionics | | Splice |

| | | | |
|---|---|---|---|
| 7th | | Metamorphosis | Convergence |
| 8th | | | Psionic Sense |
| 9th | | | Stasis Field |
| 10th | Psychoportation | Teleport | Dimension Door |
| 11th | | Empower | Time Shift |

## Sorcerers Immortal

*I shall laugh as I place my head on the block, laugh at them all as the raven jeers at the gallows or the worm mocks the grave. It took the Prince's most powerful knights to bring me - shackled in cold iron - before my earthly liege, but not before I had slain a hundred of his retainers, twisted the insides of his beloved wife, cursed their only son with ravening madness eternal.*
*I have lain among the rat-gnawed bones of the oubliette and accepted the iron maiden's cruel embrace, but 1 am not alone, and I feel no pain. The slaadi still comfort me with their infernal melodies, and my invisible familiars still inform me, bringing news in the clammy darkness from my lord Thasmudyan. I shall have eternal life for my devoted service; the baatezu lord has promised me this final boon.*
*I will survive, of that I am certain, but my next evolution may not remember all of my secrets, all the cryptic mysteries of the Art. I shall bid the shadows to write them down, inscribe them in a book so that I may remember all that I knew before I died: And then I shall depart this earthly realm and walk on farther shores, undreaming and unbidden, until I stand once again in the ivory court of Thasmudyan.*

- From Nebt Bhakau's *Book of Shadows*

The human mind and personality yearns to persist after death. Most turn to religion for the promise of eternal life, but other individuals - less trusting in divine providence or perhaps fearing their spirit's ultimate destiny in the afterlife - take it upon themselves to secure their own immortality in the physical world. Most necromancers eventually master the secret talents necessary to achieve this goal. Indeed, some embrace the Art solely for this purpose.
Aging is a natural process for all, but to the necromancer, both powerful magic and the curse of the Black Arts can quickly strip the wizard of fleeting youth. Although age initially matures a wizard's mental faculties, senility and decrepitude eventually corrupt both mind and body. A wizard can allay or avoid these disabilities through potions, *wishes*, or necromancy.
*Potions of longevity* and *elixirs of youth* are perhaps the most common method for extending life, though their rare material components make mass production highly infeasible. In addition to their easily mundane components, the formulae for these potions is rumored to include either the dust of a lich, a dragon's breath, an angel's whisper, or the blood of an elf, freely given. Not surprisingly, few wizards can obtain or create more than a few of these potions, usually extending their normal life span by several decades. However, even if an unlimited supply of such potions were available, the increasing chance of completely reversing their effects (1% cumulative per potion) drastically limits their ultimate usefulness. At best, a wizard might hope to extend his or her lifetime by three to four centuries with such potions.
Powerful spells, such as *limited wish* or *wish*, can also prolong life. Although each DM must adjudicate the specific powers of a wish for the campaign, it is not unreasonable to assume such magic could slow aging by a factor of 10. A *wish* irreversibly ages the caster by five years, and it cannot be used to negate its own life-draining effects. A 40-year old wizard who wishes for an extended life span still ages to 45

years before the *wish* takes hold. Still, with intelligent use of a few *wishes*, an archmage might prolong his or her life beyond a millennium.
There are other ways to extend human life, known only to the powerful necromancer. The new spells *life force transfer* and *life force exchange* enable the wizard to permanently transfer his or her own life force into the body of another (presumably much younger) individual. *Magic jar* works along the same premise, though the effects are only temporary. In all of these cases, the necromancer achieves youth only at the expense of another individual. With *life force transfer*, the victim dies when the spirit is literally forced out of the body to make room for the caster's life force; with *life force exchange*, the spirits of the caster and victim swap bodies; with *magic jar*, the wizard and victim share the same body (albeit temporarily). While each of these spells carries its own dangers (see the spell descriptions in this book and the *PHB*), they can also provide an unusual form of human immortality for the necromancer. Unlike other methods, which only ensure prolonged life, these spells enable an evil wizard to also enjoy all the pleasures and benefits of eternal youth.
A necromancer can thus effectively extend his or her mortal lifetime almost indefinitely - certainly far beyond the range of normal humans - through potions, the intelligent casting of *wishes*, or by the unscrupulous use of the Art. However, a wizard can also resort to a permanent undying transition in order to achieve some measure of immortality.

**Undead Necromancers and Death Priests**

Most wizards and priests embrace undeath only as a last resort, after all of the less drastic means of life extension have been exhausted. Nevertheless, some necromancers and priests voluntarily surrender their mortal lives early, trading all their human weaknesses for the dark powers of the deadalive. The undead never need eat, sleep, or face any of the other mortal failings that continually distract from their dastardly pursuits. They can devote centuries to increasing their power or spreading their religion.
Certain individuals may suffer undeath as a form of divine curse or punishment for terrible crimes or the use of black necromancy. But the majority of undead necromancers and priests have chosen their fate and accepted the ultimate Dark Gift. The vampire and lich are the most likely (and deadly) forms of undead necromancers that a party will encounter in a campaign. A undead priest may be encountered in either of these forms or that of a greater mummy. Most undead continue to develop their powers in undeath, making them increasingly powerful adversaries with time.
Vampiric necromancers arc similar in most respects to their human counterparts in terms of their wizard abilities. Their abilities to charm others and command lesser animals make them natural candidates for the Undead Master kit. Vampire death priests will usually worship the Lord of Undead. In addition to their spellcasting powers and vampiric abilities, the vampire suffers from a number of serious weaknesses (holy symbols, sunlight, garlic, and so on). However, as noted in *Van Richten's Guide to the Vampire*, these weaknesses decrease with age, even as the vampire's special powers continue to mature and develop.
The lich, on the other hand, is a consummate immortal spellcaster, the ultimate goal of any necromancer or death priest. Unlike mortal specialists, the wizard lich can learn spells from any school of magic, and it still enjoys all of the regular benefits of the Archetype (it still gains all of the additional spells and saving throw bonuses of the kit). The lich also retains any special powers it enjoyed while alive and may gain additional salient abilities as its skills continue to grow. The DM should see the NPC sheet of Vermissa for an example of a priestly lich. *Van Richten's Guide to the Lich* contains an exhaustive description of this variety of undead.

The greater mummy, presented in the *MONSTROUS MANUAL*, is enchanted by a necromantic priesthood to retain its clerical powers in undeath. Since this creature is sometimes created by more powerful priests (or the gods) to safeguard a particular tomb or temple, its mobility and usefulness as a villain are greatly impaired. In Chapter Nine, we explore the network created by an undead priest (the lich Vermissa in this case) who has been forced to remain in a particular location for centuries.

Along with those from the various monster races, undead necromancers and priests should be reserved for special, nasty encounters. They can also serve as memorable villains in a campaign. When used sparingly, these inhuman necromancers should provide many surprising challenges for a high-level party of adventurers.

# Chapter 3: The Price

*Sometime after midnight, Jal' shook me awake with a start. A sharp, wide moon hung in the night sky near the desert horizon. I cursed softly. My turn at watch wasn't due for a few more hours, when the shining sphere was at its zenith.*
*"He's dreaming again," Jal' told me, worriedly. "Come help me tie him down."*
*Our brother Talib slept beneath the palms, away from the rest of the caravan so his nocturnal ramblings would not disturb their rest. He was speaking in Kadari again, the ancient language of the dead. Luckily for Jal', she couldn't understand a word, but I knew some of the phrases, with my small rogue's talent for tongues. I ignored the obscene whispers and started binding Talib's legs together to keep him from wandering away into the desert. Meanwhile, Jal' worked on his hands, to stop him from casting his withering spells and slaying us all in his sleep.*
*Jal' started praying after she finished, her soft, holy whispers mingling with our brother's ravings. Jal' prayed for a cure to his shattered sanity, but I only hushed her into silence, straining to understand his curiously accented Kadari. Talib's eyes were open, as usual, staring up into the stars as he dreamed. From his speech, I knew my brother was not mad, at least not in the usual sense, for his sleeping gaze was focused not on the stars, but on another time, long past, when Kadari was still spoken by the living.*

- From *Leyla's Lost Journal*

Whether they realize it or not at the outset of their careers, wizards that specialize in necromancy make painful, personal sacrifices for their profession. Even if they shun the Black Arts entirely, a necromancer is still subject to the social prejudices, physical dangers, psychic pressures, and curses that plague those who channel the forces of the spirit.
As with any discipline, mastery of the Art comes at a price. All necromancers suffer from a nearly universal social stigma associated with their profession. In addition, many of these wizards - especially those who embrace the Black Arts - must overcome a number of personal handicaps which increase in number and severity along with the necromancer's power.

## The Social Stigma

In every society, there is some form of scapegoat, a small group of people who are blamed or held accountable for the countless unexplainable tragedies in human existence. As late as the so-called Enlightenment, Western society blamed the witch for kidnappings, unexplained fires, tainted welly, rampant plagues, and mysterious deaths. Countless women bearing the signs of a "stereotypical" witch were rounded up, tortured until they confessed to crimes they did not commit, and finally burned at the stake to purify the community.
In the campaign, a necromancer may experience similar, severe public discrimination whenever his or her profession becomes known in a social context. At one extreme, based on the witch-hunting atmosphere of Europe during the 16th-17th centuries, the practice of black magic, or indeed any form of necromancy, may be punishable by death or (if the wizard is exceedingly powerful) shameful exile. At the very least, no society which is ruled by a good or neutral ruler will tolerate the open practice of the Black Arts. Even in a dark and gritty campaign where the forces of evil run rampant in society, a known necromancer will be viewed with open fear, suspicion, and hatred.

Discrimination can take a wide variety of forms. A perceived necromancer may be barred from a particular tavern, shop, or home (or even from an entire village) once his or her profession is recognized. Vigilantes, bounty hunters, rival mages, or even adventuring parties may try to eliminate a visiting necromancer, hoping to bolster their position in the community, gain a few new magical items, and possibly collect a reward from the local authorities.
Necromancers that need or choose to live in civilization must disguise their profession to escape unwanted attention, especially at low levels. Not surprisingly, most practitioners of the Art tend to shun human society, preferring the lawless expanse of the wilderness where their deeds and experiments can go unnoticed and unpunished.

## Punishments and Handicaps

As discussed in Chapter Two, wizards who practice black necromancy are subject to the attention of evil, extraplanar powers that sometimes reward mortals with supernatural powers (after a successful powers check). However, when a sinister deity bestows the Dark Gift upon a mortal, the god usually exacts a personal price which manifests as one of the many handicaps outlined in this section. On the other hand, two new role-playing devices (the *disease check* and the *madness check*) can be used by the DM to introduce handicaps into the campaign without divine or supernatural intervention. Regardless of their origin, disabilities help define a distinctive and memorable villain for the campaign.
The DM may also care to bestow these handicaps on PCs who willingly employ black necromancy. Handicaps are a good, role-playing alternative to the imposition of "alignment shock" described in the DMG. A handicap system also helps explain why the Art is viewed with universal fear and loathing in the campaign.
Of course, certain players may relish playing a slightly twisted wizard character. Even then, the handicaps will serve to enhance role-playing in the campaign. As a rule of thumb, however, the DM should never assign a handicap that would completely cripple a wizard character and prevent him or her from casting spells.
For every Dark Gift bestowed on a necromancer (see Chapter Two), the DM should choose an appropriate handicap for the character. Alternatively, the DM may roll a d4 and consult the appropriate subsection as listed on the table directly below.

1. Physical Deformity
2. Bodily Affliction
3. Insanity or Madness
4. Unholy Compulsion

**Physical Deformity**

In literature, horrific and vile villains arc often physically marked with some sort of extremely noticeable and distinguishing disability (in addition to their stereotypical tendency to always dress in black, representative of the darkness that lurks within their twisted souls). The hunchbacked Richard III, for instance, was universally hated and reviled because of his deformity. To Shakespeare, this alteration of the King's form became synonymous with malignant villainy. Symbolically, a physical deformity was viewed as mirror of an individual's inner self or interpreted as a form of divine punishment for a dreadful sin. In this way, warts became forever associated with witches.

Modern writers about necromancy have continued with this allegorical convention. The necromancers of dark Ashton Smith, for instance, are so powerfully evil that their baneful nature is painfully apparent to all around them, as if the corrupt wizards radiated a palpable aura of malevolence. Normal acts of kindness, such as a smile or laughter, become perverted into frightening glimpses of their twisted nature.

**Bodily Afflictions**

Just as physical deformity has been associated with villainy, physical sickness and disease have been historically interpreted as a form of divine retribution. Of course, mass outbreaks of plague and pestilence - which decimated both the good and evil - can be cited to refute such superstitions, but still such beliefs remained, even in the face of rational observation.

In addition to its supernatural origins, disease could just as easily result from a necromancer's plundering of the dead or contact with rotting corruption and filth. A necromancer might also gain a sickness after exposure to certain undead (like a mummy), cursed magical items (such as a *staff of withering*), and spells (like *cause disease* and *plague curse*). The risk of disease also threatens wizards who tamper with black necromancy. Wizard spells that by their very nature inflict disease on others (such as *contagion* or *mummy touch*) might have some form of unforeseen side effect on the caster.

In game terms, whenever you feel a necromancer has placed his or her health at risk by investigating an especially filthy, moldering crypt (or perhaps casting a disease-producing spell), have the character make a *disease check* - simply a constitution check subject to the modifiers on Table 8. Disease checks should also be required for PCs, though only for special circumstances, such as exploring major tombs or searching a large number of rotting bodies.

Normally, if a character fails a disease check, symptoms of an ailment (such as dizziness, nausea, fever, or coughs) emerge within 13-24 hours. Characters with the healing nonweapon proficiency can allow an afflicted individual to make second disease check, this time with a +2 bonus. Unless *cure disease* is available from a priest or paladin, the full force of the affliction descends upon the unfortunate victim in 1-4 days.

However, in the special case of a failed powers check, a necromancer is not entitled to a disease check and succumbs to the ravages of an illness within 1-6 turns of attracting the baneful attention of the patron god. Usually, the corresponding Dark Gift is only bestowed after the character suffers through the disease. This severe, divinely imposed affliction may not be treated by a character with the healing nonweapon proficiency, and *cure disease* will only be effective if cast by a priest of a greater level of experience than the necromancer suffering from the ailment.

The full course of the disease may last from 5-20 days, during which time, the character may become incapacitated. Each day the illness progresses, the character (temporarily) loses 1 point from one (or more) ability score. Either choose or roll ld6: 1) Str, 2) Int, 3) Wis, 4) Dex, 5) Con, 6) Cha. When one of the scores drops below 3, the character has been effectively incapacitated. After the disease has run its course, lost points are regained at a rate of 1 point for every 2-5 days.

Unless you are in a punishing mood, don't inflict fatal diseases on your players. It is far more interesting (and character building) for them to suffer strange permanent handicaps as a result of their affliction (as listed on Table 7), or to incur a permanent one-point loss in an ability score.

**Insanity or Madness**

As we have seen in the kit descriptions of Chapter One, the mental demands placed on certain

necromancers, as a result of their trafficking with the dead and lower-planar entities, will eventually wither the sanity of the most stable individuals. Because of their high wisdom, necromancers rarely go stark-raving mad. They are almost never incapacitated by their own insanity. Rather, the necromancer's own twisted mind becomes a most insidious handicap. The wizard docs not even realize that the mental disability exists, and even if he or she acknowledges its existence, the necromancer does not care to remove it!

At the DM's option, when members of certain kits advance a new experience level, they must make an insanity check. Similar to the fear and horror checks employed in the RAVENLOFT rules system, an insanity check (also called a madness check) is a save vs. paralyzation. (Wisdom bonuses normally applied to saves vs. mental effects are also included.) The mental decay can be treated with *cure insanity, heal,* or *restoration* spells.

The necromancer's "professional" madness does not usually result from a single, traumatic experience, but rather from a slow destabilization of the mind, a gradual erosion of the sanity that occurs while learning the terrible secrets of the Dark Art. A necromancer might also be driven mad by a successful powers check. For this special case, no insanity check is allowed, since it is considered a mandatory price by the evil god (which bestows a helpful Dark Gift in exchange). Madness can also result from a wide variety of causes outlined in the new 4th-level clerical spell *cause insanity*.

The forms of madness described in this section do not reflect modern medical definitions. They are intended to provide role-playing opportunities for experienced DMs and players alike.

1. Phobia
2. Melancholy
3. Delusion
4. Paranoia
5. Hallucinations
6. Amnesia

**Phobia.** The character develops an irrational fear of some creature or situation and will flee or cower whenever confronted with it (treat as if affected by a *fear* spell). The victim may also mention or want to discuss the object of fear in any conversation. Some possibilities are monophobia (fear of being alone), homophobia (fear of blood), psychrophobia (fear of cold things), claustrophobia (fear of containment), necrophobia (fear of corpses), nyctophobia (fear of the dark), onomatophobia (fear of a certain name), hypnophobia (fear of sleeping), pnigerophobia (fear of smothering).

**Melancholy.** The character loses the will to act or participate in a suggested activity. He or she wants to be left alone and may become violent if disturbed. In any given situation, the subject is 50% likely to do nothing, regardless of the danger, even at the risk of personal safety. If berated, pressured, insulted, or otherwise made to feel inferior, the subject has a 50% chance of becoming violent. Violent fits last only ld6 rounds, then the character lapses back into brooding silence and inaction.

**Delusion.** The character believes him- or herself to be something or someone that she or he is not. The wizard takes a new identity and tenaciously holds on to it. Usually, the character adopts the guise of someone or something unusually important. An apprentice necromancer may believe himself to be the legendary archmage Tzunk, who sundered the gates of the fabled City of Brass and scattered the legions of efreet with his terrible pronouncements from the *Codex of Infinite Planes*. By the same token, she may also think that she's a flower or a cat or a brooch on someone's jacket. In any case, the character does his or her absolute best to impersonate the person or thing that's been identified with. If a player character is afflicted with this form of madness, the particular choice of a delusion for the character may be discussed

between the DM and the player.
**Paranoia.** The character experiences delusions of grandeur, accompanied by the absolute conviction that everyone is thoroughly jealous and out to get him or her. For instance, a necromancer might believe that she or he has angered some extraplanar power by delving into the hidden secrets of the cosmos, and this evil deity (and its mortal minions) are now planning to eliminate him or her. The character docs not trust anyone and may fixate upon a particular person or creature as the leader of the conspiracy. The necromancer sees evidence of the great cosmic conspiracy in everything and everyone.
**Hallucinations.** The character constantly sees things that simply aren't there. He or she may see hallucinatory enemies in any combat situation or whenever a saving throw or ability check is required. Hallucinations can be most entertaining to role-play in combination with a phobia or paranoia. The character may be affected as if by *fear, hypnotic pattern*, or even *suggestion*.
**Amnesia.** This madness robs the character of minor or temporary memories and factual knowledge, effectively turning him or her into an "absent-minded" individual. The character cannot remember facts or events that didn't take place within the last few hours. This form of amnesia blocks the ability to recall factual knowledge, similar to the new 4th-level wizard spell *brainkill*. It in no way affects professional performance, the ability to cast spells, and saving throws.

**Unholy Compulsion**

Curses are a fourth handicap which may be imposed on a necromancer by a patron god as a compensating punishment for some Dark Gift. The curse usually manifests as some form of uncontrollable compulsion (such as howling at a full moon). Others affect the necromancer's behavior (such as never being able to speak the truth). A final class of curses makes the wizard susceptible to a special attack form (like holy water). The handicaps listed in Table 9 may also result from willingly dabbling in black necromancy or using necromantic (and cursed) magical items.
The recipient is usually well aware of the nature of his or her compulsion, but as with a *geas* or *quest*, the subject is unable to take any measures that would remove it. Instead, the wizard may try to compensate for the weakness with appropriate precautions. For instance, a wizard who was susceptible to weapons hewn from freshly cut holly might destroy all trees near his or her lair.
Only a *remove curse* (employed by a higher-level caster than the victim) or a *wish* can eliminate an unholy compulsion.

**Table 7:** Assorted Physical Deformities.

**Table 9:** Unholy Compulsions and Curses.

| | |
|---|---|
| 1 | All hair permanently turns white or falls out |
| 2 | Fur or scales cover body and frame face |
| 3 | Club foot/lameness in a leg (1/2 movement) |
| 4 | Eyes similar to animal's (like a cat or wolf) |
| 5 | Face resembles that of a particular animal |
| 6 | Hands or feet are misshapen claws or talons |
| 7 | Hands turn coal black or blood red |
| 8 | Hunchback (combat ability unaffected) |
| 9 | Malignant stench of decay or aura of malevolence in a 10' radius |
| 10 | Physical aging, 1-20 years |
| 11 | Second mouth appears at the base of the skull |
| 12 | Six-fingered hands (or six-toed feet) |
| 13 | Skin gains the cold blue pallor of a corpse |
| 14 | Small horns appear on head |
| 15 | Smile or laughter appears cruel and evil |
| 16 | Teeth (or ears) are long and pointed |
| 17 | Three-foot long tail sprouts from lower back |
| 18 | Tongue is forked or serpentine |
| 19 | Vestigial, leathery wings on back |
| 20 | Voice sounds evil, low, whispery, or inhuman |

| | |
|---|---|
| 1 | Blinded by bright light |
| 2 | Drinks fresh blood, 1/day |
| 3 | Eats corpse flesh, 1 /day |
| 4 | Eats earth and stones, 1/day |
| 5 | Eats fresh (uncooked) meat, 1/day |
| 6 | Harms or kills a sentient individual, 1/week |
| 7 | Hates all contact with the living (only tolerates undead or extraplanar allies) |
| 8 | Howls under night sky or at moon, 1/day |
| 9 | Memorizes spells in an underground chamber |
| 10 | Murders friends and allies |
| 11 | Never speaks the truth |
| 12 | Seeks revenge/murders for the slightest perceived insult or disagreement |
| 13 | Sheds own blood (1-4 hp damage), 1/day |
| 14 | Sleeps in a tomb or open grave |
| 15 | Withers all vegetation when casting spells (1' radius per spell level) |
| 16 | Wounded by contact with cold iron or steel (1-4 hp + normal weapon damage) |
| 17 | Wounded by contact with freshly-cut wood (1-4 hp + normal weapon damage) |
| 18 | Wounded by contact with silver or gold (1-4 hp + normal weapon damage) |
| 19 | Wounded by fresh or holy water (2-7 hp damage) |
| 20 | Writes/reads backwards (left to right) |

**Table 8:** Disease Check Modifiers.

| | |
|---|---|
| +1 | Opened a sealed coffin or sarcophagus |
| +2 | Searched a decomposed corpse |
| +2 | Hazard is located in a moist environment |

| | |
|---|---|
| +2 | Retained clothes after emerging from hazard |
| -4 | Waited for fresh air to circulate in hazard |
| -2 | Wrapped cloth around mouth and nose |
| -2 | Hands and feet covered with gloves and boots |
| -4 | Bathed after emergence from disease hazard |

## Paid in Full

The practice of black necromancy takes a terrible toll on the body, the mind, and the spirit. Some of the handicaps can be quite severe. Keep in mind that they are intended to counter-balance the potentially powerful Dark Gifts described in Chapter Two. They can also be used to punish player characters for dabbling in the Black Arts. Not all of the proposed handicaps are equally nasty; the DM may decide to impose two lesser hindrances on a necromancer in exchange for a particularly powerful Dark Gift.
Even if a necromancer (wisely) avoids the Black Arts, the wizard must still pay a social price. The necromancer faces fear and ignorance in the uninitiated, who cannot comprehend the subtle beauty of the Art. While some necromancers resign themselves to solitude, others are pained by the lack of public understanding or appreciation for their calling. Even after all the other sacrifices have been paid in full, loneliness is the ultimate price of the necromancer.

# Chapter 4: The Dark Art

*Mirtul 17, Year of the Bow*
*Three days after skirting Carcathen, we sighted a westward sail - a Nelantherese caravel, Retaliatior, standing high in the wind with a full complement of pirates. We tried to beat them to the Race, but they caught us off Nemesser's Tower, though not within sight of land, or we would have surely been lost. As I was calling the crew to clear for action, one of our passengers, the Lady Doctor Tolbert, came on deck and watched the approaching ship with a look of mixed disgust and annoyance.*
*"My husband hated pirates," the Lady said. I hastily agreed, for she was a sorceress of sorts, as well as a surgeon. In the past, when the topic of her husband came up, her eyes became distant and sad, almost dangerous. "Gerard's last action was against pirates in these waters," she said to no one in particular, before withdrawing below.*
*The final action with Retaliator came as a surprise. Once the caravel closed to boarding distance and called for our surrender, Lady Ellandra came back on deck, this time shielded by a cold, blue aura. She began to speak in a soft and deadly whisper, her gaze fixed on the wildly shouting men on the pirate ship's quarter deck. Many of the rogues had climbed up into the rigging, where they fired arrows onto our ship. One of the bolts struck Ellandra square in the face, but it was brushed aside by her magical warding.*
*As the Lady intoned the last syllable of her dreadful spell, a greenish vapor formed in the rigging above the pirate's quarter deck. Wailing resounded from the skyward cloud, like a distant chorus of lamentations. Ghostly images swirled in the liaze. The billowing mist quickly descended onto the decks of Retaliator, and horrific screams rose in a deafening crescendo from the ghastly cloud, echoed now by the terrified men in its midst. Shriveled bodies plummeted from the rigging, each with a sickening thud, onto the decks below. One by one, the pirates'flesh withered like burned paper, and the scant survivors beheld many more vaporous ghosts now swirling in the foul mist around them. And after the eternity of a few seconds, the howling cloud began to dissipate, leaving behind the wracked and twisted corpses of Retaliator's crew. The pirate ship sailed on, crewed only by the dead, fixed in its final course by a blasted corpse whose corrupted hands still clenched the helm.*
*Once the distant screaming abated, the Lady warned us to leave their ship behind as a warning to others. She then demurely withdrew again to her cabin, where she stayed for the rest of the voyage to Calimshan. But the remainder of the trip was not a happy one, for every night we could hear her muffled sobs, calling out to her long-dead husband, echoing throughout the ship.*

—From the log of Waterdeep's *Pennance*,
Captain George Toal commanding

The most dreaded powers of a wizard come from the spells at his or her disposal. The Dark Art has many uses, the least of which brings death in a horrible and excruciating manner. The necromancer can drain the life force of a victim, command shadowy spirits of the netherworld, or animate the remains of the dead. Yet, for all the attention focused on the manifestly evil spells of the archetypal sorcerer, little concern has been devoted to exploring the more useful and even beneficial applications of the so-called Dark Art. In addition to its stereotypical negative uses, necromancy can also heal the afflicted, provide protection from the dead, and inform the living.
This chapter explores both the beneficial and baneful sides of this feared school of magic. First we present a few guidelines for choosing necromantic spells to reflect a wizard's alignment. Finally, the

majority of the chapter describes over two dozen new wizard spells.
The massive amount of necromantic spells available to wizards can be a bit overwhelming for DMs accustomed to the limited selection in the *PHB*. Appendices at the end of the book have been designed to ease the burden of NPC spell selection for the DM. Appendix One contains all spells available to necromancer wizards, listed by level and general application. Appendix Two lists all of the spells in the expanded school of Necromancy, compiled from this and other sources. Finally, the DM may use the spell index in Appendix Four to easily locate necromantic spells in this book and other references.

## Spell Selection for the Wizard

Since the necromancer might be playing an important, long-term role in a campaign, it is paramount that the DM determine not only what spells the wizard might have memorized for a specific encounter, but also define a comprehensive list that includes all spells to which the caster has access. The Undead Master on holiday at the cemetery will undoubtedly have a different set of spells at his or her disposal than the reclusive Philosopher, lounging in a study.
Choosing spells for any spell caster - especially a powerful one - can be an challenging and time-consuming task for DM and player alike. An 18th-level sorceress, for instance, has over 40 spells at her disposal! Are all her 3rd-level spells going to be *vampiric touch*? Unlikely! She will choose a wide variety of spells that are appropriate to her kit and alignment. As detailed in Chapter One, each kit is specialized in a different aspect of necromantic spellcraft.
A wizard's alignment generally has the biggest effect on his or her spell selection. While not all necromancy is inherently evil, it carries a strong social stigma because of its great potential for inflicting pain, suffering, and harm on both the living and the dead (or even the undead). A wicked NPC will probably have no compunction about employing "criminal" or "black" necromancy. However, once the heroic characters in your campaign have defeated this nemesis, they will undoubtedly uncover his grimoire and gain access to the villain's repertoire of spells.
Even good-hearted PCs may be tempted to use the forbidden lore, considering that many necromantic spells can be quite powerful, especially at high levels. Is a spell inherently evil, or is it simply that it can be put to evil use? This is a question many heroes will have to struggle with. This ambivalence and uncertainty should be encouraged, since temptation and moral quandaries make for excellent role-playing. However, as explained in Chapter Three, the use of criminal necromancy carries grave dangers for the caster, whether villain or player character. While the consequences for employing black necromancy must always be kept vague and nebulous for the players, the DM needs to have a clear definition and justification of the term.

**Table 10:** Forbidden Spells of Black Necromancy.

| Level | Spells |
|---|---|
| 1st | chill touch, corpse visage (WH), exterminate |
| 2nd | choke (WH), ghoul touch (WH), rain of blood (SH) |
| 3rd | bone club (WH), mummy touch (FOR), pain touch (WH), vampiric touch, rain of blood (SH), skull trap |
| 4th | Beltyn's burning blood (FOR), brainkill, contagion, enervation |

| | |
|---|---|
| 5th | bone blight, mummy rot (WH), summon shadow, throbbing bones (WH) |
| 6th | blackmantle (WH), dead man's eyes (WH), death spell, flames of justice (AA), ghoul gauntlet, Grimwald's gray mantle (FOR), lich touch (FOR) |
| 7th | finger of death, suffocate (TOM) |
| 8th | Abi-Dalzim's horrid wilting (TOM), death link (FOR), deathshroud, defoliate (WH), shadow form (WH) |
| 9th | conflagration (AA), death ward, energy drain, wail of the banshee (TOM) |

**Criminal or Black Necromancy**

The *Player's Handbook* and other sources of necromantic spells tend to be vague or (worse yet) contradictory about what constitutes an evil spell. For instance, the classic spell of the necromancer, *animate dead*, contains a clear admonition against its use by good characters.

However, certain other necromantic spells (in the *Player's Handbook*, particularly) have been written in a way that conceals, or at least understates, their baneful nature. The description of *summon shadows* mentions nothing about the moral implications of summoning several chaotic evil beings from the Negative Material Plane to serve the caster (usually by draining the life forces of the wizard's enemies). Hence, there is obviously a need for some clearer definitions.

Criminal necromancy includes all spells which are cast for the sole purpose of inflicting permanent physical harm on other individuals, or (worse yet) draining their immortal life force. Consider the *death spell* (another classic from the *PHB*), which supposedly "snuffs out the life forces of creatures ... instantly and irrevocably."

In context with other punishing spells like *chain lightning* and *disintegrate, death spell* might not appear terribly horrible or evil. Take another look at the second line in the description which nonchalantly states that "[victims] cannot be raised or resurrected"! In other words, the spell utterly annihilates the victim's life force, past all hope of restoration, save by the omnipotent *wish*.

Black necromancy usually brings death, physical injury, or spiritual annihilation in an excruciating and terrifying manner. In order to make the evil nature of a spell painfully clear, the DM should feel free to improvise, exaggerate, or embellish a particularly dry description. Consider the account of *death spell* given in the chapter introduction. This spell and the others on Table 10 fall under the classification of black necromancy and, as such, are most appropriate for evil villains.

In game terms, therefore, every time a wizard (NPC or PC) uses a spell of black necromancy, the DM should secretly roll a *powers check*. By their very nature, these spells attract the attention of evil deities who will seek to reward, punish, and ultimately subvert the wizard involved. Criminal necromancy embraces all spells which inflict bodily or spiritual damage, spread disease, bring untimely death, or cause pain. The DM is encouraged to devise similarly nasty descriptions for all of the spells listed in Table 10. Don't sermonize to your players about the evils of criminal necromancy - have their characters experience the horrors themselves. If, despite your warnings, players willingly and consistently employ evil spells, feel free to impose any of the afflictions outlined in Chapter Three.

**Gray or Neutral Necromancy**

The DM should refer to Appendix Two for a complete listing of spells in the necromantic school. Except for the few listed in Table 10, the majority of necromantic spells fall into a gray category of moral uncertainty. These spells are not intrinsically evil per se, but they certainly can be put to inherently wicked uses.

Take *animate dead,* for instance. Raising up a zombie to carry one's luggage is not considered an evil act, but animating the dead for the purpose of attacking a merchant caravan is another matter entirely. While appropriate for neutral wizards, animation of the dead should be distasteful and perhaps even forbidden to chaotic good and lawful good wizards. Spells of gray necromancy rarely advance the cause of good.

While casting spells of black necromancy always requires the wizard to make a powers check, neutral or gray necromancy only requires a powers check when it employed for an evil purpose. Gray necromancy thus carries an element of risk and uncertainty: depending upon the easterns intent, the spell may or may not have a chance of attracting the attention of an evil god. It is left for the DM to decide which spells belong to the category of neutral necromancy. It is suggested that all divination/disguise magics (see Appendix One) and certain special use spells (such as *animate dead animals, undead mount (FOR), bone dance, skull watch (FOR),* and so on) fall into this largest grouping of necromancy. Of course, the DM may decide that certain spells (such as *animate dead* and *magic jar*) have too much potential for evil. The DM should feel free to augment Table 10 as necessary for the campaign.

**Benign or White Necromancy**

A third and final category of necromancy embraces magic of a benign or beneficial nature. White necromancy includes spells which restore and fortify the living body or life force (such as *delay death (WH), empathic wound transfer, bone growth, Spendelard's chaser (FOR), Nulathoe's ninemen (FOR),* and *reincarnation*) or derive their power from the caster's own life force (such as *spirit armor (TOM)* or *homunculus shield (TOM)*) or can be used only to disable undead (such as *hold undead* and *bind undead*). Note, however, that spells that *control* undead are not considered white necromancy!

Although white magic can be used to heal wounds and bone fractures, it is no substitute for clerical healing. White necromancy derives its healing power from a volunteer's source of life energy (often the caster's), as in *empathic wound transfer*. Clerical magic, in contrast, bestows healing through a combination of faith and divine authority. Short of a *wish* (or for a brief duration, a *limited wish*), wizard spells cannot "create" new hit points - the Art usually shuttles life force from a donor to recipient.

In contrast with black and gray necromancy, white magic has absolutely no chance of attracting the attention of an evil god. No powers check is ever required for casting a spell of white necromancy (except, perhaps, in Ravenloft).

Wizards of good alignment will thus employ white necromancy over those spells with questionable moral implications. Of course, nothing prevents evil mages from employing these spells as well, provided that doing so suits their own dark purposes. During an emergency, when a wizard needs to heal allies (or him- or herself) and no cleric is available, even the most dark-hearted necromancer will resort to white magic.

## New Wizard Spells

The new wizard spells in this section include over two dozen examples of white, gray, and black necromancy. The DM may use these new spells to augment the standard selection available in the Player's Handbook (PHB). The DM can also find interesting necromancy spells in the Tome of Magic

(TOM), Complete Wizard's Handbook (WH), Arabian Adventures (AA), and Forgotten Realms Adventures hardcover (FOR). For the DM's convenience, relevant spells from all these sources have been included in the appendices and spell index at the end of the book. The DM may also refer to Van Richten's Guide to the Lich, though almost all of the spells from this source have been designed for use by undead. Finally, the DM may care to adapt some of the new priest spells from Chapter Six, though the wizard versions should be at least one or two levels higher than their clerical counterparts.

Some of the spells presented here (and in other chapters) were first developed by other game designers. These authors, who have helped advance the body of necromantic lore, are acknowledged with special thanks on page 3.

The following spell descriptions conform in most respects to the standard format in the Player's Hand book, starting with specifications for range, components, duration, and so on.

**1st-Level Spells**

**Animate Dead Animals**
**Corpse Link**
**Exterminate**
**Locate Remains**
**Spectral Voice**

**2nd-Level Spells**

**Embalm**
**Living Link**
**Skeletal Hands**

**3rd-Level Spells**

**Bone Dance**
**False Face**
**Skulltrap**

**4th-Level Spells**

**Brainkill**
**Empathic Wound Transfer**
**Summon Spirit**

**5th-Level Spells**

**Bind Undead**
**Bone Blight**
**Graft Flesh**

**6th-Level Spells**

**Corpse Host**
**Ghoul Gauntlet**
**Transmute Bone to Steel**

**7th-Level Spells**

**Wound Conferral**

**8th-Level Spells**

**Death Shroud**
**Life Force Transfer**

**9th-Level Spells**

**Death Ward**
**Life Force Exchange**

## 1st-Level Spells

**Animate Dead Animals** (Necromancy)

Range: 10 feet
Components: V, S, M
Duration: Permanent
Casting Time: 2 rounds
Area of Effect: Special
Saving Throw: None

This spell creates undead skeletons and zombies from the bones and bodies of dead animals, specifically vertebrates (fish, amphibians, reptiles, birds, and mammals). The animated remains obey simple verbal commands given by the caster, regardless of the language employed. Only naturally occurring animals of no higher than semi-intelligence can be animated with this particular spell (lizards, cats, frogs, weasels, tigers, and so on), including minimals and non-magical, giant-sized animals. These undead remain animated until they are destroyed in combat or turned; the animating magic cannot be dispelled.
The number of undead that a wizard can animate depends on the animal's original hit dice, the caster's level, and the type of undead being created. The caster can create the following number of animal skeletons:

- 1/4 HD animal or less: 4/caster level
- 1/2 to 1 HD animal: 2/caster level
- 1+ to 3 HD animal: 1/caster level
- 3+ to 6 HD animal: 1/2 caster levels
- Animal of over 6 HD: 1/4 caster levels

The caster can create the following number of animal zombies:

- 1/4 HD animal or less: 2/caster level
- 1/2 to 1-1 HD animal: 1/caster level
- 1 to 3 HD animal: 1/2 caster levels
- Animal of over 3 HD: 1 /4 caster levels

Animated skeletons of animals that had 1/4 to 1 HI) conform to the statistics of animal skeletons (see "Skeleton" in the MC). Skeletons of animals that had less than 1/4 HD when living conform to those same statistics/ with the following changes: AC 9, HD 1/4; hp 1, #AT 1, Dmg 1. Skeletons of those animals of over 1 HD conform to the regular animal statistics in the MM, with the following changes: armor class is worsened by two (AC 10 maximum), damage per attack is reduced by two (1 hp minimum), and movement is reduced by half. Animal zombies conform to the statistics for the particular animal that has been animated, with the following changes: the animal's number of hit dice is increased by one, AC is worsened by three (AC 8 maximum), and movement is reduced by half.
Skeletal and zombie animals gain the standard undead immunities (resistance to cold-based, *sleep, charm*, and *hold* spells), but lose any normal defenses that the living animal might have had. They also lose any special attacks (raking of rear claws, swallowing whole, and so on) and cannot inject poison or emit fluids, such as musk or saliva. Swallowing does no further damage to the creature swallowed, except to trap it within the swallower's rib cage. Priests gain a +1 bonus when turning these undead.
This spell is often a necromancer's first experience animating corpses. For this to work, the animal bodies or skeletons must be intact. The material components are a blood drop and bone chip from the same species as the target remains (only animals belonging to the same species may be animated per spell).

**Corpse Link** (Necromancy, Alteration)

Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1
Area of Effect: Caster
Saving Throw: None

With this versatile spell, a wizard establishes a sensory link between him- or herself and a corpse or freshly animated zombie of a human, demihuman, or humanoid within the spells range. This link allows the caster to gather sensory information from the vicinity of the cadaver or undead being. For every three levels of experience past the 1st, the wizard gains the ability to collect information from an additional sense via the corpse link. At 4th level, for instance, the wizard may choose up to two senses (up to three at 7th level, four, at 10th level, and all five at 13th level).
*Sight:* The caster can see what the corpse or undead creature sees as if looking through one of the creature's eyes.
*Sound:* The wizard can now hear through one ear, exactly as if standing at the corpse's current location (if a wizard/thief, the caster can use his or her hear noise ability too).
*Smell:* With one nostril, the wizard can now smell things exactly as if standing at the corpse's current location. The spell conveniently masks the putrefying stench of the cadaver (if any) so that subtle variations of aroma (like the scent of a rose) can easily be detected.
*Taste:* The caster can taste any substance which is introduced into the corpse's mouth. The substance (which may be solid or liquid) tastes exactly as if the wizard had placed it on one side of his or her own tongue. This can be especially useful when checking for poison in food or *identifying* unknown potions. Thankfully, the taste of the corpse's own rotting flesh can be masked out by the spell.
*Touch:* The caster gains the ability to sense the textural and environmental conditions, with a single hand, as if standing at the corpse's location. The wizard can gauge the surface texture and temperature of any

object or substance which is placed in contact with the corresponding hand of the corpse.
The type and number of sensory signals is chosen by the wizard at the time of casting, and cannot be changed for the duration of the spell. The caster collects all the sensory information through a single organ (eye, ear, nostril, half of the tongue, or hand) belonging to the corpse or undead recipient. *This organ need not be attached to the rest of the cadaver for the spell to function properly.*
While the spell is in effect, the wizard can still see/hear/smell/taste/touch normally through other (unlinked) organs. For example, a necromancer harvests the left eye from a fresh cadaver (with a successful Anatomy ability check) and places it on a high ledge, with a strategic view of a front door. If the spell is now cast, the wizard's left eye would be able to see through the left eye of the corpse and spy on any visitors, while his or her right eye remains normal.
Furthermore, if the target of the spell is a zombie, the magic enables the caster to issue simple commands to the undead creature via this link. The commands can be no longer than four words and can deal only with the creature's movement (turn left, walk forward two steps, and so on) If either the caster or the undead creature moves beyond the range of the spell, the effects arc negated. *Corpse link* does not impart any animation to dead tissue; if cast on a regular cadaver, it remains stationary for the duration of the spell.
The material component is a fresh corpse or a newly-animated zombie. Unless some form of preservative magic has been employed to protect the corpse's decaying sensory organs (such as *embalm* or *spirit bind*), this spell cannot be employed on the remains of one who has been dead for longer than 1 day per level of the caster. This spell also requires the appropriate sensory organ of an animal or monster noted for its keen senses (such as the eyes of a hawk, ear of a rabbit, snout of a pig, and so on).

**Exterminate** (Necromancy)

Range: 10 feet
Components: V, S, M
Duration: Instantaneous
Casting Time: 1
Area of Effect: 1 small creature or 1 cubic foot per level (up to 10 creatures or 10 cubic feet maximum).
Saving Throw: None

In the hands of a novice spellcaster, this spell instantaneously snuffs out the life forces of small rodents and vermin in the area of effect, including such normal pests as flies, mice, beetles, rats, spiders, and the like. Only creatures with 1-3 hp per level of the caster (9 hp maximum) and animal intelligence can be *exterminated*. More powerful wizards can thus affect bigger pests, including large spiders, stirges, poisonous snakes, and giant or huge centipedes. If the targeted creatures are extremely small (1 hp or less), then an area up to 1 cubic foot per level (10 cubic feet maximum) can be cleansed of pests.
This spell is well-suited to indoor or outdoor applications and is a favorite among necromancers who live among pestilence. Occasionally, cruel mages have been known to *exterminate* benign animals (and sometimes even others' pets) with the spell. The somatic gesture is a pointed finger, while the caster verbalizes a low *zzzt* sound. The material components are a pinch of lavender and dried garlic.

**Locate Remains** (Necromancy, Divination)

Range: 0
Components: V, S, M

Duration: 1 turn + 5 rounds/level
Casting Time: 1 round
Area of Effect: 30' long + 5'/ level
Saving Throw: None

This spell attunes the caster to the physical remains of dead beings in the area of effect. *Locate remains* will thus easily detect the presence of unburied corpses or corporeal undead (such as skeletons, zombies, or ghasts), but has no effect on noncorporeal undead (such as ghosts or spectres). The area of effect extends in a 10' wide path, facing the in the caster's current direction. Scanning in a direction requires one round, during which time the caster remains motionless in concentration.
*Locate remains* is mostly unaffected by walls or obstacles, though the area of effect is decreased (to 10' + IV level) by more than three feet of solid stone, ten feet of wood or packed earth, or one inch of metal. In the most general application, the spell precisely locates any and all physical remains of individuals in the area of effect, regardless of sex, species, and undead status. This spell does not impart any knowledge regarding the identity (or undead nature) of the remains; only the current locations of corpses within the area of effect are learned. If a personal item or a small fragment of the deceased individual is available at the time of casting, the spell can be used to locate the remains of that specific individual. In that case, the spell docs not register the presence of any remains except those of the desired individual.
Both the general and specific versions of the spell have no effect if cast on a living creature of any kind. The material component for this spell is either a small piece of bone from a human cadaver (for the general version) or else an article of clothing, personal possession, or strand of hair (for the specific version). This spell is popular in regions with strict burial customs.

**Spectral Voice** (Necromancy, Alteration)

Range: 10 yards/level
Components: V, S, M
Duration: 1 rum/level
Casting Time: 1
Area of Effect: Caster
Saving Throw: None

This spell is similar to the 1st-level spell *ventriloquism* in that it allows the caster to throw his or her voice. However, the caster's voice issues only from the mouth of a specified corpse, skeleton, or zombie. The voice coming from the cadaver or undead creature will not sound like the caster's voice. In the case of a cadaver or zombie, it will sound similar to the hoarse, scratchy voice of the deceased individual. In the case of a skeleton, the voice will sound like a soft, raspy whisper. For the duration of the spell (which cannot be ended prematurely), the caster's voice emanates from the corpse or undead creature. As a result, the wizard is unable to cast any additional spells requiring verbal components until after the *spectral voice* has expired. The material component is a preserved tongue.

## 2nd-Level Spells

**Embalm** (Necromancy, Alteration)

Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 2 rounds
Area of Effect: 1 corpse
Saving Throw: None

An *embalm* spell enables the caster to protect a corpse (or a harvested part thereof) against the natural forces of decay and dissolution, until some later time when it is needed for a spell. If me *embalmed* cadaver is later animated as a zombie, golem, or other form of animated undead, the creature gains +2 hit points per hit die (8 hp/HD maximum) because of the greater strength and resiliency imparted by the spell to the dead tissue. It has no beneficial effect if cast on skeletal remains or on previously animated undead.
Thus preserved, a corpse permanently retains the same odor and appearance it had at the time of casting. *Embalm* does not reverse the effects of putrefaction, but it does prevent any further decay of an individual's physical remains. Unlike more powerful spells (such as *Nulathoe's ninemen (FOR)* or the clerical spell *spirit bind*), *embalm* does not facilitate subsequent resurrection of a corpse. The material component is a drop of vinegar.

**Living Link** (Necromancy, Divination)

Range: 90 yards + 10 yards/level
Components: V, S
Duration: 1 round/level of caster
Casting Time: 2
Area of Effect: 1 creature
Saving Throw: None

With this spell, a wizard establishes a sensory link between him- or herself and any living creature within range. If the wizard knows a specific creature or person within range, then the spell can take effect on that specific creature. Otherwise, the *living link* will be established with any sentient creature within range, determined randomly.
Similar to the 1st-level spell *corpse link* (which only works with fresh cadavers and zombies), *living link* allows the caster to gather sensory information from the vicinity of the targeted creature (sight, sound, smell, taste, or touch). For every four levels of experience past the 1st, the wizard can collect information from an additional sense (up to two senses at 5th level, three at 9th, four at 13th, and all five at the 17th level of experience).
The target creature of this spell experiences nothing to indicate that its senses have been tapped, and it remains in control of its own actions, entirely unaware of the magical connection to the wizard. In other words, the wizard cannot force the subject to look at something (listen at a keyhole, taste a glass of wine, pick up an object, and so on). This spell merely enables the wizard to directly experience the world through another creature's perceptions. For instance, looking through another creature's eyes gives the wizard all of its visual capabilities, like infravision should the creature have that ability.
While the spell is in effect, the *living link* overrides the wizard's own sensory perceptions. Thus, while a wizard is seeing through another creature's eyes, he or she is unable to see through his or her own. The spell can be ended early with no risk to the caster.

**Skeletal Hands** (Necromancy, Evocation)

Range: 10 feet + 10 feet/3 levels
Components: V, S, M
Duration: 1 turn + 5 rounds/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

By casting this spell, a wizard animates a pair of skeletal hands that levitate in midair and move as directed by the caster, who uses verbal commands and somatic gestures to guide them. The hands can perform only simple grasping, lifting, and carrying activities. They cannot perform complex movements that require great dexterity, such as picking locks. They can, however, open unlocked doors and chests, or turn pages in a spell book. The hands can also make two clawing attacks per round, each attack directed against a different target. They attack using the wizard's table at the same level as the spellcaster, and each inflicts 1-3 hp damage on a successful hit. The hands may be physically attacked in turn (each hand has AC 5, hp 4, and MV 6) and may move anywhere within their range.
The hands can carry up to 5 pounds each; together, they can carry an object of up to 20 pounds. The hands may wield weapons within these weight limits. When using weapons, the skeletal hands attack on the wizard's combat table, with a level half that of the spellcaster and with applicable penalties for nonproficiency. Handheld melee weapons do half their normal damage (round up fractions), because the hands cannot generate the proper forces that the weapons need in order to inflict normal damage. The hands may fire an already loaded crossbow and inflict normal damage, because the crossbow provides the necessary force to propel the bolt. All other missile weapons have their ranges reduced to one quarter and inflict their normal damage (round up fractions).
The material components are the complete, skeletal hands of any human, demihuman, or humanoid. These hand bones may be reused in multiple castings of the spell, providing the hands have not been damaged or destroyed in combat.

## 3rd-Level Spells

**Bone Dance** (Necromancy)

Range: 10 yards/level
Components: S, M
Duration: 3 turns/level
Casting Time: 3 rounds
Area of Effect: Special
Saving Throw: None

This spell temporarily animates the physical remains of a human, demihuman, or humanoid. *Bone dance* forges a mystical link with the newly made undead creature, enabling the caster to mentally control its movements, just as a master puppeteer manipulates the actions of a wooden puppet. The skeleton or zombie animated by this spell is incapable of carrying out any independent actions the wizard must

mentally command his or her undead puppet to walk forward, pick up a sword, strike an opponent with it, and so on. While the caster concentrates on maintaining the *bone dance*, he or she may not speak, cast other spells, or actively engage in melee. The spell occupies the greater part of the caster's attention.
The skeleton or zombie created by this spell conforms to the normal variety described in the MM. It is compatible with (can be affected by) other necromantic spells that affect undead, and the creature may perform all of the simple actions outlined in the *skeletal hands* spell. If directed into combat, it fights as a regular skeleton (even if it still has some flesh on its bones).
When combined with *spectral voice*, bone dance can make for an effective decoy, a menacing bluff, or at least a ghastly form of entertainment. When augmented by *corpse link*, a *dancing* cadaver may serve as an effective (and ultimately expendable) scout that can work beyond the immediate visual range of the caster.
Normally, the *bone dance* progresses for the duration of the spell or until the caster loses concentration. The dance also ends prematurely if the caster causes the skeleton to move beyond spell range or out of direct sight (certain divinations, such as *corpse link* or *clairvoyance*, may lift this hindrance). The bone dance may be destroyed in combat, or broken by a successful *dispel magic*. The material component is an intact skeleton or corpse and a small, crude puppet which the caster must manipulate with both hands to choreograph the bone dance.

**False Face** (Necromancy, Alteration)

Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 3
Area of Effect: Caster
Saving Throw: None

This spell enables a necromancer to copy the face of another human, demihuman, or humanoid, either living or dead. It has no effect on undead. The wizard gains the facial features of the chosen individual of either sex, providing the subject lies within range and the caster can clearly see the face he or she is trying to emulate.
The caster does not gain any sensory abilities (or disabilities) associated with the new face. For example, if the caster copies a blind man's face, the wizard still retains his or her normal sight. The caster retains his or her normal voice, too, as well as height, bodily appearance, spells, and spell-like abilities.
The *false face* serves as an effective disguise, though it radiates a magical aura of necromancy. Spells that detect or banish illusions have no effect on this disguise; the *false face* is not illusionary. It may be reversed with *dispel magic*.
The material components are a small ball of natural rubber and a small mirror, both of which are consumed in the casting.

**Skulltrap** (Necromancy, Evocation)

Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 4

Area of Effect: One Skull
Saving Throw:1/2

This ward may be placed on any non-living skull or the skull of an undead skeleton. The *skulltrap* remains dormant until the skull is touched by living matter or is struck and damaged by non-living matter (for instance, it's struck by in combat or falls to the floor). Assume a normal skull is AC 8 and has 2 hp. This simple warding does not discriminate; it can just as easily be triggered by the wizard who cast the spell as by a curious rat brushing up against it.
When the *skulltrap* discharges, the skull flashes briefly with red or violet light and violently explodes, releasing a blast of energy drawn from the Negative Material plane. The burst of negative energy does 2d4 hp damage plus ld4 hp damage for every level of the caster. All living creatures within 10' of the skull must make a saving throw vs. breath weapon to suffer only half damage from the blast.
Because the trap is so easily triggered, the skull is often placed in its final resting place before casting the spell on it. The trapped skull may be moved without triggering the trap, but it must be moved very slowly and without contact with living matter. Cloves or any other thin materials used to cover the flesh of a living being arc not enough to prevent the skulltrap from being discharged. The material component is a pinch of dust from the physical remains of a corporeal undead being with strong ties to the Negative Material Plane, such as a wight or vampire.

## 4th-Level Spells

**Brainkill** (Necromancy)

Range: Touch
Components: V, S
Duration: Permanent
Casting Time: 1 round
Area of Effect: 1 creature
Saving Throw: Neg.

A wizard using this spell, which operates much like a *forget* spell, can permanently burn from the memory of any one creature all knowledge of either a specific place or person or a time period of up to one year (the spellcaster may choose the desired result). The spell works on any intelligent creature by destroying a portion of its brain, but a victim is entitled to a saving throw vs. death magic to resist the effects of the spell. If successful, the creature suffers only a painful headache, which dissipates in 1-4 hours but is otherwise harmless. If failed, the victim suffers 1-6 points of damage from an excruciating headache, leaving him or her with selected gaps in his memory.
*Brainkill* can affect only the victim's memory and ability to recall factual information. For example, a person thus affected might be completely unable to remember details of a place, the name, appearance, or any traits of a person, or might have a one-year blank in his or her memory. The spell has no effect on a persons learned abilities or skills. For instance, suppose an individual gained a swimming proficiency six months before coming under the influence of this spell. While the victim will no longer recall the swimming lessons, he or she still retains the ability, though it might not become evident until the victim jumps into a large body of water. Aside from relearning it as best as one can, the lost knowledge and memories can never be regained except by a *wish*.

**Empathic Wound Transfer** (Necromancy)

Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: Creature touched
Saving Throw: None

By casting this spell, a wizard transfers some of the wounds of another creature to him- or herself, thereby partially curing the recipient. Up to 2 hp per level of the caster may be transferred, so a 10th level necromancer could cure an ally of a 20-hp wound (but the wizard will then take 20 hp in damage).
The hit point loss could have originally resulted from physical attacks, certain poisons, spell effects, diseases, or curses (except those that cannot be removed by the *remove curse* spell). This spell cannot restore amputated limbs, drained life levels, or lost life. It also cannot undo any continuously acting poison or disease. The spell only temporarily reverses such harm, which will then continue to affect the victim.
The caster cannot drain his or her own life. Normally, a wizard can only transfer up to his or her current number of hit points. However, if the DM makes use of the rules for "hovering on death's door" (page 75 of the DMG), then a necromancer might be voluntarily drained to the brink of death (-9 hp). Of course, the mage immediately loses consciousness in such a case (as noted in the DMG), but his or her condition does not deteriorate unless further wounded by another agent. At the DM's discretion, this spell also enables a necromancer to immediately restore an incapacitated and dying victim, as per the 3rd- level priest spell *death's door*. Unlike the priest version, however, hit points cured by the *wound transfer* are inflicted on the caster. Hit points lost by the wizard may be regained by normal healing or magic.
Finally, after the *transfer* is complete, the wizard temporarily loses four points of Constitution due to extreme exhaustion; each point may be recovered by six turns of complete rest. If the caster's Constitution drops below 3, unconsciousness results, and full Constitution is not regained for 24 hours.
The material components are hair and blood from both the recipient and the caster, two newt eyes, and two wolf teeth (each from a different animal). These components are consumed in the casting.

**Summon Spirit** (Necromancy)

Range: 10 yards
Components: V, M
Duration: 1 round/level
Casting Time: 1 turn
Area of Effect: 1 dead human or demihuman
Saving Throw: Special

This spell allows the wizard to raise up the spirit of a dead human or demihuman, which may answer questions put to it by those present at the summoning. Of course, the questioners must speak the same language as the dead creature.
Summoning a dead spirit is far from a certain or trouble-free enterprise. The base chance that a spirit will answer the summons is 50% + 1% for each experience level of the wizard casting the spell. This chance

of success also depends on the authority of the caster in the spirit world, the length of time the subject has been dead, and the specific time of day during the casting (see Table 11).

**Table 11:** Spirit Summoning Modifiers.

| Modifier | Condition |
|---|---|
| +5% | Caster is a necromancer |
| +5% | Caster has spirit lore proficiency |
| +10% | Caster is a member of the Witch kit |
| None | Subject dead for up to 1 week |
| -5% | Subject dead for up to 1 month |
| -10% | Subject dead for up to 1 year |
| -15% | Subject dead for up to 10 years |
| -20% | Subject dead for up to 100 years |
| -30% | Subject dead for up to 1000 years |
| -50% | Subject dead 1000 years + |
| -25% | Spell cast by day |
| None | Spell cast at night |
| +10% | Spell cast at full moon |
| +25% | Cast on a holy day associated with the dead |
| +10% | Ancestor present at summoning |
| -10% | Spirit previously summoned within the same month |

Regardless of actual penalties or bonuses, the chance of success never drops below 5% or rises above 95%. If the spell fails, there is always the chance that the summoning will attract the attention of some other (potentially hostile) spirit or undead creature, either from the netherworld or the general vicinity of the caster. The chances of summoning a malicious undead are 5%, cumulative with every failed attempt by the same caster. The DM may roll on the table for the clerical spell *summon undead*. Note that this spell in no way protects the wizard (or those present at the casting) from the attacks of inadvertently summoned undead.

If the summoning is successful, the desired spirit slowly rises from the ground before the caster. The spirit's willingness to answer questions will first determine the effectiveness of the spell. If the spirit is of a different alignment than the caster or formerly had more hit dice than the caster's current level of experience, the shade is entitled to a saving throw vs. spells to resist the interrogation.

Provided that the spirit is agreeable, it can answer no more than one question for every three levels of the caster. Summoned spirits tend to be evasive and cryptic when questioned by the living. In general, their knowledge is limited to what they knew while alive. A spirit may also be called upon to answer specific questions about the near future, regarding actions undertaken before the next nightfall. Questions and

predictions about future events are subject to the same conditions and limitations as the priest spell *augury*.
This spell requires a shallow pit filled with the blood from a slaughtered ram. The pit opens a symbolic link with the netherworld, while the blood serves to lure a spirit back into the world of the living. Note that the blood may also attract hostile undead (if the summoning fails). The DM may care to modify this spell so that it always summons a host of spirits (numbering 1-20) who must be individually questioned and placated before the desired shade arrives. The DM may also care to increase the chances of summoning a hostile undead (even if the spell succeeds) to reflect the caster's location and the tone of the campaign. Obviously, calling a beneficial spirit near the burial mound of a wraith may bring both creatures to investigate the unusual summons.

## 5th-LeveI Spells

**Bind Undead** (Necromancy)

Range: 10 yards/level
Components: V, S, M
Duration: 2 rounds/level
Casting Time: 5
Area of Effect: One undead/level
Saving Throw: Special

*Bind undead* is highly effective against certain kinds of undead (it has no effect on living creatures). This spell automatically affects all chosen corporeal undead of 6+ or less HD (including coffer corpses, crypt things, ghouls, ghasts, great ghuls, huecuva, mummies, all types of skeletons, sons of Kyuss, wights, and all manner of zombies), with no saving throw. Such creatures curl into a ball (if more than one undead is affected, they are all gathered into one tightly-packed sphere). Affected undead are held helpless and immobile, their Special abilities in stasis, until the spell expires or the caster frees them. The diameter of this ball of undead is typically 2-3 feet per affected creature. Typically, this "boneball" is rolled off a cliff or into an obstacle or fire, or conveyed into the midst of foes, whereupon the caster ends the magic, freeing the undead to fight.
Against noncorporeal undead (such as ghosts and spectres) and all undead of 7 or more HD who don't rum as "Special" (including vampires and liches), *bind undead* acts only as a *slow* spell. These undead are entitled to a saving throw vs. spells to resist the effect. *Bind undead* does not effect "Special" undead. The material component is the bone of any creature, held in the wizard's left hand at the rime of casting.

**Bone Blight** (Necromancy/Alteration) *Reversible*

Range: 30 yards
Components: V, S, M
Duration: Permanent
Casting Time: 5
Area of Effect: One creature
Saving Throw: Neg.

This nasty curse slowly erodes the healthy bone of any chosen creature within range, who is entitled to a saving throw vs. spells. If failed, all bone in the creature slowly begins to dissolve, eventually reducing it to a quivering mound of formless flesh.
Except for experiencing a strange "tingling sensation" at the time of casting, the victim is not immediately aware of the spell's effect (making it even more insidious). In the short term (starting at the moment of casting up to the first full day), the bones of the victim become embrittled, greatly increasing his or her susceptibility to crushing attacks or falling damage. At the onset, the subject of this spell sustains double normal damage from such attacks; by the end of the first day, the victim's current hit points are reduced by 20%.
In the medium term (lasting ld6+l days from the time of the casting), a victim is subject to frequent, painful fractures. All attacks by piercing and slashing weapons inflict double normal damage, while crushing attacks inflict quadruple damage. By the end of this period, the creature's hit points are reduced by 60%. In the terminal stage of this spell, a victim's bones finally dissolve, collapsing the subject's spine and skull, bringing a slow and painful death.
While under the effects of this spell, the victim's body is unable to undergo normal healing processes. Magical healing (spells or potions) slows the onset of the terminal stage, but it cannot halt the bone loss process completely. Every 10 hp of magical healing effectively prolongs the victim's life in the intermediate stage of the affliction for one full day. The slow dissolution of bone can only be halted by a successful *dispel magic* or by *remove curse*, *cure disease*, *limited wish*, *wish, heal*, or *restoration* spells. Once the spell has been broken, lost hit points can be healed by normal or magical means.
The reverse of the spell, *bone growth*, immediately halts the *bone blight* and slowly (over a period of 1-6 days) restores all damage caused by that spell. Bone growth can also be used to fuse normal fractures by accelerating the recipient's normal healing processes. Mild compression fractures heal in a day, while more serious ruptures (such as a broken leg or back) might take 1-4 days to fuse (assuming complete bed rest for the patient; otherwise healing time is doubled). This spell does not affect wounds or soft tissue damage, including cuts and sprains, nor does it correct for improper alignment of the bones while healing.
Both versions of this spell only work on living creatures and have no effect if cast on undead. The material component is a drop of aqua regia for *bone blight* and a drop of milk for *bone growth*.

**Graft Flesh** (Necromancy/Alteration)

Range: 0
Components: V, S, M
Duration: Special
Casting Time: 5
Area of Effect One individual
Saving Throw: None

With this spell, a wizard can graft any freshly harvested flesh to the body of the recipient, either replacing a lost limb or serving as a disguise. The duration is limited only by the compatibility of the grafted flesh to the host's own body. Flesh harvested from the recipient him- or herself (such as a severed limb) can be permanently reattached with this spell. If the grafted limb were taken from a fresh corpse, however, the maximum duration of the spell would be 1 day/level of the caster. Only musculo-skelelal tissues are affected by this spell; it cannot be used to graft organs or attach additional appendages (such as an extra arm) to the recipient.

*Graft flesh* can also disguise the subject (who may be the caster) with the flesh from a cadaver. While the subject gains the facial and bodily appearance of the deceased individual, the transformation is only "skin deep." The recipient retains his normal voice, knowledge, spells, and other abilities. Furthermore, the subject does not gain any physical or sensory abilities associated with his new appearance (the spell cannot, for instance, increase the host's physical strength or replace lost eyesight). This application lasts 1 day/level of the caster.
For the duration of the spell, grafted flesh literally becomes an extension of the host's own body (affected tissue radiates a faint aura of necromancy, however). The recipient has complete control over the flesh as if it were his or her own. At the conclusion of the spell, the grafted flesh slowly deadens and ultimately drops away. A successful *dispel magic* ends the spell prematurely.
*Graft flesh* only functions on living human, demihuman, or humanoid subjects. The material component is the host's own severed limb or else a suitable replacement from a fresh corpse (dead for no longer than 1 day per level of the caster). Grafted tissue must be harvested from the same species as the host. *Graft flesh* cannot be combined with other enchantments (such as *embalm* or *spirit bind*) which are used to preserve a corpse. By the conclusion of the spell, all grafted flesh has decayed past all utility and cannot be used in a subsequent casting.

## 6th-Level Spells

**Corpse Host** (Necromancy)

Range: Touch
Components: V, S, M
Duration: 1 day/level
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell enables an individual touched by the caster to transfer his or her life force to temporarily animate the fresh corpse of a human, demihuman, or humanoid. This spell will fail if cast on undead. The recipient wills the cadaver to move and act and can even cast spells through it—all while his or her own body is safely up to 5 miles away per level of the caster. While animated by the host's life force, the corpse ceases to decay; however, unless illusionary magic is cast upon it, the cadaver will appear to be a form of undead (such a ju-ju zombie).
The recipient (who may be the caster) can see, hear, and sense through the corpse host. The host can fight, talk hoarsely (with the voice of the corpse), and carry things—in fact, it can perform all tasks less exacting than lock-picking, sewing, and similar handicrafts. It can even go adventuring and earn experience points for its "master."
The recipient's mind functions in two places simultaneously within the corpse host and within his or her real body. The real body can still sense (see, hear, and so on) exactly as before, even benefiting from enhancements such as a magical ring. The tradeoff is paralysis. Aside from breathing, blinking, and moving his or her eyes, the recipient cannot move his or her real body while the host is animated. (Friendly guards are a wise precaution. So is a pleasant or strategic view). The real body does not need to eat, drink, or sleep.
The recipient is vulnerable when his or her corpse host is the target of magical and psionic powers that

affect the mind. The host can be fooled by illusion spells to the same degree as the recipient. It works this way because both recipient and host are actually sharing the same mind.
Physical attacks against the corpse host don't damage the real body, though they do harm the host. The latter has a number of "hit points" equal to the recipient's normal maximum (even if the recipient is currently crippled). The host has the recipient's natural armor class (10), though it may wear armor and employ weaponry with the same restrictions that apply to the recipient. The host does not benefit from anything worn or carried by the recipient's real body, however.
The corpse host can withstand attacks as well as (or as poorly as) the recipient can normally. Note that since the host is not undead, it may not be turned or affected with spells or magical items that influence such creatures.
If the host drops to 0 or fewer hit points, the owner must make a system shock roll. Failure indicates that the real body also dies along with the host. The spiritual link between the recipient and host can also be abruptly severed by (successfully) casting the wizard spells *dispel magic*, *limited wish* or *wish* or by employing the clerical spells *spirit release* or *dispel evil*. Severance of the spiritual link also requires the recipient to make a system shock roll in order to survive the ordeal.
The recipient of this spell can abandon the link with the corpse host at any time, with no harm to him- or herself. The host immediately collapses (resuming its usual decay), and the recipient immediately regains control of his or her real body. The same thing occurs when the spell ends or the corpse host somehow moves beyond the spell's range or to another plane.
The material components include a fresh corpse (of an individual who has been dead for no longer than 1 day per level of the caster) and a freshly-excised patch of the recipient's skin. Harvesting this piece of flesh from the subject at the time of casting also inflicts 1-3 hit points of damage. At the conclusion of the spell, the recipient is entitled to a saving throw vs. death magic. If failed, the hit point loss is permanent (consumed by the spell) and cannot be reversed or magically healed except with a*wish* or *restoration* spell. If successful, the loss in hit points, while temporary, can only be regained by normal rest.

**Ghoul Gauntlet** (Alteration, Necromancy)

Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 6
Area of Effect: Special
Saving Throw: Neg.

This rare and horrible spell causes the victim to be slowly transformed into a ravening, flesh-eating ghoul (see the description in the *MONSTROUS MANUAL* for all about the lives of ghouls). The transformation process usually begins at the limb or extremity (usually the hand or arm) closest to the location touched by the caster at the onset of the spell. The victim suffers 1-2 hit points of damage each round while the body slowly dies and transforms into a ghoul's cold, undying flesh.
The victim is entitled to an initial saving throw to resist this deadly transformation. If failed, only a *limited wish*, *wish*, or *restoration* will end the condition. A *dispel magic* or *remove curse* may be effective, but only if cast within three rounds of the touch that confers the *ghoul gauntlet*. During the early stages of the spell, the original afflicted extremity may be severed and burned to terminate the spell. If the extremity affected by the *ghoul gauntlet* is amputated while the victim has lost less than 20% of his

or her total hit points, then only a hand or a foot may need to be severed (inflicting ld4+l hp of damage, requiring a system shock roll to remain conscious, and resulting in the loss of the limb's mobility and functions). After the victim has lost 20%-50% of his or her hit points, however, an entire limb will have to be cut off, with the loss of ldl2+4 hp and a system shock roll. Initially, the transformed flesh of the victim has no paralytic powers or any of the special abilities associated with ghouls. As the spell unfolds, the advancing front of dying flesh inexorably traverses the entire body, and the victim immediately dies once the *ghoul gauntlet* reaches the heart or brain (upon reaching 0 hp due to the spell). Healing spells, potions, or magical items have no power to cure or reverse this affliction while the *ghoul gauntlet* runs its course.

One full day after the victim has died (unless the remains are burned), the subject awakens as a fullfledged ghoul as outlined in the *MONSTROUS MANUAL.* The undead is now a fawning slave, utterly under the control of the necromancer who cast the nefarious spell.

The material components include the freshly harvested fingernail of a corpse and a pinch of mandrake root. Both of these are consumed by the casting of the spell.

**Transmute Bone to Steel** (Alteration, Necromancy) *Reversible*

Range: 30 yards
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: 1 creature or object
Saving Throw: Special

A wizard casting this spell makes any object made of bone, including a skeleton, as strong as steel. The spell may be cast only upon dead, inanimate bones; after they have been transmuted, the bones may now be animated by the usual means. Despite their increased strength, the bones do not change in appearance, and they retain their original weight. Bone objects make all future saving throws as if they were hard metal (DMG, page 39). Transmuted skeletons now have AC 3 and take half the usual damage from physical attacks. However, these skeletons still take normal damage from holy water and magical attacks and are also subject to spells affecting metal {*transmute metal to wood* or *heat metal*) and the attacks of creatures that especially affect metal, such as rust monsters.

The reverse of this spell, *transmute steel to bone,* weakens any metal by making it as brittle as dry bone (altering all saving throws appropriately). Each non-living recipient of this spell must make an item saving throw vs. disintegration. If failed, the former metal item makes all future saves as if it were fashioned from bone. Metal armor loses its effectiveness, becoming AC 7. Whenever a successful hit is made by or upon the item, the transmuted object must make a save vs. crushing blow to remain intact and functional. Magic items weakened by this spell remain magical, with any bonuses applied to their saving throws. Weapons affected by this spell inflict -2 hp per die of damage (and must save to avoid breakage whenever they hit a target). Physical attacks versus transmuted metal creatures inflict +2 hp per die of damage. The material components (for both versions of the spell) are steel filings and powdered bone.

## 7th-Level Spells

**Wound Conferral** (Necromancy)

Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 2 rounds
Area of Effect: Two creatures
Saving Throw: Neg.

This spell is similar to the 4th-level wizard spell *empathic wound transfer*, except that it enables the caster to transfer the wounds (up to 3 hp per level of the caster) between any two creatures, excluding the caster. The wizard must be able to grasp both the creature with the disability and the creature about to receive the disability without having to make attack rolls. Thus, the two beings must either be willing to undergo the spell, or else be sleeping, unconscious, or otherwise bound and secured from escaping the caster's grasp.

The recipient of the disability is entitled to a saving throw vs. spells if unwilling. If the recipient's saving throw succeeds, the transfer is incomplete and nothing further happens. If failed, the recipient gains the wounds of the disabled creature, subject to a few limitations.

The total amount of transferred hit points is limited to the caster's current hit points (or 3 hp per level, whichever is *smaller*). Normally, the spell functions by conveying the wounds from the disabled creature to the caster (during the first round of casting) and then from the caster to the final recipient (during the second round of the spell). Should an conferred disability drain the wizard below zero hit points (if the wizard unwittingly attempts to channel more hit points than he or she currently possesses), the exchange effectively backfires and now operates on the wizard himself as an *empathic wound transfer*. The spell also backfires if it is interrupted during the second round of casting, before the final conferral of life force to the recipient.

At the DM's discretion, this spell will never backfire when employed by a necromancer, who is presumably an expert in these rites. If interrupted during casting, the spell merely fails without any transfer of wounds from the disabled creature. When cast by a necromancer, this spell can also immediately restore an incapacitated and unconscious creature, as per the 3rd-level priest spell *death's door*.

This spell is terribly exhausting for the caster. After the exchange is complete, the wizard temporarily loses seven points of Constitution; each point may be recovered by two hours of complete rest. If the caser's Constitution drops below 3, unconsciousness results, and the full Constitution is not regained for 24 hours. The material components are the same as for as the *empathic wound transfer* spell, except for a specially fashioned ruby brooch or pendant (worth at least 5,000 gp) which must be worn by the wizard at the time of casting. The ruby, which serves as a temporary receptacle or buffer for the exchanged life force, shatters upon the completion of the spell.

## 8th-Level Spells

**Death Shroud** (Necromancy)

Range: Touch
Components: V, S, M
Duration: Special (2 rounds/level maximum)

Casting Time: 8
Area of Effect: 1 creature/level
Saving Throw: Neg.

*Death shroud* draws upon the Negative Material Plane to surround the caster in a dark and shadowy aura of life-draining energy. While the spellcaster suffers no ill-effects from this baneful radiance, it may have dire consequences for anyone who comes into contact with the aura.
The *death shroud* can be used actively in offense and passively in defense. In combat, the wizard may activate the deadly power of the spell by touching a victim (requiring a successful attack roll). Any creature touched must immediately save vs. death magic with a -4 penalty. If the roll is successful, the victim is unharmed. If the save is failed, a black haze forms around the victim, draining 20% of his or her current hit points each round until the unfortunate individual dies at the end of the fifth round. The *death shroud* also serves as a passive ward or protection for the caster. Anyone who touches the wizard or attempts to strike him or her with any handheld object or melee weapon must make a saving throw vs. death magic (with no penalties) or be stricken by the death shroud in a similar manner.
The following spells remove the *death shroud* from an afflicted individual: *cure critical wounds, heal, limited wish, wish,* or a successful *dispel magic*. Lesser curing spells and *healing* potions delay death only by one round. Multiple applications of these spells or potions may prolong a victim's life until the duration of the spell expires. The spell may also be ended prematurely by killing or successfully employing *dispel magic* on the caster (this immediately releases all creatures afflicted by the spell).
The *death shroud* remains in effect until the wizard has successfully attacked or been attacked by a number of creatures equal to his or her current level (or the spell's maximum duration of two rounds per level has elapsed). Undead are not affected by this spell. In fact, if an undead creature is attacked by a *death shroud,* it immediately gains 1 HD, and the wizard must save vs. death magic or suffer the effects of the *death shroud* him- or herself.
This dreadful spell is known only to a select cadre of necromancers who purportedly learned it from a mysterious, bronze-bound book of extraplanar origin. The warding requires the following material components: crushed black opal and diamond (worth 5,000 gp), dust from a corporeal undead with strong ties to the Negative Material Plane (such as a vampire or wight), and a hunk of smoky quartz. These ingredients are consumed in the casting.

**Life Force Transfer** (Necromancy) *Reversible*

Range: 1"
Components: V, S, M
Duration: Permanent
Casting Time: Special (8 turns)
Area of Effect: 1 creature
Saving Throw: Neg.

Upon completion of this long and highly-versatile incantation, the caster permanently transfers a creature's life force (even his or her own) into a specially fabricated item, a magical receptacle, or the body of another individual. Once the mental transfer has been completed, the recipient's body falls into a cataleptic state, and remains in a death-like trance or coma for 2-7 days. Unless the subject's life force is magically reunited with the body during that time period, his or her body dies, and the life force remains permanently trapped within the physical object or new body.

While in the physical receptacle, the recipient may perform any action permitted by the new form. In an item such as a ring or a sword, the subject may communicate with the user when the receptacle is held or worn properly. The extent of communication depends on the subject's intelligence:

| Int | Communication |
|---|---|
| 3-11 | None |
| 12-13 | Semi-Empathy |
| 14-16 | Empathy |
| 17+ | Telepathy |

Individuals of low or average intelligence cannot communicate, and those of above-average intelligence can communicate using a primitive form of empathy (usually limited to a throb or tingle of varying intensity). At the discretion of the DM, the life force might animate a specially prepared statue or golem, perhaps even enabling the recipient to employ any memorized spells.

*Life force transfer* is sometimes the final step in the manufacture of a powerful magical item or minor artifact (usually a sword). In this process, a victim's life force is transferred into a magical item (unless he or she saves vs. death magic at -4), which is finally sealed with a *permanency*.

In such an enchantment, the recipient's body is frequently destroyed afterward by the caster, forever trapping the victim's life force in the item (unless the *permanency* is first reversed and a new body prepared using a *clone, wish*, or similar means). If the item is destroyed while the recipient's life force is in it, the creature may regain its body by making a system shock roll if it lies within 1 mile per level of the original caster; otherwise, the subject's life force dissipates, and the creature dies.

Sometimes, a wizard may employ this spell as a final measure to protect his or her own life. In this version, the entire incantation and receptacle are prepared and cast beforehand, but only the final syllable of the spell is left unfinished. The wizard may pronounce this short (single segment) syllable at any later time, casting his or her life force into the receptacle— providing that it lies within range. Obviously, this strategy only works if the receptacle is kept close to the wizard at all times. Furthermore, the wizard usually must leave behind clues or encrypted instructions so that his or her allies may later reverse the spell and restore the wizard to his or her normal state, whatever that may be. While the spell is in its unfinished state, the wizard cannot learn a new 8th-lcvel spell to replace it. Aside from this limitation, however, the caster remains unaffected by the pending spell.

Less scrupulous wizards may use this rite to permanently transfer the recipient's life force (often their own) into the body of a younger individual, thereby extending their own existence. The victim is entitled to a saving throw vs. death magic with a -4 penalty to resist the effects. If failed, the subject's life force departs (resulting in the death of the victim), and the recipient's life force takes permanent possession of the victim's body. If the saving throw is successful, the spell fails without any ill effect to either the victim or recipient (though it may be recast at a later date). Thus, an ancient necromancer may transfer his or her life force into the body of a vigorous, younger person, thereby gaining all of the victim's physical attributes, manual skills, hit points, and extended life span.

The spell requires either an expertly-crafted item or any living human, demihuman, or humanoid (preferably young and healthy) to house the subject's life force. The remaining material components include a scroll inscribed with special rare inks and a massive, blood red garnet (worth 5,000 gp or

more). The exact nature of any physical receptacle should be decided by the DM, but it must be of quality suitable for enchantment. The gamet (but not the scroll) is consumed in the casting. This spell cannot be dispelled normally (even in its "pending" state). If the receptacle was not sealed with a *permanency*, then the subject's life force may be driven out with *spirit release* or *dispel evil* (in the event of a permanent magical receptacle, the item's *permanency* must be first overcome with *dispel magic*).
In rare cases, to be adjudicated by the DM, the life force of the victim does not depart from the body, but coexists in his or her body with that of the recipient or "intruder." Such a life force may be able to take control of the survivor—use the control rules for the *magic jar* spell to determine this. As before, the "intruder" life force can only be ejected by casting *spirit release* or *dispel evil* (or a *full wish*). Otherwise, at the discretion of the DM, the life force of the "intruder" merges with that of the victim, diluting the recipient's personality, alignment, and possibly sanity, as well.
The reverse of this spell, *revoke life force transfer*, requires the original scroll (the one used in the *life force transfer* spell to be revoked), the construct, and the body of the recipient. Providing that the spell is cast before the body physically dies (within 2-7 days of the original separation), the reversal process requires a system shock roll in order to be successful. If failed (or if the body has already perished), the newly released life force dissipates, and the subject dies.

## 9th-Level Spells

**Death Ward** (Abjuration, Necromancy)

Range: 0
Components: V, S, M
Duration: Special
Casting Time: 1 turn
Area of Effect: One doorway, portal, or small object
Saving Throw: Neg.

By covering a doorway with the most forbidden and lethal of necromantic runes, a wizard can protect a small portal so that any creature that tries to pass through the warded area without first speaking a word of command is immediately subjected to a modified *death spell*. A *death ward* may also be cast on an item (usually a spell book or phylactery) or on a tunnel or cave entrance no larger than 30' feet in diameter. A single application of this spell can kill up to twice as many hit dice or levels of creatures as the wizard who cast the spell has levels of experience (thus a 20th-level wizard can slay up to 40 levels with a single *death ward*).
Each creature passing through the ward is entitled to a saving throw vs. death magic with a -4 penalty; if successful, the individual survives and the ward loses none of its lethality. However, those who fail their saves are immediately slain (as per a *death spell*) and their levels or hit dice are subtracted from the potency of the ward. Those with greater hit dice than the current power of the *death ward* are unaffected by the spell.
For example, an I8th-level lich has cast the *death ward* (which can slay up to 36 levels) on the entrance to her inner sanctum. A party of four characters, each 15th level, enter her lair and foolishly traverse the warding. The first member fails his save and perishes, reducing the ward's effectiveness to 21 levels. The second character makes her save and thus escapes any ill effects (the ward remains unaffected, however). The third character fails the save and dies also, reducing the ward to 6 levels of potency. The fourth

15th-level character has too many levels of experience to be affected by the weakened ward, which remains in effect until drained by a less powerful being.
Despite its lethality, this is not a subtle warding. The protected area or object is literally covered with intricate, arcane runes and symbols at the time of casting These glyphs may flash ominously with pale red or blue light when approached within 10 feet. The entire area radiates a magical aura of lethal necromancy. Provided that he or she is on the same plane of existence, the caster will be immediately aware if the *death ward* has been triggered. By concentrating, the wizard who cast the ward may determine its current level of lethality, regardless of distance.
This terrible spell is a closely held secret, guarded jealously by the most powerful and black-hearted of necromancers and liches. It was originally designed by liches, as they can easily sustain the rigors of casting such a spell.
Mortal wizards who employ this powerful spell have a 25% chance of going insane (as per the *contact other plane* spell), contracting permanent paralysis (via a stroke), or suffering from a terminal illness (as per the *cause disease* spell) as adjudicated by the DM. The danger of misfortune is reduced by 5% for every point by which the mortal wizard's Intelligence is above 18, though this modified chance never drops below 5%. Curiously, the mental stability afforded by lichdom makes these undying wizards completely immune to the dangers of employing this ward. It is similarly rumored that certain ancient, evil dragons have developed an even more potent version of this spell, which they may employ in their lairs with impunity.
The material component is a magical ink fabricated exclusively for this spell. The list of the ink's noxious ingredients is lengthy and complex, but it includes the venom of numerous poisonous animals and the acrid ichor of extraplanar fiends. Not surprisingly, the accumulation of these deadly components and the subsequent fabrication of the baneful ink itself sometimes results in tragedy for a mortal wizard, as mentioned previously.
While the inscription process (the actual casting) of the *death ward* takes only 1 turn, the fabrication process of the ink (once the proper ingredients have been assembled) takes 1-4 days. The ink also requires the dust of powdered perdiots and garnets, worth between 2,000-8,000 gp.

**Life Force Exchange** (Necromancy) *Reversible*

Range: 60 yards
Components: V, S
Duration: Permanent
Casting Time: 9
Area of Effect: Two creatures
Saving Throw: Neg.

This spell permanently switches the life forces of two creatures (one of which may be the caster). Both recipients must be within range at the time the spell is completed, or it fails automatically. When employed correctly, both creatures are surrounded by a radiant green aura and must save vs. spells at -6 to avoid the effects (obviously, willing recipients may forego the saving throw to consciously accept the effect).
The spell only functions properly if both recipients fail their saving throws. If only one target of the spell fails the save, then the one who made the saving throw is automatically stunned (reeling and unable to take action) for 1 round. Meanwhile the other subject (the one who failed the save) is stunned for 1-4 rounds.

In the event of a successful transfer, both life forces retain all of their original mental abilities and behavioral patterns, although their physical abilities are limited (or possibly enhanced) by their new forms. For instance, a decrepit necromancer uses this spell to exchange life forces with a hale, young warrior in the prime of his health. While the wizard gains a young and vigorous body (and all of the benefits that go with it), the unfortunate youth finds himself trapped in the withered shell of a dying, old man. Creatures unaccustomed to being shifted in this way are stunned for a minimum of 1 round after the transfer.

The effects of this spell are permanent and can only be reversed by a full *wish* or by the reverse of the spell, *revoke life force exchange*. If one of the bodies is slain before reversal can take place, the life force currently inhabiting that body departs. That spirit and its new body are dead just as if the spirit was in the body that actually belonged to it in the first place. The life force originally belonging to the slain body is now irreversibly trapped in its new form. Short of expending two *wishes* (one to restore the slain body, and the second to transfer the life force), the only way to now restore the victim to his or her rightful body is by *cloning* the original body and casting *revoke life force exchange*.

# Chapter 5: Death Priests

*When Our Lady of Pain discovered her sister had left the Land of the Living and taken refuge in the World of the Dead, her wrath and fury were boundless. She descended to the Land of No Return, through the caverns and lower regions known only to this spirits, until she reached the city of Erkalla itself, ruled by Cyric, the King of the Dead. And Loviatar approached the gate of the city, known as Ganzir, and pounded her Flail of Tears on the door, demanding to be let in, but her command was unanswered, and her screams resounded through the streets of Erkalla:*
*"Gatekeeper, I am here at Ganzir before the Walls of Erkalla. Open these gates for me! I am Loviatar, Maiden of Pain, Mistress of Sorrow, and I shall smash down this door if you do not open it! I shall crack open the bolts with my Flail of Tears and sunder the iron with my Scourge of Despair. I shall release all the dead from city of Erkalla, and they shall climb up the stairs of the earth. I shall raise up the dead, and they shall eat the living: the dead shall outnumber the living!"*
*And the Gatekeeper appeared, and he opened the door, but he would not let Our Lady pass:*
*"Mighty Loviatar, Maiden of Pain, you cannot enter Erkalla with your symbols of Power. Leave them with me, and then you may visit the King."*
*Our Lady of Pain saw the truth in his words, and at the gate of the city, she stripped off her talismans. She gave up the Flail of Tears, surrendered the Scourge of Despair. She unwrapped her Robe of Severed Hands, and coiled up her Whip of Countless Afflictions. She unwrapped the spiked wire from her hair and plucked out the needles from her nails.*
*And at last Loviatar was finished, and the Gatekeeper escorted her into Cyric's dismal palace. And the King of the Dead saw Our Lady humbled, and in his throne room of glory, he heard her complaint. Cyric made his voice heard like a gavel of thunder, and he spoke loudly his judgment, with the following words:*
*"I am Cyric, Lord of Erkalla, and I welcome you to my pale domain. You have no power here in my most ancient city: over the dead only I am King. I have heard your request and will honor it. When you leave, your sister shall accompany you. But each winter she will come back and visit me, and I shall return her to your side in the summer."*
*Our Lady of Pain heard his pronouncement, and she left gladly with her sister beside her. Thus Loviatar ascended from the netherworld, resuming her just punishment of Man.*

-"Loviatar's Descent into the Netherworld,"
recounted in the *Nycoptic Manuscripts*

Long before magicians learned how to practice the Art, priests were worshipping Death in its varied forms. In Eastern societies. Death was personified as an active agent in the world, symbolized by the rise and fall of a river, in the fury of a raging tempest, or in the jaws of the crocodile. In Hindu, Death was revered as Kali, the Black Mother, goddess of Murder and Destruction. In Nordic society. Death and Pestilence were personified by Hel, another feminine deity.
In other cultures. Death was merely an impersonal event, not an active force, and the important necromantic gods were those that presided over the spirits of the dead in the Afterlife. Nergal (from Mesopotamia), Yeh-Wang-Yeh (from China), Arawn (from Celtic Europe), Mictlantecuhtli (from Mesoamerica), Osiris and Anubis (from Egypt), Hades (from Greece), and Pluto (from Rome) were all gods of the Dead, charged with ruling the netherworld. In particular, the Egyptians - whose society was fairly obsessed with death - had an entire pantheon of deities who were associated with the dead: gods of Embalming, Entombment, and Final Judgment in the Underworld.
Modern fantasy has further enriched the concept of the death priest, dark Ashton Smith, in "The Charnel God," describes the worship of a ravening Ghoul God by the name of Mordiggian, a creature who feasts upon

the remains of the dead. Robert Bloch explored this same theme in "The Brood of Bubastis," in which he describes the cult of a ghoul queen as a perverted form of Bast, the Egyptian cat goddess of pleasure. These writers were expanding a fictional religious cult of incomprehensibly evil extraplanar powers, founded by H. P. Lovecraft in the 1928 story "The Call of Cthulhu." Since then, countless authors have contributed to the fictional cult of Cthulhu, creating numerous evil deities of Death and Madness.

Given the potentially wide range of necromantic worship, the death priest deserves special attention set apart from the discussion of wizards in previous chapters. In this chapter, we basically present an addendum for the *Complete Priest's Handbook (CPrH)* that includes updated information about necromantic priesthoods. The information in this chapter can also be used to flesh out the religious background (if any) of necromancer wizards. Finally, we briefly mention a few religious secret societies that might include priests as well as necromancers. These secret societies will be further discussed in Chapter Seven.

## Necromantic Priesthoods

For the purposes of this book, a death priest can include any cleric whose religion embraces one of the many aspects of death. This priest thus need not worship death per se. From the *CPrH*, the priesthoods of Evil (Philosophy), Disease, Life-Death- Rebirth (Force), and (obviously) Death itself fall into this general category. In this chapter, we also present the priesthoods of the Dead, Murder, Pestilence (a more detailed revision of the Disease priesthood), Suffering, and Undead. These new priesthoods are discussed in sufficiently general terms that they can be transplanted into any campaign world with minimal modification. Also, the new priesthoods include sufficient detail that the DM need not worry about assigning individual kits from the *CPrH* in order to flesh out a particular priest character.

Unlike the *CPrH*, we are not interested in exploring priesthoods that would be appealing or useful to player characters. Even among experienced players, few besides the DM will enjoy role-playing twisted, death-worshiping religious fanatics. Unless stated otherwise in the following descriptions, it is strongly suggested that death priests, along with necromancers, remain NPCs for the campaign, where they can serve as unusual advisors, employers, and evil archvillains.

Most priesthoods outlined in the *CPrH* gather priests and followers from among humans and all of the major demihuman races (dwarves, elves, gnomes, half-elves, halflings). However, only humans are admissible to the necromantic priesthoods outlined below, for the same reasons that necromancy (at least in general) can only be practiced by human wizards (see Chapter One).

Finally, the deities mentioned here can be represented by male, female, or even monstrous powers. In the descriptions that follow, the most likely gender of the various gods has been used for clarity and convenience; the DM should feel free to modify the deity's sex to suit the particulars of a campaign.

**Table 12:** Extended Death Priest Advancement, Spells, and Level Improvements.

| Level | Experience | Hit Dice (d8) | THACO | Spell Levels | | | | | | | Proficiencies | | Saving Throws | | | | |

**NW**: Nonweapon Proficiency slots; **W**: Weapon Proficiency slots; **PPDM**: Paralyzation, Poison, or Death Magic; **RSW**: Rod, Staff, or Wand; **PP**: Petrification or Polymorph; **BW**: Breath Weapon; **S**: Spells.

**God of the Dead**

This god is the King of the Dead, the Guardian of the Afterlife, the Protector of the Eternal Pilgrim. He is also the Patron of Travelers, since journeys and quests in the world of the living are merely a preparation for the ultimate voyage into the netherworld. Undead are an abomination to this deity, since they represent a direct affront or rebellion against his divine authority.

The God of the Dead is chiefly responsible for keeping departed spirits completely separated from the realm of the living. He must directly approve any *raise dead, resurrection*, or *reincarnation* spell in the campaign, even those cast by priests of other deities in the same pantheon. Any time one of these spells is cast, there is a

flat 25% chance that a true neutral deity will cancel it (neutral evil deities will refuse such requests 50% of the time).

Priests of this god are sometimes called Death Lords by members of their Order (also "Pales" or "Deadeyes" among their detractors). They are charged with maintaining the divinely ordained segregation between the Living and the Dead. Those who thwart this natural order - specifically undead creatures or living people who have cheated natural death too many times - will often be paid a cheerless visit by these priests, who will seek to restore the divine balance. The priesthood is also charged with sheltering travelers, guiding the lost, and assisting questers, since these attributes are reflected in their deity and considered to be a preparation for their role in the afterlife.

**Alignment:** The God of the Dead is either neutral or neutral evil. In societies where the god serves as an impartial judge and ruler of the Dead (like the Egyptian god Anubis), he will be true neutral. However, when the deity is revered as a cold and pitiless guardian or incarcerator of the dead (such as the Greek god Hades), he may be neutral evil. His priests must be neutral good, neutral, or neutral evil, although the flock of worshippers may be of any alignment.

**Minimum Ability Scores:** Wisdom 9, Charisma 12.

**Weapon Proficiencies:** As living ambassadors from the God of the Dead, Death Lords need to be able to perform their sacred duties, which often include "retiring" those undead and stubborn mortals who refuse to die. These specialty priests may thus employ a wide range of weapons, including the battle axe, dagger/dirk, knife, scythe, sickle, stiletto, staff, khopesh, scimitar, and short sword.

**Dress/Armor Allowed:** Normally, the priests wear only simple traveling clothes or shirts of white, charcoal gray, brown, or black. On ceremonial occasions, the priests dress in robes of purple or red (the colors of royalty), covering their faces and hands with white chalk to make themselves appear like corpses. They may not employ any form of armor or shield, though they can use protective magical items, such as *rings of protection*, provided that these items are unadorned.

**Nonweapon Proficiencies:** Required: netherworld lore (this new wizard proficiency takes 1 slot only), religion. Recommended: (General) etiquette, heraldry, singing; (Warrior) any; (Priest) astrology, musical instrument, reading/writing, spellcraft; (Wizard) necrology (this takes 1 slot only). Forbidden: all Rogue.

**Role:** Death Lords live apart from civilization in secluded fortress-monasteries, separated from the world of the living. There they pray and meditate for the dead, occasionally emerging from their religious community (always in ceremonial garb) to perform an urgent quest or mission for their divine overlord. These assignments usually involve laying a troubled spirit (or perhaps an ancient wizard) to rest. Depending upon the perceived reluctance (and power) of the individual, anywhere from 1-6 red-robed priests may be dispatched on such a "retirement" ritual.

As patrons of travelers, the priesthood might also provide shelter and valuable information for a party during an adventure or quest. They can also perform as mentors or guides on a journey into the netherworld, since they are intimately acquainted with their deity's residence in the Outer Planes (usually Hades). The priesthood could thus serve as a springboard for extraplanar adventures.

Sometimes, a lone priest will wander the world, seeking personal enlightenment or on some other quest. This would provide a good excuse for an NPC Death Lord to join the party for an adventure or two, until some important mission has been resolved. It might also serve as good motivation for a PC Death Lord, should the DM decide to make this kit available to players.

**Spheres of Influence:** Major Access to All, Astral, Necromantic, Divination, Protection, Travelers *(TOM)*. Minor Access to Sun (including reversed spells), Charm, Combat, Guardian, Healing, and Summoning.

**Granted Necromantic Spells:** 1st: *invisibility to undead;* 2nd: *aid;* 3rd: *death's door, feign death, negative plane protection, speak with dead, spirit bind/spirit release;* 4th: none; 5th: *dispel good/dispel evil, slay living/raise dead, drain undead;* 6th: none; 7th: *destruction/resurrection;* Quest: none.

All Death Lords have access to spells with power over life and death. Priests of neutral good alignment will

only employ the deadly versions of these spells when on an official "retirement" mission.
**Granted Powers:** Death Lords have a powerful ability to turn undead (even priests of evil alignment will attempt to destroy undead rather than control them). These priests always affect undead as if they were three levels higher in ability (thus a 5th-level Death Lord turns undead as an 8th-level priest).
Upon reaching 5th level, the priest may employ a heightened version of *speak with dead*. With this ability the priest need only know the name of the deceased in order to summon the spirit, regardless of its time spent in the netherworld. The shade is not entitled to a saving throw to resist interrogation, and it must answer up to six questions truthfully.
Finally, at 12th level, all attempts to *raise dead* are automatically granted by the deity.
**Other Limitations:** All Death Lords must adopt a Spartan, almost monastic lifestyle. Not only does tills way of life prepare them for the coming existence in the afterlife, but it also serves as an example for faithful followers. Since the dead have no need for wealth, the priests never retain personal treasure, either donating the money to their temple or distributing it among members of their flock. Although the priests can own personal possessions and magical items, these objects must have a plain appearance.
Normally, the priests may only eat simply prepared food (the blander, the better) to remind them of the drab fare in the netherworld. During holy seasons, they must subsist on a diet of flavorless food (such as rice). In addition, the priests must spend at least one day of the week in utter seclusion and meditation, completely abstaining from all food, water, and contact with other living creatures.
These priests may never marry. Upon reaching 5th level, they must also remain completely celibate.
**Possible Symbols:** Gates, Gravestone, Tomb, Path, Road, White Hand, Pale Face.

**The Goddess of Murder**

This evil deity embraces cold murder as the quintessential act of destruction, symbolic of the primordial chaos and the unpredictable forces of nature that oppose humanity. This deity is the patron of all unnatural and premeditated killing, whether it is inflicted on others or upon oneself. She opposes order, creation, and all existence.
The male priests of this goddess, sometimes called Stranglers or Assassins, spread death around the world by murdering for their Dark Mother, the Queen of the Noose, our Maid of Despair. Her priests advance the religion into the heart of civilization, efficiently eliminating any who speak out against them. Assassination is their most sacred mission, a holy and meritorious enterprise undertaken in the service of their deity. The priesthood's goal is to subvert societies and destroy civilizations through strife, terror, and coercion. Because of their evil nature, the DM should only allow these priests to be NPCs in the campaign.
**Alignment:** This deity is utterly chaotic and evil. Her priests and worshippers may be of any evil alignment, but the majority will match the disposition of their goddess.
**Minimum Ability Scores:** Wisdom 9, Dexterity 9.
**Weapon Proficiencies:** Only high-ranking members of the priesthood (at least 8th level) may shed a victim's blood. All priests must learn how to wield the silken cord to strangle their targets. This form of garrote is used to choke a victim to death and is generally used to strike from behind. Surprise provides a +3 attack roll bonus; no surprise provides a -3 penalty. Holding a victim in the garrote for 3 consecutive rounds kills the victim. A THACO roll is needed to hit the victim on round 1; successful THACO rolls are needed on rounds 2 and 3 to hold the victim. However, on rounds 2 and 3, the victim's armor class is calculated using only magical armor and Dex bonuses; physical armor offers no protection.
For example, a warrior wearing plate mail and a *cloak of protection* +2 has a Dex of 17. Her normal armor class is -2, but on rounds 2 and 3 of a garrote attack, her armor class is only considered to be 5.
The silk cord, when wielded in this fashion, has a speed factor of 2 and inflicts 1-4 hit points of damage for each round of effective use. The weapon is useless against creatures that are larger than man-sized. At 1st

level, the priest devotes his or her two weapon proficiency slots to specialize in this weapon, gaining a +1 to hit/+2 on damage.
At 8th and higher levels, a priest may learn from among the following weapons: battle axe, club, dagger, knife, lasso, scimitar, khopesh, scythe, sickle, short sword, long sword, stiletto, dart, javelin, or bow.
**Dress/Armor Allowed:** Stranglers intermingle with every level of society. As such, they are forced to take great pains to appear as a mundane member of whichever social class they are trying to infiltrate during a particular assignment. They can wear any form of armor and type of dress that is necessary to complete their disguise.
In ceremonial occasions (assassinations), the priests dress in pure white robes and hide their faces behind a white silk mask. Their garb is accented only by a black or red cord worn about the waist, which will eventually be used to strangle an unfortunate victim. The cord is usually left behind as a message to survivors.
**Nonweapon Proficiencies:** Required: disguise (this proficiency takes 1 slot only). Recommended: (General) languages (modem), etiquette, heraldry, rope use; (Warrior) set snares, hunting, tracking; (Priest) astrology, local history, musical instrument, reading/writing, religion, spellcraft; (Rogue, these take 1 slot only): blind-fighting, reading lips, tightrope walking, tumbling, jumping; (Wizard) any. Forbidden: healing.
**Role:** Priests of the goddess form a secret society, a fanatical cult which operates at the heart of many civilizations. Members of this religion lead double lives, sometimes as dual-classed characters, serving in the community as respected leaders by day and sneaking out into the streets by night to exact the dark will of the goddess. Their chief targets include innocent travelers, government officials, and wealthy merchants who refuse to contribute to the cult's coffers.
The priesthood uses its own power to extort fabulous wealth from the terrified populace - all for the greater glory of goddess, who promises earthly riches and success to her worshippers. Young priests are frenziedy eager to prove their devotion, frequently offering up their own children to her bloodstone altar. These zealots are only mildly reprimanded for such fanaticism. As their religious ardor matures, Stranglers are taught to slay only the enemies of the priesthood.
**Spheres of Influence:** Major Access to All, Charm, Healing (harmful reverse spells only). Necromantic, and Chaos *(TOM)*. Minor Access to Combat, Divination, Elemental, and Protection.
**Granted Necromantic Spells:** 1st: *ebony hand, spectral senses;* 2nd: *aid, hear heartbeat;* 3rd: *life drain, speak with the dead;* 4th: *heart blight, poison;* 5th: *slay living/raise dead;* 6th: *asphyxiate;* 7th: *death pact, destruction/resurrection, energy drain, mindkiller (TOM);* Quest: None.
The Goddess of Murder typically only grants necromantic spells which inflict damage, bring death, or provide divinatory insight and inspiration during a holy slaying. On rare occasions, she may permit a loyal follower to be revived with *raise dead, resurrection,* or *death pact*. Granted Powers: In return for their devoted service, Stranglers gain magical abilities from the goddess, making them very difficult to apprehend. Starting at the 1st level, her priests may move silently and hide in shadows (in both natural and urban surroundings) as a ranger of the same level. At 10th level, they may become invisible for up to 1 turn, plus 1 round per level. The priests may exercise this power only once each week. Stranglers of all levels can both turn and command undead.
**Other Limitations:** All members of the priesthood are male, since the priest and goddess are joined in a symbolic marriage. Although the priests are thus forbidden from marrying mortal women, they are not required to be celibate. Indeed, most cults have temple prostitutes as proxies for the goddess during the seasonal ceremonial rituals and weekly orgies.
However, since worship of the opposite sex is a central tenet of their religion, Stranglers arc generally forbidden from harming them. The male priest views himself as the son, husband, and father of all the women in the world. To harm any of these relationships would damage his intimate link with the goddess, resulting in an immediate loss of all granted powers and highest level spells until the priest has suitably atoned for such

an outrage (ritual suicide by strangulation is usually considered to be a suitable apology). On rare occasions, the goddess may make exceptions to this rule, but only when specific women have offended her.
In addition to all women, priests are prohibited from attacking any males (usually merchants or high government officials) who have been granted specific immunity by the goddess. These individuals usually purchase their immunity by making lavish contributions to the priesthood or swearing to serve the religion as a mole or spy.
**Possible Symbols:** The Female Face, the Four- Armed Woman, the Noose, the Silk Cord, the Curved Dagger, the Skull.

**The God of Pestilence**

The merest sigh of this god washes epidemics across the land; when he exhales from his rotting lungs, vile with consumption and a thousand other ills, a fetid cloud of disease-laden filth carrying uncountable deadly plagues covers the face of the earth. At his slight irritation, towns fall into ruin and desolation. His anger can sunder societies. Although this greater god is a patron to all forms of sickness and disease, lesser deities abound, each devoted to a separate illness (such as Silver Death and the Magenta Rasp).
Plague Priests spread disease, death, and ignorance wherever they may go. They afflict unwary victims with crippling afflictions and transport plague-ridden vermin to peaceful, contented cities. They harvest the festering slime from decayed corpses, greasing the door knobs and tools of innocents with sickening corruption. These evil priests delight in bringing misery and despair to healthy and joyous communities. The DM should only allow these wicked and depraved clerics to be villainous NPCs.
**Alignment:** This deity is neutral evil, as are his priests and followers.
**Minimum Ability Scores:** Wisdom 9, Constitution 15.
**Weapon Proficiencies:** Plague Priests may employ all types of bows, the dart, scourge, scythe, sickle, staff, and whip. These priests also favor a curious form of Y-tipped staff (sometimes called a talon staff) which they use to transport fallen bodies of victims. The curving tips of the talon staff slip easily under the armpits of prone victims, making them easy to drag.
**Dress/Armor Allowed:** Plague priests always dress in a massive mantle with a tall cowl that can be pulled up over the head to conceal their horrible faces. The color of the cloth in which they dress always represents the favored hue of their patron deity. Priests of the Black Death might wear heavy cloaks of darkest midnight, while those priests serving the sinister Lord of the Yellow Plague would favor saffron-hued robes.
High-level priests sometimes wear simple wooden masks painted a single solid color to match their chosen raiment. Some even go so far as to wrap their limbs in white bandages, making them appear like mummies. Besides this ceremonial garb, the priests can wear any form of armor, favoring enchanted plate mail.
**Nonweapon Proficiencies:** Required: herbalism. Recommended: (General) any; (Priest) ancient history, reading/writing, religion. Forbidden: healing, any Wizard, Rogue, or Warrior.
**Role:** Plague priests seek to devastate civilization and disrupt social order both at the local level and on the grandest imaginable scale. Unlike the Stranglers, who attempt to direct their priests to engage in selective ritual murders, the priests of pestilence apply their art to humanity as a whole. Their victims are peasant and noble alike, both easily subject to disease and the ravagings of the worm. The priests are as indiscriminate in their victims as they are in their methods.
Many Plague Priests are allied into a loose and secret confederation known simply as the Ravens by some, or as the Scabrous Society to others. This organization embraces the entire pantheon of plague gods, and all of them are devoted (in principle at least) to the same goals: decay and dissolution of organized society and human civilization. The Scabrous Society is further detailed in Chapter Seven and makes for an ideal long-term nemesis in the campaign.
**Spheres of Influence:** Major Access to All, Animal, Healing (reversed forms of spells only), Necromantic.

Summoning, Weather. Minor Access to Combat, Divination, Protection (reversed forms of spells only, where applicable). **Granted Necromantic Spells:** 1st: *undead alacrity, ebony hand;* 2nd: none; 3rd: *animate dead, cause blindness or deafness, cause disease, life drain;* 4th: *cause insanity, poison, plague curse;* 5th: *slay living, scourge;* 6th: *asphyxiate;* 7th: *mindkiller (TOM), wither;* Quest: none.
**Granted Powers:** Plague priests are completely immune to all forms of disease, magical and mundane. They can also lay on hands as a paladin of the same level, except they can only use this power to harm, rather than to heal. Thus, a l0th-level priest can inflict 20 hp of damage with a touch (once per day, no saving throw allowed). Finally, the priest can also bestow a fatal disease with a touch (as the 3rd- level cleric spell *cause disease*, once per week for every five levels of experience).
In general. Plague Priests cannot turn or control undead, except when the undead have been specifically raised from bodies stricken by disease. For instance, if a necromancer animated the corpses of a dozen plague victims, then the priests of Pestilence would be able to turn or command them. Similarly, Plague Priests can only animate the corpses of those who have died from disease.
**Other Limitations:** Priests of Pestilence are reflections of their corrupted deities. Although technically immune to disease, they have a horrid and disfigured appearance that festers and rots as the priest advances in power and experience. These clerics suffer a -1 penalty to Charisma for every level they advance; as their power grows, they come to resemble decayed corpses, symbolizing the very dissolution they try to promulgate. This advancing leprous condition is viewed by the priests as a sign of divine favor, the sacred Kiss of their god. Not surprisingly, they neither marry nor seek intimate relations; their priesthood is effectively celibate. Their ceremonial high cowls, masks, linen wrapping, and heavy incense help them conceal their odious appearance and odor when they move about in society.
**Possible Symbols:** Mice, Rats, and other Vermin, Ravens, the Y-tipped Staff.

**The God of Suffering**

The lot of humanity is to suffer and shed tears, and this god embodies all of the pain and misery in world. A prolonged and agonizing life is merely the prelude to a long-awaited death that brings final comfort and release from all sorrows. Although pain and sadness are almost always viewed as evil or undesirable aspects of living, the deity who embraces these symbols has a predominantly benevolent side and seeks to comfort the afflicted and bring solace to the sorrowful. He is a god of endurance and compassion, as well as pain and madness.
Priests of the Crying God, most commonly known as Flagellants, are wandering ministers of pain and consolation. They are attracted like flies to centers of evil, desolation, and natural disaster in the world, where they either nurture or assuage the sorrow. In a plague- stricken community that welcomes their priesthood, they may take on the role of heroes by healing the sick and raising the dead. But woe to the cruel or ungrateful town, for their fate shall be even greater pain and hardship under the ministrations of the Flagellants.
**Alignment:** The Crying God is neutral good, since he embodies not only sorrow but also endurance and compassion. His priests however, may be either neutral good, neutral, or neutral evil. Evil Flagellants form a separate Cult of Pain, largely ostracized from the mainstream priesthood, which strives to spread suffering in the world and argues that death is the only true consolation for the living. The flock of the Crying God may be of any alignment.
**Minimum Ability Scores:** Wisdom 12, Constitution 15. Priests with a Constitution of 17 or greater can use the increased hit point adjustment as if they were fighters (thus a Flagellant with Con 18 gains +4 hit points per level). This increased tolerance to physical damage reflects the priest's incredible tolerance for pain.
**Weapon Proficiencies:** Flagellants may choose from a wide variety of weapons, including the whip, scourge, mace (any), staff, club, and flail (any).

**Dress/Armor Allowed:** Members of the mainstream (neutral or neutral good) priesthood, known as the Brotherhood of Sorrow, may not wear any type of armor, nor can they don any form of ceremonial raiment save a simple felt skullcap of white, gray, or red (depending upon the priest's rank in the Brotherhood). Aside from the cap, their clothing is tattered rags or hairshirts, so that all around them can see the open bleeding wounds on their limbs and back, symbols of the pain and suffering they must endure for their religion. Most high-ranking priests (Master Flagellants) tattoo holy symbols, religious inscriptions, or even blue-gray tears below an eye as a mark of their devotion. Other Masters, who consider that tattoos do not cause enough suffering, prefer elaborate body piercings as symbols of their authority.

The evil Cult of Pain accepts this costume as well for all but the highest members: their Painbringers (high priests), who direct the hurtful worship services, wear blood red robes (or even red-painted armor and shield) in addition to their red skullcap.

**Nonweapon Proficiencies:** Required (this takes two slots only): endurance. Recommended: (General) any; (Priest) healing, herbalism, musical instrument, languages (ancient), local history, religion, spellcraft; (Warrior, this takes one slot only) running. Forbidden: all Rogue or Wizard.

**Role:** Flagellants can play either a positive or negative role in the campaign. If the DM wishes to stress the kind and compassionate nature of their god (perhaps to offset the presence of evil Plague Priests in the same campaign), the Brotherhood of Sorrow can then serve as traveling healers of pestilence or as bizarre mentors with a thorough knowledge of local history. The priests strive to become tragic, sacrificial figures whose self-imposed tortures mirror the suffering of the world and enable them to cure others. They symbolize endurance in the face of adversity and the triumph of life over death. Flagellants welcome all forms of pain and hardship as tests of their faith.

Despite their good intentions, the Brotherhood is most often viewed with a strange mixture of horror and derision in the elite circles of most societies. The common person, who usually benefits from the Flagellants' cures and always enjoys a good spectacle, may also have mixed feelings about the priesthood. Nevertheless, the Crying God and his followers usually find themselves at the crux of countless jokes and farces, but this ridicule is viewed only as one of life's many hardships, eagerly borne for their religion.

The evil faction of the priesthood, known as the Cult of Pain, is a sadistic band of cutthroats, thieves, and torturers who use their priestly powers and reputation to extort riches from the communities they visit. As such, they make excellent campaign villains. Although the Cult of Pain shares many of the same motives as the priesthood of Pestilence (and possibly the Scabrous Society), most alliances are usually temporary, lasting until some specific goal has been accomplished, such as the destruction of a specific barony. Although the mainstream Brotherhood priests vehemently denounce the cult's horribly evil activities, they nonetheless accept its existence as yet another form of sorrow they must continually endure.

**Spheres of Influence:** Major Access to All, Charm, Guardian, Healing, Necromantic, Protection. Minor Access to Combat, Elemental, Summoning, Sun, Weather, and Travelers *(TOM)*.

**Granted Necromantic Spells:** 1st: none; 2nd: *aid, slow poison;* 3rd: *cause blindness or deafness/cure blindness or deafness, cause disease/cure disease, death's door, feign death, negative plane protection, remove paralysis;* 4th: *cause insanity/cure insanity, poison/neutralize poison;* 5th: *slay living/raise dead;* 6th: none; 7th: *destruction/resurrection, energy drain/restoration, wither/ regenerate;* Quest: *health blessing (TOM)*.

Note that only members of the neutral evil faction will regularly use the harmful spells from the Necromantic (and Healing) spheres.

**Granted Powers:** All Flagellants gain a +4 bonus to saving throws that involve any form of endurance or resistance of pain and suffering. They gain a +2 bonus on all ability checks involving Constitution (such as swimming, running, or drowning). In addition, Flagellants have the ability to focus the power of a single healing or harming spell (such as *cure* or *cause serious wounds*). This augmented spell, when cast by the priest will either cure or inflict maximum possible damage. This power can only be used once per day.

Flagellants also have the power to control emotions in others. Starting at 3rd level, they can remove fear from others and negate the harmful effect of emotion-based spells or magical items which cause pain, suffering, or hopelessness. For every level of experience, a priest can perform this on up to two persons per day. Recipients of this ability need only be able to see and hear the priest for it to take effect (no saving throw).
Starting at 5th level. Flagellants can bestow powerful emotions in others, including courage, hope, and joy, as well as fear, hate, and sorrow (as the 3rd- level priest spell emotion control in *TOM*). They may use this ability once per day, affecting as many as two creatures per level of experience who can both see and hear the priest (subjects are allowed a saving throw if unwilling).
Finally, the priests of Suffering cannot turn or command undead.
**Other Limitations:** Flagellants embrace a lifestyle of pain, self-mortification and hardship. The Brotherhood relishes none of life's pleasures, for such would impede their ability to heal its sorrows. They can keep no wealth and may own no more Spartan possessions than what they can carry themselves. If there are two paths or choices, the Flagellant will always take the more difficult of the two. He or she will always walk before riding, climb mountains rather than use a cleared pass.
This obstinacy and almost insane impracticality has been the cause for frequent ridicule by non-believers, who sometimes derisively refer to the Flagellants as the "Cult of the Stupid" or the "Brotherhood of the Mad." Flagellants must remain both chaste and celibate.
In addition to its reputation for fanatical self-denial, priests of the Brotherhood must engage in ritual flagellation in order to gain spells. Typically, a priest must inflict one point of damage on him- or herself in order to be granted a single spell. Of course, this damage may be healed by memorizing curative spells, but more often, the wounds are merely cleansed so that they will not fester, and the curing spells are retained for those not fortunate enough to be blessed with divine endurance. Even if they are not memorizing new spells, these priests must engage in ritual flagellation at least once per day. These gruesome rituals are carried out in public whenever possible (usually in a town or village square, where they quite often draw quite a crowd of curious rubberneckers and sometimes gain new converts).
The Cult of Pain takes a somewhat more relaxed view of these restrictions. The important goal for these priests is that others are meant to suffer pain and loss. These priests gain spells by inflicting pain and damage, not by experiencing it themselves. The cult is organized in a strict hierarchy of sadistic torturers: highest Painbringers flagellate the lesser priests, who in turn both whip and beat the few members of the faithful flock. In the cult, only the Painbringers have license to amass personal wealth, indulge in physical luxuries, or marry. Few cult members are entirely sane.
**Possible Symbols:** The Whip, Scourge, Rack, Spiked Coffin, Bound Hands.

**The Lord of Undead**

The King of Ghouls is the deity of the undying. He represents the desire to persist in the physical world beyond the grave, the unnatural craving to preserve one's personality after life. The god symbolizes the power of the mind over the needs of the spirit and body. As such, he is the devourer of souls and cannibal of the dead. His dark will first changes and ultimately consumes the human body after death. The god loves venom, putrefaction and decay; his heralds are the worm, vulture, and hyena.
The priests of this god, also known as Charnelists, worship all undead as an embodiment of their deity. Even the most humble animated skeleton is a symbol of his power and must be treated with respect. The Charnelists are protectors and allies of undead; some groups chose a single undead form and revere it as a sacred icon of their god. Others seek to create new undead to serve their deity, or to convert existing undead to his worship. Those who refuse to convert are destroyed, their dust scattered to the winds as a warning to others. This evil and destructive priesthood is only appropriate for NPCs in the campaign.
**Alignment:** The God of Undead is lawful evil, but his priesthood may of any evil alignment (neutral and

lawful types predominate). Worshippers are usually neutral or evil in alignment.
**Minimum Ability Scores:** Intelligence 13, Wisdom 14.
**Weapon Proficiencies:** Charnelists employ bludgeoning weapons common to most priests, preferring the spiked mace and flail in melee (they prefer to fight two-handed, if Dexterity permits). They may also leam the warhammer, staff, sling, and club.
**Dress/Armor Allowed:** These priests favor somber plum robes, limned in silver thread, worn over blackened plate or chain mail. Instead of a helm, they wear an ornate silver circlet that is fashioned like a crown of worms. They may not use any form of shield.
**Nonweapon Proficiencies:** Required (this new wizard skill takes 1 slot only): necrology. Recommended: (General) herbalism (poison manufacture), etiquette, heraldry; (Wizard) anatomy; (Priest) herbalism, reading/writing, religion, spellcraft. (Rogue): disguise, reading lips. Forbidden: none.
**Role:** The King of Undead, known by some as Thasmudyan, is only publicly worshiped in a few cities isolated from mainstream civilization by tall mountains, the forbidding desert, or the trackless sea. In these backward locales, the main temple serves literally as a charnel house where the bodies of the dead are deposited by the citizens as an offering. There the cadavers rot and decay until they are consumed by the King's avatar and his fanatical clergy. These cities almost always have a dark and sinister reputation, one that is quite well-deserved for what should be obvious reasons. Worship of the Ghoul God is strictly forbidden in most civilized nations, forcing the religion to operate there like a secret society.
Each separate priesthood of the Lord of Undead has its own agenda of magical research related to death and the undead. Despite this division, or perhaps because of it, the individual temples communicate effectively with each other, either by spell or magical item. Some priesthoods investigate deadly poisons that will create new forms of undead; others try to mate and crossbreed humans with other venomous creatures, attempting to create a superior race of undead beings.
A few temples operate like the Cult of the Dragon in the Forgotten Realms, which seeks out evil dragons and converts them into dracoliches, the focus of their religion. Others, like the Cult of Worms described in Chapter Nine of this book, strive to spread knowledge about attaining lichdom to any interested person. Whatever their specific role, the Charnelists are yet another potential nemesis for the campaign.
**Spheres of Influence:** Major Access to All, Astral, Charm, Necromantic, Summoning, Thought *(TOM)*. Minor Access to Combat, Divination, Protection, and Sun.
**Granted Necromantic Spells:** 1st: *invisibility to undead, skeletal servant, spectral senses, undead alacrity;* 2nd: *aid, resist turning, slow poison;* 3rd: *animate dead, death's door, feign death, life drain, negative plane protection, speak with dead;* 4th: *cause insanity/cure insanity, poison/neutralize poison;* 5th: *dispel good, imbue undead with spell ability, slay living, scourge, undead regeneration;* 6th: *asphyxiate, summon undead;* 7th: *death pact, destruction, energy drain, mindkiller (TOM), wither;* Quest: *undead plague (TOM)*.
**Granted Powers:** Charnelists have great authority over any undead they encounter. Starting at first level, they affect three times the regular number of creatures per successful turning attempt (this translates to 6d6 undead, plus 6d4 extra creatures when denoted by a * on Table 47 on page 67 of the *DMG*).
Once a priest reaches 6th level, he or she gains the ability to fashion exceptional undead; any skeletons or zombies which are animated (either by *skeletal servant* or *animate dead*) gain an additional +1 hit point per hit die.
Starting at 9th level, the priests leam all of the secret rites that create powerful undead. They first leam how to make ghouls or ghasts (9th level). Then, at 12th level, they learn to create ju-ju zombies and mummies. Finally, at 16th level, they learn the secrets of vampirism and lichdom. All of these rites require numerous sacrifices (from 1-20 fresh corpses) and vast amounts of wealth in the form of rare components (1,000-20,000 gp). Even if both were available in unlimited quantities, the ritual can still only be performed once a month and creates but one undead creature.
**Eventually**, once a priest has received permission from his or her deity (usually after performing some

notable deed or quest for the benefit of the religion), the priest will undergo the process of performing the transformation upon him- or herself, joining the mighty Lord of Undead in (potentially) everlasting undeath. This is the ultimate dream for many such priests.

**Other Limitations:** The Ghoul God is a ravenous deity, demanding constant sacrifice. Usually dead bodies (the more recently dead, the better) are preferred, but exhumed cadavers can serve as a substitute in times of need or persecution (which happens as often as one might come to expect of such a morbid cult). Thasmudyan's worship is rumored to include several obscene rituals, the least of which includes cannibalism of the dead and necrophilia. Charnelists are accordingly forbidden from marrying or engaging in any intimate relations with the living.

**Possible Symbols:** The Vulture, the Hyena, Skeletal Hand, Crown of Worms.

## Other Priestly Resources

Although this chapter stands alone as a concise discourse on necromantic priesthoods, there are a number of useful TSR products which serve as sources of further inspiration on this topic. *The Complete Priest's Handbook*, a definitive work on creating priest characters, contains numerous examples of different pantheons, priesthoods, priest kits, and the role-playing of priest characters. The DM is referred to that resource for guidelines on creating believable and properly motivated priest characters for the campaign.

For more information about specific death gods, *Legends and Lore* summarizes the deities and religions from eleven historical and fictional pantheons. This fine book includes details about death priesthoods and their granted powers.

For campaign-specific information about death priests, the DM should refer to the *FORGOTTEN REALMS® Adventures* hardcover for detailed descriptions of various death gods (Cyric, Bhaal, and Myrkul) and their specialty priests. The *GREYHAWK® Adventures* hardcover also contains a description of the death god Nerull and his priesthood.

# Chapter 6: The Priest Sphere

*We entered into the catacombs of Moradask by night, so as not to attract the Society to our presence, but we stumbled across the high priest in the dungeons anyway. Luckily for us, he did not notice us at first because of the darkness spell Talib used to hide us. Silent as wraiths, we glided behind the priests until they reached the Idol of Ishistu, hewn from solid ivory, with diamonds for eyes. Only in the temple did they finally seem to sense our presence, slamming the doors and sealing us inside.*
*I will not recount in detail the horrors I experienced this night. The Plague Priests caused our limbs to blister and decay in front of our very eyes, and we would have all been lost had not our sister Jal' been a paladin, naturally immune to their afflictions. Cursed with blindness, Talib hurled spells wantonly about the chamber, sundering the idol and several priests with his liglitning. In the end we triumphed, but we did not linger to savor our victory. I could hear the high priest calling upon Ishistu's aid, back in the sanctuary, and I had no wish to confront the albino rat god when he arrived. Of course, before we made our hasty retreat, I managed to pick up the diamond eyes of the shattered statue, but the gems served only as chilling mementos of that evening, since no one would buy them.*

—From *Leyla's Lost journal*

The necromantic priest sphere does not bear the same negative stigma as the wizard school, probably because most of the clerical spells in the *Player's Handbook* are first described in a positive or even life-giving context. However, from the perspective of a death priest, the paltry and somewhat bland selection of spells in the necromantic sphere leaves much to be desired. This chapter presents over a dozen new and distinctive spells, arming the death priest with a much wider and more potent array of magic.
Not every cleric with knowledge of the necromantic sphere should automatically gain access to all of these new spells. The majority of these rites represent the most jealously guarded secrets of a few, highly specialized priesthoods. These sacred mysteries are rarely shared with outsiders, and they can only be discovered through careful research. As noted in the previous chapter, most necromantic priesthoods have access to only a few spells from this chapter.
Many of the new spells in this section are only granted to priests serving evil deities, greatly restricting their use by good or heroic characters. At the DM's discretion, a carefully selected minority may be made available to PC clerics. Beneficial spells like *spectral senses, hear heartbeat, death's door, spirit bind* (or its reverse, *spirit release), cure insanity,* and *drain undead* are periectly appropriate for neutral or good priests with access to the necromantic sphere, provided the characters devote the requisite time to prayer and research. The remainder of the new spells should be reserved for NPC death priests.
All spells belonging to the revised necromantic priest sphere have been listed in Appendix Three. The sphere has been slightly expanded to include such standard spells as *slow poison, remove paralysis, speak with dead, neutralize poison*, and *dispel evil*, which would obviously help priests involved with the dying or the dead. In addition, evil priests need access to the spells *poison* and *dispel good*. Finally, since Appendix Three is intended to help the DM choose spells for NPC death priests (who tend to be evil), all spells have been listed according to their harmful title (not the helpful reverse, as they are listed in the *PHB*).

## New Priest Spells

| **6th-Level Spells** | **Asphyxiate** |
| | **Summon Undead** |
| **7th-Level Spells** | |
| | **Death Pact** |

## 1st-Level Spells

**Ebony Hand** (Evocation, Necromancy)

Sphere: Necromantic
Range: 0
Components: V, S, M
Duration: 3 rounds + 1/level
Casting Time: 4
Area of Effect: Personal
Saving Throw: None

This minor meditation focuses a baneful, necromantic aura in the caster's chosen hand, enveloping the fingers in a dark, flickering radiance. The aura of the *ebony hand* enhances the delivery of harmful, touch-related spells (such as *cause light wounds* or *cause disease*) by providing a +1 bonus on the priest's

attack roll for every three levels of experience past the first (+2 to hit at 4th level, +3 at 7th level, to a maximum of +4 to hit at 10th level).
Once the *ebony hand* is cast, the magic of the touch- delivered spell is no longer conducted though physical contact with the caster's fingertips, but through the flickering aura of the *ebony hand*.
The companion touch-delivered spell(s) may be cast either before or after the creation of the *ebony hand*, which does not expire with a single, successful touch and may be used to deliver multiple attacks if the spell duration permits. Note that the *ebony hand* does not enhance attacks with weapons or other ranged spells.
The material component varies from religion to religion, but it is usually a piece of apparel or jewelry which is worn on the caster's hand to help focus the meditation (often a black glove or a simple silver or onyx ring). Regardless of the actual focus employed, the material component is not consumed by the spell and may be employed in multiple castings. As the spell description implies, the *ebony hand* may only be granted by malevolent deities to their evil priests.

**Skeletal Servant** (Necromancy)

Sphere: Necromantic
Range: 10 yards
Components: V, S, M
Duration: One week
Casting Time: 1 turn
Area of Effect: One body or skeleton
Saving Throw: None

This spell temporarily animates the bones of a dead human, demihuman, or humanoid creature of man-size or less. The resultant skeleton will obey only simple commands until it is destroyed, turned, or dispelled, or the spell duration expires. As with the creations of the more powerful *animate dead* spell, a *skeletal servant* can be commanded to guard an area, follow the caster, carry heavy objects, and so on. The servant is not well suited to complex tasks (such as cooking, for instance) and is generally created to serve as a porter or temporary bodyguard.
A priest may have only one *skeletal servant* per level of experience in service at once. The material component is a handful of graveyard dirt. As with the more powerful *animate dead* spell, the creation of a skeletal servant is not a good act, and only evil priests use it frequently.

**Spectral Senses** (Divination/Necromancy)

Sphere: Divination, Necromantic
Range: 30 yards/level
Components: V, S, M
Duration: 1 hour/level
Casting Time: 4
Area of Effect: Caster
Saving Throw: None

This spell establishes a sensual link between the priest and an skeleton or a zombie within the spell's range. This link allows the caster to see what the undead sees as if the priest were looking through the

creature's eyes. The link also enables the priest to hear any sounds that occur in the vicinity of the undead being. The priest can hear and see exactly as if he or she were standing at the same location as the undead creature. The spell also allows the priest to issue simple commands via this link. The spell ends abruptly if either the caster or the undead creature moves out of range or is somehow moved to another plane. Alternatively, the spell may be cast upon an (inanimate) corpse. In such a case, the spell transmits visual and auditory senses to the priest, but does not confer any ability to command or animate the body. The material components are the priest's unholy symbol and a black, hooded cowl which must be worn over the eyes and ears of the priest to benefit from the spectral senses.

**Undead Alacrity** (Necromancy)

Sphere: Necromantic
Range: Touch
Components: V, S, M
Duration: 1 turn + 2 rounds/level
Casting Time: 4
Area of Effect: One undead/level
Saving Throw: None

This spell only affects skeletons and zombies, which temporarily gain the speed and agility of a living human in a peak, healthy state (a movement rate of 12). The undead also gain the same dexterity, initiative, and saving throws as the caster (providing, of course, that these attributes are better than those of the undead). Because of their alacrity, the armor class of the undead is automatically improved by 1 (and possibly further modified by the defense adjustment of the caster, if any). The material components are three drops of water, sinew of any mammal, and a drop of quicksilver.

## 2nd-Level Spells

**Hear Heartbeat** (Divination, Necromancy)

Sphere: Divination, Necromantic
Range: 0
Components: V, S, M
Duration: 1 turn + 2 rounds/level
Casting Time: 1 round
Area of Effect: 10' radius/level
Saving Throw: None

Her the duration of this spell, a priest becomes completely deaf to all normal sounds and may hear only the noise of other creatures' beating hearts. The heartbeat of each person, animal, or monster in the area of effect is clearly distinct and may convey information about the being's proximity, direction, size, emotional distress, general health, and race or species. For instance, the heartbeat of a frail old wizard would be much softer and weaker than that of the *invisible* ogre bodyguard, standing behind him. This spell can provide quite confusing results if cast in the presence of numerous individuals (such as on a crowded city street) and is most effective when cast by a cleric in relative seclusion. A priest never hears

his or her own heartbeat with this spell. It is effectively masked out by the power of the hear heartbeat spell.
Obviously, this spell is of little use with creatures without functioning hearts (such as plants or undead).
The spell's range is diminished if more than a one- inch thickness of wood, stone, or metal lies between the caster and a subject. Each inch of a barrier's thickness should be treated as 10' of open space.
The material component is beeswax mixed with a tiny drop of the priest's own blood (to block the sound of his or her own heartbeat). While casting the spell, the priest places the wax in his ears to blot out normal sound and trigger the magical effect. Note that the priest is completely oblivious to normal sounds (such as talking or music) while the spell is in effect.

**Resist Turning** (Abjuration)

Sphere: Necromantic
Range: Touch
Components: V, S
Duration: 1 turn + 2 rounds/level
Casting Time: 5
Area of Effect: 3" diameter circle
Saving Throw: None

While this spell is in effect, all undead within a 15- yard radius of the affected object or creature gain a resistance to being turned (or commanded) by the clerics and paladins of an opposing religion (compared to that of the caster). The base resistance of the undead to being turned is 20%, plus 5% for every two levels of experience of the caster (60% at 4th, 65% at 6th, 70% at 8th, up to a maximum of 95% at 18th level).
This resistance roll is made secretly by the DM before each turning attempt is made. A single priest can continue attempting to turn or command the resistant undead creatures each round until either the resistance is overcome or the turn roll indicates failure. The spell can be centered on a stationary object or upon any moving creature, including the caster.

## 3rd-Level Spells

**Death's Door** (Necromancy)

Sphere: Necromantic
Range: Touch
Components: V, S, M
Duration: 1 hour/level
Casting Time: 6
Area of Effect: One human or demihuman
Saving Throw: None

When a cleric employs this spell, he or she touches a subject who is injured, unconscious and "at death's door" (-1 to -9 hit points). The spell immediately brings the wounded individual back up to 0 hit points, bringing the subject back from death's door. Although the victim remains unconscious, bleeding and

deterioration are stopped for the duration of the spell. The subject (now at 0 hit points) can be brought immediately to consciousness by clerical spells or items that restore lost hit points.
The DM should modify this spell if he or she disallows the optional rule for "hovering on death's door" (page 75 of the DMG). If the DM considers characters to be immediately dead once they reach 0 hit points, then this spell may bring mortally wounded (0 to -9 hit points) characters back to life, providing it is cast within 1-10 rounds of the victim's demise. The subject must make a system shock roll to survive the transition, and if successful, he or she permanently loses a point of Constitution.
This modified version restores the victim to 1 hit point, which may now be immediately increased by further magical healing, as outlined above. Once too much time elapses after an individual's death, the victim can only be brought back to life with a *raise dead* spell or some other, more powerful form of necromancy.
The material components of the spell are the cleric's holy/unholy symbol, a bit of white linen, and any form of unguent.

**Life Drain** (Necromancy)

Sphere: Necromantic
Range: Touch
Components: V
Duration: Special
Casting Time: 6
Area of Effect: One creature
Saving Throw:1/2

By casting this spell and touching another individual, a priest may fortify another's life force at the expense of a victim. This spell enables the priest to drain 1-8 hit points plus 1 hp per level of the caster from a living creature. The priest may immediately bestow the hit points on him- or herself, or transfer them to another individual within 1-4 rounds of the casting. The stolen hit points can increase those of the recipient beyond the normal maximum, and these extra hit points only last for up to one turn per the caster's level. Any damage suffered by the subject is first subtracted from these additional hit points. Though predominantly employed by evil priests at the expense of innocents, the spell may be used by those of noble intent, but only if all participants act of their own accord. However, if the victim (the donor of the life force) is unwilling, a saving throw indicates that the spell was partially resisted and only half the hit points were drained. Undead can neither benefit nor be harmed by *life draining*. It is possible, however, for an undead priest to drain hit points from a victim and bestow them on a living ally.

**Spirit Bind** (Necromancy) *Reversible*

Sphere: Necromantic
Range: 10 yards
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: One corpse
Saving Throw: Neg.

When cast near the corpse of a newly dead individual, this spell binds an individual's life force to its physical remains, preventing a spirit's departure to the afterlife. The (presumably unwilling) spirit of the deceased is entitled to a saving throw vs. spells to resist the effect (made as if still alive), modified by a -1 penalty for every three levels of experience past the 1st of the priest (-2 penalty at 7th level, -3 at 10th level, to a maximum of -6 at 19th level).

*Spirit bind* must be cast on the body of the deceased within one round of the individuals' death, for every level of experience of the caster. Thus a 10th-level priest may bind the spirit of an individual who was dead for up to a turn. If successful, the *spirit bound* corpse takes on a pale silvery or mauve radiance. Normal animals and even monsters of low intelligence will involuntarily shun this necromantic aura. While under the effect of this spell, a cadaver becomes immune to the normal effects of rot and decay. *Spirit bind* may thus be employed to preserve a body for a subsequent *raising* or *resurrection,* for which the *spirit bound* individual is considered to have been dead for less than a day. Furthermore, because of the strong, necromantic link already forged between the spirit and the body, the victim receives a -10% bonus on his or her system shock roll.

However, this spell is more often put to much darker ends by death priests. Note that, for the deceased, being *spirit bound* is not a pleasant experience. The spirit may not be aware of its current location or the passage of time (or so good-aligned priests who employ this spell may like to think), but it is most certainly aware of being trapped or constrained. Once bound to its body, a spirit is much easier to coerce with threats of permanent imprisonment and to interrogate with *speak with dead* spells. Some sages speculate *spirit bind* may be also involved in the loathsome creation of a flesh golem.

While immune to normal decay and dissolution (and the ravaging of animals and dumb monsters), the *spirit bound* corpse is in no way protected from destruction by a sentient creature or individual. Should its body be destroyed, the spirit instead becomes *bound* to the last area resided by the physical remains. Such a restless, quasi-liberated spirit might become a non-corporeal undead (such as an apparition, banshee, haunt, poltergeist, wraith, ghost, or spectre). A spirit imprisoned in this manner may only be released by casting the reverse of this spell (see below) or *dispel evil (dispel magic* and *reverse curse* arc ineffective). Because of the considerable dangers for the subject and moral quandaries involved, good-aligned priests arc naturally reluctant to employ *spirit bind* except in the most dire emergencies.

The reverse of this spell, *spirit release,* severs a spirits ties with the material world and is a common practice at formal funerals. Unwilling, non-corporeal undead are entitled to a saving throw to resist the spell's effects, subject to the same penalties as outlined for *spirit bind*. If failed, the undead spirit departs for the outer planes and is effectively dispersed. Note that neither version of this spell affects corporeal undead (such as ghouls, liches, and vampires), nor do they affect extraplanar creatures.

## 4th-Level Spells

**Cause Insanity** (Necromancy) *Reversible*

Sphere: Necromantic, Thought
Range: Touch
Components: V, S
Duration: Permanent
Casting Time: 1 round
Area of Effect: Creature touched
Saving Throw: Neg.

This spell drives a victim insane. The DM may consult the madness table in Chapter Three or choose a form of insanity to suit the wicked caster. A death priest, for instance, might inflict a victim with an exaggerated fear of dying (requiring the character to make a saving throw vs. paralyzation to avoid the effects of a *fear* spell whenever he or she encounters a cadaver, human bones, a graveyard, or even an open coffin). Alternatively, the victim might become convinced that all corpses were undead, waiting to rip him or her to shreds. In a combat situation, a death priest will probably choose to quickly neutralize an opponent with an incapacitating form of insanity, such as *confusion or feeblemindedness*. The insanity is permanent and cannot be dispelled except by casting *cure insanity* (the reverse), *heal, restoration, or wish*.

The reverse of this spell immediately cures insanity due to most causes (no saving throw). The spell must be administered while the patient is exhibiting insane symptoms. *Cure insanity* can heal a conscious victim of the effects of hallucinatory spores and repair psychic trauma (resulting from a mindwipe or other psionic assault). The spell also diminishes psychic exhaustion (restoring 5-40 PSPs). It cures madness resulting from spells (such as *confusion, chaos, contact other plane, feeblemind, symbol of insanity, and prismatic spray, wall, or sphere*) and also heals the insanity caused by certain magical items (such as *an elixir of madness or a scarab of insanity*). However, the spell will not control aberrant behaviors caused by lycanthropy, undeath, or powerful curses (such as *a geas or quest*). Finally, at the DM's discretion, *cure insanity* may temporarily calm the demented behavior of certain extraplanar creatures (such as slaad).

**Heart Blight** (Necromancy)

Sphere: Necromantic
Range: 10'/level
Components: V, S
Duration: Special (up to three rounds)
Casting Time: 7
Area of Effect: One living creature
Saving Throw: Neg.

With this spell, an evil necromancer priest may exert his or her dark will on the still-beating heart of any living victim, provided the target remains in clear view (line of sight) and within the spell's range. After casting the spell, the priest must focus his or her entire concentration on the victim's heart for three rounds, during which time the caster may not cast other spells or engage in melee. The priest may, however, walk, talk, and take ordinary defensive precautions while the spell runs its course through the victim.

During the first round of the spell, the victim must make a saving throw vs. death magic with a -2 penalty. This saving throw is modified according to the victim's hit point adjustment due to Constitution (+1 bonus for 15 Con, +2 for 16 Con, and so on; sec page 15 in the PHB for more on this).

If the victim makes this first saving throw, the spell fails to take hold of his or her heart and has no further effect. If the victim foils the save, however, then he or she suffers a massive spasm of pain in the chest (similar to that felt in a heart attack), inflicting 1-8 points of damage on the victim and completely incapacitating the individual for one excruciating round.

During the second round, the victim is entitled to another saving throw, this time with a -1 penalty (plus

any bonuses for Con). As before, if the victim makes the save, the spell ends with no further effect. If failed, however, the victim's chest pain intensifies, as if a searing band of iron were being slowly tightened around the heart. The character experiences severe dizziness, disorientation, and terrible shooting pains in the arms, jaw, and left shoulder.

Meanwhile, the victim loses 25% of any remaining hit points, is paralyzed with pain for 2-5 rounds, and immediately loses 2-5 points of Strength, Constitution, and Dexterity. Providing the victim survives the final stage of the spell (see below), these lost points are regained at a rate of 1 point in each these three ability scores per day.

On the third round of the spell, the target must make a (third, unmodified) saving throw vs. death magic or suffer a massive heart attack, resulting in immediate death (onset time is 1 round, during which time, the victim is completely incapacitated). Alternatively, a kind DM might decide that the final phase of the spell merely plunges the victim into a deep, death-like coma, lasting 1-4 days and resulting in the permanent loss of 1 point of Constitution.

This deadly spell may be thwarted in a number of ways. Successfully casting *dispel magic* on either the victim or the priest will disrupt the *heart blight*, as will casting a simple *protection from evil* spell on the victim or wearing a *scarab of protection* (this drains a charge, however). Furthermore, the victim may be entitled to repeat a saving throw with a +2 bonus if treated by another character with the healing nonweapon proficiency. Finally, the spell is immediately broken if the victim is transported out of range or removed from the priest's line of sight. Because of its murderous effect, this spell is only granted to wicked priests by the gods of Death, Disease, and Evil.

**Plague Curse** (Necromancy)

Sphere: Necromantic
Range: Touch
Components: V, S, M
Duration: See below
Casting Tune: 1 round
Area of Effect: One creature or object
Saving Throw: Neg.

By means of this spell, a necromancer bestows a powerful curse on a person or object which becomes a carrier for plague and contagion. Every person or animal that comes in direct physical contact with the cursed carrier must make a saving throw vs. death magic or contract a fatal disease (as described in the 3rd-level priest spell *cause disease* on pages 209-10 of the *PHB*), resulting in a victim's slow, agonizing demise within 2-5 weeks. The living focus of a *plague curse* is completely immune from the effects of the disease he or she carries. In many cases, the carrier will be oblivious to his cursed condition—especially if the carrier is a frequent traveler and does not remain in a single location long enough for the plague symptoms to surface in those he or she contacts.

The carrier of a *plague curse* displays no outward signs of disease and radiates only a very faint aura of necromancy (only a 5% chance of detecting per level). The curse may only be removed from an individual by a priest of higher level than the caster (*dispel magic* has no effect); alternatively, a cursed object may be cleansed by destruction in fire.

Normally, the curse only expires after it has claimed one life for each level of the original caster. As for the deadly affliction caused by a *plague curse*, it may be successfully treated with a paladin's healing touch or with such spells as *cure disease, heal,* or *restoration.*

The secrets of this malignant incantation are known only to the scant few priests who serve the cold gods of Pestilence and Decay. It is rumored that some Plague Priests must willingly accept this curse for their religion. Invoking a *plague curse* ages the caster by one year. The material component is the priest's unholy symbol and a small ball of myrrh.

## 5th-Level Spells

**Undead Spell Focus** (Necromancy)

Sphere: Necromantic
Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 8
Area of Effect: One undead
Saving Throw: None

For the duration of this spell, the recipient undead becomes a magical focus for the caster, who can now funnel any chosen, currently-carried "companion" spell through the undead. Any companion spell is emitted from the undead, but all casting activity (including component use) is performed by the priest. Distance does not matter, so long as priest and undead remain on the same plane.
However, unless other spells (such as *spectral senses, reflecting pool*, or *magic font*) arc employed to "sec" the undead's current surroundings (or it is in a known location), companion spells will be hurled blindly. A priest can cast multiple spells, one per round, through the undead, until it is destroyed or a maximum of one spell per level of the priest has been cast or the spell expires (it lasts up to 10 turns per level).
With this spell, a hidden priest can avoid direct combat, employing an undead as a spellcasting fighting-focus. This spell can be cast on an undead affected by *spectral senses, undead alacrity*, or *resist turning*, and the spells will function simultaneously. Finally, the undead may be controlled by clerical ability, spell, or magical item, without hampering the *imbuement.*

**Scourge** (Necromancy)

Sphere: Necromantic
Range: 120 yards
Components: V, S, M
Duration: Permanent
Casting Time: 8
Area of Effect: 1 creature per level
Saving Throw: Neg.

This nasty spell causes a major disease and weakness in victims who fail a saving throw vs. spells at a -3 penalty. Afflicted individuals are immediately stricken with a sickening *scourge* that quickly spreads to cover their entire bodies. The blackened boils, magenta blotches, violet lesions, seeping abscesses, and malignant cysts are excruciatingly painful, and highly debilitating.

In the short term, the Strength, Dexterity, and Charisma of each victim are reduced by 3. Attack rolls are similarly decreased by 3. The agonizing symptoms persist until a victim receives a *cure disease*, *heal*, or *restoration* spell bestowed by a more powerful priest than the original caster. *Dispel magic* and *remove curse* are powerless to mediate the symptoms of a *scourge*, but a *wish* will eradicate the infection immediately.
A *scourge* may also lead to a long-term, debilitating illness. Those ignoring the malignant disease resulting from the spell's effects for more than a few days may be susceptible to much worse afflictions (such as gangrene, plague, or leprosy) that ultimately result in the victim's untimely death within 1-4 weeks.
Furthermore, if a victim of the spell enters an area of dense population, there is always a chance that the disease may spread (1% per caster level) into an epidemic of massive proportions. These long-term effects of the *scourge* are left to the discretion of the DM.
The material component is a specially prepared, black whip or riding crop, which is cracked in the direction of the intended victims during the casting of the spell. Because of its horrific affect, *scourge* is typically only granted to high priests of a malignant and evil god who is dedicated to spreading death and disease.

**Undead Regeneration** (Necromancy) *Reversible*

Sphere: Necromantic
Range: Touch
Components: V, S
Duration: Instantaneous
Casting Time: 8
Area of Effect: One undead
Saving Throw: None

With this spell, the priest can "heal" an undead, restoring to its unlife 2d4 hit points plus one point per level of the caster's experience. As with most spells that restore hit points, undead regeneration cannot raise a creature above its normal maximum. Noncorporeal undead can also be affected by reaching into the space they occupy. During the "healing" process, the spell temporarily shields the priest from dangerous contact with the undead, such as aging or paralysis.
The reverse of this spell, *drain undead*, inflicts a like amount of damage. Note that the damage "drained" from the undead creature is lost. It is not gained as healing or extra hit points for the caster. The same protections against undead powers are conferred on the caster as with *undead regeneration*.
Only one undead can be affected by either version of this spell.

## 6th-Level Spells

**Asphyxiate** (Necromancy)

Sphere: Necromantic
Range: 120 yards
Components: V, S, M
Duration: 1 round/level

Casting Time: 9
Area of Effect: One individual/two levels
Saving Throw: Neg.

This spell asphyxiates individuals (chosen by the priest) who fail a saving throw vs. death magic. If fewer than six individuals are targeted with this spell, each receives a -1 penalty on their save (-2 for three creatures or less, -4 if the entire spell is focused on a single creature). This necromancy induces a victim's throat to constrict and his or her lungs to swell shut, similar to a severe allergic reaction, for so long as the subject remains within range of the spell.
Each round, a victim must attempt a Constitution check. If failed, the victim suffers 1 - 6 points of damage. If successful, the subject manages to gasp in enough air to reduce the damage to 1-3 points. During its struggles against *asphyxiation,* the affected creature becomes effectively *slowed* (as per the 3rd- level wizard spell). A victim who fails three consecutive Constitution checks has been smothered and dies automatically on the following round.
The effects of *asphyxiate* continue until either the spell expires, a victim withdraws beyond range of the spell, or a successful *dispel magic* is employed on a victim. Victims remain *slowed* for 1-3 rounds after the spell ends. This spell normally affects only humans or demihumans, though the DM may extend the dominion of the spell to include man-sized or smaller animals and monsters. Obviously, creatures (such as undead and plant creatures) that never breathe cannot be affected by this spell.
The material component is an unholy symbol and a (symbolic) silken gag, which the priest loosely wraps around his or her own mouth after casting the spell. Because of its murderous effect, *asphyxiate* is typically granted only to priests serving evil deities.

**Summon Undead** (Necromancy, Summoning)

Sphere: Necromantic, Summoning
Range: 60 yards
Components: V, S
Duration: 1 turn/level
Casting Time: 9
Area of Effect: Special
Saving Throw: None

This spell summons one or more undead into the general vicinity of the priest. The creatures answer the summons within 7-12 rounds (ld6+6). Upon their arrival, lesser undead will usually seek to eliminate the priest at once unless he (or she) is suitably fortified behind *protection from evil 10' radius*. More powerful, intelligent undead may attempt to parley with the priest, but they will invariably end the conversation and attack once their initial curiosity has been satisfied. A priest must be prepared to command, cajole, entice, or destroy whatever creature has been called into his service.
Whenever possible, the DM should choose what kind of undead answers the priest's summoning, based on the caster's current surroundings, level of ability, and alignment. Alternatively, the DM may roll a d20 and consult the following table:

| Roll | Summoned Undead (Number Appearing) |
|---|---|
| 1-8 | Ghouls (4-16) |

| | |
|---|---|
| 9-12 | Ghasts(2-8) |
| 13-14 | Shadows or Wights (2-5) |
| 15 | Wraiths or Mummy (1-3) |
| 16 | Spectre, Ghost, or Banshee (1) |
| 17 | Special (1) |
| 18-20 | No undead in range (0) |

Special undead might include sons of Kyuss, apparitions, crypt things, eyes of fear and flame, and any other unusual undead creature the DM may wish to introduce. In truly rare circumstances (for instance, if the spell is cast near a creature's lair), this spell might attract the attention of a more powerful undead, such as a death knight, vampire, or even a lich. These beings will seldom arrive in a predictable fashion and are the most likely to demand some form of nasty retribution or lavish sacrifice to appease.
The summoned undead remain in the vicinity of the priest for at least one turn per level and may be commanded to assist the priest in his or her endeavors (including, possibly, attacking the caster's opponents). Unless fortified with *resist turning*, the undead summoned by this spell can be turned (or commanded) by priests other than the caster. Because it enlists the service of powerful and malicious undead, *summon undead* is granted only to priests serving evil deities.

## 7th-Level Spells

**Death Pact** (Necromancy, Alteration)

Sphere: Necromantic, Summoning
Range: Change
Components: V, S, M
Duration: Special
Casting Time: 1 turn
Area of Effect: One individual (usually caster)
Saving Throw: None

By completing this ritual, a high priest forges a powerful pact with his or her deity. The covenant ensures that a chosen individual will survive an untimely death. A *death pact* is triggered whenever the protected individual is reduced to fewer than 0 hit points (mortally wounded) due to combat, spell, or accident. In the same round, the subject receives the following benefits:

- The individual (or his or her remains) and all possessions are transported immediately back to a religious sanctuary as if by a *word of recall* (the location of the sanctuary must be specified at the time of forging the death pact).
- Upon arrival, the individual receives a raise dead spell (if necessary) and automatically makes any required system shock roll.
- Any physical damage sustained by the individual is completely *healed* except for 2-5 (ld4+l) points of damage.

- Any severed or amputated limbs are instantaneously *regenerated*.
- The body is cleared of lingering enchantments with a *dispel magic* (bestowed at caster's level), whether beneficial or baneful, and cleansed of all poisons, diseases, blindness, curses, and insanity.

A *death pact* will remain in effect indefinitely until the conditions established at the time of its forging have been fulfilled. The *pact* may be established to benefit an individual other than the caster. However, in almost all cases, the chosen one must be in good standing with the caster's religion and agree to undertake a mission that will directly benefit the deity or dark power responsible for granting the spell. A *dispel magic* cannot end a *death pact* prematurely.

This powerful spell is not without its costs, however. Forging a *death pact* is an exhaustively stressful process, drawing the priest into draining audiences with extraplanar powers. As a result, establishing a *death pact* ages the caster five years and requires at least one week for complete recuperation, during which time the priest cannot cast any spells or engage in any physically demanding activity.

Furthermore, when the pact is invoked, the mystical transport and instantaneous healing exacts another toll, this time aging the recipient for five years (if the individual was *raised*, he or she also loses one point of Constitution permanently). Thus, if the priest casts the spell on him- or herself, he or she must be prepared to sacrifice at least ten years of life!

The spell's material components are an (un)holy sanctuary consecrated to the caster's deity and seven drops each of the caster's blood, the recipient's blood, (un)holy water, and dew. This powerful pact has enabled many "slain" priests to return from the dead and eliminate their enemies. Wicked necromancers in the service of evil deities are rumored to have significantly reduced the terrible personal toll on the caster by some unspeakably foul sacrifice. Note that powerful wizard necromancers might achieve a similar effect with *wish*-fortified *contingency* spells.

# Chapter 7: Allies

*Have I ever told you, my lads, the tale of any adventure on the dreaded Isle of Sahu? At the time when I moored offshore the island, I had no idea of its evil reputation as the homeland for necromancers. Even if I had known, I was young and invincible like you, and in search of dangerous adventure. And besides, our ship was badly in need of fresh water and supplies.*
*Now, when I went ashore with a well-armed landing parly of brave souls, I found a curious tower fashioned from rusted metal into the shape of a giant toadstool. As I approached, a door in the base of the tower opened, and a pair of plum-robed men welcomed us with a friendly greeting. The elder, an unusual man with weird, bluish skin, introduced himself as Master Pizentios, a scholar of ancient magic. The other man, a much younger, cadaverously thin fellow, was called Sarzec. I gathered from his deferential treatment of Pizentios that he served as an assistant to the older wizard.*
*They seemed genuinely friendly - and we had been living on old limes, chipped beef and lurd biscuit for so long - that when they invited me and my entire crew to a freshly cooked dinner, I could hardly refuse. The Master graciously welcomed us all into his tall tower and entertained us with tales about the dangers of the surrounding waters, and the beauty of the island's exotic flowers, which he grew in a private garden. Suddenly, I noticed that all of my sailors were falling insensibly to the floor. Somehow, even though the apprentice served us all from the same bowl, our food had been tainted with a powerful sleeping poison.*
*As my vision began to blur, the Master motioned silently to the shadows, and the darkness disgorged a winged fiend whose red eyes began to glow hungrily in the dim lamplight. The two necromancers and their diabolical familiar gloated quietly while I sank to the floor, powerless to move my limbs or even speak. I remember hearing one of the wizards grasping a knife on the table, and the scatter of chairs across the floor as he approached one of my fallen sailors. And then I heard, before I fell away into merciful darkness and oblivion, the sound of obscene, urgent slurping as the familiar began its own repast.*

-From Captain Omar's "Tale of Sahu"

Powerful necromancers rarely live alone. Contrary to popular misconception, not all practitioners of the Art abhor company, and even the most reclusive wizard may have at least some servants at his or her beck and call. Although wizards do not normally gain followers like most other character classes once they reach 9th or 10th level, they may still attract apprentice necromancers, hire henchmen, summon familiars, or even create their own undying followers. Finally, sociable necromancers may care to ally themselves with a secret society of their profession, gaining access to a wide variety of potential allies with similar interests.
Unlike the necromancer, death priests gain an entire cult of fanatical followers once they reach 9th level. Their "flock" usually starts with 20-200 0-level followers (as noted in the *PHB*; see the *CPrH* for priesthood specific followers), plus 2d5 minor priests (each 1st-6th level). Obviously this following will grow as the priest advances in power and prestige with his or her deity. The DM may care to extend a priest's usual entourage with a few "special" guardians or fiendish advisors gleaned from the current chapter.
The decision to flesh out a necromancer character with an entire cast of supporting henchmen and flunkies will normally depend on his or her role in the campaign. This chapter is intended for the DM who wants to turn a necromancer NPC from a minor random encounter into a campaign-ruling menace.

When the wizard (or priest) ceases to act as an individual and starts to behave like a master manipulator, complete with free-acting agents to perform his or her bidding, then you have the beginnings of a true campaign villain.

## Apprentices

One of the first principles of sympathetic magic dictates that "like attracts like." The same can be said for necromancers and aspiring students of the Forbidden Arts. The outstanding master of any academic subject, artistic skill, or physical prowess will undoubtedly attract young novices who wish to learn what the master has to offer. The study of necromancy is no different, and despite its notoriety, a master of the Dark Arts can expect to be approached and petitioned by several hopeful students.

There are many advantages to apprenticeship, for both student and master. The student gains access to some portion of his or her master's knowledge, and he or she also receives training in new spells and wizardly techniques. The master also benefits from the arrangement (perhaps as much or even more than the pupil), for although the tutor has to deal with the responsibility of teaching a new student, he or she also gains a willing and (more or less) obedient servant. Most magical research does not require the mastery personal attention and may be competently handled by a wizard of much lower level. Similarly, a powerful wizard would not wish to waste time cleaning the laboratory, preparing meals, cleaning the tower, gathering spell components, and performing other such menial tasks. Admittedly, a few of these duties can be accomplished by mindless undead or fiendish familiars, but the simplest, cheapest, and least dangerous way to recruit help has always been to hire on a living apprentice,

Upon reaching 9th level, a necromancer attracts 1-4 apprentices. Naturally, a wizard may refuse to take any students if she or he so desires, but sometimes an especially driven student can change a stubborn mind. Apprentice wizards usually begin their careers at 1st level and must be trained by their master (either by taking them on adventures or through instruction). They usually adopt the same kit as their mentor, and their spell list is usually restricted to a small subset of their master's much larger repertoire. Once the students reach 3rd level, there is a 30% chance that they will leave their master's? service and begin their own careers as necromancers unless their mentor otherwise entices them to stay. This chance increases by 10% for every level the student gains beyond 3rd. Although a master necromancer may be periodically deserted by an apprentice, another potential (lst-level) student usually arrives to fill the vacancy within a month of the departure.

As the master's power and fame grows, so too will the number of students who are attracted to his or her service. For every level of experience beyond 9th, a necromancer may attract one additional (lst-2nd level) apprentice. Indeed, some necromancers establish their own secret schools hidden in the wilderness, far from established colleges. The DM is referred to DUNGEON® #27 for an excellent example of such a school.

While still young and impressionable, an apprentice tends to take on the mannerisms and attitudes of the master. However, as the student's fledgling power and aptitude develops over a period of time, he or she begins to develop a more fully realized sense of personality and professional demeanor; in the final stage of apprenticeship, a student begins to assert his or her own wizardly opinion, openly conflicting (sometimes violently so) with the wishes of the master.

Powerful necromancers (like most wizards and academicians) tend to be somewhat egotistical and will rarely tolerate an apprentice with more than half their own experience levels in their service. Thus is it rare for a l0th-level necromancer, for instance, to be encountered with an apprentice of greater than 5th level. Obviously, the more powerful the necromancer, the more talented and skilled the current students

will be.
Depending upon the personality of their master, some students are merely released from their apprenticeship once they have proceeded too far in their studies. Given the criminal tendencies of certain necromancers, however, other students meet a much more sinister fate.

## Henchmen

Although apprentices can dramatically increase a necromancer's research productivity, they have the same skills and limitations as their master. In a sense, they are a weaker reflection of their mentor, and most necromancers who utilize living allies will recognize this drawback. Like most wizards, a necromancer may turn to living hirelings or henchmen for assistance in defending their stronghold, administrative duties, spying missions, and the like. Anatomists, in particular, must often rely on roguish associates to procure the fresh cadavers that are necessary for their professional advancement.
A necromancer's henchmen will either be fighters (40%), thieves or bards (30%), wizards (10%), psionicists (5%), or (death) priests (5%). It is improbable that a retinue will include druids, rangers, paladins, or wizards from a different school. If necromancers wanted access to a spell from another school of magic, they would have learned it themselves. Some wizards may promote their own students to the rank of henchmen once they reach high enough level (it is a big leap from student to employee). Henchmen wizards are thus necromancers who get along well with their former mentors. Most henchmen will have about half as many experience levels as their patron. They will be well equipped with mundane and magical items, according to the whims, taste, and financial background of their employer. Unlike students, who are attracted by a wizard's prestige, the number of henchmen in a necromancer's service will depend on his or her Charisma.
Note that there is yet another fundamental difference between the henchman or crony and the lowly apprentice who works for little more than the quest for magical knowledge and power. Most henchmen must be compensated in more concrete terms. Their loyalty most often comes at a price, usually in the form of monetary wealth or magical items. As with player characters, most abused henchmen will desert or seek to betray their masters. In most cases, only those henchmen with a compatible alignment will remain for long in a particular necromancer's service.

## Familiars

A familiar is any creature, magical or otherwise, that augments the personal powers of a wizard. The familiar is more than a minor servant or hireling: it can serve as a pel and a confidant for a lonely necromancer, as well. At low levels, the *find familiar* spell can be employed to obtain a small animal that will transmit sensory information back to its owner. Animals such as the crow, raven, serpent, hyena, vulture, and weasel are most appropriate to the necromancer, who can presumably summon more powerful familiars than the average wizard by right of his or her secret knowledge.
Ordinarily, familiars do have a major drawback: because of the spiritual (necromantic) link with its master, when the familiar dies, the wizard must make a system shock roll to survive the ordeal while permanently losing a point of Constitution. Necromancers with familiars will take elaborate precautions to keep their familiars safe from harm.
Although these are the most common types of familiars available, it is also possible to attract more powerful, extraplanar creatures into a necromancer's service. With the proper sacrifice an evil wizard can summon a creature from the Lower Planes to serve as a familiar. Most often, the fiendish familiar will

either be an imp or a quasit (as detailed in the *MONSTROUS MANUAL*). A necromancer (or an evil priest with access to the sphere of Summoning) may call an imp or quasit to him or her, with a 10% chance of success per level of experience.

Although the fiend often appears like a tiny, wicked creature, it could also take on a more dangerous or sinister appearance. For instance, instead of looking like an annoying 2' tall fiend (something akin to Jabba the Hut's maniacally cackling pet in the film *The Empire Strikes Back*), an imp could appear as a shadowy, winged creature with glowing red eyes (as illustrated in Captain Omar's introductory tale). The DM should feel free to embellish and tailor both the appearance and powers of the classic imp to suit the personality of its master and the mood of the campaign. Pizentios's "shadow imp," for instance, may have the ability to hide in natural shadows and darkness (gaining the ability to serve as an excellent spy), but it also has all the weaknesses of a normal undead shadow, such as aversion to bright light (see Pizentios's character description in Chapter Nine for more details). These essentially minor changes in appearance and abilities can dramatically change the way a parly of adventurers regards the familiar (and its master as well), especially among experienced players who have perused the *MM*.

Depending upon the power of a necromancer, the "common" imp may not suit either his or her taste or image. Other fiends may serve as more interesting or appropriate pets. On the other hand, a more practical Archetype may prefer to have a nightmare as his trusted, magical steed and familiar. A few fiends (imps and quasits included) will willingly serve a mortal master, on the hopes that they will be able to collect the wizard's soul when he or she dies and present it to their overlords in the Outer Planes, gaining greater prestige (or in the case of an imp or quasit, a promotion in the infernal hierarchy).

In general, a necromancer may not have an extraplanar creature as a familiar with more than a third as many hit dice as the wizard's levels of experience. Thus, it would take at least an 18th-level necromancer to attract a 6 HD succubus or nightmare familiar. In addition to the usual telepathic rapport, the fiend usually confers some of its powers on the master (as noted for the imp in the *MM*). A succubus, for example, may provide her master with invulnerability to surprise and resistance against all types of fire, as well as her usual fiendish immunities (such as half damage from cold and gases, and resistance to electricity and poison). More importantly, fiendish familiars enable their masters to memorize and cast spells as if they were one level higher, provided they are within one mile per level of experience. Finally, the necromancer gains bonus hit points, equal to the maximum hit points of his or her familiar (regardless of proximity).

Of course, should anything tragic ever happen to a fiendish familiar, the penalties are far worse than those suffered when an animal familiar dies. When a fiendish familiar dies (or more appropriately, has been banished from the necromancer's plane of existence), the wizard must roll a save vs. death magic or perish; even if he or she survives, the necromancer loses four levels of experience. These lost levels may be regained normally or by powerful magic (such as wishes or restoration spells). Given the harsh penalties involved, a necromancer will not subject even a fiendish familiar to unnecessary risks.

A more powerful fiendish familiar can be a major nemesis for the party in its own right. In some of dark Ashton Smith's Hyperborean short stories (such as "The Last Incantation" and the "Death of Malygris"), the necromancer Malygris was served by a fiendish viper of tremendous power, that singlehandedly defeated the most powerful wizards of an entire kingdom when they came to plunder his master's tower. Such a creature was clearly more of a trusted ally and advisor than a pet to the archmage, no doubt gated in from the Outer Planes and approached with a suitable bargain to obtain its willing service. Although these allies are not strictly familiars in the sense that they do not share a spiritual bond with the necromancer, they do considerably augment the wizard's powers and knowledge, simply by working with him or her. Clearly, a powerful necromancer may have a formal familiar (mundane or otherwise) and any

number of such extraplanar allies who might take on the role of lesser henchmen.
Please keep in mind that the previous discussion of extraplanar familiars has implied that the wizard is completely evil in alignment. No fiend will willingly serve a good master, except perhaps to twist him or her into a servant of evil. Clearly, powerful necromancers of neutral (or good) alignment will attract other kinds of pets, messengers, and allies from the Outer Planes. A pure-hearted Witch may be assisted by an archon or a lesser deva. A powerful Philosopher, on the other hand, may prefer to recruit familiars from the Elemental Planes, summoning an elemental, aerial servant, invisible stalker, or even a genie into service. Necromancers of all alignments can thus gain the powerful benefits provided by an extraplanar familiar.

## Undying Minions

Although some necromancers enjoy living company, others relish only the presence of the dead, animated in a twisted form unlife by the Forbidden Art. The creation of undead has always been associated with necromancy, but its powers are far more expansive than many of the uninitiated would care to imagine. A necromancer has the power to raise up a variety of undead into service, not simply the stereotypical automaton.
Independent, self-willed undead such as ghosts, wraiths, spectres, vampire, and the like can rarely be created by a necromancer. These creatures usually come about through some divine curse or by the malignant force of their own personality. In this section, we are concerned with the necromancer's methods and requirements for creating undead minion.s. We also address, however briefly, the topic of golem creation, since it can involve the transfer of life force into an inanimate object and thus falls into the murky province of necromancy.
**Skeletons.** These are the simplest undead for a necromancer to raise to unlife. Starting at 1st level, the wizard can bring animal forms to unlife (see *animate dead animals*). At 5th level, she or he can temporarily animate a single human skeleton (see *bone dance*). Finally, at 9th level, the wizard can create a large number of permanent human or monster skeletons (with *animate dead*).
Certain death priests with access to skeletal servant can also temporarily animate skeletons, starting at 1st level. This ability becomes permanent at 5th level, when they gain access to *animate dead*. Finally, a few magical items, such as the *staff of skulls* and the *thunder of doom* can also be used to raise up undead skeletons.
In Ravenloft, it is also possible for a 9th-lcvel necromancer to raise up a giant skeleton (sec the *MM*) with even greater powers. Since such creatures are partially imbued by mysterious Dark Powers, it is generally impossible to create such a creature outside Ravenloft. Of course, the evil goddess of Undead may grant such a boon to members of her priesthood, but such a favor is unlikely to be granted to a wizard (unless, perhaps, he or she is a devoted worshiper).
Skeletons are mindless automatons and, as such, are useful only as soldiers, guardians, porters, and workers. They are incapable of individual thought or initiative beyond the instructions given to them by their creator.
**Crawling claw.** These animated hands and claws can be raised up by a wizard or priest starting at the 1st level of experience, providing they have the knowledge to do so. The secret of this relatively simple necromantic rite can be found in both the *Art of Necromancy* and the *Book of Shadows* (for the wizard version) and also the *Nycoptic Manuscripts* (for the priest version). After the severed limbs have been assembled, up to one claw may be animated per level of experience of the spell caster. Once created, crawling claws can be directed by the telepathic commands of their creator, but more often, they are

given duties similar to that of the skeleton, whose intellect (or complete lack thereof) they share.

**Zombies.** Unlike skeletons, which are merely the desiccated framework of a creature's form, a zombie is an animated corpse. Most sages maintain that the zombie, like the skeleton, is a mindless slave, but this is clearly not the whole story. Those who have experimented with animated cadavers (most notably Kazerabet in the *Art of Necromancy*) have revealed that most zombies remember some facts about their former lives, depending upon how quickly they were animated after their deaths. Clearly, the animated corpses of the long dead, whose worm-eaten brains have been filled with cobwebs and rats' nests, will have little or no recollection of their former selves (in this case, they conform most closely to the stereotypical description of the zombie in the *MM*). However, those zombies who are raised up almost immediately after their deaths can be ordered to recall facts about their life to their current masters. Despite this interesting feature, however, a zombie is little better than a skeleton in terms of its ability to act independently and of its own initiative.

The common zombie can be brought to unlife temporarily by a necromancer at 5th level (with *bone dance*) or permanently at 9th level (with *animate dead*). A priest can create permanent zombies at 5th level with *animate dead*. Note that the clerical as well as the wizard versions of *animate dead* can raise animal and monster as well as common zombies.

**Shadows.** A necromancer can readily summon these evil spirits from the Negative Material Plane once at the 9th level of experience (see *summon shadow*). These creatures answer a necromancer's summons willingly, for it provides an easy opportunity for them to feast on life force. Once the summoning expires, these creatures usually return to the Negative Material Plane very quickly. They do have free will, however, and if properly approached, may even enter the wizard's service, assuming that they will be provided with enough fresh life force to temporarily ensure their loyalty. Highly chaotic, violently hungry, and unpredictable, shadows rarely stay attached to a living master for long, especially if the wizard has valuable living allies. They can sometimes be found in the permanent retinue of a lich.

**Ghouls.** Some would maintain that ghouls represent a separate race of free-willed undead descended from giants and genies. Although this may be the case for some types of ghouls (such as the Zakharan great ghul), it is nonetheless possible for an experienced necromancer of no less than 12th level to create minion ghouls (or lacedons). The process may be as straight forward as casting *ghoul gauntlet*, or it may involve a more obscure variant of *animate dead*. Regardless of the rite employed, the procedure must be applied to a still living individual who dies during the evil incantation and raises within 24 hours as a ghoul.

Because of their chaotic nature, ghouls can be very difficult to command, even for their creator (unless he or she has the special ability to turn or command undead). Usually, a necromancer will allow ghouls to wander in packs near the wizard's lair, summoning them only when they are required to perform a specific task. The ghouls often require some form of payment in return, usually in the form of living sacrifices (one victim for each ghoul's willing service) or, at the very least, a large number of fresh corpses.

**Dracolich.** This undead creature results from the necromantic transformation of an evil dragon, always with the help (wanted or not) of at least a 12th-level necromancer. The wizard prepares a receptacle for the dragon's spirit by casting *enchant an item* and also prepares a necromantic potion. If the dragon consumes the potion (of its own accord, through trickery, or coercion), it dies, and its life force transfers to the enchanted receptacle. Later, the dragon's spirit can reanimate a dead reptilian body. Dracoliches retain all of their abilities and intellect that they possessed in life. In addition to immortality, they gain undead immunities and unique powers.

A dracolich can be an extremely powerful ally for a necromancer, but it is free-willed and not under the wizard's complete domination. The creature must usually be enticed with offerings of treasure in order

for it to undertake any mission on behalf of its living caretaker. The Cult of the Dragon, which regards the undead dragon as a semi-divine form, is said to worship the dracoliches they help create.

**Ghast.** Using methods similar to those outlined above for the ghoul, a necromancer of at least 14th level can create ghasts. However, these powerfully chaotic creatures are even more unpredictably violent than their weaker cousins, and thus much more difficult to control. For this reason, they are rarely raised except as an experiment. Afterward, they are either literally trapped in an area (to serve as unwilling guards), set loose into the countryside (where they promptly wander far away from their creator's domain), or simply destroyed.

**Ju-ju zombie.** These hardy undead make the best undying servants. They can be created once a necromancer reaches at least 14th level by first slaying a victim with *finger of death* (or once the wizard is more powerful, by casting *energy drain*) and then animating the dead body. Because of the manner in which they were slain, ju-ju zombies retain a surprising amount of their original personality and intellect - far more than the ordinary zombie. They are capable of independent, reasoned thought, although their undying mind is heavily clouded with a sleepy, dreamlike stupor (hence their effectively low intelligence). Ju-ju zombies are not self-willed, however, and as long as their creator lives, they will follow his or her commands with faithful obedience.

If their master dies, they become completely self- willed, carrying out (as much as possible) any ambitions they may have followed in life. In one of his short stories ("Necromancy in Naat"), dark Ashton Smith writes about how a pair of zombies who were once lovers while they were alive return to their romantic courtship after their necromantic master dies. Most ju-ju zombies, however, are filled with a latent hatred of the life they were denied by their creator.

Kazerabet once relied heavily on ju-ju zombies to help run an entire dictatorship, long before she embraced the lifestyle of a sage and wrote the *Art of Necromancy*. Ju-ju zombies were at the top of her undead bureaucracy, serving as her chief lieutenants and messengers. Each ju-ju zombie was given command or authority over a number regular zombies and skeletons and set to perform a specific task, which they performed with tireless efficiency. An appendix in the *Art of Necromancy* includes a few secrets about preserving a ju-ju zombie's original living appearance. Kazerabet admits to employing ju-ju zombie masseurs in her boudoir, and she always liked her handsome body servants to be as aesthetically pleasing and lifelike as possible.

**Crypt thing.** This creature is a necromantic guardian set in place by a wizard or priest of at least 14th level to secure a crypt, graveyard, or tomb. The creature's teleportation attack can be quite disorienting and frightening to opponents, and most often, crypt things act more as deterrents than physical threats. Unless the necromancer or priest has chosen a tomb or crypt as a lair (or stores something valuable in such a location), a crypt thing is unlikely to be a popular topic of research for that particular spellcaster. Kazerabet hardly gives them more than a passing reference in her *Art of Necromancy*, and the *Book of Shadows* is little more informative.

**Golems.** The most powerful necromancers can create golems. Although not strictly undead, golems are magical automatons that can be created by transferring some life force or elemental spirit into an inanimate object. As such, they are a perfect topic of study, experimentation, and creation for the necromancer, particularly the Anatomist or the Undead Master. The necromancer can create many types of golems as detailed in *Van Richten's Guide to the Created* and the *MONSTROUS MANUAL*.

The simplest of such creations, which can be assembled by a wizard of 14th level or higher, is the necrophidius. It appears to be a huge skeletal snake topped by a fang-toothed human skull. According to the *Art of Necromancy*, it is possible for a necromancer of at least 16th level to fashion multi-headed variants of the necrophidius.

A 14th-level necromancer can also fashion a flesh golem, either by summoning an elemental spirit to

animate the corpse-hewn receptacle or by transplanting the brain of another sentient individual into the creation. The latter version of the flesh golem, known as the Ravenloft variant, is fully detailed in *Van Richten's Guide*. Finally, at 18th level, a necromancer may want to create a bone golem, essentially a towering bone colossus capable of terrible destruction.

A few death priests, particularly those serving deities of Murder and Revenge, have the ability to create a scarecrow once they reach 9th level. This evil automaton is created specifically for the purpose of killing a particular individual, much like an assassin.

**Skeleton warrior.** This undead creation is formed when a necromancer of at least 16th level binds the spirit of a powerful fighter into a specially prepared circlet, often using the spell *life force transfer*. The skeleton warrior retains all of the abilities, intellect, and personality it possessed in life, except that it must obey, as a willing slave, whoever wears the circlet. Not surprisingly, all skeleton warriors seek to obtain the circlet containing their souls so that they may destroy it and rest in peace. To counter this, the necromancer either must always wear the circlet or must somehow restrain the skeleton warrior (perhaps in a locked room) when the wizard chooses to remove the circlet. With their high magic resistance (90%), skeleton warriors make almost unbeatable wizard-killers. Undead Masters are among the few necromancers who would willingly tolerate such a constant threat in return for the service of this powerful minion.

It is rumored in the *Book of Shadows* that a talented wizard may be able create another type of soul receptacle for a skeleton warrior (like a ring, perhaps) that would enable an ambitious necromancer to simultaneously control more than one of these creatures. Other powerful mages, such as the famous Elminster, have noted that it may be possible to bind wizards in such a fashion. For example, Tashara of the Seven Skulls was said to have bound no fewer than seven lesser undead wizards into her service before she was finally outdone by her own ambition and greed for magical power. Such awesome necromantic bindings, including the subjugation of liches (if such is indeed possible, as implied in the *Art of Necromancy*), are risky enterprises for only the most powerful necromancers.

## Secret Societies

Given the ability to recruit students, henchmen, extraplanar allies, and undead minions, an ambitious necromancer could amass a sizable army of underlings, given enough time and determination. Some wizards, having gone mad with their quest for power or lacking enough ambition to rise beyond the status of a petty tyrant, arc content to remain in relative seclusion, basking in the glory of their isolated dictatorship.

Other necromancers are of more modest ambitions. They have absolutely no interest in rulership at all and are merely content to ignore the entire timeconsuming business of raising followers and minions. Simply put, they are interested only in tending to their quiet research.

Finally, some wizards join secret societies - and some join as many as they can.

A secret society provides training, support, information, and contact with like-minded allies for not only wizards, but priests as well. The secret society takes the individual wizard or priest, along with his or her entire private army of followers, and makes them part of a larger necromantic community, each of the members of which are dedicated to some mysterious goal greater than any of them could aspire to singly. Most campaign worlds have at least a few secret societies. In the Spelljammer multiverse, the evil Tenth Pit opposes the honest Pragmatic Order of Thought; in the Realms, the wicked Zhentarim are balanced by the honest Harpers; Dark Sun has its rebellious Veiled Alliance; the Land of Fate has the incendiary Brotherhood of the True Flame. These covert Orders - some established for good, others for evil - help

flesh out a campaign world, making it more realistic, exciting, dangerous, and complicated, all at the same time. Before we explore a few secret societies with necromantic interests, it will be helpful to review some of the basic principles on which these orders are founded.

Every secret society shares three common attributes. First, a secret society convinces its members that they are members of a powerful elite. Second, each society contains arcane rites, code words, recognition signals, and hidden chapter houses to maintain an aura of mystique and secrecy. Third, secret societies are founded for a concrete and specific goal. Once the DM understands these three general characteristics, it will be easier to create more realistic and compelling secret societies for the campaign.

**Privileges of Membership**. Those who join a secret society immediately gain the support of a wide body of colleagues. These friends will provide their new member with arcane training, financial resources, even magical items. Society chapter houses may contain huge reservoirs of knowledge, monetary wealth, and caches of arcane devices for use by members of their Order. A necromancer joining a secret society may gain access to the Order's huge spell books to augment his or her own personal power.

A priest, on the other hand, gains the spiritual support and guidance of other members of his or her own religion. He or she may also gain access to new spells and devices which can only be fabricated or granted by members of the religious Order.

Finally, there are the social intangibles of belonging to such an organization. These sorts of things may not mean much in terms of strictly interpreted game statistics, but they are still fundamental motivators of human behavior. Membership in a secret society is considered a privilege by those who belong to it, and even its evil subscribers truly feel a sense of fellowship and camaraderie with their peers. The most depraved necromancer may still crave to be welcomed and appreciated by a few fellows who understand his or her problems and arc interested in helping resolve them. Members of a secret society quickly come to believe that they belong to a privileged community of the elite.

**Rites of Passage**. As their very name implies, a secret society is a covert organization whose existence, location, purpose, and agenda must all be kept strictly hidden from the mainstream civilization. This is usually done to protect the society and its members from its enemies (either civilization as a whole, a reigning government, or an opposing secret society). Incidentally, this intense aura of secrecy helps reinforce the sense of mystique, privilege, and all the other social intangibles associated with the Order as well.

Every secret society contains a set of codes, recognition signals, and an established rite of passage that ensures its continued secrecy and the loyalty (fanaticism) of its members. Potential new converts are not immediately welcomed into a secret society. There are numerous tests and secret rituals that must be performed in order to become a member. By performing these rites (however abominable), an aspiring member gradually "proves his worthiness" to the Order and is finally allowed admittance as an initiate.

**The Goal.** Once indoctrinated, an initiate is usually assigned one or more members of the Order to help complete the training (brainwashing). Even good-aligned societies attempt to mold the minds of their members to establish some sense of conformity and provide motivation to work for a common goal of extraordinary importance. This brainwashing can be accelerated, if need be, with mind-influencing magic and medicines, but it can just as easily be performed by a highly charismatic individual with a thorough understanding of human nature.

A society's true goal is almost never revealed to its low-ranking members. As they "prove their worthiness" in a sequence of increasingly difficult tests, small pieces of a much larger puzzle are gradually revealed to them as they rise in the ranks of membership. Finally, only after their unswerving loyalty to the Order has been proven by countless tests, the true hidden purpose of the organization will be revealed to them, like a religious epiphany.

A covert Order maintains a cult of secrecy even within its own hierarchical organization. Only the

highest members realize its true agenda. Although a secret society can exist for a good or noble purpose, their methods of indoctrination and brainwashing are easily twisted and can become a powerful tool of evil. They are thus ideal tools for both corrupt necromancers and fanatical death priests.
For the remainder of this chapter, we present a few necromantic secret societies that the DM may care to transplant into a campaign. These organizations can serve as shady employers and questionable contacts for information, but more likely, they will .serve as villains or long-term enemies. Feel free to modify or embellish any of the following descriptions to suit the particulars and religious pantheons of the campaign.

**The Cult of Worms**

Founded at the same time as the monarchy of the Necromancer Kings on the island of Sahu, this religious organization of priests and necromancers is dedicated to the baatezu lord Thasmudyan. The ancient god of Undead was worshiped on Sahu long before the arrival of the Necromancer Kings, and perhaps the Cult of Worms in some way reflects ancient religious practices forbidden since the times of earliest antiquity. Regardless of its sinister primeval origins, the cult still survives today as a secret society. Its members have wormed their way into all the nearby governments and principalities.
The high priestess of the cult, a mysterious figure revered only beyond the lands of Sahu as the Undying One, is a lich named Vermissa. The cult's current purpose is to secure Vermissa's freedom from a prison established by the first Necromancer King. Its members recruit powerful necromancers from the surrounding realms, enticing them to the island of Sahu with promises of magical power and lichdom. In exchange for such knowledge, Vermissa demands that the wizard destroy one of the nine magical seals keeping her imprisoned on Sahu. Vermissa has not yet revealed any of her long-term (post-freedom) goals to her followers, but her ambitions have always been lofty, and spurred by centuries of imprisonment, the clever lich has had concocted a grand infernal scheme. Vermissa, the Cult of Worms, and the heritage of the Necromancer Kings are all featured in the sample campaign in Chapter Nine.

**The Scabrous Society**

This far-flung organization consists primarily of death priests who are dedicated to the god of Pestilence. Its membership is also open to necromancers (usually members of the Archetype kit). Although nominally dedicated to the unravelling of governments, their true purpose is the complete and utter destruction of all civilization. They are necromantic nihilists who want to bring disease and death to every village, town, city, and kingdom in society.
When a small chapter house secretly opens in a community, its priests and spies first collect as much information as possible about the new location. Then they will then begin an ever-widening campaign of destruction in the town, sowing as much discord as possible in the process, to keep their presence camouflaged. They defoliate fertile pastures, poison livestock, pour pestilent potions into communal wells, and spread gold coins marked with *plague curses*. The Scabrous Society leaves only deserted ghost towns in their wake, stripped of all their valuables. The chapter house then moves on to a new location and repeats the cycle of destruction.
Leaders of each chapter house communicate regularly with their superiors to report their progress, receive advice, and take new orders. They are well-organized and respond quite violently against those who thwart their plans. Retribution squads, armed with *deathdust*-envenomed weapons, *arrows of harming*, and *plague bolts* (see Chapter Eight for more on these) will quickly make an example of any

foolishly heroic opposition.

**The Cult of Pain**

This group is directed by a sadistic sect of the priests of the God of Sorrow. Their goals include spreading their excruciating worship and indulging their cruel appetites. Necromancers, particularly evil Anatomists and Archetypes, favor the cult.
To escape persecution, the cult locates its temples deep underground or in the most secluded reaches of a city's slum. Their flagellation ceremonies, while quite painful (especially when they pass around the brine- soaked sponges after the first chorus), are only to gradually accustom the worshiper to the delight of receiving pain and inflicting it on others. These services are a front and a brainwashing device. Only after an initiate has demonstrated, time and again, his or her willingness to expose him- or herself and others to pain and suffering will that person be introduced to the hidden mysteries of the cult.
Beneath each temple, secured against intrusion by powerful magical wardings, the evil priests maintain an extensive torture chamber where they devise and perform the most horrific experiments. The cult hierarchy maintains extensive contacts with slavers, rogues, and kidnappers (usually fanatical cult members) who help keep a constant supply of helpless victims in the temple dungeons. The cult does not torture its own followers (except in the flagellation ceremonies). It needs them to help spread the faith and serve the temple.

**The Anatomical Academy**

Since the mutilation of corpses is regarded as anathema in many civilizations, this secret organization exists to spread the detailed knowledge of the human body and to provide its members with fresh cadavers on which to practice. The hierarchy consists mainly of Anatomists, but the Order is open to all wizards, priests, healers, or surgeons with knowledge of interest in anatomy.
Members of the Academy meet for secret lectures or conventions in secluded warehouses, dungeons, or even the abandoned classrooms of a university. They maintain frequent contact through private correspondence, magical spells, and enchanted devices. The Academy also has established a network of contacts with local authorities, usually located at cemeteries, morgues, prisons, and poorhouses, to deliver cadavers to subscribing members. Once these bodies have been magically *embalmed* by the Academy's field agents (low-level Anatomists), the cadavers can be transported over large-distances by mundane means (usually ship or wagon). In extremis, the corpses can be animated and disguised to facilitate transport, but such methods carry the danger of attracting too much attention. The Academy strives to keep a low profile or risk the swift condemnation (and perhaps persecution) by the most conservative and righteous (lawful good) members of society.
The Academy is basically a neutral organization that exists merely to facilitate the collection and dissemination of necromantic knowledge. Bodies are accepted at the back door for polite thanks, a sack of gold, and no questions. They have absolutely no interest in learning about the identity of their new "specimen." Some scrupulous Anatomists insist that their corpses must have died a natural death, but other less- principled individuals merely require that their merchandise be "essentially intact." It is not uncommon for murderers to dispose of an unwanted body by selling it the Academy. The organization frequently hires rogues and adventurers to establish new contacts with potential sources of cadavers and also to transport large shipments of harvested corpses to its most secluded members.

# Chapter 8: Tools of the Trade

*Pizentios kept me and the rest of my crew locked in his cellar for days, at the bottom of a deep, dark pit that was sealed by a single trap door. One morning. Apprentice Sarzec opened the. trap door and used a rope to lower some noxious stew - perhaps intending to drug us again and feed another sailor to his master's familiar. We had no intention of sampling his fare once again. By then, of course, we had established a plan of escape.*

*Although stripped of all our possessions and holy symbols, Tala, a priestess with our crew, prayed for a command spell. When the apprentice opened the trap door above us, the cleric suggested that Sarzec jump. Just like that, without hesitation, the dumb sot leaped into the pit with us, breaking both legs when he hit the floor and knocking him out cold. Tala bound Sarzec's wounds, but I refused to let her set his mangled legs. At least the villain wouldn't bleed to death. Six of my sailors made a human pyramid, lifting up the first mate until he reached the open trap door. He then secured the rope Sarzec used to lower our food, and we all climbed out, leaving the unconscious apprentice in the pit.*

*After we escaped from Pizentios's prison, we began to raid his home. Fortunately the necromancer and his familiar were still occupied elsewhere on the island, so we sacked the metal tower, hurling his most useful tomes, talismans, potions, and scrolls into a number of sacks. We also discovered artifacts of the necromancer's hideous practices, embalmed in jars of amber oil. We destroyed these and many other abominations that decorated the shelves of his study.*

*The greatest treasure we discovered beneath his bed in his private chamber, locked in an ebony box. It was a scimitar in a black leather sheath, superbly balanced and traced with the most deadly wordings of black necromancy, or so Tala warned me. I strapped it on anyway. In a corner of the room, on an iron stand, we found Pizentios's grimoire. Fearing it was trapped, I used the sheathed scimitar to flip it into a sack. There was no time to inspect any of these treasures in detail, since we were terrified that the necromancer might return at any moment and slay us all. But Fate smiled upon us, and we made it back to our ship with all of Pizentios's most valuable treasures.*

*In the night, Pizentios returned to his devastated tower. By then, our ship stood off from shore, far beyond the range of his lethal spells. Bereft of his grimoire, the necromancer sent his familiar after us instead. The winged fiend descended on us like a nightmare and began ravaging the crew. Then I unsheathed the scimitar I had stolen from Pizentios' tower, and the fiend, beholding its naked blade writhing with fell runes, fled abruptly into the night. Our escape from the Isle of Sahu was complete.*

—From Captain Omar's "Tale of Sahu"

Necromancers and death priests are renowned for their exotic magical creations. Over the centuries, these spellcasters have developed an expansive foundation of necromantic lore which is only now being rediscovered. Much of this ancient knowledge is not being employed in the most ethical manner. For example, based on the principles found in magical texts such as the *Book of Shadows*, the Scabrous Society has recreated a few long-forgotten poisons and necromantic devices to help expand their evil organization.

This chapter details a few of the magical venoms and necromantic items that have only recently come into more frequent use by several powerful groups of necromancers and various cults of death priests. Sometimes, adventurers such as Captain Omar have managed to discover new sources of necromantic lore in their travels. As more archaic tomes begin to appear in the campaign, the magical devices outlined in this chapter will become more than just rare curiosities. This chapter enables the DM to augment the

arsenals of necromancers and priests in the campaign.

## Poisons and Potions

Practitioners of the Art employ a variety of magical venoms and potions to achieve their ends. From the *DMG, dust of sneezing and choking, elixirs of health and madness, potions of extra-healing, healing, longevity, poison, undead control,* and *vitality* are most likely to be included in the recipe book of the necromancer or death priest, either for personal use or for use on others (in the case of harmful items). From the *TOM,* these spellcasters will sometimes also employ *air spores, curdled death* and *powder of the black veil* as poisons in combat. The list of venoms found on page 73 of the *DMG* provides a general background of non- magical poisons for the campaign. Certain necromancers, such as the Archetype or Witch, may also be experts at harvesting natural poisons from animals and monsters such as snakes, spiders, scorpions, wyverns, and the like.

Many of the necromantic secret societies employ magical venoms and unique potions that are created and distributed only to members of their organizations. The Scabrous Society and the Cult of Pain, in particular, relish the use of enchanted poisons like *deathdust.* Even the righteous Death Lords have developed an enchanted venom, called *soultravel.* Of all the death priests, only Stranglers disavow all use of poison in their holy slayings.

Many necromancers, working independently, have also developed several insidious poisons of varying efficacy and magical potency. Undead Masters use a variety of deadly potions (like *ju-ju wine*) that transform the unfortunate drinker into an undead. Other ointments, such as *ghast salve,* provide protection or even power over special types of undead.

Along with these specialized necromantic elixirs, evil wizards also tend to use exotic but otherwise normal poisons to an alarming extent. Even a mundane zombie can become a major threat to a party of adventurers when it wields a dreambliss-envenomed sword given to it by its master. As recounted in the Captain Omar's introductory tale in Chapter Seven, a powerful necromancer like Pizentios can (and will) effectively use poison to sedate a large group of opponents.

Natural poisons - such as dreambliss and mind-shadow - that induce slumber or disorientation in opponents are especially valuable to necromancers, who cannot bring about such effects with their spells. These poisons are sometimes used for medicinal purposes by the Anatomist, but there are many times when a villain wants to render victims helpless or unconscious. Without access to spells from the schools of Illusion or Enchantment/Charm, necromancers must resort to poisons to achieve similar ends.

Keep in mind, while perusing the following list of new potions and venoms, that the final decision about whether necromancers and their secret societies actually do employ certain poisons (or any at all) with any sort of regularity is left to the DM. Prices for normal venoms, which might also be made available to PCs (at the DM's discretion), are listed when appropriate.

**Ju-ju Wine:** This fragrant liquid appears to be a dark red wine. In fact, it is an insidious potion of poison. If even a sip is tasted by a human, demihuman, or humanoid, the wine brings instant death unless the victim makes a saving throw vs. death magic. If failed, the victim is permanently transformed into a ju-ju zombic who automatically obeys the commands of the first person who speaks to him or her. The zombie can be turned or affected by magical items that influence undead, but the victim cannot be restored except with a *wish, raise dead,* or similar necromancy.

A second, less toxic vintage of *ju-ju wine* is also known to exist. This milder, white-wine variety turns the victim into a "living" ju-ju zombie for 2-5 days, who (as with the more potent variety) mindlessly

obeys the first person who speaks to him or her. However, since the victim is not truly dead, he or she cannot be turned or commanded by a priest. Until the effects of the lesser potion expire, the victim temporarily loses all racial, class-related, and professional abilities. (150 XP.)

**Dreambliss:** This powerful (non-magical) narcotic is derived from the sticky white sap of a thick-leafed jungle or desert plant. Dreambliss quickly sedates even the largest opponents. Victims struck by a coated weapon must save vs. poison to resist its potent effect.

If the victim fails the save, he or she falls into a deep, euphoric "Sleep of Bliss" lasting 2-8 hours. The onset time depends on the victim's size: S (1 round), M (1-2 rounds), L-G (2-5 rounds). Upon waking from the poison-induced slumber, most victims remember happy, dreamlike visions that they long to experience someday again.

Dreambliss is sometimes used as a recreational drug in rich circles, but the addictive poison quickly drains its victims of all Wisdom (permanent loss of 1 point per month of repeated use) and wealth before long. The poison's effectiveness against even large-sized monsters makes it popular among both adventurers and criminals. A single dose costs from 200-1,200 gp.

**Deathdust:** This deadly magical powder can be used as either contact or insinuative poison. An arrowhead need only be sprinkled with a pinch of the powder and touch the skin to be effective. Clearly, the powder must be handled extremely carefully by trained individuals.

Deathdust acts almost instantly, with an onset time of 1-3 rounds, during which time it causes an irritating burning sensation and may be reversed with a *dispel magic* (successful against 12th-level magic). Otherwise, the necromantic powder causes the victim to literally fester, decay, and desiccate into a pile of dry dust within a single round if a saving throw vs. death magic is not made. Deathdust is sometimes applied to an enemy's doorknob or sprinkled into a pouch of gold given as a gift. It is said to smell like myrrh.

**Ghast Salve:** Only a few powerful necromancers know the secret of creating this sickly green ointment. The cream's powers activate one round after being spread upon the recipient's body. The recipient gains immunity to paralysis and to the stench of ghasts. The user of *ghast salve* also exudes the same stench of ghasts and can paralyze others if the victims fail a saving throw vs. paralysis. Finally, regular ghouls and ghasts will regard the recipient in an extremely favorable light (as if he or she had an 18 Charisma). The subject gains a +7 reaction adjustment with these forms of undead.

*Ghast salve* reacts strongly with holy water. If struck by such liquid, the recipient suffers damage as though he or she were truly undead (ld6+l points of damage for a direct hit, 2 hp for a splash). Typically, ld3 jars, each containing up to three applications, will be found. A single application lasts for an hour. (500XP/jar.)

**Mindshadow:** This non-magical poison is brewed from a variety of arboreal fungus and is available in most temperate climes for between 300-1,800 gp per dose. When introduced into a human's bloodstream, mindshadow causes extreme disorientation and both visual and auditory hallucinations in the victim, who must make a saving throw vs. poison to resist the effect (onset time is only 1-3 rounds).

Victims failing their save become *confused* (as per the wizard spell) for 5-20 turns. During that time, the victim is highly susceptible to *suggestion* (-6 penalty to the saving throw to refuse a specific request) by anyone conversing with or questioning the victim. Mindshadow can be used in combat to disorient opponents, but it is much more often employed by necromancers during the interrogation of prisoners. Since it leaves the victim almost totally at the mercy of frightening hallucinations and suggestions, mindshadow is rarely used as a recreational drug.

Mindshadow only works effectively with humans. Other races and monsters gain a +1 to +4 bonus to their save (onset time 2-12 rounds, depending on their physical size and the amount of poison employed). If they fail, they arc only slowed (as the wizard spell) for 2-12 turns (with no susceptibility to suggestion,

as in humans). Dwarves are immune to the poison's effects.

**Soultravel:** This magical poison, which can be absorbed directly via the skin, is used by the priests of the Dead and certain Philosophers to loosen the bond between a person's body and spirit. Victims are entitled to a saving throw vs. spells to resist the effect if unwilling.

If the save is failed, *soultravel* forces the victim's spirit to surrender his or her physical body and enter the Ethereal Plane, much like an undead ghost. However, unless she or he has had extensive experience with *soultravel*, the ethereal victim will be completely helpless and disoriented on the Ethereal Plane. Meanwhile, his or her physical body remains in a deathlike coma. The victim cannot physically attack those in the physical world, although he or she can still cast spells and use psionic abilities.

*Soultravel* is not for the casual user. Strong doses of the venom will sever the bond between the body and spirit irrevocably, effectively killing the victim. The victim can also be slain by casting *spirit release, dispel magic,* or *dispel evil/good* while his or her ethereal form is further than 30' from the physical body. However, if the ethereal form is close enough to the body when any of these spells are cast, the spirit and body are reunited.

Unless prematurely ended by magical spells, as outlined above, the effects of *soultravel* usually last for 4-16 turns. Upon awakening, the subject loses 2-8 points of Constitution, which are regained at a rate of 1 point per day of rest. (400 XP.)

## Magical Items

Necromancers and death priests have an awesome arsenal of magical items at their disposal. In the *DMG*, all varieties of enchanted daggers (particularly the *dagger of venom), darts of homing, swords of wounding, life stealing*, and the *planes* would be ideal weapons for such characters; the *axe of hurling* is a favorite among high priests of the Murder Goddess. Necromancers would also collect or manufacture *scrolls of protection from poison, possession, and undead, rings of wizardry, staves of the magi or power, wands of illumination, conjuration or paralyzation, amulets of life protection or versus undead,* and *mirrors of life trapping*. Death priests seek similar items (providing they are usable by clerics), including *rods of resurrection, staves of curing, the serpent, swarming insects, and withering, and the phylactery of long years.*

*The Tome of Magic* also contains a number of magical items that are particularly appropriate to necromancers or death priests: *powder of coagulation, the ring of necromantic resistance, bag of bones, claw of magic stealing, jar of preserving, school caps of necromancy, and the tapestry of disease warding.*

Undead Masters, Philosophers, and other necromancers who favor conjuration and summonings may own or create *rings of djinni summoning, efreeti bottles*, and other elemental-summoning devices (bowls, censers, stones, and so on). Many of these items can be modified to work on the evil denizens of the Lower Planes as well, containing one or more imprisoned fiends who are bound to serve the owner of the device. Other items that merely summon a fiend from the nether regions may require some form of sacrifice in order to appease the creature and secure its willing service for some period of time. Note that elemental or fiendish prisons will usually be enchanted with protections for the user; summoning devices, on the other hand, may not be fitted with such amenities and (at the very least) will require the wise user to be warded in a circle of *protection from evil*.

Many necromantic items are strongly tied to the practice of the Black Arts and, as such, are only appropriate for evil characters. These items may still function if wielded by good PCs, but they usually bring some form of curse on the user (see Chapter Three). A *dagger of venom,* for instance, may slip in

battle and strike an ally (or even the user). All of the dangers associated with criminal necromancy apply to magical items as well as spells. Items created for use by members of a specific religious cult may simply fail to operate when used by a member of a different faith.

The DM is the final arbiter in terms of what items are appropriate for PCs in a particular campaign. He or she must ultimately decide what baneful side-effects and curses (if any) will befall adventurers who rely upon necromantic devices far beyond their understanding and formal magical training. For the remainder of this section, we present a number of new magical items that are appropriate for necromancers, death priests, and other practitioners of ancient and forbidden magic (although they may occasionally be used by any unscrupulous sort of character).

**Amulet of Health:** These talismans have been enchanted and used since ancient times. Originally, they were carved in the shape of some strong animal, like a lion or elephant, and worn about the neck. More recent amulets, created by the Brotherhood of Sorrow, have been fashioned in the shape of two bound hands, tied at the wrist, and may be worn or carried anywhere on the body in order to benefit from its protection.

These amulets confer complete immunity to disease and madness (see Chapter Three). They protect against curses, magical items, monsters, and spells that inflict plague and insanity. They even ward against lycanthropy, mummy rot, and other magical diseases. Note that these amulets do not automatically cure any previous afflictions; they only prevent the owner from contracting such disease or madness in the future. A few of these amulets (5%) also provide protection against poison. (1,000 XP.)

Amulet of Terror: These devices were first forged in the distant past by the Necromancer Kings of Nog and Kadar, and their secrets have only recently been brought to light by Kazerabet's *Art of Necromancy*. When activated, this talisman cloaks the wielder in a purple aura of malevolence, terrible to behold. Kazerabet has compared the amulet's necromantic radiance to the chilling aura of a lich, though it has a decidedly different effect. Everyone within 30' of the wielder must make a saving throw vs. spells with a -2 penalty or stand rooted to the spot, frozen in terror, for 2-5 rounds. These devices have 20-50 charges when discovered. (3,000 XP.)

**Arrow of Harm:** Similar in appearance to the dreaded *arrow of slaying*, this black-shafted war arrow is inscribed with fell runes by the powerful priests of Murder and Pestilence. It confers a +3 bonus to hit when shot by any variety of long bow. Any living creature stuck by this necromantic bolt suffers the effect of a harm spell and is automatically reduced to ld4+l hit points.

For so long as the bolt remains in the victim's flesh, the unfortunate is immune to the effects of magical or natural healing. Removing the embedded arrow from a victim's flesh inflicts an additional ld8+3 points of damage, which usually results in unconsciousness (or in some campaigns, the victim's death once he or she reaches 0 hp). Attempts to magically heal a victim with an embedded *arrow of harm* will only succeed if *dispel magic* is cast on the bolt during the same round as a *cure light wounds* (or similar magic) is employed on the victim.

Its rumored that the Cult of Pain has devised an even nastier version, similar to the regular *arrow*, except that the victim is additionally forced to make a saving throw vs. death magic or be paralyzed with pain for so long as the bolt remains embedded in the flesh (with the same penalties for extraction as the normal bolt).

From 1-4 of these baneful sheaf arrows will be found at once, and they lose their magical abilities after they have been used successfully against a victim (arrows which have missed their target have a 2 in 6 chance of breaking; if not, they can be collected for use again). (600 XP each.)

**Bone Ring:** This plain finger ring is always carved from human bone. Nebt Bhakau's *Book of Shadows* hints at a secret method for enchanting these rings, but only the clerical tome *On Coming Forth by Day*

contains the full details of their construction. A *bone ring* wards the wearer from all energy- or Strength-draining attacks from all sources (such as undead and hostile spells). Each ring has 1-100 charges. Each attempted drain that the ring absorbs will drain one charge until it finally disintegrates into fine, dry powder. Unless magical divination (such as *identify*) is employed, the wearer will not be aware of how many charges are remaining.

A few, special *bone rings* (5%) are rumored to protect the wearer by absorbing wizard spells of black necromancy (see Chapter Four), in addition to warding against spells and undead attacks that drain Strength or life energy. Both versions cannot be recharged. (3,500 XP for lesser; 5,000 XP for greater ring.)

**Gloom Candle:** These ebon tapers are a boon to evil death priests and necromancers alike and can be enchanted by one of either profession once they reach 12th level, according to the recipe set forth in the *Book of Shadows* (wizard version) or *On Coming Forth by Day* (priest version). A *gloom candle* burns for an hour, although it can be normally extinguished prior to that duration.

While it burns, a *gloom candle* fills a 100' radius with a deep shadow, negating any light or darkness in the area of effect. A necromancer (or a type of death priest normally unable to command undead, such as a cleric of Suffering) using the candle gains the ability to control undead as a 6th-level priest. This only affects any undead within the *candle's* radius and for the duration of the *candle's power*. Evil priests gain a +2 ability to control undead. Non-evil priests and paladins suffer a -4 penalty on then attempts to control or turn undead. Finally, undead within the area of effect regenerate 1 hp per round while the *candle* burns, although they do not regenerate if reduced to 0 hit points. From 1-4 *gloom candles* will be discovered. (100 XP each.)

**Hades Hand:** Also called *Bane's fist* (or often by its more generic title, the *dagger of slaying*), this wickedly curved *dagger +1* is enchanted as a receptacle for 2-5 powerful necromantic spells that normally require physical contact to transmit. Instead, these spells are stored in the dagger blade and are triggered and delivered to the victim by subsequent, successful attacks with the weapon.

The release of these stored spells cannot be controlled by the wielder. They are automatically bestowed on all subsequent victims of the blade (until all of the stored spells have been exhausted). The Scabrous Society usually imbues such daggers with *cause (fatal) disease, cause blindness*, or *slay living*. It is said that the wizard version of the dagger, employed most often by necromancers, can store an even greater number of deadly spells (2-8), such as *vampiric touch, lich touch*, and so on.

Those slain by a *Hades hand* are forever dead. Regardless of whether or not the death resulted from a stored spell or physical dagger damage, the victim of such assault can never be brought back to life by *raise dead, reincarnation*, or *resurrection*. Only a full wish can restore a character who has been slain by a *Hades hand*. Members of any character class (evil alignment only) may employ one of these weapons. Like a *ring of spell storing*, a *Hades hand* can be "recharged" with any harmful spell of black necromancy by a death priest or necromancer. (3,500 XP.)

**Handglyphs of Power:** These ancient weapons, fashioned by the Necromancer Kings, typically took the form of small circular medallions, perhaps three to four inches in diameter. Each medallion would be inscribed with battle glyphs on the front side, the wheel-shaped symbol of the Nog and Kadar adorning the back surface. A small chain was sometimes attached to handglyphs, so they could be worn as a necklace, or wrapped around the wrist in combat. The battle runes on the front side were displayed to any enemy in combat as a command word or phrase was spoken to trigger its power.

Handglyphs were the primary weapons of the Necromancer Kings, enchanted with one type of offensive magic cast at 12th level of ability, usually *fireball, lightning bolt, enervation, cone of cold, disintegrate*, or *death spell*. When discovered in ruins, they will usually contain 1-4 remaining charges. Typically

short-range weapons, they have a range of at most 30 yards.
Kazerabet reveals the secret to recharging these deadly devices in her *Art of Necromancy*. She also hints at more powerful handglyphs, known as *stun-*, *blind-*, or *deathglyphs*. These presumably contained *power words of stunning, blinding,* and *killing,* respectively, but their existence is mere conjecture, and certainly Kazerabet offers no suggestions to recharging the more powerful variety, even if they do exist. (1,800 XP)
**Horn of the Exalted Dead:** This horn is a necromantic version of the *horn of Valhalla*, except that it raises up the spirits of dead warriors (rather than summoning berserkers from Valhalla) to fight for the owner. According to Kazerabet's *Art of Necromancy*, the horn may be enchanted by a necromancer or death priest to bind the spirits of dead warriors into service. The instrument is typically inscribed with the names of 2-7 individuals whom the owner must call before blowing the horn.
Each of these spirits can be summoned from the netherworld once per week to serve the owner. Regardless of their level of experience in life, the spirit warriors now serve in combat as 5th-level fighters, having AC 4 and 30 hp each (THACO 16). Each is armed with a sword and spear. As spirits, they are immune to all weapons of less than +1 enchantment and unaffected by *cold, poison, paralyzation, sleep, hold*, and *charm* spells. They can be turned as wraiths.
After they have been summoned, the spirit warriors remain for up to an hour or until they have been forced to return to the netherworld by being reduced to 0 hp or being subjected to *spirit release* or *dispel evil*. In any event, these spirits are not destroyed and can still be called by the hom after another week has passed.
*The horn of the exalted dead* can be used by either necromancers, death priests, or common warriors, though only members of the former two professions may use the necromantic item with impunity. If the owner is a warrior, upon sounding the horn for the first time, his or her name will be magically appended to the list on the instrument. After the warrior dies, his spirit will be bound to the hom, and subsequent owners will be able to summon that warrior from the netherworld, too. Nothing short of a *wish* (or the destruction of the hom) can erase the fighter's name from the ranks of the undying on the hom. (4,000 XP).
**Nether Scarab:** This ancient talisman, whose secret of manufacture has been thankfully lost to modem priests and necromancers, is a dark and twisted version of the more beneficial *scarab of protection*. It has the same ability to absorb life draining attacks of certain undead (and spells), but it does not confer a saving throw bonus, nor does it allow a saving throw against spells that do not normally permit one. Instead, a *nether scarab's* most feared power is the ability to store the level-draining attacks it absorbs. The scarab's owner may then redirect these charges later as an attack. The scarab's owner need only touch a victim, and if the victim fails a saving throw vs. death magic, the scarab drains a level (or hit die) and bestows any drained hit points on the owner (these may increase the owner's hit points beyond the normal maximum, but these disappear after an hour as per *vampiric touch*). Only one level may be drained per round. According to Kazerabet's scholarship in the *Art of Necromancy*, these ancient devices usually have 10 charges, but a rare few (5%) have 20 charges. A *nether scarab* can never be recharged. (5,000 XP.)
**Plague Bolts:** These light crossbow bolts (or flight arrows) are enchanted by the Plague Priests to spread plague and misery in their wake. The +2 missiles inflict either ld4+3 points of damage if a bolt, or ld6+2 if an arrow, but whoever is struck must also make a saving throw vs. petrification. A failed save indicates that the victim has contracted a fatal disease and will die in ld20 days unless treated by a cure disease spell cast by a priest of 7th or higher level. Any person exposed to the infected victim must also make a saving throw vs. petrification each day or also become infected.
*Plague bolts* do not lose their potency after being fired, and may be collected for reuse (unless they have

been broken in flight, 2 in 6 chance). These dangerous arrows may not be handled with impunity unless the character has learned the venom handling nonweapon proficiency (see Chapter One for more on this). All others must make a save vs. petrification each time they use a *plague bolt*, or become infected themselves. From 1-6 flight arrows (50%) or bolts (50%) will typically be discovered at once. (150 XP each.)

**Robes of the Shadow:** A favorite magical item among the followers of the Murder Goddess, these brocaded robes are equivalent to a *cloak of protection*, varying from +1 to +3 in enchantment. The robe's primary power, however, enables its wearer to assume *shadow form* for up to one turn per level of experience, once per day. This power is usually activated by a short prayer to our Lady of Despair (this command phrase is usually sewn somewhere into the garment). These robes are considered to be semi-divine artifacts in the cult of the Death Mother, and her Stranglers will seek to regain a lost set of robes regardless of the cost. (1,000 XP per plus.)

**Scepter of the Netherworld:** This plain ivory baton, enchanted by priests of the Dead, operates exactly like the most powerful *amulet versus undead*. Its primary function, which may be used by any character class, enables the owner to turn undead like a 9th-level priest (this power, available once per round, draws one charge whether successful or not).

If the owner is a priest with at least minor access to the necromantic sphere, or a necromancer, the scepter also enables him or her to call upon the spirits with *speak with dead* (once per week, two charges) and *summon spirits* (once per month, two charges). Refer to the listed spells for details about these powers (the owner is treated as a 9th-level wizard or priest).

When discovered, the *scepter* usually contains from 20-50 charges. It may be recharged by any priest of 9th level or higher with major access to the necromantic sphere. (3,000 XP.)

**Scroll of Protection from Fiends:** These are popular among Philosophers and Undead Masters, who must regularly traffic with extraplanar creatures. Like all of the other protection scrolls, they can be used by any character class.

The scroll requires 1 full round to read if it is to protect against all evil denizens of the Lower Planes, 7 segments if it will ward against greater fiends, and only 3 segments if defending against lesser fiends. The circle of protection created by the scroll extends in a 10' radius from the reader. No fiend can penetrate the circle physically or magically in any way, but the person(s) located within the protection may launch attacks from inside. 1 he protection moves with the reader of the scroll. Its effect lasts for 5-20 (5d4) rounds.

As with other protection scrolls, the warding circle cannot be used to force a fiend into a place from where further retreat is impossible (such as a comer). There is no way in which the scroll can be used as an offensive weapon. (2,500 XP.)

**Shadowblade:**This weapon is a prison or receptacle for an undead shadow, and it derives certain powers from its unholy occupant. It functions as a *blade +1* (either a dagger or a type of sword), and in addition to inflicting normal weapon damage, it also drains ld4 points of Strength from a victim with each successful hit.

Anyone drained of all Strength by the weapon becomes a shadow under the command of the wielder. A *shadowblade* cannot be "turned" or controlled by a priest, though any shadows created by the weapon have no such immunity.

A *shadowblade* distinctly radiates evil and necromancy, both of which can be detected with elementary divinations. Only evil characters may employ this weapon. Good or neutral characters wielding the blade may be drained of 1-4 Strength points by its shadowy inhabitant unless they make a saving throw vs. death magic for each round they use the weapon. (XP 2,000.)

**Staff of Skulls:** This staff, usable by all classes, animates skeletal or cadaveric remains with the command word "Arise!" (1 charge). Animated skeletons or zombies are under the command of the staff wielder (see *animate dead*). If the staff should change hands, control of the undead goes with it. Skeletons or corpses need not be complete, but those lacking parts will, of course, have their actions and mobility impaired. Such animation is permanent, lasting until the undead have been destroyed.
Twenty-five percent of these staves have secondary functions which can be triggered by all generalist mages and most specialists, except Enchanters, Illusionists, or Transmuters. These greater staves can mend broken bones (see *bone growth*) or reattach severed limbs (see *graft flesh*) to a wounded and living subject. They can also be used offensively to attack the bones of the victim (see *bone blight* or *throbbing bones (WH)*). Each of these four secondary functions draws one charge and requires a successful attack roll in combat if the subject is unwilling.
These staves are sometimes topped by a small ivory skull or hewn from the thighbone of a giant creature. Both versions of these staves can be readily enchanted (or recharged) by a necromancer of 12th level or higher. (900 XP for lesser; 3,500 XP for greater staff.)
**Talisman of Divining:** These are some of the only non-deadly and useful handglyphs created by the ancient Necromancer Kings. They are similar in appearance and operation to the *handglyphs of power*, detailed previously. The talismans were created for a variety of divination purposes (choose a power or roll a d6): *1) detect good/evil, 2) detect life; 3) locate remains; 4) detect undead; 5) detect poison/disease; 6) detect magic.*
These divinations have a range of a 30' radius around the talisman and are unaffected by the presence of earth, stone, metal, or wood, though they are completely blocked by any quantity of salt water, alcohol, iodine, or quicksilver. These rechargeable devices usually contain 1-100 charges when discovered. (5,000 XP.)

## Necromantic Lore

Tomes of power, forbidden books, and ancient, long-dead sages can help bring an atmosphere of necromantic tradition to the campaign, a historical perspective that adds another dimension of realism for your players. Among the early writers of the Cthulhu cycle, it was almost mandatory to create a book of necromantic secrets.
H. P. Lovecraft had such success with his fictional *Necronomicon*, from which he "quoted" so accurately, that many of his readers believed that the book existed, convinced by Lovecraft's stories that it had been penned by the Arab Alhazred before he was driven mad with his own revelations, dark Ashton Smith retorted by creating the *Book of Eibon*, and Robert Bloch invented *Mysteries of the Worm*, giving it a Latin title (*De Vermis Mysteriis*) to further bolster its authenticity. All of these authors heightened the realism of their tales by discussing their tomes in a historical context of known treatises on necromancy, such as the *Book of Secrets* by Albertus Magnus, or the Egyptian *Book of the Dead*.
These same techniques work surprisingly well in an AD&D® campaign. How often does a party of adventurers stumble across the private study of an evil necromancer and scan the shelves for an interesting title? In my experience, this has happened many times, and the most successful DMs have had a few clever descriptions prepared to intrigue their players. Obviously, we are not suggesting that the DM invent a whole library of necromantic titles and their contents. It is sufficient to make up a few books and refer to these frequently so that the players quickly come to recognize them as symbols of necromantic lore.
Here, then, is a small sample of what a group of adventurers might find on the bookshelves of a powerful

necromancer. These books can be used as an item of treasure for a successful raiding party, or the object of a quest by the adventurers, who may seek to recover some of the ancient lore contained therein.
Note that many of these books contain knowledge about evil, extraplanar creatures or black necromancy. Although many of the evil-aligned magical tomes in the *DMG* carry powerful wardings to prevent their use by good characters, there is no such magical protection for the books mentioned here, unless a trap has been set by the book's current owner as a deterrent to theft. Instead, feel free to use the system of punishments outlined in Chapter Three whenever a good character willingly uses an evil tome mentioned in this section. Of course, all of these books (whether good or evil) will be widely sought after by necromancers, and if one of the tomes happens to be in the party's possession at the time, they could be in store for a nasty encounter or perhaps even a new adventure.

**The Art of Necromancy.** This heavy tome was penned by Kazerabet, the former queen of an entire undead principality and a renowned scholar of the ancient Necromancer Kings of the Ruined Kingdoms. This book contains many useful necromantic spells (gray and white necromancy mostly) and also descriptions on how to create and recharge various necromantic magical items (as alluded to previously in this chapter). The book includes an encyclopedic description of undead, along with a discussion of their special powers and weaknesses. Finally, the book ends with a translation dictionary for Kadari, the ancient language of the Necromancer Kings. Wizards who read the *Art of Necromancy* can learn necrology and ancient languages (Kadari) as bonus nonweapon proficiencies (see Chapter One) at a rate of one proficiency for every 1-4 months of the character's studying.

**The Book of Shadows.** It is said that Nebt Bhakau dictated this account of black necromancy to his summoned shadow familiars while he lay in an oubliette before his execution. After his death, copies of this book started to appear in nearby cities, and although all available copies were promptly burned and the book was banned by the local authorities, it is a widely known fact that some copies escaped the interdiction. The book is a thorough treatise on the Black Arts, and includes all of the baneful spells listed on Table 7 on page 46.

Of more interest, perhaps, to the Undead Master especially, the book also contains many of the secret rites necessary to raise up crawling claws, enslave evil genies, summon fiendish familiars from the Outer Planes, and subjugate skeleton warriors. Wizards who read this book carefully gain a +1 bonus on their netherworld knowledge nonweapon proficiency check.

**On Coming Forth By Day.** This clerical tome has been compiled over countless generations by the priests of the Dead, and contains a description (but not the actual secrets) of all clerical spells from the necromantic sphere. It also contains the procedure for fashioning *scarabs of protection* by a priest of at least 9th level.

Any priest who reads this magical tome and ponders its contents for over a month gains minor access to the necromantic sphere (if she or he had none before) or major access to the necromantic sphere (if he or she had only minor access before). A priest who already has major access to the sphere achieves an improved understanding of necromantic spells, gaining a permanent +1 bonus on his or her saving throws against these spells (whether cast by a wizard or priest).

**The Necrophidicon.** This thin, magical volume is a specialized *manual of golems* that can be used to create a necrophidius (a type of golem described in full in the *MONSTROUS MANUAL*). Normally, the process requires a wizard of at least 14th level (or a priest of at least 9th level), approximately 10 days of labor, and at least 8,000 gp in materials.

If the wizard or priest is not sufficiently powerful, he or she may invoke the necessary incantations from the book, although this destroys the Necrophidicon in the process (the manufacture of the golem still takes the same amount of time and cost in materials). Many of these tomes were also used as notebooks

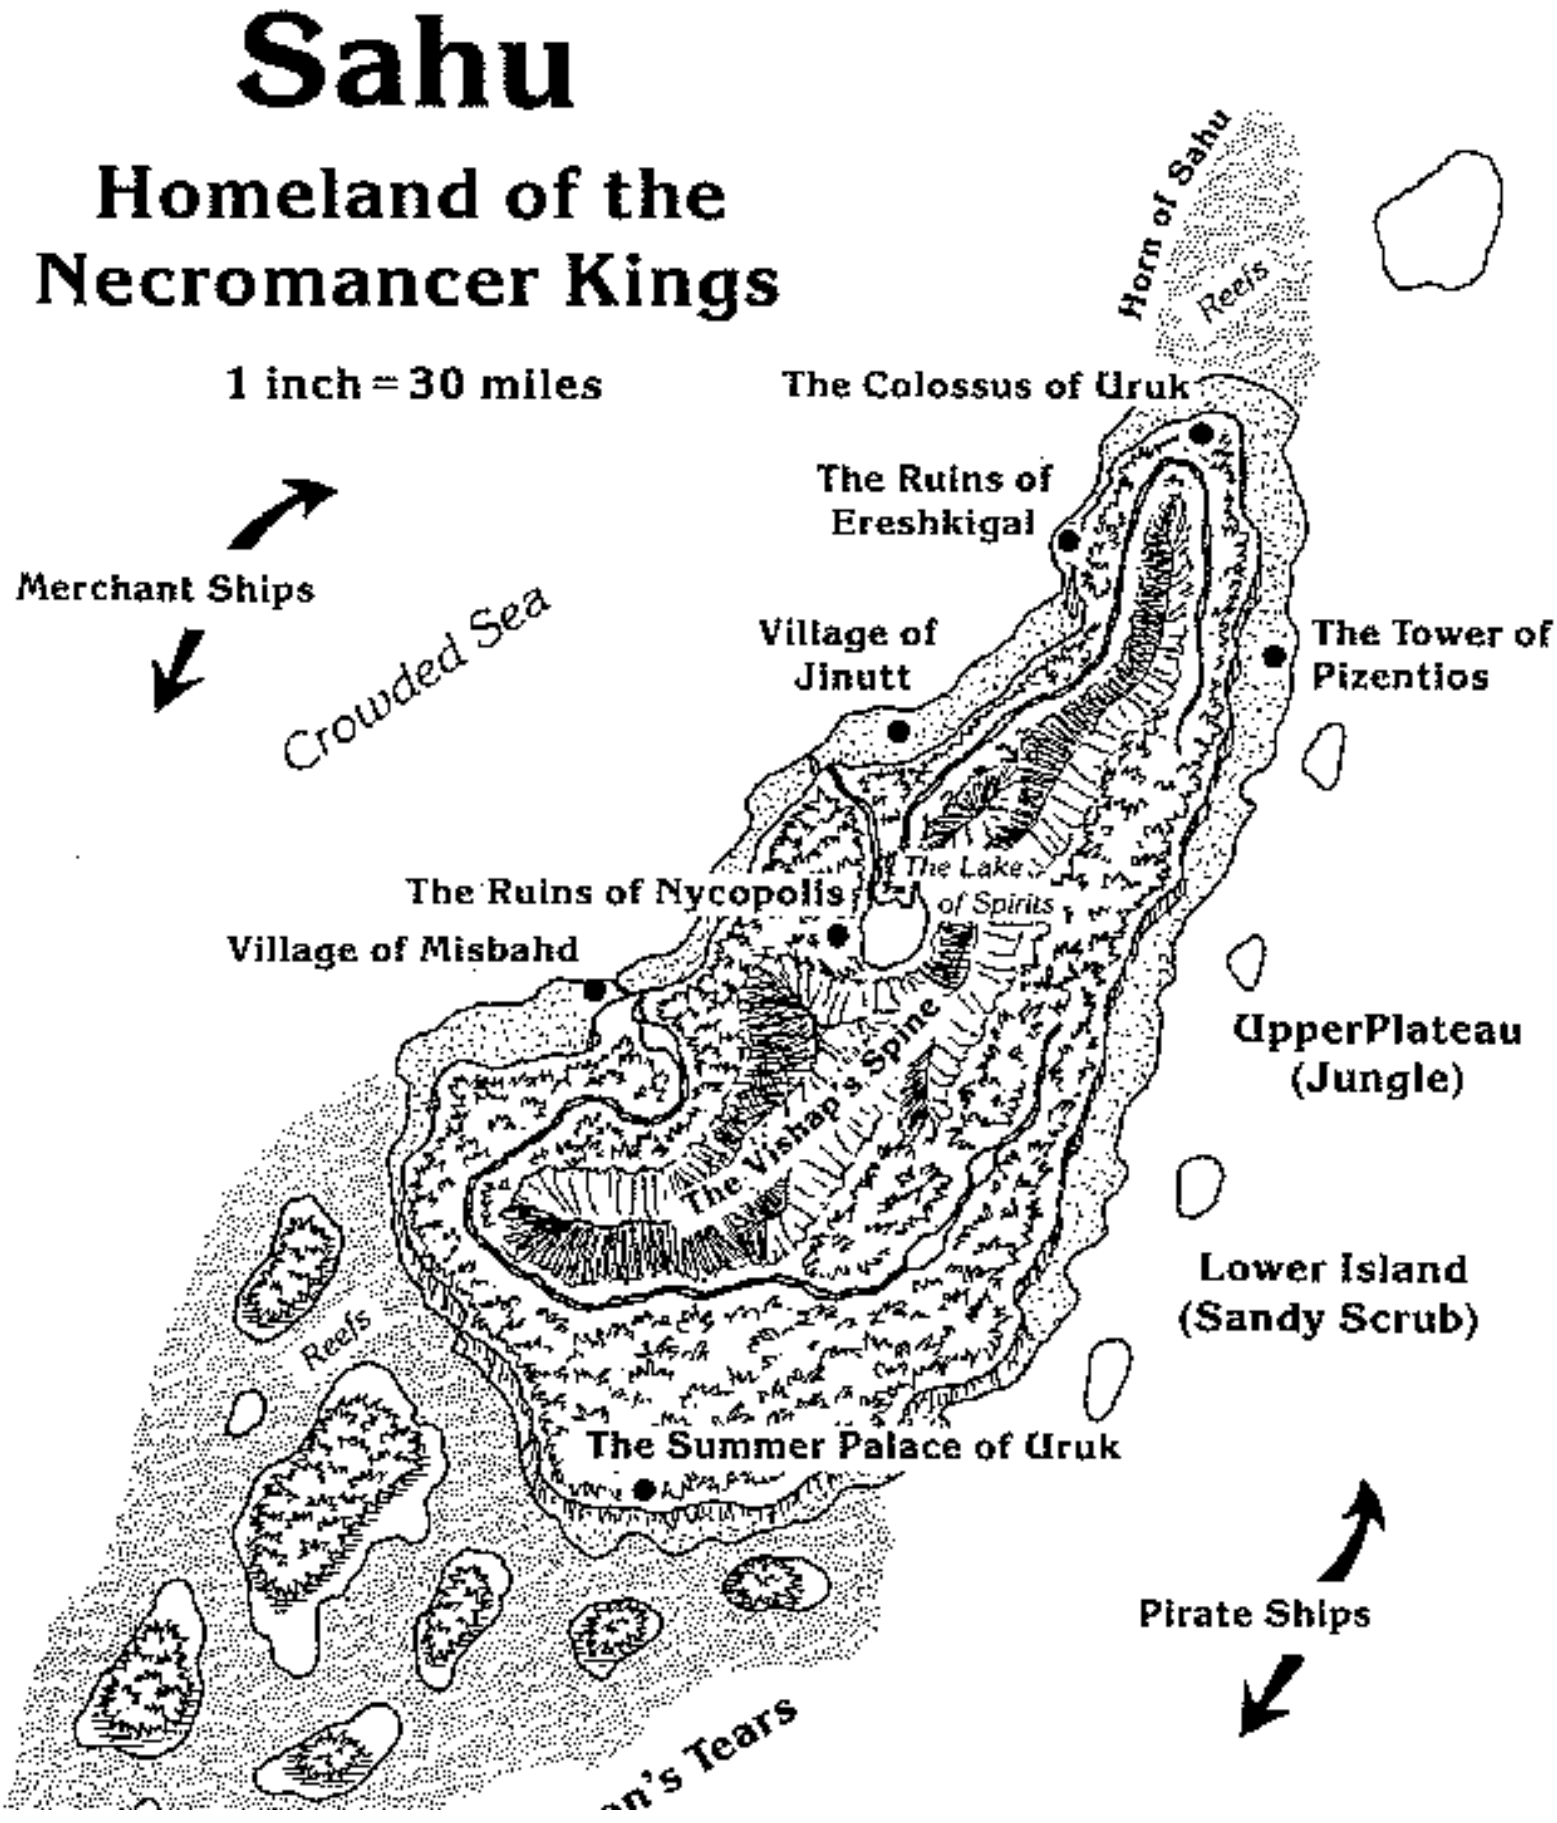
by skilled necromancers and death priests and may contain the secrets of creating other kinds of necromantic golems.

**The Nycoptic Manuscripts.** These twin papyrus scrolls arc inscribed with ancient tales and cryptic prophesies by an anonymous author who was probably (at least partially) insane. Despite their dubious accuracy, the manuscripts contain many useful descriptions of necromantic spells (both priest and wizard) and magical items, particularly those incantations and devices that affect a person's life force. The details of such spells and items are not present, but the manuscripts can be used to cut the time and expense for researching these topics in half. The *Manuscripts* are thus an invaluable tool of necromantic research and, as such, are highly prized by both necromancers and death priests. Some spellcasters - once their sanity has faded from reading the *Manuscripts* too many times - are said to at last understand the author's doomsday prophesies. Finally, the *Manuscripts* supposedly contain the full rite of creating an *undead plague* (a quest spell outlined in *TOM*). This powerful incantation can only be comprehended and invoked by a priest (or necromancer) who has already failed at least one madness check (see Chapter Three). The spell disappears from the Manuscripts after it has been read, only to reappear when the work passes on to a new owner.

**The Fabric of the Human Body.** This oversized book is a comprehensive monograph about the structure and function of the human body. It is recognized as one of the most thorough and accurate texts on human anatomy and contains dozens of drawings depicting dissected cadavers. This work will be found on the shelf of almost any respected Anatomist. Provided a wizard or priest already has a basic proficiency in healing, he or she would be able to leam the Anatomy nonweapon proficiency after three months of study (and at least one dissection of a human cadaver).

**The Eleven Baneful Gates.** This ancient scroll is thought to contain the secret of immortality, symbolized by eleven tests or riddles. The work was bestowed by a prophet of the gods on a wizard-king (perhaps one of the Necromancer Kings). According to legend, this king sundered his realm after becoming immortal, leaving nothing in his wake but sand and dust.

Copies of the original are known to exist, and these rare books cover in full detail the various rites involved in becoming a lich. The process requires a powerful necromantic potion and a wizard of at least 18th level (in order to survive the transformation at least). This work is one of the books most coveted by necromancers and would-be liches alike.



Sahu
Homeland of the Necromancer Kings
1 inch = 30 miles
Horn of Sahu
Reefs
The Colossus of Uruk
The Ruins of Ereshkigal
Merchant Ships
Crowded Sea
Village of Jinutt
The Tower of Pizentios
The Lake of Spirits
The Ruins of Nycopolis
Village of Misbahd
The Vishap's Spine
UpperPlateau (Jungle)
Lower Island (Sandy Scrub)
Reefs
The Summer Palace of Uruk
Pirate Ships

*Long ago, when the Old Dynasty began to fail on the mainland, Uruk Kigal was exiled with a whole cadre of his supporters for practicing deviant and forbidden magic. Uruk departed the jungle valleys of his youth in search of a new home. He crossed the sea and discovered Sahu, a large island of mysterious beauty that resembled, in many respects, his beloved home.*

*The island was divided into a low-lying coastal region, an inner high plateau embraced by jungle, and a high ridge of mountains rising from the center of the island like the spine of a vishap. On the high plateau, by the shores of a sepia lake, Uruk built Nycopolis and made his city the capital of a new monarchy. He built the Great Summer Palace out of solid ivory and erected a mighty Colossus in his image to guide visitors safely to his island. Uruk was the first and most powerful of the Necromancer Kings, and he ruled Sahu, some say wisely, for many hundreds of years.*

*Now, Sahu was not entirely uninhabited when Uruk founded the New Dynasty. The colonists found the traces of an even more ancient civilization on the island, based on the low, sandy shores. They discovered entire ruined cities of antique metal towers, sundered and dilapidated, lapped along the coast by the hungry sea. In these mushroom- shaped spires, exotic totems and strange shrines were unearthed, temples of the forgotten god Thasmudyan, King of Worms, Lord over Life and. Undeath. Many of the New Dynasty began to worship this ancient god whose first followers had long since abandoned Sahu to live forever beneath the cold waves of the sea (or so the ancient legends say).*

*The worship of Thasmudyan, known as the Cult of Worms, soon flourished again under an ambitious priestess named Vermissa, one of the first nobles to accompany Uruk into exile on Sahu. But the King was jealous of Vermissa's mounting influence, and he conspired with his most powerful nobles to destroy her. Vermissa disappeared soon after from Nycopolis. When she died, the Cult of Worms floundered without her direction, and Uruk reigned supreme once again in his mighty new kingdom of necromancers.*

*Thus the age-old conflict between king and high-priest began again in Sahu, transplanted from the mainland by its colonists, and it sprang forth anew with all the vehemence of old. As it destroyed the Old Dynasty, so too did it unravel the Necromancer Kings. The New Dynasty eventually withered and died, leaving only mournful spirits to glide over the still black waters by the ruins of Nycopolis. Now only their histories and their mysterious artifacts remain as sad, silent testimonies to their former power and glory.*

—From Kazerabet's *Art of Necromancy*

Thus far, we have been primarily concerned with developing the individual components of the necromancer and death priest. We have presented kits, powers, spells, and magical items, but we haven't really discussed how to fuse these elements into characters and use them in a campaign. In this chapter, we address these issues.

First we present a sample campaign with guidelines for creating a detailed and convoluted storyline lasting for many adventures The chapter also contains some adventure hooks which the DM can drop as rumors or expand into full-length scenarios if desired. These scenarios illustrate a multitude of roles for the necromancer and death priest in the campaign.

Finally, we devote the remainder of the chapter to seven detailed NPC necromancers and death priests who will pop up intermittently in this chapter as they have been doing so throughout the rest of this book. Our goal is to provide the DM with an interesting setting, specific adventure ideas, and necromancer characters that can be easily incorporated into an existing campaign.

General methods for creating settings and NPCs have already been covered in other blue-cover DM supplements. For more general information on running a successful campaign, the DM should consult the

*Creative Campaigning* sourcebook. A starting DM may also refer to the *Complete Book of Villains* for general guidelines on creating compelling nemeses for a campaign.

## Isle of the Necromancer Kings

Every campaign or adventure begins with an epic story such as the tale of the Necromancer Kings. Legends and lore form the backdrop of any campaign, creating a mood and background that will inspire your players and get them interested in your world and all of the things that occupy it.

A good campaign is created like an onion, with various layers of perception and reality overlaying one another. At each layer, a party of adventurers starts with a common perception, myth, legend, or rumor and uncovers the reality or truth behind that perception. This revelation leads to a new, deeper awareness of the world, which can be again challenged in another adventure. This cycle progresses until the entire onion had been peeled away, revealing a single, terrifying truth or reality at the core that irrevocably changes the PCs' perception of the entire campaign.

A detailed setting is extremely important to creating a vivid and memorable campaign. Sahu, the Isle of the Necromancer Kings, can easily be transplanted into the ocean of any world. Its official location is in the southern hemisphere of Toril, in a region of the Land of Fate setting known as the Ruined Kingdoms of Nog and Kadar. (Incidentally, the Old Dynasty, alluded to in Kazerabet's tale of Sahu, is fully detailed in the *Ruined Kingdoms* boxed set). But Sahu could just as easily be located off the coast of Amn or the Shining South in the Forgotten Realms, another region with a legacy of powerful ancient empires.

Sahu is an ancient place, the home of two destroyed civilizations: the New Dynasty of the Necromancer Kings and the Old Empire of Thasmudyan that preceded them. It is an island of ruined cities, magical pools, and cursed lakes. Its forgotten palaces are littered with the treasures of bygone epochs and scattered with the bones of foolhardy explorers.

Sahu itself is the outermost layer of the "campaign onion" mentioned earlier. It is important that, in the beginning of the campaign, Sahu appears like "just another interesting place to adventure." Indeed, Sahu is dubbed the "Isle of Serenity," though the actual meaning of the word is rooted in deep antiquity. Actually, in the ancient language of Kadari, spoken by the Necromancer Kings, Sahu means something like "Serene Eternity," an old euphemism for Death. The island's name is another example of the contrast between conventional popular belief and a deeper, more sinister reality.

Sahu is a perfect setting for adventure, and in this section, we present a brief guide. Note that you, as the DM, can "deconstruct" Sahu, scattering its individual elements anywhere in your campaign, especially if it is primarily land based with little or no access to the sea. Finally, these place descriptions also illustrate the varied settings and contexts in which a necromancer or death priest will feel most at home.

### The Twin Villages of Misbahd and Jinutt

Sahu is not completely bereft of civilization. Two villages, Misbahd and Jinutt, can be found on the island's northern shore, at the base of the giant plateau. These settlements can be used as the starting point for most adventures, since the party will presumably have arrived at one of these ports by ship. Misbahd is a dilapidated and squalid den of rogues and pirates. The settlement is well fortified, protected by a small fleet of "privateers," and its shops and stores are filled with all types of merchandise, illicit and otherwise. Jinutt, on the other hand, is a small, simple village of fishermen who provide food to Misbahd in exchange for various necessities.

Despite the villages' serene or mundane appearance, there is something peculiar about them which should only be learned after several visits in which the PCs have become sufficiently familiar with the locals and village leaders. Eventually, the party members will notice that there are a few shrines to mainland gods, but there is no large temple or priesthood in either Misbahd or Jinutt. There are no healers or priests capable of raising the dead on Sahu. Neither is there a cemetery. When people die (which happens quite frequently in rough Misbahd), their

bodies are carried in a funeral procession out to the edge of town, where they are abandoned to "the wild forces of nature," presumably to be devoured by wild animals. This ancient tradition is very sacred to the villagers, and it applies to everyone on the island - both natives and visitors. To break with this holy rite would anger the evil spirits of the highlands, who would punish the offending village. Those attempting to interfere or stop a funeral procession will be quickly confronted by a hysterical and violent mob.
Although they would never admit it to any visitor, many of the villagers are secret worshippers of the ancient god Thasmudyan and are fanatical members of the highly secret Cult of Worms. The entire ruling hierarchy in both villages is made up entirely by cultists who arc sworn to absolute secrecy. The bodies of the dead are actually carried away by a pack of ghouls (disguised as plum-robed priests) to a nearby underground temple where the corpses are ritually devoured by the ghouls and a small hierarchy of death priests (Charnelists) whom the PCs may recognize as members of the village council. Each temple has a black stone idol of Thasmudyan and a small treasury which may contain a few magical items of minor importance. Obviously, important magical items are wielded by the priests and ghouls themselves.
Finally, these villages are also ideal locations to learn various rumors and lore about the island. In general, the superstitious villagers (island natives) consider the upper plateau to be haunted, a forbidden, dangerous place of ghosts and evil spirits. A few retired adventurers in the villages have more information. With suitable monetary encouragement, they reveal the location of "ruins along the shore of the sea" (Ereshkigal) supposedly containing fabulous treasures and magical items, virtually unguarded.

**The Iron Spires of Ereshkigal**

Further north along the coast from Jinutt lies Ereshkigal, a largely deserted city of ruined metal towers, located about five miles inland so its appearance cannot easily be discerned from the sea without a telescope. The ruins are quite extensive, spreading out over a few square miles.
The city encompasses hundreds of metal spires fashioned like giant mushrooms or fungi. The few intact specimens are hollow shells bereft of any kind of stairs, with only a few small entrances at the base (symmetrically arranged) and a central hole in the 120' high ceiling. Most of the outlying towers have already been stripped of anything interesting by explorers, but spires in the center of the city are filled with bizarre inscriptions in an unknown language (predating the Kadari tongue of the Necromancer Kings).
Contrary to rumor, Ereshkigal's treasures are hardly unguarded, since the towers of the inner city serve as lairs for several packs of ghouls and ghasts. These lairs are clustered around a central spire that has been converted into a lofty cathedral to Thasmudyan, guarded by a powerful high priest with the powers of a greater mummy, who carries an ancient *horn of the exalted dead*.
Concealed beneath the shrine's altar is a secret passage leading into a convoluted mazework of tunnels and subterranean corridors that stink of ghast breath. Ultimately, these caverns lead to the Garden of Eternity (detailed below), but they are filled with roving packs of armored undead soldiers, deadly *glyphs of warding*, and ravening beasts of the Underdark.

**The Colossus of Uruk**

On top of the plateau, overlooking Ereshkigal and the deadly Horn of Sahu, stands the Colossus of Uruk, easily visible from the coast. This gargantuan, 150'-tall granite statue was erected by the first of the Necromancer Kings and originally served as a lighthouse to protect incoming ships from the reefs. The Colossus has been completely overgrown by plants and birds' nests. The statue's stone body is entirely hollow, like an odd tower, and contains numerous chambers, including a small library and a magical lantern room in its hollow head. The eyes of the statue once contained specially enchanted lenses that magically magnified any light source in the room so it would be visible for miles at sea.
Now the huge eye lenses of the Colossus are shattered, but two of the broken fragments might still serve as

makeshift *eyes of minute seeing*. The walls of the lantern chamber were lined with fire-proofed gold to augment the internal reflection, a source of fabulous wealth for the lucky adventurer who recovers it. However, the primary light source for the chamber is still a huge, imprisoned, and very angry fire elemental (16 HD, maximum hit points) who will attack any who enter the room and attempt to steal its valuable furnishings. Without the enchanted lenses of the Colossus, the elemental's glow can no longer be perceived from outside, except nearby and at night.

The first time the party visits the Colossus, the entrance at the base of the statue will be *wizard locked* (cast at 20th level), and the beautiful philosopher Kazerabet will be perusing some of the volumes in the library (see her separate NPC sheet at the end of this chapter). Luckily for the PCs, she will have already deactivated the most deadly of magical wards in the Colossus. She will not attack the party unless they assault her first, and will warily introduce herself as Zaribel, since her formal name might be too easily recognized by any experienced student of magic. Note that this powerful archmage could easily obliterate even an experienced party, so try to drop veiled hints about the kind of person the party is dealing with. Comments like "I'm glad you didn't come here earlier, before I disarmed the old *symbol* on the door" should work nicely.

Although she will not reveal anything about her past history or future plans, Kazerabet does not mind hinting that she is interested in the history of the Necromancer Kings and had always wanted to visit the Colossus. Most scholars like to flaunt their knowledge, and Kazerabet is no exception. The PCs might pump her for information about the ancient history of the island, learning all of the lore presented in the chapter introduction. Before she *teleports* mysteriously away, she warns the party not to take any of the books in the library, since she might want to return and peruse them later. Although the books are not warded in any way, Kazerabet will come looking for them eventually if the party takes any. The party is free to peruse the books in the library itself, however. Its shelves may contain copies of various histories of the Necromancer kings, including a copy of the *Nycoptic Manuscripts* and *On Corning Forth by Day*. This is a good opportunity for the DM to introduce the party to some of the necromantic lore or spells presented throughout this book.

**The Tower of Pizentios**

This spire lies on the eastern shores of Sahu, as described in the Tales of Captain Omar (see the introduction to Chapters 7 and 8, and the NPC sheet for Pizentios). The mushroom-shaped metal tower, similar to the spires of Ereshkigal, cannot be seen from shore, but there is a small collection of wooden buildings in a sheltered lagoon that serves as a supply base for a pirate ship of necromancers, the *Scrofula* (see the NPC sheet for Sarzec). Normally well-camouflaged by palm trees, the wooden supply sheds might have been temporarily uncovered in a recent storm, making them visible from a ship at sea. Otherwise, a party might stumble across the lagoon by chance, with or without the *Scrofula* at port.

The supply sheds are guarded by a squad of twelve zombies (maximum hit points). The zombies will not attack if the party leaves the supply sheds alone. If the undead are defeated, the storerooms will be found to contain spare sails, spars, rigging, and planking - everything one might need to equip a ship, except food and water. The palm groves near the sheds are the home to four newly made shadows, recent victims of Pizentios's *shadowblade*. These creatures only emerge from the grove at night. Of course, any sounds of battle at the lagoon or supply sheds will undoubtedly attract Pizentios, who will appear with his infernal familiar Ifrit to exact vengeance (and perhaps gain more zombies).

If the party leaves the sheds alone and explores inland, they are quickly spotted by the invisible Ifrit, who warns his master of their approach. The evil necromancer will attempt to dupe the party using the same ruse he employed on Captain Omar, but he will have telepathically summoned his zombies and shadows just in case the stratagem fails. He has learned from his past mistakes and is determined not to let history repeal itself.

The DM should place only a moderate amount of treasure ill Pizentios's tower, since Omar's raid already stole most of the finer pieces in the necromancer's hoard. Should the party manage to defeat Pizentios, he will attempt to flee through a massive bronze door in the basement, leading to the Underdark beneath Sahu and,

eventually, to the Garden of Eternity. The DM might allow a resourceful party to follow him there, only to be driven back by the Bone Legion after the PCs have briefly glimpsed the Garden.

**Capital of the Necromancer Kings**

The ruined city of Nycopolis stands on Sahu's inland plateau, on the shores of an inky black lake. The desolate ruins are utterly devoid of life. No speck of grass grows within a mile of its crumbling walls. No animals, living monsters, or island natives will voluntarily approach it. The last of the Necromancer Kings, in his madness, opened a gate to the Negative Material Plane in the lake, and it promptly sucked all the life force out of the city's debauched inhabitants. Some believe it was the evil god Thasmudyan who inspired the last King's madness, a final act of vengeance against the dynasty that betrayed him. Others believe the King's vile act was performed out of sheer spite held against those that were destined to outlive his tortured soul's time on this earth.

At night, Nycopolis comes alive with the spirits of the dead. Pale ghosts, spectres, and banshees rise up from the lake every evening, flitting mournfully around the ruins. These spirits take on the shapes and professions they had in life, centuries ago when the metropolis prospered. Every night, the ghost of the last Necromancer King rises from the lake to hold court in his Royal Palace, accompanied by an entire doomed retinue of spirits. The living are not welcome in this ghost city by night, but there is nothing to deter adventurers from exploring the city during the day

The monumental architecture of Nycopolis is at once sinister and beautiful to behold. The city was hewn from the blackest of volcanic rock, erected in the shape of a perfect nonagon with a monolithic black tower at each of its nine corners. Wide boulevards radiate into the city from each gatetower, opening into a network of palaces, bazaars, shops, and warehouses, all constructed from the same dark granite, all completely deserted and eerily empty. The city looks as if it were deserted yesterday, with laden carts still littering the streets and fully-furnished homes still lining the boulevards. Nycopolis has been frozen in undeath by a terrible curse.

The vast Royal Palace at the center of Nycopolis still contains many treasures of its past. There is enough wealth and magical items in the palace to fill a thousand coffers, but all of the gold is tainted with an irrevocable *plague curse*, and its only surviving artifacts are twisted and evil.

In the basement of the Royal Palace, past the vaults heaped with antique treasures, lies a massive copper portal tarnished blue-green with age and heavily traced with spirit wardings and ghost banishings. Indeed, the warded door is meant to keep out ghosts, spirits, and other undead, but these magic runes have no power over the living. The door is unlocked, and leads into a tiny, 10' teleportation chamber. Those who enter immediately vanish, reappearing in a similar chamber beneath Uruk's Summer Palace.

**Uruk's Summer Palace**

The Summer Palace was King Uruk's second great architectural wonder, a complete contrast to his capital's dark and dreary buildings. Erected a hundred miles south of cursed Nycopolis, on the high plateau overlooking the Rubban's Tears, the Summer Palace was fashioned from tons of solid ivory and white marble. Its domed halls and wide courtyards gleam like polished bone in the bright sunlight.

The Summer Palace is completely secluded from the rest of the island in the heart of an impenetrable wilderness. There is no road across the ghoul-infested plateau from Nycopolis, and the approach by sea is impossible due to the cliffs, jagged reefs, and hungry schools of ixitxachitl. The safest approach is by air (and even that can be dangerous because of the wyvern roosts in the Spine), though the King himself favored the *teleportation* cell deep in the basement, for both its quiet efficiency and its unquestionable security.

The Summer Palace is thus a perfect, secluded retreat, shielded from the rest of the world by anti- divination wardings. Even the existence of the Summer Palace was a closely guarded secret, since according to legend, Uruk himself raised the building with immortal laborers, tasked genies, and fiendish servitors in only three days

and three nights. He told its location to no one and filled the surrounding jungles with undead creations and fell guardians to safeguard his privacy.
Kazerabet stumbled across the Palace quite by chance, while flying over the island on a magical steed. She had read references to the Summer Palace in ancient texts from Uruk's reign and was delighted to find the palace uninhabited by any significant threat, with most of its library intact. She has lived there for years, leaving only to explore the island or pay a social call on Vermissa in the Garden of Eternity. Now she devotes much of her time to researching the various methods of attaining lichdom.
There are two magical *gates* in the basement of the palace, one ancient (forged by Uruk himself) and one new (created recently by Kazerabet). The ancient *gate* leads to the basement of the haunted Royal Palace in Nycopolis. The newer portal gates visitors directly to the Garden of Eternity. Both portals have been massively warded to keep out undead, and Kazerabet has placed an invisible *symbol of stunning* in the foyer to trap uninvited living visitors. An invisible stalker has been tasked with watching these doors and will report immediately to Kazerabet the moment one opens.
The archmage is bound by her own code of honor to offer hospitality to visitors, and she will be wryly amused if she encountered the party previously at the Colossus. Providing the heroes treat her with proper respect, Kazerabet entertains them grandly for three days. She then asks them not to trouble her research again, and she allows them to leave the way they came.
These three days are a perfect opportunity for the adventurers to ask Kazerabet more questions about Sahu and its many secrets. She might offer insight into Pizentios's loathsome character (particularly his vulnerability through Ifrit), some lore about the history and dangers of Nycopolis, and perhaps some veiled hints about the Garden of Eternity.
As noted earlier, Kazerabet should be much too powerful for the party to fight with any real hope of survival. References to invisible fiendish servants, the occasional glimpse of a genie, and the numerous embalmed ju-ju zombies maintaining the palace should be ample hints of her extreme power. If the party is rude, attacks her, or pries too much into her private research, Kazerabet will promptly subdue the offenders and let them rot in her oubliettes for a while. Days later, she will release them, stripped of all equipment and magical items, into the monsterinfested jungle outside her palace.

**The Garden of Eternity**

Deep within the core of Sahu, somewhere beneath the Vishap's Spine, rests an ancient prison for an undying priestess of Thasmudyan, the lich Vermissa (see her NPC sheet). Imprisoned in the Garden of Eternity by King Uruk and eight lesser barons, Vermissa was abandoned in her subterranean abode and all but forgotten. The Garden is not a physical prison, but a magical binding that prevents Vermissa (or her spirit) from leaving. Others can enter and leave the Garden freely. Vermissa gives regular audiences from her prison to a steady stream of undead followers and living cult members.
The magical binding was formed with nine magical seals, each enchanted with *life force transfer* and wrought into the main doors of the Garden by a different necromancer. Vermissa will need another nine similarly powerful necromancers to free her, each casting *revoke life force transfer* on an unbroken seal.
Recently, Vermissa persuaded Kazerabet to break one of the seals, just as she convinced Nebt Bhakau (Pizentios's former master) and four other powerful necromancers in the past centuries to aid her, for Vermissa knows the secrets of lichdom, and she gladly bestows them on wizards who aid her. It is only a matter of time before she is freed, but just to help matters along, Vermissa bestowed her patronage on the young Pizentios, expecting him to break the seventh seal when he becomes sufficiently powerful.
The garden itself is in a vast cavern whose walls have been magically smoothed. The ceiling has been imbued with *continual light*, and the rich soil has given root to many strange plants that Vermissa has augmented over the centuries of her imprisonment. The trees and flowers in her garden give bloom to many horrendous human parts with grotesque limbs and faces grafted into the scaly brown bark of twisted mauve bushes or somehow

fused into giant orchidlike flowers. These pale limbs and contorted faces are not dead, for that would be merciful and provide little entertainment for Vermissa. The trees and flowers in the Garden arc alive, after a fashion, twisted into pathetic, fleshy things that crave new fodder. Vermissa feeds her Garden frequently, sometimes with the occasional visitors when they displease her, or with hand-picked enemies from the surface.
Vermissa lives in a U-shaped palace that wraps around one half of the Garden, embracing it in a semicircle as if it were an outdoor courtyard. The largest chamber in the palace, besides the audience hall, is a huge cathedral to Thasmudyan, beneath which rests a hidden treasure vault containing Vermissa's phylactery. The palace contains an extensive library of necromantic lore (stolen from Uruk's vaults in Nycopolis by Vermissa's ghouls) and a tall trophy room, where the lich saves the animated heads of her most entertaining visitors for moments when she craves light-hearted conversation. There is an entire wing of "guest" rooms, though only the necromancers Pizentios and Kazerabet (and other prominent, living cult members) make frequent visits.
Reaching the Garden is not an easy task, as it lies beyond a mazework of twisting runnels, protected in key regions by powerful *glyphs* and *symbols* or guarded by well-organized detachments of Vermissa's Bone Legion, an elite force of mummies and ju-ju zombies. These caverns rise to the surface in a number of locations, such as the hidden shrines outside Misbahd and Jinutt, the ruins of Ereshkigal, and the tower of Pizentios. Cult members have a secret password that they use to gain passage through the various traps and guardians of the Underdark, but these code phrases change frequently (once every few months). Perhaps the most direct way into the Garden is through the multiple gates leading from Nycopolis to the Summer Palace, and from the Palace to the Garden, but these magical portals are used only by Kazerabet herself and would probably require her personal permission (unlikely given).
The Garden of Eternity is the secret core of the Necromancer Kings campaign, and knowledge about its location and true contents should be kept mysterious for as long as possible in the campaign. Infiltrating the Garden, confronting Vermissa, and defeating the lich priestess should only be attempted by the most powerful and resourceful parties.
A more likely scenario would involve the heroes' attempted infiltration of the garden, and their subsequent capture by the lich, who would be more then happy to give them a tour of her facilities, providing at least some opportunity for role-playing. If they entertain her sufficiently (or somehow manage to beat her at chess), the lich might release them. Otherwise, they will have to devise their own escape (possibly aided by Kazerabet if she has grown fond of the PCs by now). If not, the party will end up as souvenirs in the trophy room or as screaming nourishment for Vermissa's Garden.

## Adventure Hooks

After one visit to Sahu, a timid party of adventurers may want leave and never return. This is only natural. Some would call such heroes intelligent or, at the very least, discreet for cutting their losses so early. In fact, if the adventurers are frightened of Sahu, you, as the DM, have been doing your job right! Here are a few more strategies that you can use to lure a reluctant party of heroes back to the island. Additionally, they can also serve as independent adventure hooks for a background even distantly related to the tale of the Necromancer Kings.

### The Pirate Necromancers

While on the mainland, the party hears rumors of increased pirate activity in the waters near Sahu. The heroes might be hired by a wealthy merchant to protect his caravel on its voyage past the dangerous island, or they could be enlisted by a nervous town council to perform a reconnaissance of the island and search for the "secret" pirate base.
The adventure itself can be relatively straightforward, with the party first encountering the pirate ship *Scrofula* (see Sarzec's NPC sheet) near the island. During the battle, one of the zombies' eyes begins to glow with a red light as Vermissa begins to watch the engagement from the distant Garden of Eternity. Before the party hacks

the zombie apart, the adventurers hear her speak through the undead's mouth. Although Vermissa does not reveal her identity, her cold voice is clearly female: "Welcome to the Isle of Serenity, you fools. You will all be feeding my servants ere long!" The malevolent laughter only ends when they hack the zombie apart.
Note that the DM can make this simple encounter much more difficult for an experienced group of heroes by placing Pizentios among the crew. Of course, Pizentios will *teleport* to safety if the battle looks hopeless, taking Sarzec with him. A search of the ship after the battle reveals a sea chest filled with minor booty taken from the *Scrofula*'s latest victims, Sarzec's spellbook, and a rutter (a navigational aid) that will help the PCs locate Pizentios's tower once they decipher its codes (requiring *comprehend languages* and several days to decrypt).
However, while the party is pondering its course of action, a powerful storm rolls across the sea toward them, driving them inexorably towards the reefs in the Horn of Sahu. The storm has been conjured by Vermissa, and she intends to dash their ship to pieces. Unless the party can dispel her unnatural weather, this will likely be their fate. Although the heroes manage somehow to survive the shipwreck, they are now marooned on the northern tip of Sahu.

**Bhakau's Return**

Pizentios's first master, Nebt Bhakau, was the Court Astrologer in Afyal, a wealthy island kingdom near Sahu, quietly manipulating events according to the wishes of Vermissa in the distant Garden of Eternity. But Bhakau's role was eventually uncovered, and the Astrologer was captured by a small group of wizards who blocked his *contingencies* and prevented him from fleeing. In captivity, Bhakau is said to have written the *Book of Shadows* with the help of minor familiars who had not deserted him. The necromancer was tortured and finally killed, his body divided into six pieces, each individually burned and buried separately in distant parts of the island. The Astrologer's tower in the royal palace was razed, and records of his very existence were obliterated.
For any regular necromancer, Bhakau's demise would have been final. But the evil god Thasmudyan had granted Bhakau a Dark Gift: the ability to regenerate (one reason why the wizard could survive countless torturing sessions and dictate a book after his tongue had been cut out). This power would have enabled the necromancer to rise up from his ashes, were they not sealed in individual containers and buried separately.
Back on Sahu, Vermissa has decided that enough time (almost 30 years!) has passed, and she can safely attempt to restore one of her favorite dead servants back to life without arousing undue suspicion in Afyal. Note that, without major access to the sphere of Divination, Vermissa must rely heavily on allies and spies for information.
The necromancer was a valuable ally, an excellent field agent for her Cult of Worms, and prophesied in the *Nycoptic Manuscripts* to be instrumental in her release (see below). She instructs Pizentios to sail to Afyal (on the *Scrofula* or a suitable replacement procured in Misbahd), where he breaks into the cemetery and steals some burial remains of a known accomplice in Bhakau's execution. The necromancer conveys the ashes back to Vermissa, who interrogates the executioner's spirit, learning the locations of the six urns.
Vermissa has no desire to send Pizentios away on a lengthy quest of this kind, so she arranges for living cult members on the mainland to hire various groups of mercenaries and adventurers to discreetly find the six urns for her. The urns are all located in inhospitable places (like at the bottom of the sea, buried at the base of a scorpion-filled ravine, or entrusted in the care of a neutral dragon, genie, or guardian daemon). Here is an opportunity for the adventurers to actually work for the Cult of Worms, though the cultists are far from sincere about the real purpose of the party's mission.
The cultists pose as members of the Brotherhood of Sorrow. The ashes, they claim, are the sacred relics of a martyred saint. The cultists pay very well, well enough that the party should not ask too many questions. If the party simply does as they arc told and recovers the ashes, they are amply rewarded, and the adventure ends there. On the other hand, if they start probing around for hidden secrets, perhaps casting divinations on the urn or its contents, they may find themselves confronted with new mysteries, all of which point directly to deadly adventure on the Isle of Sahu.

**The Scourge of Thasmudyan**

The *Nycoptic Manuscripts* foretold many plagues and portents, but none arc more terrible than the Opening, when the Ninth Seal in the Garden of Eternity will be broken, releasing Vermissa from her magical prison. The first portent of her release, alluded to in the *Manuscripts*, is the spread of disease across the land as the "cold breath of Thasmudyan heralds the return of His chosen."

Rampant plague is an excellent backdrop for a campaign of necromancers and death priests. It should descend on a setting slowly, with vague rumors of unexplained deaths filtering to the adventurers before the massive epidemic breaks out, slaying as much as a third of the local population. This plague is at least partly magical in nature, since clerical magic is much less effective against it. *Cure disease* has only a 50% chance of success (the spell only works once per victim), and only *heal* is 100% effective in eradicating the infection.

Before long, the Brotherhood of Sorrow arrives, and the Flagellants try their best to mediate the local pain and suffering. One of the Master Flagellants approaches the heroes, asking their help to stop the disease. The learned priest has heard of the *Nycoptic Manuscripts*, which describe magical plagues of this sort and might contain suggestions of a cure. He begs the party sail to Sahu and search for a copy, which may greatly help alleviate the suffering.

The prophetic manuscripts can indeed be found in Sahu, either in the Colossus of Uruk or perhaps in the Tower of Pizentios (or the Garden of Eternity itself). A perusal of the scroll docs reveal a cure for the disease (eating one raw scarab beetle a day), but it also suggests the cause of the plague: "the release of Thasmudyan's chosen." (Vermissa is not named specifically).

There are two other prophesies in the manuscripts that are directly related to Vermissa: "The Sundered Man shall be made whole by the Chosen, who will release Her" (this refers to the restoration of Nebt Bhakau, mentioned previously) and "The Chosen shall Emerge when the Colossus walks in Nycopolis" (this can be taken to mean that the Colossus of Uruk will come to life in some way, but it really alludes to the fact that Bhakau and Pizentios, working together, will create a huge, flesh golem (a Colossus of sorts) and use the monster to physically destroy Vermissa's prison). All of this will happen exactly as was predicted, unless, of course, the necromancers' evil plans are thwarted by the intrepid adventurers after they bring back the knowledge of how to cure the plague!

**Lich Hunting**

It is highly probable that the heroes may not survive a direct, violent confrontation with Vermissa. If the DM wishes to stage one anyway, in a truly epic style, feel free to introduce the party to King Talib, lich-hunter, as an individual who can provide them with some much-needed aid. Introducing Talib helps muddy the situation even further, given his past involvement with Kazerabet and her secret intention to become a lich herself. Naturally, Talib does not reveal that he is still Kazerabet's husband, and he does not know that his wife is currently on Sahu in the Summer Palace.

Once Talib learns that the adventurers have visited Sahu, he will approach them (in a *corpse host*) to learn about their adventures. He will offer money, magical items, or even his services as a lich-hunter in exchange for all they know about the island. He has long suspected that Sahu might be the haven for (at least) one lich and has researched its history quite thoroughly. He has reason to believe that Vermissa and Uruk made the transformation centuries ago. Talib confides all these secrets to the heroes, hoping to sway them to his side. Later, when he gets to know the party better, he may even reveal the personal reason for his crusade against liches.

Talib is respectfully cautious, particularly where liches are concerned. He has completed some discreet magical reconnaissance of the island and uncovered the existence of the Cult of Worms in Misbahd and Jinutt. He now feels ready to visit the island, albeit disguised in a *corpse host*. He needs the adventurers because of their

familiarity with the island, and he would appreciate their company during the visit. He promises them the wealth of the Necromancer Kings if they seem uncertain (and are motivated by greed); he also warns of the danger to the surrounding world when Vermissa finally earns her freedom.
Talib's relationship with Kazerabet adds another convolution to the exploration of Sahu. If the party has already encountered her and informs Talib of this, his first goal will be to track down his wife, determine her motives for staying on Sahu, and try to convince her to join him on his lich-hunt. If the party hasn't met her before, he will insist on exploring the ruins of Nycopolis, where they will find the "back door" into the Summer Palace and there encounter Kazerabet. The melodramatic reunion between husband and wife gets off to a shaky start (Talib is, after all, disguised in a *corpse host*). Kazerabet angrily sets her wards blazing when she sees the party, threatening to wipe them out for disturbing her research one too many times. Then Talib calls her by her true name (Inanna) to get her attention, and he reveals his true identity. She calls his *corpse host* a "neat trick," and he praises her radiant beauty and asks her to come back to him. "You finished your precious book," Talib notes casually. "I enjoyed reading it enormously," he adds, complimenting her further (he knows too well how to butter her up).
Kazerabet still loves her husband, but she tries very hard not to show it. She refuses to join him and the party against Vermissa (that would be contrary to her personal code of honor), but she will allow him (along with the adventurers) to use the *gate* in her basement to quickly reach the Garden. She says as little as possible about her involvement with the lich, except that she was studying Vermissa for a new book. Her interest in Sahu, she claims, was purely academic.
Aided by Talib, the adventurers may now be able to defeat Vermissa. Before her destruction, however, at a climactic moment in the battle, Vermissa reveals the true reason Kazerabet was helping her, and suggests that Talib's wife has already made the transformation into a lich. Before Vermissa dies, she wishes Talib joy in hunting his wife down and slaying her.
Make sure to arrange for Talib's *corpse host* to die a grisly, death before the climactic scene, leaving the final dirty work in the battle, and the destruction of Vermissa's phylactery, up to the heroes alone. After her death, presuming that the adventurers emerge from the battle victorious, the party hears a distant roar, and Thasmudyan informs them of his displeasure. He curses the heroes with any malediction the DM finds appropriate (save vs. spells at -4). The curse can only be removed by a 20th level or higher priest.
Afterward, confirming Vermissa's allegations, the PCs will find the Summer Palace completely empty should they return there via the *gate*, with no trace of Kazerabet's former occupancy. Talib *teleports* there in person to congratulate the adventurers, and he searches the palace for any clues to Kazerabet's current whereabouts. She has indeed left a clue, a small vase on a neglected mantle. A *legend lore* cast on the vase will reveal the distant location of its manufacture, another renowned center of magical learning. Kazerabet might be found somewhere near that vicinity, but perhaps the vase is nothing more than a red herring, planted there to throw a persistent husband off her trail.

## Necrophiles

As the sample campaign has shown, vivid and believable characters are essential to keep a convoluted plot moving forward. NPC necromancers are not passive, boring hulks, lurking in a crypt, waiting for an unsuspecting party to wander by. Each has his or her own agenda, plans, and ambitions, and these may - or may not - coincide with allied necromancers, even in an allied organization. In the last section of this book, we finally present seven of the necromancers and death priests to whom we have alluded throughout this book, as concrete examples of the multiplicity of roles these characters can play in the campaign.
Two of these characters, Ellandra and Mistress Yola, are purposefully independent from the Necromancer Kings campaign and can easily introduce a group of PCs to an entirely different series of adventures involving the Anatomical Academy and Ellandra's goal to restore her dead husband. The DM should feel free to tailor or modify the backgrounds for any of the other characters to suit the needs of a particular setting. May these

necrophiles provide you with inspiration for countless more intriguing characters in your campaign.

## *Ellandra*

**Lady Doctor Ellandra Tolbert**
**13th-level Human Necromancer (Anatomist)**

**Str:** 9
**Dex:** 17
**Con:** 10
**Int:** 16
**Wis:** 17
**Cha:** 15 (10 without *grafted* face)
**AC:**1
**THACO:** 16 (13 with *hornblade* +2 or throwing knife)
**Movement:** 12
**Hit Points:** 39
**Alignment:** Neutral
**Dark Gifts:** Nil
**Special Attacks:** By spell or magical item; opponents save at -1 vs. her necromantic spells; specialized in knife.
**Special Defenses:** *Contingency* invokes a *fire shield* spell if physically attacked.
**Saving Throws:** PPDM 11; RSW 7; PP 9; BW 11; S 8.
-1 bonus on saves against necromantic attacks, +3 magical attack adj. (Wisdom).
**Size:** M (5'3")

**WP:** knife (specialized), rapier. **NWP:** anatomy (16), etiquette (15), heraldry (16), modem languages (elvish, dwarvish, 16), healing (15), herbalism (15), reading/writing (18), spellcraft (15), spirit lore (11), venom handling (15).

**Spells:** *color spray, detect disease (WH), light, magic missile, protection from evil, unseen servant; detect life (WH), ESP, ice knife (WH), knock, living link, protection from paralysis (TOM); delay death (WH), dispel magic, false face, iron mind (WH), paralyze (FOR), wizard sight (TOM); brainkill, empathic wound transfer, minor globe of invulnerability, shout, summon spirit; cloudkill, bone growth, graft flesh, teleport, throbbing bones (WH), wall of force; death spell, power word, silence (FOR), transmute steel to bone.*

**Equipment:** *Bracers of Defense AC4, greater bone ring,* platinum necklace set with a *pearl of power* (5th level), *amulet of life protection, wand of paralyzation* (66 charges), *hornblade (dagger +2),* diamond wedding ring (5,000 gp), gold necklace (1,500 gp), four jade bracelets (500 gp each), doctor's satchel with knives, scalpels, saws, bandages, four vials of *soultravel,* three vials of mindshadow, *potion of extrahealing,* three pots

of *Kheoghtom's ointment*, and two packets of *dust of sneezing and choking*.

**Physical Appearance:** A short, pale woman in her late thirties, Ellandra has thin yellow hair and hazel eyes, highlighted by long gold lashes. Ellandra's hands are milk-white and delicate, her fingers tipped by unusually long nails. When nervous, bored, or anxious, she will clack her nails impatiently, on the nearest available hard surface.
Despite her natural beauty, Ellandra is insecure about her own appearance. She favors long-sleeved robes cut in the exotic, southern style of Calimshan to modestly conceal much of her body, and she keeps a black leather shoulder bag nearby, which contains her surgical equipment and medications.

**Background:** Ellandra was born into one of the noble houses of Neverwinter. Her father was a famous Anatomist, and as a child she assisted him in his dissections. When she was 13, a disgruntled serf burned the Tolbert Estate to the ground. Only Ellandra survived, but her face was badly burned in the inferno. After that disaster, she resolved to continue her father's research, eventually joining the Anatomical Academy.
At first, Ellandra focused her research on curing - or at least hiding - the horrible burns on her face. She first developed *false face* for that purpose. As her power grew, she learned how to *graft flesh* from a cadaver onto her own scarred face, concealing her deformity.
Today she still maintains a *grafted* face, and her skill with the Art enables her to blend the corpse flesh with her own skin exactly. She continually fortifies this disguise with multiple overlapping spells, so that it cannot be undone all at once by a single lucky *dispel magic*. Ellandra has maintained this "disguise" for years.
Her former husband, Gerard Anterra, was a famous sea captain and privateer, but he tragically died in action off Nelather more than five years ago. His body was never recovered, and Ellandra was plunged into deep depression. After Gerard's death, Ellandra devoted her life to the Academy. Ellandra now labors exhaustively at her research, secretly trying to find a way to bring her husband permanently back from the dead.
Her close friend and confidante. Mistress Yola (detailed in her own NPC sheet), has recently cultivated a mild cruel streak in Ellandra. Even though Ellandra does not follow her friend's fanatical religious views, she still regards Yola as a trusted ally.

**Role-Playing Notes:** Ellandra carries herself with the hauteur of a true aristocrat. She is fantastically wealthy and expects everyone around her to cater to her whims, if not for her wit and beauty, then for her money. Ellandra is an accomplished surgeon, but she only practices these skills on the living to show off or to endear herself to potential allies. She really has little concern for healing - her interest lies in dissecting and studying the dead body.
Despite her wealth and power, Ellandra is sad and lonely. She mentions her dead husband Gerard in just about any conversation, and when she is especially morbid, she dredges up memories of her father. Ellandra craves love and attention. She adores flattery.
Despite her quirks and mood swings, Ellandra is more sad and tragic than cold-heartedly evil. She can be extremely generous with those she is trying to befriend. Ellandra would make an interesting patron for a party of adventurers. She might even take a party mage under her wing, especially if he coincidentally reminded her of Gerard.

## *Kazerabet (Zaribel)*

**Angel of the Dark, Former Queen of Ysawis**
**20lh-level Human Necromancer (Philosopher)**

**Str:** 12
**Dex:** 15
**Con:** 10
**Int:** 17
**Wis:** 19
**Cha:** 18
**Armor Class:** 1
**THACO:** 14 (12 with magic staff)
**Movement:** 12
**Hit Points:** 48
**Alignment:** Lawful Neutral
**Granted Powers/Dark Gifts:** Nil
**Special Attacks:** By Spell or magical item; opponents save at -1 against her necromantic spells.
**Special Defenses:** *Chain contingency (TOM)* raises a *prismatic. wall* and a *homonculous shield (TOM)* around her in defense when she snaps her fingers; *stoneskin* spell withstands 12 physical attacks; *contingency* spell *teleports* her to safely if wounded to 10 hp or less; has combined *permanency* spells with *comprehend languages, protection from normal missiles, read magic,* and *tongues*; has used *wishes* to shield her from all divination, location, and scrying spells; immune to *cause fear, charm person, command, friends,* and *hypnotism*.
**Saving Throws:** PPDM 10; RSW 5; PP 7; BW 9; S 6.
+2 on saves vs. spell (magic staff); +1 bonus on saves against necromantic attacks, +4 magical attack adj. (Wisdom).
**Size:** 5'6"

**WP:** dagger (thrown and wielded), staff. **NWP:** ancient languages (Kadari, 17), ancient history (16), brewing (17), engineering (14), etiquette (18), herbalism (15), heraldry (17), airborne riding (17), necrology (19), netherworld knowledge (16), reading/writing (18), religion (19), singing (18), spellcraft (15).

**Spells:** *animate dead animals, burning hands, color spray, corpse link, chill touch, exterminate, feather fall, grease, magic missile. spectral voice, spider climb, unseen servant; darkness 15' radius, embalm, ESP, ghoul touch (WH), levitate, living link, skeletal hands, spectral hand (x2), protection from paralysis (TOM), vocalize (WH), web; delay death (WH), clairvoyance, dispel magic, dispel silence (FOR), fireball, infravision, lightning boll (x2), slow, vampiric touch, tongues, wizard sight (TOM); contagion, dimension door, enervation, magic*

*mirror, summon spirit, polymorph other; animate dead (x2), dismissal (x2), magic jar, teleport; chain lightning, lich touch (FOR), invisible stalker, globe of invulnerability, legend lore; finger of death, lifeproof(AA), power word, stun, spell turning, vision; death shroud, maze, mind blank, sink; time stop, wail of the banshee (TOM), gate.*

**Equipment:** *staff of the magi* (18 ch.), *amulet of terror* (13 ch.), *bracers of defense AC 2, ring of regeneration, ring of wizardry* (doubles lst-3rd level spells), *talisman of divining* (detects undead, 38 ch.), *wand of lightning* (48 ch.), *handglyph of power (death spell,* 2 ch.), *nether scarab* (18 ch.), *figurines of wondrous power* (three ivory goats, one use remaining for each), miniature, modified *iron bottle* worn on necklace (containing six barbazu), *scroll of protection from undead,* two bottles of greater *ju-ju wine, potions of invisibility* and *extrahealing* (x2), two concealed daggers.

**Appearance:** Kazerabet has a strong, forceful personality and an intellect so intense and commanding that at first one may almost be tempted to forget to notice her attractive face and figure". Her eyes arc a spectacular steel gray, and they flash like drawn daggers when she is angered. She has a proud and expressive mouth, with ruby-painted lips that often curl into a pouting smile or a contemptuous sneer. For important occasions, she puts on a platinum tiara that accents her eyes (10,000 gp) and drosses in a full-length imperial robe, encrusted with emeralds (7,500 gp). During more intimate audiences, she prefers a semi-translucent gown, vaporous and sheer like a shroud of mist.

**Background:** For the past two centuries, Kazerabet has been an eminent researcher, a scholar, and a theoretician of the necromantic Arts. She practiced necromancy to gain a greater knowledge of life by studying death, embracing the Art because it was forbidden and mysterious. Kazerabet has always been fascinated by the history of the Necromancer Kings of Sahu and their legacy of magical artifacts.
Kazerabet's researches have taken her to Sahu, the Isle of the Necromancer Kings, where she uncovered the Garden of Eternity hidden beneath the island. There she has entered into a mutually beneficial pact with the lich-priestess Vermissa (see her NPC sheet). In exchange for access to her ancient library and assistance in attaining lichdom, Kazerabet has agreed to remove one of the nine ancient glyphs keeping Vermissa imprisoned in the Garden.
Kazerabet is a neutral visitor in the Garden of Eternity. She is fascinated by Vermissa, as she represents the history she has been studying for decades. Although Kazerabet easily tolerates the presence of undead, she has no respect for Vermissa's living cult members and allies. She finds the necromancer Pizentios (see his NPC sheet) particularly distasteful.

**Role-Playing Notes:** Kazerabet carries herself with all the pride and dignity of exiled royalty. She is an extremely private person and never discusses her past history or future plans.
Though Kazerabet memorizes divinatory and defensive magics, she is fully capable of unleashing a torrent of devastating spells (and barbazu) when provoked. If she is seriously endangered, her chain *contingency* will activate (see "Special Defenses"), giving her time to release her barbazu from her iron bottle, cast *time stop,* and ready her necromantic attacks. She will not hesitate to *teleport* away from a lost battle so she can *gate* in a greater baatezu and prepare her own ambush.

## *Pizentios*

**Master Pizentios of the Ghoul's Skin, Shadowmaster**
**11th-level Human Necromancer (Archetype)**

**Str:** 15
**Dex:** 11
**Con:** 15
**Int:** 18
**Wis:** 16
**Cha:** 10
**Armor Class:** 1 (with *spirit armor*) or 7
**THACO:** 17
**Movement:** 12
**Hit Points:** 58 (including Ifrit's hit points) or 40
**Alignment:** Lawful Evil
**Dark Gifts:** Enhanced night vision (and *wizard sight (TOM)*), turn/command undead as 6th-level cleric.
**Special Attacks:** By spell or magical item; opponents save at -1 against his necromantic spells.
**Special Defenses:** Telepathic link with Ifrit, Ifrit's ability to regenerate (1 hp/round), and Ifrit's 25% magic resistance.
**Saving Throws:** PPDM 11; RSW 7; PP 9; BW 11; S 8.
+3 on all saves (magic robes), +1 bonus on saves against necromantic attacks, +2 magical attack adj. (Wisdom).
**Size:** 5'6"

**WP:** scimitar, staff. **NWP:** ancient languages (Kadari, 18), ancient history (17), brewing (18), herbalism (16), necrology (16), netherworld knowledge (14), reading/writing (19), religion (16), spellcraft (16), spirit lore (6), venom handling (14).

**Spells:** *corpse visage (WH), corpse link, chill touch, grease, magic missile; choke (WH), spectral hand, stinking cloud, vocalize (WH), web; blink, dispel magic, non-detection, spirit armor (TOM), vampiric touch; Beltyn's burning blood (FOR), dimension door, minor globe of invulnerability, polymorph self; animate dead, cloudkill, summon shadow, wall of bones (WH).*

**Equipment:** *shadowblade* scimitar, *staff of skulls* (20 ch.), *robes of protection +3*, gold signet ring (150 gp, engraved with the wheel symbol of the Necromancer Kings), heavy black robes imbued with *deeppockets*. filled with miscellaneous spell components, adventuring gear, 14 garnets (500 gp each), three pots of *ghast salve, potions of vitality, gaseous form*, and *undead control*, scroll of wizard spells (cast at 11th level): *chill touch, vampiric touch, mummy touch (FOR)*, and *animate dead, a protection from fire* scroll, and four packets of *dust of coagulation (TOM)*.

**Appearance:** Pizentios's most distinguishing feature is his clammy blue-gray skin. His fingernails and lips are an even darker shade of blue, lending him the appearance of a fresh corpse. When he smiles, his blue-black gums contrast hideously with his pearl white teeth. Pizentios is otherwise a dumpy, short, middle-aged man with a protruding round belly. Most of his hair has fallen out, leaving him partially bald, except for a thin fuzzy band of whitish strands clustered above his cars and around the back of his head. He has intense, dark eyes and a cold, emotionless voice that sends shivers up the spines of weak-hearted listeners.

**Background:** Pizentios was hand-picked as an apprentice by the infamous necromancer Nebt Bhakau. When Pizentios was a youth, Bhakau sent him to explore Sahu and learn the secrets of the Necromancer Kings. Before Pizentios could return, however, he learned of his master's imprisonment and demise. Fearing a similar fate should he return, Pizentios remained on Sahu.

One day, Pizentios encountered a group of ghouls and joined their pack by using *ghast salve*. The ghouls led him to the Garden of Eternity, where he met the imprisoned Vermissa (see her NPC sheet). The lich had once been Bhakau's patron, and she embraced Pizentios as an exiled son. The necromancer swore an oath of fealty to Vermissa and her evil god, Thasmudyan, gaining the ability to perceive hidden auras (enhanced vision) and command undead. Pizentios also gained the service of an infernal familiar, Ifrit.

Ifrit is an unusual imp. Although he can take any of the normal forms, his preferred shape is that of a man-sized shadow, with tiny horns and vestigial wings. In this form, he is 90% undetectable in shadowy surroundings and completely invisible in deep shadows (or darkness). Unlike an undead shadow, however, Ifrit is not harmed or deterred by light. The fiend delights in terrorizing Pizentios' apprentices, and requires one blood sacrifice per week to assure his loyalty. If so appeased, the imp follows his master's orders obediently.

Pizentios was too young and inexperienced to contain the new powers bestowed on him. The initiation nearly killed him, leaving him hideously disfigured. Pizentios recovered and founded a small school for necromancers outside the entrance of Vermissa's Garden. He is currently training new skilled followers for her cult. These apprentices naturally have no idea of what transpires in Pizentios's "secret garden.

**Role-Playing Notes:** Pizentios is smug and arrogant, confident in the knowledge that he is Vermissa's favorite pet. His power has grown considerably in the past few years, and tie yearns to leam all of his former master's great secrets. In many ways, he is like a spoiled child who has been given too much, too soon. No matter how much he learns or gains, he always wants more. This insatiable ambition, combined with his genius intellect, makes Pizentios a deadly opponent.

In battle, he will first surround himself in a *wall of bones*, and then *summon shadows* to distract his enemy. He will next prepare *minor globe of invulnerability* and *spirit armor* as quickly as possible. Depending upon the wind conditions, he will hit his foes with *cloudkill* or *Beltyn's burning blood* (his favorites). Should he be pressed into melee, he can fight with either his *shadowblade* or his enchanted staff. Finally, if an encounter goes poorly, he will call in Ifrit for a distraction and either *dimension door* himself away or *polymorph* into a gargoyle to escape.

## *Sarzec*

**Sarzec the Broken, Captain of the Scrofula**
**6th-level Human Necromancer (Undead Master)**

**Str:** 11
**Dex:** 11
**Con:** 10
**Int:** 15
**Wis:** 16
**Cha:** 14
**Armor Class:** 3 (with spirit armor) or 8
**THACO:** 18
**Movement:** 6 (hobbled by old accident)
**Hit Points:** 25 (including 5 extra hp from Malvolio)
**Alignment:** Chaotic Evil
**Dark Gifts:** Nil
**Special Attacks:** By spell or magical item, opponents save at -1 against his necromantic spells, turns/commands undead as 6th-level priest (Undead Master).
**Special Defenses:** Nil
**Saving Throws:** PPDM 13; RSW 9; PP 11; BW 13; S 10.
+2 on all saves (magic ring), +1 bonus on saves against necromantic attacks, +2 magical attack adj. (Wisdom).
**Size:** 4'11" (bowlegged)

**WP:** darts. **NWP:** ancient history (14), ancient languages (Kadari, 15), heraldry (15), navigation (13), necrology (16), netherworld knowledge (13), reading/writing (16), religion (14), spellcraft (13), swimming (11), weather sense (14).

**Spells:** *chill touch, charm person, detect magic, magic missile (x2); spectral hand, ghoul touch (WH), skeletal hands; bone dance, spirit armor (TOM), lightning bolt.*

**Equipment:** *ring of protection* +2 (silver band set with a tiny green ceramic scarab beetle), iron key worn from string around neck (opens sea chest, see below), gold earring set with a garnet (100 gp), three golden rings (worth 50 gp each), midnight blue robes (edged in silver thread) whose pockets contain one black *bead of force*, spell components, a compact quiver with nine barbed darts dipped in Type C poison (onset 2-5 rounds, 25 hp damage, 2-8 if save), a spyglass (500 gp), *potions of healing* (x2), and a wizard scroll (spells cast at 11th level): *animate dead* (x3), *cloudkill*.

**Physical Description:** Sarzec was once a tall and handsome man, but a previous accident has left him a crippled hunchback with horribly twisted legs. He walks slowly and painfully in a bowlegged gait, but he stubbornly refuses to seek medical treatment. The prideful wizard will not even use a staff or cane as a crutch.

Sarzec is approaching his early thirties, but his blue eyes are ringed with darkness, and his raven-black hair is shot with silver. He has a loud and commanding voice and speaks with an air of determination.

**Background:** Formerly an apprentice of the necromancer Pizentios (sec his NPC sheet), Sarzec fell into an oubliette while feeding one of his Master's prisoners on Sahu. The fall shattered his body, but he survived, and his life was spared by the escaping prisoners. Enraged by his student's failure, Pizentios refused to set the broken bones, which healed and fused at awkward angles, leaving him a permanent cripple. Pizentios successfully convinced Sarzec that the prisoners were to blame for his disfigurement, and when Sarzec finished his studies, the master even outfitted him with a ship and a zombie crew to hunt down the renegade sailors who crippled him.

Sarzec now scours the seas in a trim caravel, the *Scrofula*, with a junior necromancer and a crew of zombies. They patrol the sea lanes near the Isle of Sahu, preying upon understaffed merchant ships, constantly on the lockout for the adventurers who wrecked Sarzec's body and filled his life with unending pain. The necromancers have a small base on Sahu and report back occasionally to Pizentios, who is pleased with their progress and keeps them well outfitted in exchange for prisoners and tribute. Sarzec enjoys the current arrangement with his former mentor (and as an Undead Master, he revels in the command of an undead crew), but his thirst for revenge takes him on ever wider forays from the coast of Sahu.

As a natural leader, Sarzec enjoys the complete authority over his undead crow. These twenty zombies (hp 12-16 each) have been fortified by *embalming*, which also prevents them from decomposing in the intense sun and heat at sea.

**Role-Playing Notes:** Sarzec is a cruel, foul-tempered bully who suffers in constant physical pain from his old injuries. He lashes out, often violently, against any who disagree with his opinion (these are scarce on a ship crewed mostly by mindless undead). In battle, Sarzec's first action is usually to cast *spirit armor* in defense, then use a *lightning bolt* to soften up the enemy while sending over a zombie boarding party. He then casts *spectral hand* to deliver touch-related attacks, afterward animating a pair of *skeletal hands* or casting *bone dance* on a fallen foe. He will not hesitate to use his magical bead. scroll, or poisoned darts if pressed in battle.

Sarzec's intelligent mind has easily grown accustomed to sea travel. He chooses his potential victims carefully, always screening their ships from a safe distance with the help of his huge raven familiar, Malvolio. If a target seems weak or helpless, he maneuvers the *Scrofula* so it has the wind advantage and attacks. The *Scrofula* has been rigged for speed. Lacking heavy supplies or cargo and forewarned by Malvolio's reconnaissance, she can outrun most merchant ships.

## *Talib*

**King Talib al-Ysawis the Magnificent (and the Accursed)**
**Dual Class Human: 5th level Desert Warrior/16th-level Necromancer (Deathslayer)**

**Str:** 16
**Dex:** 13
**Con:** 15
**Int:** 17
**Wis:** 16
**Cha:** 15
**Armor Class:** -1 (with *ghost armor (FOR)*) or 6
**THACO:** 15 (13 vs. liches)

**Movement:** 12
**Hit Points:** 68
**Alignment:** Chaotic Good
**Dark Gifts:** Nil
**Special Attacks:** By spell or magical item, opponents save at -1 against his necromantic spells, liches save at -2 vs. all spells.
**Special Defenses:** Physical body warded by a *corpse host* when hunting undead, *contingency* spell *teleports* all equipment to safety when the *corpse host* is destroyed.
**Saving Throws:** PPDM 10; RSW 5; PP 7; BW 9; S 6.
+1 on saves vs. spell (scarab), +5 on all saves (cloak and stone); +2 on all saves against liches, +1 bonus on saves against necromantic attacks, +2 magical attack adj. (Wisdom).
**Size:**6'l"

**WP:** scimitar (specialized), great scimitar, longbow, spear, dagger, staff. **NWP:** ancient languages (Kadari, 17), ancient history (16), engineering (16), fire building (15), heraldry (17), survival (17), running (9), blind-fighting (14), land based riding (19), necrology (16), netherworld knowledge (13), tracking (16), reading/writing (18), religion (16), spellcraft (15).

**Psionics:** (wild talent). PSPs: 138, mind blank (9), mind bar (15), object reading (11), sensitivity to psychic impressions (12).

**Spells:** *burning hands, corpselight (FOR), detect undead, hold portal. magic missile, protection from evil; cloak from undead (FOR), E5P, knock, levitate, vocalize WH), web; dispel magic, fireball, ghost armor (FOR), lightning bolt, hold undead, wizard sight (TOM); dimension door, empathic wound transfer, Evard's black tentacles, polymorph self, thunderstaff (TOM), wall of ice, polymorph other; bind undead, cone of cold, dismissal, graft flesh, teleport. wall of force; Bloodstone's spectral steed (TOM), chain lightning, claws of the umber hulk (TOM), legend lore; acid storm (TOM), prismatic spray, wound conferral; Bigby's clenches fist, homunculus shield.*

**Equipment:** *cloak of protection* +4, *rod of absorption* (40 ch.), *talisman of divining (detects life,* 65 ch.), *handglyph of power (disintegrate,* 3 ch.), *scimitar of life stealing* (specialized: #AT 3/2, Dmg 1d8+4), *stone of good luck* (carved in the shape of a white elephant), a jade *scarab of protection* (10 ch.), and a *girdle of many*

*pockets* containing traveling spellbooks, spell components and adventuring gear, a composite longbow, quiver with 24 *arrows* +2, a purse with 400 gp, 10 pearls (100 gp each) and 10 diamonds (1,000 gp each), *potions of extrahealing* (x4), *flying, invisibility*, and *growth*, an *elixir of youth, scroll of protection from fiends* and a scroll (cast at 16th level) with *limited wish* (x3).

**Physical Description:** Talib appears to be unusually strong and muscular for a man in his sixties. His massive shoulders and arms arc covered by tattoos, and his face is lined with wrinkles and deep scars. One ear is gone, nothing more than a tattered strip of skin, and his right eye is covered by a velvet eye patch. Because of his scimitar, scars, and military demeanor, one might easily mistake him for a retired general.
For dangerous missions, Talib adopts a *corpse host* as a disguise and a safeguard, since his distinctive features are easily remembered and his lethal quarries often set up nasty surprises. He prefers to use the fresh body of an experienced fighter who died of natural causes (or in battle). Talib always makes sure to conceal any obvious mortal wounds on his host. Most often, he does this simply by wearing enough clothing to cover himself fairly well. After all, it wouldn't do much for the credibility of his disguise to be seen walking about with a gaping chest wound.

**Background:** In his youth, Talib married Kazerabet (see her NPC sheet), who advanced his training and let him rule by her side over a secluded kingdom of undead. After a few happy decades, Kazerabet mysteriously deserted him. He has never forgiven her, but neither has he stopped searching for her.
Talib became a Deathslayer after his two sisters, Jal' and Leyla, were *disintegrated* by the lich Thalath. He has since destroyed four liches (including Thalath) and returned all the zombies in his kingdom back to their graves. Ysawis is now a secluded and deserted city in the jungle, doomed to slow decline by its dark heritage. Talib lives in a magnificent Jade Palace in the decaying city, alone save for a contingent of loyal jann. At least four jann bodyguards accompany Talib (or his *corpse host*) on his adventures, flying *invisibly* around him.

**Role-Playing Notes:** At first, Talib fought liches in revenge, but his anger has been replaced by grim moral outrage. He is reckless, foolhardy, and fatalistic. He has no fear of pain or death because his *corpse host* can easily be replaced, and he always has at least one clone of himself carefully stored in his palace. Destroying liches gives his empty life a sense of purpose, and he pursues it with gusto. Though he suffers from horrible recurring nightmares and terrifying visions, he somehow manages to maintain a sane, positive, and often humorous outlook on life.
Talib (or his host) may sometimes join a party of adventurers to help mask his movements when hunting a lich. To protect his companions, he tries to conceal his true power and invisible associates unless direly threatened. Talib may serve as a temporary ally for an adventure or two, provided these excursions help Talib locate or ultimately destroy his enemy.

## *Vermissa*

**The Undying One, Queen of Worms, Matron of Ghouls**
**24th-level Lich Priestess (Charnelist)**

**Str:** 10
**Dex:** 12
**Con:** 15
**Int:** 18
**Wis:** 20
**Cha:** 16
**Armor Class:** -3
**THACO:** 6
**Movement:** 6
**Hit Points:** 90
**Alignment:** Lawful Evil
**Special Attacks:** Aura of power (creatures of 5 HD or less must save vs. spells or flee for 5-20 rounds), chilling touch (Dmg: 1-10 hp, permanent paralysis).
**Granted Powers/Dark Gifts:** *Animate dead* by touch (3/day), *skull scry* (see through any corpse within 17 miles, at will).
**Special Defenses:** Never surprised (robes), +1 magical weapon to hit, immune to *charm, sleep, enfeeblement, polymorph, cold, electricity, insanity*, and *death spell*.
**Saving Throws:** PPDM 2; RSW 4; PP 3; BW 6; S 5.
+3 on all saves (ring), +4 magical attack adj. (Wisdom).
**Size:** 5'8"

**WP:** staff, footman's flail, footman's mace, warhammer. **NWP:** ancient history (16), ancient languages (Kadari, 17), musical instruments (flute, horn, 10); local history (13), gaming (14), reading lips (15), necrology (19), netherworld knowledge (18), spirit lore (12), anatomy (17); herbalism (16), reading/writing (18), religion (19), spellcraft (15).

**Spells:** *bless, command (x2), call upon faith (TOM), darkness, detect food, emotion read (TOM), protection from good, sanctuary, spiritual hammer, undead alacrity; aid, augury, barkskin, draw upon unholy might (TOM), enthrall, know alignment, hold person (x2), music of the spheres (TOM), resist turning, withdraw; bestow curse, dispel magic (x3), life drain (x3), memory read (TOM), prayer, protection from fire, speak with dead; abjure, cause insanity (x2), mental domination (TOM) (x2), rapport (TOM), solipsism (TOM) (x2), thought broadcast (TOM), poison (x2); dispel good, imbue undead with spell ability, quest, scourge (x2), slay living, undead regeneration (x3); asphyxiate (x3), aerial servant, animate object, summon undead (x2), wall of thorns; confusion, energy drain, mindkiller (TOM).*

**Equipment:** A loose purple gown *(robe of eyes)*, an electrum choker adorned with writhing worms and set with a massive 5,000 gp emerald (functions as a *helm of telepathy*), a gold and amethyst earring (an adapted *ioun stone*, absorbs 58 spell levels), a *ring of spell storing* (*contains dispel magic, dispel good, undead regeneration* (x2), *word of recall*), *ring of protection +3, staff of withering* (20 ch.), *talisman of divining* embedded in an gold arm band (*detects magic*, 44 ch.), and three *handglyphs of power* wrapped around the wrists and lower arms like exotic bracelets (*fire* (2 ch.), *disintegrate* (I ch.), *power word, stun* (2 ch.)).

**Appearance:** For a lich, Vermissa's body is remarkably well preserved, still possessing the same voluptuous curves and alluring contours of an attractive young woman. Vermissa carries the full weight of her undead transformation in her face, where the skin has shrunken tight over her skull, and her eyes bum with infernal radiance in their empty sockets. She sometimes uses a solipsism to disguise her true nature (she can subdue her aura, chilling touch, and glowing eyes at will). Vermissa's voice can be soft and sweet (she can sing beautifully) when she is receiving visitors; when angered, however, her voice gains a tone of commanding power and malevolence.

**Background:** Vermissa lived when the first Necromancer King ruled Sahu in the distant past. She founded the Cult of Worms. directly challenging King Uruk's authority. Even then, Vermissa's power was great, and Uruk dared not anger Thasmudyan, her infernal patron. Rather than destroying Vermissa, Uruk and eight of his barons forged an eternal prison for their nemesis. They lured Vermissa into the Garden of Eternity and locked her within using nine seals of power.

Vermissa raged against Uruk, but he left her there to perish. In time, Uruk passed away, and his dynasty faded into oblivion, but Vermissa lived on, granted the gift of lichdom by Thasmudyan. Although she is prevented from physically leaving the Garden, others can enter and leave at will.

She has since rebuilt her Cult of Worms into a semblance of its former glory. Vermissa has cultivated relationships with powerful necromancers like Kazerabet (see her NPC sheet), providing ancient lore in exchange for destroying a seal of her prison. Now only three seals remain, and she is slowly training her own branch of wizards through Pizentios (see his NPC sheet). Once her private corps of necromancers is sufficiently powerful, she will be free at last.

**Role-Playing Notes:** Vermissa is a master manipulator, a priestess and politician with a long-term view. Her living cult members control all the villages on Sahu, and her countless undead minions (ghouls and ghasts mostly) range freely over the island's "haunted" highlands. Vermissa's power is strongest on Sahu. She can project her spirit into any undead creature on the island and see through the eyes of any corpse within a score of miles from her lair. Her power extends, more tenuously, from Sahu to the mainland beyond, where her fanatical cult members have insinuated their way into positions of political power and authority.

Vermissa's quick and agile mind has been numbed by centuries of boredom. She would gladly welcome a party of explorers into her subterranean Garden to relieve some of the monotony. She might even let some of them live if they are suitably entertaining. If not, their remains can be served to Thasmudyan at his next infernal feast. Hostile visitors will meet a similar fate.

## *Yola*

**Pain-Mistress Yolanda Shamat**
**8th-level Human Death Priestess (Pain)**

**Str:** 14
**Dex:** 13
**Con:** 15
**Int:** 12
**Wis:** 17
**Cha:** 13
**Armor Class:** 5
**THACO:** 16
**Movement:** 12
**Hit Points:** 50
**Alignment:** Neutral Evil
**Granted Powers:** Negate emotion spells in others, *emotion control* (fear, sorrow, or hatred; up to 16 people, 1/day), focus harm spell (*cause serious wounds*, 17 hp damage, 1/day).
**Special Attacks:** By spell or magical item.
**Special Defenses:** Nil
**Saving Throws:** PPDM 7; RSW 11; PP 10; BW 13; S 12.
+4 on saves vs. pain; +3 magical attack adj. (Wisdom).
**Size:** 5'9"

**WP:** scourge, footman's mace, footman's flail, staff, whip. **NWP:** endurance (15), local history (13), reading/writing (13), religion (17), rope use (13), spellcraft (10), swimming (14).

**Spells:** *bless, call upon faith (TOM), cause light wounds, command, protection from good: aid, draw upon unholy might (TOM), hold person (x2), silence 15' radius; cause blindness, death's door. dispel magic; cause insanity, cause serious wounds.*

**Equipment:** *Scale mail +1*, wickedly spiked staff-mace, whip, gold signet ring (100 gp), nose ring (50 gp), electrum tiara (250 gp), belt pouch (28 gp, 34 sp, and a pair of thumbscrews), and shoulder bag with four knives, one dose of mindshadow. eight caltrops, scourge, spare whip, iron spikes and needles, a sponge, 50' of rope, flask of salt water, *potion of extrahealing*, and four packets of *powder of the black veil (TOM)*.

**Physical Description:** Yola is a daunting figure. A tall, sturdily built woman in her early thirties, Yola has pale blue eyes and midnight black hair which she braids and coils around sharp iron needles. She has dark, .swarthy features, and she speaks with an exotic foreign accent. Her stature and demeanor clearly convey a strong, commanding personality, for she carries herself rigidly erect, moves with deliberate purpose, and cows everyone around her with an icy stare.

**Background:** As a child, Yolanda Shamat was sold as a slave to Signer Matanzas, a priest of Loviatar who introduced her to the excruciating rites of the Pain Goddess. Yola rose in Matanzas' household to the position of

chamberlain, and she ran his estate with brutal efficiency. Matanzas was a member of the Anatomical Academy, and the vivisection facilities in his estate were sometimes used as a meeting place for the Academy. Dr. Ellandra Tolbert (see her NPC sheet) attended several of these meetings and met Yola at Matanza's Estate. While their first encounter was less than cordial, it was clear that Ellandra was not intimidated by Yola's demeanor. After only a few visits to the estate, the two began to exchange polite greetings, and then pleasantries. Ellandra persuaded Matanzas to transfer Yola into her service.

Since slavery is not as prevalent in her homeland, Ellandra promptly gave Yola her freedom when she moved north to Waterdeep. In a curious mixture of gratitude, friendship, and respect, the priestess agreed to remain in Ellandra's employ as her "personal assistant." Yola is convinced that her friend's attempts to bring back her dead husband will only result in great sorrow and pain, but as a priestess of Loviatar, she finds some measure of satisfaction at helping in this enterprise. She manages Ellandra's villa just like Matanzas' estate, though the soft northern servants have almost no tolerance to pain and are thus almost pathetically easy to control.

Yolanda is also now an established member of Loviatar's priesthood in Waterdeep, but the city's high priest reminds her too much of Malanzas. She spends as little time in the House of Pain as possible, preferring to assist Ellandra in furthering her research. She has no personal following and no interest in acquiring one.

**Role-Playing Notes:** Yola exudes a palpable aura of harsh, uncompromising severity that is emotionally disturbing to humans in her presence, as well as animals. Babies cry, children flee, dogs bark, and horses rear at her approach.

Anyone visiting Ellandra will first have to contend with Yola, who screens her mistress from needless interruptions. She addresses newcomers with glacial frigidity unless they have a scheduled appointment. Yola also serves as a recruiter for Ellandra, hiring adventuring parties to take care of messy or difficult business (such as acquiring new bodies for Ellandra's secret research).

Yola can be extremely unpleasant if provoked into combat. Her first action will usually be to release her dogs and invoke fear using her *emotion control* (save vs. spells or flee for 8 rounds). If her dogs can shield her from melee, she will first *silence, hold* or *command* spellcasters; otherwise she will wade into battle focusing *cause serious wounds* (see granted power) or *cause insanity* on an opponent. Once her spells have been exhausted, she will fight with her staff-mace (THACO 13, Dmg ld6+3); against unarmored victims, she may use her whip to entangle or disarm (THACO 20 with called shot, Dmg: ld2/l). Yola is too prudent to fight to the death. She will use her *powder of the black veil* and anandful of scattered caltrops to cloak her escape and deter pursuit.

# Appendix 1: Common Spells for Necromancers

These tables list most spells available to necromancer wizards (**boldfaced** spells belong to the school of Necromancy). When randomly rilling a scroll or spell list, determine the spell's level, then use the frequency table, then the appropriate subtable.
***Bold-Italicized*** spells are described in this book. *TOM = Tome of Magic; WH = Complete Wizard's Handbook; SH= Complete Sha'ir's Handbook; FOR = Forgotten Realms Adventures; AA = Arabian Adventures*. The rest are found in the 2nd Edition *Player's Handbook*.

# Introduction

**Using This Book**

There comes a desperate moment when every hero looks skyward in search of divine favor, when he raises his arms to the heavens and calls upon the cruel fates to spare his life.

Who hears him?

*Legends & Lore* is a compendium of possible answers. It provides AD&D© game statistics and role-playing details for dozens of deities from the pantheons of eleven different cultures. Included in this book are sections on the mythoi of the American Indians, Aztecs, Celts, Chinese, Egyptians, Greeks, Indians, Japanese, and Norse peoples. In addition, there are sections detailing the tales of King Arthur and the gods of Fritz Leiber's Nehwon.

*Legends & Lore* also describes a few of the heroes and monsters from the mythology of each of these societies, as well as presenting a brief summary of their cultures. In short, it is a resource book filled with useful information for any Dungeon Master who wishes to enrich his AD&D© game campaign .

As many readers will note, this is not the first edition of *Legends & Lore*. With the publication of the AD&D 2nd Edition game, updating the original volume seemed a must. The *Legends & Lore* revision is much more than a readjustment of game statistics. It is a complete rewrite from top to bottom, with many completely new entries. Even the old entries have been researched again and examined in a fresh light.

The volume has been expanded from 128 to 192 pages. Where the old *Legends & Lore* placed its emphasis on game mechanics and weapons, the new book is concerned with role-playing and using the gods in a fantasy campaign. It also stresses cultural flavor, beginning each section with a short summary describing the society and civilization of the people who worshipped the pantheon in question.

Despite the volume's increased size, the decision to concentrate on role-playing has necessitated some difficult decisions. The entry for each deity has been expanded to at least half a page, emphasizing such things as divine relationships with worshipers and the special duties and powers of the priests who follow the god. No doubt, some readers will take issue the content of some of the entries themselves. In a project of this nature and scope, such disagreements are unavoidable.

When reading and using *Legends & Lore*, it is important to keep its intent and purpose firmly in mind. This book is not, in any way, a judgment on the validity or value of any religion practiced in any part of the world, either currently or in the past. It does not encourage or discourage belief in any of the deities listed herein, nor does the omission of any religion reflect in anyway upon that religion's value or validity. Such judgments have no place in fantasy role-playing.

Nor does *Legends & Lore* make any claim to being a scholarly work. A comprehensive study of the mythology of even one culture would fill many volumes of this size. To complicate matters further, the study of mythology is far from an exact science. For the large part, mythology is based upon an accumulation of stories handed down from generation to generation over a period of thousands of years. As these stories passed from one teller to another, the details were quite naturally altered, either intentionally to fit the current needs of the society, or, less obviously, through inaccurate memorization or shifting cultural biases. Invariably, the end result is that several versions of the same myth exist side by side, presenting the serious student with a tangle of legend, fact, and fiction that cannot be unsnarled.

*Legends & Lore* does not even attempt this formidable task. Instead, it simply selects the version most suited to its purpose and presents it for the Dungeon Master's consideration. In at least one case, that of the American Indian, many of the deities are complete fabrications of the author, designed to capture the spirit of the culture, not to present accurate descriptions of gods once worshipped by true Native Americans .

**Running Divine Beings**

When deities in an AD&D© game deign to notice or intercede in the lives of mortals, it is the Dungeon Master who must play their roles. Running a god is a far greater challenge than assuming the role of a sage, merchant, or talkative monster. The players will pay careful attention to the words and actions of divinities, so the DM must make sure he thoroughly understands his deities and be careful to present them in a special light.

The most important principle in having gods in a fantasy role-playing campaign is to use them judiciously and sparingly. It is certainly possible to run a high-level role-playing game in which gods commonly appear for the purpose of helping player characters. But such a campaign would stretch the game's rules to the point where it could hardly be called an ADVANCED DUNGEONS & DRAGONS© game at all. The AD&D© game is designed for a more mortal level of play. The player characters are heroic not because of the tremendous powers they might or might not accumulate, but because of the terrible risks they take in the face of imminent death. To use a god to save characters from those risks time and time again is to sully the heart of the game.

On the other hand, neither are the gods super-powerful monsters. Most of them are capable of destroying a mortal at the merest whim. To set the characters into direct conflict with a deity is, almost always, to ensure a quick and inescapable death for the individual concerned — not much fun, no matter how one looks at it.

Despite the two precautions above, gods are a vital part of a fantasy world. Since the dawn of history, every culture has strived to explain the mysteries of the world in terms humans can understand, and men have always tried to influence their fates by appealing to the wondrous forces that shaped their lives. In almost every case, these forces have been given names, shapes, and personalities which men could, at least to some small degree,

comprehend. In addition, magical powers have been attributed to these forces. To gain the favor of these supernatural beings, the people who created them began offering them gifts of food, wealth, and even life itself. This is how the gods of the ancients were born, and no fantasy campaign is complete without its own pantheon of such beings.

The nature of a society's gods is both a reflection and a catalyst of its culture. Its pantheon embodies its world-view, greatly influencing what the characters in that society desire, how they behave, and their motivations for undertaking heroic deeds. In practical terms, then, gods should be used not only to provide flavor to a campaign, but to provide guidance and motivations for player characters. Each player character should select a deity from his culture's pantheon, then use that deity's ethos as guide for his character's actions. For example, while a search for wealth and adventure would be sufficient reason for a Norseman worshipping Thor to undertake an unprecedented sea voyage, a mountain of gold would hardly motivate an American Indian venerating the Great Spirit to paddle his canoe across a small lake.

More importantly, character alignment assumes its full importance only when tied to the worship of a deity. When it comes to behaving properly for one's alignment, the fear of evoking divine wrath is a much better persuader than the threat of having one's alignment involuntarily changed.

Of course, the presence of deities has a much greater impact upon the priest class than it does on any other. Priests are expected to actively serve their deities, and each entry contains a special section that delineates exactly what the deity in question expects from his priests. At the same time, the wide range of choices available should make priests a more important part of the campaign, with even greater possibilities for creative innovation and role-playing on the player's behalf.

**Deities and the Campaign**

At first glance, it may prove difficult for the Dungeon Master to choose which gods to make available to his player characters. He should begin by considering the nature of his campaign, then selecting the pantheon (or pantheons) which has the closest flavor. For example, those running Oriental campaigns might consider the Chinese or Japanese pantheons, those running a medieval campaign could select the Arthurian, Celtic, or Norse mythos, and those running campaigns set in classical times might select the Egyptian, Greek, or Indian mythos. The different pantheons included in *Legends & Lore* have been selected to provide a range of possibilities wide enough to cover almost any setting.

Once the DM has selected the pantheon, players should chose their characters' deities from within that pantheon. In certain cases, a DM might want to use two or more pantheons in his campaign. Although this must be handled carefully (for each pantheon comes with its own peculiar world-view that may not be compatible with that of another pantheon), it is a perfectly acceptable decision. Perhaps, as in ancient times, different pantheons are worshipped in different parts of the world. Perhaps two cultures have only recently come into contact with each other, and the natives of each society are still worshipping the gods of their own pantheon. It is even possible to envisage a campaign in which deities from all of the pantheons are worshipped.

The most important thing to remember in selecting a pantheon and using *Legends & Lore* is that it presents resource information, not rules. Although all of the material in this book has been carefully researched, the information presented here should be considered as a collection of guidelines, to be altered and changed according to the specific needs of the campaign.

For the most part, the relationship between the gods in this book and player characters is of the same magnitude as that of men to ants. While the gods are certainly aware of the existence of men, and occasionally find them interesting or annoying, men hardly merit all of their attention. If a man is foolish enough to irritate a god, he will almost certainly be noticed — and then quickly crushed by the deity's supernatural finger.

Unlike the relationship between men and ants, though, there does seem to be something more vibrant in the association between a god and his worshipers. The exact nature of this connection, unfortunately, remains a mystery far beyond the comprehension of mortals and (some say) immortals alike. Suffice it to say that gods need worshipers and will often go to some little trouble to make sure they have a good supply.

Another interesting aspect of the gods is that they cannot be killed by anything save another god of greater stature, or by a god of any stature using an artifact. This means that no mortal may ever kill any god. He might be capable of inflicting enough damage to drive off or dissipate a god, especially if he is wielding an artifact, but the god will always recover from its damage. Needless to say, gods that have been attacked, and especially injured to such an extent, will not be very happy with the responsible mortal. More often than not, they will deal with such fools quickly — and permanently.

Fortunately for such daring and unwise mortals, even finding a god is no easy matter. For the most part, they inhabit the outer planes. They never visit the Prime Material Plane in their true forms, for this plane is the focus of so much divine attention that it is impossible for any deity, no matter how powerful, to enter it personally. Therefore, heroes wishing to confront a true god must first find a way to travel to the outer planes and then track down the god they wish to find. The latter action, of course, is no easy matter, since the gods can move between the planes at will, and often take advantage of this ability as they pursue their individual agendas.

At the DM's discretion, campaigns that utilize only one pantheon may take place in an alternate Prime Material Plane. In this alternate Prime Material Plane, the gods of that pantheon (and that pantheon only) are permitted to visit the plane in their true forms. In some cases, a god's true form is described as being the earth, the sky, the

moon, or some other natural phenomena. In these instances, the form described is in an alternate Prime Material Plane. If the campaign takes place in the true Prime Material Plane, then the description refers simply to the god's essence, which has been projected into the appropriate body in the true Prime Material Plane.

**Avatars**

When a god has business upon the true Prime Material Plane, he must send an avatar. An avatar is simply a manifestation of the god upon the Prime Material Plane. This manifestation is not nearly as powerful as the god himself, and is merely a projection of the god's power to the Prime Material Plane. Always remember, there is great difference between the god and the avatar. The avatar embodies just a small portion of the god's power.

Unlike the god himself, an avatar can be destroyed, which is never looked upon kindly by the true god, and often results in some sort of divine retribution. Although avatars may take many different forms, the number that can be created and the frequency with which they may be replaced depends upon the god's stature (explained below). Often, avatars possess magic items of incredible power. Unless stated otherwise, these items always teleport back to the god when the avatar is destroyed.

Avatars are unaffected by the restrictions which apply to normal characters. For example, they often have attribute scores over 18, magic resistance, can be of any class without regard to alignment, dual- or multi-class restrictions, and can even possess a character class while in animal form. They also receive a damage (but not THAC0) bonus for strengths of over 18. In order to reflect their supernatural natures, however, their statistics are presented more in a monster type format than in that of a character. Their hit points are always calculated at 8 points per hit die, and they use the THAC0, saving throw, and other statistical tables for monsters. Always use the listed THAC0 for the avatar; they do not receive any THAC0 bonuses for Strength or magical weapons.

Many avatars use weapons in combat. When they have multiple attacks with the same weapon, the weapon's damage is listed only once, followed by any magical bonus it may receive, the weapon's name (in parentheses), and then the avatar's strength bonus. If multiple weapons are employed, the word "weapon" will appear and if attacks are made unarmed, then no parenthetical information will appear. For example, the damage statistic of an avatar wielding a sword +3 with a Strength of 19 would look this way:

**Dmg 1d8 + 3 (sword) + 7.**

Most avatars have the ability to move only over land. However, some can also fly, swim, or burrow, often at the rate that the avatar moves over land. In these cases, the total movement mode is indicated by an abbreviation following the movement rate, like this: MV 15 sw. If the fly or swimming rate is different, the abbreviation will be preceded by the appropriate number. In cases of flying avatars, they are always assumed to have a maneuverability class A.

Often, avatars have special abilities in addition to their normal class abilities. These are described in the individual entries under "Special Att/Def".

Many avatars have the ability to cast spells. Such avatars a cast spells while in any form, even that of an animal. they do not need to make any gestures, speak any words, or use any material components. When they decide to cast a spell, it simply goes off.

The spheres or schools to which the avatar has access are listed in his description. An avatar always has access to any spell in the school or sphere, providing it is of the appropriate level for level of expertise. In addition, he may only cast the same number of spells of a given level that a wizard or priest or comparable rank would be able to cast. For example, an avatar with the abilities of a 12th level wizard access to the illusion/phantasm school of magic could cast four illusion/phantasm spells from each level up to five, and any one phantasm spell of level six.

**Divine Abilities**

The reader will note that there are no statistics for the powers and abilities of true gods listed anywhere in this book. This is because the power of the gods is such that it is impossible to quantify it. Statistics quite simply become meaningless when dealing with the gods.

Nevertheless, some gods are more powerful than others. In *Legends & Lore*, the gods are divided into several different statures: Greater, Intermediate, Lesser, and Demigods. There also a separate class for heroes. These legendary men and women are of such renown that they deserved inclusion in this volume. Each class possesses certain abilities and powers, which are outlined below.

**All Gods**

All gods, from Lesser to Demi-, have the powers described this section. Although these are powerful abilities, they are taken for granted by the deities in this book.

**Immortality:** All gods are immortal. The only way for a god to die is to be destroyed by a god of higher statue in magical or physical combat. Otherwise, any god that suffers an attack that should destroy it simply disperses, then reassembles later (roll percentile dice to determine number of days). So, for example, a god which is seemingly torn apart by a powerful artifact would simply be dispersed, only to reassemble later.

**Teleport:** All gods possess the innate ability to instantly teleport to any point on the same plane. They can do this at will and without any chance of error.

**Initiative:** When dealing with mortals, all gods automatically receive the initiative. Of course, they can choose to simply wait and see what the mortals opt to do, but they may always act first if they desire.

**Comprehend Languages:** All gods understand and can speak any language. It is assumed that this includes written and spoken languages as well as other, more unusual, forms of communication like the light and color based dialect of the will o'wisp.

**Magic Use:** All gods may use any spell of any level. This includes the spells of priests or wizards and does not require the use of spell books, prayers, or material, verbal, and somatic components. In short, invoking such powers requires the slightest act of will on the part of these incredible beings.

**Greater Gods**

In addition to the abilities above, Greater gods can do practically anything. In most cases, they are the gods who created the rest of the pantheon. Some of their additional abilities include.

**Shapeshifting:** Greater gods can transform themselves into any object, animate or inanimate, of any size. In some cases, beings of this stature have been known to assume planetary proportions.

**Magic Resistance:** Greater gods are 100% resistant to mortal magics, 75% resistant to the magic of gods of lesser ranks, and 50% resistant to the spells of other greater gods.

**Saving Throws:** All greater gods are assumed to automatically make all saving throws required of them. This is a reflection of their great abilities, mental powers, and physical stamina .

**Planar Travel:** Just as they can teleport across space without error, so too can they travel between the various planes of existence at will. As mentioned earlier, however, even these powerful beings cannot enter the true Prime Material Plane.

**Sensing Ability:** These beings are truly omniscient. That is, they know what is happening everywhere at all times. In many cases, they can accurately predict the precise actions of mortals and other gods based on their vast knowledge.

**Creation:** Greater Gods can create any object, animate or inanimate, they can think of. This process is draining, however, since they are converting their own energy stores into physical objects. Therefore, the god must rest for one turn per ton of mass he or she wishes to manifest. Thus, the creation of a 10 ton stone statue would require that the god rest for 10 turns (100 minutes) afterward.

**Life and Death:** Greater gods can kill any living mortal creature with but a thought. Likewise, they can bestow life upon any slain mortal being anywhere. Of course, another greater god can reverse effect immediately if so desired.

**Communication:** Greater gods can speak directly and secretly to any being across any void and through any physical or mystical barrier. This power transcends the bounds of space and planes, but not (as a rule) time.

**Multi-tasks:** Greater gods can perform any number of tasks at once. Of course, natural limitations based on their current physical form may apply, but there is never a penalty on their actions due to complexity.

**Avatars:** Greater gods can employ up to ten avatars at a time, moving them between planes at will. If one is destroyed, it requires one day to make another.

**Granted Abilities:** A greater god can grant any power or spell of any level to his or her priests. It is through this ability that deities give priests and paladins their magical powers.

**Intermediate Gods**

Intermediate gods wield a great deal of power, but are by no means as powerful as greater gods. One important difference is that they lack the vast creative powers of greater gods, and are generally not the creators of their pantheons (although they may be the fathers or mothers of other gods). Their powers include:

**Shapeshifting:** Intermediate gods can change into any object, animate or inanimate. The limitations on their powers prevent the object from being bigger than the largest natural or enchanted item of its size already in existence. Thus, an intermediate god could assume the shape of a huge bull elephant, but not one which is larger than the largest ones found in nature.

**Magic Resistance:** Intermediate gods are 95% resistant to mortal magic, 70% to magic of gods of lesser stature, 50% resistant to magic of gods of same stature, and 25 % resistant to magic of gods of greater stature.

**Saving Throws:** Intermediate gods have a saving throw of "2" in all categories. Thus, they will only fail on a natural roll of "1"

**Planar Travel:** Intermediate gods have the same ability to travel between planes as greater gods. They are still unable to enter the Prime Material Plane, but otherwise have no chance of error.

**Sensing Ability:** Intermediate gods always know what is happening within 100 miles of their current position. In addition, they can extend their senses and learn what is happening within 100 miles of any worshiper of any god in their pantheon, or any holy object of any god in their pantheon.

**Creation:** While they cannot create objects out of nothing, intermediate gods can summon or create a duplicate of any object they hold, providing suitable materials are available on the same plane. This is a tiring process, however, and they must rest one turn for every 100 pounds of the object's weight .

**Life and Death:** Intermediate gods, while unable to directly cause the death of a living creature, can arrange accidents that can will kill any mortal being anywhere. They can raise any previously living being from the dead at will, regardless of the time that has passed since that being died or the current location or condition of the body.

**Communication:** Intermediate gods can speak directly and secretly to any being across any void or through any physical barrier. In this regard, their powers are the equal of the greater gods.

**Multi-tasks:** Intermediate gods can perform up to 100 tasks at once without suffering any penalties of any sort. Obviously, there may be physical limitations imposed on this based on the current physical form of the deity.

**Avatars:** Intermediate gods can use up to five avatars at a time, moving them between planes at will. If one is destroyed, the deity requires one week to make another.

**Granted Abilities:** Intermediate gods can grant any power that does not exceed their own powers, or spell of any level, to priests. Like the greater gods, they use this power to give spells to their priests.

**Lesser Gods**

Lesser gods often serve other gods in the capacity of helpers or domestics. Their powers are mighty, but in no way equal those of greater or intermediate gods.

**Shapeshifting:** Lesser gods can change into any animate object they desire. Their power is restricted, however, so that their new form will be an average example of the creature. Thus, if a lesser god wished to become a stallion, it would look much like any other stallion.

**Magic Resistance:** Lesser gods are 90% resistant to mortal magic, 60% resistant to magic wielded by gods of lesser ranks, 45% resistant to magic of gods of same stature, and 20% resistant to magic of gods of higher stature.

**Saving Throws:** Lesser gods have a saving throw of "3" in all categories. Thus they will only fail their saves on natural rolls of "1" or "2".

**Planar Travel:** Like the greater and intermediate gods, lesser gods can travel between planes at will. No physical or material barrier can hinder such transit and they have no chance of error.

**Sensing Ability:** Lesser gods always know what is happening within 10 miles of themselves. Like intermediate gods, they can extend their senses to include knowledge of all that is transpiring within 10 miles of any of their worshipers or any of their holy objects.

**Creation:** Lesser gods cannot create or duplicate any object. But they know where to find any object that they desire that already exists. If they desire an object which does not exist, they can sense the location of those who can manufacture it.

**Life and Death:** Lesser gods share the ability to raise any previously living mortal being from the dead. They can do this at will and across any distance or barrier no matter what the current condition of the body.

**Communication:** Lesser gods can communicate with their worshipers only through dreams or by means of an avatar. In some cases, they create special holy objects which allow them to communicate directly with their followers.

**Multi-tasks:** Lesser gods can perform up to five tasks at once without penalties of any sort. Obviously, in some forms they may encounter physical limitations to the number of actions which can be attempted.

**Avatars:** Lesser gods can only use two avatars at a time, moving them through planes at will. If one is destroyed, it requires one month to make another.

**Granted Abilities:** Lesser gods can grant their worshippers any power that does not exceed their own powers, or spell of up to 6th level.

**Demigods**

Demigods are the least powerful deities of any pantheon. Frequently, they are mortals who have earned divine status through great deeds. They have the following powers:

**Magic Resistance:** Demigods are 70% resistant to mortal magic, 40% resistant to magic of other demigods, and 20% resistant to magic of gods of greater stature.

**Saving Throws:** Demigods have a base saving throw of "4" in all categories. Thus, they fail their saves only on a natural roll of "3" or less.

**Planar Travel:** Unlike other gods, demigods can travel between planes only via magic spells and devices. Because of this limitation, they tend to remain on one plane more than any of the other types of gods.

**Sensing Ability:** Demigods have the ability to know what is happening within one mile of themselves or any of their own worshipers.

**Communication:** Demigods can speak only through their avatars. In rare instances, they have fashioned holy objects which also allow them to converse with their followers directly.

**Multi-tasks:** Demigods can perform any two tasks at once without penalty. In rare cases, the physical form they select may limit this further, but that is seldom the case.

**Avatars:** Most demigods can use but one avatar at a time. If this avatar is destroyed, they require one full year to fashion another. Many demigods, however, are wholly unable to employ avatars.

**Granted Abilities:** Demigods can grant any power or spell of up to 5th level to their worshippers and priests.

**Heroes**

Heroes are legendary mortals who have performed such great feats that they become part of a culture's mythos. They have no godlike powers, although they are generally well-known to the gods and may have frequent dealings with immortals. Their only powers are that they often have very high attribute scores, maximum hit points, and are not subject to dual- or multi-class restrictions.

**Divine Ascension**

As mentioned in the previous section, it is possible for a hero to become a demigod. In order for this to happen, the following conditions must be met:

The hero must have advanced to an experience level at least twice as high as the average experience level in the campaign. No matter what the average experience level is in a campaign, however, the hero must be at least 15th level.

The hero must have at least one Attribute score that has been raised to 19 or above.

The hero must have a charisma of 18, with a body of at least two hundred followers that regard him as virtually a deity already.

The hero must be a true and faithful follower of his alignment, having committed no more than one incongruous act during his lifetime.

If all of these conditions are met, the DM may, at his option, elect to invest the character with demigod status. Characters granted such status become part of the culture's pantheon. If they are player characters, they are removed from play and treated as a demigod from that point on.

**Priests and Deities**

As one might expect, the relationship between a priest and his god is of the utmost importance. It is through his deity's favor that a priest receives his special powers and the ability to cast spells.

These blessings have their price, however. In return for this benison, most gods expect a great deal of service from their priests. First and foremost among a priest's many obligations is the duty to work toward his deity's goals. For example, if a priest's deity is dedicated to peace, he must always strive to promote peace and harmony.

Second, he must behave in an manner exemplary of his faith's teachings. Even when conducting everyday business, the priest must stand out as a shining example of the values his god advocates.

Another important duty is the obligation to expand the influence of his faith. No matter where a priest is, he must miss no opportunity to explain the teachings of his religion to the uninitiated, taking special care to emphasize the rewards worshipping his deity can bestow. In accordance with this duty, the priest must always conduct himself in a manner which reflects properly upon his deity.

The Dungeon Master must also be sure that the priest has a good sense of his position within his community and religious hierarchy. In most societies, fellows of the clergy are respected (or sometimes feared) members of society. Priests who engage in adventuring are usually considered unorthodox and tolerated only with reluctance. As they advance in level and importance to the order, senior members will no doubt exert increasing pressure on the individual to settle down and apply himself to a more sedentary lifestyle. Of course, this is probably not what the deity himself wants from the priest, and the conflict may lead to many a minor controversy.

Even if he is an "adventuring cleric", a priest is expected to support his order. Often, this takes the form of giving part (or all) of his treasure to the order. But his superiors may also ask him to undertake some dangerous missions on the order's behalf .

Depending upon the religion, and the DM's decision, priests are sometimes required to perform certain rituals or services. Many of these are listed under "Duties of the Priesthood" in the individual entries, but the DM should feel free to replace or modify the listed responsibilities if he desires.

Priests may occasionally fall away from the worship of their deities. This always results in a loss of powers and spells, at least temporarily. If the priest transfers his worship to another deity, and has been a worthy follower of the first, there is a 75% chance that the second deity will accept the character as a priest. Such a transfer is always accompanied by a loss of enough experience points to place the priest in the midrange of the level below his current level.

Of course, there are many ways for priests to anger their gods other than a change of loyalties. Behavior violations of alignment codes are always considered at least minor transgressions, usually punished by the temporary loss of low level spells. Minor transgressions can usually be corrected by an act of penance, such as fasting, meditation, or the gift of minor amount of money to the order.

Neglecting to perform the proper rituals or failing to strive toward fulfilling the deity's goals are examples of moderate transgressions. Such infractions are punished by the loss of granted powers and high-level spells, and can only be rectified through major penance. In addition to a period of fasting or meditation, the priest must give at least one moderately powerful magic item to the order (never to be used by again), and/or undertake some dangerous quest on the deity's behalf.

Any priest who commits heresy, a second moderate transgression, or who willfully disobeys or ignores his deity, has committed a major transgression. Such transgressions are always punished by an immediate and total

loss of all priestly powers and spells. If the deity is a neutral or evil one and the offense serious enough, major transgressions may even be punished by death (in whatever form the god has the power to arrange). Penance, if the deity allows it, must be accompanied by a complete sacrifice of all possessions (save one set of normal clothing and one non-magical weapon). Then the errant priest must undertake a seemingly impossible quest involving a high risk of death, donating all treasure recovered, including magic items, to the deity's order.

Fortunately, the path for most priests is a narrow but well-marked one. For a true and faithful priest, the commission of even a minor transgression should be a rare thing. By and large, the majority of priests should never have to make penance for anything worse than a minor transgression.

**Turning Undead**

The ability to drive away or destroy undead is a major advantage shared by the worshippers of many deities. In the AD&D© game, there are two versions of this power. One is available to priests of good alignment and the other to priests of evil alignment. Characters who are neutral (whether lawful, chaotic, or true neutral) are usually unable to employ turning powers.

The good version of this power is described briefly on page 38 of the Players' Handbook and in more detail on pages 67 and 68 of the Dungeon Master's Guide. The evil version of this power is defined on page 68 of the Dungeon Master's Guide. The latter power is refereed to as "commanding undead" in this book.

**Non-Human Followers**

*Legends & Lore* draws upon history for its gods and heroes. As such, the deities in its pages reflect only the human experience. If the AD&D game were purely historical in content, this would present no problem. However, the AD&D realm is more than that. It includes races such as elves who never truly graced our own world.

When setting up a campaign and deciding which of the pantheons presented in this book to use, remember to think of the non-humans in your game world. Be sure that deities are set up as the patrons of elves and others for dwarves, gnomes, halflings, and so forth. In many cases, the way to do this is to adapt one (or more) of the gods listed in *Legends & Lore*. When selecting gods for non-humans or demi-humans to worship, be sure to keep in mind ideals of their race. Elves, for example, might find the Norse god Baldur to be worthy of respect because of his inherent beauty and charisma. Dwarves, on the other hand, might not be too impressed with such a figure — but Thor, now there's a god a dwarf can give respect to.

**Explanatory Notes**

In order to provide as much information in as little space as possible, we have followed a strict format in *Legends & Lore*. Each entry will be in a standardized style, the major elements of which are:

**Myths Section Introduction**

The introduction to each section includes a short summary of the culture that created the pantheon in question. This background information will prove helpful in placing the gods of that mythos into context, and in adding flavor to campaigns using those gods. If the Dungeon Master intends to set his campaign in one of these historical periods, however, he would do well to take a trip to his local library or bookstore in order to do some further reading. It is impossible to provide all the detail needed to flesh out such a campaign in just a few pages.

Following the historical summaries, is a section of new magic items and spells which have been designed especially for campaigns utilizing deities from that mythos. In some cases, new character classes have been added or substituted to this section. As these new spells, items, and character classes have been designed especially for that mythos, we do not recommend using them outside of campaigns utilizing the gods of that mythos.

The introduction also includes a map of some structures that might be encountered in that culture, such as a temple, farm, or castle. These are included as examples of architecture that will add flavor to campaigns in those mythos.

**Personal Entries**

After the introduction comes the entries describing individual gods, heroes, and monsters. Each entry describing a deity is arranged in a similar order:

- Deity name (and stature)
- Deity description
- Role-playing information
- Avatar description
- Duties of the Priesthood

Entries describing heroes and monsters are similar to those describing the deities, making use of statistical abbreviations to present game information in condensed form. However, the text of hero and monster entries tends to be shorter, only presenting a summary of the hero or monster's history and abilities.

**Abbreviations**

The following abbreviations are used in *Legends & Lore*. **Alignment abbreviations:** lg (lawful good); ng (neutral good); cg (chaotic good); ln (lawful neutral); cn (chaotic neutral); le (lawful evil); ne (neutral evil); ce (chaotic evil); g (good); e (evil); c (chaotic); n (true neutral); l (lawful).

Deities' statistics: All deities will have their AD&D© game statistics presented in the following format:

**Statistics:** AL lg; WAL any g; AoC sun; SY ball of light.

AL = the god's alignment
WAL = alignments of those worshipping the god
AoC = area of control; in other words, the aspects of nature over which the deity exerts influence
SY = a short description of the symbol used by the deity's worshipers

**Avatar's statistics:** All of the avatars presented in *Legends & Lore* will have their AD&D game information presented in the following format:

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 f | SZ 6' | MR 15% |
| AC -2 | HD 16 | HP 128 |
| #AT 2 | THAC0 3 | Dmg 1d8 (sword) +4 |

Str = strength
Dex = dexterity
Con = constitution
Int = intelligence
Wis = wisdom
Cha = charisma
AC = armor class
HD = hit dice
SZ = size (Note that sizes are given in feet).
MR = magic resistance
THAC0 = to hit armor class 0
HP = hit points
MV = movement rate; f = flying rate, sw = swimming rate, br = burrowing
#AT = number of attacks per round
Dmg = typical damage done per attack (see "Avatars above)

Following the avatar's statistics will be a section which detail its special attacks or defenses.

**Requirements of the Priesthood**

Lastly, we will present information for the deity's priests as well. All of these entries will be formatted as follows:

**Requirements:** AB standard; AL lg; WP mace and staff; AR a; SP all, healing, divination; PW 1) *heal*, 10) *raise dead*; TU turn.

AB = attribute scores required to become a priest of the deity's order. "Standard" means that the standard requirements listed in the AD&D© 2nd Edition Player's Handbook apply.
AL = acceptable alignments for priests of this deity
WP = weapons priests of this faith are allowed to use
AR = armor restrictions for priests of this faith. The following codes may appear:

a (any armor allowed)
b (May only wear nonmetal armor)
c (May only wear metal armor)
d (May not wear any magical armor)
e (May only wear magical armor)
f (May only wear armor made by priests of the same faith)
g (May not wear any armor at all)

SP = spheres of clerical spells to which the deity grants access for his or her priests. A sphere followed by a "*" indicates only minor access is allowed to that sphere.

PW = special powers commonly granted to priests by the deity. A number followed before a power indicates that the listed power is granted when the priest reaches that level. Unless otherwise indicated, these powers may be used once per day. For example, "10) *raise dead*" means that at tenth level, the priest is granted the ability to raise dead once per day.
TU = The ability to **turn** or **command** undead.

*Legends & Lore* also gives the statistics for many heroes and monsters specific to a given mythology. Heroes are presented in a format similar to that used for avatars. Although the order of the statistics listed for them is different from that used for avatars, the abbreviations are the same and should cause no confusion in the reader's mind.

Monster statistics are presented, like heroes, in a format similar to that used for avatars. However, the following entries appear only for monsters:
No. = Number appearing in a typical encounter.
ML = Morale level of the monster.
XP = Experience point award for defeating the monster.

# American Indian Mythology

In ancient times, North America was inhabited by a vast number of Indian tribes. In the limited space available, it would be difficult to merely describe them all, much less discuss the differences between the deities worshipped by each tribe.

The mythologies of North America are as varied and numerous as the different Indian nations that inhabited the land. From the Iroquois who inhabited the lush woodlands of what is now the Northeast United States to the Apache who lived in the deserts of northern Mexico, the people of each tribe had their own peculiar interpretation of the supernatural world and their place in it. Any attempt to incorporate all of the deities worshipped by these various tribes as part of a single pantheon is destined to be full of unexplained gaps and conflicting detail.

Fortunately, there are many analogies between tribes, even those located on opposite ends of the continent. For the purposes of a campaign setting, we can use these analogies to draw some rather broad and coarse generalizations that will allow us to create a unified and consistent pantheon where, in historical reality, one did not exist.

First, no matter where they made their homes, the Indians of North America lived close to nature — probably closer than any other civilization (or, more accurately, group of civilizations) in any other part of the world during any period in history. Many tribes lived in temporary or portable housing such as wigwams or teepees, and spent their lives following the game herds upon which their existence depended. Other tribes lived in more permanent hogans and adobe houses, feeding themselves through crude farming and by gathering nature's bounty.

No matter how they provided for their needs, the Indians lived at nature's mercy. The game herds might roam away and hunting would become difficult, or locusts might come and destroy an entire crop of maize. It should not be surprising that in trying to understand the mysterious forces that meant feast or famine for them, the Indians concluded that nature was full of unseen spirits that sometimes chose to aid and sometimes to ravage their lives.

The Indian world was inhabited not only by men, but by an unseen magical force which abides in every aspect of nature — stones, plants, animals, even themselves. Often, this magical force took the form of spirits which were associated with certain animals or plants. Therefore, most Indian deities are associated with some form of nature, such as an animal, a manlike being or even a natural force such as a season or an aspect of weather. In many tribes, children were named in honor of a particular spirit, in the belief or hope that the spirit would return the honor by becoming the child's supernatural guardian.

The Indian view of the supernatural was not confined to their own world. Most tribes believed in an Upper World, where the greatest spirits abided — including those that had preceded the creation of the physical world. There was also a Lower World, where (in many cases) the essence of the dead spent eternity. In some cases, it was believed that the Upper World contained the images which descended to the physical world to become men, and in other instances, the Indians believed that the first men crawled out of deep caves leading to the Lower World.

Whether they believed men had come from above, below, or had simply existed for all time, many Indians believed in a powerful deity called anything from the Great Spirit to Father the Sky, the Master of Life, the Great Mystery, or Wakonda. The Great Spirit is foremost among the spirits, and is associated with great power and beneficence.

The Great Spirit is believed to reside in the Upper World, which is normally unreachable by mortal men. Therefore, birds and other winged creatures are often used as intermediaries to this realm. Similarly, snakes and crawling things are often used as messengers to the Lower World, which is likewise unreachable except through death.

The Indians share no commonly-held belief regarding the creation of the world, and many tribes simply view the world as having always existed. However, among the tribes that do have creation myths, the world is largely assumed to have been drawn from beneath the water by some powerful spirit — though this spirit is not always thought to be the Great Spirit.

Deities from the Indian pantheon are most commonly found in the Upper World and Lower World. These demiplanes are located in the Outer Planes, with direct access to the Happy Hunting Grounds where Indian deities spend much of their time. There are many gates connecting the Upper and Lower Worlds with that portion of the Prime Material Plane inhabited by the Indian tribes.

**New Spells**

**Spirit Animal Form** (Alteration)
Third Level Priest

Sphere: Animal
Range: Touch
Components: V, S

Duration: 1d10 days
Casting Time: 1 hour
Area of Effect: 1 person
Saving Throw: None

This spell is most commonly used on warriors and rangers in the pursuit of some heroic deed. *Spirit animal* form can be cast upon the self or another willing person. After entering a trance which lasts at least one hour, the receiver changes into a typical member of his spirit animal's species. For all intents and purposes, he becomes that animal, receiving all of its normal attributes and abilities, save that he retains his own intellect. He uses the spirit animal's combat tables, but uses the saving throw tables appropriate to his human form. Everything he was wearing or carrying becomes part of the animal form, and is still with him when he returns to normal. The spell lasts 1d10 days, and neither the caster nor the receiver has any control over when it will expire.

This spell may not be used to assume the form of supernatural or supernaturally large animals, such as thunder birds. If such an attempt is made, the receiver assumes the form of a similar type of creature — in the case of thunder birds, for example, an eagle.

**Bad Medicine (Enchantment/Charm)**
Fourth Level Priest

Sphere: Charm
Range: Line of Sight
Components: V, S, M
Duration: Special
Casting Time: 2
Area of Effect: Individual (or village)
Saving Throw: Negates

*Bad medicine* is a powerful spell most often used by irate priests to avenge themselves on those who have angered them. Bad medicine modifies the target's THAC0, saving throws, morale, and damage by -2. It is usually cast upon a single individual, but a priest of 16th level or higher can cast this spell upon as many as 300 beings (animal or human), as long as they are gathered in an area of an acre or less. The character with the lowest saving throw score saves for the entire village.

To cancel *bad medicine*, a priest of equal or greater level than the original caster must cast the reverse of the spell upon the victim(s). If this is not possible, the spell can also be removed by remove curse or wish spell.

If not cast in order to cancel *bad medicine*, the spell's reverse, *good medicine*, is not nearly as powerful as its vengeful form. It raises the THAC0, saving throws, morale, and damage of the target by +1 for 1d10 rounds. *Good medicine* can be cast on an entire village, but only if all occupants are gathered together in an area no greater than 100' in diameter.

The material components of either spell are a handful of herbs common to the area, the claw of an eagle (for *bad medicine*), the feather of an eagle (for *good medicine*), and the venom of a poisonous snake.

**New Magic Items**
**Sacred Bundle**

A *sacred bundle* is a collection of 5-10 totemic items placed together in a pouch for the purpose of imbuing magical protection on the wearer. To create a *sacred bundle*, a warrior: enters a trance (usually with his medicine man's help) and contacts his guardian spirit. He then asks for the spirit's help in creating this magical talisman. After carefully considering the warrior's personality and nature, the spirit selects 4-9 (1d6 +3) items which the warrior must collect. Usually, several of these items will be difficult or dangerous to procure, such as a bear's claw, a giant snake's rattle, or a feather from the nest of an eagle.

After he has collected these items, the warrior goes to his tribe's medicine man and asks for his help in mystically binding the materials together. The medicine man then asks the warrior to gather one last rare item. Almost always, the medicine man chooses an item which he needs in performing his shamanistic duties, and when the warrior procures it, takes part of the item for his own use.

Once all the items are assembled, the medicine man performs a ceremony binding them into a *sacred bundle*, and from that point forward the warrior wears the *bundle* at all: times. The *sacred bundle* bestows the following benefits upon the owner: + 2 on all saving throws, the warrior is only surprised on a natural roll of 1, his unarmored AC becomes 2, and he subtracts one point from each die of damage when he is hit by an enemy's weapons.

If the *sacred bundle* is ever removed from the warrior's body, all of its benefits permanently vanish, and he can never get another. A *sacred bundle* never benefits anybody but the warrior who made it.

**Great Spirit (greater god)**

The Great Spirit dwells in the Upper World and is the most powerful of all North American Indian deities. Though it would be incorrect to say that he is the leader or ruler of the pantheon, he is the master of light and the breath of life. Without him, no living thing would inhabit the physical world.

The Great Spirit is known by a variety of names, including Master of Life, Father the Sky, Great Mystery, Wakonda, Tirawa, Arch of Heaven, and the Kitcki Manitou. In his primary form, he appears to be a disc of white light more brilliant than the sun, and mortals daring to look upon him are always blinded (no saving throw possible). Only another greater god can restore the eyesight of a mortal so marked.

The Great Spirit has all of the powers of a normal greater god. In addition, he controls the weather of the physical world, can assume the shape of any animal in nature (though the animal always appears to be made of light), and can animate and breathe life into any substance — be it rock, wood, or dead flesh.

Although the Great Spirit is aware of all things, he rarely intervenes in the affairs of men. The only exception to this is when an entire tribe or nation is threatened by some form of supernatural evil. On such occasions, he usually attempts to thwart the evil by manifesting himself in the form of some awe-inspiring animal and warning the offenders away. He only resorts to the taking of life as a last resort.

**Role-playing Notes:** As discussed above, the great spirit seldom answers any mortal summons, though he is always aware of everything happening in the physical world. When he intercedes in human affairs, it will always be of his own accord and on the behalf of a large number of people of good alignment .

Very occasionally, the Great Spirit will send an omen to a medicine man worshipping him. This omen always takes the form of bright light, and usually relies on color to convey the deity's message. For example, if the Great Spirit is pleased with the cleric's efforts, he might have a luminous white owl land on the man's shoulder. If angered by a betrayal of faith, he might send a glowing red eagle to attack the medicine man.

When he finds it necessary to discipline a priest, the Great Spirit's punishments generally involve light in some manner. A minor punishment might deprive the medicine man of the ability to see colors, while a more severe punishment could be total blindness. In extreme cases, such as when a medicine man betrays his own people and the Great Spirit, the offender might even be struck dead by a bolt of lightning.

**Statistics:** AL lg; WAL any good; AoC life, nature, creation, and light ; SY shining globe.

**Great Spirit's Avatar (Ranger 14, Druid 18)**

Most often, the Great Spirit's avatar appears in the form a white, luminous bear, although it can assume the shape any animal in nature. The avatar always receives the benefit of any special abilities of the animal whose shape it assumes.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 15 | Wis 18 | Cha 16 |
| MV 20 f, sw | SZ 10' + | MR 55% |
| AC -3 | HD 18 | HP 144 |
| #AT 3 | THAC0 3 | Dmg 1d8/1d8/1d12 +7 |

**Special Att/Def**: The statistics above are for the favorite form: a bear. The avatar retains the bear's ability to hug its victims for 2d4 + 7 additional damage on a to-hit of 18 or better. Even though the avatar has the form of a k it can cast spells as an 18th level Druid and all spells in All, Animal, Elemental, Plant, and Weather spheres available to it.

**Duties of the Priesthood**

A medicine man who worships the Great Spirit is venerating the most powerful of Indian spirits. Although he has access to great powers, the Great Spirit seldom grants powers to him easily or rapidly. Priests must lead lives of exemplary virtue.

They must always strive to drive evil from the world through their own kindness and wisdom, relying upon force only when the lives of their fellows are in danger. Clerics the Great Spirit may never live with evil or warlike tribes, unless they are doing so in order to change the wicked ways of such people.

As a priest of the Great Spirit, a medicine man must constantly strive to promote life and nature. He must subsist on a vegetarian diet and may never eat flesh, even in the most desperate circumstances. Because the Great Spirit remains so aloof, his clerics preside over very few ceremonies, and beseech his aid in the most dire of circumstances.

**Requirements:** AB standard; AL lg; WP sling & weapons; AR b; SP all, animal, elemental, healing, protection, sun, & weather; PW 5) *Shape Change* (a forms only), 7) *Control Weather* (1 mile radius), 10) *Raise Dead* (once per week); TU nil.

**Sun (intermediate god)**

Sun, sometimes called Shakuru, is charged by the Great Spirit with casting warmth and light over the world. Aside from the Great Spirit himself, Sun is the most powerful of the dominant Indian spirits. Although he serves the Great Spirit's will, he is not subordinate to the Great Spirit in any servile sense, for he is free to discharge his duty as he pleases.

On most days, Sun is clearly visible in his true form, a shimmering disc of light. He is said to walk from one side of the world to the other, spreading warmth and light over the land as he goes. Sun has the power to create warmth and light wherever he can see, though he is often inconsistent in his use of this power.

**Role-playing Notes:** Unlike the Great Spirit, Sun is heavily involved in the affairs of men. As he walks across the sky each day, he cannot help but see what the tribes are doing. When he is pleased with their actions, he shines down upon their lands brightly and keeps them warm. When he is displeased, however, he does not show himself and the day is dim and chilly. If angered, he shines down with great intensity, making men hot and tired and withering their plants.

Unfortunately, Sun has a mercurial disposition, so it is difficult to determine what will make him angry and what will not. In addition, he is not one given to gentle messages. Often, the first sign of Sun's anger may be a severe sunburn suffered during the dead of night, or sudden and severe heat exhaustion. Sun rarely punishes fallen priests with death, however. If a priest offends him too deeply, Sun simply severs the spiritual connection which gave the medicine man his powers.

**Statistics:** AL cn; WAL any but evil; AoC light, heat; SY sun.

**Sun's Avatar (Fighter 14, Illusionist 14)**

Sun's avatar takes the form of a yellow-skinned, yellow-haired warrior of great physical strength and attractiveness. He can call upon the Illusion/Enchantment school of magic for his spells.

| | | |
|---|---|---|
| Str 20 | Dex 20 | Con 18 |
| Int 18 | Wis 16 | Cha 18 |
| MV 15 f | SZ 6' | MR 35% |
| AC 0 | HD 14 | HP 126 |
| #AT 2 | THAC0 7 | Dmg 1d8/1d8 +8 |

**Special Att/Def:** when someone looks at Sun's avatar with harmful intent, the attacker must save versus spells or be permanently blinded. Once per round, he can throw a fireball up to 500 yards without suffering penalty for range. This fireball does 2d10 damage for each 100 yards it travels. Sun's avatar can fly at the same speed he moves on ground.

**Duties of the Priesthood**

Medicine men devoted to Sun spend the majority of their time trying to appease their spirit. They are constantly sending messengers, in the form of powerful birds, to the Upper World with messages of supplication. When Sun shines too brightly for too long, they must suffer endless hours of rigorous penance in the hope of salving his anger. If Sun chooses not to shine, they must often spend days on end begging him to show himself.

One of the most important duties of a medicine man devoted to Sun is greeting him each morning. The surest way for a priest to incur Sun's wrath is to sleep past dawn.

Another important ceremony is the Sun Dance held each spring. The medicine man must spend an entire week dancing. It is during this time that young warriors hoping for Sun's favor must endure a test of pain to prove their worthiness.

In each tribe, the most experienced medicine man worshipping Sun is granted the power to call and command birds of prey, which serve as messengers to the Upper World.

**Statistics:** AB Standard; AL any g or n; WP bow, tomahawk (hand axe), or club; AR b; SP sun, all, healing', and protection; PW special (see above); TU turn.

**Moon (intermediate god)**

Moon, also known as Pah, is the sister of Sun. Her duty is to light the night, which she fulfills with regular but varying success. Her appearance is constantly changing, though she most often appears as a shimmering disk of silver. Hers is the power to light the dark, and to hold at bay the dangerous things which lurk in the night.

**Role-playing Notes:** Moon is particularly sympathetic to women, and is 10% more likely to answer a plea for help if it comes from a woman. Good omens from Moon generally take the form of a visit from her avatar, but she expresses her displeasure only by her absence. Moon rarely punishes individuals who have angered her, she simply severs their spiritual connection with her instead.

**Statistics:** AL lg; WAL any good; AoC light, protection, women; SY silver disc.

**Moon's Avatar (Bard 10, Priest It)**

Avatars of Moon are beautiful women. In dangerous situations, they are each accompanied by 25 dedicated 3rd level warriors.

| | | |
|---|---|---|
| Str 16 | Dex 18 | Con 16 |
| Int 18 | Wis 18 | Cha 20 |
| MV 14 f | SZ 5' | MR 30% |
| AC 1 | HD 12 | HP 84 |

#AT 1 THAC0 9 Dmg 1d4 +1

**Special Att/Def:** Any sentient male looking upon Moon's avatar must save versus spells or fall under her control. She casts spells as a 12th level cleric, save that all spells in the charm, healing, and protection spheres of sixth level or lower are available to her. Moon's avatar flies at the same rate moves on land.

**Duties of the Priesthood**

Moon's clerics must meet all of the standard clerical requirements, but must also be females of good alignment. Moon discourages her priestesses from engaging in combat, but they may defend themselves with knives if attacked. Moon allows her clerics major access to the Protection and healing spheres, and minor access to charm and creation spheres.

She always grants her priestesses the power to create *light* within a 10' radius, and they are expected to keep a light glowing within their teepee or (camp) at all times.

**Statistics:** AB standard (always female); AL any g; knife; AR b; SP all, protection, healing, charm, and creation; PW 1) *light* (10' radius); TU nil.

**Earth (intermediate god)**

Earth is known by several names: Earth Mother, Nokomis, and the Grandmother. She is the beginning and end of all life, for all mortal beings spring from her bosom upon birth and return to it upon death. She feeds all animals, men, and plants, and is the provider of the Water of Life.

Earth derives her power from the Great Spirit, who has bestowed upon her the ability and duty to nurture life. However, she is free to use this power as she pleases and does not answer to him in any subservient sense. She can create up to a 100 square miles of land or ten million gallons of water at will an without tiring. Further, she can accelerate, decelerate, or control the growth of any plant, or cause earthquakes of such magnitude that everything within the affected area must save versus death magic or be destroyed.

Earth is usually visible in her true form to all mortals, though few realize what they are looking at. She abides in the ground upon which they stand, the soil which they till, and the rocks upon which they sit. Those who know what to look for sense her as a warm presence in all that surrounds them.

**Role-playing Notes:** Earth is a patient and careful deity. She is the most likely of higher Indian deities to answer the individual supplications of her worshipers. As a rule, her base chance to respond in any given case is increased by 1% for each level of the beseecher, and by 5% if the beseecher is a priest of her order.

Earth prefers to guide her worshipers through a wide range of omens. Almost anything can serve as a sign of her pleasure or displeasure: a white eagle, a black wolf, a burning tree. Often, the meaning of such portents is unclear, and the recipient must enter a deep trance to clarify its meaning.

However, when she finds it necessary to discipline a transgressor, Earth's punishments are severe and unmistakable. In cases of tribal offenses, she often sends a flood or earthquake to devastate the wrongdoers. Individual offenders fare little better: being attacked by a black bear or bitten by a snake is considered an unmistakable sign of her enmity.

**Statistics:** AL ng; WAL n or ng; AoC life, nature, food; SY stalk of maize.

**Earth's Avatar (Druid 18)**

Earth's avatar always takes the form of an old woman. She casts spells as an 18th level Druid, save that she can call upon any clerical spell in the plant or animal spheres.

| | | |
|---|---|---|
| Str 18/00 | Dex 16 | Con 18 |
| Int 18 | Wis 19 | Cha 14 |
| MV 15 br | SZ 5' | MR 35% |
| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d6 +7 |

**Special Att/Def:** Earth's avatar cannot be injured by weapons made of unworked natural materials. For example, a wooden club or stone arrowhead causes her no damage, but she is affected normally by any weapon of forged metal. Earth's avatar can burrow through soil or rock at the same rate she moves on the surface.

**Duties of the Priesthood**

Earth's clerics must meet the standard requirements for druids, except they must always be of neutral good alignment. Usually, but not always, her priests are women. Whether male or female, however, her clerics must prove their fruitfulness by being parents, and usually have between 4-8 children living in their lodge. Losing the ability to bear children is considered a sure sign that an individual has lost Earth's favor, though this seldom happens to even to the oldest of her clerics.

Priestesses worshipping Earth preside over two important ceremonies each year: the Blessing of Spring, when life returns from the bosom of the Grandmother, and the Sacrifices of Fall, when important magic items must be buried in the fields or thrown into raging rivers so that the life will return to the fields in the spring.

Clerics worshipping the Earth Mother may use clubs or sickles to defend themselves or, if necessary, to prevent the desecration of the land. Earth allows her priestesses major access to the animal and plant spheres, and minor access only to the elemental, summoning, and weather spheres. Once they reach the 4th level of experience, she also grants her clerics the ability to summon and command 1- 6 wolves. At the 8th level of experience, she allows them to instantaneously grow one tree per day, up to sixty feet in height, provided they have the proper seed to plant. At the 12th level of experience, she permits her priests to travel over water as if it were land.

**Statistics:** AB as druid; AL ng; WP clubs or sickles; SP all, animal, plant, elemental', summoning', and weather'; PW 4) *summon and command 1-6 wolves*; 8) *tree growth* (see above); 12) *water walking*; TU: turn.

**Wind (intermediate god)**

Wind, also known as Hotoru, is the master of weather and climate. Upon his breath, carries life-giving rains or the parched gasps of drought. He can cool off a hot day, or can uproot trees and topple even the sturdiest of lodges with a tornado. Wind takes great joy in his liberty from the Great Spirit's authority, exercising his powers with caprice and whim.

In his true form, Wind is an invisible swirl of air that can always be felt and sometimes heard, but never seen. He has the power to control weather at will, even to the point of parching the land with hot breezes one moment and covering it with terrible blizzards the next.

**Role-playing Notes:** Wind is chaotic and capricious. Upon noticing any slight, he is likely to take vengeance in the form of catastrophic weather. Omens from Wind take the form of unusual winds. When he punishes one of his own priests, he carries the offender away in a powerful tornado and drops him in the middle of a large body of water.

**Statistics:** AL cn; WAL any; AoC weather, agriculture SY tornado.

**Wind's Avatar (Fighter 10, Wizard 10)**

In avatar form, Wind always appears as the huge chief of an unknown tribe. In one hand, he carries a massive club and in the other a huge war lance.

| | | |
|---|---|---|
| Str 20 | Dex 19 | Con 18 |
| Int 16 | Wis 15 | Cha 18 |
| MV 15, 20 f | SZ 8' | MR 35% |
| AC -1 | HD 10 | HP 80 |
| #AT 3/2 | THAC0 11 | Dmg 1d10 +8 |

**Special Att/Def**: Wind's avatar can unleash a *lightning bolt* which does 2d10 points of damage, always hits its target, and has a range of 900 yards. He can only be hit by +1 or better weapons or magic. Wind's avatar can fly at will. Both his club and his lance do 1d10 damage and require a strength of 18/00 to wield. The lance fires a 2d10 *lightning bolt* once per round. Wind's avatar casts spells as a 10th level wizard, and he can call upon any spell of up to 5th level from the invocation/evocation school.

**Duties of the Priesthood**

Clerics of Wind must meet the standard clerical requirements, but may use any weapon in battle. They must constantly appease Wind with sacrifices of food and valuables, made at least weekly. In agricultural tribes, Wind's priests are treated with a combination of awe and mistrust, for the well-being of the entire tribe often depends upon the ability of such priests to earn and hold Wind's favor.

**Requirements:** AB standard; AL any c; WP any; AR b; SP all, combat, elemental, weather; PW 5) *summon rain* (500 yard area); TU nil.

**Morning Star (intermediate god)**

To Morning Star, the Great Spirit has entrusted the Breath of Life, which Morning Star must spread over the earth each dawn. Morning Star is free to use this gift as he sees fit, but he is generally a benevolent god who executes his duty faithfully.

Visible on the Prime Material Plane as the last star in the sky each morning, in his true form Morning Star resembles a young man painted red, wearing moccasins, a heavy robe, single downy eagle's feather, also stained red, and a headdress. Morning Star can animate any material, even rocks.

**Role-playing Notes:** As long as priests worshipping Morning Star strive to promote life, they remain in his favor. When a priest violates this code, Morning Star generally reveals his displeasure by hiding his presence at dawn. Morning Star punishes transgressions by removal of clerical powers.

**Statistics:** AL lg; WAL any good; AoC life, morning; SY star above the rising sun.

**Morning Star's Avatar (Fighter 13, Priest 12)**

Morning Star's avatar always takes the form of a young man armed only with his bare hands or a rope. He can cast spells as a 12th level priest, save that he has access to any priest spell of 6th level or below in the creation and healing spheres. He can also use the *raise dead* spell.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 (f) | SZ 6' | MR 35% |
| AC 0 | HD 13 | HP 104 |
| #AT 2 | THAC0 9 | Dmg 1d3 +8 |

**Special Att/Def:** Morning Star's avatar is immune to all forms of light or heat attacks, such as *prismatic sphere*, *rainbow pattern*, *fireball*, *flame strike*, etc. He can animate and control any single object, such as a teepee, tree, boulder, etc. Morning Star's avatar can fly at the same speed he moves upon ground.

**Duties of the Priesthood**

Clerics of Morning Star must pray to his star each morning, and must always strive to promote the creation of new life. They may never kill, even in self-defense, instead attempting to disable attackers without depriving them of life. They are usually called upon to bless the birth of new infants, crop plantings, and anything involving the creation of life.

**Requirements:** AB standard; AL lg; WP lasso and net; AR b; SP all, creation, healing, animal, divination, plant and protection; PW 10) *raise dead*; TU: turn.

**Fire (intermediate god)**

Upon Fire, also known as Hastsezini, the Great Spirit has bestowed the ability to destroy anything living. He is also charged with providing warmth and light, but is resent ful of this duty and only executes it if constantly fed. Fire's true form is that of a jet-black human with the head of a hawk, and he is always sheathed in an aura of flames. He has the power to see and hear anything that passes within fifty yards of a fire.

**Role-playing Notes:** Fire is arrogant, vengeful, and tolerates no affronts to his power or shortcomings among his priests. His omens always involve fire and are never subtle. It is common for him to create a face in a fire and speak directly to his worshipers. He delights in punishing by burning.

**Statistics:** AL le; WAL any; AoC fire, destruction; SY burning torch.

**Fire's Avatar (Ranger 12, Druid 12)**

Fire's avatar appears in the form of a dark-skinned human, sometimes with a hawk's head. Occasionally, he appears as a human-shaped flame.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 17 |
| Int 19 | Wis 19 | Cha 12 |
| MV 15 (f) | SZ 7' | MR 35% |
| AC -1 | HD 12 | HP 96 |
| #AT 3/2 | THAC0 9 | Dmg 1d10 (weapon) +8 |

**Special Att/Def:** The avatar's flaming sheath inflicts 1d10 damage per round to all within ten yards. He cannot be hit if attacked from behind and can cast any fire-based spell, no matter what the level or sphere. Fire's avatar can fly at the same speed he moves upon ground.

In avatar form, Fire casts spells as a 12th level Druid, with access to all spells of 6th level or less in the appropriate spheres. He carries a magical shield +3, a bow that fires arrows of flame, a large club, and a lance of fire (all doing 1d10 damage). If a mortal touches any of these weapons, he suffers 1d10 points of fire damage per round — even if magically protected from fire.

**Duties of the Priesthood**

The duties of priests worshipping Fire consist primarily of appeasing their arrogant god with regular sacrifices of food and fresh meat. Fire's priests must always keep a fire burning within their lodge, and are often called upon to perform foul tasks, like murdering those who have offended their god. They are allowed to use any weapon, though Fire grants an extra first level spell to those using only flame-based weapons. Because of their deity's evil nature, his priests are often banished from the tribe if some fire-based calamity befalls the village.

**Requirements:** AB as druid; AL any; WP any (see above); AR b ;SP all, combat, divination, elemental, guardian, necromantic, and summoning; PW 1) bonus spell (see above); 1) *create fire* (as the spell); TU nil.

**Thunder (intermediate god)**

As the voice of the Great Spirit, Thunder is the herald of disaster and the bearer of good fortune. Also known as Heng or the Thunder Bird, Thunder announces the coming of great disasters. He also has the power to bring good fortune to those who deserve it. Occasionally, when Wind has neglected to bring rain to a deserving tribe,

Thunder carries a lake upon his back and sprinkles it over the fields. In true form, Thunder resembles a huge black eagle as large as the sky, but he sometimes appears as a warrior in storm clouds.

**Role-playing Notes:** Thunder does not enjoy his role as the harbinger of catastrophe. Nevertheless, he executes this duty conscientiously. Portents of impending disaster include fierce thunder, cloud cover so heavy it blots out the sun, and the unexpected and unwelcome arrival of thousands of birds. Omens of good fortune always take the form of a black eagle soaring overhead. In fact, such a sighting is enough to modify the saving throws and attack rolls of the viewer by +2 for a period of 1d10 weeks.

Thunder rarely punishes tribes or individuals directly. Rather he simply withdraws his support.

**Statistics:** AL cg; WAL any good; AoC good fortune; SY black eagle.

**Thunder's Avatar (Fighter 14, Priest 10)**

Thunder's avatar takes the form of a giant black eagle, but can also be seen as a giant carrying a huge lance.

| | | |
|---|---|---|
| Str 21 | Dex 17 | Con 18 |
| Int 18 | Wis 18 | Cha 15 |
| MV 15, 24 f | SZ 12' | MR 40% |
| AC 1 | HD 14 | HP 126 |
| #AT 3 | THAC0 7 | Dmg 1d12/1d12/2d10 +9 |

**Special Att/Def:** Every other round, Thunder's avatar can shoot lightning from his eyes. This attack never misses its target and always inflicts 30 points of damage. In his eagle form he is able to make two claw attacks and one beak attack each round. When in his giant form, he can strike with his lance twice per round for 1d12 points per attack. Thunder casts spells as a 10th level priest utilizing any spell of 5th level or less in the guardian, protection, or weather spheres.

**Duties of the Priesthood**

Thunder's priests may never engage in an evil or selfish act. Upon reaching the 5th level, Thunder's priests receive the ability to grant good fortune once per week. This modifies the saving throw and to-hit rolls of one subject by +1 for 1d10 rounds. This ability increases by +1 every five levels, so that at 10th level it is +2, 15th level it is +3, 20th it is +4, and so on.

**Requirements:** AB standard; AL any g ;WP bow, lance, and tomahawk (hand axe); AR b; SP all, divination, protection, guardian, healing, and weather; PW 5) *good fortune* (see above); TU nil.

**Raven (lesser god)**

Raven is one of the most powerful of the many animal spirits. He professes to have created the world by pulling it up from beneath the waters. The validity of this claim remains in doubt, however, for he is well known as a trickster who resorts to anything to satisfy his ravenous appetite. Though his true form is that of a large black raven, he can polymorph at will into many different forms, including a fox, jay or even the moon.

**Role-playing Notes:** Though generally goodhearted, the unpredictable Raven has a narrow range of concerns —and most of them have to do with food. Raven never answers appeals for aid unless an offering of food is made to him. Even then, Raven is unlikely to help unless the appeal is for food, water, or shelter.

Raven's omens are always delivered by one or more of his namesakes. For instance, if displeased, Raven might send a flock to drop various disgusting items on the offender. When seriously angered, Raven's punishments are inventive and harsh. As an example, Raven once turned a man who hunted too many ravens into a grasshopper, so that the ravens could hunt him.

**Statistics:** AL cg; WAL any; AoC trickery and deception; SY black feather.

**Raven's Avatar (Fighter 10, Illusionist 8)**

Raven's avatar usually takes the form of a giant raven. However, he is able to change form at will and does not hesitate to assume another shape if it will further his progress in a given matter.

| | | |
|---|---|---|
| Str 18/00 | Dex 16 | Con 18 |

**Special Att/Def:** Raven can employ both the *polymorph other* (-2 to save) and *polymorph self* spells at will. He has the spell abilities of an 8th level Illusionist, calling upon any spell 4th level or less in the Illusion/Phantasm school of magic.

**Duties of the Priesthood**

Priests worshipping Raven must be of a chaotic alignment and must meet all ordinary clerical requirements. They are expected to feed any ravens that happen to be nearby, and must converse with these birds constantly. As a result, there are variably 1d20 of these garrulous birds following any priest of Raven.

**Requirements:** AB standard; AL any c; WP any; AR SP all, animal, and charm; PW 3) *converse with ravens*; *fly* (movement rate = 15); TU nil.

***Coyote (lesser god)***

Coyote is the most clever and cunning of animal spirits. He is credited with teaching men crafts such as making weapons, pottery, as well as the summoning and controlling of fire. Despite the generous side of his personality, however, Coyote is a cowardly thief who often resorts to trickery.

Coyote can polymorph himself into any natural animal once per day. He can make himself or any object invisible for an indefinite period of time, and can animate any object for up to one week. His true form is that of a giant, silver-furred coyote.

**Role-playing Notes:** Coyote is greedy and conniving. During his frequent attempts to swindle a fellow god, he often assigns difficult jobs to his worshipers, promising great rewards if they succeed. Most often, he "forgets" to keep such promises. He is not above bullying a mortal to get what he wants.

Omens from Coyote take the form of strange noises in the night. Typically, he will only punish his clerics for failing at an assigned task or daring to cheat him. Such punishments take the form of a cruel trick, such as stealing a cherished possession and giving it to the victim's enemy.

**Statistics:** AL cn; WAL any; AoC crafts, thievery; SY bushy, drooping tail.

**Coyote's Avatar (Thief 14, Illusionist 6)**

He can cast spells as a 6th level illusionist, and can call upon any spell under the 3rd level in the illusion/phantasm school. Despite his lack of hands, Coyote's incredible Dexterity allows him to utilize all of the thief abilities appropriate to his level.

| | | |
|---|---|---|
| Str 19 | Dex 20 | Con 18 |
| Int 15 | Wis 18 | Cha 7 |
| MV 15 | SZ 7' | MR 15% |
| AC 2 | HD 14 | HP 112 |
| #AT 1 | THAC0 7 | Dmg 2d10 +7 |

**Special Att/Def:** On any natural attack roll of 20, the avatar's victim must save versus death magic or have his neck snapped by the creature's powerful jaws.

**Duties of the Priesthood**

Coyote's priests must meet all of the normal requirements for clerics, save that they must have a Dexterity of at least 12. In addition, priests of Coyote must sacrifice 1 gp per level worth of treasure (or one magic item) a week. Failure to do so results in a loss of spells and powers until the missed sacrifice is made up. They must also defend coyotes whenever they encounter an endangered one. To lure young worshipers to him, Coyote grants all of his priests the abilities of a thief of similar level — to a maximum of tenth level.

**Requirements:** AB standard, Dexterity 12+; AL any c ;WP as thief; AR b; SP all, animal, summoning, charm; PW 1) thief abilities (see above); TU nil.

**Snake (lesser god)**

Though a giant serpent in true form, Snake takes great delight in manifesting himself in the guise of a man with rainbow-colored skin. Snake has complete control over all scaled, land-dwelling creatures within his sight, even if they are supernatural in origin. He has the power to make any object poisonous to the touch, or to turn any poison into a harmless substance (even after it has begun acting). He can control his age at will, often growing visibly older or younger during the course of a single conversation.

**Role-playing Notes:** As long as his worshipers don't do anything evil, Snake is a patient deity. But he does not tolerate transgressions of his strict moral code. Those offending Snake will find themselves growing mysteriously older at a rapid rate. After the offensive behavior is atoned for, the supernatural aging stops, but does not reverse itself. In cases where severe punishment is called for the offender mysteriously dies of effects normally associated with a lethal snake's venom.

**Statistics:** AL ng; WAL any neutral or good; AoC reptiles and aging; SY a writhing snake.

**Snake's Avatar (Wizard 15, Priest 8)**

Snake's avatar is usually a man with rainbow-hued skin, though he can also take the form of a giant snake. In either form, he casts spells as a 15th level wizard and an 8th level priest, save that he has access to any wizard spell of 7th level or under, and any priest spell of 4th level or less in the all, animal, charm, or necromantic spheres.

| | | |
|---|---|---|
| Str 14 | Dex 18 | Con 18 |
| Int 19 | Wis 18 | Cha 18 |
| MV 15 | SZ 6’ | MR 20% |
| AC 1 | HD 10 | HP 80 |
| #AT 1 | THAC0 11 | Dmg 1d6 |

**Special Att/Def:** Snake’s avatar can only be hit by magic or +1 or better weapons. No reptile (including dragons) will attack him under any circumstances. In addition, he can summon and command 5-500 snakes at will.

**Duties of the Priesthood**

Priests of Snake must meet all the standard clerical requirements, and must keep at least four varieties of dangerous snakes as pets. As weapons, they are allowed to employ poisoned arrows or daggers, but only in defense of themselves, others, or a snake. At the 10th level of experience, Snake gives his priests the power to summon and command 1d10 snakes, and at the 15th level of experience he grants them the ability to control their aging process (making them immune to the effects of normal and magical aging, but not to disease, injury, or death).

**Requirements:** AB (see above); AL ng; WP poisoned arrows and daggers; AR b; SP all, animal, charm, healing, and protection; PW 10) *summon snakes*; 15) *control aging*; TU nil.

**Spirits (demigods)**

The Indian world is populated by many different spirits, which are manifestations or "manitous" of the mysterious magic power that inhabits all things. There are ancestral spirits who watch over their descendants from camps in the lower world, animal spirits who dema nd homage before the hunt, and spirits of sacred places.

An Indian might encounter a spirit in virtually any situation and in virtually any form. For instance, an ancestral spirit might appear as a very old man or a river spirit as watery snake. They will generally have one or two supernatural powers associated with their nature.

Of course, it would be impossible to present statistics for every spirit in the world of the Indian, but their avatars generally fall within the following parameters:

**Role-playing Notes:** The personalities and goals of these minor spirits are as varied as their number. Generally, they promote and protect whatever it is they personify, and look disfavorably upon anybody who harms their embodiment. Animal spirits generally recognize the need for hunting and allow it, as long as the hunter shows the proper respect and is not cruel or greedy. Their omens and portents always take a form appropriate to their nature. Generally speaking, they are quicker and more severe in their punishments than the higher deities, for they must compensate for their limited power by demanding strict obedience from their worshipers.

**Spirit Avatar (any one or two classes, level 7-11)**

Like the spirits themselves, the avatars usually assume a form related to their nature. They almost always have some form of limited spell ability, although its nature will vary based on the background of the spirit.

| AC 4-0 | HD 8-11 | HP 64-88 |
| #AT 1-3 | THAC0 11-13 | Dmg 1d4-2d10 +1-6 |

**Special Att/Def:** Any one or two powers which are appropriate to their nature. For example, the spirit of a lake might be able generate a wall of fog just as the lake does on an autumn morning.

**Duties of the Priesthood**

Spirits do not have priests in the sense that other deities do. Rather, they are venerated as the need arises and will often reward the individuals paying homage to them with special powers and protections for a limited time (usually 1-10 days). For example, a warrior venerating a cloud spirit might receive the ability to ride the winds. Obviously, such powers are only given when the actions of the individual are sincere and he makes some appropriate sacrifice to the spirit.

## American Indian Heroes

**Hiawatha (Ranger 15 Druid 8)**

One of the greatest of all Indian heroes, Hiawatha was credited with uniting the Iroquois into the Five Nations. A man of great thought, Hiawatha was invited speak before the Council of Hereditary Chiefs. He convinced the chiefs to end the bitter and murderous wars between Iroquois tribes and form a confederacy. He envisions

spreading this confederation from tribe to tribe all across North America. Sadly, the arrival of foreign colonizers stop to his plan.

**Spells:** 1) *animal friendship*, *pass without trace*, *detect snares and pits*; 2) *speak with animal*, *produce flame*, *slow poison*; 3) *hold animal*, *water breathing*, *snare*; 4) *cure serious wounds*, *neutralize poison*, *speak with plants*.

Hiawatha is credited with many other great feats, battling monsters and even gods on behalf of mankind. In his headdress he wears a feather given to him by an eagle-spirit that modifies his AC by +2, and he travels in a canoe that moves by itself. Hiawatha fights with club or bow and arrow, each of which 1-6 points of damage. In unarmed combat, he grapples and bear-hugs his opponents for 8 points of damage per round.

**Stoneribs (Ranger 10)**

According to legend, Stoneribs is the son of a legendary mother named Volcano Woman. He could shoot birds with bow and arrow as soon as he could walk. He ways goes to the aid of tribes in dire peril, and is the warrior who slew the great sea monster Qaqwaai. He possesses a magical halibut skin that allows him to assume the form of a man sized halibut. It also bestows upon him the ability to breathe and move through water as if were he a fish even when in his human form.

**Spells:** 1) *invisibility to animals*, *pass without trace*, *ventriloquism*; 2) *produce flame*, *messenger*; 3) *hold animal*.

He is a welcome guest in the camps of all the plains tribes, where he enjoys challenging the resident warriors to contests of prowess and skill. In such contests, Qagwaaz relies only upon a wooden club and his great strength so that he does not injure his opponents too severely.

After such contests, Qagwaaz enjoys feasting and impressing the women with his stories and songs. Should a village be attacked while he is visiting, Qagwaaz is the first into battle. He is considered the ideal for all warriors to emulate.

**Yanauluha**

The first tribal priest, Yanauluha can summon any Indian deity to his aid at will. Though now considered a spirit, it is not clear how or even if he has died. Anyone sacrificing a magic item to him has a 10% chance that Yanauluha will aid him, unless an evil act is requested. He appears as a richly garbed, ancient Indian who talks very slowly.

**Priest 20, Ranger 10**

# Arthurian Heroes

King Arthur was a celebrated British hero, a legendary ruler credited with uniting the independent and belligerent knights of Britain at the Round Table and beating back the Saxons and other barbarian invaders. He also established a realm of virtue, Logres, that was the spiritual counterpart of his material kingdom. In this way, Arthur became not only the principal defender of Britain, but the embodiment of her ethical ideals as well. In every sense, he was the ultimate savior-king of Britain.

Despite his legendary standing, Arthur and his companions are seen as very human. Arthur himself is nearly always presented as just, powerful, wise, and generous. But he is also pictured as indecisive, unseeing, petulant, and occasionally stubborn. His queen, Guinevere, is beautiful and dedicated, but she is in love with Arthur's greatest knight. Despite his dedication to Arthur and the principles of virtue, this knight, Launcelot, is powerless to keep himself from returning her affection.

These characters, and hundreds of others, are described with such vividness and detail that it seems impossible that they did not live. Yet, the Round Table has never been discovered and the locations of Arthur's castles have never been determined. The island retreat, Avalon, remains as thoroughly hidden by the haze of time as it ever was by ocean mists.

Many mythologists insist that the great king never lived. Arthur, they claim, is the personification of a Celtic deity or, at most, an exaggeration grown out of the exploits of a conquering barbarian king. But for every mythologist who believes Arthur did not live, there is a historian who has devoted his or her life to proving that Arthur is more than mere legend. Many believe that they have found the locations of his most famous battles, the mounds upon which his castles once stood, even an island that might have been Avalon. Unfortunately. many of these assertions conflict, and it is not within the scope of *Legends & Lore* to sort through their claims in search of their validity. For our purposes, it is the legend itself, and the people who created it, that matters most.

Whether he lived or was only a mythical ideal, Arthur was born into an Britain descending into the depths of anarchy and chaos. The time was 500 AD The Germanic tribes of what is now eastern Europe were sweeping down on the degenerating Roman Empire, conquering Gaul, Spain, and even sacking Rome herself. Faced with such fierce opposition, Rome withdrew her legions from the far-flung territories, leaving Britain undefended, disorganized, and easy prey for the fierce Saxon, Angle, and Jute warriors of what is now Denmark and northern Germany.

It was Arthur who united the quarrelsome British knights and led the fight to repel the invaders. Many historians claim that he was the grandson of a Roman named Constantine (probably not the Emperor, though that is a possibility), and was trained in warfare at a Roman academy. He united the British realms through his tactical genius and was elected to lead the defense against the Saxon invaders.

According to legend, he was the son of Uther Pendragon and Ygraine, conceived through Uther's impersonation of Ygraine's husband even as he lay dying on the battlefield. Upon Arthur's birth, the wizard Merlin took the infant and had him raised by an honest and trustworthy knight, so the youth would mature into a wise and just king. Arthur was proclaimed king at the age of 15, when he pulled the sword *Excalibur* from a stone at a contest to pick the new king. (In many versions of the myth, Arthur was given *Excalibur* by the Lady of the Lake.)

Upon achieving kingship, Arthur moved quickly, defeating the barbarians in a series of fights known as the Twelve Battles. In the last of these battles, fought at Mount Badon, he reputedly killed 960 enemies personally, putting an end to the Saxon invasion — at least during his lifetime.

After the Twelve Battles, Arthur began uniting the British knights around the Round Table and establishing the chivalric order that was his greatest nonmilitary achievement. It was during this time that Guinevere and Launcelot fell in love, and began the affair that would eventually devastate the unity of the Round Table.

Also during this great peace, Arthur's jealous half-sister, Morgan le Fay, began studying sorcery and engaged in many plots to destroy her brother and his achievements. Her most successful plot was the conception of Mordred, who was destined to betray Arthur. Morgan's plots became so troublesome that Arthur was forced to banish his half-sister from court, further undermining the unity of the Round Table.

In the midst of the Round Table's troubles, the knights of Arthur's Realm faced their greatest test: the search for the *Holy Grail.* At a feast where all the seats of the Round Table were filled, the *Holy Grail* momentarily appeared over the table. When it vanished, all the knights present swore to seek the golden chalice. Although they all tried valiantly to complete the quest, it was the saintly Sir Galahad who finally drank from the *Holy Grail* and cured many evils which had been afflicting the land.

Upon completion of the Grail Quest, Arthur's court began to decline. Several knights had died during the quest, Launcelot and Guinevere were powerless to discontinue their love affair, and Mordred was conspiring to usurp Arthur's throne. The final blow to the unity of the Round Table came when Mordred presented Arthur with proof of the Queen's adultery and demanded that she be executed, per the law. When Arthur reluctantly agreed, Launcelot took the queen and fled. The King and his knights followed, laying siege to Launcelot's castle in order to enforce the law. During the battle, Launcelot saved Arthur's life. As a result, the King agreed to a truce in which Launcelot exiled himself to France and returned Guinevere.

Unfortunately, many of his knights did not approve of this arrangement, most notably Sir Gawain, who was in the midst of a blood feud with Launcelot. In order to preserve what endured of his realm, Arthur agreed to attack Launcelot in France. While he was away, Mordred attempted to usurp the throne and marry Guinevere, further shattering the Round Table. Upon hearing of this, Arthur returned with his remaining loyal knights. They faced Mordred's forces in a terrible battle at Camlann that left only a handful of men alive. Although Mordred was killed, Arthur himself was mortally wounded. Before he died, Arthur had *Excalibur* returned to the Lady of the Lake, then was ferried to Avalon by three mysterious queens.

Upon hearing of Arthur's death, Launcelot returned to find that only five Knights of the Round Table still lived, and that Arthur's Realm was shattered beyond repair. Guinevere had entered a monastery to repent of the sin that had destroyed the Round Table. Launcelot followed her lead by giving up his arms and becoming a monk. By the time he and Guinevere died, England was again being overrun by barbarians.

**Role-playing in an Arthurian Setting**

Unlike most of the other beings described in *Legends & Lore*, King Arthur and his companions are not deities. They are legendary heroes, and, as such, should not be worshipped. Even if they could hear a cleric's prayer and or warrior's plea for supernatural aid, they would most likely be powerless to answer.

Instead of treating the Arthurian Myths as a pantheon of supernatural beings, DMs wishing to make use of it in their campaigns should view it as a setting. The Arthurian saga will fit into almost any campaign, especially those based to some extent on the European Dark and Middle Ages. Any isolated land, such as an island or remote peninsula, will serve as the territory. Sprinkle it liberally with an assortment of feudal lords, add an invading horde of barbarian plunderers, then have Arthur, or a similar great leader, unite the lords in order to defend their homeland.

The player-characters might arrive in this setting in any number of ways. If they don't have seasoned characters already, they might start as a squires or men-at-arms for one of the smaller knights, then work their way into Arthur's court during the many battles against the barbarians. On the other hand, if they have already been adventuring for some time, they might encounter one of Arthur's knights, or hear stories of a fabulous court where all knights are treated as equals, which is renowned for its justice, and where strangers are always treated as welcomed guests.

Once they have reached the Round Table, of course, they may find themselves deeply entwined in the politics of court, asked to undertake a perilous quest on the king's behalf, or suddenly forced to prove their skill and courage in the midst of a great tournament.

**Duties of a Knight of the Round Table**

Any player character aspiring to a seat on the Round Table will have to earn it. First, they will have to attract Arthur's attention through some valorous deed or trait, such as prowess at arms, undaunted bravery, a thorough command of magic, unerring piety, etc. Once Arthur has noticed such persons, they will have to impress him with their adherence to a strict code of behavior.

They must be just, loyal, courteous, generous, and, most importantly, reverent; they must protect the poor and weak, and never deny protection to a lady or maiden; the must remain clean and chaste in spirit and in flesh (though it is permissible to love from afar); they must strive for candor and flee from pride; and they must face death at all times with courage and good bearing. Although Arthur is not foolish enough to believe that all of his knights can live up to this code all of the time, he will not extend an invitation to the Round Table to anybody who displays more than minor variations from these standards.

Taken together, these standards may be interpreted as the Code of the Round Table. The code is rooted in deep faith in the existence of an ultimate deity, in the beneficence of the a special order, and in the belief that men and women prove their worthiness only to the extent that they serve an ideal greater than themselves. While, for game purposes, it should certainly be possible for a player character to become a man of the Round Table without sharing Arthur's religion, they should share these three beliefs, at least.

Arthur will permit an individual of any character class into his court, provided their apparent alignment is some variation of good. Generally, their scores must be at least 10 in attributes, at least 15 in their primary attribute, and it must be a minimum of 5th level (unless admitted as a domestic servant or squire). Only fighters of 10th level or greater, well-versed in jousting and sword combat, will be invited to sit at the Round Table itself. Nobody using poison, backstabbing, or other trickery to win a combat will ever be to stay in Arthur's court.

**The Pious Knights**

A special order of clerics known as "The Pious Knights" wanders through Arthur's realm. These clerics are warrior-priests who have dedicated their lives to reverence and righteous use of force. Though their deity remains mysterious and distant, they are unswerving in their devotion. The Pious Knights will undertake any mission that contributes to the greater glory of their deity or order, no matter how dangerous or life-threatening.

Though they are an organized order, the Pious Knights have no central seat of control or power. Instead, they gather at a secret circle of standing stones once per year to introduce new initiates and discuss the order's business. The Pious Knight with the most experience points is treated as group's spiritual leader and advisor.

During the rest of the year, they wander through the realm seeking out poor and oppressed people to help. They differ from the Knights of the Round Table in that they usually direct their attention to peasants in distress rather than nobles. Despite this difference in emphasis, the Knights of the Round Table respect the Pious Knights very highly. The leader of the Pious Knights is always granted a seat at the Round Table, and, at various times, several other members of the order have also sat at the table.

To become a member of the Pious Knights, an initiate must become the squire of a Pious Knight of 10th level or more. Such initiates must meet the following requirements: Strength 13, Constitution 9, and Wisdom 15. Their prime requisites are Strength and Wisdom, and a Pious Knight who has scores of 16 or more in each receives a bonus of 10 percent to the experience points he earns. Only humans may become Pious Knights. Pious Knights must always be lawful good in alignment, and automatically lose the benefits of their character class if their alignment changes. In this case, they revert to being simple warriors until they have performed a suitable act of contrition. Characters whose alignments are changed to evil, however, can never again be a Pious Knight.

In combat, Pious Knights may use non-cutting weapons, such as maces, nails, or slings. For tournament purposes, they may use lances and swords, providing the cutting edges and points have been dulled. They may never use weapons of backstabbing or deception, such as daggers, poison, or garrotes.

Intentionally causing the death of a human or demi-human, even in the heat of combat, results in an immediate and irreversible loss of powers for a Pious Knight. Such characters immediately become simple warriors of a level appropriate to their experience points. Note that this may result in a loss of levels.

Pious Knights inadvertently causing the death of a human or demi-human lose a 3d10 x 100 experience points and must undertake an act of penance before they may begin advancing again.

Pious Knights are a cross between cleric and warrior. They use the THAC0, Hit Dice, and Saving Throw tables of warriors, but use the Experience Level, Spell Progression, and Turn Undead tables of clerics. They may employ the standard powers of clerics, save that they have major access only to the all, creation, healing, and protection spheres and have no access at all to other spheres. They receive no granted powers from their deity.

At the first level of experience, Pious Knights are allowed to adventure on their own or with a group of their choosing (as long as this group does not contain any characters of evil alignment that the knight knows about). At the tenth level of experience, they may accept up to six initiates of levels 0-5 as squires and companions. It is the responsibility of the Pious Knight to ensure that these initiates are lawful good.

The shield symbol of the Order of Pious Knights is a representation of the *Holy Grail*.

**Special Note:** There is no evidence, in literature or history, that suggests an order resembling the Pious Knights really existed in Britain during this time. The Pious Knights are offered as a new character class for gaming purposes only, and the use of this order in your campaign is strictly optional.

**Portents, Omens, and Transgressions**

Although Arthur's deity remains distant and unapproachable, Arthur's world is filled with portents, omens, mysterious magic, and miraculous occurrences.

Portents associated with duty, an upcoming quest, or some other endeavor important to the welfare of the kingdom take the form of a religious symbol such as the *Holy Grail*. Beneficent omens are associated with romance, beauty, or a lovely woman; for example, the Lady of the Lake is often credited with giving *Excalibur* to Arthur. Signs of doom are identified with the harsh side of nature or paganism; for instance, Merlin was able to prophesize the downfall of one of Arthur's predecessors, Vortigen, after watching a red dragon devour a white dragon.

In Arthur's world, transgressions of proper behavior carry their own tragic consequences. The direct involvement of a supernatural being is never required to levy a punishment, for the well-being of the world depends upon the good behavior of its inhabitants. If they fail in their duty, their sins reverberate throughout society and eventually come rolling back to destroy them. Thus, the love affair of Guinevere and Launcelot destroys first the unity of the Round Table and ultimately forces them to enter a monastery to repent from the atrocious consequences of their deeds.

**New Spells**

**Impersonation** (Illusion)
Sixth Level Wizard

Range: Touch
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: One person
Saving Throw: Special

When this spell is cast upon a willing recipient, he immediately assumes the appearance of another person whom he wishes to impersonate. The recipient becomes the same height, sex, and race of the target, even

speaking with the same voice, and gesturing with the same mannerisms. The impersonator is indistinguishable from the impersonated in all outward appearances.

However, the impersonator does not acquire the subject's memories or abilities, and cannot automatically speak the subject's language. Furthermore, if the impersonator does anything that is out of character for the subject, anybody present who knows the subject makes a saving throw versus spells. Anybody making a successful save sees through the illusion and realizes that an impostor has taken the subject's place.

The material component of impersonation is a drop of blood, lock of hair, or cherished possession belonging to the person who is to be impersonated.

**Revelation** (Greater Divination)
Sixth Level Wizard
Fifth Level Priest (Divination)

Range: Line of sight
Components: V, S
Duration: 1 round
Casting Time: 1 round
Area of Effect: Self
Saving Throw: None

By casting a revelation spell, a wizard immediately understands, in unerring detail, the complete meaning of an omen or portent. This spell can only be used when the spellcaster sees the omen, and must be used while the portent remains visible. Revelation cannot be used to predict the future, except as indicated by the portent, nor even who sent the omen. The spell only reveals the exact meaning of the omen.

Should a spellcaster attempt to use revelation to understand an unusual event which is not an omen, the spell fails, although the caster does learn that there is no great importance to the supposed sign.

**Protection From Death** (Necromancy)
Seventh Level Priest

Sphere: Protection
Range: Touch
Components: V, S, M
Duration: 1 turn
Casting Time: 2 rounds
Area of Effect: individual
Saving Throw: Negates

Protection from death is a powerful priest spell which temporarily prevents an individual from dying. When cast upon a willing recipient, no saving throw is required. The individual suffers damage normally, save that when he reaches zero hit points, he must simply admit defeat and retire from combat. While under the influence of a protection from death spell, an individual is immune to the effects of poison, disease, and death magic. The protection from death spell can be canceled by a dispel magic spell, leaving the individual subject to death normally).

After a protection from death spell wears off, the individual is completely healed and returned to full hit points. Lost limbs and the like are not regenerated, however, unless they have been recovered and are held in place when the spell fades out. If the person has suffered injuries too severe to permit survival after the spell ends (beheading, for example) then they will simply die.

The material component of this spell is an item taken the body of a dead person.

**New Magic Items**

**Holy Grail**

The *Holy Grail* is a sacred relic brought from Rome to Britain by Joseph of Arimathea's family, where it was lost until Arthur's knights set out on their search. It is a large chalice that appears to be made of pure gold, though in reality it is craft from wood. In order to even see the *Holy Grail*, one must be of Lawful Good alignment and above evil temptations. Only a knight of saintly virtue may actually touch or drink from the *Holy Grail*.

When a worthy knight drinks from the Grail, he activates its magical powers. At this point, the chalice has the following powers, which it exercises automatically as the need insists: *create food and water* (for all those who can see it), *heal*, *neutralize poison*, *remove curse* (for anybody who can see it) and *plant growth* over any barren area into which it is taken. Once a saintly knight drinks from the Grail, it disappears from his hands and is again lost until found by another worthy man.

**Excalibur**

Given to Arthur by the Lady in the Lake in return for a favor to be named later, *Excalibur* is the magical sword which gave Arthur the power to unite the kingdoms of Britain. Its origins are as misty as the location of Avalon, but it is clear that the weapon was forged by some supernatural being in order to assist worthy kings in defending Britain. *Excalibur* is a sword of sharpness +5 that can only be wielded by a Lawful Good warrior of 18 strength or greater. If stolen, taken by treachery, or lifted in an evil cause, *Excalibur* will break upon contact with another weapon. It can only be mended by returning all of the resulting pieces to the Lady of the Lake, she will only mend it for a worthy king, such as Arthur.

As valuable as *Excalibur* itself is the sword's scabbard which prevents blood from flowing from its wearers wounds. Anyone wearing the scabbard suffers damage from bludgeoning, magic, fire, and other forms of non-cutting attacks. The scabbard only functions for a Lawful Good wearer.

**King Arthur**

King Arthur is the legendary ruler who united Britain and beat back her Saxon invaders. He also established a realm of virtue, Logres, that is the spiritual counterpart of his material kingdom. Arthur is not only the principal defender of Britain, but the embodiment of her ethical ideals as well.

Arthur's heritage and remarkable achievements have already been discussed in the introduction to this section, so it shall suffice here to say that he is a savior king in every sense of the word. He rules his realm, the united kingdoms of Britain, with compassion, wisdom, and, when need be, unappeasable might.

Paladin 16, Bard 5

| | | |
|---|---|---|

| AC -1 | MR nil | MV 12 |
| HP 147 | AL lg | THAC0 3 |
| #AT 2 | Dmg 1d8 +5 (Excalibur) +3 | |

**Priest Spells:** 1) *command*, *remove fear*, *protection From evil*; 2) *enthrall*, *hold person*, *slow poison*; 3) *remove paralysis*, *magical vestment*; 4) *cloak of bravery*.

Arthur is married to the beautiful Guinevere, whom he met when he came to the aid of her father, Laodegan, who was being besieged by Irish forces. Despite the fact that they were outnumbered, Arthur and his company attacked the Irish and drove them away. In gratitude, Laodegan promised Arthur anything he wanted. The young king, who had fallen in love with his host's daughter the instant he saw her, asked for Guinevere's hand in marriage. Laodegan was happy to comply, though it was not clear that Guinevere returned Arthur's feelings. In addition, Laodegan presented Arthur with an oak table large enough to seat 250 knights. This table eventually became known as the Round Table.

Physically, Arthur is a huge man with strong, honest features, a heavy beard, and a penetrating gaze. He is never far from his famous sword, *Excalibur*, or its magical scabbard (see section introduction for description of these two magic items). In combat, he wears glistening plate mail, his bejeweled war crown, and carries a shield bearing his device, the golden dragon.

King Arthur has all of the powers normally due a paladin of his rank. Because of his status as the savior of Britain, however, he is not bound by all of the restrictions which normally apply to paladins. First, he has attracted a large body of followers in the guise of the Knights of the Round Table. Second, he is allowed to accumulate vast sums of wealth, which he uses for the good of England.

**Merlin**

Merlin was conceived by a woman who had the misfortune of being seduced by supernatural creature of evil origin. Fortunately, she was a woman of outstanding moral character and related her misfortune tune to her confessor, who used a holy symbol to save her unborn child from the clutches of evil.

Wizard 17, Druid 14

**Priest Spells:** 1) *detect evil, create water, cure wounds, pass without trace, entangle, faerie fire*; 2) *messenger, snake charm, slow poison, barkskin, trip, obscure* 3) *meld into stone, protection from fire, pyrotechnics, shape, tree, call lightning*; 4) *produce fire, cure serious wounds, neutralize poison*; *sticks to snakes*; *control temperature, 10' radius*; 5) *transmute rock to mud, wall of fire, cure critical wounds*; 6) *stone tell, heal*; 7) *creeping doom*.

Born at least three generations before Arthur, served several kings, including Arthur's father, Uther, acting as an advisor, seer, and magician. He is a grizzled old with a long white beard and hair, though he is also surprisingly agile and hardy for his appearance. His supernatural heritage gives him the ability to regenerate 1 hp per round and is responsible for his unusually high intelligence, which renders him immune to 1st level illusion spells.

Merlin is often credited with supernatural prophetic abilities, but this assumption is not exactly accurate. He has an intense interest in divination magic, which he often uses in attempt to foresee the future. Merlin's staff serves as a staff striking and absorbs spell levels like a staff of the magi.

Though he has a good heart, people often regard Merlin surly and impatient. This is because he rarely tolerates fools and never tolerates selfish or evil people. Merlin's one weak spot, however, is his love for a pretty face — more than one woman has made a fool of him.

**Queen Guinevere**

After risking his own life to save Laodegan from a band of Irish besiegers, Arthur was rewarded with the hand of Laodegan's beautiful daughter, Guinevere. Unfortunately, although she respected and admired the young king, Guinevere was not truly in love with him. Nevertheless, she was obligated as a dutiful daughter to do as her father wished and marry the king.

**Spells:** 1) *charm person, friends, protection from evil*; 2) *detect evil, ESP*; 3) *non-detection.*

Despite Guinevere's lack of feeling for Arthur, the royal couple had a happy and harmonious life for a time, for the king was a kind and just man. However, their happiness came to an end when Launcelot of the Lake rode into court and asked for admittance to the Round Table.

Merlin had foretold of the coming of a young, sturdy knight who was invincible in combat. Both Arthur and Guinevere immediately recognized Launcelot as this man, and welcomed him with open arms. Unfortunately, Guinevere and the handsome knight also fell hopelessly in love with each other. For many years, the pair managed to keep their love virtuous and chaste, ennobling themselves and strengthening the Round Table through their sacrifice. But as Guinevere picnicked with her ladies-in-waiting one day, the cruel Sir Meleagans kidnapped her and carried her off to his castle. Of course, Launcelot soon came to her defense and, after facing many dangerous trials, rescued her. In the passion of the moment, they consummated their love.

After returning to court, Guinevere tried to restore their love to its previous courtly form. But, having known bliss in Launcelot's arms once, she will not be able to resist temptation indefinitely. It is this weakness that ultimately led to the downfall of the Round Table.

To new acquaintances, Guinevere often seems rather aloof and haughty. As the Queen, she is accustomed to dealing with power-hungry, manipulative nobles, and tends to hold strangers at arm's length until confident of their true motivations. Once she knows somebody well, however, she has a warm and generous personality.

When she finds it necessary, Guinevere can make herself irresistibly enchanting by using a combination of her bardic magic, natural charm, and unparalleled beauty.

**Sir Launcelot of the Lake**

The greatest knight of the Round Table was Launcelot of the Lake, who was invincible in combat and irreproachable in character — save for his love of Guinevere. Orphaned as a young child, he was raised by the Lady of the Lake in her underwater castle. She saw to it that he was trained not only in the ways of the warrior, but also in those of chivalry, and became the ideal paladin.

Fighter 18

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 14 | Wis 13 | Cha 18 |
| AC -3 | MR 10% | MV 12 |
| HP 115 | AL lg | THAC0 0 |
| #AT 2 | Dmg 1d8/1d8 (sword) +6 | |

When Launcelot turned 18, the Lady of the Lake gave him a magic ring (which modified his AC by -3 and bestowed a 10% magic resistance), and sent him to Arthur's court to join the Round Table. The young knight was immediately accepted, and he fell irretrievably in love with Queen Guinevere, though he swore to love her from afar.

Launcelot quickly proved his worth and became the king's champion and most trusted friend. He went on many quests for Arthur and defended the king's side in many battles. In addition, it was Launcelot who rescued Guinevere when Sir Meleagans abducted her. Near the end of this adventure, Launcelot and Guinevere consummated their love. It was after that episode that Launcelot lost the benefits of paladinhood and became an ordinary knight. Despite his fall from grace, Launcelot continued to serve his friend the king, struggling all the while to return his love for Guinevere to its pure and chaste form.

Launcelot is the object of the affections of Elaine, the beautiful daughter of one of the minor kings of Britain. She has even resorted to sorcery to win his affections, having herself changed into a likeness of Guinevere in order to seduce the handsome knight. This episode, during which they conceived Launcelot's son Galahad, so disturbed Launcelot that he became a hermit for a time.

His presence was missed so much that both King Arthur and Guinevere spent fabulous sums searching for him, eventually finding the sad knight and convincing him to return to Camelot and the Round Table. This proved disastrous, for having known Guinevere's physical love once, he was not be able to resist it forever.

Launcelot is the perfect gentleman, always courteous to those he meets and willing to give all strangers the benefit of the doubt. He is extremely charming and will gladly befriend any person who would befriend him, provided that friendship does not encroach on his loyalties to Arthur or Guinevere. Those who mistake his mild manner for cowardice, however, will soon see that this is not the case, for Launcelot is fearless in battle.

**Lady of the Lake**

The Lady of the Lake is a person of mysterious origins, and some believe fairy blood runs in her veins. She is the woman who raised Launcelot and who presented *Excalibur* to Arthur. In times of peril, she occasionally helps heroes who observe the Code of the Round Table. Even then, she seems withdrawn and aloof, as if concerned with something beyond the comprehension of mortals.

Enchantress 16

The Lady of the Lake lives in a castle in the waters of a hidden lake, where she stores many magical items. She always wears a pair of magical bracers bestowing AC 2 upon her.

**Mordred**

Mordred is the son of Morgan le Fay, Arthur's half-sister. Though his mother is married to a Knight of the Round Table, Mordred's true parentage is in doubt. It is well known that his mother is a seductress, and there are whispers that she practices the darker side of magic.

Fighter 14

As Morgan le Fay's son and Arthur's nephew, Mordred has been granted a seat at the Round Table. However, he secretly covets Arthur's power and shares his mother's hatred of the King. He is always scheming to usurp the throne, and is working to shatter the unity of the Round Table by exposing Guinevere's affair with Launcelot.

**Morgan le Fay**

The daughter of Ygraine and Gorlois, Morgan le Fay is Arthur's half-sister. Secretly bitter over her father's death and the trickery which Uther, Arthur's father, employed in seducing her mother, Morgan is determined to see her begotten son, Mordred, replace Arthur as king of Britain.

Illusionist 14

| | | |
|---|---|---|
| Str 10 | Dex 17 | Con 17 |

**Spells:** 1) *shocking grasp*, *unseen servant*, *charm person*, *change self*, *ventriloquism*, *magic missile*; 2) *alter self*, *darkness 15' radius*, *fools' gold*, *hypnotic pattern*, *invisibility*, *mirror image*; 3) *hold person*, *suggestion*, *spectral force*, *fireball*, *wraithform*, *lightning bolt*; 4) *polymorph other*, *fear*, *dimension door*, *minor creation*, *phantasmal killer*; *passwall*, *summon shadow*, *advanced illusion*, *dream*, *seeming*; 6) *project image*, *invisible stalker*, *permanent illusion prismatic spray*, *sequester*.

She is an accomplished seductress who uses her charms to sow discord at the Round Table. In general, Morgan does her best to appear seductive and charming to strangers who might prove useful to her. Should one of these unfortunates yield to her charms, this domineering woman soon attempts to subvert his morality and twist him to her own ends.

**Sir Gawaine**

The favorite nephew of King Arthur, Sir Gawaine is a valiant but prideful knight who will stop at nothing to avenge a blemish to his honor. He has engaged in many adventures on behalf of Arthur and the Round Table, including the famous incident with the Green Knight. Gawaine is angry with Launcelot for an imagined insult, and is awaiting an opportunity to avenge himself.

Fighter 16

| #AT 2 | Dmg 1d8/1d8 (sword) +6 | |

**Spells:** 1) *remove fear*, *detect magic*, *detect evil*; 2) *hold person*, *slow poison*; 3) *dispel magic*.

Perhaps because of his upbringing, or perhaps to make up for the impurity of his conception, Galahad has remained chaste throughout his life. His physical attractiveness and his prowess are as evident as his saintly moral standing. Merlin has prophesied that only Sir Galahad has the necessary moral perfection to complete the Grail Quest.

Sir Galahad wears white field plate and carries a white shield with a red cross. Once a day, the shield can cure critical wounds.

**The Green Knight**

Sir Bernlad, a knight of fiercely independent disposition, is one of the few powerful lords who has not sought a chair at the Round Table. He rode into Arthur's court in bright green armor and challenged any man to hit him with his axe. When Gawaine accepted this challenge and beheaded him in one stroke, Bernlad simply picked up his head and left, instructing Gawaine to present himself for a similar stroke in a year.

Fighter 14

| | | |
|---|---|---|

| HP 96 | AL cg | THAC0 5 |
| #AT 2 | Dmg 1d8 +3/1d8 +3 (Axe) +4 | |

True to his word, Gawaine sought out the Green Knight and presented himself for the return stroke. After a series of tests designed to test Gawaine's virtue, Bernlad merely nicked the valorous knight and discharged the obligation.

The secret of Bernlad's immunity to harm lies in his Green Armor, which was given to him by the Lady of the Lake in order to test the virtue of Arthur's court. As long as Bernlad wears the armor, he cannot be harmed by any physical weapon. This enchantment applies only to him. In addition, Bernlad's battle axe is a +3 weapon.

**Sir Percivale**

After his father and two brothers were slain in knightly combat, Percivale's mother took him deep into the woods to raise him in ignorance of chivalry. Her plan did not succeed. At the age of fifteen, he met some knights who told him about the Round Table. He set off for Camelot and naively presented himself for membership.

Fighter 14

As it often does for fools, fortune smiled on him. He arrived in time to see a huge knight in golden armor insult Arthur and steal one of the King's fine golden cups. Percivale volunteered to recover the cup and, through a series of lucky accidents, defeated the knight.

As he was trying to strip the knight of his armor, an old knight happened by and took pity on the rash youth. This knight offered to teach Percivale the codes of chivalry and the art of combat. When Percivale returned to Camelot, he was a match for any of the knights.

**Sir Tristram of Lyoness**

Born in sorrow by a dying woman, Tristram was raised by a faithful tutor who saw that he learned the chivalric arts. After several adventures in which he proved his worth to his uncle, King Mark of Cornwall, Tristram was sent to Ireland to fetch the beautiful Isolde, who was to be Mark's bride. Tristram and Isolde accidentally drank a potion that caused them to fall deeply and in love. Even after Isolde married King Mark, the lovers continued to meet secretly, causing King Mark to become one of Tristram's greatest enemies.

**Spells:** 1) *charm person, friends, sleep*; 2) *alter self, fools' gold*.

It is only Tristram's association with Arthur's court, where he has proven his prowess by defeating every knight except Launcelot, that has kept Mark from resorting to murder stop the affair.

**Sir Gareth of Orkney**

The young son of King Lot, Gareth gained his entry into Arthur's court by serving in the kitchens of Camelot. As a serving boy, Gareth was continually mocked by the boisterous Sir Kay, who called him "Beaumains", or "bighanded" because of his often inappropriate generosity. Nevertheless, Gareth remained determined to earn a seat at the Round Table and continued to train in every spare moment. Eventually, Launcelot realized the boy's potential and took the youth under his protection.

Fighter 15

| #AT 2 | Dmg 1d8/1d8 (sword) +3 | |

After being knighted, Gareth earned a reputation as a fearless protector of ladies in distress, especially one Lady Lyoness, whom Arthur eventually gave to him in marriage.

The most modest of all the knights of the Round Table, Gareth is sure to befriend any individual who is ridiculed or scorned by the other knights.

**Sir Kay**

Sir Kay is Arthur's foster brother and serves as the king's seneschal. He is a robust, boisterous knight who takes his position as Arthur's steward extremely seriously. Kay guards the proprieties of chivalry without understanding the essence of the code, and is constantly upbraiding new arrivals to the court for some technical violation of the code, even though they may be observing the spirit of chivalry far more closely than Kay himself.

Fighter 13

| | | |

| #AT 2 | Dmg 1d8/1d8 +1 | |

Many knights are puzzled by Arthur's tolerance of Kay, for he is a loudmouthed troublemaker who is constantly causing an uproar at the Round Table. Nevertheless, Arthur remains steadfastly supportive of Kay, perhaps out of loyalty to Kay's father and the man who raised him, Sir Ector.

In combat, Kay is a capable fighter, but utterly cruel and without mercy. He wears two magical rings. the first functions as a *ring of free action*, save that it allows him to breathe underwater for up to nine days. The second allows him to assume the size and strength of a hill giant.

**Bedevere**

Despite the fact that he has only one hand, Bedevere is renowned for his skill with the spear. He is a close friend of both Arthur and Kay, probably due to the time they spent together as youths, and has accompanied them on many quests. It is foretold that it will be Bedevere who Arthur asks to return *Excalibur* to the Lady of the Lake.

| #AT 2 | Dmg 1d8/1d8 (sword) +6 | |

Lamorak has slain several knights of the Round Table. He is a great enemy of Sir Gawaine, and Tristram as well. Lamorak is one of Percivale's older brothers (and therefore will not be encountered when Percivale is old enough to fight).

**Sir Palomides the Saracen**

Palomides is a bitter rival of Tristram's, for the Saracen also loves Isolde and has sworn to make her his, regardless of the fact that she loves Tristram. Wearing the chain mail armor of a Moorish warrior, he is well known for the quickness of his scimitar and his courage in battle. Sir Palomides also fights from horseback with a composite bow, which has done nothing to improve his image among knights who regard such weapons as less than chivalric.

**The Average Knight of Renown**

In Arthur's time, there were thousands of knights seeking fame and honor in Britain. Knights of Renown usually fight with lance, bastard sword, two-handed sword, or morningstar. They often ride a heavy war-horse in battle. When not engaged in combat, they are usually riding a lighter horse. All knights have a squire to assist them with their equipment and there is a 5% chance that the squire is a better fighter than his knight. Squires cannot fight from horseback, or use a sword, until they have been knighted. Average knights rarely grant mercy in combat.

**Knight of Quality**

At the minimum, the Knights of the Round Table were all Knights of Quality. Knights of Quality can fight with lance, bastard sword, two-handed sword, or morningstar. They usually ride a heavy war-horse in battle. When not engaged in combat, they lighter horse. All Knights of Quality have a squire to them with their equipment, and usually 1d10 men-at-arms of levels 1-7. Their squires cannot fight from horseback, or use a sword, until they have been knighted. If they are of good alignment, Knights of Quality will grant mercy in combat 75% of the time, provided they are asked to do so.

## Arthurian Monsters

**The White Hart**

The White Hart is a large albino buck with fifteen point antlers. Knights and their ladies sometimes glimpse it bounding through the forests of Britain, but commoners never see it unless they have proven themselves extraordinarily brave.

The White Hart is a harbinger of adventure that will befall those who spy it. The White Hart inhabits the misty isle of Avalon. If followed out across the misty waters off Britain's western coast, one will eventually reach the enchanted isle.

Some say the one who slays the White Hart will become England's eternal ruler. But according to others, when the White Hart dies, all magic will fade away.

| #AT 3 | Dmg 1d12/1d8/1d8 | | |

**Special Att/Def:** The White Hart can only by hit by magic weapons and can only be tracked when it is in sight as it leaves no visible trail. It is immune to all spells in animal sphere and enchantment/charm school. Each round, it regenerates 5 hit points. Lastly, this magnificent beast can run across water without penalty.

**The Questing Beast**

A powerful sorceress created the Questing Beast in vengeance for the destruction of her lover, a giant who was preying upon Pellinore's lands. The Questing Beast is a four-footed reptile resembling a camel without the humps, and having a long, serpentine tail ending in a nasty spiked ball. It wanders across Pellinore's lands wreaking havoc and destruction. Because Pellinore's men used a pack of hounds to track down the giant, the beasts' favorite prey are dogs, which it swallows whole and which sometimes remain alive in the beasts' stomach for years.

Although anybody brave enough to face the horrid creature might be lucky enough to drive it off, only Sir Pellinore or one of his descendants can kill it.

| #AT 4 | Dmg 1d12/1d8/1d8/1d10 | | |

**Special Att/Def:** The questing beast can only be killed by Pellinore, Percivale, Lamerok, Agglovale, Durnarde, Tor, Elayne, Galahad or someone else descended from Pellinore. Once per day, it breathes a cloud of poison gas which does 5d8 damage. Those who save versus poison will suffer half damage .

# Aztec Mythology

When Columbus set sail on his famous journey, parts of America were already civilized — and had been since nearly 700 years before the Golden Age of Greece. Though Columbus never saw them, three civilizations occupied the lands he claimed in Spain's name. The Aztec empire was just reaching the zenith of its power, dominating an area that included much of what is central Mexico today. Farther south, the ancient civilization of the Mayans was waning and had broken up into independent states that still controlled the Yucatan peninsula. And even farther south, in South America, the mighty empire of the Incas was the best-administered nation on Earth, controlling an area extending from southern Columbia to central Chile.

From a modern perspective, the most amazing thing about these societies was their isolation. Shielded from Europe by the vast Atlantic Ocean and from the Orient by the even more mighty Pacific, they had evolved from the simplest beginnings into complex societies in near-total seclusion. Their people did not suspect that the rest of the world existed, and no hint of their splendor had reached Europe or Asia.

**Regional History**

Like those of all American Indians, the primitive ancestors the Aztecs migrated to the New World in prehistoric days, crossing the Bering Strait over the frozen sea or during periods of low ocean levels. Gradually, these waves of hunters and gatherers drifted south settling on both continents of the Americas. Then, about 3,400 BC, some of the Indians in the Middle Americas made a crucial discovery: they learned how farm corn and other crops. With the abundance of food provided by a sound agricultural system, the Olmec people developed the first civilization of the Americas, which lasted from approximately 1,200 to 300 BC.

The Olmecs left a legacy of three vital inventions that shaped American cultures for the next two thousand years. First, their religion was marked by the cult of the supernatural jaguar-man, vestiges of which seem to have been part of most cultures more than a thousand years later. A more important contribution was the system of elite religious leadership which lay at the heart of all ancient American nations. Late in their culture's development, the Olmec priests invented a primitive form of glyph writing that was the basis for all later written languages in Middle America.

About 300 BC, the Olmec religious center at La Venta is sacked by invaders and their culture faded away. Civilization did not perish from Middle America, however. The Olmecs were followed by a succession of later cultures, including the Mayan (in 300 AD), which was perhaps the high point of Middle American artistic culture.

The Mayan priests supervised the construction of religious complexes dominated by steep pyramids, where they worshipped a wide range of deities associated with nature and their agrarian pursuits. Properly speaking, the cultural centers were not cities. These religious complexes were inhabited by the priestly elite, who were supported by farmers from the neighboring countryside.

When their civilization began to decline, sometime before 1,000 AD, it was invaded by the Toltecs, a warlike people from whose heritage the fierce Aztecs would soon rise. With the invasion, the bloodthirsty gods of the Toltecs replaced many of their gentler Mayan counterparts, accounting for many of the similarities between the late-Mayan and Aztec pantheons. The revitalized Mayan civilization flourished until 1,200 AD, when the Toltecs abandoned their capitol in the Yucatan. Again, the Mayans were invaded, this time from the south, and within 200 years their once-proud civilization was coming apart at the seams.

**The Valley of Mexico**

While Mayan culture was rising to its great heights in the Yucatan area, another civilization was taking shape farther north, in the Valley of Mexico. Located where modern day Mexico City now stands, the valley was filled with lakes and surrounded by protective mountains, an ideal location for the early development of agriculture. By 300 AD, its inhabitants had developed the first true city in the New World, Teotihuacan. Located thirty miles northeast of Mexico City, Teotihuacan was planned by master architects with a taste for austere lines and magnificent proportions. A three mile avenue ran through the middle of the city, connecting a complex of three pyramids that remains one of the most spectacular sights in Mexico.

But, as in any land, where there is wealth, there were those determined to take it. In 700 AD, Chichimec nomads from northern Mexico invaded the valley, overthrowing Teotihuacan and claiming peaceful city after city for their own. For the next two hundred years, the valley sank into constant warfare as the invaders fought each other for control of the conquered lands, and as wave after wave of Chichimec nomads arrived to join in the spoils.

Then, in about 970 AD, one of the tribes, the same Toltecs who later invaded the Maya civilization, finally conquered the Valley of Mexico. After consolidating their hold on the valley and founding the Toltec capitol at Tula, their armies marauded over most of Mexico, and they managed to hold off the new waves of Chichimec invaders until about 1160 AD, when their capitol also fell to their barbarian kinsmen.

This time, however, the Valley of Mexico did not sink into anarchy. It was filled with fortified city-states populated by ferocious warriors, and many of these city states held out against the fresh bands of Chichimec invaders.

**Early Aztec History**

One of these new tribes was the Aztecs, a group of impoverished nomads who, according to their early legends, had emerged from a cave in Aztlan, an unidentified location in northwestern Mexico. In their wanderings, they carried with them their one cherished possession, the wooden image of their terrible god, Huitzilopochtli.

When the worshipers of Huitzilopochtli entered the Valley of Mexico, all the good land was taken and they were too weak to conquer any of the established city-states. Largely because of their brutal religious practices, they were branded as savage outlaws and chased from place to place by the descendants of their own Chichimec heritage. At last, however, they persuaded Coxcox, the ruler of Culhuacan, to let them have a patch of sterile, snake-infested land near his city.

Here, they built a temple to their god and lived by killing and eating the snakes which infested their new home. But they quickly alienated their benefactor by brutally murdering his daughter. Coxcox mustered his forces and set out to destroy the Aztecs.

They were quickly driven into the marshes of Lake Texcoco, where they escaped by hiding among the reeds. Their god, Huitzilopochtli, told them they would be safe on an island where an eagle perched on a cactus holding a snake in its beak. The Aztecs duly found the island, hardly more than a few rocks protruding out of the waters. As their god instructed, they made this their new home.

Huitzilopochtli's advice was sound. The island was in the center of three powerful mainland cities, but was not strongly claimed by any. In addition, surrounded as it was on all sides by water, it could be easily defended. The Aztecs had no difficulty holding their island, and built their city, Tenochtitlan, upon it.

They soon learned to increase the area of their island by filling the marshes with dirt and rocks, and by building chinampas, islets made by anchoring wicker enclosures to the bottom of the lake and filling them with silt, reeds, and refuse. These chinampas made remarkably fertile croplands, so the Aztecs had even found a stable supply of food on their island.

As the Aztecs filled in the swamp surrounding their city, Tenochtitlan grew rapidly, reaching a population of 300,000 at the beginning of the sixteenth century. As an aside, this was five times the size of London at the time. It was surrounded by an ever widening belt of chinampas planted with flourishing crops of fruits and vegetables. In the middle of the chinampas, connected to the mainland by three long causeways, rose the city. It was cut into blocks by a gridwork of canals bordered by narrow pedestrian lanes and crossed by plank footbridges. These streets were completely dedicated to foot traffic, for the Aztecs made little use of the wheel and had no carts or wagons. This was probably due to the lack of beasts of burden. Before the Spanish came, there were no horses, oxen, cows or other large domesticated animals in the New World.

The humbler houses were made from adobe and the better ones from stone and stucco, but all were cleanly whitewashed and most had small courtyards. Everywhere, the city was immaculately clean and filled with blooming flowers, which the Aztecs loved almost to excess. Near the center the city rose the great palaces of the Emperor, nobles, a high priests. In the exact center, enclosed by the "Wall Snakes", rose the temple-pyramids and other ceremonial buildings.

Protected by their invulnerable island fortress, the Aztecs were free to pursue their favorite occupation: war. They began to ally themselves with older city-states, who where willing to offer large rewards for the help of the fierce Aztec warriors. Eventually, they learned to play these city-states against each other, and gained their first significant hold the mainland when they betrayed one ally and helped other defeat it. After this victory, they quickly learned to exploit conquered cities with unparalleled vigor, and by 147 AD they were the undisputed masters of the Valley of Mexico, and therefore of Mexico itself.

**Aztec Culture**

The Aztecs were aided in their conquests by a peculiarly bloody religion which encouraged warfare, especially for purposes of taking captives. The emphasis on taking prisoners had nothing to do with mercy, however. After capture, prisoners were killed to appease the more bloodthirsty of Aztec deities.

As brutal as this aspect of Aztec society seems to the modern reader, it was not unusual in the Valley of Mexico. Most of the inhabitants of the region were descended from the same Chichimec nomads as the Aztecs. They shared many of the same convictions, and also believed in the beneficial properties of eternal warfare. Like the Aztecs, their soldiers had no fear of death, and thought that perishing in war guaranteed a glorious afterlife. There are even stories of prisoners preferring death to being set free.

The Aztec preoccupation with war was so great that when they were not engaged in a real one, they would arrange a mock battle called a "War of Flowers" with one of their neighbors. Equal numbers of warriors would meet in a special place and fight until a certain number of warriors had been captured.

Aztec weapons were crude by European standards. swords, which are treated as short sword for game purposes, were made of wood and edged with obsidian. They also employed spears launched by spear throwers which are treated as javelins. Their spear throwers increased the javelin's age by +2 and added 25% to the range of such weapons. They also occasionally used such basic weapons as clubs rocks. Their armor was of quilted cotton (AC 8), and they wore helmets shaped like the heads of fantastic beasts.

As absorbed with war and death as the Aztecs were, these grisly preoccupations did not entirely dominate their lives. Every twenty days, they held joyous festivals with feasting, music, and dancing. The same nobles that supervised grisly religious rites wore robes of gloriously colored feathers and carried ornate bouquets of flowers in accordance with fastidious etiquette. Merchants and craftsmen exchanged their wares in a huge marketplace that held 60,000 people.

Like most of the ancient peoples in Middle America, the Aztecs used a rubber ball to play a game that resembled a cross between volleyball and basketball. On courts of paved stone, the players used their torsos, rear ends, and elbows (never their forearms, hands, or feet) to try knocking the ball through stone hoops suspended on the sides of the courts. The games were symbols of the play of cosmic forces, and the outcome may have been used to divine the future. But, undoubtedly, they were also enjoyed as sport.

In theory, Tenochtitlan was a democracy. In practice, it was an absolute monarchy whose semi-divine emperor was chosen by a council of noblemen from a single royal family. The emperor oversaw the appointments of the high-ranking dignitaries and bureaucrats who helped him rule the city and its conquests. The bulk of Tenochtitlan's population consisted of artisans, merchants, peasants, and slaves captured in battle or sold into bondage to pay their debts.

One of the most remarkable achievements of Middle American culture was a complicated calendar, which they could correct in such a way that it was more accurate than the one commonly used today. Basically, it consisted of eighteen-day months and twenty-month years. At the end of the year were added five days that were "outside" the calendar, to form a year 365 days in length. During this last five day period, people were careful not to perform any unpleasant activities, for they believed it was possible that whatever they did during these "outside" days they would do forever.

The Aztecs also observed a secondary, divinatory calendar consisting of 20 "signs" of thirteen days each. Each sign was ruled by a different deity.

Because celestial cycles were a key part of the Aztec religion, they were excellent astronomers. The combination of their solar and divinatory calendars allowed them to make very exact descriptions of earthly time in relationship to heavenly bodies.

**Aztec Religion**

The Aztec pantheon is one of the largest and most complicated known. They had a god who was responsible for all the major forces in nature, and for many social aspects of their culture as well. The size of the Aztec pantheon may be due, in part, to their fondness for war. Whenever they conquered another tribe, they felt it was important to incorporate that tribe's god into their own pantheon. As a consequence, their pantheon grew at an impressive rate.

At the root of the Aztec religion is their peculiar view of time and space, one of the forces behind the creation of their elaborate calendar. Like most Middle Americans, to them time and space are the same thing. On the highest level they merge together into the absolute being of the all powerful deity who exists outside material creation. To the consternation of all living things, time-space has unraveled. It is the duty of the gods to keep it from unraveling further, and the duty of men to help the gods in their task.

To understand the Aztec association of time-space, it may be helpful to picture a wheel with four broad spokes. One spoke points in each direction: north, south, east, and west. There is also the hub of the wheel, which counts as a separate place. When the wheel is spinning, the entire thing appears solid and at rest. When it is truly at rest, however, it looks like it is made up of separate parts.

In the Aztec view, the hub and each spoke represent different cosmic age-places, called "suns". Each sun was associated with a different direction, color, and group of deities. Although the suns exist simultaneously side by side, they also rotate in a sequential pattern that gives the evolution of the universe a cyclical nature. As the wheel revolves, different suns gain predominance over the physical world.

Within each sun, only certain forms of earthly life can survive. So the changing of a sun is always catastrophic, bringing about great transformations. The Aztecs live in the Fifth Sun, located in hub of the wheel. In some ways, it is the culmination of all the other suns, and the only one in which mankind has been able to survive. In order to keep the Fifth Sun from passing, the Aztecs must feed and strengthen their gods — and the penalty for failure is the end of creation! The Aztecs also believe in a "world above" and a "world below" separate from the horizontal structure of the suns. These worlds are divided into many levels. For our purposes, the most important aspect of these worlds is that the world below is the home of the dead, and the world above is the home of the gods, night and day, shooting stars and fiery snakes, birds, heavenly bodies such as Venus, the Sun, the Moon, and the Milky Way, and the clouds. The progenitor of the gods, Ometeotl, lives in the uppermost plane of the world above, which embodies all of existence.

Ometeotl is a personification of the principle of duality which pervades much of Aztec thought. He is male and female, negative and positive, light and shadow, and could also be thought of as two separate gods, Ometecutli and Omeciuatl. Most of the gods of the Aztec pantheon, in fact, had a counterpart of the opposite sex who performed a function similar to their own.

On a more human level, duality is important in the special relationship existing between every human and his animal counterpart. At the moment of birth, every human develops a spiritual bond with a particular animal and their destinies are linked from that point forward. It is possible, the Aztecs believe, to bring a man harm by

finding his counterpart and doing it harm. These beliefs may well be a vestige of the Olmecs' worship of the jaguar-man.

Unlike the gods of other mythol, the gods of the Aztecs do not inhabit the planes. Instead, many of them live in space. It is even possible for humans to visit their homes (for instance, by using the space-travel rules in the SPELLJAMMER" game). Should a mortal dare such an act uninvited, there is only a 5% chance that the deity will be at home. If he is home, there is only a l% chance per level of the character that the god will not disapprove of the visit (priests of that deity's mythos receive a 10% bonus to this chance).

**New Spells**

**Locate Spirit Animal** (Greater Divination)
Fourth Level Priest

Sphere: Divination
Range: Special
Components: V, S, M
Duration: 1 day
Casting Time: 1 turn
Area of Effect: 1 person
Saving Throw: Negate

A priest using a locate spirit animal spell learns the location of the spiritual counterpart of his subject. For a full day afterwards, he knows the current location of the animal.

This spell is often used to capture a person's spiritual counterpart, for both good and ill effects. When the caster wishes to inflict harm on his subject, he can often do so by injuring, or even killing, the counterpart. The victim of such an attack suffers symptoms identical to those of the animal (save that he does not necessarily die if the animal dies), and loses the same number of hit points as his counterpart. If the animal dies and the human does not, he permanently loses that number of hit points. Such a person can never be subjected to an attack upon his spiritual counterpart again.

This spell is often used for beneficial purposes when a person is suffering from a mysterious ailment. Often, the cause of such ailments is an injury or sickness affecting the spiritual counterpart. If the animal can be found and cured, the person will recover from his mysterious ailment.

Unfortunately, just because a priest knows the location of a spiritual counterpart, that does not mean he can reach the animal. The animal may be anywhere within an area of 1d100 x 10 miles of the subject. Often, the priest must undertake a long journey in order to track down the animal.

If the subject is aware of the casting of this spell and unwilling to have his spiritual counterpart located, he is entitled to a saving throw. A successful throw indicates that the priest did not find the counterpart, and an unsuccessful throw indicates that he did.

Once the animal is located, it usually regards any attempt to capture or injure it as hostile, even if performed for the benefit of its counterpart. It is entitled to fight as a normal member of its species in all ways. It is important to remember, however, that all magic and damage affecting the animal also affects the subject of the spell. In the case of spells, the human counterpart is allowed to make a separate saving throw (just as if the spell had been thrown directly against him), but with a -2 modifier.

**New Magic Items**

**Murky Mirror**

The *murky mirror* is small disc of polished silver that can be used in three different ways. When a normal man or woman holds it, he or she makes a Charisma check. If they fail the check, the *murky mirror* functions as a normal mirror. If they pass the check, the image in the mirror reflects the individual as others see them. A beautiful woman who considers herself ugly, for example, would see a ravishing image of herself. A bullying fighter would see in his face the image of a feared and hated ogre.

When a military leader of any rank looks into the mirror he sees his most threatening enemy. The image always shows the size and nature of the enemy's forces. Leaders making a successful Intelligence check can often interpret the enemy's location from landscape appearing in the image. No sound accompanies the image, and it cannot be controlled to focus in upon a desired area.

When a priest looks into the mirror, it issues a silverish smoke that engulfs his head and hides what he sees from view of anyone nearby. If the priest does not withdraw head, he sees a vision of the future. How far in the future depends upon his level, as does the scop e of the vision:

| Level | Distance into future | Scope of vision |
|---|---|---|
| 1-3 | 1 day per level | Self |
| 4-6 | 1 week per level | Self |
| 7-9 | 1 month per level | Party |
| 10 | 1 year | Party |
| 11 | 2 years | Party |

| | | |
|---|---|---|
| 12 | 3 years | Party |
| 13-15 | 1 year per level | Country |
| 16-20 | 5 years per level | Country |
| 21+ | 10 years per level | World |

The vision always shows the future at the precise time listed for a priest of that level and cannot be changed. The scene it shows is what will happen if events continue a their current course and the priest does nothing to change them. At the lowest levels, the priest sees only his own future. At the middle levels, he sees the future of himself and 10 of his closest friends (the adventuring party, in the case PCs). When the priest reaches 13th level or above, he sees the future of the political unit to which he owes allegiance, such as a kingdom or city-state. At the highest levels, his vision tends to all of mankind.

After being used, the *murky mirror* leaps out of the holder's hands and flies into the sky, where it becomes a bright shining star. Characters attempting to hold onto the mirror have a 5% chance per level (maximum 95%) of doing so, the mirror will attempt to fly into the sky after each use.

**Ometeotl (greater god)**

Ometeotl is "the god-above-all, of the near-and-close, he who is at the center". He is the progenitor of the gods, who created first himself, then the other gods, and then everything else. In a certain sense, he is the embodiment of the universe, and all things are a part of him. No statue or depiction of Ometeotl has ever been made, for he is as invisible as the wind. The only image of Ometeotl that a man can see are his footprints. At will, Ometeotl can create anything he wishes without tiring.

**Role-playing Notes:** Ometeotl is the most aloof of all deities and never answers appeals for aid. The only time he will involve himself in human affairs is if those affairs threaten the order of the universe itself. In such cases, he will send his avatar to destroy or correct the problem.

Ometeotl seldom sends omens or warnings to worshipers. If they do something that angers him, he simply withdraws his favor. If they do something that threatens his power or the order of the universe, he sends his avatar to destroy them.

**Statistics:** AL n; WAL any; AoC creation; SY footprint.

**Ometeotl's Avatar (fighter 18, wizard 18)**

Ometeotl's avatar cannot be seen. He carries a razor sharp sword of pure obsidian. If unsheathed, this sword can be seen. Ometeotl's avatar casts spells as an 18th level wizard and always has access to all spells of all schools.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 20 | Wis 20 | Cha 10 |
| MV 20 | SZ 7' | MR 40% |
| AC -4 | HD 18 | HP 144 |
| #AT 2 | THAC0 1 | Dmg 1d8/1d8 (sword) +8 |

**Special Att/Def:** Ometeotl's avatar is always invisible, even when attacking. No means of detection, either magical or mundane, will reveal his location. Even while involved in combat, Ometeotl may create one 10th level warrior (AC 2, HD 10, THAC0 8, HP 120, #AT 3/2, Dmg 1d8 (sword) +6) to fight at his side.

**Duties of the Priesthood**

Priests of Ometeotl are free to behave as they please. However, 10% of any treasure they accumulate, and every third magic item, must be donated to Ometeotl's temple or the god will withdraw his support. Before eating, they are expected to offer half of their meal to their god.

**Requirements:** AB standard; AL any; WP any; AR b; SP all; PW 1) turn undead as if 2 levels higher; 10th) *turn invisible*; TU turn.

**Huitzilopochtli (intermediate god)**

The patron god of the Aztecs, Huitzilopochtli is the god of war, lightning, and fruit and crops. His translated name "Left-handed Hummingbird:' is deceiving, for he is a fierce, bloodthirsty god. He was born of a mortal woman, fully grown wearing blue jade armor, and carrying a blue javelin. He resembles a blue-skinned man with hummingbird feathers decorating his head and left leg, though when acting in his guise as a lightning god he sometimes resembles a serpent. He sends a 10d10 lightning bolt to any location on the Prime material Plane.

**Role-playing Notes:** Huitzilopochtli is quite active in affairs of men. Assuming they perform the proper rites, worshipers can count on him for sound advice. Those who have offended him will find their weapons mysteriously dulled or rotted, usually at an inopportune moment. Other omens include violent lightning storms, an unexplained stench of death, and mysterious battle sounds in the night.

**Statistics:** AL ne; WAL any; AoC war & light; SY

**Huitzilopochtli's Avatar (fighter 18)**

Huitzilopochtli's avatar takes the form of a warrior who has won great victories in the distant past. The avatar is ways armed with a blue javelin. When the avatar leaves, his physical shell, the body of a great warrior, remains behind. Although no longer divine, the hero remains a force to be reckoned with. He lives for the remainder of a normal man's life, but is +3 on all saving throws.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 18 | Wis 17 | Cha 16 |
| MV 18 | SZ 6' | MR 25% |
| AC -6 | HD 18 | HP 144 |
| #AT 2 | THAC0 1 | Dmg 1d8/1d8 (sword) +7 |

**Special Att/Def:** Huitzilopochtli's avatar is unaffected lightning and can be hit only by +1 or better magic weapons. Attacks made against his back rebound on the attacker, doing their normal damage. He can hurl his javelin which comes a stroke of lightning and inflicts 5d10 points damage if it hits. The javelin returns to his hand instantly after hitting or missing its target.

**Duties of the Priesthood**

Huitzilopochtli's clerics must embody the spirit of war. They must always be willing to fight without regard to own lives . Their primary duty is presiding over the deaths of prisoners taken in Huitzilopochtli's name.

**Requirements:** AB standard; AL any non-good; weapons that draw blood; AR b; SP combat, necromancy, sun, weather; PW 10th) receive a blue javelin that does 1 point of lightning damage per level of the priest; TU nil

**Quetzalcoatl (intermediate god)**

Quetzalcoatl is known all over Middle America as the feathered-serpent, god of the wind. He is also a god of wisdom, a teacher of peaceful arts, and the protector of the Second Sun. Long before Tenochtitlan's founding, Quetzalcoatl was chased from the Valley of Mexico by a rival god. Before leaving, he promised to come back in 500 years and avenge himself. The Aztecs are awaiting the noble god's return with trepidation, for he would not approve of many of their current practices. He makes his home on Venus, where he appears as a flying serpent covered with green feathers.

**Role-playing Notes:** Quetzalcoatl is preparing to return to the world and is recruiting worshipers. Any priest of good alignment may receive a visit from an avatar. The avatar attempts to recruit the priest, saying that the evil Fifth Sun must be brought to an end. Quetzalcoatl's omens and portents include wind storms, the presence of birds (especially talking ones), and whispering voices.

**Statistics:** AL cg; WAL any good; AoC air, wisdom; SY feathered snake with wings.

**Quetzalcoatl's Avatar (priest 18)**

In avatar form, Quetzalcoatl usually appears as a talking, feathered snake. The avatar has access to priest spells in any sphere.

| | | |

| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 1 | Dmg 1d10 +6 |

**Special Att/Def:** Quetzalcoatl's avatar has the normal spell immunities associated with high Wisdom and Intelligence. Anyone hit by the avatar must save versus paralyzation or be entwined by the avatar's body. They will suffer 1d10 points of crushing damage per round until the hold is broken.

**Duties of the Priesthood**

Priests of Quetzalcoatl are charged with preparation for his return, and may be assigned a variety of tasks, including the infiltration of key government posts, recruiting worshipers in the wilderness, or even preparing secret caches of weapons and armor. When their god returns, they will be called upon to rise up and destroy the masters of Tenochtitlan.

**Requirements:** AB standard; AL any good; WP any; AR b; SP any; PW 1st) communicate secretly by sending messages on the wind. Range is unlimited, but message requires one minute per mile to reach target; 5) turn undead; TU special.

**Mictlantecuhtli (intermediate god)**

Mictlantecuhtli, with his wife Mictanchihuatl, rules over the Aztec afterlife from Tlalxicco, the ninth and lowest level of the Aztec underworld. People unlucky enough not to die during an activity presided over by another god — in combat, as prisoners, during childbirth, etc. — must undertake the journey across the nine

rivers of the Aztec underworld. Here, under the watchful eye of Mictlantecuhtli and his wife, they endure neither pain nor pleasure, just a dreary eternal existence.

In their true forms, Mictlantecuhtli and Mictanchihuatl resemble emaciated human beings with skull-like heads, bulging eyes, and claw-fingered hands. They have control over the dead, and it is only with their blessing that a *raise dead* spell may function.

**Role-playing Notes:** As deities of the underworld, Mictlantecuhtli and Mictanchihuatl are unconcerned with human events. They do, however, demand the payment of a small amount of blood from any of their followers who cast a *raise dead* spell (treat this as an additional component of the casting process). Their omens often include the hoot of an owl, a dream in which the sleeper dies, and having a vulture land on one's shoulder, all of which presage death.

**Statistics:** AL n; WAL any; AoC death; SY skull and crossbones.

**Mictlantecuhtli's Avatar (priest 16, fighter 14)**

Mictlantecuhtli's avatar resembles an emaciated human being with a skull-like head and bulging eyes. He has access to the combat, divination, elemental, or necromantic spheres. Mictanchihuatl's avatar is a female version of her husband's.

| | | |

| AC -2 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d8/1d8 (claws) +5 |

**Special Att/Def:** Anyone looking upon the avatar's face for the first time must save versus petrification or remain motionless for 1d10 rounds.

**Duties of the Priesthood**

The primary responsibility of clerics of Mictlantecuhtli and Mictanchihuatl is preparing the dead for their journey into the afterlife and presiding over their death rites. Once a year, they must spill some of their own blood in order to feed their deities.

**Requirements:** AB standard; AL any neutral; WP any; AR b; SP combat, divination, elemental, necromantic; PW 1) turn undead; 5) command undead; TU special.

**Tezcatlipoca (intermediate god)**

Tezcatlipoca's name, which means "Smoking Mirror" seems particularly appropriate. He was worshipped by the Toltecs, the Aztec's predecessors, as a sun/warrior god who fought a daily battle against the night. He was also credited with ripening crops, but was also feared because of his ability to bring on droughts. Tezcatlipoca was the guardian of the First Sun until being knocked from the sky by Quetzalcoatl as he ushered in the Second Sun. Tezcatlipoca's fall resulted in his transformation first into a jaguar, then into the constellation Ursa Major. After his fall, Tezcatlipoca's role changed. Though the Aztecs still regarded him as a patron of warriors, he was now the god of night and the benefactor of witches, thieves, and other evildoers. A great spreader of disorder and strife, Tezcatlipoca never forgave Quetzalcoatl for his fall, and eventually evened the score by using treachery to topple Quetzalcoatl's guardianship of the Fourth Sun.

In his home in Ursa Major, Tezcatlipoca is invisible and ubiquitous, or he appears as a one-footed man with a round mirror of black obsidian in place of the missing foot. By gazing into this mirror, he can see what any mortal on the Prime Material Plane is doing. If it is somehow separated from Tezcatlipoca, the mirror becomes a mirror of life trapping.

**Role-playing Notes:** Tezcatlipoca is the second most powerful god in the Aztec pantheon, a position he guards jealously. He often assigns his priests tasks designed to erode the support of rival gods. On rare occasions, he has even been known to appear personally (though not on the Prime Material Plane) to further some particularly important scheme. He is especially vigilant in regards to the Quetzalcoatl's worshipers, and places special emphasis on exposing schemes to help their deity prepare for his return.

Omens and portents from Tezcatlipoca tend to be direct and forceful. More than once, he has frightened a worshiper by causing his image to appear in a mirror and issue instructions. Other omens include sudden darkness, being trailed by a jaguar, and evil faces appearing in obsidian utensils.

Because of his jealously, Tezcatlipoca tolerates no shortcomings in his priests, and he is particularly vigilant about watching their activities in his obsidian mirror. Minor transgressions are punished by a denial of spells and, usually, a visit from some of Tenochtitlan's more unsavory thieves. In the case of major offenses, Tezcatlipoca usually sends an avatar to end the offender's life.

**Statistics:** AL ce; WAL any; AoC night and treachery; SY black mirror.

**Tezcatlipoca's Avatar (warrior 15, thief 25)**

Most often, Tezcatlipoca's avatar takes the form of a giant black jaguar, but he occasionally appears as a thief of indeterminate age when the jaguar form would be inappropriate. The attack forms listed above are for his jaguar form. In human form, he receives only two attacks per round. However, in human form, he uses an obsidian *fang dagger* +4. The *fang dagger* functions as a dagger of venom, save that the victim must make a saving throw any time he is hit. The effects of the toxin are detailed under Special Attacks.

| | | |
|---|---|---|
| Str 18/00 | Dex 19 | Con 17 |
| Int 16 | Wis 14 | Cha 10 |
| MV 20 | SZ 8' | MR 20% |
| AC -2 | HD 15 | HP 120 |
| #AT 3 | THAC0 5 | Dmg 1d10/1d10/2d20 +6 |

**Special Att/Def:** Victims hit by the avatar's claws save versus poison or lose 1 constitution point permanently. Further, he can only be hit by +2 or better magic weapons. On a natural attack roll of 20, he grapples for 2d10 point damage. This is in addition to the normal melee damage inflicted and continues each round until his hold is broken. He is treated as wholly invisible when hiding in shadows and always moves silently when he wishes to do so.

**Duties of the Priesthood**

The first duty of priests of Tezcatlipoca is to promote their temple. Every cleric is required to produce at least one convert every six days.

Their second duty is to prevent Quetzalcoatl from gaining too much power. To this end, clerics below fourth level are assigned to follow Quetzalcoatl's known priests and report their activities.

High level priests must spend a great deal of their time forming ceremonies in order to strengthen and appease their god.

**Requirements:** AB standard; AL any evil; WP any, sons encouraged; AR b; SP all, combat, divination, elemental, necromantic, summoning; PW 3) see in the dark, move silently with 85% success, 9) hide in shadows 90% success, 12) climb walls with 95% success; TU command.

**Tlaloc (intermediate god)**

Tlaloc, "he who makes things grow", is the god of rain and moisture, who presided over the Third Sun. He is a cruel deity who delights in the torture of helpless innocents. Given his evil nature, it seems strange that Tlaloc has created Tlalocan, a gay paradise reserved for the victims of death associated with water (such as drowning or being broken on the rocks by a great wave). Tlaloc makes his home on the tops of the highest mountains, and resembles a man with a snakelike head, save that he has tusk-like teeth and white rings around his eyes. He is married to Chalchihuitlicue.

**Role-playing Notes:** Tlaloc has four pitchers of water which he may pour over areas of the Prime Material Plane as indications of his mood. He uses the first pitcher, which contains good water, only when his priests have performed their rites with the proper zeal. The other three he uses to express his displeasure: the second pitcher contains water filled with spider eggs and webs that bring blight, the third with water that turns to frost, and the fourth with water that causes fruit to rot. Other omens of Tlaloc's displeasure include too little or too much rain, drought, and floods.

**Statistics:** AL le; WAL le; AoC rain and moisture; SY serpent chasing its tail.

**Tlaloc's Avatar (fighter 14, druid 12)**

Tlaloc's Avatar appears as man with a snakelike head and armed with a magic, razor-sharp sword of pure obsidian. He has access to the all, animal, elemental, healing, plant, and weather spheres.

| | | |
|---|---|---|
| Str 18/51 | Dex 18 | Con 18 |
| Int 18 | Wis 17 | Cha 17 |
| MV 18 (f) | SZ 6' | MR 20% |
| AC -2 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 2d8/2d8 (sword) +4 |

**Special Att/Def:** Tlaloc's avatar can summon a hailstorm covering an area of 140 square yards and doing 14d4 points of damage to all within it. He can also bite for 2d12 points of damage in melee.

**Duties of the Priesthood**

The duties of Tlaloc's clerics include kidnapping, torture, and other tasks of his vile worship.

**Requirements:** AB standard; AL any evil; WP any; AR b; SP all, animal, elemental, healing, plant, weather; PW 1) *summon hailstorm* covering 1 square yard per level, doing 1d4 points of damage per level, and lasting for a period of 1d4 rounds; TU nil.

**Chalchihuitlicue (intermediate god)**

Also known as the "Goddess of the Jade Petticoat:' Chalchihuitlicue is the deity of running water and was the protrectress of the Fourth Sun. She delights in blessing chaste loves, sheltering children, and protecting mankind in general. It was through her influence that her evil husband, Tlaloc, created his paradise for those who die by water. In her true form, she is beautiful woman wearing a skirt of green jade. She has the power to turn 3-300 humans into any animal form. When the Fourth Sun ended in a devastating flood, she saved mankind by turning her worshipers into fish.

**Role-playing Notes:** Chalchihuitlicue is a rarity in the Aztec pantheon: a deity who makes a habit of helping mankind. There is a 1% chance that she will send her avatar to aid any worshiper who sacrifices his or her most valuable piece of jade jewelry by throwing it into a bottomless pool. The chance increases to 25% if the sacrificer is a priest making the request on behalf of the needy.

Omens from Chalchihuitlicue often involve the sound of running water, such as an unexplained musical trickling to denote pleasure, or the roar of a waterfall to denote anger.

**Statistics:** AL cg; WAL any good; AoC flowing water, love, children; SY petticoat.

**Chalchihuitlicue's Avatar (wizard 14, hard 14)**

Chalchihuitlicue's avatar usually appears as a beautiful woman wearing a green jade skirt. She has access to the alteration, enchantment/charm, and illusion/phantasm schools of magic.

| | | |
|---|---|---|
| Str 14 | Dex 18 | Con 15 |

| AC 2 | HD 14 | HP 112 |
| #AT 1 | THAC0 7 | Dmg 1d4 +5 (dagger) |

**Special Att/Def:** Any being looking on Chalchihuitlicue's avatar for the first time, or hit by her jade dagger, must save versus paralyzation or be unable to attack.

**Duties of the Priesthood**

One of the most important duties of Chalchihuitlicue's clergy is sheltering orphans, and any temple dedicated to her is bound to be filled with parentless waifs. Foul water is also an abomination to her, so her priests spend a fair amount of their time unblocking streams, draining marshes, and so on.

**Requirements:** AB standard; AL any good; WP any blunt; AR b; SP all, charm, creation, divination, healing, guardian, protection, weather; PW 1) *create and/or purify water* (1 gallon per level), 10th) *Conjure water elemental*; TU

**Tlazolteotl (intermediate god)**

Tlazolteotl is the goddess of guilty loves, pleasure, and vice. She is an eater of filth and a sinister seductress who tempts virtuous men to their ruin. In her true form, she appears as a scantily-clad woman of great beauty, though she is a gifted illusionist who can appear in many guises.

**Role-playing Notes:** Although Tlazolteotl herself is base and debauched, she demands that humankind follow a strict moral code — and delights in punishing humans who do not. To this end, she sends her avatar to Tenochtitlan to test the resolve of good men. Often, the avatar uses her invisible dagger to slay the victim after he has succumbed to her charms. But in the case of powerful men, she prefers to expose the indiscretion in such a manner as to ruin his life and reputation.

Omens from Tlazolteotl include offal raining from the sky, unexplained yearnings, and physical pleasure inappropriate to the circumstance.

**Statistics:** AL ce; WAL any; AoC bodily pleasure and vice; SY red serpent's head.

**Tlazolteotl's Avatar (illusionist 16)**

Tlazolteotl's avatar is a beautiful woman who, while dressed appropriately to the occasion, reveals as much of her charms as possible. Tlazolteotl's avatar casts spells only from the illusionist school of magic.

| | | |
|---|---|---|
| Str 12 | Dex 18 | Con 16 |
| Int 18 | Wis 10 | Cha 19 |
| MV 18 | SZ 5' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d4 (dagger) |

**Special Att/Def:** No evil being can bring himself to strike her. Anyone wounded by her invisible dagger must save versus death or die instantly. If attacked, Tlazolteotl's avatar uses an innate ability to create an image of herself as a foul monster with dripping fangs, long talons on her fingers, and black greasy skin covered with warts.

**Duties of the priesthood**

Tlazolteotl's priestesses are assigned the duty of exposing those possessed of a base and immoral character by tempting others into committing shameful acts. At least once every three months, they must lure a man into a guilty love. They are expected to subsist on garbage, filth, and offal. Failure to do so leads to revocation of the favor of their goddess.

**Requirements:** AB standard, must be female; AL any evil; WP poisoned dagger; AR b; SP charm, combat, divination, healing, necromantic; PW 1) immunity to all forms of disease; 5) *cause disease* (as reverse of 3rd level priest spell *cure disease*), 10) Charisma raised to 18; TU nil.

**Xochipilli (intermediate god)**

Xochipilli, the "Prince of Flowers:' is god of beauty, happiness, music, and gambling. Along with his twin sister, Xochiquetzal, he is responsible for much of men find joyful in life. He is a benevolent but fickle god who seldom blesses a man with his gifts for long. In his true form, he has the body of young man, but his face is that of a decaying corpse.

**Role-playing Notes:** Xochipilli has a mercurial disposition. Sometimes he takes great pleasure in helping his worshipers, other times he inflicts great hardships on them for little reason. Anyone sacrificing an important magic item to him by throwing it into the street and walking away stands 1% chance of attracting his attention. If the person is about to take an immensely big gamble, this chance increases 25%. If he responds to the sacrifice, Xochipilli will aid the worshiper by allowing him to make a second die roll at some critical moment. Omens from Xochipilli include unexplained music, a run of good or bad luck, and the sudden urge sing.

**Statistics:** AL cg; WAL any; AoC beauty, good and bad luck; SY flower.

**Xochipilli's Avatar (bard 18)**

Xochipilli's avatar is a well-proportioned young man the head of a corpse. He carries a large axe with an obsidian blade that never grows dull or chips. Xochipilli may select bard spells from any school of magic.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 16 | Wis 16 | Cha 19 |
| MV 18 | SZ 6' | MR 25% |
| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d10 (axe) +8 |

**Special Att/Def:** Xochipilli's avatar gets a second chance to make any attack roll which fails to hit the target. Further he gets two chances to make any saving throw that is required of him. Anyone attempting to strike him must make two successful attack rolls before they can hit him and must make two successful saves in order to save against one of his spells.

**Duties of the Priesthood**

Xochipilli's clerics must be extremely handsome or beautiful, always cheerful, and willing to take chances. They are expected to wager all they own on some trivial event at 1 once a year.

**Requirements:** AB standard, but at least 16 charisma; any; WP any; AR b; SP all, charm, combat, creation, divination, healing; PW 1) +1 to all saving throws; 5) +2 to saving throws; 10) second attempt at any failed save throw; TU nil.

**Xochiquetzal (intermediate god)**

Xochiquetzal is the goddess of flowers, dance, and proper love. Along with her twin brother, Xochipilli, she is responsible for much of what men and women find joyful in life. However, as the goddess of love, she is somewhat less fickle than her twin — though that is not to say that she is entirely constant, either.

In her true form, Xochiquetzal is a woman of such beauty and gaiety that all men who see her fall in love with her. She has the power to make any man fall in love with any woman.

**Role-playing Notes:** Though not intimately involved in human affairs, Xochiquetzal occasionally answers (10% chance) the joint plea of a man and woman in love, though their relationship cannot be hidden or illicit in any manner. She is especially concerned with countering the efforts of Tlazolteotl to lure good men into guilty loves.

Omens from Xochiquetzal include the unexpected appearance of a blooming flower, the sudden withering of a flower already in bloom, and the uncontrollable urge to dance.

**Statistics:** AL ng; WALany; AoC love, flowers, celebrations; SY rose.

**Xochiquetzal's Avatar (bard 18)**

Xochiquetzal's avatar takes the form of a woman of tender countenance and incomparable beauty. She can cast her bard spells from any school of wizardry.

| | | |
|---|---|---|
| Str 12 | Dex 17 | Con 15 |
| Int 18 | Wis 18 | Cha 20 |
| MV 20 | SZ 5' | MR 20% |
| AC 1 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1-4 (dagger) |

**Special Att/Def:** Any man who looks upon Xochiquetzal's avatar must make a saving throw versus spells or find himself forever determined to defend her from all harm. Her silver dagger causes only 1d4 points of damage, but anyone hit by it must save versus paralyzation or fall into a state of euphoria and stand stunned for 1d4 rounds.

**Duties of the Priesthood**

Only men and women in love may be priests of Xochiquetzal and both individuals must become priests. Their primary duty consists of keeping their love alive. Above all, they must never deceive their spouse or be unfaithful. The man-wife priest teams are expected to keep lavish flower gardens in their homes.

**Requirements:** AB standard, but at least 16 charisma; AL any good; WP club, net, quarterstaff, sling, whip; AR b; SP all, charm, creation, divination, guardian, healing, protection; PW 3) *cure serious wounds*; 6) *cure disease*; 9) *neutralize poison*; 12) *heal*; 15) *raise dead*; TU nil.

**Metzli (intermediate god)**

Metzli, the Lady of the Night, is the goddess of the moon. She is the kindly patron of all animal growth. But she is also the goddess who brings the terrible things of the night — cold damp air, the poisons of the atmosphere, ghosts, and other fearful shapes and shadows. Metzli is the deity who brought light to the world by throwing a leper into a bonfire, then walking into the flames herself. As the pair vanished, the night gave way to the day.

In her home on the moon, she is a beautiful, ghostly woman of silver light. She has the power to instantly increase or decrease the size of any animal up to five times (with a corresponding change in HD, hit points, strength, and damage).

**Role-playing Notes:** On the surface, Metzli seems an enigmatic contradiction. She is a beneficent goddess of night who created day, yet she also presides over the terrible creatures of the night. What humankind does not realize, and what Metzli has no interest in explaining, is that she is concerned with far more than the welfare of human beings, and: the creatures of darkness are of crucial importance to her.

Omens from Metzli take the form of visits from shadowy creatures in the late hours of night.

**Statistics:** AL ng; WAL any; AoC night and animal growth; SY crescent moon.

**Metzli's Avatar (fighter 15, illusionist 10)**

Metzli's avatar takes the form of an albino female warrior. She is armed with a magical sword of white metal that cuts through any armor as if it is five armor classes worse than normal. Metzli's avatar has access to spells in the illusion/ phantasm school of magic.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 16 |
| Int 19 | Wis 17 | Cha 18 |
| MV 18 | SZ 6' | MR 20% |
| AC -1 | HD 15 | HP 120 |
| #AT 2 | THAC0 5 | Dmg 2d8/2d8 (sword) +6 |

**Special Att/Def:** Metzli's avatar is able to assume wraithform at will, and control the size of animals as per the 5th level cleric spell, *animal growth*. She is immune to any damage caused by fire.

**Duties of the Priesthood**

Metzli's priests spend most of their time raising fruits and grain, which they leave out in special vessels at night to feed their deity's shadowy denizens. Not even the highest clerics know the significance of this task.

**Requirements:** AB standard; AL ng; WP battle axe, club, sling, whip; AR b; SP animal, astral, combat, necromantic, protection; PW 1) infravision (60 feet); 10) ability to cast spells from the illusion/phantasm school of wizard magic as if they were clerical spells of equal level; TU turn.

**Centeotl (intermediate god)**

Centeotl is the goddess of agriculture, nature, and corn in particular (she shares this last duty with a male counterpart, Cinteotl). She is a beneficent deity who watches over food crops, but is also the mistress of pain and illness, and has a habit of using her physical charms to lure men to their death. Unlike Tlazoteotl, she seems to do this not out of maliciousness, but because such victims are necessary for the fertility of crops.

**Role-playing Notes:** Centeotl watches over the harvest, dictating how bountiful it will be based upon the devotion of her worshipers. Although she needs the lives of young men to ensure her cycle of fertility, she tries

to reward her victims by allowing them to experience indescribable but total bliss in her avatar's arms before dying. She also judges who will suffer illness and pain, sometimes rather capriciously and sometimes with great fairness and justice.

Omens from Centeotl include insect plagues, crop blights, pollen, and seeing her avatar, which always foretells great personal calamity, even if the individual does not succumb to her charms.

**Statistics:** AL cn; WAL any; AoC agriculture, illness, pain; SY cornstalk.

**Centeotl's Avatar (druid 15)**

Centeotl's avatar is a beautiful, golden-haired woman armed with a magical staff of blue jade. She can draw upon the all, elemental, and plant spheres for her spells.

| | | |
|---|---|---|
| Str 14 | Dex 16 | Con 15 |
| Int 16 | Wis 19 | Cha 18 |
| MV 18 | SZ 6' | MR 20% |
| AC 0 | HD 15 | HP 120 |
| #AT 1 | THAC0 5 | Dmg 2d10 (staff) |

**Special Att/Def:** Centeotl's avatar can use any spell in the plant sphere at will. When victims are hit by Centeotl's staff, they must save versus poison or fall ill and suffer an additional 1d6 point loss from Constitution. This loss is permanent, but can be restored by a cure disease spell.

**Duties of the Priesthood**

Centeotl's priests preside over the planting and harvesting of all food crops. A great deal of their time is occupied with reading the signs of nature to determine optimum planting times. In times of famine, they must also seek out volunteers (often themselves) to perish in Centeotl's embrace. Upon reaching 10th level, Centeotl's priests are able to employ a pain touch. This power can be used at will to cause anyone touched to save versus paralyzation or fall writhing to the ground for 1d4 rounds

**Requirements:** AB standard; AL any; WP sickle, spear; AR b; SP all, elemental, plant, weather; PW 1) *create food* (as 3rd level Priest), 10) *pain touch*; TU nil.

**Ixtlilton (lesser god)**

Ixtlilton, or Little Black Face, is the god of healing and medicine. He is the deity who keeps humans healthy and free from disease, or who helps them recover from disease. An impish deity of dark complexion, Ixtlilton's touch cures all diseases, no matter how serious.

**Role-playing Notes:** Ixtlilton is dedicated to relieving human disease, but no one seems to know exactly why — perhaps because he has never slowed down long enough to explain motivation. All a person need do to receive Ixtlilton's help is be sick and pray for it. Evil beings stand a 1% chance of being visited by him, neutral beings a 10% chance, good beings a 25% chance, his worshipers a 50% chance, and his priests a 75% chance. Persons lucky enough to receive a visit from Ixtlilton seldom realize it; they simply begin getting better. Ixtlilton is too busy to send omens or portents to his worshipers.

**Statistics:** AL lg; WAL good; AoC health; SY branch.

**Ixtlilton's Avatar (priest 14)**

Ixtlilton's avatar is an impish, dark-skinned man. He can draw upon spells in the all, creation, healing, necromantic, plant, and protection spheres.

Ixtlilton's avatars are unique in that they spend most their time on the Prime Material Plane, and can sometimes be glimpsed scurrying from house to house at a dizzying pace. Unfortunately, there are many more sick people than they can reach, which is why so many humans die of disease.

| | | |
|---|---|---|
| Str 18/76 | Dex 15 | Con 18 |
| Int 19 | Wis 19 | Cha 10 |
| MV 25 | SZ 3' | MR 30% |
| AC 2 | HD 18 | HP 112 |
| #AT 1 | THAC0 3 | Dmg 1d6 (staff) +4 |

**Special Att/Def:** Ixtlilton's avatars are immune to any form of disease or poison. Anyone hit by an avatar's staff must save versus spells or be stunned for 1d4 rounds.

**Duties of the Priesthood**

Like Ixtlilton, his priests are devoted to curing the sick and spend their time seeing to the needs of the ill. They live in a temple filled with containers of black holy water. Providing the sufferer drinks nothing but this black water, he recovers 1d4 hit point s per day and his Constitution is magically prevented from falling below 1 under any circumstances. Only priests of Ixtlilton can survive on such a diet for long period of time, however.

**Requirements:** AB standard; AL lg; WP club; AR b; all, healing, necromantic, protection; PW 1) immunity to disease; 3) create 1 vial of black holy water per day; 10) prevent another from dying by disease (must stay with subject for one solid week); TU turn.

## Aztec Heroes

### Nezahualcoytl

By many accounts, Nezahualcoytl was the greatest priest-king to rule in the Valley of Mexico. He was the ruler of Texcoco, an uneasy ally of the early Aztecs. He began his early life in exile from political vengeance, then returned to power and restored the fortunes of his people. He was a just, able administrator, a capable general, and an avid astronomer. Nezahualcoytl believed in an all-powerful deity from which the power of the other gods was manifested.

**Spells:** 1) *command*, *remove fear*, *detect magic*, *detect poison*, *detect snares & pits*, *cure light wounds*; 2) *enthrall*, *hold person*, *augury*, *know alignment*, *find traps*; 3) *locate object*, *speak with dead*, *animate dead*, *cure blindness or deafness*, *cure disease*; 4) *cloak of bravery*, *detect lie*, *cure serious wounds*, *neutralize poison*; 5) *cure critical wounds*, *raise dead*; 6) *find the path*, *heal*.

### Nezahualpilli

Nezahualpilli was the son of Nezahualcoytl, and was also one of the greatest priest-kings of Middle America. He was an intelligent ruler who wisely saw the necessity of making an alliance with Tenochtitlan and, therefore, saved his city-state from a terrible defeat. He was a good king and general who ruled Texcoco for many years, but he did not share his father's interest in just administration.

Priest 14, Fighter 10

### Axayacatl

A contemporary of both Nezahualcoytl and Nezahualpilli, Axayacatl was a great Aztec priest-king who led his city to many military and diplomatic victories over neighboring tribes, often with the help of his allies from Texcoco. He extended and consolidated Tenochtitlan's domination over much of Middle America. He also suffered one of their greatest defeats when he unsuccessfully tried to invade Tarascan territory.

Fighter 12, Priest 12

Under Axayacatl's reign, the religion of the Aztecs reached its full development. The great Calendar Stone, over twelve feet in diameter and weighing more than twenty tons, was carved and brought to Tenochtitlan while he ruled.

Axayacatl was an avid worshiper of the Aztec patron deity, Huitzilopochtli. Note that because of the limited number of spheres this god allows his worshipers to access, Axayacatl does not have as many spells in many levels as might otherwise be the case.

**Monsters**

Aztec mythology is lacking in the awesome creatures found in so many other mythol, perhaps because there were few huge beasts in Middle America. However, there are several creatures in the AD&D© game which might be suitable for use in a campaign set in this region. We suggest the following: aarakocra, bat (giant), couatl, fire lizard, fire snake, giant (hill, stone, fire), hawk, jaguar, lycanthrope (any), mountain lion, owl (talking, giant), rat (any), snake (poisonous, giant), spider (any), wasp (giant).

In addition, the goddess Metzli has the power to create some fearsome monsters by enlarging normal animals to three or four times their normal size. With a little thought, the mysterious shapes and shadows of the night which she protects might make interesting monsters as well.

# Celtic Mythology

**Celtic History**

Perhaps more so than any other culture addressed in this volume, the Celts are very difficult to pin down as a single cohesive nation. Their unusual beginnings and their lack of centralized governmental structure mark them as unique, somehow outside the bounds of what we today consider be a country or state. The historical record tells us Celtic unity was based strictly on culture, not on race, language, or heritage.

Of course, our knowledge of the ancient Celts is distorted as we look through the romanticism of 18th and 19th century scholars. At every turn in our study, we have to carefully judge the source of information and decide whether or not that source has twisted the facts for one reason or another.

From their original homeland in southern Germany and Bohemia, the early Celts came abruptly into the historical forefront. In fact, they were considered along with Scythia, India, and Ethiopia to be one of the four so-called peripheral nations (stated from a mediterrania-centric point of view). Considering their origins, the original Celts must have been Germanic stock, relying on primitive agriculture and the hunt, no doubt caught up in the perpetual warfare of their tribal neighbors to the north.

From these ambiguous beginnings, the Celts tore across the northern European plain and into the Balkans unchallenged. swept over what is now France and into Spain, subjugating the Gauls they found there until they had advanced to the gates of Rome itself. From Gaul they expanded rapidly into Britain and then on to Ireland, where their traditions ultimately held out the longest against the changing world. To the southeast, the Celts reached as far as Asia Minor where evidence of their culture can be uncovered today. In the 4th century BC, they scrambled across what is now modern Europe, exerting control over an enormous area. Their motivation for expansion is unclear, but its results are undeniable.

However, for reasons equally obscure, from their position of widespread domination, the Celts fell quickly into a period of decline. No doubt many factors contributed to this seeming failure of their control. First, the great distances involved probably became insurmountable. Somewhat later in history, the Romans would hold sway over a similarly large area and even with their penchant for logistics and communications they barely held on to it. The Celts hardly commanded the same talents for road building and flexible government in the 4th century BC. Second, the Celts were plagued by a minority status. In the areas they controlled, they found themselves outnumbered by their subject peoples who did not share the Celtic culture nor practice its rituals. Their control over such people must have been shaky at best. Finally, there is evidence that the Celts spent a large proportion of their resources on mercenaries. Sometimes these were used to keep control over their subjects, other times they were employed for wild ventures with no clear goal in mind. Over all these factors, their complete lack of central government or authority contributed greatly to their decline. At any rate, these and other considerations conspired against the Celts, dooming their empire before it could begin. The Celts were, from the start, destined only to spread out across Europe, never to rule it.

Seeing little resistance and experiencing their own periods of growth, the neighboring nations of Dacia, Germany, and Rome closed in on Celtic territories no longer controlled by them. Though the Celts were largely absorbed into those territories, and their traditions there continued for some time, the days of the Celtic peripheral nation were over. When these other nations were through, Celtic influence was largely reduced to Gaul, Britain, and Ireland.

Later in their history, Rome pressed even further into these territories, conquering Gaul and then much of Britain before they were through. The Roman contact with the Celts was largely adversarial, hardly a forum for a meaningful exchange of ideas. However, the writings of the conquerors, mainly those of Caesar himself, speak of the Celts and their traditions. Of course, the Romans often placed their own ideals in the place of the Celtic culture and pantheon they found, so their writings about the Celts are slanted, at best.

The Romans, however, never conquered Ireland, and the Celtic tradition there flourished. Only the Viking invasions of the 9th century and the Anglo-Norman incursions of the 12th diluted the Celtic heritage of the island. To this day, Irish Celtic texts and artifacts are both the most abundant and the most reliable windows into their past.

**Celtic Culture**

As stated earlier, the Celts were often masters of their realms in name only, being, if you will, paper tigers. Many of their subjects no doubt ignored the Celtic religious rites in favor of their own traditions. Especially in later times, when vast numbers of Celts were absorbed into other nations, it stands to reason that they were isolated groups of worshippers, most likely outcasts, forced to practice their religion out of sight of other, more popular ones.

The Celts held two major positions in society as supreme: the druidic and bardic orders. The druids were the highest societal order, carrying out religious functions as necessary. The bards were second to the druids, and they were charged with the creation and preservation of Celtic literature.

**Druids in Celtic Society**

The druids were the religious leaders of the Celts, and in some ways the most mysterious. They performed the sacrifices called upon by tradition, performing simple chants and rituals to please the many gods the Celts

worshipped. The Gaulish druid leaders would gather for religious business in a place known as the Carnutes, which translates as sacred place, sacred grove, or oak sanctuary. This emphasizes the notion that the druids had a special kinship with nature and, in particular, the forests.

In their function as church elders, the druids maintained their leadership over the community in other ways, as well. The druids officiated various legal arguments among their followers, and even went so far as to become the chief educators for their flocks. The druids expanded their leadership over the Celts into every imaginable area.

Druids were considered to have the ability to forecast, in the vaguest of terms, future occurrences. Through various rituals, the druids would foretell that a day, week, or month would be favorable or unfavorable for such things as battle, farming, hunting, etc. Stories handed down from the period indicate that these predictions were taken to heart by both the Celtic peasants and their leaders alike.

Of course, as the religious leaders, the druids also bore the brunt of opposition and hatred from other religions. When other religious groups encountered the Celts, they denounced them as pagans and sought to discredit them. The druids in Gaul and finally Britain and Ireland were forced to give up their outright leadership over their people. However, many of their functions were soon taken up, albeit in subtler forms, by a group known as the filidh. The Irish filidh carried on ritual tradition in a manner more easily tolerated by their new neighbors.

**Bards in Celtic Society**

The Celtic bards, on the other hand, were the conservators of literature. The Celts never had their own written language, though they borrowed bits and pieces from neighboring languages, at times. Among the Gaulish Celts, however, the notion of literature was strictly oral; no written record was ever kept because it was considered distasteful. While this feeling was not necessarily true among the insular Celts of Britain and Ireland, there is still a very restricted body of written literature which can be fully attributed to the Celts.

Among the Irish Celts, the bards were considered to be an inferior class of poets, rhymers, and simple storytellers. Their oral traditions were admired by the common folk, but they were not given anything like the status of the druids or filidh. However, when religious pressures forced changes in the upper strata of Celtic organization, the bards went virtually unnoticed and, therefore, unchanged. In fact, it is to the bards that we can give thanks for the Irish oral tradition of history without which we would know very little about the Celts.

**Lifestyle**

The lifestyles of the peasantry varied greatly, dictated more by the richness of the land than by anything else. Sheep herders along the foothills of the Alps lived very differently from farmers on the plains of Gaul or Britain. Typically, farming villages in Gaul and Germany were formed of small, square wooden houses. Their plows were primitive, not even turning the soil, so land depletion put entire villages on move every few years. Villagers in Britain tended to create larger, round stone structures with thatched roofs that reached nearly to the ground. They would also have gardens and farms, but also kept a great deal of livestock. Livestock farmers shared the buildings, keeping each other fed (and warm). Celtic peasants appear to have kept many common animals, including small cattle, pigs, and geese. Wild boars were apparently hunted — possibly as a rite of manhood. They also tended more exotic animals such as chickens, recently introduced from the east, and bees for both their wax and honey The Celtic farmers grew barley, oats, and beans. They grew flax and tended to sheep for their clothing.

Of course, the Celtic nobility and the druids lived a somewhat what better life. There are indications that wines were imported for the nobility, for instance, a luxury the common folk did not enjoy. In all fairness, Celtic nobility most likely did not live a carefree, glamorous life. They were warlords and military men, very different indeed from the legends such as King Arthur. His legend is derived from historical fact about a Celtic leader who fought off the invading Saxons and Jutes from Britain in the 6th century AD. However romanticized over many tellings, the real Arthur those around him were warrior kings leading armies of peasants and soldiers against invaders and other Celts alike.

**Warfare**

From their very beginnings, the Celts had been a warrior people. Their penchant for conflict was well known even to the scholars of the time. They attacked and sacked Rome, fought off German invaders, swept over most of Europe only to be defeated by the superior organization and bureaucracy of the Roman Empire. And when not fighting against an outside threat, the Celtic tribes were perfectly willing to fight one another.

Burial records indicate that the Celts were masters of the two-horse chariot. Virtually all tribal chieftains were buried with their chariot, though horses were apparently too valuable to bury with their owner. Many other Celtic warriors had mounts, as well.

Statues and historical accounts tell us that Celtic warriors went into battle naked except for a torc, a hoop of bronze gold worn about the neck. They fought with spear and sword, and occasionally with helmet and shield. Roman scholars credited the individual Celtic warrior with tremendous skill and bravery.

Celtic warriors took great pleasure in cutting the heads of their fallen enemies. These heads would then be worn from a belt or attached to a chariot. It was the Celtic belief that the head held certain magical properties after life; many Celtic structures have skulls built right into them to ward off evil or bring luck.

**Architecture**

The Celts are noted for the structures of standing stones they left behind. Stonehenge is only the most widely known of these. Indications are that many of these structures were in fact not of Celtic make, but of much earlier sun-worshipper peoples — the Celts merely adopted them and built additional structures on those designs. In any event, they have acquired a different signifi cance.

Circular stone patterns often helped map out the patterns of constellations, the moon, sun, and seasons. For any culture that relies on agriculture, such knowledge is vital. Stones were often erected in circular patterns in honor of particular local gods or goddesses.

Simpler standing stones were often not placed in a pattern at all. These in earlier times marked the burial places of important personages. Later, they were employed to mark sites of important events or boundaries between tribes and vil lages.

It is unclear whether the Druids actually performed rituals at these sites, but it is likely. Druids might easily have officiated the ceremonies held at these important sites, interpreting their information and calling upon their gods for assistance or guidance.

Without a significant written record, much about the Celts and who they were will never be known to us. How many epic struggles were there, how many significant events that were lost before the 4th century BC? Without their art, from which we can interpret much, and the fortuitous isolation of the Irish Celtic community, they might have been totally lost to history.

What we do know is intriguing. The Celts held sway over a tremendous area before the Roman Empire, taken by tribes of ferocious warriors. Their lifestyles, though varied by the great distances between them, revolved around a shared culture. The druids and bards took the burden of religion and literature, while the warrior chieftains kept their forces strong, and usually on campaign. Their semi-nomadic styles had gone unchanged over much of their history. They had artisans and craftsmen skilled in both woodwork and metalwork, and artists borrowing from the traditions of other nomadic peoples. Though all but crushed under Roman domination, much of what the Celts were lives on today in the traditional Irish and Scottish cultures, as well as in our own.

**Magic Items**

**Standing Stones**

Celtic priests can create formations of *standing stones* in order to intensify their magic. The ceremonies during the creation of a ring of *standing stones* makes them highly magical places where mere lesser mortals fear to tread.

The creation of *standing stones* is a lengthy process that requires many priests. There must be at least 50 levels of priests or druids who worship at least four different Celtic gods. One of these priests must be at least a 10th level worshipper of Belenus in order to have the all important *enchant stones* spell. The site must have stones available and be at least five miles from any other existing *standing stones*. All of the priests must spend an entire month assembling the stones and attending ceremonies — the *enchant stones* spell must be cast at the end of each week and again at the end of construction. If the priests are interrupted in any way during that time, the enchantment fails and they must start again. During creation, the *standing stones* site must be dedicated to one sphere of spells forever (for instance, *standing stones* — divination). Once created, the magic of the standing stones is permanent.

The actual physical parameters of the *standing stones* are fairly loose. The exact size and number of the stones is unimportant for game purposes — they are arranged at creation to follow the seasons, stars, constellations, suns, moons, or whatever. It is only important that they be arranged in a series of circular patterns. Since they are generally between 10 and 30 meters across, standing stones are some of the largest magical items around.

Once created, ceremonies can take place at the site to cast spells within its assigned sphere. The total of priest levels involved in the ceremony can be used as a direct multiplier to any of the following: range, duration, or area of effect. As an example, if 50 priest levels are involved in a ceremony at *standing stones* to cast an *animate object* spell, they could either multiply the range by 50 (to 1500 yards), the duration by 50 (to 50 rounds/level), or the area of effect by 50 (50 cubic feet/level). One of the priests must actually cast the spell to be amplified by the *standing stones*, and his is the base from which all other information is extrapolated.

**Torc of the Gods**

The torc of the gods was created by Goibhniu himself and is only bestowed upon the most brave warriors of the tribes. The torc allows the wearer to *shape change* or *polymorph others* at will, for any duration desired. The torc is forged of rare metals and has a gem set into the front.

**New Spells**

**Enchant Stones** (Enchantment)

Sphere: Elemental
Range: Touch
Components: V, S, M
Duration: Permanent

Casting Time: 1 week
Area of Effect: Special
Saving Throw: None.

This highly specialized spell is only available to priests who worship Belenus and who have attained 10th level. It is bestowed upon them by their god who will allow them to use it to create an area of *standing stones* once per year. The spell takes an entire week to prepare and cast. Any interruption will negate its effects and force the priest to start over. If a year passes and a priest with this spell fails to create a set *standing stones*, this (and all of the priest's other spells) is taken back by the disappointed Belenus, never to be bestowed again.

The material component for this spell is small stone quarried from the same place as the stones for a *standing stones* site. They must already be placed in position.

**Frenzy of the Celts** (Enchantment/Charm)

Sphere: Combat
Range: 30 yards
Components: V, S, M
Duration: 1 turn/level
Casting Time: 6
Area of Effect: Special
Saving Throw: None.

This 3rd level priest spell allows the Celtic priests to drive their armies into a battle frenzy before combat. The spell affects 20 hit dice of creatures per casting (usually ten 2nd level Celtic warriors). For its duration, the *frenzy of the Celts* spell allows those affected to never check morale, gives them a +1 to all saving throws and attack rolls, and allows them to move 50% more than their normal distance without penalty. The spell also forces those affected to immediately charge the closest enemy forces and engage them in combat, whether this is a wise tactical decision or not. Warriors under a *frenzy of the Celts* spell do not require leadership, but those who come out of the spell without a leader in sight will rout back to their own lines or some other point of safety.

The material component for this spell is a tiny chariot wheel and a spark created with flint and steel.

## Heroes

### The Wild Hunt

Despite its evil connotations, the Wild Hunt is a manifestation of good life force on the Prime Material Plane. It appears in Celtic lands whenever there is a great force of evil in the area. The source of the evil could be many different things, from an evil wizard or priest moving through the area to an invading evil army. Wherever the druids are and wherever they have built *standing stones* that the Wild Hunt can use as beacons, the pack and its master are forever on guard against encroaching evil. The Wild Hunt appears in the world of men as a huge pack of magical dogs led by a great man. The man has dark skin and can either be on foot or at the reins of a two-horse chariot. He carries an enormous spear and wears a metal and leather helmet with antlers. The dogs of the pack are huge beasts that can, at one instant appear as normal (albeit huge) canines and then transform into ferocious, magical animals with green flame coming from their mouth and eyes. When the Wild Hunt approaches, the weather turns for the worse — the winds howl and thunder booms from the heavens. The Wild Hunt fights evil with evil's weapons, namely fear and ferocity.

Celts or other good beings who encounter the Hunt on the move may be swept up by it. All Celts or characters of good alignment who see the Hunt must make a save versus spells or become part of the Wild Hunt and its mission, accepting the Master as their leader. Persons so caught up might have to act against their own alignment at the behest of the Master, fighting against those they might otherwise ignore, etc. As it tears across the countryside, the pack will raise a terrifying ruckus, attracting followers and warning evil of its approach.

On any given night there will be only one Wild Hunt, provided there is sufficient evil to warrant it. Once the pack has caught up with the source of evil, it will attack. The pack and the master will fight to the death against the evil. If they are slain, they will appear fresh for a new hunt the following night. If they do not destroy the evil they pursue, the Wild Hunt will return until their prey is driven from Celtic lands or slain.

The Wild Hunt has been known to fight against demigods and heroes who have manifested evil among the Celts. Sometimes destroyed themselves, they have always returned to renew the battle. The forces that seek out evil to destroy it are eternal, and the Wild Hunt can never be completely annihilated.

**The Master of the Hunt**

The Master appears as a dark skinned man wearing an antlered black helmet.

**Role-playing Notes:** The master does not speak or communicate with anyone. He merely leads his pack of hounds and other followers toward sources of evil and attacks. His tactics are generally limited to an immediate frontal assault since he cannot die, his need for cunning is limited.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 17 | Wis 17 | Cha 9 |
| MV 18 | SZ 6' | MR 25% |
| AC 0 | HD 20 | HP 200 |
| #AT 3 | THAC0 1 | Dmg 1d6 +3 (spear) +6 |

**Special Att/Def:** The Master of the Hunt generally does not engage in combat until most of his pack of hounds have been slain. He will then attack with his *spear +3*. The Master can also ride his chariot over victims, doing 3d10 points of damage to any who fall beneath its wheels.

**The Pack of the Wild Hunt**

The individual hounds of the Wild Hunt are beasts. There are 20 dogs in the pack.

| | | |
|---|---|---|
| AC 2 | HD 5 | SZ 3' |
| MR 15% | THAC0 14 | HP 30 |
| MV 21 | #AT 1 | Dmg 2d4 |

**Special Att/Def:** The pack can cause *fear* in any mortal being that it is pursuing. Each hound has the equivalent protection from evil spell upon it at all times. The pack also can swarm its enemies without regard to the actual space available, so all 20 dogs can attack an enemy each round. Finally, once per turn each dog can use its green flame tongue to add an additional 5 points of damage to any attack that hits.

**Lugh (intermediate god)**

Lugh can best be described as the god of excellence, reputed to be not only the inventor and patron of the arts, but also an expert in such diverse fields as sorcery, history, craftsmanship of all sorts, story telling, and heroism. Lugh, whose name means "The Shining One" is the most widely worshipped of the pantheon, with numerous monuments throughout Celtic regions where followers prayed to him for guidance in any of his many areas of expertise. Known to be a late comer to the pantheon, Lugh is often found in the company of Rosmerta, a goddess of wealth and material possessions. He can control endeavors in the arts and crafts with which he is familiar, and he can control or influence all forms of travel and commerce. He can also turn day to night or vice versa at will. Beyond these pursuits, however, Lugh is a formidable warrior, armed with a great spear and a sling.

**Role-playing Notes:** A wanderer of the lands of his worshippers, consorting with the various goddesses of the lands that he meets, Lugh is a self-confident god, eager to keep his hand in mundane affairs. He keeps an eye out for fair play in human matters, stepping in with his avatar to affect the outcome of endeavors within his own expertise.

**Statistics:** AL cn; WAL any neutral; AoC arts, crafts, travel, commerce, war, horsemanship; SY eight-pointed star.

**Lugh's Avatar** (warrior 15, wizard 12)

Lugh's avatar is a young, beardless warrior with spear, sling, and purse. He will have with him a cock, goat, or a tortoise. He may also appear with a beard, or as a shoemaker and can call upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 17 |
| Int 18 | Wis 18 | Cha 15 |
| MV 18 | SZ 6' | MR 50% |
| AC 0 | HD 20 | HP 190 |
| #AT 2 | THAC0 3 | Dmg 1d4 (sling) +6 |

**Special Att/Def:** In a desperate situation, Lugh's avatar may increase his sling's number of attacks to 5 per round and automatically hit with each one. He may do this for one round in any given encounter.

**Duties of the Priesthood**

Priests of Lugh must be highly skilled in the arts, and they must be well-traveled. They must also erect mounds to or hold their ceremonies atop low hills or other summits.

**Requirements:** AB standard; AL any neutral; WP sling, mace; AR a; SP all, animal astral, charm, combat, creation, divination, guardian, healing, protection, summoning, sun, weather; PW 1) *create darkness or light* in a 100' radius once per day; 3) travel at thrice normal speed for 4 hours per day; 9) *enchant an item* once per week; TU nil.

**Oghma (intermediate god)**

Oghma, whose epithet, Grianainech, means "of the sun-like countenance," is the god of eloquence and language. His speeches and words carry great weight with his listeners, and he is often depicted as having gold chains between his tongue and the ears of his listeners; Celts have great respect for the powers of persuasive speech that Oghma personifies. He has the power to communicate his ideas accurately and quickly, swaying any number who hear him to his cause. Oghma invented the beautiful Oghma script which can be easily carved into stone or wood, especially at places devoted to his worship. Oghma is also known to be a champion, both as a warrior and as a patron of ideas.

**Role-playing Notes:** Oghma enjoys visiting and speaking to his flock in the form of his avatar. He strengthens their collective resolve to worship him, and teaches his priests the arts of his lettering and persuasiveness. Oghma seeks justice and will occasionally go out of his way to see that it is done. He will champion small causes at times, even those that affect but one village with only a few worshippers, if an injustice is brought to his attention.

**Statistics:** AL ng; WAL any good; AoC speech, writing; SY Celtic chalice.

**Oghma's Avatar** (bard 12, warrior 10)

Oghma's avatar is an old man, his grey hair is all but gone and he has dark, wrinkled skin. He carries a bow and club, and wears a lion's skin. His spells can come from any school of magic.

| | | |
|---|---|---|
| Str 18/50 | Dex 17 | Con 17 |
| Int 18 | Wis 18 | Cha 17 |
| MV 12 | SZ 6' | MR 30% |
| AC 2 | HD 15 | HP 110 |
| #AT 1 | THAC0 5 | Dmg 1d6 (club) +3 |

**Special Att/Def:** Oghma's avatar can charm anyone who can hear him. Victims must save versus spells or be charmed, and Oghma's avatar may continue to speak every round until silenced, subdued, or killed.

**Duties of the Priesthood**

Priests of Oghma are expected to hold their congregations in line with the persuasive powers of their order. Oghma does not tolerate losing worshippers to other gods in the pantheon, and deals out strict punishment to those priests who let their flocks wander.

**Requirements:** AB standard; AL any good; WP club, bow; AR a; SP all; animal; charm; combat; creation; divination; elemental; guardian; healing; plant; protection; summoning; sun; PW 1) *friends* once per day; 3) *charm person* once per day; 8) *mass charm* once per day; TU nil.

**Goibhniu (intermediate god)**

The smith held a special fascination for the Celtic peoples. Smiths were thought to have magical powers of charm and healing, bestowed upon them by the god of the smiths, Goibhniu. Goibhniu is actually one of a triad of gods; Luchta the wright and Creidhne the worker in metal are also important craftsmen gods. Together they fashioned weapons for Lugh at the battle of Magh Tuiredh, each doing his part to create sound, sure weapons. Reputedly, weapons forged by the great Goibhniu will never miss their mark, and those stuck by them will certainly be slain. In the great Feast of Goibhniu, the god serves a variety of foods and drinks which can soothe, heal, and even make immortal their consumers.

**Role-playing Notes:** Though his size and appearance may at first be threatening, Goibhniu is a generally warm and friendly fellow. He is especially fond of sharing stories of battle and fine armaments. He often makes food and drinks for those he befriends, sharing with them a small feast — the wines and dishes of which will be of a magical nature and will both prolong life and heal damage. However, when made angry, Goibhniu sends forth his avatar and will show no pity, slaying mortals who have crossed him without so much as a second thought.

**Statistics:** AL ng; WAL any neutral; AoC manufacture of weapons and armor, healing; SY anvil.

**Goibhniu's Avatar** (fighter 18, priest 15)

Goibhniu's avatar is a brawny smith, muscled and blackened by hard work at the forge.

| | | |
|---|---|---|
| Str 18/00 | Dex 15 | Con 18 |
| Int 15 | Wis 15 | Cha 10 |
| MV 12 | SZ 6'5" | MR 30% |

| | | |
|---|---|---|
| AC 0 | HD 18 | HP 180 |
| #AT 5/2 | THAC0 3 | Dmg 1d4 +6 (warhammer) +6 |

**Special Att/Def:** Despite his THAC0 of 3, Goibhniu's avatar never misses his targets. He uses either his *warhammer +5* or his *spear +5*, depending on the situation. Once per turn, he may automatically slay any living creature that he hits with either of these weapons, no saving throw allowed.

**Duties of the Priesthood**

Priests of Goibhniu are expected to watch over and protect both smiths and warriors alike. They are required to take the blacksmith non-weapon proficiency and can serve as court armorers or smiths. They are also expected to oversee the feeding and healing of the faithful, especially warriors wounded in battle.

**Requirements:** AB standard, but Str of at least 15; AL any neutral; WP any metal; AR a; SP all, astral, charm, combat, creation, elemental, guardian, healing, protection, sun, weather; PW 1) *heroes' feast* once per week; 10) craft weapons, shields, or suits of armor with a +2 enchantment (requires one month each); TU nil.

**Daghdha (greater god)**

Daghdha enjoys a position of leadership among the loose confederation of Celtic gods, a god of druids. His powers widely varied, but he is credited with control over the weather and crops. His great cauldron is a bottomless receptacle with food and drink and the abundance of the Celtic other-world from which he comes — there is virtually nothing he cannot pull from his cauldron. Daghdha is the custodian the gods and all Celtic people, using his charms and powers to protect and aid them whenever he can. As a warrior he is a great leader and scout, as a father figure he is both stern and fun-loving; Daghdha enjoys being a comical figure of great power.

**Role-playing Notes:** Daghdha is a happy go lucky sort who is only interested in the general welfare of his Celtic worshippers. He will often send his avatar to appear at the scene of an impending battle and use his charms to sway crucial male figures on the other side. He also sends him during times of pestilence or crop failure to set things right. He will tempt to resort to comic trickery to get his own way.

**Statistics:** AL cg; WAL any good; AoC crops, weather; Celtic shield.

**Daghdha's Avatar (fighter 15, hard 10)**

Daghdha's avatar appears as a tall man who is dressed comically, with a very short tunic and uncouth behavior.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 17 |
| Int 18 | Wis 18 | Cha 15 |
| MV 15 | SZ 6' | MR 80% |
| AC 2 | HD 15 | HP 150 |
| #AT 5/2 | THAC0 6 | Dmg 1d6 (club) +10 |

**Special Att/Def:** Daghdha's avatar wields a club a highly magical nature. If he so chooses, any blow from its heavy end will automatically slay a living being (no save throw). However, if he turns the club and touches a dead being, it will regain life (as *raise dead* spell). Also, Daghdha's avatar has the ability to *charm* any woman, mortal or otherwise, and bend her to his will.

**Duties of the Priesthood**

Priests of Daghdha must be druids. They are expected to dress in an unorthodox manner in order to draw attention to themselves. Daghdha's druids are chiefly responsible for the creation of great *standing stones* with which they can keep track of the seasons and through which they can exercise their magical powers. His druids generally keep to themselves, gathering only to perform important ceremonies.

**Requirements:** AB as druid; AL as druid; WP as druid AR as druid; SP as druid; PW as druid, but also 1) can accurately predict weather one full week in advance; 8) *heroes' feast* once per day; TU nil.

**Manannan mac Lir (intermediate god)**

The Celtic god of the sea is a knowledgeable custodian of the oceans. Manannan mac Lir rides over the waves on his chariot, pulled by various creatures of the sea, admiring its beauty and governing its bountiful operation. To Manannan mac Lir, the oceans are a vast plain, the various fishes either cattle or sheep — in his other-world reality, he lives upon the "land" while others must use boats to visit it. He generally wears armor made of metal and sea shells and carries a giant sword, riding his chariot upon the waves.

**Role-playing Notes:** Manannan mac Lir's sends his avatars to roam the oceans on their chariots. He has great respect for those mortals who can master the seas, but has no pity for those who fail and drown within them.

**Statistics:** AL in; WAL any neutral; AoC oceans and the creatures in them; SY a fish.

**Manannan mac Lir's Avatar (fighter 17)**

Manannan mac Lir's avatar is a gigantic man in shell armor.

| | | |
|---|---|---|
| Str 25 | Dex 20 | Con 25 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15, Sw 21 | SZ 7' | MR 40% |
| AC 0 | HD 17 | HP 170 |
| #AT 5/2 | THAC0 4 | Dmg 1d8 (bastard sword) +14 |

**Special Att/Def:** Manannan mac Lir's avatar wields a sword called *Retaliator*, that will automatically slay his worst enemies, the fire giants, when he hits them with it (no saving throw). He can also call upon up to 100 HD worth of undersea creatures to fight with him. The creatures must be able to get to the scene of the battle under their own power, but once there will follow his commands to the letter.

**Duties of the Priesthood**

Priests of Manannan mac Lir can be either druids (as per the Player's Handbook) or priests (as described below). They are required to base themselves in coastal villages or regions, but can travel inland on business that might affect the seas. Manannan mac Lir's priests are encouraged to protect the sea and its creatures.

**Requirements:** AB standard; AL any good; WP mace or trident; AR a; SP all, animal, astral, combat, divination, elemental, guardian, healing, plant, summoning, weather; PW 1) *create salt water* (as the *create water* spell); 5) *breathe water* 1 hour per level per day; TU nil.

**Arawn (intermediate god)**

As god of death and the underworld, Arawn rarely has reason to venture into the world of the living. His home is an island so far out at sea that no one, not even Manannan mac Lir, can find it while living, for only the dead can travel there. In fact, Arawn generally only sends an avatar to the world of the living after someone has been resurrected that Arawn would rather keep. Many other Celtic gods will endorse resurrections, but none can guarantee that Arawn will leave the matter at that. Arawn has absolute power over life and death among the Celts.

**Role-playing Notes:** On resurrecting any individual, there is a 2% chance per level of that individual that Arawn will intervene. He will either send his avatar to reclaim the body or (25% chance) he will attempt to bargain. He will offer some other similar character from the legions of the dead provided he can keep the original character. Refusal of his offer will be met with force.

**Statistics:** AL ne; WAL any evil; AoC life and death; SY warrior's skull.

**Arawn's Avatar (priest 18, wizard 12)**

Arawn's avatar appears as a normal man in black robes. His features are very dark and deep set.

| | | |
|---|---|---|
| Str 17 | Dex 15 | Con 18 |
| Int 15 | Wis 18 | Cha 12 |
| MV 12 | SZ 6' | MR 50% |
| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 10 | Dmg 1d6 (club) +1 |

**Special Att/Def**: Arawn's avatar has 50% magical resistance normally, but this is increased to 100 % for any magical or clerical spells that would otherwise inflict damage on his avatar's body. Anyone hitting Arawn's avatar with a magical weapon must instantly save versus spells or die.

**Duties of the Priesthood**

Priests of Arawn officiate at one and only one religious function — burial. Celtic burials involve simple graves for most, complex graves including chariot and trophies for warriors and chieftains. Priests of Arawn do not officiate at sacrifices to other gods, but are generally on hand for ceremonies of their own immediately following such events.

**Requirements:** AB standard; AL any evil; AR a; WP club or scythe; SP all, astral, creation, divination, guardian, necromantic, summoning; PW 1) *speak with dead*; 10) *animate dead* once per hour; TU command.

**Morrigan (intermediate god)**

Morrigan is the Celtic goddess of war. She is a fearsome warrior, causing great fear in her opponents, driving home her own battles with a spear in either hand. She is terribly ugly, laughs a maniacal laugh, and has dreadful manners. She expects all Celts and especially her followers to fight constantly, encouraging petty wars where there otherwise would be none. She can *shape change* to fool her opponents, and often calls upon four minor goddesses of war to fight by her side. At one time, Morrigan tried to seduce the hero Cu Chulainn, but on failure she turned against him and nearly killed him.

**Role-playing Notes:** Morrigan is bent on warfare every turn. She will readily pick fights, preferring to get mortals to fight each other by whatever means. She will use many forms to trick otherwise peaceful parties into

conflict. Morrigan often observes battles and will not tolerate fear among her followers — she will strike dead any follower that turns and flees from a battle she is watching.

**Statistics:** AL ce; WAL any evil; AoC battle and war; Celtic sword hilt.

**Morrigan's Avatar (fighter 20)**

Morrigan's avatar can appear in many forms, most commonly a hag, but sometimes as a crow or beautiful young woman.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 15 | Wis 12 | Cha 5 |
| MV 15+ | SZ 6' | MR 80% |
| AC -2 | HD 20 | HP 200 |
| #AT 5/2 | THAC0 1 | Dmg 1d6 (spear) +4 |

**Special Att/Def:** Morrigan's avatar can cause *fear* every round she is in combat in every enemy she can see. In a chase she can adjust her speed to any amount to keep doggedly pursuing a victim until it runs out of energy. Morrigan can become *invisible* at will and fight freely while in a state.

**Duties of the Priesthood**

Priests of Morrigan have to band into battle groups or attach themselves to groups of warriors at all times. It is rare that Morrigan will allow one of her clerics to travel independently, unless they are in search of greater, more intense combat situations. Morrigan's priests have no power to heal, since it is her will that those who fall in battle should die.

**Requirements**: AB standard; AL any evil; WP any; a; SP all, astral, combat, elemental, guardian, protect PW 1) Morrigan will *heal* 5 hit points per level over night for her priests who have killed anything the day before; TU turn.

**Diancecht (intermediate god)**

As the Celtic god of healing, Diancecht cares for the sick and wounded without regard to their worship. He is so insanely jealous of his abilities that he slew his own son who might have become a better healer than his father. Diancecht has healed the other gods, as well, fashioning at one time a silver arm to replace one lost, and using a cat's eye to replace a lost eye. He has a magical bath that can instantly and completely heal any mortal or god. Diancecht often uses his powers to enforce his notion that any wound is the responsibility of the inflictor to heal, or at least pay for. In combat, Diancecht will heal himself, friends, and enemies alike, for he is unable to control his penchant for medicine.

**Role-playing Notes:** Diancecht is obsessed with healing, both among the gods and among mortals. His avatar is forever wandering the world of men searching for those who need his skills. Whenever confronted, Diancecht will seldom involve himself in a situation that does not require him to heal.

**Statistics:** AL lg; WAL any good; AoC medicine and healing; SY a leaf.

**Diancecht's Avatar (priest 18, fighter 12)**

Diancecht's avatar appears as a young man in simple clothing, bearing a bag filled with herbs and medicines.

| | | |
|---|---|---|
| Str 18 | Dex 15 | Con 12 |
| Int 18 | Wis 18 | Cha 17 |
| MV 12 | SZ 6' | MR 25% |
| AC 4 | HD 18 | HP 144 |
| #AT 1 | THAC0 10 | Dmg 1d4 (dagger) +4 |

**Special Att/Def:** Diancecht's avatar never gets involved in large battles. When in combat, he is immune to any hit that does less than one-fourth of his basic hit points (36) in a single strike — other blows simply deflect off of him. At will, he can heal any individual he can see.

**Duties of the Priesthood**

Priests of Diancecht may be either clerics or druids. Like their deity, they are sworn to seek out those who need to be healed and perform their work. However, living in the imperfect world, his priests cannot pick and choose patients, so often follow marauders or other war bands to exercise their talents.

**Requirements:** AB standard; AL any good; WP mace; AR a; SP all, animal, creation, divination, healing, plant, protection; PW 1) all spells from the healing sphere are cast as if they were 1 level lower than normal. For example, *cure serious wounds* becomes a 3rd level spell and *cure critical wounds* becomes a 4th level spell; TU nil.

**Math Mathonwy (intermediate god)**

Math Mathonwy is the Celtic god of sorcery. He carries a mighty magical staff and wears a torc given to him by the other gods. As master of his household, Math insists that his feet rest in the lap of a maiden whenever possible. He does not tolerate mistreatment of his maiden foot warmers, nor does he abide treachery on their part, and has vented his wrath upon many who have violated his trust. He saves his magic mainly for his own purposes, keeping his family in check, and seldom casts spells for the good of his followers or priests.

**Role-playing Notes:** Math Mathonwy seldom sends his avatar into the world of men without some mission. It is rare that his avatar will become embroiled in the affairs of humans unless there is some magical experimentation involved. Math Mathonwy is always in search of new magics and humans knowing this can trick his avatar into action, but they might suffer his wrath at a later time.

**Statistics:** AL ne; WAL any neutral; AoC magic; SY the staff.

**Math Mathonwy's Avatar (wizard 20)**

Math Mathonwy's avatar appears as an elderly man in heavy tunic and robes.

| | | |
|---|---|---|
| Str 12 | Dex 15 | Con 15 |
| Int 18 | Wis 17 | Cha 12 |
| MV 15 | SZ 6' | MR 40% |
| AC 4 | HD 20 | HP 80 |
| #AT 1 | THAC0 14 | Dmg 1d4 (dagger) |

**Special Att/Def:** Math Mathonwy's avatar will avoid combat whenever possible. If cornered, he will use his magical staff to attack; when it hits, it turns his opponent into a pool of water, permanently (although a save versus wands is allowed to avoid this transformation). Math Mathonwy also uses his magical powers to *polymorph* his enemies into animals, often leaving them as such for years at a time as punishment for some wrong they did to him or his family.

**Duties of the Priesthood**

Priests of Math Mathonwy may be either clerics or druids. At higher levels, they also have many standard magical abilities which make them very powerful evokers of magical force. His priests often take part in group rituals to stir up magic involved in other ceremonies. However, all priests must perform an entire month of prayer in solitude every year — those who did not achieve enough experience to gain a level in that year must start over at first level after the month is through.

**Requirements:** AB standard, but Int must be 15; AL any neutral; WP dagger; AR g; SP all, animal, astral, charm, combat, creation, divination, elemental, guardian, healing, necromantic, plant, protection, summoning, sun, weather; PW 6) cast wizard spells as if they were five levels lower in experience; TU nil

**Belenus (intermediate god)**

Belenus is a god of the sun and of fire, a patron of the druids. He has the ability to control the heat and light from fires and from the sun, bringing them into focus to destroy or blocking them off to freeze when he wishes. In May, the Celts drive cattle through special Beltain fires while Belenus watches with favor and raises the overall quality of the livestock. Belenus encourages the construction of *standing stones* to measure the progress of his sun and sacred groves where his druids may meet and build great bonfires to him.

**Role-playing Notes:** Belenus sends his avatar to the world of men frequently to visit with chieftains and court the ladies of the Celts. He can look unfavorably upon a particular village and cause the sun to stand still or never come up for some period of time. With such powers, he can easily bring otherwise powerful chieftains in line with his thinking.

**Statistics:** AL ng; WAL any good; AoC sun, heat, light; SY solar disc and *standing stones*.

**Belenus' Avatar (fighter 15, bard 10)**

Belenus' avatar appears as a strong young man with curled black hair and a terrific shining torc around his neck.

| | | |
|---|---|---|
| Str 18 | Dex 17 | Con 15 |
| Int 15 | Wis 15 | Cha 18 |
| MV 15 | SZ 6' | MR 30% |
| AC 0 | HD 15 | HP 150 |
| #AT 5/2 | THAC0 6 | Dmg 1d8 (longsword) +2 |

**Special Att/Def:** Belenus' avatar can blind any living creature within sight by making his magical torc shine with the brightness of the sun. He can also focus that light for one round, inflicting 3d10 damage provided he hits his mark. His longsword can be made to flame once per turn, doing an additional 2d10 to creatures affected by fire.

**Duties of the Priesthood**

Priests of Belenus must be druids. At least once in their lives they are required to take part in the construction of a stone structure in honor of their god and his sun. This usually takes at least a year. Meetings with other druids must take place in designated groves around enormous fires. Wandering druids must tend to forest fires, taking care that they occur in sufficient quantity to renew portions of the woods, but not too frequently that they devastate it.

**Requirements:** AB as druid; AL as druid; WP as druid; AR as druid; SP as druid; PW 1) *continual light* on command; 10) *enchant stones* (as described earlier); TU turn.

**Brigantia (intermediate god)**

Brigantia is the Celtic goddess of the rivers and rural life. She was raised on the milk creature of the other-world, a white, red-eared cow. She is worshipped by the Celtic queen Cartimandua (women in positions of power are not at all uncommon among the Celts) and by the pastoral villages and towns. She is the protector of flocks of geese and herds of cattle, seeing they flourish to help feed her hungry worshippers. Her dominion over the rivers allows her to use their waters for therapeutic purposes. She often wears a crown and is depicted in Celtic art sitting atop a globe. She is also sometimes outfitted for war, wearing a breast plate and carrying a spear.

**Role-playing Notes:** Brigantia is of a relaxed, peaceful nature. She rejoices in the slower, quieter ways of the country folk, and never ventures into large towns or cities, Her tending of animals is compulsive, and she will often keep that task even when other pressing matters are brought to her attention.

**Statistics:** AL ng; WAL any neutral; AoC rivers and livestock; SY a footbridge.

**Brigantia's Avatar (priest 18)**

Brigantia's avatar appears as a beautiful young woman, (either tending animals or armed and dressed as the goddess herself).

| | | |
|---|---|---|
| Str 15 | Dex 15 | Con 12 |
| Int 18 | Wis 18 | Cha 19 |
| MV 15, Sw 21 | SZ 5' | MR 30% |
| AC 2 | HD 18 | HP 144 |
| #AT 1 | THAC0 10 | Dmg 1d6 (spear) |

**Special Att/Def:** When near a stream, Brigantia's avatar can call upon the waters of any river or stream to flood any area up to 20 feet beyond its banks, sweeping her enemies away. She can also call upon nearby herd animals to swarm an enemy, slowing it so that she might escape or distracting them so that she can attack.

**Duties of the Priesthood**

Priests of Brigantia are charged with spreading her bounty across the land, and so are often seen carrying two clay jars. The first contains water from a Brigantian river or stream which the priests can pour into other streams to cleanse them. The second jar contains dung from her pastoral lands which, when distributed, brings her blessings upon fields and villages. The priests can also apply their water and dung to heal the sick or injured.

**Requirements:** AB standard; AL neutral good; mace; AR a; SP all, animal, charm, creation, divination, mental, healing, plant, protection, weather; PW 1) heal 1 point of damage per level per day with water and dung; 5) *cure light wounds* once per day if at a stream blessed by Brigantia, 10) *animal growth* once per day; TU nil.

**Celtic Heroes**

**Cu Chulainn**

Cu Chulainn is the greatest hero of the Celts, a fine warrior who has dealt with mortals and immortals on their own terms. Originally named Sedanta, the young man is reputed to have traveled to the land of Emhain Mhacha and defeated (single-handedly) 150 other youths. When he approached the lands of the great smith Culann, he encountered and defeated the smith's huge guard dog with his bare hands. Enraged, Culann forced Sedanta to guard his lands in the dog's place, and thus Sedanta became known as Cu Chulainn, or "dog of Culann:

Cu Chulainn underwent a series of initiations into heroic stature. He was forced to fight many other heroes and creatures, put through exotic rituals throughout Celtic lands, and finally learned strategies and magical tactics that have rendered him all but invincible.

**Role-playing Notes:** Cu Chulainn is known throughout the lands of the Celts, by mortals and gods alike. He never travels in disguise, so cannot help but be noticed. Cu Chulainn has a particular hatred of giants and will seek them out to destroy them whenever possible. He travels the Celtic lands to stamp out injustice and has a reputation for appearing just in the nick of time.

(warrior 20)

| | | |
|---|---|---|
| Str 18/00 | Dex 17 | Con 18 |
| Int 17 | Wis 15 | Cha 17 |

| | | |
|---|---|---|
| AC -2 | MR 10% | MV 15 |
| HP 200 | AL cg | THAC0 1 |
| #AT 5/2 | Dmg 1d6 +4 (spear) +6 | |

**Special Att/Def:** Cu Chulainn's spear is called *Gae Bolg*, and is made from the bones of a sea dragon. He is the only mortal who can heft it, and while he has it in his hands he cannot be surprised. The weapon is a *spear +4*. In battle, Cu Chulainn glows with a brilliant light and those attempting to fight him cannot look directly at this brilliance and suffer a -4 penalty to their attack rolls. When fighting giants, Cu Chulainn gains an additional +4 to all attack and damage rolls against them.

# Chinese Mythology

Throughout antiquity, Ancient China was one of the most cultivated and powerful empires in the world. Its first semi-legendary dynasty was founded in 2,000 BC, well before ancient Greece rose to power. By 200 BC, the emperors of Ch'in dynasty controlled an area of 500,000 square miles. they had also completed one of the most impressive civil engineering projects ever undertaken, the Great Wall of China, which runs for more than 1,500 miles along the nation's northern frontier. By the 7th century AD, the Chinese had developed both paper and printing, crucial inventions which were not to reach the west until more than 700 years later. The list of technological advances made by the Chinese goes on and on, but includes the invention of the clock, development of gunpowder, and the spinning of silk.

Considering these impressive achievements and its physical location, it is no wonder that China thought of itself as "Middle Kingdom." To its inhabitants, the Middle Kingdom was the center of the world and a beacon of civilization in a shadowy world of barbarism. They believed that the people to the north of China were fierce nomads who lived herding sheep, horses, and camels. Those to the south, they considered headhunting savages who fed themselves by slithering about in rice paddies. The kingdoms to the west were jealous, hostile rivals, and to the east lay vast seas populated by the isolated island cultures.

The Middle Kingdom's great civilization developed in the vast plain of northern China. This plain was a dry prairie covered many yards deep with yellow dust that had been blowing out of Mongolia for thousands of years. Through the middle of this plain wound the Yellow River, a great sluggish river so choked with silt that it frequently overflowed its banks and flooded the farmlands along its length.

This dusty basin might seem an unlikely birthplace for one of the greatest cultures man has witnessed, but it was here that the first Chinese city-states arose, relying upon the waters of the Yellow River to irrigate their fields of millet and barley, and to water their herds of pigs, goats, and oxen. It was also here that Yu the Great, the founder of the legendary Hsia dynasty, established the first Chinese empire.

Although it remains unclear whether Yu the Great was an historical or legendary personage, it is clear that his reign was followed by a long series of vigorous dynasties.

**The Age of Philosophy**

From about the sixth to third centuries BC, the central power of the empire declined and the feudal city-states enjoyed a great deal of independence. Although this situation, eventually led to a prolonged civil war, it was also during this period that two of China's most prominent philosophies, Confucianism, and Taoism, were developed. Both were founded by sages who, as was the custom during this period, wandered from petty king to petty king offering their advice and wisdom. Although neither philosopher received much acclaim during their own times, both had an impact on China that is still evident today.

The heart of Confucianism, which was founded by K'ung Fu-tzu, is an ethical and moral system rooted in the venerated traditions of China's earliest ages. Basically, K'ung Fu-tzu taught that people, especially rulers, should be unselfish, courteous, respectful of the opinions of others, loyal to family and prince, humble, virtuous, and bold in the cause of right or good. Strictly speaking, Confucianism is not a religion, for it is not concerned with the supernatural or spiritual matters. It is more a philosophy that guides men in their everyday lives.

In many ways, Taoism is the opposite of Confucianism. Where Confucianism is concerned with the art of government and social morality, Taoism is concerned with otherworldly mysticism. Taoists believe in a oneness-of-being. To them, life is the same as death and all things are part of the same harmonious state of existence. The only way to achieve knowledge of this mystic state is to enter a trance and merge with the infinite. The Taoists believe that any order imposed on nature is destructive and bound to create unhappiness, so they are generally opposed to law and government.

Needless to say, this did not make Taoism popular with the ruling class, but it did not stop Taoism from becoming the most popular religion of the lower classes. It eventually became organized into a church, complete with a formal hierarchy, rites, festivals, and an escape to the Mystical Garden for the faithful.

Both Taoism and Confucianism were influenced by a concept from another school of philosophy, that of yin-yang. Basically, yin-yang is a dualist view of the cosmos which posits the existence of two opposing forces, yin (female, dark, weak) and yang (male, light, strength). It is through the interaction of these two forces that everything in the universe is created.

Sometime between around 100 AD, another important influence came to China from distant India: Buddhism. This new religion taught that suffering was indistinguishable from life. The only way to reach salvation was to extinguish all sense of self, which would lead to a state of illumination beyond both suffering and existence. Despite these foreign ideas, there were many surface similarities between Taoism and Buddhism, such as its emphasis on meditation as a means of enlightenment. Therefore, Buddhism found a ready reception in China, and it was not long before Buddhist schools peculiar to Chinese culture appeared and flourished.

Because of the influence of these three schools of thought, it is often said that China has three religions: Confucianism, Taoism, and Buddhism. This is not to say that a single individual practices all three religions. Rather, it means that there is room in China for followers of all three religions.

As the paragraphs above illustrate, the ancient Chinese were relatively broad-minded and open to new ideas. Imperial China was a land where new concepts received a frank appraisal and, if found deserving, an opportunity to flourish. For priests charged with spreading worship of their deity, it should be an interesting land in which to adventure.

**Chinese Social Order**

Early in Chinese history, the Emperor ruled the land through a network of noble lords not too terribly different from that of feudal Europe. But as the empire grew and became increasingly concentrated in huge cities (some had more than a million inhabitants), it became necessary to develop an efficient system to administer it. In response to these needs, China developed the world's first massive bureaucracy

Political power quickly passed from the hands of the nobility to the prefects and governors employed by the Imperial bureaucracy. These civil servants reported to the Emperor through an elaborate chain of command that ensured an efficient delegation of power and responsibility. In theory, any intelligent man could rise to a position of power in this system of government. Bureaucrats were chosen not through heredity or nepotism, but on the basis of scores earned on a rigorous civil service examination which tested the prospective employee's knowledge on a wide variety of subjects, especially Confucianism and religion. In reality, however, only the children of the well-to-do could afford to invest the time and money necessary to ensure an acceptable examination score.

Despite these flaws, the Chinese bureaucracy worked reasonably well. There were many problems with corruption and betrayal of the public trust, but the system could not have been too seriously flawed, or it would not have survived as long as it did. The last emperor ruled an area of over three million square miles and was not formally deposed until the 20th century.

In addition to China's efficient bureaucracy, there are many reasons for the longevity of its Imperial government. One of the most important, however, is certainly the Emperor's special relationship with the deities of his culture.

Chinese Emperors ruled by a Mandate from Heaven. In the earliest times, it was believed that the kings were direct descendants of a heavenly deity. As such, these "Sons of Heaven" were endowed with extraordinary spiritual power which enabled them to establish hereditary lines of sacred Emperors who ruled in the country's best interest. As the dynasties grew older, this precious spiritual power dissipated until the rulership was passed on to someone devoid of this sacred power. At that time, heaven would bestow its mandate on another hero, who would displace the current Emperor and found a new dynasty.

One of the most important duties of a Son of Heaven was to act as an intermediary between heaven and the entire world, known as "Under Heaven." The Chinese believed that everything in nature was endowed with a supernatural spiritual force. In the earliest times, it was the king's duty to use his spiritual power to ensure that these spirits provided for mankind's needs. Natural disasters, such as drought, flood, famine, etc., were seen as a sign that the emperor had lost his mandate to rule.

The Chinese also practiced ancestor worship. They believed that when a person died, his spirit lived on in the upper regions and influenced the fate of his descendants Under Heaven. To invoke the blessings of these ancestors, and to sustain them so they would not become evil spirits, every citizen from the lowest to highest offered his ancestors food and wine.

In return, the ancestors were expected to provide and look out after the welfare of his descendants. The earliest kings had questions written down on pieces of polished bones (later called "dragon bones"). These bones, which contained questions about nearly every aspect of ruling a society, were held over a fire until they cracked. The answer to the question was divined from the pattern of the cracks.

These primitive beliefs did not fade away as Chinese society advanced and as the pantheon grew more complicated. Instead, the old beliefs and the new became parallel religions that complemented each other. The duty of appeasing the nature spirits passed into peasant hands, while the duty of worshipping the new, more powerful gods (and his own divine ancestors) became the province of the Emperor.

The pantheon of these new gods was similar to the organization of the empire. At the head of the bureaucratic order was Yu-Huang-Shang-Ti, the supreme emperor of Heaven and Under Heaven. He ruled from a splendid palace, and had a full set of courtiers, family, army, and civil servants at his disposal. These subordinates were charged with certain duties and responsibilities, and had to report to Shang-Ti once a year. If the supreme emperor was not pleased, as was a the case, they could be removed and replaced by another who would do a better job.

Although the deities of the Chinese pantheon inhabit many different planes, they may be found together at least once a year at Shang-ti's palace in the Seventh, or Illuminated, Heaven. Normally, only lawful good beings are admitted into this plane, but any Chinese deity may come and go here through Shang-ti's power.

**The Afterlife**

Like all Chinese mythology, the concept of the afterlife is mixture of Buddhist, Taoist, and Confucian thought. Basically, the ancient Chinese believed that after death, a person's soul goes to the first of ten supernatural law courts. Here, the judge investigates the person's deeds during his past life and passes judgment on what is to come.

Depending on the nature of their morality, the souls of the virtuous met one of three fates. They could be sent back the earth to be reincarnated immediately. In cases where the individual's morality was subject to question, he might be incarnated in an animal's body as a minor punishment. The souls of the very honorable might be sent to the K'un-lun Mountain, dwelling place of the Immortals, or to the Land of Extreme Felicity in the West. Both paradises were lands of eternal delight which only the most virtuous souls could hope to attain.

The souls judged to be wicked passed through nine more courts of law. In the first eight of these courts, the soul is judged for crimes against the jurisdiction of that particular court. For instance, in the second court, the individual might be found guilty of being a dishonest intermediary or an ignorant doctor. In the third, he might be judged a backbiter or forger, and in the fourth a miser, cheat, or blasphemer. As the individual receives his judgment, he is passed to one of two bells attached to each court, where he receives a punishment appropriate to the crime. For instance, a miser might be compelled to swallow molten gold, a liar might have his tongue cut out, a murderer might be cut into pieces, etc.

After receiving the appropriate punishment in each court, the soul reaches the house of Lady Meng, just inside the exit to this terrible after-world. Here, the Lady Meng serves them the Broth of Oblivion, which robs the souls of memory of their former lives and their ordeal in the afterlife. After drinking the broth, the souls pass through the exit and climb onto the Wheel of Transmigration and are cast back to earth to be reincarnated in a new body.

**Priests in China**

Ancient Chinese clerics were responsible for worshipping the entire pantheon of gods, and performed a wide variety of tasks related to the heavens as a whole. In the AD&D© game, however, priests often dedicate themselves to a particular deity. Their spells and powers are granted as favors from that deity in return for the cleric's service.

When running a campaign with the Chinese mythos as a backdrop, you can handle this difficulty in one of two ways: you can run clerics as basic priests who are granted their powers from the Celestial Bureau of Priestly Powers. In such a case, you should assign the Priest's spells to him in accordance with the needs of the Celestial Bureaucracy and without regard to the character's own wishes (reflecting the inflexible nature of bureaucratic administration). Under no circumstances will such priests receive granted powers or any other benefits normally reserved for priests using the specific mythos option.

On the other hand, if you wish to use the wider range of options available in the specific mythos rules, you may do so. Simply allow the priest to dedicate himself especially to a particular deity. While he is still bound to show the normal reverence to all gods, he can earn the special favors available in the mythos rules by showing extraordinary dedication to a particular deity.

**New Spells**

**Ancestral Blessing** (Necromancy)
2nd Level Priest

Sphere: Necromancy
Range: Touch
Components: V, S, M
Duration: 1 question or 1 day per level of caster
Casting Time: 1 round
Area of Effect: 1 person or house
Saving Throw: none

This spell can be used by a character of any class who is at least 3rd level or higher and the head of his or her household.

The caster of this spell calls upon the spirits of his ancestors for advice or protection. Providing the caster maintains an altar to his ancestors in his home and sacrifices food to them each day, the spirit of one of the individual's ancestors will answer the summons.

The ancestor spirit will either answer one question (with 75% accuracy), or bestow a blessing on one character of the caster's choice. This blessing takes the form of a +1 modifier to the character's saving throws that lasts for the duration of the spell.

Alternatively, the caster can ask the spirit to guard his home. In this case, the spirit acts as an infallible alarm against all non-magical intrusions for the duration of the spell. The spirit will not protect the home, it will simply alert the caster to an intrusion (no matter where he happens to be at the moment).

The material components of this spell are a dozen grains of any cereal or grain and a thimble filled with wine.

**New Magic items**

**Canon of Changes**

This book allows the reader to draw on the mystic Oneness of the universe to change the nature of matter to fulfill his own desires. Essentially, he can convert any non-living object weighing up to 500 gp into any other, non- living, non-magical object of similar mass.

If used in conjunction with the *analects of magic* (see below), this conversion can be done with up to 5,000 gp of mass. In addition, the object may be converted into a magical weapon, armor, or shield with a bonus of up to +5, with one power based on any wizard or priest spell of up to fifth level. Alternatively, the object could be converted into any monster of up to 10 HD.

Only a being of at least 18 Constitution and 18 Wisdom can read this book. Even for beings powerful enough to employ the tome, it requires 72 hours of constant reading before he can execute the change, and he forgets everything he has learned from the book after the transformation is completed. A being may read the book as many times as he wishes, but he loses one point of Constitution each time he uses the knowledge gained from it.

Any being who attempts to use this book while lacking the proper Constitution or Wisdom permanently loses 1d6 points of Constitution. This book may not be used to alter living beings, attribute scores, or to create magic items except as described above.

**Analects of Magic**

This book allows a wizard (or wu-jen, if you are using the *Oriental Adventures* supplement) to memorize any spell, no matter what his level. Reading the *analects of magic* requires 72 hours of uninterrupted study, and after using the ability gained from it, the reader forgets everything he read. Only 1 wizard (or wu-jen) of 18 Constitution and 18 Intelligence may read this tome and they must lose one point of Constitution when they do so.

Any being who attempts to use this book while lacking the proper Constitution or Intelligence loses 1d6 points of Constitution .

When used in conjunction with the *canon of changes* (see above) this book has other special powers.

**Jade Scepter of Defending**

This huge scepter is made of white jade and constantly glows as if a *continual light* spell had been placed on it. It can be used like a *mace +3* which inflicts 1d6 points of damage (plus its magic bonus). It never needs to make a saving throw against any destructive force short of that delivered by a god. The scepter's most useful property, however, is that it will: prevent any non-magical weapon from striking the holder for as long as he concentrates on not being hit. The holder may do nothing else while concentrating on his defense, and the jade scepter will not defend the holder from any attack inflicted by magic or magic weapons.

A Charisma of at least 18 is required to wield the jade scepter. Any being with a Charisma below 18 who tries to lift the scepter loses a point of Constitution.

**Dancing Sword of Bronze**

At first glance, this ancient weapon appears to be a tarnished sword of bronze. If wielded by a being with a Strength of at least 18, however, its true nature becomes apparent. It no longer looks corroded, and performs as a *sword of dancing +1* as described in the Dungeon Master's Guide. In addition, when held by its owner, the *dancing sword of bronze* also has the ability to shoot a 30 hit point *lightning bolt* once per round. If its owner is ever killed, or moves more than thirty feet away from it, the sword vanishes, only to reappear in its corroded form years later in some farmer's field.

In the hand of any being with a Strength of less than 18, the sword appears to be nothing more than a corroded, weapon of bronze.

**Shang-ti (greater god)**

Shang-ti, also known as Yu-Huang-Shang-Ti, is the Supreme Ruler of the universe. He is the giver of life, the vitalizing power of the earth, the bestower of the Mandate of Heaven, the supreme judge, forgiver, savior of mankind, and the personification of heaven itself. As the head of the Celestial Bureaucracy, all other deities rule through his grace and authority. His word is law among all gods and goddesses, and he is the final arbitrator in any dispute among them. In his true form, Shang-ti is an ethereal, aged man with a bald head and a long white beard.

**Role-playing Notes:** Shang-ti runs the Celestial Bureaucracy with the welfare of the Chinese Empire at heart. He never gets angry, but will replace any subordinate god who fails to perform his duty correctly. In cases of corruption, Shang-ti has returned even the most powerful gods to mortal form and sent them to the After-world to be punished for their misdeeds.

Omens come from Shang-ti only when the Emperor has lost his Mandate from Heaven. In such times, the Empire is besieged by natural disasters such as plagues, floods, and earthquakes.

**Statistics:** AL lg; WAL any lawful; AoC creation, social order; SY jade dragon.

**Shang-ti's Avatar (fighter 16, priest 18)**

In his avatar form, Shang-ti appears as a wizened old man. The avatar has access to spells in any sphere.

| | | |
|---|---|---|
| Str 18/95 | Dex 18 | Con 18 |
| Int 19 | Wis 19 | Cha 17 |
| MV 18 | SZ 6' | MR 50% |
| AC -4 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8 +2/1d8 + 2 (staff) +5 |

**Special Att/Def:** Shang-ti's avatar carries a staff of thunder and lightning as described in the Dungeon Master's Guide. All missile attacks directed at him through the air turn around and strike the sender.

**Duties of the Priesthood**

Only the Emperor may worship Shang-ti, although lower nobility and peasants are allowed to make offerings to him once a year. The Emperor's sole duty consists of administering the earthly bureaucracy as efficiently as possible and with the welfare of the Chinese Empire at heart.

**Requirements:** AB standard, but at least 17 Intelligence; AL any lawful; WP any; AR e; SP any; PW 5) Charisma of 19 and innate ability to detect lies; TU turn.

**Kuan-ti (intermediate god)**

Kuan-ti, also known as Huan-ti, is the god of fortune telling and war. Instead of making war, however, he tries to prevent it whenever possible. He is a great scholar and protector of the people, though he can be merciless and unforgiving in the pursuit of his duties. When war is unavoidable between two powers, it is his task to adjudicate the dispute and determine who is deserving of victory.

Occasionally, he enjoys using his intellectual prowess to predict the future, which accounts for his position as the god of fortune-telling. In his true form, he appears as a large muscular man with green armor and red skin.

**Role-playing Notes:** Although he is the god of war, Kuan-ti is not very warlike. Whenever possible, he prefers to see political differences settled by diplomatic rather than military means. When a war does erupt, he prefers to remain involved until he has determined which side is more valorous, for experience has taught him that warriors fighting for just causes tend to be more brave than those fighting on behalf of evil.

**Statistics:** AL ng; WAL any good; AoC war, fortune telling, protection; SY black-winged chariot.

**Kuan-ti's Avatar (fighter 18)**

Kuan-ti's avatar takes the form of a huge man with red and green armor.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 19 | Wis 19 | Cha 16 |
| MV 18 | SZ 7' | MR 35% |
| AC -4 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d10 +3/1d10 +3 (sword) +8 |

**Special Att/Def:** Kuan-ti's avatar wears special magical armor that helps defend him against magical attacks. All such attacks must make attack rolls (as if they were missile weapons for ranged spells and as melee weapons for touch spells). He fights with a magic *two-handed sword +3*.

**Duties of the Priesthood**

Clerics devoted to Kuan-ti must be competent fighters, but cannot be quarrelsome or pugnacious. They must always be ready to defend the weak or the empire, but can never lift their weapons for personal gain.

All priests of Kuan-ti are multi-classed fighter/priests and must meet the standard requirements for both classes. The normal prohibition against human characters being multi-classed is waived in the case of Kuan-ti's followers.

**Requirements:** AB standard, but must also be (see above); AL any good; WP any; AR a; SP all, guardian, healing, protection; PW none; TU nil.

**Yen-Wang-Yeh (intermediate god)**

Yen-Wang-Yeh is the god of the dead, chief judge of the Ten Law Courts of the After-world, and king of the Eighteen Hells. When a dead man's soul reaches the first court of the after-world, Yen-Wang-Yeh determines whether the man should be rewarded, passed directly to the Wheel of Transmigration (reincarnation), or passed onto the lower courts for punishment. In his true form, Yen-Wang-Yeh resembles a yellow-robed warrior with ebony skin.

**Role-playing Notes:** Yen-Wang-Yeh is a dedicated and humorless servant of the Celestial Bureaucracy. His primary concern is making sure that the spirits of the dead are processed quickly and efficiently.

Yen-Wang-Yeh must personally approve any *raise dead*, *resurrection*, or *reincarnation* spell cast by any worshipper of any god in the Chinese pantheon. Any time such a person casts one of these spells, there is a flat 25% chance he will cancel it. Yen-Wang-Yeh is not well-known for sending omens or portents.

**Statistics:** AL ln; WAL any lawful; AoC death; SY helm wrapped with ribbons.

**Yen-Wang-Yeh's Avatar (ranger 17)**

Yen-Wang-Yeh's avatar is a black-robed man with ebony skin. He can use the number and level of spells appropriate to a ranger of his level, selecting them from the animal and plant spheres.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 16 | Wis 17 | Cha 12 |
| MV 16 | SZ 6' | MR 30% |
| AC -1 | HD 17 | HP 136 |
| #AT 2 | THAC0 5 | Dmg 1d8/1d8 (sword) +6 |

**Special Att/Def:** Yen-Wang-Yeh's avatars can move silently (100% success), turn *invisible* at will, and track without error over any terrain up to seven days after his quarry has passed. Anyone touching the avatar's body must save versus paralyzation or remain motionless for 1d4 rounds.

**Duties of the Priesthood**

Priests devoted to Yen-Wang-Yeh are required to prepare the dead for cremation, preside over funerals, and offer advice to their followers about how best to worship one's ancestors. Occasionally, they are called upon to track down a rogue undead spirit.

Priests of Yen-Wang-Yeh who have reached 5th level can converse with the spirit of another's ancestor. They may ask the spirit up to 5 questions which are truthfully answered. A person's ancestral spirits may be contacted only at their request and with their permission.

**Requirements:** AB standard; AL any; WP any; AR a; SP all, divination, necromantic, protection, summoning; PW 3) *speak with dead*; 5) *speak with ancestral spirit*; 10) *raise dead* (no chance of cancellation); TU turn.

**Fu Hsing (intermediate god)**

Fu Hsing is the god of happiness, who sees to it that each man receives his share of joy. Originally, Fu Hsing was a mortal magistrate named Yang Cheng. Yang saved the people from the emperor Wu-ti's intolerable tax levies in the sixth century AD. In return for his bravery and selflessness, the Jade Emperor made him immortal and assigned him the cheerful task of spreading happiness. Fu Hsing is a small, cheerful man with a ready smile.

**Role-playing Notes:** Fu Hsing is a jolly deity who takes great pleasure in executing his duties. A prayer from any unhappy person who truly deserves happiness is 90% likely to bring a response from Fu Hsing. Often, he sends his avatar to heroes to ask them for help on behalf of the distressed person.

If a party answers such a request and helps the person, they are sure to be rewarded. Sometime in the future, at their most desperate hour, Fu Hsing will send his avatar to their aid.

**Statistics:** AL cg; WAL any; AoC happiness and joy; SY bat.

**Fu Hsing's Avatar (bard 18)**

Fu Hsing's avatar often appears as a grimy old man carrying a beat-up lute and singing a jolly song in a robust voice. He can cast draw upon any school of magic to cast any spell appropriate to his level as a bard.

| | | |
|---|---|---|
| Str 13 | Dex 18 | Con 16 |
| Int 18 | Wis 18 | Cha 17 |
| MV 15 | SZ 5' | MR 30% |
| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d4 (dagger) |

**Special Att/Def:** With a single strum of his magical lute, Fu Hsing's avatar can cast any wizard spell of first through fourth level.

**Duties of the Priesthood**

Priests dedicated to Fu Hsing must spread happiness wherever they go. They can fight only in defense of themselves or another and may never instigate combat. If they encounter a sad person, they must do what they can to cheer him or her. They must also learn to sing jolly songs and play at least one musical instrument. In campaigns that use proficiencies, they are required to select the singing and artistic ability skills. In the latter case, they must choose to be proficient in the playing of musical instruments. They can never sing or play sad songs, however.

**Requirements:** AB standard, but must have a charisma of 14 or more; AL any good; WP dagger; AR a; SP all, charm, creation, healing; PW 1) immune to fear or despair; 5) gain spell abilities of a bard of same level as priest; 10) cast any spell known to them by playing a single note on any musical instrument they are proficient with; TU turn.

**Chung Kuel (intermediate god)**

Also known as K'uei Hsing, Chung Kuel was a brilliant mortal who finished first in all of his examinations. However, he was so ugly that the Emperor would not affirm his success. When the despondent Chung Kuel threw himself into the sea, a turtle saved his life. The Emperor took this as a divine sign and acknowledged the examination result. Chung Kuel served so efficiently and honestly that Shang-ti granted him immortality, making him assistant to Wen Chang Ti, god of literature. Eventually, as the need for bureaucrats increased, Shang-ti created a ministry to watch over truth and the examination process, placing Chung Kuel in charge of it. In his true form, Chung Kuel is a finely dressed man with a magnificent potbelly, a hairy nose of grotesque proportions, red-rimmed eyes, and a tiny chin completely lost beneath the folds of his bulging cheeks.

**Role-playing Notes:** Chung Kuel's primary duty is to oversee the imperial examinations. There is a 50% chance that he will notice any cheating. This chance increases to 75% if magic is used. When a cheater is noticed, his test paper bursts into flames in his hand, inflicting 2d6 points of fire damage (no save allowed).

**Statistics:** AL lg; WAL non-evil; AoC truth and testing; SY ruler and writing brush.

**Chung Kuel's Avatar (priest 17)**

Chung Kuel's avatar resembles the god himself: finely dressed and repulsively ugly. He can draw upon any sphere for his spells. In addition, he may also cast any wizard spell as if it were a priest's spell of the same level.

| | | |
|---|---|---|
| Str 18 | Dex 16 | Con 16 |
| Int 20 | Wis 20 | Cha 0 |
| MV 15 | SZ 6' | MR 20% |
| AC 2 | HD 17 | HP 136 |
| #AT 1 | THAC0 5 | Dmg 1d6 +3 (staff) +2 |

**Special Att/Def:** Anyone looking at Chung Kuel's avatar must save versus petrification or look away. He can always detect a lie and his staff, which is a +3 weapon, also acts rod of cancellation.

**Duties of the Priesthood**

Priests dedicated to Chung Kuel must be honest, scholarly and ugly. Their primary duty consists of administering imperial examinations, though they are often employed as investigators in cases of official corruption.

**Requirements:** AB standard, but maximum Charisma 9; AL lg; WP staff, club, mace; AR a; SP all, charm, divination, healing, protection, summoning; PW 5) *detect lie*; 10) *detect lie* (no saving throw); TU nil.

**Liu (intermediate god)**

A Celestial Prince, Liu is the god of crops and Superintendent of the Five Cereals: rice, barley, millet, sorghum, and wheat. In addition to supervising the individual deities of each of the five cereals, he is charged with interacting with the gods of rain, hail, insects, and other natural phenomena to ensure an adequate growing season. His is a very difficult job, for he must carefully balance the needs of each of the different cereals, at the same time using diplomacy and other political skills to convince his fellow gods not to send too much or too little rain. Save for his godly bearing and charisma, Liu is a young man who resembles a mortal bureaucrat who might occupy a similar station on earth.

**Role-playing Notes:** Liu's tasks keep him so busy that even when faced with a major agricultural catastrophe, a worshiper has only a 1% chance of attracting the god's attention. Dungeon Masters should increase this to 1% per level for priests dedicated to Liu. Should Liu notice a worshiper's request, he will send his avatar to offer what help he can.

Because he works so hard, Liu is easily affronted if the proper rites are not observed in his honor, which may result in a poor harvest for the offending community. Omens from Liu usually concern the proper time for planting and harvesting, and are associated with the moon, the wind, and the weather.

**Statistics:** AL n; WAL any; AoC crops and food; SY one stalk of each of the five cereals bound together.

**Liu's Avatar (druid 16)**

Liu's avatar resembles a humble peasant. He can draw upon the all, animal, divination, elemental, healing, plant, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 18/94 | Dex 17 | Con 15 |
| Int 17 | Wis 17 | Cha 18 |
| MV 15 | SZ 6' | MR 20% |

| | | |
|---|---|---|
| AC 0 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d8 + 3 (staff) +5 |

**Special Att/Def:** Liu's avatar carries a *staff of command +3* and can control plants in a 100' radius at will.

**Duties of the Priesthood**

Priests dedicated to Liu are expected to work in the fields and to preside over planting and harvesting rites.

**Requirements:** AB standard; AL any; WP bill-guisarme, sickle, nail; AR a; SP all, animal, plant, healing, sun, weather; PW 5) *cure disease* (works on plants only); 10) turn *insect plague* spells; TU nil.

**Lu Hsing (intermediate god)**

As the god of salaries and functionaries, Lu Hsing is often revered by ambitious bureaucrats. He served the founder of the Han dynasty as a loyal and honest administrator. As a result, Shang-ti deified him and gave to him the task of overseeing the fair distribution of rewards in the earthly bureaucracy. Along with Fu Hsing and Shou Hsing, he is one of the three gods worshipped by public servants in order to assure a prosperous career and a happy life. In his true form, he is an immaculately groomed man with a pleasant countenance and a long, silky beard.

**Role-playing Notes:** Lu Hsing's primary concern is ensuring that hardworking bureaucrats receive the rewards they deserve. He is more concerned with results than with methods, so dishonesty or treachery does not hinder an administrator's career, so long as it is employed for the benefit of the state.

However, he detests corruption in any form, so any official committing dishonorable acts for personal gain stands a 10% chance of coming to Lu Hsing's notice. In such cases, Lu Hsing tries to correct the aberrant behavior through a series of omens. First, the individual's salary is somehow lost for three weeks in a row. Second, his superior makes a surprise inspection and, no matter what he finds, chastises the bureaucrat for keeping a sloppy office. Third, the bureaucrat receives a visit and stern lecture from Lu Hsing's avatar. If the individual still does not redress his misdoings, Lu Hsing arranges public exposure of the official's corruption.

**Statistics:** AL In; WAL any; AoC just rewards; SY deer.

**Lu Hsing's Avatar (priest 15)**

Lu Hsing's avatar usually takes the form of a well-dressed bureaucrat, often riding a huge stag as a mount. He can draw on any sphere for his spells.

| | | |
|---|---|---|
| Str 18/09 | Dex 16 | Con 18 |
| Int 18 | Wis 17 | Cha 18 |
| MV 15 | SZ 6' | MR 20% |
| AC 2 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d6 +3 (Flail) +3 |

**Special Att/Def:** Lu Hsing's avatar can only be hit by +2 or better weapons.

**Duties of the Priesthood**

Lu Hsing is worshipped in the homes of bureaucrats, not in formal temples. Any bureaucrat who sacrifices a small portion of his salary and who works hard may become a priest of Lu Hsing.

**Requirements:** AB standard; AL any lawful; WP club, dagger; AR a; SP all, charm, divination, healing, summoning; PW 1) *suggestion* (as 3rd level wizard spell), 5) *domination* (as 5th level wizard spell), 10) *mass charm* (as 8th level wizard spell); TU nil.

**Shou Hsing (intermediate god)**

Shou Hsing is the god of longevity and the arbiter of life spans. He possesses a set of tablets upon which he has inscribed the date of everyone's death. As these dates are written in stone, they are supposedly immutable. However, the god has been known to "juggle the writing" and change the dates favorably for those who treat him especially well.

In his true form, Shou Hsing is an aged man with a pure white beard and eyebrows. He has an enormous, egg-shaped bald head. Shou Hsing usually supports himself with a large, rough stick, and carries a Pan T'ao — one of the peaches of immortality — in his free hand.

**Role-playing Notes:** Although he has no formal temples, Shou Hsing enjoys being worshipped. Many people maintain a shrine to him in their homes and regularly offer him barley cakes and wine. Members of such households seldom suffer the infirmities of old age, but those who neglect such sacrifices seldom age gracefully. Omens from Shou Hsing include signs of premature aging, such as graying hair, loss of hearing or sight, and unexplained arthritic aches.

**Statistics:** AL cn; WAL any; AoC long life; SY peach.

**Shou Hsing's Avatar (wizard 16)**

Shou Hsing's avatar is an aged bald man of cheerful disposition. He can draw his spells from the necromancy, invocation/evocation, and enchantment/charm schools of magic.

| | | |
|---|---|---|
| Str 18/52 | Dex 16 | Con 15 |
| Int 18 | Wis 19 | Cha 16 |
| MV 15 | SZ 6' | MR 25% |
| AC 2 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d6 +5 (staff) +4 |

**Special Att/Def:** Shou Hsing's avatar carries a walking stick that is a +5 magical weapon and also functions as a *staff of withering*. In addition to the normal powers of such a weapon it can cause any living creature to age 5d10 years instantly. This special power can be used once per day and, although an attack roll is required to hit the target, no saving throw is allowed.

**Duties of the Priesthood**

Priests devoted to Shou Hsing devote themselves to protect and comfort the elderly. They are often called upon to preside over parties thrown to celebrate the 50th, 75th, and 100th birthdays of long-lived individuals.

**Requirements:** AB standard; AL any; WP staff; AR a; SP all, astral, charm, combat, creation, healing, necromantic, protection; PW 1) priest only ages one year per two; 10) priest no longer ages; 20) priest can halt the aging of others at the costs of one point of his own Constitution; TU turn.

**Kuan Yin (intermediate god)**

Kuan Yin is one of the most popular gods of ancient China, for she is the goddess of mercy. She constantly strives to ease suffering of all kinds, and is especially fond of rescuing shipwrecked sailors, curing the diseased, and protecting endangered women and children. Her surname, Sung-Tzu-Niang-Niang ("Lady who brings children"), reflects her place as the goddess of human fertility. In this role, she makes sterile women fertile and brings souls to newborn children. In either aspect, Kuan Yin's true from is that of a slim young woman dressed in white.

**Role-playing Notes:** Kuan Yin is dedicated to compassion and peace, especially where women and children are concerned. When somebody commits a violent act that affects children, there is a 1% chance per child and/or woman affected that she will notice and send her avatar to intervene. The person responsible will always be punished severely, though not by the loss of life. Omens from Kuan Yin are often delivered by talking infants. Any woman stealing a pair of slippers from Kuan Yin's temple will become pregnant.

**Statistics:** AL lg; WAL any good; AoC childbirth mercy; SY infant lying on a lotus flower.

**Kuan Yin's Avatar (priest l7)**

Kuan Yin's avatar appears as an extremely beautiful slim young woman, often with a lotus blossom in her hair and an infant in her arms. She can call upon the all, animal, charm, healing, and protection spheres for her spells.

| | | |
|---|---|---|
| Str 21 | Dex 17 | Con 17 |
| Int 18 | Wis 19 | Cha 19 |
| MV 18 | SZ 6' | MR 30% |
| AC 5 | HD 17 | HP 136 |
| #AT 1 | THAC0 5 | Dmg 3d10 +9 (staff) +9 |

**Special Att/Def:** Kuan Yin's avatar cannot be hit by any physical weapon, even magical ones. In combat, she employs a magical *quarterstaff + 5* that inflicts stunning damage only. In addition, she has the power to negate one attack against any person per round (she chooses which attack at the end the combat round).

**Duties of the Priesthood**

In addition to keeping an ample supply of slippers on hand, priests dedicated to Kuan Yin must defend the helpless, minister to the sick, and care for homeless children. They may never kill purposely, and if they kill accidentally they lose all their powers until they have performed a suitable of contrition.

**Requirements:** AB standard; AL any good; WP staff; g; SP all, charm, creation, guardian, healing, protection; PW 3) -4 AC bonus; 5) *cure disease*, 10) *cure blindness and deafness*; TU turn.

**Chih-Nii (intermediate god)**

The daughter of Shang-ti, Chih-Nii is the goddess of spinners and weavers. She makes clothes for all the gods of heaven, a task that keeps her so busy that she has had no time to find a husband. Fortunately for Chih-Nii, however, her sister convinced her to take a rest and go to earth.

While the women were bathing in a stream, a cowherd came along and hid Chih-Nii's clothes. When he would not return them, Chih-Nii was forced to remain on earth and eventually fell in love with the mischievous cowherd. Unfortunately, the gods soon recalled Chih-Nii. Recovering Chih-Nii's clothes from their hiding place,

the cowherd tried to follow her to heaven, but Shang-ti stopped the mortal on the far side of the Celestial River (the Milky Way). Chih-Nii may now cross the Celestial river to visit her lover only on the seventh day of the seventh month each year, when the magpies gather to make a bridge with their wings.

**Role-playing Notes:** As the patron of spinners and weavers, Chih-Nii watches over women who earn their living by making clothes. Her main interest, however, is women who have found love late in their lives, and there is a 10% chance she will send her avatar to punish any male who jilts such a woman.

**Statistics:** AL cg; WAL any; AoC spinning and weaving, love; SY spinning loom.

**Chih-Nii's Avatar (bard 10, priest 10)**

Chih-Nii's avatar is a very shy but beautiful woman. She can draw upon any school of magic for her wizard spells, and upon the all, charm, divination, elemental, healing, protection, and summoning spheres for her priest spells.

| | | |
|---|---|---|
| Str 13 | Dex 19 | Con 16 |
| Int 16 | Wis 12 | Cha 18 |
| MV 15 | SZ 5' | MR 15% |
| AC 5 | HD 10 | HP 80 |
| #AT 1 | THAC0 11 | Dmg 1d4 (dagger) |

**Special Att/Def:** Any mortal casting a magic spell against Chih-Nii's avatar loses that spell permanently, and any weapon wielded by a mortal against her loses its magical properties permanently. Anyone hit by her dagger must save versus spells or fall asleep until awakened by another character (this requires one round to do).

**Duties of the Priesthood**

Clerics of Chih-Nii preside over ceremonies concerning silkworms, sheep, and other textile sources. As a sign of this, they can only wear armor fashioned from hemp or quilted silk. They are also expected to aid and shelter those involved in impossible loves or star-crossed romances.

**Requirements:** AB standard; AL any non-evil; WP rope, bow and arrow, spear; AR special; SP all, charm, divination, elemental, healing, protection, and summoning; PW 1) *create garment* (from rags); 6) *cause cloth to rot* (save allowed).

**Lei Kung (intermediate god)**

Although Shang-ti has established an entire Ministry of Thunder, it is dominated by Lei Kung, the Duke of Thunder. In his true form, he is an ugly, blue-skinned brute with wings and claws. He is clad only in a belt and loincloth, with drums hanging from his waist. In his hands he carries a hammer and a chisel.

Although he has several duties, Lei Kung's favorite is that of vengeful punisher of undetected, wicked deeds. He also hunts down and destroys evil spirits that have dominated human bodies, or humans who have committed crimes not governed by mortal law. Lei Kung treats all of these criminals the same — he uses his chisel to strike them dead.

Another of Lei Kung's duties is to beat the drums hanging from his belt during storms. He performs this duty while several other deities perform similar tasks required to make rainstorms.

**Role-playing Notes:** Lei Kung is a malicious deity who enjoys inflicting pain on mortals and spirits alike. As long as there are plenty of wrongdoers for him to track down, he remains content. But when he runs out of deserving victims, he often listens to the false accusations of spiteful rivals or suspicious neighbors. The only omen Lei Kung ever bothers to send is a deafening roar of thunder as he strikes a victim dead.

**Statistics:** AL le; WAL any; AoC thunder, vengeance; SY hammer and chisel.

**Lei Kung's Avatar (ranger 15, druid 10)**

Like Lei Kung himself, the avatar is an ugly, blue-skinned brute with claws, wings, and a set of drums hanging at his belt. He can draw his Druid spells only from the elemental or weather spheres.

| | | |
|---|---|---|
| Str 20 | Dex 17 | Con 18 |
| Int 15 | Wis 14 | Cha 17 |
| MV 18 | SZ 7' | MR 15% |
| AC 0 | HD 15 | HP 120 |
| #AT 2 | THAC0 5 | Dmg 2d8/2d8 (chisel) +8 |

**Special Att/Def:** Lei Kung's Avatar's drums act as a horn of blasting when struck. Further, he is immune to damage caused by sound, electric, or water based attacks.

**Duties of the Priesthood**

Priests dedicated to Lei Kung must dedicate themselves to ferreting out the misdeeds of others, and often assume the role of spy or informer. They are sometimes asked to assist their patron in tracking down a spirit that has assumed the form of a man.

**Requirements:** AB standard; AL any; WP hammer, javelin; SP all, combat, elemental, sun, weather; PW 1) 3rd level thief abilities; 12) 12th level thief abilities; TU nil.

**Sung Chiang (intermediate god)**

Sung Chiang, also known as No Cha and a thousand other names, was a famous thief living in the twelfth century AD. When the brigand died and went to the first Law Court of the After-world, Yen-Wang-Yeh was astounded at all the crimes Sung Chiang had committed. The Judge asked him if he was sorry for all the things he had done. Sung Chiang said that he was not, for he had done nothing worse than the corrupt bureaucrats ruling his province. His comment caused an investigation and the guilty administrators were brought to justice. In gratitude, Sung Chiang was given divine status — but only after passing through every Law Court in the After-world. In recognition of his occupation, Sung Chiang now has three faces, eight arms, silvery scales for skin, and red eyes that blaze like fire.

**Role-playing Notes:** Sung Chiang's ways have not changed just because he became a god. He is still greedy, and worshipers who do not sacrifice at least half of their treasure to his murky shrines are sure to receive a visit from his avatar.

**Statistics:** AL ne; WAL any; AoC thievery; SY dagger through a silver bracelet.

**Sung Chiang's Avatar (thief l8)**

Sung Chiang's avatar appears in so many forms that it is impossible to describe them all. Most, however, are at least vaguely human.

| | | |
|---|---|---|
| Str 18/00 | Dex 20 | Con 18 |
| Int 18 | Wis 14 | Cha 18 |
| MV 18 | SZ 6' | MR 15% |
| AC -2 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d4 (dagger) +6 |

**Special Att/Def:** Sung Chiang's avatar can use his dagger as either a melee or missile weapon. When his dagger is thrown, another appears in his hand and the first disappears after it has inflicted its damage. Anyone hit by his dagger must save versus poison or suffer a loss of 3d6 points of Constitution. If this reduces their Constitution to 0 or less, they are slain. If not, the lost points will return over the course of the next 1d6 days.

**Duties of the Priesthood**

All of Sung Chiang's priests are multi-classed Priest/Thief characters. The normal prohibition against human multi-classed characters is waived in the case of these individuals.

**Requirements:** AB standard, but must also meet Thief requirements; AL any evil; WP as Thief; SP charm, combat, divination, guardian, healing, necromantic; PW nil; TU nil.

**Lao Tzu (lesser god)**

Lao Tzu is the legendary philosopher who compiled the *Tao-te-Ching*, the basis of Taoist thought. After finishing this wonderful book, Lao Tzu was deified. He mounted a green ox and rode away into the sunset. Lao Tzu is now venerated as the founder of Taoism. He is worshipped by mystical philosophers hoping for assistance in achieving true enlightenment.

**Role-playing Notes:** Lao Tzu is in charge of intuitive knowledge and mystical enlightenment, which he grants sparingly. Lao Tzu is fond of visiting his temples and orders in avatar form. Here, he tests his worshipers' knowledge by drawing them into heated philosophical debates. Omens from Lao Tzu generally assume the form of some natural catastrophe or good fortune, such as an insect plague or a stretch of warm weather in the middle of winter.

**Statistics:** AL In; WAL any lawful; AoC mystic insight, nature; SY yin-yang circle.

**Lao Tzu's Avatar (druid 12)**

Lao Tzu's avatar appears to be an ancient hermit with a spry step and twinkle in his eye. He can draw upon the all, animal, elemental, healing, plant, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 12 | Dex 15 | Con 18 |
| Int 18 | Wis 20 | Cha 18 |
| MV 15 | SZ 6' | MR 15% |
| AC 0 | HD 12 | HP 96 |
| #AT 1 | THAC0 9 | Dmg 1d6 (staff) |

**Special Att/Def:** Anyone hit by the staff of Lao Tzu's avatar must save versus paralyzation or be permanently paralyzed. Nothing short of a wish can counter this curse.

**Duties of the Priesthood**

Priests dedicated to Lao Tzu or Taoism must preside over a wide range of ceremonies. Their most important duty, however, is achieving their own enlightenment — a process which requires untold hours of meditation. Once per year, each priest makes a roll to determine whether or not he has achieved enlightenment. He stands a l% chance of success for each year he has been a priest (double the chance of success for priests with a Wisdom of 18 or greater). Priests making a successful roll automatically rise three levels (to minimum Experience Points needed), have their Wisdom increased to 18 or by 1 point if their have already have a score of 18 or better). Further, they receive the ability to commune with Lao Tzu once per week and control weather once per day.

**Requirements:** AB standard; AL any neutral; WP staff, blowgun (with poison), bow, harpoon, spear, sickle, sling; AR (level 1-10) a, (level 11+) g; SP all, animal, divination, elemental, healing, plant, weather; PW 1) *resist fire/cold* (as spell, but constant); TU nil.

**K'ung Fu-tzu (lesser god)**

K'ung Fu-tzu, known as Confucius to westerners, is the Great Teacher. He is one of the great philosophers who advised the rival lords during the turbulent period of "The Hundred Schools." K'ung Fu-tzu tried to teach his fellow Chinese (especially rulers) to respect the wisdom of the past, to behave courteously and unselfishly, to be loyal to their family, friends, and countrymen, and to strive to do that which is right. By doing these things, he believed, life would become much more rewarding and serene for all men. Because of K'ung Fu-tzu's great deeds, Yen-Wang-Yeh sent the sage to eat the peaches of immortality when he presented himself at the First Law Court of the After-world.

**Role-playing Notes:** K'ung Fu-tzu is concerned primarily with proper govemment and social relations, especially as fixed by the traditions of the esteemed past. When he notices a good-intentioned but inept or bungling ruler (15% chance), he often sends his avatar down to act as the man's advisor. If he notices a corrupt ruler or high-level bureaucrat (50% chance), his avatar will be sent to expose the man. Omens from K'ung Fu-tzu usually include unexpected discord at court, peasant rebellions, and the breakdown of normal social relationships.

**Statistics:** AL lg; WAL any good; AoC social behavior, veneration of the past; SY scroll and writing brush.

**K'ung Fu-tzu's Avatar (priest l3)**

K'ung Fu-tzu's avatar appears as a well-dressed sage of venerable age. He can draw upon the all, charm, guardian, healing, and protection spheres for his spells.

| | | |
|---|---|---|
| Str 14 | Dex 14 | Con 16 |
| Int 19 | Wis 20 | Cha 16 |
| MV 15 | SZ 6' | MR 10% |
| AC 2 | HD 13 | HP 104 |
| #AT 1 | THAC0 9 | Dmg 1d6 (staff) |

**Special Att/Def:** Anyone hit by the staff of K'ung Fu-tzu's avatar must save versus paralyzation or be stunned for 1d10 rounds.

**Duties of the Priesthood**

Followers of K'ung Fu-tzu honor the spirit of the Great Teacher through ceremonies performed in his temple, spreading his teachings, and by the careful observation of venerated traditions.

**Requirements:** AB standard; AL any good; WP staff, club, other blunt instruments; AR a; SP all, charm, guardian, healing, and protection; PW 1) *know alignment*; 10) *charm person* 15) *detect lie* (no saving throw).

**The Dragon Kings (demigods)**

The Four Dragon Kings, Ao Ch'in, Ao Kuang, Ao Jun, and Ao Shun, are the rulers of the four seas which surround the earth. Each inhabits a magnificent crystal palace beneath the sea under his control. To aid them, each has a cabinet of ministers made up of the greatest members of each species of animal in his sea. They also have an army of fish, crabs, and crayfish who serve as watchmen and who police the sea floor.

Of more importance to the peasants who worship the four dragon kings, however, are their terrestrial duties. They are responsible for bringing rain to the sections of the earth adjoining their seas, but can only do so on the orders of the Celestial Emperor himself. The dragon kings also oversee their smaller relations, the chiang lung, who dwell in every river, lake, and waterway in China.

In their true form, the dragon kings are huge, serpent-bodied oriental dragons. They can also take the form of men or women.

**Role-playing Notes:** Generally speaking, dragon kings remain aloof from human affairs and do not respond to worship or flattery.

**Statistics:** AL varies; WAL any; AoC sea and rain; SY dragon.

**Dragon Kings**

As they have no avatars, dragon kings must appear themselves when they want something done. Because of their unusual natures, they are permitted to travel to the Prime Material Plane and are an exception to the rule forbidding gods to set foot on the earth in person. They can cast up to two wizard and priest spells of each level per day, selecting from any sphere or school of magic.

| | | |
|---|---|---|
| Str 24 | Dex 20 | Con 23 |
| Int 19 | Wis 19 | Cha 18 |
| MV 12, 39f, 3j, 18s | SZ 150' | MR 50% |
| AC -10 | HD 20 | HP 160 |
| #AT 3 | THAC0 1 | Dmg 1d10/1d10/6d6 |

**Special Att/Def:** The breath weapon of any dragon king is a cone of steam 90' long, 30' wide at its end that does 24d12 points of damage. A saving throw is allowed for half damage. The dragon kings can cast a *bless* or *detect lie* spell up to three times per day and an *animal summoning* or *quest* spell once per day.

**Duties of the Priesthood**

The Dragon Kings maintain no ties with those who worship them. One exception is the matter of drought, when an effigy of the appropriate Dragon King is paraded through town and then left by the side of the road. It is hoped that this will persuade the Dragon King to bring rain.

**Requirements:** AB standard; AL any; WP any; AR a; SP none; PW none; TU nil.

**Ch'eng Huang (demigods)**

The Ch'eng Huang are place gods, divine guardians of specific localities. Most of these localities are villages, cities, towns, but they have been known guard bridges, mountains, and other areas of importance. Sometimes known as "Gods of Walls and Ditches," they are charged with protecting the inhabitants of the town in which they are honored. Usually, Ch'eng Huang are spirits of mandarins or bureaucrats who served the town well during their mortal life, who were subsequently nominated by a Celestial Bureaucrat for the honor of protecting it in the Afterlife.

**Role-playing Notes:** The responsibilities of the Ch'eng Huang are not limited to protecting their places from outsiders. They are frequently consulted by the local governor prefect to learn the identity of notorious thieves, to ask advice in making crucial decisions, and for guidance in any difficult task. Most often, the Ch'eng Huang deliver their responses in the form of poems heard in dreams.

**Statistics:** AL usually lawful and/or good; WAL AoC specific locality; SY varies.

**Ch'eng Huang's Avatar (fighter 8-10, priest g-10)**

When the Ch'eng Huang's avatars are seen, they usually resemble the mortal from whom they were created. For their spells, they can draw upon a wide variety of spheres (though seldom more than three at a time) that will reflect the nature of the place sacred to them.

| | | |
|---|---|---|
| Str 9-19 | Dex 9-18 | Con 9-18 |
| Int 9-18 | Wis 9-18 | Cha 9-18 |
| MV 12-15 | SZ 4-7' | MR 5-15% |
| AC 5 to 0 | HD 8-10 | HP 64-80 |
| #AT 3/2 | THAC0 11-13 | Dmg 1d8 (sword) + 2-8 |

**Special Att/Def:** As a rule, any Ch'eng Huang avatar assume *wraithform* at will. Even when not in such a state, they can only be hit by +1 or better weapons and magical spells.

**Duties of the Priesthood**

There is no established order for worshipping the Ch'eng Huang and thus they generally have no priests. Rather, duty of worshipping the god of a given place falls on shoulders of the entire community. If the governor or prefect happens to be a priest, he may dedicate himself to locality's Ch'eng Huang and receive spells and powers outlined below.

**Requirements:** AB standard; AL any; WP varies; varies; SP all, charm, divination, elemental, guardian, healing, protection; PW 1) *commune* with Ch'eng Huang once per day; 10) *detect lie* (always active); TU varies.

## Chinese Heroes

**Pa Hsien, The Eight Immortals**

The Eight Immortals are legendary persons who became immortal through the practice of Taoist doctrine. Other than the fact that they have all engaged in many comical adventures, they have little in common. They are:

- Han Chung-li. A great teacher and a free spirit who enjoyed wild parties. By some accounts, he was also a skilled warrior. (Priest 12, Fighter 8.)
- Chang-kao Lao. He traveled thousands of miles on his white donkey, which he could fold up into the size of a piece of paper. He was a well-known conjurer. (Conjurer 14)
- Lan Ts'ai-ho. The patron of gardeners and renowned street singer. He rose to heaven on the fumes of wine. (Druid 8, Bard 8.)
- Li T'ieh-kuai .While his spirit was visiting Lao Tzu, Li T'ieh-kuai's body was destroyed. When he returned, he had to occupy the body of a deceased beggar. He is honored by pharmacists and exorcists. (Priest 14.)
- Han Hsiang-tzu. A youth who loved flowers, music, and poetry. He learned to grow plants with poems on their leaves. (Bard 15.)
- Ts'ao Kuo-chiu. A reformed murderer who was admitted to the Eight Immortals because there happened to be a vacancy. (Rogue 10.)
- Lu Tung-pin. Standing eight feet tall, Lu is a great alchemist who is famous for fighting evil spirits. (Wizard 14.)
- Ho-Hsien-Ko. The only female member of the Eight Immortals. She attained immortality by eating mother-of-pearl given to her by a ghost. (Necromancer 12.)

## Chinese Monsters

**Neglected Spirit, Ancestral**

Among the most terrifying monsters that inhabit the Chinese countryside are the neglected spirits of ancestors. As long as one's descendants make the proper sacrifices, ancestral spirits are neutral or beneficent beings. But if an ancestral spirit is ignored, it eventually goes mad and begins preying on humans. The first victims are inevitably the descendants who ignored it. Later, however, it is not so selective, and may attack anybody unfortunate enough to happen by at the wrong time.

Ancestral spirits invariably take on the shriveled appearance of their mortal corpses, save that they grow long yellow fangs and claws, have burning red eyes, and extremely foul breath. Ancestral spirits are a form of undead and can be turned by priests with that ability. In such cases, they are treated as spectres.

| | | | |
|---|---|---|---|
| AC -2 | 1 | SZ 6' | XP: 9,000 |
| MV 18 (f) | ML 18 | AL ce | INT high |
| HD 8 | HP 64 | MR 10% | THAC0 13 |
| #AT 3 | Dmg 1d8/1d8/ld12 | | |

**Special Att/Def:** Neglected spirits can assume *wraithform* at will and are only hit by +1 or better magic weapons. Each round, they attack with two claws and a bite. Victims of their claws must save versus poison or lose 1d6 points of Constitution. These return at a rate of 1 per day. Victims of their savage bite must save versus death or lose one level (permanently).

**Generals of the Animal Spirits**

Each kind of animal is lead by a powerful, extremely intelligent member of its species. These magical leaders are known as Generals, and serve their fellows in functions similar to a cross between human emperors and deities. Each general appears to be an extremely large, beautiful specimen of its breed.

All generals are able to turn *invisible*, *astral*, or *ethereal*. Further, they can *shapechange* (into a human being) or *teleport*. All of these abilities are usable once per round and at will. They also act as if under the influence of *ESP*, *comprehend languages*, *tongues*, *detect magic*, and *know alignment* spells at all times. They can only be hit by +5 or better weapons, and can cast up to two wizard spells from each school once per day. Once per day, they can *teleport* themselves and 1,000 of their subjects to any location they are familiar with. They all regenerate five hit points per round and individual types of animal generals may have additional abilities.

# Egyptian Mythology

No other pantheon in *Legends & Lore* inspires as much awe and wonder as that of the ancient Egyptians. As the masters of a nation that stood for some three thousand years, from the Thinite period in 3200 BC to the Ptolemaic period in 30 BC, the gods of this ancient realm have had a major influence in the development of the western world.

**The History of Egypt**

Although it is difficult to pinpoint the dawn of Egyptian culture, modern archeological evidence suggests that the first known inhabitants of the Nile Valley are believed to have a culture based largely on that of Mesopotamia (or, more specifically, Sumer).

Although acquiring information about the history of a people whose roots run so deep is difficult, modern archaeologists have been aided in their studies of ancient Egypt by a number of things. Much of what is known about later developments in the region draws upon the *Aegyptiaca* of Manetho (a priest who lived in the 3rd century BC and set the dynastic categories that are still used as the foundation all Egyptian studies). In addition to the works of Manetho, the most important source of information on this culture comes in the form of the buildings and structures, such as the Great Pyramid at Giza and the Sphinx, that have stood up to the ravages of time and now pay mute testimony to the wonders of this ancient culture. Study of such places has allowed scientists to classify the history of ancient Egypt into three categories: the Old, Middle, and New Kingdoms. In addition these three major groupings, some scholars include an Early Dynastic period (that predates the Old Kingdom) and several Intermediate Periods (that fill gaps between the three major periods). For ease of reference, *Legends & Lore* deals with the three main ages.

**The Old Kingdom**

This first period of Egyptian society began some 4,000 years ago. It held power for roughly five centuries (c. 2755 to 5 BC) and had its capital in Memphis. Those who ruled Old Kingdom had a strong and unified government, with firm support from the religious sector. In fact, it wasn't long before this monarchy evolved into a theocracy, with the kings (pharaohs) being recognized as gods on earth. The Old Kingdom began with the founding of the third dynasty (the first of the Memphite houses) and was something a golden age. The second pharaoh, Zoser (or Djoser), worked hard for the principles of national unity. As a symbol of this, he employed elements of architecture from all portions of Egypt in the construction of his mortuary buildings Saqqara. It was during this phase of history that Imhotep (Zoser's architect) demonstrated the skills that would soon make him a legend in ancient Egypt by overseeing the construction of the famous Step Pyramid that was to be Zoser's tomb. Although this structure was quickly overshadowed by later constructions of the period (like the Great Pyramid itself) it was the foundation on which all later Egyptian architecture would be based.

Later rulers of The Old Kingdom expanded upon the grandeur that Zoser had spawned. Snefru, who was the first of Egypt's warrior kings, oversaw campaigns in Nubia, Libya, and the Sinai. His active pursuit of commerce and mining brought great prosperity to the thriving society on the Nile.

Snefru's son, Khufu (or Cheops), succeeded him and oversaw the building of the Great Pyramid at Giza. Although little is known of his reign, it seems clear that only a government that was firmly in place, very efficient, and utterly loyal could have managed the construction of such a structure in that time.

Two of Khufu's sons came to sit upon the throne of Egypt. The eldest, Redjedef, introduced the concept of Ra, a solar element, into the religion and the pharaoh's titulary. His younger son, Khafre (or Chephren), built the mortuary complex at Giza and also oversaw the construction of the mighty Sphinx.

Later rulers of this period maintained the high level of cultural and scientific advancement established by Imhotep. The ancient Egyptians carried their love of greatness into every field of study and culture. For example, Memphite astronomers designed the first solar calendar based on a year of 365 days. Their knowledge of medicine was equally impressive, including a highly developed understanding of the circulatory system and the use of antiseptics.

The Old Kingdom gradually fell apart, however, as the power of its central government was bled off and the various nomes (districts) began to challenge the authority of the pharaohs. By the time of the seventh dynasty, circa 2255, the throne at Memphis had lost almost all of its power over the people of Egypt. Many modern scholars classify the period of time between 2255 BC and the rule of Mentuhotep II in 2061 BC as the First Intermediate Period.

**The Middle Kingdom**

Following the virtual collapse of the bureaucracy of the Old Kingdom, the once unified society of Egypt was shattered. This is perhaps best reflected in the artwork of the period, which became more provincial and varied throughout Egypt. In addition, the lower classes began to claim some rights that had previously been reserved only for the ruling elite. For example, the wards and spells formerly woven only around the tombs of kings now began to appear on the coffins of the common folk.

While the rulers who preceded Mentuhotep in the Middle Kingdom attempted to reunite the sands of Egypt from their power base in Thebes, it was not until his reign that the empire was truly reforged.

Still, however, Mentuhotep drew heavily upon his regional heritage and the culture of Thebes. It was not until Amenemhet replaced him on the throne that the capital returned to Memphis. Under the hand of this peaceful pharaoh, national unity was stressed and the fabric of society was restored. Amenemhet demanded loyalty from the nobility and Egypt's scattered provinces and used a series of propaganda campaigns to put across the image of the pharaoh as a "good shepherd" who would watch over the people of Egypt and guide them into an era of peace and prosperity. Evidence acquired from a study of *The Story of Sinhu* indicates that Mentuhotep was assassinated.

Mentuhotep's sons and grandsons picked up the programs and policies established by him and used them to rule over Egypt until the close of this period in 1668 BC. During this time, they built fortresses throughout Nubia, ruled Palestine and Syria, and fought a series of brutal campaigns against the Libyans to the west.

Sesostris III, who ruled from 1878 to 1843 BC, oversaw the building of a great canal at the first cataract (south of Syene) and divided the kingdom into three geographic regions. Each of these regions was ruled by a powerful leader loyal to the pharaoh. Once this structure was in place, the power of the lesser nobles (which had brought down the Old Kingdom) was broken. The rulers of the Middle Kingdom saw to it that this period was a golden age for Egyptian art and literature.

The rulers of the 13th dynasty, although they managed to maintain control over Egypt's Nubian conquests and the central government, were weaker than their predecessors. This, coupled with the fact that they came and went with great rapidity (there were roughly 60 of them between 1784 and 1668 BC) meant that they never had a chance to solidify their individual power bases. When they were confronted with internal pressure (from the soon to be recognized 14th dynasty) and external attack (from the Palestinian Hyksos), their rule was broken and the Middle Kingdom came to an end.

The period between 1720 and 1570 BC is generally recognized by scholars as the Second Intermediate Period. During this time, four dynasties (two of which were Hyksos) held power in Egypt.

**The New Kingdom**

The time between the fall of the Middle Kingdom and the rise of the New Kingdom was a turbulent one. As many as three dynasties claimed to rule during the interim, and only the Thebian ruler Kamose (who ruled from about 1576 to 1570 BC) was able to fend off the Hyksos invaders. When his brother, Ahmose I, took the reins of power in hand, he was able to defeat the Palestinians and restore unity to Egypt. Under his guidance, the New Kingdom was born.

Ahmose restored the balance of power between the pharaoh and his regional governors and restored the bureaucracy which had existed in the Middle Kingdom. He was supported in his efforts by most of the Egyptian military, which earned them many rewards when his power was at its peak and insured that none could challenge his rule.

When Amenhotep I came to power, he began to strengthen Egypt's borders in Palestine and Nubia. Evidence of his authority can be found in the al-Karnak region, where Amonhotep I built many monuments. Unlike his predecessors, he separated his well-hidden tomb from his mortuary complex, a custom that was adopted by those who followed him. Later kings, starting with Thutmose I, began building their temples and tombs in the Valley of the Kings.

When Amonhotep IV came to power, he fought to reform the religion of Egypt and confronted the powerful priests of his time. He relocated the seat of government to Akhetaton and tried to create a quasi-monotheistic belief system based on the god Aton. His attempts failed, however, and his son Tutankhamen returned the throne to Thebes. It is interesting to note that, although he is perhaps the best known of the Egyptian pharaohs, Tutankhamen is only remembered because his tomb was discovered (largely intact) in 1922, not because of any great contributions he made to Egyptian culture.

The 19th Dynasty was founded by Ramses I in 1293 BC. He was formerly the commander of the military and ruled for only two years before he was succeeded by his son, Seti I. Seti (and later his son, Ramses II) was responsible for many successful military campaigns and for much construction at Abu Simbel, Luxor, al-Karnak, Abydos, and Memphis. Ramses II was also responsible for the defeat and subjugation of the Hittites (which he secured by taking a Hittite princess as his wife). His own son, Merneptah, defeated the Sea Peoples (a race of invaders from the Aegean) in the 13th century BC and went on to defeat Israel. Later rulers found it almost impossible to rule over the many races conquered by members of the 19th dynasty and uprisings were a constant threat. The 20th dynasty saw the close of the New Kingdom. lowing the rule of Ramses III, who was a brilliant military strategist, the throne became weak. Unable to contend with he rising power of the priesthood and the army, Egypt fell into a period of decline (the Third Intermediate Period) which was, by all reasonable standards, the end of the Egyptian state as a self-ruled power.

**The Egyptian Creation Myth**

In the dawn of time, according to the priests of an Egypt, there was only the ocean (known as Nun). One day, an egg (or flower in some versions) floated to the surface the sea. It opened and Ra, the father of the Egyptian gods, stepped forth. Ra beget two children, Shu and Tefnut. These two newborn gods were lifted up to become

the atmosphere and clouds. Like Ra, they quickly brought forth two of their own children — Geb, who formed the solid earth, and Nut, who became the stars and the night sky. Ra was pleased with his work, and was master of them all.

Geb and Nut later had children of their own. They had three sons (Set, Osiris, and Horus) and two daughters (Isis and Nephythys). In an effort to stop them from producing many children without his permission, Ra ordered Shu to move between Geb and his sister, breaking their embrace and preventing the creation of any additional gods. Although there were later to be numerous other gods created, none of them could claim Geb and Nut as their parents.

It is important to note that the creation of the world and the birth of the gods of the Great Ennead was different in every telling. Egypt was a land in which every small town had a patron deity of its own and, as one might expect, the benefactor of each village played an important role in the history of the universe. As might also be expected, such gods were seldom acknowledged as important outside of their own regions.

**The Great Ennead**

Egypt was a land of many gods, for every animal and place seemed to have its own power and, thus, its own god. In addition, many of these gods had several different forms. For example, the sun god Ra was known by different names at dawn, dusk, and noon. The Great Ennead, however, were the nine most powerful gods in Egyptian Mythology. They were the close family of Ra, and formed a sort of dynasty about him.

The members of the Great Ennead were Ra, Geb, Nut, Shu, Tefnut, Osiris, Isis, Set, and Nephythys.

**The Concept of Maat**

*Maat* is a word that does not translate well into modern English. It combines features that we might describe as honor, truth, duty, and integrity, but is much more than a standard of behavior like the codes of chivalry or bushido found elsewhere in history. *Maat* was the natural state of the universe and all things were expected to conform to it. Only by so doing, in fact, could they be at peace with the gods and live a happy life.

In game terms, player characters can treat *maat* as a natural desire on the part of all persons to lead what might be described as a lawful good life. Rulers are expected to be fair in their administration of laws while the common folk are expected to give their employers an honest day's work for their wages. Those who do not fulfill their obligations can expect only turmoil and misery.

**Death and the Dead**

Ancient Egypt was a society that many might say was obsessed with death. The concept of an afterlife, although not one of eternal bliss or torment, was a part of everyday life. It was impossible to separate the concepts of daily life, *maat*, and death.

Every Egyptian was expected to spend his life making preparations for his death. For the nobility, the rich and powerful rulers of Egypt, this meant the construction of great tombs (like the pyramids). For those not so well off, it meant fashioning some sort of burial chamber or private grave, and for the poor it meant doing what could be done (which was usually not much).

Death was seen as a time of transition by the Egyptians. When the pharaoh ruled on earth, he was serving Ra. When he died, he traveled to the underworld to become one with Osiris and rule over the lands of the dead. Because the concept of *maat* required that the universe always be in a constant state, the afterlife was believed to be not unlike life on earth. Kings would rule in the afterlife, laborers would work on, and scribes would continue to compose their works.

Respect for the dead was a primary part of *maat* and the life of an Egyptian. To undertake any action which might be seen as disrespectful to the dead was to risk the anger of the gods. In game terms, this means that any action of this type — from breaking into a sacred tomb to removing a copper coin from the body of a fallen warrior — incurs a 5% chance that the avatar of Osiris will be dispatched to deal with the offenders. If this does not take place, there is a 25% chance that the violators will be affected by the curse of Osiris. Such a curse causes the victims to suffer a -5 penalty on all attack rolls, saving throws, damage rolls, morale checks, attribute checks, and proficiency checks. The only way to remove such a curse is with a wish spell.

The Great Pyramid

**1. Mastabas**

The pyramid is surrounded by a large number of low, flat buildings known as mastabas. These secondary tombs serve as the final resting places for the workers (usually slaves or prisoners of war) who built the pyramid.

**2. Lesser Pyramids**

In addition to the mastabas, the sands around the great pyramid also play host to a number of smaller pyramids. These structures act as tombs for the officials and engineers who oversaw the slaves in their work.

**3. Funeral Temple**

This chamber was dedicated to the gods of Egypt. Here, the final rites were performed and the body of the pharaoh made ready for his voyage to the afterlife. The only entrance to the pyramid is located in this room.

**4. Narrow Corridor**

All of the corridors inside the pyramid are very narrow and confining. As a rule, they stand no taller than four feet and are about a yard wide.

**5. First Burial Chamber**

In the event that the king should die before any of the other burial chambers were completed, he would be laid to rest here.

**6. Second Burial Chamber**

If the pharaoh were to die before construction of the pyramid were finished, his body would be placed in this here.

**7. Crypts**

Once the funeral rites had been completed and the pharaoh placed in the hands of the gods, the priests who saw his burial would take their own lives. Their bodies would remain here while their spirits traveled with pharaoh to his new kingdom.

**8. Funeral Barge**

In order for the pharaoh's spirit to make the journey to the afterlife, it was believed that he needed a craft to travel in. Thus, this chamber was built around the hull of an ornate funeral barge.

**9. Grand Hallway**

Unlike the other halls in the pyramid, this is a high affair. It's walls are covered with ornate carvings depicting the life of the pharaoh.

**10. Main Burial Chamber**

This lavishly decorated chamber was the heart of the pyramid. Here, in an ornate sarcophagus, the body of the pharaoh rests for all time.

**Magical Items**

**Ankh of Power**

Each of the gods of the Great Ennead has the power to create an *ankh of power* at will. In practice, however, they are rarely manufactured. It is believed that fewer than a dozen of these priceless objects exist.

In the hands of a priest who worships a member of Great Ennead, the *ankh of power* glows as if under the influence of a *continual light* spell. This light is pure and having the power to drive away any undead creature it shines upon. Any attempt to conceal or darken this light is an affront to the gods and will result in the instant destruction the ankh.

Any healing spell cast by the priest while he holds the ankh in his hand will be at double effectiveness. Further, as long as the object is in his possession, the priest is immune to all forms of poison and disease, including such unusual afflictions as mummy rot and lycanthropy.

Lastly, an *ankh of power* can cast a *sunray* spell three times per day if the priest speaks a command word unique to the individual ankh.

**Ra (greater god)**

Ra is the father of the Egyptian pantheon. He gave birth to Shu, who became the air, and Tefnut, who became moisture. He is the grandfather of Geb (the earth) and Nut (the sky), and the great-grandfather of Osiris, Isis, Set, and Nephythys. Together, these gods form the Great Ennead of Heliopolis, the city of the sun. He is said to have created mortal man from his tears.

Every day, Ra rises above Manu (the hill of sunrises) aboard his great boat Manlet and looks down upon the world with his blazing eye (the sun). Manlet is a large war galley that was constructed from solar flames and is sheathed in an aura of fire that will inflict 40 points of damage each round (no saving throw) to any being that touches the craft without Ra's permission. At night, Manjet transforms itself into Mesektet, a funeral barge, and Ra guides it back across the waters of the underworld, so that he may once again cross the sky in the morning. In both forms, the craft radiates an antimagic shell that prevents anyone but Ra from employing spells. In addition to its obvious ability to fly, the craft can become *invisible*, assume a *wraithform*, or *plane shift* when commanded to do so by Ra. Thrice per day Ra can command Manlet (but not Mesektet) to deliver a bolt of solar fire at any target in his sight. This bolt always hits and inflicts 100 points of damage (no saving throw and no defense).

There is a great bond between Ra and the pharaohs of Egypt. Without his divine grace, they cannot rule. Anyone who claims the throne of Egypt without approval from the sun god will be instantly consumed by fire. There is no warning, no chance of survival, and no hope of resurrection.

Ra is the patron of many things, but is most commonly associated with the sun and kings. He is noted for his diplomatic skill and his general dislike for the humans he created from his tears.

**Role-playing Notes**: Ra maintains a low profile. He has little interest in the affairs of men, for he finds them bothersome and petty. His stature as King of the Gods and as the God of Kings, however, makes him an important figure in daily life. Thus, he does his best to be a responsible deity and watches over his followers on Earth. Omens from Ra often take the form of strange behavior on the part of the sun.

**Statistics:** AL ln; WAL any lawful; AoC the sun, kings; SY ankh on a solar disc.

**Duties of the Priesthood**

Priests of Ra are often the advisors to kings, if not kings themselves. Priests of Ra must greet him each morning as he guides Manlet into the sky and bid him farewell at dusk when he leaves the sky. Failure to meet these obligations is certain to result in the loss of spells until the oversight is corrected.

**Requirements:** AB standard; AL lawful good; WP any; AR a; SP all, astral, charm, creation, elemental, sun, weather; PW 1) *light*; 5) *continual light*; 10) *shape change* (into a hawk); 15) *sunray*; TU turn.

**Ra's Avatar (priest 20, wizard 19, warrior 15)**

Ra's avatar takes the form of a large and powerful warrior with a hawk's head. His left eye glows brightly, for it is a piece of the sun. Ra's avatar often carries a glowing ankh as a symbol of his great power and is often found riding Manjet or Mesektet. Although the avatar will fight if pressed, he prefers to negotiate solutions to problems. He has access to any sphere or school of magic for his spells, but favors those spells that employ fire, heat, or bright light.

| | | |
|---|---|---|
| Str 20 | Dex 20 | Con 25 |
| Int 25 | Wis 25 | Cha 25 |
| MV 24 f | SZ 7' | MR 80% |
| AC -3 | HD 20 | HP 300 |
| #AT 2 | THAC0 3 | Dmg 1d10 (fist) +8 |

**Special Att/Def:** Ra's avatar does not normally employ weapons in combat, for his powerful blows can inflict damage. The avatar himself can be hit only by spells or magical weapons with at least a +3 enchantment. Each round, may unleash from his eye a stream of solar flame that has a range of 400 feet and inflicts 4d20 points of damage to anyone it touches. Victims are entitled to a saving throw versus breath weapons, with success indicating that they take half damage. In addition, he can use his ankh to instantly destroy any form of undead creature or any being that is not on its home plane.

**Geb (intermediate god)**

Following their creation by Ra, Shu and Tefnut produced numerous offspring. The first of these was Geb, who became the earth. Geb was so enraptured with his sister, Nut (the sky), that they instantly embraced. After they had produced four children of their own (Isis, Set, Osiris, and Nephythys), Ra instructed Shu to break up the embrace.

Geb is able to exert absolute control over any creature from the Elemental Plane of earth and can summon 2-12 earth elementals to fight for him at any time. He can instantly negate any spell involving earth, rock, mud, or the like and cannot be harmed when he stands on solid ground.

**Role-playing Notes:** Geb was once a curious and quick tempered god, but he has mellowed since his birth and now takes a more even-tempered (and safe) approach to life. Geb's true form is that of a huge man with dark brown skin and burning eyes. He always wears a golden crown as a symbol of his divine power.

**Statistics:** AL ng; WAL any; AoC the earth; SY mountain.

**Geb's Avatar (warrior 17, wizard 15)**

Geb's avatar, like the god himself, appears as a hulking man with dark brown skin and smoldering eyes. He traditionally carries a *quarterstaff +3* in combat that can duplicate the function of any magical item or magic spell relating to the earth. For example, he can command it to function as a *spade of colossal excavation* or to cast a *transmute rock to mud* spell. He can draw upon any school of magic for his spell abilities.

| | | |
|---|---|---|
| Str 25 | Dex 23 | Con 25 |
| Int 22 | Wis 20 | Cha 22 |
| MV 12 | SZ 10' | MR 30% |
| AC -3 | HD 18 | HP 270 |
| #AT 2 | THAC0 1 | Dmg 1d6 + 3 (staff) +14 |

**Special Att/Def:** In addition to his quarterstaff, Geb's avatar can regenerate 25 hit points per turn when he is in contact with the earth. Once per day, he can summon 2-8 earth elementals to fight for him. He can employ an

*imprisonment* spell once per round, no matter what other action he is attempting. Only +3 or better magical weapons can harm the avatar of Geb.

**Duties of the Priesthood**

Priests of Geb are friends of the earth. They have much in common with dwarves in that they love deep caverns and the splendors of mighty mountain ranges.

**Requirements:** AB standard; AL n; WP a; AR a; SP all, astral, combat, creation, elemental, guardian, protection, summoning; PW 1) infravision (60 feet); 2) detect grades and slopes (as dwarf); 3) detect stonework traps, pits, and deadfalls (as dwarf); 10) *summon earth elemental*; 15) *imprisonment*; TU nil.

**Nut (intermediate god)**

Nut is both wife and sister to Geb, the earth god. The two are deeply in love and will never act in a manner that is harmful to the other. Because Ra had forbidden Nut and Geb to have children, she was forced to resort to trickery to bear her five young. Since Ra had decreed that Nut could not give birth on any day of any month of any year, she went to Thoth for help. Thoth managed to capture some of the moon's light and used it to create five new days (outside of Ra's domain). On each of these days, Nut gave birth to a new god.

In her true form, Nut appears as a tall, slender woman whose body is the black of the night sky. She sparkles with starlight and is enchanting to behold. Omens from Nut always take the form of patterns in the stars.

**Role-playing Notes:** Nut is as devoted to her husband Geb as he is to her. They are kept apart by Shu and the order of Ra that forbids them from having any more children. Nut is very sensitive to the concerns of those who are forbidden to marry the one they love and will often send her avatar to help out such couples.

**Statistics:** AL ng; WAL any; AoC the sky, couples forbidden to marry; SY stars against the night sky.

**Nut's Avatar (wizard 20, priest 20)**

When Nut's avatar is sent to the Prime Material Plane, she always takes the form of a slender, ebon skinned woman of outstanding beauty. She has access to any sphere or school of magic for her spells.

| | | |
|---|---|---|
| Str 20 | Dex 25 | Con 22 |
| Int 25 | Wis 25 | Cha 25 |
| MV 12, 24f | SZ 7' | MR 30% |
| AC -3 | HD 15 | HP 150 |
| #AT 1 | THAC0 5 | Dmg 1d4 + 3 (dagger) +8 |

**Special Att/Def:** Nut's avatar wields a black bladed *dagger +3* in combat. Anyone struck by it must save versus spells or lose 2 levels instantly, just as if they had been struck by a vampire. Nut's avatar is immune to all spells that involve air and, because of Geb's watchful eye, those that involve earth as well.

**Duties of the Priesthood**

Priests of Nut are always female. Although they are permitted to love and expected to be true to their mates, they are forbidden to marry. Marriage services presided over by priests of Nut are considered a sure sign of conjugal bliss.

**Requirements:** AB standard (plus minimum charisma of 16); AL ng or cg; WP as wizards; AR a; SP all, astral, charm, divination, guardian, healing, protection, weather; PW 1) *darkness* (the reverse of light); 5) *darkness, 15' radius*; TU turn.

**Shu (intermediate god)**

Shu, also known as "the upholder", is the god of the atmosphere. He is charged with holding up the sky and, thus, keeping Nut and Geb separated. Shu (and his wife Tefnut) were Ra's first children and he has great affection for them both.

As one might expect, Shu has complete control over the air and all things associated with it. Shu can control any creature from the Elemental Plane of Air and can summon 4-24 air elementals to serve him at any time. Shu can also negate any spell that deals with air or the atmosphere at will. In his true form, Shu looks like a normal, if divinely handsome, man who is constantly surrounded by a swirl of wind. He can control the velocity of these winds, which may range from gentle breezes to tornado force cyclones. Omens from Shu come in the form of strong winds and atmospheric phenomena.

**Role-playing Notes:** Shu is a heroic and noble god who serves as king of Heliopolis when Ra is absent or unavailable. He is fair and impartial, but less of a politician than Ra.

**Statistics:** AL lg; WAL any good; AoC winds, the atmosphere; SY ostrich feather.

**Shu's Avatar (warrior 20, priest 20)**

Shu's avatar looks much like the god himself. He appears as a powerful and handsome man with a light blue tint to his skin. He eyes carry the gleam of summer lightning in them and his smile the warmth of a spring sunset. He can call upon any sphere for his spells, but prefers those that deal with the atmosphere or winds.

| | | |
|---|---|---|
| Str 24 | Dex 23 | Con 25 |
| Int 23 | Wis 23 | Cha 20 |
| MV 12, 24f | SZ 7' | MR 35% |
| AC -3 | HD 15 | HP 180 |
| #AT 2 | THAC0 1 | Dmg 1d6 + 5 (sword) +12 |

**Special Att/Def:** In combat, Shu's avatar employs a gleaming *short sword +5*. Anyone struck by this weapon must save versus breath weapon or be caught up in a great wind and carried away from the battle. Such persons will suffer 3d20 points of damage and be moved one mile away for each point inflicted. Shu is affected only by +3 or better magical weapons.

**Duties of the Priesthood**

Priests of Shu perform their services in large, open areas which are often full of wind gusts and drafts. They are required to pray and meditate during wind storms.

**Requirements:** AB standard; AL any non-evil; WP short sword; AR a; SP all, astral, elemental, guardian, protection, sun, weather; PW 5) create an area of calm (no winds) level x 5' in diameter; 10) *control winds*; TU nil.

**Tefnut (intermediate god)**

The wife and sister of Shu, Tefnut embodies the moisture of the atmosphere. Her power is seen in the wrath of a storm or in the gentle dew found on plants at sunrise. As one might guess, she is sometimes fierce and angry and other times loving and gentle.

Villages in need of rain often call upon Tefnut to send her life-giving gift while those in the grip of a great storm plead with her to spare them and turn her attention elsewhere.

Tefnut's true form is that of a slender, attractive woman with the head of a sleek lion. The air around her smells of rain and lightning and her voice is the deep rumble of distant thunder. Omens from Tefnut always come in the form of storms or rain.

**Statistics:** AL ng; WAL any; AoC storms, rain, and running water; SY pyramid and sun.

**Tefnut's Avatar (wizard 20, priest 15)**

Tefnut's avatar comes only in the form a slender woman with the head of a lioness. She is often accompanied by 1d6 lionesses who obey her every spoken word her without pause. She has access to any school of magic or to the all, animal, astral, elemental, weat her spheres for her spells.

| | | |
|---|---|---|
| Str 19 | Dex 23 | Con 19 |
| Int 23 | Wis 23 | Cha 24 |
| MV 12, 24f | SZ 7' | MR 30% |
| AC -3 | HD 15 | HP 150 |
| #AT 1 | THAC0 9 | Dmg 1d6 + 3 (sword) +7 |

**Special Att/Def:** In combat, Tefnut's avatar can command her sword to transform itself into a stroke of lightning. Anyone hit by this weapon suffers normal damage and they must save versus spells or take an additional 5d20 points electrical damage. In addition, she can unleash a *lightning bolt* (as per the spell) from her eyes in combat and is unaffected by any weapon of less than +3 enchantment.

**Duties of the Priesthood**

Tefnut expects her priests to cherish the storms that she sends to earth. As such, they are often found standing outside during fierce downpours that have caused everyone to scurry for shelter.

**Requirements:** AB standard; AL any non-evil; WP short sword; AR a; SP all, astral, charm, creation, divination, elemental, protection, sun, weather; PW 1) predict weather (100% accuracy, 1 day ahead per level); 5) *call lightning*; *weather summoning*; 15) *control weather*; TU nil.

**Osiris (intermediate god)**

The husband of Isis and son of Geb and Nut, Osiris has a dual nature. While he is often worshipped as a god of nature and plant life, he is also the protector of the dead. Osiris is the god who taught the Egyptians the arts of civilization and is very fond of his people. If any community that maintains a temple to Osiris is attacked, there is a 25% chance that Osiris will send his avatar to lead the battle against the invaders.

Osiris and Set are bitter enemies, for the latter once tricked him into lying down in a magic coffin. Once inside, Osiris was unable to escape and soon died. His wife Isis, mummified his body. In so doing she gave him eternal life and made him a god of the dead.

In his true form, Osiris is a tall, muscular man with a greenish tint to his skin. He can command or destroy any undead creature at will.

**Role-playing Notes:** Osiris is a wise god who rules Heliopolis in Ra's absence. He is very alert to the needs and desires of his followers and always has their best interests at heart.

**Statistics:** AL lg; WAL any good; AoC vegetation, the dead; SY flail.

**Osiris' Avatar (warrior 20, priest 18)**

When Osiris sends his avatar into the world of men, it takes either the form of a great warrior with greenish skin or a mummy. He can call upon any sphere and can cast spells from the school of necromancy as if they were priest spells.

| | | |
|---|---|---|
| Str 24 | Dex 19 | Con 25 |
| Int 25 | Wis 25 | Cha 24 |
| MV 15 | SZ 7' | MR 40% |
| AC -3 | HD 15 | HP 220 |
| #AT 1 | THAC0 1 | Dmg 1d6 + 4 (fail) +12 |

**Special Att/Def:** Osiris' avatar wields his royal flail in combat. This *flail +3* has the same powers as a *mace of disruption*. He can be hit only by +3 or better magical weapons and is immune to all forms of necromantic or death magic. He can command or destroy any undead creature he encounters at will.

**Duties of the Priesthood**

Priests of Osiris must honor the dead and the places in which they rest. No priest of Osiris can ever take part in or condone the looting or violation of a grave, the removal of treasure from a fallen body (either friend or foe), or any similar action. Sacrilege of this type results in an instant loss of all powers and abilities. Priests who die while in such disgrace will become mummies (or some other form of undead, at the DM's discretion).

**Requirements:** AB standard; AL any non-evil; WP flail; AR a; SP all, astral, charm, combat, guardian, healing, necromantic, protection; PW 1) employ spells from the school of necromancy; 10) any *animate dead* spell has double effectiveness; TU turn (as if 2 levels higher).

**Isis (intermediate god)**

One of the most prominent members of the Great Ennead, Isis is the goddess of motherhood and the ideal for all Egyptian women. She is daughter of Geb and Nut, the wife of Osiris, and the mother of Horus .

Isis introduced the custom of marriage to the Egyptian people and has served as the ruler of Heliopolis in the past. She was responsible for the transformation of her husband into a god of the dead.

Isis' true form is that of a tall and beautiful woman of classical nature. She has green eyes that dance with mystical highlights, and a soothing voice.

**Role-playing Notes:** Isis is a regal and noble deity who is eager to share the knowledge of the gods with humanity and often goes to great lengths to introduce her worshippers to new concepts and ideas. In many cases, these new ideas take the form of magic spells and enchantments.

**Statistics:** AL lg; WAL any good; AoC marriage, magic, and motherhood, ; SY eye and teardrop.

**Isis' Avatar (wizard 20, priest 20)**

Like the goddess herself, the avatar of Isis appears as a lovely woman with a dark complexion, dark hair, and sparkling green eyes. Her voice is gentle and her words can charm any creature (no saving throw). She can call upon any school of magic or sphere for her spells.

| | | |
|---|---|---|
| Str 15 | Dex 25 | Con 15 |
| Int 25 | Wis 25 | Cha 25 |
| MV 15 | SZ 7' | MR 100% |
| AC -3 | HD 15 | HP 170 |
| #AT 1 | THAC0 8 | Dmg 1d10 (touch) |

**Special Att/Def:** In combat, Isis' avatar seldom uses her ability to charm others. Rather, she employs her magical touch to inflict 1d10 points of damage. Any magical item or weapon used against her is instantly stripped of its power and destroyed — artifacts are entitled to a saving throw versus disintegration to avoid this effect. No spells will work on the avatar unless she wishes them to, and those casting spells at her are instantly stripped of their magical powers for 1d20 days unless they make a successful saving throw versus spells.

**Duties of the Priesthood**

Priests of Isis are, in actuality, multi-class wizard/priest characters. In the case of human worshipers, the normal prohibition against multi-class characters is waived.

**Requirements:** AB standard, plus must meet requirements for wizards; AL any non-evil; WP any; AR a; SP all, astral, charm, combat, creation, divination, elemental, guardian, healing, necromantic, protection, sun; PW 1) magic resistance of 5% per level; 10) never fails saving throws caused by magical attacks; TU nil.

**Set (intermediate god)**

A cold and calculating god, Set is the jealous personification of evil. He always acts against the interests of mankind and the gods of Egypt. His followers are a dark and scorned lot who work under of darkness and keep themselves cloaked in treachery and deceit.

Set was the son of Geb and Nut. His birth was horrific by any measure, for he tore himself free from his mother's womb sprang upon the world as a foul and hideous thing. Although he has the body of a human male, his head is that of a jackal. Set's supreme act of evil was murdering the god Osiris.

**Role-playing Notes:** Set guards his power and his secrets carefully. He is always looking for ways to recruit new followers and disrupt the churches of the other Egyptian gods. Despite his loathsome nature, Set takes good care of his followers and will not willingly betray or abandon his people.

**Statistics:** AL le; WAL any evil; AoC evil, desert storms, ought, and chaos; SY coiled cobra.

**Set's Avatar (rogue 20, necromancer 20)**

Set's avatar generally assumes the form of the god himself, man with a jackal's head. He can call upon any school for his spells save those normally forbidden to necromancers (illusion & enchantment/charm).

| | | |
|---|---|---|
| Str 20 | Dex 25 | Con 20 |
| Int 23 | Wis 23 | Cha 23 |
| MV 15 | SZ 7' | MR 50% |
| AC -4 | HD 20 | HP 160 |
| #AT 1 | THAC0 11 | Dmg 2d20 (bite) +8 |

**Special Att/Def:** When Set's avatar attacks, he does so with his spells and his powerful bite. Anyone bitten by him must save versus poison or be instantly slain. In addition, the avatar's skin is coated in poison so that those who touch him are subject to the same effects. At will, Set's avatar can cause one who meets his gaze (save versus spells to avoid) to instantly turn lawful evil. When this happens, they are also *charmed* by the avatar. Set's avatar can only be hit by +3 or better magical weapons.

**Duties of the Priesthood**

Priests of Set often oversee the activities of thieves, assassins, and other evil beings. It is not uncommon for an order of assassins to be headed by such an individual. They are not permitted to betray members of their order and must always work to promote " the brotherhood of evil."

**Requirements:** AB standard; AL any evil; WP any; AR SP all, astral, combat, guardian, healing, necromantic, protection, summoning; PW 1) backstab (as thief of equal level); 5) immune to all poisons; 10) attract 2d10 faithful followers of evil alignment; TU command.

**Nephythys (intermediate god)**

Daughter of Geb and Nut and twin sister of Isis, Nephythys was once married to Set. She left him in horror over the murder of Osiris and helped Isis (Osiris' wife) to revive her husband. Because of this, she often acts as a guardian of the dead. Nephythys despises her former husband and will do everything in her power to thwart his plans for evil.

In addition to her duties as keeper of the dead, Nephythys is also the guardian of wealth. As such, her power is often invoked to defend tombs that have been filled with treasures. Anyone violating such a burial chamber is risking the wrath of this god.

**Role-playing Notes:** Nephythys is a somewhat greedy god who takes an interest in the accumulation of wealth by her followers. As such, she tends to favor those of her followers who are well off. She often rewards persons who are of help to her or her church by leading them to important treasures.

**Statistics:** AL cg; WAL any; AoC the dead and wealth; SY moon and ankh.

**Nephythys' Avatar (wizard 18)**

Like the goddess herself, Nephythys' avatar appears as a tall and beautiful woman of grace and dignity. Her eyes sparkle with the gleam of gold. Her touch can bestow great wealth upon any individual by raising the value of any object they hold to 100 times its original cost. Thus, if she touches a sword that cost 15 gold pieces to buy, it is transformed into a fine weapon worth 1,500 gold pieces. She can call upon any school of magic for her spells.

| | | |
|---|---|---|
| Str 15 | Dex 25 | Con 15 |
| Int 25 | Wis 25 | Cha 25 |
| MV 15 | SZ 7' | MR 100% |
| AC -3 | HD 15 | HP 170 |
| #AT 1 | THAC0 8 | Dmg 1d10 (touch) |

**Special Att/Def:** Nephythys' avatar can only be harmed by magical spells or weapons of +3 or better. In combat, she is able to instantly slay any enemy with her gaze (save versus spells at-6 to avoid).

**Duties of the Priesthood**

Those who worship Nephythys are expected to accumulate great volumes of treasure. Once each year, they sacrifice 90% of their wealth to their god and begin again.

**Requirements:** AB standard; AL any non-evil; WP any; AR a; SP all, charm, combat, guardian, healing, protection, sun, weather; PW 1) double normal starting gold; 5) know the true value of any item on sight; 10) never lose at a gambling game; TU nil.

**Thoth (lesser god)**

As the god of science, knowledge, and medicine, Thoth is an important figure in the Egyptian pantheon. Thoth is not related to any of the other gods in the Egyptian pantheon, a fact that makes him something of an outcast. On the other hand, there are those who believe that it was he, not Ra, who was the source of all creation. Thoth is very close to Isis, Osiris, and Horus.

It is said that Thoth maintains a set of three great books in which all knowledge is recorded. These books are locked away at the heart of a great crypt.

**Role-playing Notes:** Thoth is not generous with his knowledge, but neither is he covetous of it. For those who work long and hard at research and science, he is a faithful source of information. Thoth is truly omniscient.

**Statistics:** AL n; WAL any; AoC knowledge; SY ibis.

**Thoth's Avatar (wizard 20)**

Thoth sends his avatar into the world to help those who are seeking to unravel the mysteries of the cosmos. Anyone who is conducting scientific or magical research has a 1% chance per month of being visited by the avatar. If this occurs, the avatar will provide the researcher with answers to his questions far in excess of those he might have obtained without divine guidance. Thoth's avatar can call upon any school of magic for his spells and his magic always has maximum effects (maximum damage, duration, range, and so on).

| | | |
|---|---|---|
| Str 15 | Dex 15 | Con 15 |
| Int 25 | Wis 25 | Cha 18 |
| MV 15 | SZ 7' | MR 100% |
| AC -3 | HD 15 | HP 150 |
| #AT 1 | THAC0 14 | Dmg 1d6 +6 (staff) |

**Special Att/Def:** Thoth's avatar wields a magical staff that acts as a combined *staff of command*, *staff of curing*, *staff of the magi*, *staff of striking*, and *staff of power* with united charges. No other being can handle this weapon without being instantly affected as if hit by a *feeblemind*. There is saving throw and even non-magic using characters can be affected by this curse. Thoth's avatar can only be hit by +2 better magical weapons.

**Duties of the Priesthood**

Priests of Thoth are expected to learn all that they can and help to spread wisdom throughout the world.

**Requirements:** AB standard plus Int of 16; AL any; WP y; AR a; SP all, astral, charm, divination, guardian, healing, protection, sun, weather; PW 1) *detect lie* (always active, no saves apply); 5) Intelligence and Wisdom increased by 1 point each; 10) *commune* with Thoth once per week; 15) Intelligence and Wisdom increased by 1 point each; TU nil.

**Ptah (lesser god)**

Where Thoth is the god of knowledge and science, Ptah is often viewed as the god of artists and designers. While the two gods have much in common (neither of them is related to any of the other gods, for instance), there are important differences. An architect planning a pyramid depends on Thoth for the mathematics to build it and calls upon Ptah for the inspiration that will make it a work of art.

In his true form, Ptah appears as a shaven-headed man with jet black skin. In his eyes is the fire of creativity that is the inspiration of all artists. Just as Thoth's priests claim that he created the universe, so, too, do Ptah's priests exert their claim to the founding waters.

**Role-playing Notes:** Ptah is a clever and dynamic god with a great love of art and beauty. He smiles upon craftsmen who produce works of great quality and will sometimes (5%) send his avatar to assure that such persons receive the recognition they deserve.

**Statistics:** AL ln; WAL any; AoC artists, artisans, craftsmen, and travelers; SY mummified hand.

**Ptah's Avatar (priest 20)**

When Ptah sends his avatar into the world, it normally takes the shape of a powerfully built man with jet black skin and fire burning in his eyes. He can call upon any sphere for his spells.

| | | |
|---|---|---|
| Str 15 | Dex 20 | Con 15 |
| Int 25 | Wis 25 | Cha 18 |
| MV 15 | SZ 7' | MR 25% |
| AC -3 | HD 15 | HP 175 |
| #AT 1 | THAC0 8 | Dmg nil (see below) |

**Special Att/Def:** Ptah's avatar can plane shift any individual to any other plane of existence with but a touch of his hand. While he must make an attack roll to strike his target, the victim is not entitled to a saving throw. Ptah's avatar is immune to all damage not caused by spells or magical weapons of +2 or better.

**Duties of the Priesthood**

Priests of Ptah are expected to be artists and scholars. As such, they must always take the artistic ability non-weapon proficiency. Individual Dungeon Masters may allow players to substitute skills like dancing or pottery for this slot if the character is clearly an artist and not just "another potter". In the eyes of many of his faithful, Ptah is considered to be the creator of the universe.

**Requirements:** AB standard plus Int of 16; AL any; WP any; AR a; SP all, astral, charm, creation, divination, elemental, summoning, sun; PW 1) 5% magic resistance per level; 5) *teleport*; 10) *teleport without error*; 15) *plane shift*; TU nil.

**Horus (lesser god)**

The son of Isis and Osiris, Horus was conceived following his father's death at the hand of Set. Afraid that he would also be slain by Set, Isis saw to it that her son was raised in secrecy by a family in the swamps of the Nile Delta.

Horus took his place among the gods when he reached adulthood and challenged Set. Horus brought all his might to bear and battled his uncle to a standstill. In the end, the goddess Neith was called upon to settle their dispute. After consideration, she ruled in Horus' favor (although Set was compensated to an extent).

In his true form, Horus appears as a hawk headed warrior of great physical power.

**Role-playing Notes:** Horus is a fierce and proud god. He is called upon by those who seek to avenge great wrongs or uphold the honor of their families. If any of his followers begins a quest to avenge the death of a family member, there is a 5% chance that he will send his avatar to aid them.

**Statistics:** AL cg; WAL any good; AoC the sun, revenge, war, and the sky; SY hawk's head.

**Horus' Avatar (paladin 20)**

The avatar of Horus is a dedicated foe of evil. He is merciless and relentless in his war against the forces of Set. He abhors all forms of deceit and treachery, and nothing will stand in his way when he is attempting to right a wrong or slay a traitor.

| | | |
|---|---|---|
| Str 25 | Dex 25 | Con 25 |
| Int 20 | Wis 20 | Cha 18 |
| MV 15 | SZ 7' | MR 25% |
| AC -3 | HD 15 | HP 430 |
| #AT 2 | THAC0 1 | Dmg 2d10 +5 (sword) +14 |

**Special Att/Def:** Horus' avatar wields a *sword of Horus* in combat. This magical weapon acts as a *sword +5, holy avenger*, but also has the special abilities of a *luck blade*, *defender* and *vorpal sword*. In addition, Horus can employ a *sunray* or *firestorm* spell at will (once per round) and can only be hit by +3 or better magical weapons.

**Duties of the Priesthood**

Priests of Horus are, like the god's avatar himself, paladins. Unlike the traditional characters of this class as described in the Player's Handbook, they are only of chaotic good alignment. Thus, they are not bound by the normal restriction against chaotic behavior by paladins. Further, they cast spells as priests (not as paladins), but only gain the ability to turn undead upon reaching fifth level.

**Requirements:** AB as paladin; AL cg; WP any; AR a; SP all, combat, guardian, healing', necromantic, protection, sun; PW see above; TU special.

**Anhur (lesser god)**

Few gods can match the fury of Anhur. However, unlike many war gods, he is a force for good. Like Horus, he fights on against the forces of evil and seldom, ever, loses. The wrath of Anhur is slow coming, for his wisdom is as legendary his ability to make war, but it is inescapable once earned.

In his true form, Anhur is a mighty figure with four arms. He is often seen with a powerful lance that requires both his right arms to wield and which is tipped with a fragment the sun. When he sends his avatars into the world of men, they carry this weapon with them.

**Role-playing Notes:** As has been noted, Anhur is a god, but one who is not quick to pass judgment on others. He expects his followers, especially his priests, to engage forces of evil wherever they find them. There is no excuse for failure.

**Statistics:** AL cg; WAL any good; AoC war; SY bird prey.

**Anhur's Avatar (warrior 20)**

Anhur's avatar always appears as a four-armed wan with a mighty lance held in his right arms. He will initiate combat only against those of evil alignment, but will answer any attack upon himself or his followers with great rage.

| | | |
|---|---|---|
| Str 25 | Dex 25 | Con 25 |
| Int 15 | Wis 20 | Cha 15 |
| MV 15 | SZ 7' | MR 25% |
| AC -3 | HD 15 | HP 430 |
| #AT 2 | THAC0 1 | Dmg 2d10 +5 (lance) +14 |

**Special Att/Def:** The lance that Anhur's avatar employs in combat is a powerful weapon. In addition to being +5, it has the abilities of a *ring of fire resistance*, *ring of protection*, *amulet of the planes*, and a *talisman of pure good*. Anhur's avatar can be hit only by + 3 or better magical weapons and regenerates 10 hits per round.

**Duties of the Priesthood**

Like the worshipers of Horus, priests of Anhur are primarily warriors. They are often found advising generals or leading armies themselves.

**Requirements:** AB standard plus Str of 15; AL any g; lance; AR a; SP all, combat, guardian, healing, necromantic, protection, sun; PW 1) +2/level to hit points; 6)2 attacks every 3 rounds; 13) 2 attacks per round; TU nil.

**Bast (lesser god)**

One of the most popular gods of the Egyptian pantheon, Bast (or Bastet) is the patron of pleasure and cats. While the Egyptians had gods who represented all forms of animal life, none was more important to them than the cat.

In her true form, Bast is a lovely woman with the head of a sleek feline. She is always found in the company of a great many cats of numerous varieties and no such animal will ever act against her interests.

**Role-playing Notes:** Bast is a goddess who delights in physical pleasures and yet maintains the quiet elegance of a feline. She is soft spoken and patient, but always a cunning dangerous opponent. Her worshipers are the sworn enemies of Set and his minions, and will attack them on sight.

**Statistics:** AL cg; WAL any chaotic; AoC cats, pleasure seekers; SY cat.

**Bast's Avatar (rogue 20)**

Bast's avatar takes the form of a stunningly beautiful woman with the head of a cat. She can, at will, *shape change* into any form of feline and can always command felines to do her bidding. No form of cat will every attack her act against her. Bast's avatar is able to employ all of the traditional thief's skills (such as hiding in shadows) at 95% effectiveness.

| | | |
|---|---|---|
| Str 20 | Dex 25 | Con 23 |
| Int 20 | Wis 20 | Cha 25 |
| MV 21 | SZ 7' | MR 25% |
| AC -3 | HD 15 | HP 150 |
| #AT 1 | THAC0 11 | Dmg 2d10 (claws) +8 |

**Special Att/Def:** Bast's avatar attacks with her deadly claws. These deadly weapons can hit creatures only affected by magical weapons and inflict double damage against those of evil alignment. Any being struck by these claws must save versus poison at -4 or be *polymorphed* into a great cat and forced to obey the avatar's commands.

**Duties of the Priesthood**

Priests of Bast are required to keep cats as pets and to sample the physical pleasures of the world whenever they can. As one might imagine, this makes the worship of Bast a popular profession.

**Requirements:** AB as per rogue plus Wis of 12; AL any non-evil; WP as rogue; AR as rogue; SP all, animal, charm, combat, healing, protection, summoning; PW 1) hide in shadows and move silently as ranger of equal level; 5) *charm mammal* (affects felines only, no save is allowed, and the power is always in operation); 10) *shape change* (into any 1 form of feline); TU nil.

# Greek Mythology

Though it flourished 2,500 years ago, no other civilization has had as much influence on the spirit of the western world ancient Greece. Our most basic and dearly held convictions, such as a man's right to liberty, to be ruled by a democratic government, and the inherent worth of the individual, are directly descended from Greek thought.

Geographically, ancient Greece was very much the same as modern Greece. Located at the southern tip of the Balkan mass, it is a region of hard, limestone mountains separated by deep valleys, and cut almost in two by the narrow Strait of Corinth. To the east, hundreds of isles dot the clear Aegean sea, and the mighty island of Crete marks its southern edge in the Mediterranean. It is a small country, no larger than the state of Florida (even at the height of its expansion). Yet it also sits at the hinge of the European and Asian continents, and its shores once touched the waters of six separate seas.

Considering its central location, it is no surprise that a sophisticated culture developed at these crossroads. The ancient Greeks believed they were descended from a legendary of heroes who would sail to the ends of the earth in search of the golden fleece, who would gladly fight a bitter ten-year war over a single beautiful woman, and who lived in a society of splendor and luxury. There is more than a kernel of truth to this legend. However, Greece was not the first civilization to rise in the Eastern Mediterranean.

From 1700 to 1400 BC, the ancient and little-known civilization of the Minoans flourished on the island of Crete and the waters of the Aegean sea. From what little is known of them, they were a vibrant and pleasure-loving people with a highly developed trading system that linked the islands of the Aegean sea together. Their civilization came to an abrupt end around 1400 BC, probably when the volcano at Thera (modern Santorini) erupted with a force three times as great as that of the explosion of Krakatoa. Thera was buried under blanket of pumice as much as 130 feet deep, cities on nearby lands were showered with fire and ash, and ships, harbors, even entire cities were washed away by tidal waves.

The Minoan society never recovered. But a new culture arose on the shores of the mainland. Building on the heritage left by the Minoans, a new sort of man established a spectacular civilization centered at the city of Mycenae that united many other early Greek cities under its influence. The Mycenaeans were great builders who erected citadels with walls ten feet thick, and who buried their leaders in enormous beehive tombs made of stones weighing as much as 120 tons. They were immensely wealthy, especially when it came to gold —a great deal of which they earned through piracy and brigandage. Unlike the Minoans, the Mycenaeans were a warlike people who wandered far on adventurous missions undertaken in the search for gold, and it was their exploits that the famous poet Homer portrayed.

Their lust for warfare seems to have been the downfall of the Mycenaeans. It was one of their kings, Agamemnon, who led them into the long war with Troy. This bitter war left Mycenae weak and shattered by civil strife, with disrupted trade routes and no political allies to help them rebuild.

While Mycenae crumbled, it was infiltrated and finally obliterated by waves of less civilized Greeks from the north, the Dorians. They eventually succeeded in destroying it altogether, and Greece fell into a Dark Age that lasted from 1200 to 750 BC. Citadels fell into ruins, record-keeping vanished, the art of writing disappeared, and the secrets of fine craftsmanship were lost.

After the fall of the Mycenaean civilization, each city, with its surrounding hamlets and farms, was a separate social unit. In chaos of the Dark Ages, they became little more than garrisons ruled by a commander and his captains. Military governments evolved into hereditary monarchies, and the king became the religious as well as secular head of the community.

The many city-states developed along different lines, giving rise to a wide variety of ideas that would later serve as the basis for the intellectual and political freedom so crucial to the development of Greek culture. Yet the Greeks still shared the same language and many other common characteristics. Despite the many different patterns along which the city-states developed, the Greeks shaped a national character that encompassed all of the individual variations of the city-states.

As the Dark Ages stabilized, the Greeks began sharing the discoveries and insights of their individual cities. They relearned and improved upon the arts that had fallen into decay with Dorian migrations. Trade began to flourish again and, in 776 BC, the first Olympic games were held in honor of Zeus.

Perhaps the most important rediscovery, however, was the revitalization of the written word with the appearance of a Greek alphabet well-suited to literature and other needs. The reappearance of writing allowed the precise and widespread communication of new ideas, and increased the cohesion of Greek society.

As the economic revival spread through Greece, the military role of the kings began to decline (though it did not disappear entirely). In city after city, the kings were deposed or reduced to figureheads. They were replaced by a council of local aristocrats who shared the power formerly held by one man, laying the foundations for what would later become the world's first true democracy.

**The New Age**

As Greece emerged from the Dark Ages, each of the city-states (known as polises) developed a unique character and culture. The extremes of this diversity are best illustrated by two of the most famous polises, Athens and Sparta.

Sparta was established by the same uncivilized Dorian invaders that plunged Greece into the Dark Age, and remained essentially Dorian until the collapse of ancient Greece itself.

It was always organized as a stern, military camp, ruled by two kings from its earliest days to its last. Citizens of Sparta were pawns of the polis, rigidly controlled from birth to death. From the age of seven onward, children were trained for war, learning to use weapons, accept harsh discipline, and endure physical hardship without complaint. The average citizen's home life was also extremely limited and controlled. The men ate in a common mess, could not live with their wives until the age of 30, and children were considered property of the polis to do with as it pleased.

At the other extreme was Athens, which had resisted the Dorian invasions by virtue of its location. Sitting atop the rocky acropolis, it repulsed the invaders and served as Greece's repository of ancient knowledge through the Dark Ages. The Athenians established the world's first true democracy, in which all free adult males met 40 times a year to vote upon questions important to the polis. Its small population was extremely civic-minded, and every man cheerfully volunteered to do his part to keep Athens and its democratic government strong.

The Athenians felt they had an exalted duty to spread liberty and democracy to all parts of Greece. Toward this end, in 478 - 477 BC, they established the Delian League, a confederation of over 250 polises allied in the name of mutual defense. In addition to their mutual military needs, however, the members of the Delian League were bound together by a far stronger force: cultural affinity.

Although each polis was (at least in theory) a free and independent state, the ancient Greeks recognized that they shared a common heritage. They spoke some form of the same language, worshipped the same gods, and followed the same customs. Despite the constant bickering between city-states, each man recognized that, after his own polis, he owed his loyalty to the diverse conglomeration of cities that made up the Greek nation.

More importantly, however, each man held a well-defined philosophy of life that marked him as being distinctly Greek. The Greeks believed that a man must be honored for his individual worth and treated with respect just because he was himself. They believed that a man's talents were a gift from the gods, and, therefore, that he should make the most of them. They viewed death as a dismal state that could not be avoided, and believed the only escape from death lay in carving an imperishable legend through magnificent accomplishments. Therefore, they lived their lives to the fullest, and pursued fame with astonishing energy. Each of these cultural threads, all vital in their own right, was woven together to form the fabric of the vibrant Greek culture.

The Greek quest for excellence in all things led to the development of many principles that remain the foundation of free societies today. The Greeks were the first to establish laws that could not be changed at the personal whim of a ruler, and designed their legal systems to secure life and property for all their citizens. They learned to diagnose diseases through the careful observation of its symptoms, laying foundations for modern medicine. They were the first people to carefully and truthfully record history in the form of verifiable facts, establishing the basic premise for all historical study that has followed.

Despite their idealistic lifestyle, the Greeks were more keenly aware of the shortcomings of humanity than other ancient civilization. In the ancient world, the Greeks were famous for their churlish tempers, especially where honor or reputation was concerned. In legend and drama, their heroes always suffered from serious failings that often led to their downfall. Even the greatest of their idols had flaws such as overweening pride, rashness, cruelty, vengefulness, stubbornness, and every form of foible known to man.

**The Greek Pantheon**

To the Greeks, man was the measure of all things, and gods mirrored them faithfully. Like men, the gods were noble and proud, but they were also quarrelsome, scheming, lecherous. These deities appeared in more or less human form, though they were always more beautiful than any mortal could hope to be. Invariably, the gods suffered from human faults and engaged in very human behavior, such as falling in love, resorting to treachery to win a cherished goal and hungering for power. Unlike the gods of many ancient civilizations, the deities of the Greeks were far from remote or mysterious. Their motives could almost always be understood in human terms.

There were two important differences between the gods and men, however. Although the gods were moved by the same emotional forces that ruled the lives of men, they were not expected to follow the rules of human behavior. Were free to engage in all sorts of conduct that would not be tolerated in human society: thievery, lechery, gluttony, adultery, and so on.

The second important difference between gods and men was power. The Greek gods were all, to some degree, embodiments of power, whether in the physical world or in the minds of men. They controlled literally everything, from storms that ravaged the seas to the love that bound men and women together. It was because of this power that the Greeks sought the favor of the gods through prayers and sacrifice. When the Greeks honored excellence in any domain, it was the gift of some of this godly power that they were praising.

The Greek gods, who were thought to live atop the heights of Mount Olympus, were ruled by the mighty Zeus. But this was not always so, for the Mycenean gods were older than the Greek gods, and the Minoan gods were older still. Thus, the Greek gods had a history of their own, just as Greek culture did.

In the beginning, there was only Chaos, from which formed Gaea (the earth), Tarterus (beneath the earth), many other primeval gods such as Eros, Night, and Day. Gaea created Uranus, the Mountains, and the Sea, then married Uranus and gave birth to the Titans, the Cyclopes, and the Hecatoncheires.

Uranus turned out to be a harsh and jealous husband who cruelly kept the Hecatoncheires prisoner inside their mother. In retaliation, she called upon her other children to avenge her, and the Titan Cronus wounded his father so severely that the cruel Uranus was vanquished. The Furies, the Ash Tree Nymphs, and the Giants were created when the deposed ruler's blood fell to earth.

After assuming his father's reign, Cronus married Rhea.. But, fearing that one of his offspring (who were the gods) would usurp his throne as he had his father's, he swallowed all of his children as Rhea gave birth to them. The furious Rhea managed to hide her sixth born child, Zeus. After growing to manhood on the island of Crete, he returned to his father disguised as a cupbearer. Zeus served Cronus a potion that caused the Titan to vomit up the young god's siblings and the gods united to overthrow their despotic father.

The task was far from over, however. After their victory over Cronus, Zeus and the other gods had to battle the rest of the Titans. After more than a decade of cosmos-shaking warfare, in which the elements of nature raged unchecked, the gods finally managed to confine the Titans to Tartarus, the Greek underworld. Next, the gods had to fight a similar battle against Typhoeus, a hundred-headed dragon that Gaea had created to attack the gods after the defeat of her Titans. The gods had no sooner buried the monster beneath Mt. Etna than the Giants challenged their rule. It required all of their prowess and the assistance of the mortal Heracles to kill the giants. Finally, after vanquishing the Titans, Typhoeus, and the Giants, the gods were at last the unchallenged rulers of Olympus and the earth.

Their domain was far different than the world we know today, however. The home of the gods, Mount Olympus, stood at the center of the earth. Around the earth ran a limitless river called Ocean. On the far shore of this river lived the Hyperboreans, a race of blessed men who did not know care, toil, illness, or old age. Their home was isolated from the rest of the world, being completely unapproachable by land or sea.

To the West was Hesperia, populated by such monstrous beings as the Cyclops, the cannibalistic Laestrygonians, Scylla, Charybdis, and the Sirens. Beyond Hesperia lay the Elysian Fields, where certain favored heroes went when they died.

To the South were the Ethiopians, the lucky, virtuous people with whom the gods banqueted. In the East were the barbarians, fierce peoples who could not speak Greek and did not know the blessings of civilization.

Directly beneath the earth was the kingdom of Hades, where the dead went to fade into nothingness. Below Hades was Tartarus, the vast realm of nebulous darkness where the gods had confined the Titans.

**New Spells**

**Enhance** (Alteration)
Eighth Level Wizard

Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 Hour
Area of Effect: One person
Saving Throw: None

Although many high-level wizards know the enhance spell, it is one they rarely use. It is powerful, dangerous, and exhausting, so it is employed only in the most dire circumstances, or as a reward for deeds truly worthy of heroic status.

By means of an enhance spell, the wizard can permanently increase one Attribute score of his choice. The caster can never cast this spell upon himself, and casting it upon another character is so fatiguing that he must rest in bed for a full week (or lose one point of Strength permanently).

On those rare occasions when a wizard does cast this spell, he names the Attribute score he is modifying (Strength, Dexterity, Constitution, Intelligence, Wisdom, or Charisma). He rolls 1d4 and adds the indicated number of points to the desired attribute. The target gains all of the appropriate bonuses and special abilities associated with his new attribute score.

Following the casting of this spell, however, the wizard loses a number of Constitution points equal to one greater than the number of points he bestowed upon his subject. Thus, if a wizard uses this spell to increase a hero's Strength by 3 points, the wizard himself loses 4 Constitution points. This loss is permanent.

No attribute may ever be increased above 22 by this spell. If the target's Strength attribute is modified to 18 and he happens to be a warrior, the target rolls percentile dice normally to determine exceptional strength.

Any time this spell is cast, there is a basic 30% chance that it will backfire. This chance is modified by -1% for each level of the caster. A 16th level wizard, for example, would stand only a 14% chance of backfire (30-16 = 14). When the spell backfires, the wizard loses 1d4 points in the Attribute score he named.

The material component of the enhance spell depends upon the attribute score that is being modified:

| | |
|---|---|
| Strength | The horn of a black bull |
| Wisdom | Two wing feathers from an owl |
| Intelligence | The tusks of a boar |
| Dexterity | The whiskers of a cat |

| | |
|---|---|
| Constitution | The claws of a bear |
| Charisma | A lock of hair from a woman with a Charisma of 16 or more |

**Favor** (Invocation/Evocation)
Fifth Level Priest

Sphere: Protection
Range: Touch
Components: V, S
Duration: 1 week per level of caster
Casting Time: 1 hour
Area of Effect: one individual
Saving Throw: none

By casting a favor spell, the priest is asking his deity to watch over the target (which may be himself). Usually, the favor spell is cast upon a great hero, such as Odysseus or Jason, lust before he undertakes a magnificent deed.

The effectiveness of the spell depends upon how the priest's god views the glory of the deed to be undertaken. Usually, as the god's favor is somewhat arbitrary, this is determined by rolling 1d6. For the duration of the spell, the target's saving throws are modified (in the positive direction) by the result. In cases of especially glorious undertakings, the DM may assign a saving throw modifier that he feels is appropriate.

In addition, the target is blessed by a pledge of one godly intervention. In practical terms, this means that, during the duration of the spell, the player character may reroll any single die roll that affects him personally. The player character may ask the god to honor his pledge of intervention only once, even if the second roll was unsuccessful.

The gods will never grant more than one favor spell to a single group of adventurers or a single adventurer, and usually insist that the spell be cast upon the group's leader. If a second favor spell is attempted, both it and the first are lost.

**New Magic Items**

**Aegis**

This magical *shield +5* is made from a goatskin with golden fleece. Bearing a depiction of the head of a beautiful woman with snakes for hair, it has two magical powers. If the bearer shakes it, anyone looking upon it must save versus fear or flee in panic for 1d10 turns. At the bearer's command, it also acts as a *cloak of displacement*.

Aegis is usually carried by Zeus, but he sometimes loans it to Athena or a favorite mortal hero.

**Gaea (Greater god)**

Gaea is the mother and sustainer of all life. She married Uranus and thus gave birth to the Titans and two broods of terrible monsters, the Cyclopes and the Hecatoncheires. Even after the rise to supremacy of the Olympians, Gaea continues to be widely worshipped. She presides over marriages, nursing the sick, and is foremost among the oracles (before Apollo took it over, the great oracle at Delphi belonged to her). In her true form, Gaea is the earth itself.

**Role-playing Notes:** Although she is widely worshipped, Gaea is one of the most aloof of Greek gods — which is to say she does not spend all of her time meddling in the affairs of mortals. Still, if the proper sacrifices of fruits and animals are made to her, Gaea has been known to lend her aid to those in dire need. She has an affinity for hideous monsters, however, and will never aid anyone in fighting them. In fact, she may well aid the monster if the battle is brought to her attention.

Omens from Gaea can take any form associated with nature, such as foul weather, plagues, abundant crops, etc.

**Statistics:** AL n; WAL any; AoC fertility, health, prophesy; SY basket of fruit.

**Gaea's Avatar (druid 24)**

Gaea's avatar takes the form of a mature, buxom beauty. She can call upon the all, animal, charm, elemental, healing, plant, and weather spheres for her spells.

| | | |
|---|---|---|
| Str 20 | Dex 20 | Con 22 |
| Int 20 | Wis 20 | Cha 24 |
| MV 24 | SZ 10' | MR 60% |
| AC -3 | HD 24 | HP 192 |
| #AT 1 | THAC0 -3 | Dmg 1d4 +1 (sickle) +8 |

**Special Att/Def:** Gaea's avatar wields a black sickle that forces all those hit by it to save versus death or be instantly slain. In addition, any being that looks uninvited upon Gaea's avatar must save versus petrification or be blinded for 1d10 days.

**Duties of the Priesthood:**

The primary duty of priests of Gaea is overseeing planting and animal husbandry. They must also minister to the sick, and often serve as oracles for their communities. All of Gaea's priests are druids.

**Requirements:** AB as druid; AL n; WP club, sickle, quarterstaff, other agricultural implements; AR b; SP all, animal, divination, elemental, healing, plant, and weather; PW 5) *cure disease*; 15) *divination*; TU turn.

**Uranus (greater god)**

Uranus was the early god of the sky heavens, and Gaea's husband. He was horrified by the hideousness of his offspring with Gaea - the Titans, Cyclopes and Hecatoncheires. He shut them up inside their mother Gaea, which both pained and angered her. To avenge herself and her children, she persuaded one of the children, the Titan Cronus, to attack Uranus. The Furies and the Giants were born when Uranus' blood fell on the earth, and the goddess of beauty, Aphrodite, rose out the sea-foam where it mixed with his blood. What happen to Uranus after the attack is unclear, but he may still be watching the earth from a secret hiding place.

**Role-playing Notes:** Uranus is a bitter old god in hiding from his progeny, who do not even realize that he is alive. He delights in causing harm to Gaea and spoiling machinations of the Olympian gods. He will always send his avatar to hinder any attempt to free the Titans or reach site of their imprisonment (see Titans).

Omens and portents from Uranus are so subtle as to go almost unnoticed, for he is quite fearful of revealing his presence. Still, the especially wise or astute may detect his in unusual events in the heavens.

**Statistics:** AL ce; WAL any non-good; AoC sky; stars.

**Uranus' Avatar (fighter t4)**

Uranus' avatar is an old, grizzled warrior. His dark eyes burn with the unspoken desire for revenge.

| | | |
|---|---|---|
| Str 22 | Dex 18 | Con 18 |
| Int 18 | Wis 15 | Cha 15 |
| MV 24 | SZ 6' | MR 60% |
| AC -6 | HD 24 | HP 192 |
| #AT 2 | THAC0 -3 | Dmg 1d8 (sword) +10 |

**Special Att/Def:** Uranus' avatar wields a sword that cuts through any non-magical material as if it were cloth. Thus his enemy's AC is never better than 5 (unless due strictly to Dexterity). Uranus' avatar also regenerates 5 hit points at the end of each combat round, and cannot be harmed by non-magical weapon or attack.

**Duties of the Priesthood:**

Uranus' priests are members of a secret sect. They hire themselves out as fighters, then secretly employ their divine powers to further their true master's ends.

**Requirements:** AB standard plus Str 13+; AL any good; WP any; AR a; SP astral, combat, divination, healing , protection; PW 10) cast spells without verbal, somatic or material components; TU turn.

**Cronus (greater god)**

The youngest of the Titans born to Uranus and Gaea, Cronus was the ambitious one who attacked his father and then assumed the throne to become ruler of the universe. However, when his mother Gaea prophesied that one of his children would overthrow him as he had his father, Cronus proved just as despotic as Uranus. As his wife, Rhea, gave birth to the Olympian gods, he seized them and swallowed them up. His plan might have worked, had Rhea not tricked him into swallowing a stone instead of her sixth child. This god, Zeus, eventually returned to lead the successful revolt against him. Because of his past actions, Cronus was imprisoned in Tartarus.

**Role-playing Notes:** Because Cronus remains penned in Tartarus, he is unable to influence events on earth except through his avatars. Therefore, at least one avatar is constantly moving about Greece, promising men great rewards in return for worshipping Cronus and turning their backs on the Olympian gods. On occasion, these avatars rise to a position of power in a polis, and the result is invariably war as the avatar attacks the power bases of Cronus' rivals. Because of his imprisonment, Cronus cannot send omens or portents.

**Statistics:** AL le; WAL any evil; AoC sinister ambition; SY sickle.

**Cronus' Avatar (fighter 20)**

Cronus' avatar is an evil looking fighter with a gleam in his otherwise dark eyes. He often passes himself off as a human warrior with no claim to his divine status.

| | | |
|---|---|---|
| Str 21 | Dex 18 | Con 18 |

| | | |
|---|---|---|
| Int 18 | Wis 15 | Cha 14 |
| MV 20 | SZ 6' | MR 40% |
| AC -3 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 1d4 +1 (sickle) +9 |

**Special Att/Def:** Although it is not magic, Cronus' adamant sickle cuts through any material it touches, effectively lowering his opponents' AC to a maximum of 5 (unless due strictly to Dexterity). Beings hit by the sickle must save versus death or lose whatever appendage it hits (DMs should determine this randomly or by decree based on the situation).

**Duties of the Priesthood:**

Cronus is no longer worshipped actively by the people of Greece. Nevertheless, there are small sects of priests dedicated to him in Athens, Rhodes, and Thebes who are constantly trying to recruit worshipers through the promise of power or money. In these three cities, the priests organize large harvest-time festivals in which class distinctions are abolished. Their intention is to use the festival as a recruiting tool.

**Requirements:** AB standard; AL any non-good; WP sickle; AR a; SP none (Cronus cannot grant spells); PW none; TU nil.

**Rhea (greater god)**

Rhea was originally worshipped as the Great Goddess of Minoan Crate, and is an example of the Great Mother goddess who took many names and shapes throughout the ancient Middle East. Above all, she symbolized fertility, in which her influence extended over plants, animals, and humans. She also controlled the varying seasons, caused products of the soil to flourish, and even protected men in battle.

Eventually, she became the wife of Cronus and gave birth to the Olympian gods. After Cronus swallowed Hestia, Hera, Demeter, Hades, and Poseidon, she saved Zeus by substituting a rock in swaddling clothes. Rhea's anguish over the loss of her first five children was ended when Zeus grew to manhood and led a revolt against Cronus. In her true form, Rhea is a beautiful woman with a generous figure.

**Role-playing Notes:** Since Zeus seized his father's throne, Rhea has yielded much of her power and many of her responsibilities to her godly children. Nevertheless, she is still revered as the mother of the gods, and sometimes answers appeals concerning fertility or motherhood. Omens from Rhea generally take the form of dreams.

**Statistics:** AL ng; WAL any; AoC fertility, life; SY female face.

**Rhea's Avatar (druid 22)**

Rhea's avatar appears as an immodestly dressed young woman of great beauty with a voluptuous figure.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 19 | Wis 18 | Cha 18 |
| MV 18 | SZ 6' | MR 45% |
| AC 0 | HD 22 | HP 176 |
| #AT 1 | THAC0 -1 | Dmg 1d6 (club) +7 |

**Special Att/Def:** No non-intelligent creature will attack Rhea's avatar under any circumstances. She cannot be harmed by weapons made of unforged natural materials such as stone or wood.

**Duties of the Priesthood:**

Priests devoted to Rhea must ensure that she is forever honored for her part in installing the Olympian gods. They also perform ceremonies related to the fertility of both man and beast, and will go to any length to aid a mother in need of assistance. Their temples often serve as temporary shelters for orphans, whom they place with loving families that have no children of their own.

**Requirements:** AB standard; AL any non-evil; WP club, blunt instruments; AR a; SP all, animal, charm, creation, guardian, healing, plant, protection; PW 8) *summon rain* (over a two mile area); TU turn.

**Zeus (greater god)**

The son of the Titans Cronus and Rhea, Zeus is the god who led his siblings in revolt against their despotic father and established the Olympians as the supreme rulers of the heavens. He is the king of the gods, though his command over them is far from absolute and his decisions are often challenged. Zeus is the god of the sky, the ruler of all high things, including the clouds, rain, wind, thunder, and mountain summits. He is the protector of laws, friend of the weak, and dispenser of justice. Although he can take any form he wishes, and often assumes that of a powerful, bearded man with regal bearing, in his true form he is a ball of fiery light so intense that no mortal can look upon him without bursting into flames.

**Role-playing Notes:** Zeus is an efficient leader, but he is something of a despot. He is moved by anger more often than mercy, and makes his decisions on the basis of politics rather than justice. A confirmed lecher, he will go to any length to woo a beautiful woman (even a mortal) — despite the jealous anger of his wife, Hera. Zeus is

not above toying with men's lives just to entertain himself and the other gods. Omens from Zeus take many forms, including thunder, animals acting in peculiar ways, and unusual celestial events.

**Statistics:** AL n; WAL any; AoC heavens, law; SY fist filled with lightning bolts.

**Zeus' Avatar (fighter 20)**

Zeus' avatar usually appears as a robust man with a full white beard and a regal bearing. However, the avatar has also been known to appear as a swan, a bull, a cloud, and in many other forms.

| | | |
|---|---|---|
| Str 22 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 18 | SZ 7' | MR 30% |
| AC -2 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 1d8 +9 (spear) + 10 |

**Special Att/Def:** The avatar of Zeus can only be hit by magical weapons. When his blood spills on the ground, it forms a 6 HD monster of the DM's choice, that is under the avatar's control. Once per round, he can throw a *lightning bolt* spell that does 4d10 damage.

**Duties of the Priesthood:**

Priests devoted to Zeus must maintain a temple of suitable grandeur, and are responsible for organizing the Olympic games held every four years to honor Zeus. At least once during his life, every priest must visit the sacred oak tree at Dodona in Epirus, where Zeus speaks to his oracles in the rustling leaves.

**Requirements:** AB standard plus Str 14+; AL any; WP spear; AR a; SP all, animal, combat, divination, elemental, healing, protection, weather; PW 1) *lightning bolt* (1d4 damage per level); 15) *polymorph self*; TU nil.

**Hera (greater god)**

As the wife of Zeus, Hera is not only goddess of marriage and women, but the queen of the heavens. Further, she has some minor control over the weather and fertility, though these are not central aspects of her character. Because of her jealous nature and the amorous exploits of her husband, she has developed the power to spy upon anybody in any place at will. In her true form, Hera is tall, noble, and beautiful woman, but, like Zeus, she can assume any form she wants.

**Role-playing Notes:** Above all, Hera is a jealous wife. She spies upon her husband almost constantly, and makes a habit of looking in on any woman with a Charisma of 18 or more. If her husband pays too much attention to another woman, she sends her avatar to kill, disfigure, or otherwise punish the woman. If a wife complains to Hera about an unfaithful husband, there is 5% chance that Hera will respond by making the luckless fellow so hideously ugly that no woman would want him (reduce his Charisma to 1).

Hera is also jealous in regards to her beauty; for if she was responsible for wiping out the Trojan race because one of its members, Paris, thought Aphrodite was more beautiful than she. Omens from Hera include visits from peacocks and other beautiful birds, a harsh voice audible only to one person, or a message carried by a married woman.

**Statistics:** AL cn; WAL any; AoC marriage; SY fan peacock feathers.

**Hera's Avatar (wizard 15, fighter 12)**

Hera's avatar appears as a tall woman of stunning beauty. She can call upon the alteration and enchantment/charm schools of magic for her spells.

| | | |
|---|---|---|
| Str 17 | Dex 18 | Con 18 |
| Int 19 | Wis 18 | Cha 19 |
| MV 16 | SZ 6' | MR 30% |
| AC 0 | HD 15 | HP 120 |
| #AT 3/2 | THAC0 5 | Dmg 1d10 (rod) +1 |

**Special Att/Def:** Hera's avatar can speak in an angry voice, causing 2d8 points of damage to all within 50 yards. Victims of this voice attack must also save versus petrification or flee in terror (as the *fear* spell).

**Duties of the Priesthood:**

Because of Hera's vengefulness, her priests must avenge the slightest insult to their goddess by arranging the of offender's death through direct action, trickery, or deception.

**Requirements:** AB standard; AL any except lawful good; WP club, cudgel, staff; AR a; SP all, charm, combat, divination, healing, protection; PW 5) *detect lie*; 12) *clairvoyance* (centered on any acquaintance of the priest; TU nil.

**Aphrodite (intermediate god)**

The beautiful Aphrodite was created from a mixture of sea foam and the blood of Uranus. She is the goddess of beauty and love. As befits the goddess her position, she was an enthusiastic companion of the male gods. She was also married to Hephaestus, but this did not stop her from consorting with Ares, Poseidon, Dionysus, and others. Aphrodite can charm any male, either god or mortal, and can generate any strong emotion (such as love, hate, anger, sorrow, etc.) in any intelligent being. Although she can assume any form (all of them beautiful), in her true form she is a woman of astonishing beauty.

**Role-playing Notes:** Aphrodite is extremely vain. There is a 10% chance she will overhear any unfavorable comparison of her beauty. In such cases, she will avenge herself by making the transgressor fall in love with a statue, turning him into a shell, or having bees sting his eyes. Omens from Aphrodite are often associated with the sea.

**Statistics:** AL cg; WAL any; AoC love, beauty; SY seashell.

**Aphrodite's Avatar (wizard 15, bard 10)**

Aphrodite's avatar is a scantily clad woman of incredible beauty. She can call upon the illusion and enchantment/charm schools for her magic.

| | | |
|---|---|---|
| Str 15 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 20 |
| MV 15 | SZ 5' | MR 30% |
| AC 0 | HD 15 | HP 120 |
| #AT 1 | THAC0 5 | Dmg 1d4 + (dagger) |

**Special Att/Def:** Aphrodite's avatar carries a dagger that causes anyone struck by it to save versus spells or be instantly charmed. In addition, upon first seeing the avatar, all men must save versus paralyzation or find themselves unable to attack her — ever. Finally, Aphrodite's avatar can cause 1d10 points of damage (and a great deal of physical pain) to anybody trying to harm her simply by waving her hand.

**Duties of the Priesthood:**

Every ten days, her priests must release white doves, and every new moon they must throw objects of art and beautiful jewelry into the sea. They must also do what they can to aid anyone who is in trouble because of a forbidden love.

**Requirements:** AB standard plus Charisma 16+; AL any non-evil; WP bow and arrow, net, staff; AR a; SP all, charm, creation, guardian, healing; PW 5) *charm person* (opposite sex only); 10) Charisma increases to 18; 15) arouse feelings of love (as the enamoring effects of a *philter of love*) in any intelligent being; TU nil.

**Ares (intermediate god)**

Ares is the god of battle, killing, and fighting. As the personification of the savage side of war, he is fond of strife, anger, and unrestrained bloodletting. As such, he is not a very popular god, and is only worshipped (at least by a large number of people) in the polis of Sparta. He has the power to inspire terror, hatred, and fear in the heart of any intelligent being (save versus spells to negate).

Although he can change shapes at will, in his true form Ares is a large man with burning, hateful eyes and a permanent scowl etched across his mouth.

**Role-playing Notes:** Ares is obstinate, hateful, quarrelsome, wicked, untrustworthy, jealous of his fellow gods, and easily offended. Because he has so few worshipers, Ares is always looking for more. If called upon in battle, there is a 5% per level chance that he will send his avatar to aid the beseecher. His help does not come without a price, however. After the battle, the individual that asked for help must become a worshiper of Ares — or face the avatar himself. Transgressions against Ares are generally punished by swift death.

**Statistics:** AL ce; WAL any evil; AoC war, killing, strife; SY spear.

**Ares' Avatar (fighter 20)**

Ares' avatar appears to be a huge fighter with bloodthirsty red eyes. He is powerfully built and carries a deadly looking spear.

| | | |
|---|---|---|
| Str 21 | Dex 18 | Con 18 |
| Int 17 | Wis 16 | Cha 12 |
| MV 15 | SZ 7' | MR 25% |
| AC -3 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 1d8 +8 (spear) +9 |

**Special Att/Def:** After the spear of Ares' avatar hits, it opens a wound that will not stop bleeding until both a remove curse and a heal spell have been cast upon it in the same round. This bleeding causes 6 hp of damage per round.

**Duties of the Priesthood:**

Strictly speaking, Ares has no priests, for his worshipers must be soldiers and fighters. However, he grants his most devoted followers the ability to use priest spells and advance as multi-class characters. Although humans are normally not allowed to become multi-classed characters, Ares bestows this ability upon those who worship him. In return, they are expected to do all they can to create strife and warfare. There is also a great rivalry between Ares and Athena. Whenever his worshipers meet hers, he expects bloodshed to follow.

**Requirements:** AB as fighters; AL any non-good; WP any; AR a; SP combat, elemental, healing, weather; PW 12) *raise dead*; TU nil.

**Artemis (intermediate god)**

An illegitimate daughter of Zeus, the huntress Artemis is the patroness of young girls, and the mistress of beasts and all wild things. She will have nothing to do with men, perhaps because she has often helped women in childbirth and blames men for all the pain involved. Although renowned as a huntress, Artemis kills only to feed herself and others, never for sport. In her true form, she is a slim young girl.

Unlike the other Olympian gods, she dwells in the forests of Arcadia, surrounded by a band of chaste and hardy nymphs. She has complete control over any non-magical animal while it is in the forests of Arcadia.

**Role-playing Notes:** Artemis loves the rugged life of a huntress. Except for helping women during childbirth, she avoids involving herself in any other human matters. She values her privacy, and will severely punish any man violating it. Omens from Artemis are always delivered by wild beasts.

**Statistics:** AL ng; WAL any non-evil; AoC hunting, wild beasts, childbirth; SY bow and arrow on a lunar disk.

**Artemis' Avatar (druid 16, ranger 16)**

Artemis' avatar appears to be a slim young girl resembling Artemis herself. She can draw upon the all, animal, divination, elemental, healing, plant, and weather spheres for her spells.

| | | |
|---|---|---|
| Str 17 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 18 | SZ 5' | MR nil |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d10 (arrow) +1 |

**Special Att/Def:** No magic spell affects Artemis' avatar, and any attack rebounds against the caster. Up to a distance of 1,000 yards, range does not affect the avatar when shooting her arrows. In melee combat, she uses a common dagger that has been poisoned. Anyone hit by this weapon must save versus poison or suffer an extra 1d10 points of damage per round until a neutralize poison can be cast upon them.

**Duties of the Priesthood:**

Only women may become druids of Artemis. They must live in the forests, tending the animals, avoiding men, and, above all, remaining chaste. Artemis punishes any violation of the rules concerning chastity by the permanent withdrawal of all powers and standing in her church.

**Requirements:** AB as druid; AL n; WP as druid; AR b; SP all, animal, divination, elemental, healing, plant, and weather; PW 7) ignore range modifiers in archery to a distance of 500 yards; 14) complete control over all animals within 1,000 yards; TU nil.

**Athena (intermediate god)**

One day Zeus developed a terrible headache. To relieve it, Hephaestus used his axe to split the mighty god's head open. Out came Athena, full grown and fully armed. She quickly became Zeus' favorite daughter, and is the goddess of noble combat, architecture, sculpture, spinning, weaving, horses, ox olives, prudence, and wise counsel. As a warrior goddess she is the protectress of Athens, but she is no less skilled in the arts of peace, inventing the potter's wheel, teaching men to tame horses, and helping them build the great ship Argos. In her true form, Athena is a helmeted, statuesque woman of great beauty. She is often seen bearing her father's shield, Aegis, or with an owl perched on her shoulder.

**Role-playing Notes:** Athena is a chaste warrior who resists any attempts on her honor with force. Even seeing Athena without her clothes will be punished by blindness (no save allowed). She is the protectress of Athens, and will always send her avatar to help if that metropolis is threatened. Omens from Athena are usually delivered by owls.

**Statistics:** AL lg; WAL any good; AoC Wisdom, crafts, war; SY owl.

**Athena's Avatar (fighter 16, priest 16)**

Athena's avatar is a helmeted, statuesque woman of extreme grace and beauty. She can draw upon any sphere for her spells.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 17 |
| Int 19 | Wis 21 | Cha 18 |
| MV 15 | SZ 6' | MR 30% |
| AC -2 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d8 +5 (spear) +8 |

**Special Att/Def:** Athena's avatar is armed with several special items. The most important of these are a helm that creates an anti-magic shell within 10' of her, a shield bearing a medusa's head that causes anyone looking at it to save versus petrification or be turned to stone, and a spear that never misses when she thrusts with it.

**Duties of the Priesthood:**

Like Athena herself, her priests must remain chaste. They must also dedicate themselves to learning the arts of combat and the crafts of peace, and be ready to fight whenever they encounter worshipers of Ares.

**Requirements:** AB standard; AL lg; WP spear, sword; SP all, charm, combat, divination, healing, protection; PW 5) regenerate 1 hp/turn; 15) *commune* with Athena once per week (one question only); TU nil.

**Demeter (intermediate god)**

Demeter is the queen of the fruitful earth and the goddess of agriculture. Without her blessing, no crops may grow on the earth. Demeter will not hesitate to use this fact to blackmail men and other gods if the need exists. In gratitude for help she once received while for searching for her lost daughter Persephone (who had been abducted by Hades), she also taught the men of Eleusis the secrets of making the earth fertile. The exact nature of these secrets, called the Eleusinian Mysteries, remains unknown to this day. In her true form, Demeter is a beautiful woman, but she can change her own shape and that of others at will. She also has complete control over the weather.

**Role-playing Notes:** Generally, Demeter is a benevolent goddess. However, if her worshipers ignore their duties, she does not hesitate to destroy their crops and send famine upon them.

**Statistics:** AL ng; WAL any non-evil; AoC agriculture; SY mare's head.

**Demeter's Avatar (Wizard 15, Druid 14)**

Demeter's avatar is usually a beautiful woman, though she sometimes takes the form of a female horse. Demeter's avatar can cast spells from the illusion school of magic, and the all, animal, elemental, healing, and weather spheres.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 6' | MR 25% |
| AC 0 | HD 15 | HP 120 |
| #AT 1 | THAC0 5 | Dmg 1d8 +5 (spear) +6 |

**Special Att/Def:** Demeter's avatar can only be injured by magical weapons and spells. In five rounds, a tree sprouts from any wound made by her spear. Two rounds after it sprouts, the tree becomes so large that the victim must lie on the ground until the roots are torn from his body (doing an additional 1d10 damage).

**Duties of the Priesthood:**

Priests devoted to Demeter must spend a year on Eleusis being initiated into the Eleusinian Mysteries. After that, they must return to Eleusis every February to help with the ceremonies surrounding the Lesser Mysteries, and every five years in September to help with the Greater Mysteries. Though it might be permissible to miss the Lesser Mysteries for a good reason, any priest missing the Greater Mysteries loses his clerical benefits until he attends the next set of Greater Mysteries in five years.

**Requirements:** AB standard; AL any non-evil; WP sickle, club, flail; AR b; SP all, animal, divination, elemental, healing, plant, weather; PW 1) *plant growth*; 10) *control weather*; 20) ability to create a *potion of longevity* (for the priest only); TU turn (upon attaining 5th level).

**Dionysus (intermediate god)**

As the god of wine, Dionysus has a dual nature. On one hand, he is the embodiment of joy, pleasure, and camaraderie. On the other, he embodies brutality, idiocy, and madness. His twin nature is a reflection of the dual properties of wine in the eyes of the Greeks: imbibed in moderation, it brings pleasure and comfort, but in excess, it brings nothing but depraved misery. He has the power to turn an unlimited amount of water to wine, to make any vine grow anywhere, and to inflict madness upon any intelligent being (save at - 4).

Although he can change shape into any living creature, his true form is that of a handsome young man.

**Role-playing Notes:** Dionysus is a raucous, unruly deity who likes nothing better than drinking to excess and wild uninhibited behavior. If left alone, he and his boisterous worshipers are usually no more than a minor annoyance. But if someone tries to inhibit his worshipers fun, or to drive them away, Dionysus is quick to mock

them. If that doesn't work, he won't hesitate to use his powers against the intruders. Omens from Dionysus often take the form of hallucinations, especially while drinking wine.

**Statistics:** AL cn; WAL any; AoC mirth, madness; SY staff tipped with pine cone and twined with a vine.

**Dionysus' Avatar (bard 17, wizard 12)**

Dionysus' avatar usually appears as a handsome young man carrying plenty of wine, a lyre, and a thyrsus (staff twined with vines). He can call upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 15 | Wis 13 | Cha 18 |
| MV 16 | SZ 6' | MR 30% |
| AC -2 | HD 17 | HP 136 |
| #AT 1 | THAC0 3 | Dmg 1d6 (staff) +7 |

**Special Att/Def:** Anyone who is touched by the staff of Dionysus' avatar must save versus spell or suffer from *confusion* as the priest spell.

**Duties of the Priesthood:**

People usually become priests of Dionysus because they like to carouse and engage in wild parties. If so, they have decided to worship the right deity, for Dionysus expects them to view life as one long celebration. Their only true duty is to cultivate grapevines and make wine, which they sell to earn money to support their temple. As a reflection of this, all priests of Dionysus are required to take the non-weapon proficiency of brewing (if those rules are used in the campaign).

**Requirements:** AB standard; AL any except lg; WP poison, staff, whip, net; AR a; SP all, charm, creation, healing, plant, weather; PW 1) *neutralize poison*; 10) Constitution raised to 18; TU nil.

**Hephaestus (intermediate god)**

Hephaestus is the god of blacksmithing and the patron of artisans, craftsmen, and mechanics. Unlike most gods, he is slightly deformed, resembling a tall, bearded hill giant with a club foot and a hunchback.

His mother, Hera, was embarrassed by her son's deformities and kept him out of sight. In order to win the respect of the other gods, he fashioned a golden throne for her. When she sat in it, she was trapped, and he would not release her until she and the other gods accepted him as their equal. Since then, he has proven one of Olympus' most valuable residents, fashioning golden palaces, intricate machines, and beautiful armor for his fellows.

**Role-playing Notes:** Hephaestus is generally a benevolent god, though he is extremely touchy about his deformity. Although he is married to Aphrodite, he is in love with Athena, who will have nothing to do with him. Because he has so few worshipers, he treats them well, often making gifts of adamant weapons, shields, and armor to those that serve him especially well. Such objects have a magical +5 bonus. Omens from Hephaestus often appear in the flames of forges.

**Statistics:** AL ng; WAL any; AoC blacksmithing, crafts; SY hammer and anvil.

**Hephaestus' Avatar (fighter 15, wizard 12)**

Hephaestus' avatar usually takes the form of a dark man with some sort of deformity. He can call upon the alteration school of magic for his spells.

| | | |
|---|---|---|
| Str 22 | Dex 14 | Con 19 |
| Int 18 | Wis 16 | Cha 10 |
| MV 12 | SZ 6' | MR 25% |
| AC 0 | HD 15 | HP 120 |
| #AT 2 | THAC0 5 | Dmg 1d6 (hammer) +10 |

**Special Att/Def:** Any being struck by the avatar's hammer must save versus paralyzation or be knocked unconscious for 1d10 minutes.

**Duties of the Priesthood:**

Before accepting any person as a priest, Hephaestus sends his avatar to see how the person reacts to a deformed person. If they are kind, they are accepted. Priests of Hephaestus must have the blacksmithing proficiency (if these rules used in the campaign).

**Requirements:** AB standard plus Str l5+; AL any non-evil; WP hammer; AR f; SP all, combat, creation, divination, elemental, guarding, healing, sun, weather; PW 1) +1 per level ability scores when making a blacksmithing check; 5) able to repair magic weapons and armor (proficiency check required); 10) able to create magical weapons or armors with a bonus up to +1 per 3 levels of experience (maximum of +5).

**Hermes (intermediate god)**

Hermes is the god of travelers, merchants, thieves, gamblers, athletes, and eloquent speech. He also serves the gods as a messenger and an arbitrator of disputes. He executed his first robbery when he was only one day old, stealing a herd of cattle from Apollo. In his true form, Hermes is a handsome youth who carries a white caduceus (winged rod entwined by two serpents). He can move from place to place almost instantaneously. Hermes also wears a pair of winged sandals that allow him to fly and a helm that allows him to turn invisible at will.

**Role-playing Notes:** Although an accomplished thief almost from the moment of his birth, Hermes has many other aspects as well. He has a keen sense of fairness that other gods often call upon in order to resolve disputes, and willingly uses his great speed to serve as a messenger to the gods (though he sends an avatar when dealing with humans or others on the Prime Material Plane). Omens from Hermes include an unusually good or bad run of luck or a sudden gust of wind as he or his avatar rushes past.

**Statistics:** AL cg; WAL any non-evil; AoC travel, trade, thievery, gambling, running; SY caduceus.

**Hermes' Avatar (thief 15, bard 12)**

Hermes' avatar appears as a handsome youth carrying a white rod that he uses as a weapon. He can call upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 18/02 | Dex 20 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 36 | SZ 6' | MR 20% |
| AC 0 | HD 15 | HP 120 |
| #AT 1 | THAC0 5 | Dmg 1d6 (rod) +3 |

**Special Att/Def:** If Hermes' avatar has a chance to speak before a combat, anyone wishing to attack him must save versus spells. Failure indicates the fast-talking avatar has talked them out of attacking him (treat this as a *charm* spell).

**Duties of the Priesthood:**

All of Hermes priests must keep physically fit and be able to run long distances (they must always select the running proficiency but need allocate only 1 slot to do so). They often serve as professional arbiters, since it is well known that Hermes sends his avatar to punish any priest he catches taking any form of bribe (15% chance per occurrence).

**Requirements:** AB standard plus Con 15+ and Wis 15+; AL any non-evil; WP club, staff, bludgeon; AR g; SP all, charm, divination healing, protection, summoning; PW 1) +1 to AC for every level up to tenth; 5) *detect lie* (no save); 10) always move as if under the influence of a haste spell; TU nil.

**Apollo (intermediate god)**

Apollo is the god of light, prophecy, music, shepherds, and medicine. He helps ripen crops, destroys pests, cures illnesses, and protects shepherds and their flocks. There are many oracular shrines dedicated to Apollo, the chief one being at Delphi (taken over from Gaea). The master of the lyre and song, Apollo is especially vain about his musical prowess and keeps the Muses as part of his retinue. Apollo is not entirely beneficent, however. He carries a bow with terrible arrows that visit plague and disease upon the targets he fires them at. In his true form, Apollo is a beardless young man who rarely wears clothes.

**Role-playing Notes:** Apollo is a tolerant, if not forgiving, god. He disdains vengeance, especially killing for vengeance. On the other hand, he encourages strict laws with harsh penalties in order to keep unscrupulous criminals in check. Generally speaking, he is a beneficent god, and there is a 5% chance that he will send his avatar to aid any beseecher of good alignment who truly needs divine help. On the other hand, he will not hesitate to fire his arrows of plague and disease at any polis that has fallen into evil and lawless ways. Omens from Apollo are generally delivered through his oracles.

**Statistics:** AL cg; WAL any good; AoC light, prophecy, music, healing; SY lyre.

**Apollo's Avatar (bard 17, priest 15)**

Apollo's avatar is well-muscled, handsome youth. He can draw upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 18/27 | Dex 19 | Con 18 |
| Int 18 | Wis 18 | Cha 19 |
| MV 18 | SZ 6' | MR 25% |
| AC 1 | HD 17 | HP 136 |
| #AT 1 | THAC0 3 | Dmg 1d8 (arrow) |

**Special Att/Def:** Anyone struck by an arrow of Apollo's avatar must save versus death or become instantly ill and suffer a loss of 1d10 points per round until a cure disease is cast upon them.

**Duties of the Priesthood:**

Priests of Apollo generally serve as oracles and healers. They are also expected to promote the lawful administration of their polis, and to serve as teachers of music and song.

**Requirements:** AB standard; AL any good; WP staff, net, bow and arrow; SP all, charm, divination, healing, sun; PW 5) *cure disease*; 10) *heal*; TU turn.

**Poseidon (intermediate god)**

An older brother of Zeus, Poseidon is the god of the seas, oceans, rivers, lakes, and earthquakes. Poseidon has the power to create new life forms, and is the creator of bulls and horses. This power often brings him into conflict with Athena. He can also summon and control any non-divine form of sea life, and change his own shape into that of any living being at will. In his true form, he is a man standing a hundred feet tall.

**Role-playing Notes:** Poseidon is a possessive god, his waves constantly lapping at the land belonging to his fellow gods, breaking off a bit here and a bit there. Poseidon also has a terrible temper, and vents his rage in the form of storms or earthquakes. His churlish disposition causes his fellow gods to consider him a foolish old fellow, but only the mighty Zeus would dare say so to his face. If any coastal polis neglects his worship, he is quick to flood it with a tidal wave or smash it with an earthquake. Omens from Poseidon take the form of storms, trembling ground, or visits from hideous, newly created monsters. When especially pleased with a priest, Poseidon rewards him with a paladin-quality warhorse, or by creating a spring in a place of the priest's choosing.

**Statistics:** AL ce; WAL any; AoC water, earthquakes, creation; SY trident.

**Poseidon's Avatar (druid 14, fighter 10)**

Poseidon's avatar is a huge, bearded man. He can draw upon the all, animal, divination, elemental, healing, plant, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 13 | Wis 15 | Cha 18 |
| MV 15 | SZ 30' | MR 15% |
| AC 0 | HD 14 | HP 112 |
| #AT 3/2 | THAC0 7 | Dmg 1d6 +1 (trident) +8 |

**Special Att/Def:** Poseidon's avatar can move through water with complete freedom, just as if it were air. Any being hit by his trident must save versus paralyzation or be stuck on its prongs. They will remain there until removed by another character (inflicting 1d10 additional points of damage) or released by the avatar himself.

**Duties of the Priesthood:**

Poseidon's priests must throw a bull into the sea as a sacrifice at least once a month. They are also expected to bless the boats of fishermen, and at least one priest is usually taken along on any long sea voyage.

**Requirements:** AB standard; AL any non-good; WP trident; AR b; SP all, animal, divination, elemental (water only), healing, plant, weather; PW 5) water freedom (as a *ring of swimming* that also bestows *water breathing*); 10); *control winds* (direction but not intensity) for up to eight hours; 15) *earthquake*; TU nil.

**Hades (intermediate god)**

Hades is a two-sided deity, the god of death on one hand and the god of wealth on the other. He is a son of Rhea and Cronus, and thus one of Zeus' older brothers. He rarely leaves his kingdom in the underworld, where the dead go to fade into nothingness. Hades has the power to bring death or wealth to any mortal. The right to restore life to the dead belongs to him alone, and he guards it jealously. He wears a helmet which can render him invisible at will. In his true form, he is a large, dark-skinned man with fiery eyes.

**Role-playing Notes:** Hades is not particularly cruel or vengeful, and his kingdom is not a retributive one. The dead pass through the groves of Persephone. Then they come upon the gates of Hades, which are guarded by Cerberus, who will let the dead enter the shadowy realm but not leave. Upon passing through the gates, the dead meet the divine ferryman Charon and pay him a coin. They are then ferried across the river of woe, Acheron. Later, the valiant dead might be permitted to cross the river of forgetfulness, Lethe, and emerge in the Elysian Fields. More unfortunate souls will cross the river Styx into Tartarus, a region of eternal pain and torment. The rest will simply fade away into nothingness. Omens from Hades are rare, and usually involve some form of unexpected death or wealth.

**Statistics:** AL ln; WAL any; AoC death, wealth; SY black ram.

**Hades' Avatar (fighter 18)**

Hades' avatar usually takes the form of a large, dark-skinned man with a black beard and black eyes.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 19 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 6' | MR 30% |

| | | |
|---|---|---|
| AC -2 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8 (sword) +8 |

**Special Att/Def:** Opponents of Hades' avatar must save versus death or die when any of the following occur: they are struck by his sword, when the avatar intentionally casts a death gaze on them (once per round, range 100 yards, can't be used in melee combat), or if the avatar is reduced to zero HP (where upon it explodes, flinging death rays in all directions).

**Duties of the Priesthood:**

Hades' priests must live in dark, dreary caverns. They hoard large amounts of gold, which they collect as fees for raising the dead.

**Requirements:** AB standard; AL any evil; WP any; AR a; SP all, charm, creation, divination, healing, necromantic, protection, summoning; PW 3) see in darkness; 5) *darkness in 10' radius*; 10) *death touch* (save versus death or die); 15) *raise dead*; 20) regenerate 5 hp per round; TU turn.

**Hecate (intermediate god)**

Hecate is the goddess of the moon, magic, and plenty. She often visits her friend Persephone (Hades' wife) in the underworld, and has learned to control the undead. Hecate is the defender of children and the provider of abundance in food, riches, and other desirable things. She also wanders the night with a pack of hell-hounds, which she sets on those foolish enough to travel at night. Those who cast spells draw upon her power, as she is the source of all non-clerical magic. At night, she can cast any two spells she wishes per round, but this, ability is reduced to only one spell per round during the day. In her true form, Hecate has three female heads and the body of a ravishing woman, but she can appear in the form of any living creature she wishes.

**Role-playing Notes:** Hecate is an independent and capricious goddess. She often aids or hinders mortals for no reason other than having nothing better to do. Any being doing injury to a child stands a 10% chance of drawing her notice, in which case she will send her avatar to exact an appropriate vengeance. At night, she sometimes appears in avatar form to lonely shepherds, and has been known to protect their flocks on more than one occasion. Omens from Hecate generally come in the form of some magical communication, and are accompanied by the eerie sound of baying dogs.

**Statistics:** AL ce; WAL any; AoC magic, moon, abundance; SY setting moon.

**Hecate's Avatar (wizard 20)**

Hecate's avatar is a beautiful, dark-haired woman. She is always accompanied by at least one hell-hound of maximum hit points and abilities. She can draw upon any school of magic for her spells.

| | | |
|---|---|---|
| Str 13 | Dex 18 | Con 18 |
| Int 20 | Wis 17 | Cha 18 |
| MV 15 | SZ 6' | MR 35% |
| AC 2 | HD 20 | HP 160 |
| #AT 1 | THAC0 1 | Dmg 1d4 (dagger) |

**Special Att/Def:** Any being hit by Hecate's dagger must save versus death or fall into a trance and be controlled by the avatar as if they were undead. The avatar has complete control over any undead creature with up to 9 hit dice (the level of a typical vampire).

**Duties of the Priesthood:**

Hecate has no priests, but all those who use magic (i.e., wizards, illusionists, bards, etc.) worship her. They are expected to sacrifice honey and black ewes to her on nights of the full moon. Failure results in a total loss of magical powers until the proper sacrifice is made on the next night of a full moon.

**Titans (greater and lesser gods)**

The Titans, sometimes referred to as "the elder gods" were the deities who replaced the primordial gods Gaea and Uranus as rulers of the cosmos.

The first Titans were the children of Gaea and Uranus. Cronus and Rhea, the king and queen of the first Titans, are discussed individually under separate entries. While Cronus sat in the divine throne, he and Rhea produced the Olympian gods. Cronus had been warned that his children might overthrow him, so he swallowed each of his children as they were born. However, Rhea managed to trick Cronus into swallowing a rock instead of her sixth child, Zeus.

After growing to manhood in exile, Zeus returned and tricked Cronus into vomiting up his Olympian siblings. There followed a great war between the Titans and the Olympian gods, eventually resulting in the defeat of the Titans. With the exception of Rhea, the Titans born directly to Gaea and Uranus (Cronus, Oceanus, Tethys, Hyperion, Mnemosyne, Themis, Iapetus, Coeus, Crius, Phebe, and Thea) were locked in Tartarus. They were all

greater gods to some extent, and too dangerous for the Olympians to forgive, so they remain locked there to this day.

The children of the original Titans, however, were only lesser gods and not as dangerous as their forebears. Therefore, the Olympians were able to forego binding them in Tartarus, and assigned different fates to them. The most important of these Titans include: Atlas, who led the Titans in their struggle against the Olympians, and was condemned to eternally bear the earth and heavens upon his shoulders. Prometheus, the wise Titan who created man and allied with the Olympians in the war, but who later offended Zeus and was chained to a rock in the Caucasus Mountains, where an eagle feeds on his liver to this day. Epimetheus, the foolish Titan who allowed his wife, Pandora, to unleash all the evils on mankind.

There were, of course, many other children born to the original Titans, and who are (very) rarely encountered wandering about Greece, but they are too numerous to list here.

Generally speaking, Titans which might be encountered in Greece appear to be huge men and women (twenty feet or more in height). They have all the powers of lesser gods, and usually embody one aspect of humanity, such as strength for Atlas, wisdom for Prometheus, foolishness for Epimetheus, etc. They will always have at least one special power connected with this aspect, and the Attribute score most closely associated with it will either be very low (1-3) or high (23-25).

**Role-playing Notes:** The personalities and goals of Lesser Titans will be as varied as those of humans, but they will have one thing in common: they either bear the Olympian gods tremendous respect or tremendous fear. Under no circumstances will they tolerate open disrespect to the Olympian gods. Those that favor the Olympian gods will see it as blasphemous, and those who do not will fear a trick or test of some kind. Generally speaking, Titans will be unconcerned with matters such as wealth or power in the human realm, but they may very well be searching for enough to eat, an adventure worthy of them, or be consumed by love.

**Statistics:** AL any; WAL any; AoC special; SY as appropriate.

**Lesser Titan**
**(fighter, wizard, thief, hard, priest, etc., at level 20)**

| | | |
|---|---|---|
| Str 15-25 | Dex 15-25 | Con 15-25 |
| Int 15-25 | Wis 15-25 | Cha 15 |
| MV 15-21 | SZ 20'+ | MR 10-20% |
| AC 4 to -3 | HD 17-22 | HP 8 per HD |
| #AT 1-2 | THAC0 varies | Dmg varies |

**Special Att/Def:** As appropriate to the nature of the titan and the aspect it embodies. As a rule, all titans can only be hit by magical weapons.

Titans do not have the ability to use avatars, so the statistics above are those of the Titan itself. Titans who are wizards, priests, and other magic users will always be able to draw their spells from at least two schools or four spheres. They will always resemble a huge human being. Almost always they are of extreme beauty, but on rare occasions titans can be hideously ugly.

**Duties of the Priesthood:**

Fearing retribution from the Olympian gods, the Titans do not make a habit of recruiting worshipers. However, if someone independently begins to worship a Titan, chances are that he or she will be flattered and will accept the worship providing the sect grows no larger than a dozen people or so.

**Requirements:** AB standard; AL as appropriate; WP appropriate; AR as appropriate; SP as appropriate; PW none, but at tenth level, Titans usually grant their worshipers the privilege of calling upon them for help once; this privilege is renewed each time the priest goes up an experience level; TU as appropriate.

**The Furies (lesser gods)**

The Furies, also called Erinyes, were born when the blood of Uranus fell upon the earth. They are angry and avenging deities who hunt down wrongdoers and punish foul deeds.

They are also known by their individual names, Alecto (the persevering anger), Tisiphone (the blood avenger), and Megarea (the jealous). The Furies reside in the underworld and only come forth (always together) to fulfill curses or punish terrible crimes, especially those involving one's own family. They have the power to fly, and to find their quarry no matter where he hides (as long as he is not hidden by some divine means). In their true forms, the Furies are old, winged crones carrying whips and scourges.

**Role-playing Notes:** The Furies only emerge to fulfill a very powerful curse or (50% chance per occurrence) to punish a terrible crime (such as cold-blooded murder, stealing from the elderly, or attacking the defenseless). They are the embodiment of impersonal justice, and take only the crime itself, not the reason for committing it, into consideration in determining their punishment. They always deal out a punishment commensurate with the crime.

**Statistics:** AL n; WAL N/A; AoC justice; SY three scourges.

**The Furies (cleric 20, fighter 20, or wizard 20)**

| | | |
|---|---|---|
| Str 16 | Dex 18 | Con 18 |
| Int 16 | Wis 16 | Cha 5 |
| MV 20 | SZ 6' | MR 20% |
| AC 0 | HD 20 | HP 160 |
| #AT 1, 2, or 1 | THAC0 1 | Dmg 1d2 (whip) +1 |

**Special Att/Def:** The whips of the Furies strip away attribute points: a hit by Alecto (the priest) strips away 1d4 points of Wisdom, a hit by Tisiphone (the warrior) strips away 1d4 points of Strength, and a hit by Megarea (the wizard) strips away 1d4 points of Intelligence. The Furies cannot be permanently destroyed by any means (see below).

The Furies do not send avatars and will always appear themselves. Because they hold a special place in the universe, the prohibition against visiting the Prime Material Plane does not apply to them.

Alecto and Megarea draw their spells from any school or sphere. If someone manages to kill one of them, the others do not stop attacking until that character is dead. If they are all killed, then the character is safe for a time. However, after 1d10 days, the furies return to hunt down and kill their murderer(s).

**Duties of the Priesthood:**

Nobody worships the Furies, though there are plenty of people who fear them.

## Greek Heroes

**Heracles (demigod)**

The son of Zeus and the mortal woman Alcmene, Heracles was strength personified. While still an infant, he strangled two huge snakes with his bare hands. Of course, Zeus' wife, Hera, was jealous of the affair that begot Heracles, and she is always conspiring to bring him harm. Heracles is a fearless adventurer whose many escapades are the stuff of legend. A robust, cheerful man, he has an appetite for food and women that almost equals that of his divine father.

Although he visits Olympus from time to time, and has been known to aid the gods in their struggles, Heracles spends most of his time in the world of men. He is a stout man with a long beard, usually wearing a lion's skin for clothing.

**Role-playing Notes:** Heracles is a dangerous fellow to have dealings with, for he will take offense at the slightest insult. Anyone tricking, deceiving, or failing to express the proper gratitude is placing his life in Heracles hands, for the demigod has a violent temper. Heracles will never have anything to do with wizards or priests, as he has a profound distrust of magic.

**Statistics:** AL cn; WAL any; AoC strength and adventure; SY lion's head.

**Heracles**

Heracles has no avatar, thus we have used the same format employed for heroes to present his statistics. If he should ever be killed, Zeus will arrange for his release from the land of the dead. Rest assured that the first thing he will do is seek vengeance for his death.

**fighter 20**

| | | |
|---|---|---|
| Str 25 | Dex 17 | Con 20 |
| Int 11 | Wis 9 | Cha 18 |
| AC 4 | MR nil | MV 15 |
| HP 168 | AL cg | THAC0 1 |
| #AT 2 | Dmg 1d6 (club) +14 | |

**Special Att/Def:** Heracles wears the Nemean lion skin which cannot be pierced by anything. Thus, all thrusting weapons do only 1 point of damage to him and all slashing weapons do only half damage. Heracles also has a special bow that has a range of up to 1 mile, and cannot miss at any range of less than half a mile. If Heracles takes more than 84 points in damage, he enters a berserk rage, attacking friend and foe alike. In this state, his damage bonus doubles to +28 points.

THAC0 unmodified by Str or Dex. It becomes -6 in melee, and -2 with missile weapons.

**Duties of the Priesthood:**

Although Heracles has plenty of admirers, he disdains those who lower themselves enough to worship him. In any event, he does not have the ability to grant clerical powers.

**Theseus**

Theseus was the first son of King Aegeus of Athens (this was in the pre-democratic days of the golden age), conceived during a stop over he made at Troezen. Although he was not wedded to Theseus' mother at the time of conception, when Theseus grew into a man and went to Athens, Aegeus nevertheless honored his first son's claim to Athen's throne.

Theseus was a clever, strong hero who earned great fame for his many exploits. His most famous adventure was the slaying of the minotaur in the labyrinth of King Minos.

**fighter 13, bard 9**

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 18 | Wis 17 | Cha 18 |
| AC 2 | MR nil | MV 12 |
| HP 83 | AL lg | THAC0 6 |
| #AT 2 | Dmg 1d8 (sword) +4 | |

As a king of Athens, Theseus was a just and wise ruler who laid the foundations for its democratic government. Then are some who say he developed a self-running government just so he would have time to go away on adventures.

Despite his wisdom, however, Theseus was not a faultless ruler. He was the man who kidnapped Helen of Troy, an incident that touched off the terrible Trojan war and plunged Greece into the Dark Ages.

**Odysseus**

Odysseus was the king of Ithaca, as well as one of the heroes of the Trojan war and the ten-year siege of Troy. A cunning man, he is credited with planning the ruse that finally ended the war: building the wooden horse and hiding soldiers inside. When the Trojans brought the gift into the city, the soldiers leapt out of the horse and opened the gates, allowing the Greek armies to sack the town.

**fighter 13, thief 9**

| | | |
|---|---|---|
| Str 18/00 | Dex 16 | Con 17 |
| Int 18 | Wis 10 | Cha 18 |
| AC 2 | MR nil | MV 12 |
| HP 83 | AL cn | THAC0 5 |
| #AT 2 | Dmg 1d8 (sword) +6 | |

On his way home after the war, Odysseus offended Poseidon by blinding Polyphemus, a lesser cyclopes who happened to be the sea god's son. Poseidon was so angry that he kept Odysseus at sea for 10 years. During this time, he had the many great adventures which were the basis of Homer's, *Odyssey*. When he finally returned home, he found his poor wife besieged by suitors who assumed that he was dead. He answered this insult in a typically direct fashion by slaying all the suitors.

## Greek Monsters

**Cyclopes**

Both greater and lesser Cyclopes resemble thin hill giants with a single eye located in the middle of their forehead. Despite their similarities, however, they are very different creatures.

**Greater**

| | | | |
|---|---|---|---|
| AC -4 | No. 1 | SZ 21' | XP: 12,000 |
| MV 15 | ML 18 | AL cg | Int high |
| HD 15 | HP 120 | MR 15% | THAC0 5 |
| #AT 1 | Dmg 7d6 (fist) | | |

**Special Att/Def:** Greater cyclopes are immune to all fire-based attacks. They usually (90%) bear magical weapons (+2 to + 5 bonus) and/or wear magical armor (+ 2 to + 4 enchantment).

There are only five greater Cyclopes: Arges, Steropes, Brontes, Pyracmon, and Acamas.

**Lesser**

| | | | |
|---|---|---|---|
| AC 2 | No. 1-4 | SZ 20' | XP: 4,000 |
| MV 15 | ML 16 | AL ce | Int low |
| HD 13 | HP 50-100 | MR nil | THAC0 7 |
| #AT 1 | Dmg 6d6 (fist) | | |

**Special Att/Def:** Lesser cyclopes can throw boulders up to 150 yards for 4d10 damage.

The more numerous lesser Cyclopes were created by Poseidon. Wild man-eaters, they are usually found in small communities on isolated islands, where they scratch out a meager existence by shepherding their flocks of giant sheep.

**Hecatoncheire**

The Hecatoncheire was born to Gaea and Uranus. It resembles a huge giant that has fifty heads and a hundred arms. It is a bitter enemy of the Olympian gods and will attack them or their worshippers on sight.

| | | | |
|---|---|---|---|
| AC 5 | No. 1 | SZ 100' | XP: 10,000 |
| MV 15 | ML 18 | AL cn | Int low |
| HD 16 | HP 256 | MR 35% | THAC0 5 |
| #AT 10 | Dmg 1d10 (fist) | | |

**Special Att/Def:** Any Hecatoncheire can simultaneously attack up to ten man-sized targets with ten fists each. On an attack roll of 20, they are able to grab their opponent, inflicting 2d10 points of damage per round until the victim escapes. Beings with a Str of 18 to 18/50 stand a 10% chance of escaping each round; add 1 percentage point for each 2 percentile points of Strength over 18/50. Beings with a Str of 19 or above stand a 90% chance of escaping. Hecatoncheire can hurl fifty boulders up to a range of 100 yards, doing damage as a *meteor swarm* spell.

**Cerberus**

Cerberus is the giant, three-headed mastiff that guards the gates to the underworld. He will always allow dead people to enter the gates, but never permit them to leave. Living people must bribe him with a tasty treat to enter, but he will not permit them to leave, even if another such bribe is offered.

Although his master (Hades) occasionally allows him to roam about the earth free, Cerberus is most often found at the gates of Hades. If met here, nothing, including magic, can trick or force him into leaving his post.

If Cerberus is ever killed, Hades simply allows him to leave the underworld and journey back to the land of the living.

| | | | |
|---|---|---|---|
| AC 1 | No. 1 | SZ 30' | XP: 12,000 |
| MV 24 | ML 18 | AL ne | Int high |
| HD 22 | HP 176 | MR 15% | THAC0 -1 |
| #AT 3 | Dmg 1d12 (bite) | | |

**Special Att/Def:** Cerberus has three heads, each of which can bite in combat. If the middle head opts not to bite, it spews a stream of poison spittle to a range of 30', causing death on contact (save versus death to negate). The collective stare of all three heads turns any mortal to stone (save versus petrification to negate). Cerberus regenerates 5 hit points per round.

**Gigantes**

The Gigantes are a race of giants that Gaea gave birth to when the blood of her-mutilated husband fell upon her earthly form. They are huge, manlike creatures with serpents for feet. Their hatred of the Olympian gods runs deep, and they will never pass up a chance to do one harm.

| AC 1 | No. 1-2 | SZ 15' | XP: varies |
| MV 15 | ML 16 | AL ce | Int low |
| HD 16 | HP 128 | MR nil | THAC0 5 |
| #AT 1 | Dmg 2d8 (fist) | | |

**Special Att/Def:** Varies by individual.

Each Gigante has at least one special power; for example, Antaeus heals all damage he takes each round. In combat, he also increases 2' in size and does an additional 1d8 in damage each round, to a maximum size of 21' and a maximum of 5d8 in damage. Both of these powers work only as long as his feet are touching the ground. Another gigante, Enceladus, is so terrifying in aspect that any being seeing him must save versus spells or flee as if affected by a *fear* spell. Any time he saves against a magic spell, Enceladus can grab it out of the air and fling it back at his attackers. If the spell allows no saving throw, he is automatically able to use this power.

# Indian Mythology

The culture of historic India is one of the oldest and most constant that has ever existed on Earth. In 2,500 BC, merchants from India's first civilization sailed the Arabian Sea, trading with such ancient and distant Mesopotamian cities as Agades and Ur. By the time Greece entered its Golden Age in the fifth century BC, the Rig Veda, the foundation of Hindu philosophical thought, was nearly a thousand years old. Despite its great antiquity, however, India's culture remained intact and as vibrant as ever when the sun set on the great British Empire. Hinduism is still practiced by 500 million people or more.

Geographically, India is an arrow-shaped peninsula located on the southern side of the Asian continent. It is large, with an area of over a million square miles. On the north, it is bordered by high, wall-like mountain ranges on all sides: the Hindu Kush on the northwest, the Karakoram on the north, and the Himalayas on the northeast. Its pointed tip is protected by the Arabian Sea on the west and the Bay of Bengal on the east. It's climate ranges from temperate in the north and arctic in the mountain ranges to tropical in the south. India has a wide variety of terrain: mountains reaching 25,000 feet in altitude, tropical jungles, barren deserts, and fertile tablelands, river valleys, and coastal plains. In the spring, much of the land is baked by a fiery, merciless sun, and in the summer it is flooded by unending monsoon rains.

Around 4,000 BC, the first Indians to inhabit this wild land gave up the nomadic life of hunters and gatherers. On the banks of rivers close to the mighty Indus, they founded many small farming villages. By 2,500 BC, they had created the Harappan Culture, India's first civilization. The Harappan Culture had two important cities, Harappa and Mohenjo Daro, each a masterpiece of urban planning. They also had dozens of smaller farming and fishing villages scattered over an area of 200,000 square miles. At the port of Lothal was a brick shipyard over 700 feet long, capable of loading merchant ships at both high and low tides.

About 1,500 BC, the Harappan Culture began to suffer a decline, probably due to working their land until it was barren, the resultant increase in monsoon flooding, and perhaps even the geology of the region, which, over the course of a thousand years, was slowly moving their sea and fishing ports away from the sea.

**The Aryans**

Whatever the reason for the decline of the Harappan Culture, the death blow came when Aryan tribes began filtering through the Khyber, Bolan, and other passes ("ghats") of the Hindu Kush. Coming from the steppes of Central Asia, these fierce nomads invaded and settled in Asia Minor. Persia. and India.

Armed with swift, horse-drawn chariots, the Aryan tribes quickly captured and destroyed Harappa and the northern cities, ravaging everything in their path. The Aryans were wandering herdsmen who spent only slightly less effort on intertribal warfare than they did on inter-cultural feuds. Cows and bulls, from which came their food and clothing, were the measure of their wealth. In their hands, the complex urban culture of Harappa and Mohenjo Daro faded into oblivion, along with its writing, craftsmanship, art, and architecture.

The Aryans did leave one artifact that was to prove more important to India than all of the cities and art works of the Harappas. The Aryan priests built up an exhaustive record of their religious beliefs and practices. Composed in a complex poetic style passed along by memory and recitation for a thousand ages, these hymns were compiled in four great books called the Vedas. This period in Indian history, from 1,500 BC to 500 BC, is called the Vedic Age. It was during this period that the fundamental principles of Hinduism, principles that endure to this day, were laid down.

During the Vedic Age, the lifestyles of the Aryans themselves underwent many changes. As they pushed south, fighting each other and conquering the non-Aryan natives of India, the Aryans began to trade their nomadic ways for agricultural lifestyles. The shift to a more stable economic base did little to change their essential character, however. They remained a fearless people of enormous pride, utterly convinced of their own racial and social superiority over those they conquered. The Aryans forced their conquered victims to live in clusters outside their villages, treated them with nothing but contempt and scorn, and banned them from participating in Aryan religious rites.

The principle of segregation also extended to the Aryans themselves, however. They divided their citizens into classes. At the top of the order were the hereditary nobles, from whom the raja (chief) was chosen. The priests, who were responsible for religious teaching and observances, came next and third were the ordinary tribesmen. Below all of these classes, of course, were the conquered peoples.

As the Aryan agricultural communities became more stable and victor and vanquished fused, the Aryan class system underwent many changes. The chiefs became hereditary, power-hungry kings, and their communities became kingdoms of varying size and power. The classes became subdivided and even more rigid, and moving from one class to another became even more difficult.

The greatest change came in the relationship of the priestly class to the nobles. By giving a new meaning to religious ritual, the priests managed to raise themselves in status even above the kings. Over the years, the priests had developed enormously complex rituals out of the ceremonies of the Rig Veda (the first Veda). As the Aryan kingdoms were taking shape, they began to teach that if a ritual were performed incorrectly, the cosmic order (called "rita") would be upset and catastrophe would follow. Of course, the priests were the only ones that could perform the rituals properly. Therefore, they became exalted even above the kings.

By the close of the Vedic Age, the Aryans had transformed themselves from simple nomads into the caretakers of a vast and complex civilization. Their rajas were no longer tribal leaders, they were hereditary kings commanding vast areas throughout India. Their family life was based upon religious concepts of divinely ordained, hereditary classes, with the brahmins (priests) at the top, followed by the kshatriya (kings and warriors), vaishyas (merchants, artisans, etc.), and finally the shudras (serfs). Their everyday actions were ruled by a multitude of proscriptions and restrictions. Religion had become a complex series of painstaking rites based upon concepts beyond the comprehension of common people, and priests were the most powerful members of the communities.

**Late Vedic Beliefs**

The power of the Vedic priests lay in their intellectual prowess, so it should come as no surprise that they developed a long tradition of philosophical compositions regarding the Vedas. One of the most important of these, the Upanishads, contained many of the themes that inspired the originators of Buddhism, Jainism, and many other less popular religions. Since *Legends & Lore* is concerned primarily with the Vedic pantheon and its later mythology, these religions will not be discussed — except to note that their origins can be found in the concepts developed toward the end of the Vedic Age.

In addition to planting the seeds of Buddhism and Jainism, the Upanishads provided the foundation of the most popular religion in India to this day, Hinduism. *Legends & Lore* makes no attempt to translate modern Hinduism into AD&D game terms, but the transition between the beliefs of the late Vedic Age and those of early Hinduism is so smooth and gradual that it is impossible to describe one without touching on the other. Many of the concepts discussed below will unavoidably have an Hinduistic echo to them.

In searching for the meaning of life and the fundamental truth of the universe, the Upanishads accepted the many gods of the Vedic pantheon. But they also sought to unify the multiplicity of the world. They achieved this by postulating the existence of the Brahman, a single world spirit that enfolded all of existence. The importance of this concept to Indian culture cannot be underestimated, for it allowed the Vedic priests to exert their influence over the worshipers of (literally) millions of different gods. Instead of converting those who worshipped deities different than their own, the priests simply sanctioned the worship of these diverse gods as different aspects of the one truth, the Brahman.

Brahman cannot be defined exactly. It is the Divine essence which is hidden in all beings, and of which all beings are a part. Everything that exists — the gods, men, animals, plants, even rocks — is simply a manifestation of the Brahman. The spirit that animates each person (and god, animal, plant, etc.) is an imperceptible part of the Brahman called the "Atman."

The only way for an individual to attain a state of bliss, according to this mode of thought, is to experience the essential unity between the Atman and the Brahman. Until an individual succeeds in doing this, he is doomed to be reborn again and again. Thus, reincarnation is one of the fundamental concepts of ancient Indian thought.

The nature of the individual's reincarnation depends upon the second fundamental concept: "karma". Simply stated, karma is a form of cause and effect. It postulates that a good result, will follow a good action, and a bad result will follow a bad action. Those leading a good life will be rewarded by a better position in their next reincarnation. Those leading a bad life will be punished by receiving a lower position (perhaps even as an animal) when they are reborn. Each man's position in life is a direct and unavoidable consequence of his actions in his last life. Note that this doctrine reinforces the rigid class structure adopted in the late Vedic Age.

Dharma, the third basic concept of ancient Indian thought, helps a person achieve good karma during his lifetime. Dharma is the duty to which a man is bound by his station in life. If he does as his dharma dictates, performing his duties according to his station in life, then his karma in the next life will be good. If he fails to follow his dharma, then he might find himself reincarnated as a beggar, slave, or worse.

Another important concept to the Vedic priests ("Brahmins") is their concept of time. In the western view, time is a steady, linear progression. Once an event has occurred, it is in the "past" and will not reappear in the "future:' To the Vedic mind, however, time is cyclical. Everything that has happened in the past will happen again, and it is impossible for anything to happen that has never happened before. They view time as a revolving circle that binds together everything in the universe, including the gods. Therefore, when they perform a ritual, they are mystically repeating some event crucial to the continuation of the universe, such as its death and rebirth.

**Ascetic Characters**

One of the basic Vedic doctrines is that in order to achieve unity with the Brahman, it is necessary to release worldly desires. In accordance with this line of thought, many people shunned worldly pleasures and devoted themselves to meditation, hoping to achieve some spiritual intuition that would allow them to join the Brahman. Often, they took their efforts to the extreme, forsaking family, friends, possessions, and even food. Although such efforts may seem peculiar to western minds, it must be noted that these "ascetics" achieved many remarkable insights that allowed them to perform seemingly impossible feats and produce an incredible understanding of the true nature of the world.

Player characters who forsake their worldly possessions and devote themselves to spiritual enlightenment may become ascetics. Ascetics are always dual-class characters (even if they are human). A character who wishes to become an ascetic gives away all of the trappings of his or her class (such as weapons, tools, magical

components, etc.), saving only the clothing on his or her back. (Note: these items must truly be given away, not merely entrusted to another member of the party for safekeeping.)

From that point forward, the ascetic must meditate four hours per day, cannot possess any item other than a begging bowl and the clothing on his back, and must deny himself all pleasures of the flesh (such as eating fine food, drinking expensive wines, the taking of a hot bath, etc.).

In return, the ascetic advances as a priest, using the priest hit point, combat, and saving throw tables. However, the ascetic casts wizard spells instead of priest spells, and gains new spells as if he were a wizard of the appropriate rank. Through his long hours of spiritual devotion, the character learns more and more about the true nature of the cosmos. He can use this knowledge in much the same way that wizards use their spells, except that he never needs material components to cast a spell and does not need to record the spells he knows in a spell book. Instead, his daily meditation serves to refresh these spells in much the same way that a priest's daily prayer restores his powers. Generally, the ascetic chooses two schools of magic from which he can cast spells. He has access to all spells within those schools.

As with any dual class character, the ascetic retains his former abilities and can use them as he pleases without gaining any experience. Any items that the ascetic used while performing as a former class must be immediately returned or given away, however, or the ascetic reverts permanently to his former class and loses all benefits of being an ascetic.

As ascetics advance, they earn several other benefits — and suffer one additional detriment. First, each time an ascetic advances a level, he loses a point of Strength because of the physical deprivations to which he is subjecting himself (though he never falls below a Strength of 3). But he also gains a point to put into either Wisdom, Constitution, or Charisma (his choice). In this way, an ascetic can raise any or all of these ability scores to a maximum of 19 (but never more).

More importantly, the ascetic gains the following powers:

1st Level: Turn undead
3rd Level: *Endure heat/Endure cold*
5th Level: *Levitate* (self only)
8th Level: *Telekinesis*
12th Level: *Heal* (self only)
15th Level: Ignore death
18th Level: Immune to all non-magical damage
20th Level: Reach unity with Brahman

The ascetic has the ability to continue functioning normally for 1d10 rounds after reaching 0 hit points. During this time, any manner of healing magic may be used to restore the character to life by bringing his hit points back to a positive value.

Ascetic characters who attain the 20th level have acquired an understanding of the universe so exact that they become one with the Brahman and are thus retired from play. A more worthy or noble end for a character is hard to imagine.

**Optional Rule: Dharma, Karma, and Reincarnation**

Indian society is founded upon the concepts of dharma, karma, and reincarnation. If you wish to incorporate these concepts into your campaign, you may want to use the following optional rules.

A PC's dharma is a combination of character class and alignment. In order to follow his dharma, a character must behave according to the alignment guidelines given in the Player's Handbook. These tenets must be followed strictly, or the character will suffer a karma penalty (see below). For example, a Lawful Good character who participated in the theft of a magic sword would be violating his dharma, for he would be breaching his duty to respect the laws of the land.

In addition to alignment, each class carries with it certain dharmic duties. The duties for the standard AD&D character classes are summarized below, but if your campaign incorporates nonstandard or highly specialized character types, you may have to define your own dharmic duties:

**Fighter:** Fighters must always be brave, never allowing fear to dictate their actions. They must never hide from danger or flee while a friend or ally fights on.

**Ranger:** The requirements for Rangers are the same as they are for Fighters, but rangers must also show reverence to nature, never killing an animal or plant without reason.

**Paladin:** The dharma of a paladin is also much the same as that of a fighter, but the paladin must never tolerate evil. Further, the paladin must always help the weak or poor and be quick to give alms to beggars.

**Wizard:** Wizards must never pass up an obvious opportunity to learn about the forces that shape the world or the magic with which it is infused.

**Specialist:** Although basically the same as if is for wizards, the specialist gains an additional duty of the DMs devising that is related to his or her field of study.

**Priest:** The priest must devote himself to the worship of his god and must never allow an insult to his faith to go unavenged. He must try to recruit followers for his god whenever possible. Specific religions might place additional demands on these characters.

**Druid:** The druid character must act in a way that is always complimentary to the natural world around him. He must never harm or destroy plants or animals without good reason.

**Rogue:** Rouge characters must attempt to accrue wealth (usually for his own benefit, but occasionally for a cause or to help another). They can never leave a potential victim or inviting fortune untouched.

**Thief:** Thieves have the same dharma as rogues, but must rely on cunning, stealth, trickery or something other than brute force to accomplish their goals whenever possible.

**Bard**: A bard must serve to entertain and enlighten. He must pursue knowledge in the form of tales and songs, not in the rigid manner of a wizard. He must pass up no chance to tell others of the wonders he has seen and the tales he has heard.

If a situation occurs which pits the dharma requirements of a character's alignment against those of his class, violating the requirements of either is still a breach of his dharma and results in the karma penalties outlined below. If a multi- or dual-class character has conflicting dharma requirements, the same rule applies.

Each time a character goes up a level, he receives a point of karma. In addition, a character who does a truly outstanding job of role-playing his character according to the dharma requirements, such as finding a clever way to meet the conflicting demands of alignment and class dharma, may receive an additional point of karma (never more than one per session). If a character significantly violates his dharma (such as a lawful good character engaging in theft), he loses a point of karma (there is no limit to the number of points that may be lost in this way).

After a character's death, the player does not roll up a new character. Instead, he consults the row matching his number of karma points on the reincarnation table below, then rolls 2d6 to see what he comes back as (ascetics modify their roll by +2):

**Reincarnation Table**

| **karma points** | **2d6 roll** 2 | 3-5 | 6-8 | 9-11 | 12 |
|---|---|---|---|---|---|
| 0 | slug | kobold | goblin | orc | gnoll |
| 3-5 | kobold | goblin | orc | gnoll | human |
| 6-10 | goblin | orc | gnoll | human | human* |
| 11-15 | orc | gnoll | human | human* | human** |
| 16-20 | gnoll | human | human* | human** | human*** |
| 20+ | human | human* | human** | human*** | nirvana |

**Slug:** The character is removed from play and the player must roll up a new one.

**Kobold, goblin, orc, gnoll:** The character is reincarnated as a monster of the type listed. See rules for creating new PC races in the *Dungeon Master's Guide*. The Intelligence, Wisdom, and Charisma of the old character are transferred to new one (making any necessary adjustments for race) and all other scores are rerolled.

**Human:** The player transfers his old character's Intelligence, Wisdom, and Charisma to his new character. All other attribute scores are rerolled. Character begins at level one in the same class(es) as the previous character.

**Human*:** The player transfers his old Intelligence, Wisdom, and Charisma to the new character and rerolls all other attributes. The new character retains the old one's class(es), but begins at 1d4 levels lower than the previous character.

**Human**:** The player transfers all old ability scores to the new character, and begins one level lower in the previous character's class(es).

**Human***:** The player may add 1d4 points to any single ability score of his old character (to maximum 18), and then transfer all of the old character's scores to new character. The new character begins at the same level as the old one and retains the previous character's class(es).

**Nirvana:** The character achieves unity with the Brahman and is retired from play. A completely new character is generated to replace the old one, but the new character receives +2 modifier on all of its saving throws.

The reincarnation appears within a day's time, having only vague memories of his previous life. All karma points from the previous character are lost, and the new character starts over at 0 karma. If a *raise dead* or similar spell is used on the previous character's body, both the reincarnation and the old character die and are removed from play.

**Brahman (greater god)**

Brahman is also known as Hiranyagarbha, Prajapati (both used in the early Vedic Age), and many other names. Here, Hiranyagarbha and Prajapati are used interchangeably. Brahman is the world spirit that enfolds all of

existence and the divine essence that is hidden in all beings, and of which all beings are a part. Everything that exists — the gods, men, animals, plants, even rocks — is simply a manifestation of the Brahman.

According to legend, in the beginning there were only the waters. From the waters was formed a golden egg (Hiranyagarbha). Prajapati was hatched from the egg, speaking the sounds "bhur," "bhuvah," and "svark," thereby forming the earth, the air, and the sky. Prajapati/Brahman has every power that any god or mortal in the Indian mythos possesses, for all things are a part of him. In his true form, Brahman has a face on each side of his head. There is also a vacant spot on the top of his head where a fifth face was burned off by the gaze of the god Siva.

**Role-playing Notes:** Though he sees and hears all, Brahman is an aloof god and will involve himself in the affairs of men only when existence itself (i.e., Brahman himself) is threatened.

**Statistics:** AL n; WAL any; AoC everything; SY four-faced head.

**Brahman's Avatar (fighter, wizard, priest, and rogue 20)**

Brahman's avatar can take any form, but most often appears as a four-armed, four-faced man. He can call upon any sphere or school of magic for his spells. In his four hands, he carries four different weapons, each doing 1d10 damage: a scimitar, a dagger, a mace, and a short sword.

| | | |
|---|---|---|
| Str 21 | Dex 21 | Con 21 |
| Int 21 | Wis 21 | Cha 21 |
| MV 20 | SZ any | MR 50% |
| AC -5 | HD 20 | HP 172 |
| #AT 4 | THAC0 -1 | Dmg 1d10 (any weapon) +9 |

**Special Att/Def:** Brahman's avatar can only be harmed by magical spells or weapons. The attacker also suffers any damage or spell effect inflicted upon the avatar (because the attacker is part of the Brahman).

**Duties of the Priesthood**

Brahman has no priests in the normal sense, for he is usually worshipped through one of his manifestations as another god. However, all ascetics seeking true spiritual enlightenment may be considered priests of Brahman, so anybody wishing to worship him directly must become an ascetic. The requirements for becoming an ascetic are discussed in the introduction to this section.

**Indra (intermediate god)**

Indra, also known in earlier Vedic times as Parjanya, is the god of the atmosphere, storms, and battle. He is the embodiment of aggressive action, a great lover of war, and was the leader of the Vedic gods when the Aryans first entered India. Indra always watches any battle with great interest, and often cannot resist sending his avatar down to participate on the side which has shown him the most favor. He has the power to raise those slain in battle, as well as complete control over anything occurring in the air, such as storms, rain, wind, and especially thunder and lightning. Indra's true form is that of a muscular man with unusually long arms and red skin. His celestial abode is located atop Mount Meru, but he is more often seen riding through the air on his huge white elephant.

**Role-playing Notes:** Indra is arrogant, selfish, jealous, and completely amoral. He is also prone to gluttony (especially where drink is concerned) and loves all other pleasures of the flesh. When a worshiper who regularly honors him with riotous feasts is about to enter a desperate battle, there is a 5% chance that Indra will send his avatar to help. Omens from Indra come in the form of storms, lightning, or wind

**Statistics:** AL ce; WAL chaotic evil, also fighters; AoC weather, battle; SY white elephant.

**Indra's Avatar (fighter 18, druid 14)**

Indra's avatar takes the form of a red-skinned warrior with gangling arms. He can call upon the elemental or weather spheres for his spells.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 16 | Wis 18 | Cha 18 |
| MV 18 | SZ 6' | MR 30% |
| AC -3 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d12 + 5 (sword) + 8 |

**Special Att/Def:** The avatar carries a flaming sword +5 that is can be used to ignite objects just as a flame tongue can. He wears magical golden armor that protects him from all non-magical missile attacks. He also carries a bow from which he can fire lightning bolts that do 2d10 points of damage and have a range of 1,000 yards. The magic of this bow eliminates all negative modifiers for range.

**Duties of the Priesthood**

Priests of Indra are expected to take an active part in many battles and must never shy away from a chance to engage in combat.

**Requirements:** AB standard; AL ce; WP any; AR a; SP combat, elemental, guardian, healing, summoning; weather; PW 10) *raise dead* on any individual killed in combat (before rolls for reincarnation are made); TU turn.

**Varuna (intermediate god)**

Varuna is the guardian of rita (cosmic order) and the lord of the sky. As the upholder of the physical and moral order, he is the protector of oaths and the divine judge. A constant observer of human actions, Varuna is so vigilant and stern in executing his duties that beings violating their dharmas are sure to suffer for their indiscretions, making Varuna the most feared of all gods in the Vedic pantheon. He has the power to see what any being is doing at any time. By looking into a being's heart, Varuna always knows whether the individual is being completely honest and whether or not he is violating his dharma. In his true form, Varuna is the sky.

**Role-playing Notes:** Varuna sees and hears all, so it is impossible to keep anything secret from him. He especially loathes lawful oath-breakers and never fails to punish them for violating their dharma, but this does not apply to oathbreakers of chaotic or neutral alignments. Omens from Varuna generally take a celestial form, such as the appearance of a comet, ball of fire, or eclipse.

**Statistics:** AL In; WAL In; AoC cosmic order, dharma;

**Varuna's Avatar (priest 20)**

Varuna's avatar is a stern-faced man carrying an ebony face. He can call upon the all, charm, combat, divination, guardian, protection, sun, and summoning spheres for his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 19 | Wis 20 | Cha 18 |
| MV 18 | SZ 6' | MR 25% |
| AC-2 | HD 20 | HP 160 |
| #AT 1 | THAC0 1 | Dmg 1d10 (mace) + 7 |

**Special Att/Def:** Any being struck by this avatar's mace loses 1d4 points of karma (assuming that this optional rule is being used). In addition, any non-lawful creature approaching within 10' of the avatar must save versus spells or flee from the avatar in fear.

**Duties of the Priesthood**

Priests of Varuna often serve as judges or lawmen. On pain of losing their priestly status, they must always keep their word. They may never participate or condone any sort of rebellion against established authority.

**Requirements:** AB standard; AL In; WP mace, hammer, fail; AR a; SP all, astral, charm, combat, divination, guardian, healing, protection, sun; PW 5) *know alignment*; 10) *detect lie* (no saving throw); TU nil.

**Mitra (intermediate god)**

Like Surya and Savitri, Mitra is one of several Vedic solar deities. He embodies the beneficial aspects of the sun, providing light and warmth, and making plants grow. Mitra also helps Varuna safeguard the rita (cosmic order) by shining his light on all that occurs on earth, and by presiding over friendships and ratifying contracts. He has the power to shine his light anywhere on earth, to provide warmth when it is cold, and to make plants grow. In his true form, Mitra is the warmth and light of the sun.

**Role-playing Notes:** Like Varuna, Mitra's primary concern is with rita, the cosmic order of the universe. During the daylight hours, he is constantly watching for any dharma violation which will upset the order. He is especially concerned with contractual promises and the duty owed by friends to each other, and will often cast a white hot light on any person committing an act which violates these duties.

**Statistics:** AL lg; WAL lg; AoC friendship, contracts, warmth, light, growth; SY plant inside the sun.

**Mitra's Avatar (warrior 16, wizard 14)**

Mitra's avatar takes the form of a three-armed man made of heavenly light (thus his resistance to normal weapons). The avatar can call upon the abjuration, conjuration/summoning, and invocation/evocation schools of magic for his spells.

| | | |
|---|---|---|
| Str l9 | Dex 18 | Con 18 |
| Int 19 | Wis 18 | Cha 17 |
| MV 15 | SZ 6' | MR 25% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d10 (sword) + 7 |

**Special Att/Def:** The avatar's *sword of light* cuts through any armor as if the wearer's AC were no better than 5. He cannot be hit by anything but magic or magical weapons. From his eyes, the avatar can shoot two beams of intense heat doing 3d12 fire damage (save versus breath weapon for half damage).

**Duties of the Priesthood**

Priests of Mitra are expected to cultivate large gardens and to keep a lamp or candle lit in their homes at all times. They must be loyal friends, and are often called upon to serve as judges in contractual disputes.

**Requirements:** AB standard; AL lg; WP any fire, club, staff; AR a; SP all, charm, creation, divination, elemental, healing, plant, protection, sun; PW 1) *light*; 10) *detect lie* (always active); TU turn

**Yama (intermediate god)**

As the first man to die, Yama became the lord and judge of the dead. His palace (Yamasadena) and his city (Yamapura) are located in the far south. Between the land of the living and his kingdom flows the bloody river Vaitarani, which all spirits must cross on their way to Yama's judgment seat. After Yama has considered the spirit's deeds in life, he decides what form the spirit's new body should take. When Yama's judgment is complete, the spirit goes to its new body in the world of the living. (Sometimes, in the cases of the very wicked, this journey takes the spirit through 21 hells of fire, filth, icy winds, thorns, etc.) Only those who have achieved unity with Brahman escape Yama's judgment. Yama has the power to see a man's entire history at a glance. In his true form, he is a green-skinned man with copper-colored eyes. He is usually dressed in red and is often seen riding his giant water buffalo.

**Role-playing Notes:** Yama's duties as judge of the dead keep him too busy to interfere in human affairs. No amount of praying or beseeching on the part of a mortal will influence his judgment, though he will often listen to another god's opinion in regards to the fate of a dead person. Those who are likely to die soon often receive visits from one of his four-eyed dogs, an owl, or a pigeon.

**Statistics:** AL ln; WAL ln; AoC judgment of the dead; SY red mace.

**Yama's Avatar (necromancer 16)**

Yama's avatar is young man with a slightly greenish complexion. He wears red robes, and can call upon the necromancy school of magic for his spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 16 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 6' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d4 (dagger) + 4 |

**Special Att/Def:** Anyone struck by Yama's dagger must save versus death or die. His robes protect him from any attack based on fire, heat, light, or electricity.

**Duties of the Priesthood**

Those worshipping Yama are responsible for preparing the spirits and bodies of the dead for cremation. They may never leave a dead intelligent being uncremated or they risk the temporary loss of their spell abilities.

**Requirements:** AB standard; AL In; WP axe; AR a; SP all, creation, divination, elemental, healing, necromantic; PW 1) *affect normal fires*; 3) *produce flame*; 8) *speak with dead*; 15) trace any reincarnated spirit to its new body; TU command.

**Agni (intermediate god)**

Agni is the god of fire, condemned to consume everything he touches. By burning away the taint of past guilt, he is also the god who dispenses immortality to those who have achieved unity with the Brahman. He functions as a mediator between men and gods by serving as the altar fire in sacrifices. Agni has the power to create fire anywhere on earth he wishes, and to control any flame anywhere. Agni can change his true form at will, but he always has red skin. Sometimes, he has one face, three legs, and seven arms and tongues. Other times, he has up to seven faces, three arms, and two legs.

**Role-playing Notes:** Agni is a beneficent god and is willing to be a guest in even the poorest home. When beseeched by one of his worshipers, there is a percentile chance equal to the worshiper's karma points (or a flat 5% if you are not using the optional karma rules) that Agni will send his avatar to aid the worshiper. Abuse of the god's kindness is certain to earn Agni's wrath. Omens from Agni are always seen in fires

**Statistics:** AL cg; WAL cg; AoC fire, messages; SY flames.

**Agni's Avatar (fighter 16, priest 10)**

Agni's avatar is a large red-skinned man with seven faces and three arms. In addition to his red axe, he carries a fan he can use to create winds (as a *gust of wind* spell). The avatar draws upon the elemental sphere (fire spells only) to cast his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 18 | SZ 7' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d12 (axe) + 7 |

**Special Att/Def:** Anyone hit by Agni's glowing, red axe must save versus paralyzation or burst into flames. Those failing their save suffer an additional 1d10 points of damage each round and cannot cast spells, fight, or do anything but roll on the ground until the flames are put out. The flames can only be quenched through magical means; ordinary (or holy) water has no effect on them. The avatar can breathe fire once per turn for 5d10 damage.

**Duties of the Priesthood**

Priests of Agni must keep a fire burning in their homes at all times. They can never leave a beggar hungry, and must aid the poor whenever asked.

**Requirements:** AB standard; AL cg; WP torch, axe, bow; AR a; SP all, combat, creation, elemental, healing, protection, sun; PW 1) *produce fire*; 5) turn undead; 10) immune to non-magical fire damage; 15) hear anything that is said within earshot of a fire (must specify location of fire); TU special.

**Surya (intermediate god)**

Surya is the god of the rising and setting sun. He is charged with bringing an end to night and regulating the end of the day. He is often called upon to heal diseases and to bring luck to the people. Surya has the power to put any number of beings of less an 20th level to sleep (save versus spells to negate). He can so see any event that occurs under the sun's light. In his true form, Surya is a man with dark red skin and long golden hair. He has a third eye in the middle of his forehead and four arms on his torso. He is often seen riding his one-wheeled chariot, which is pulled by seven horses (each a different color of the rainbow).

**Role-playing Notes:** Surya is generally a beneficent being who occasionally (1% chance) grants a worshiper luck in the form of an opportunity to repeat a critical die roll. Surya has no use for thieves, murderers, and others who benefit by conducting their business in the dark. Omens from Surya generally arrive at dawn in the form of an illusion.

**Statistics:** AL lg; WAL lg; AoC morning and evening; SY half sun.

**Surya's Avatar (wizard 14, fighter 14)**

Surya's avatar is a golden-haired youth with a third eye in the middle of his forehead. He often keeps his extra arms hidden beneath his robes, and can call upon the illusion/phantasm and alteration schools of magic for his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 16 | SZ 6' | MR 15% |
| AC 0 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 3d8 (light sword) |

**Special Att/Def:** Any being within 10' of the avatar's unsheathed *sword of light* must save versus petrification or be blinded for 1d10 turns. The sword automatically dispels all illusion and darkness spells within 20'.

**Duties of the Priesthood**

Surya's priests must rise at dawn and may not retire until after sunset. Most of them serve the community as healers.

**Requirements:** AB standard; AL lg; WP spear; AR a; SP all, charm, divination, healing, protection, sun; PW 3) immunity to disease; 5) *cure disease*; 10) *sunray*; TU turn.

**Savitri (intermediate god)**

Savitri is the god of the day long sun. He causes all things to move and work, the tides to ebb and flow. Like his complement Surya, he sees all that occurs under the sun's light. Unlike Surya, however, he is not always a gentle god; what he sees sometimes angers him and causes him to shine down with unmerciful intensity, or to hide his glorious face from the world. He has the power to bestow life upon any inanimate object (including a dead body), to drive away rot and decay, and to move any object at will. In his true form, Savitri is a man with golden eyes, hands, and tongue. He is seen every day riding his golden chariot across the sky.

**Role-playing Notes:** Savitri is generally a beneficent god, but he has a bad temper and is quick to punish transgressions with oppressive heat. Like Surya, he despises thieves, murderers, and others who conduct their business in the shelter of the night, and will never aid such a character — even if it means leaving more worthy

individuals to their fates. When one of his worshipers dies, there is a percentile chance equal to the worshiper's karma points (or a flat 5% if you are not using the optional karma rules) that Savitri will restore the dead individual to life.

**Statistics:** AL ng; WAL ng; AoC life, light; SY full sun.

**Savitri's Avatar (fighter 16, priest 14)**

Savitri's avatar is a handsome youth with golden eyes, hands, and tongue. He can call upon the all, creation, elemental, and sun spheres for his spells.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 16 | Wis 16 | Cha 18 |
| MV 16 | SZ 6' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 2d10 (sword) +8 |

**Special Att/Def:** Any weapon striking Savitri's avatar must save versus magical fire or be destroyed. Any armor contacted by Savitri's fire sword must save versus magical fire or fall off.

**Duties of the Priesthood**

Priests of Savitri must always keep a light shining in their homes. They must always help those who have been victimized by thieves, murderers, and other criminals.

**Requirements:** AB standard; AL ng; WP any; AR a; SP all, combat, creation, divination, elemental, healing, protection, sun; PW 1) *continual light*; 10) *raise dead* (before reincarnation checks are made); 15) *fire breath* (3d10 damage to range of 30'); TU turn.

**Soma (intermediate god)**

Soma is the god of soma-juice and the moon, as well as the lord of the stars and plants. Soma manifests himself in the soma plant, which provides a powerful juice that causes men to see hallucinations. At one time, all classes of men drank soma-juice, but when it was realized that the drink provided divine power, long life, and insights to the future, this privilege was reserved by law for the priests, kings, and noble classes. Individuals drinking at least one serving of soma-juice a week receive two benefits: they are immune to any form of non-magical disease and their Constitution is raised by one point. These effects fade at the end of the 7th day without Soma-juice, but are regained as soon as the individual drinks another helping. In his true form, Soma is the moon, though he can manifest himself in many different shapes (such as a bull, giant, or bird).

**Role-playing Notes:** Although generally beneficent, Soma is rather vain and proud. He is a great collector of beautiful things, as he believes these items reflect well upon him. When dedicated worshipers drink soma-juice, there is a 5% chance that the resulting hallucination will contain some helpful communication from Soma himself. Omens from Soma always come in the form of soma-induced illusions.

**Statistics:** AL cg; WAL cg; AoC moon, plants, prophesy; SY moon.

**Soma's Avatar (illusionist 18)**

Soma's avatar usually appears in the form of a large, silver-skinned giant. He can draw upon the illusion/phantasm school of magic for his spells.

| | | |
|---|---|---|
| Str 18 | Dex 19 | Con 19 |
| Int 19 | Wis 18 | Cha 18 |
| MV 15 | SZ 8' | MR 25% |
| AC 0 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d4 (dagger) + 2 |

**Special Att/Def:** Anyone struck by the avatar's dagger must successfully save versus death or believe that they have died. This misconception lasts 1d10 turns, during which the character is effectively out of the game. Every time an attacker strikes Soma's avatar, he must successfully save versus spells or believe his attack failed to inflict any damage.

**Duties of the Priesthood**

Priests of Soma are the cultivators and guardians of soma-juice. By law, it is their duty to keep all but the priests, kings, and noble classes from drinking soma-juice. For a good cause, however, they have been known to violate this law.

**Requirements:** AB standard; AL cg; WP sickle, spear, axe; AR a; SP all, animal, charm, divination, healing, plant, protection; PW 1) *plant growth*; 10) *find the path*; 15) *programmed illusion*; TU nil.

**Ushas (intermediate god)**

Ushas is the goddess of dawn, the bright and ever-young daughter of the heavens. Every morning, she drives away the evil spirits that have gathered in the night, awakens the gods and all living creatures, and then opens the gates of the sky to allow Surya into the world. After Surya has brought the rising sun and delivered it to Savitri's one-wheeled chariot, Ushas leads Savitri's horses across the sky. No evil thing may stay or approach within 100 miles of Ushas. She also has the power to reincarnate any dead being into a new body of her choice, awaken any creature from any type of sleep, and to open any door or gate, regardless of how it is locked. In her true form, Ushas is a beautiful, light-skinned woman.

**Role-playing Notes:** Ushas is a beneficent deity who protects humankind from evil spirits, especially those associated with the night. There is a 5% chance that she will send her avatar to aid anyone (except thieves) needing help while fighting supernatural evil beings. Omens from Ushas generally occur in the form of vibrant colors in the dawn sky (e.g., red for impending violence, black for evil to come, gold for a hero's approach, etc.)

**Statistics:** AL lg; WAL lg; AoC light, wakefulness, locks; SY rising sun.

**Ushas' Avatar (priest 16)**

Ushas' avatar takes the form of a beautiful woman. She can draw upon the all, charm, healing, protection, and sun spheres for her spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 18 | Wis 19 | Cha 20 |
| MV 15 | SZ 6' | MR 20% |
| AC 2 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d8 (staff) +4 |

**Special Att/Def:** Any intelligent being within 10' of Ushas' avatar must save versus spells or be *charmed* (as per the spell) by her incredible beauty. The avatar can also fire a brilliant ray of golden light from her staff up to a distance of 100'. This ray always hits its target, inflicting 4d8 points of damage. Those hit must also save versus paralyzation or be blinded for 1d10 rounds.

**Duties of the Priesthood**

Priestesses of Ushas must be women. They greet the arrival of the new day with songs and music, and may never retreat from evil.

**Requirements:** AB standard, but Charisma of 16 or more; AL lg; WP staff; AR a; SP all, charm, creation, divination, guardian, healing, protection, sun; PW 1) *light*; 15) all evil beings within 10' of the priestess must save versus petrification or flee; TU turn (as if 5 levels higher than actual level).

**Siva (intermediate god)**

Siva should not to be mistaken for the Hindu god "Shiva the Destroyer," which is a composite of many older gods. Siva is such an important manifestation of Rudra (the destructive god of storms and diseases) that he can be regarded as a separate deity. Siva is power incarnate, a fierce ascetic who repeatedly brings the world to the brink of annihilation by dancing in fire. He is the negative force of the cosmos, destroying whatever he touches in order that it may be reincorporated into unity with the spirit of the cosmos. Anything that Siva touches is utterly annihilated and can never be reconstructed, raised, or reincarnated. In his true form, Siva is a man with four arms and three eyes, usually wearing a tiger skin and a snake collar.

**Role-playing Notes:** Though determined to destroy all of existence, Siva does not consider himself evil. He is merely attempting to return everything to unity with the cosmic spirit. He is an impersonal god who seldom answers prayers, but he occasionally sends his avatar to defend one of his temples.

**Statistics:** AL ne; WAL ne; AoC destruction; SY cobra head.

**Siva's Avatar (fighter 20, wizard 15)**

Siva's avatar takes the form of a very large, four armed man with three eyes. As he walks, the ground beneath his feet disappears. He can call upon the alteration school of magic for his spells.

| | | |
|---|---|---|
| Str 21 | Dex 18 | Con 18 |
| Int 19 Wis 19 | Cha 18 | |
| MV 18 | SZ 7' | MR 25% |
| AC -4 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 2d10 (sword) +9 |

**Special Att/Def:** Anything hit by the avatar's scimitar, or that touches the avatar, must save versus disintegration (items) or death (beings). Failure means the item or being has been disintegrated and cannot be reconstructed (raised or reincarnated). The avatar may use his extra arms to cast one spell per round, even while engaged in melee. His third eye shoots a beam of annihilation up to 100' that hits as a missile weapon and has the same effects as a blow from his scimitar.

**Duties of the Priesthood**

Priests of Siva are noted for their monthly fire dance. After scouring the countryside in search of sacrifices (which includes everything from furniture to living beings), the priests spend several hours dancing around a huge bonfire. They end the ceremony by throwing everything they have collected into the fire.

**Requirements:** AB standard; AL ne; WP any; AR a; SP all, combat, divination, elemental, necromantic, sun, weather; PW 1) immune to fire damage; TU control (upon reaching 10th level).

**Kali (intermediate god)**

Also known as the Black Mother, Kali is a strange and terrible goddess nearly as ancient as India itself. She is the embodiment of energy, both creative and destructive. In that she is a creator of life, she is similar to the mother goddesses of many cultures. But she also eats her own sons and destroys the life that she creates, and is almost unique in this aspect of her being. Kali radiates a peculiar *charm* (as spell) over men, and is beloved as the beautiful, horrible, life-giving, life-taking mother. Kali has the power to create living beings from non-animate matter, and the power to kill any creature with a mere thought. In her true form, Kali is a four-armed woman with red eyes, a skeletal face, and a blood-smeared body. She seldom wears any clothing but a skirt of severed hands.

**Role-playing Notes:** Kali delights in both killing and creation, for both are expressions of the essential energy she embodies. She is equally likely (5%) to send her avatar to aid a woman in childbirth or a murderer in danger. Omens from Kali often come in the forms of terrible visions or blissful dreams.

**Statistics:** AL ce; WAL ce; AoC life and death; SY skull.

**Kali's Avatar (fighter 16, thief 16)**

Kali's avatar is a beautiful, four-armed woman of dark complexion and voluptuous proportions. She is rarely seen during daylight.

| | | |
|---|---|---|
| Str 19 | Dex 19 | Con 18 |
| Int 18 | Wis 12 | Cha 19 |
| MV 15 | SZ 6' | MR 20% |
| AC -2 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d10 (sword) + 7 |

**Special Att/Def:** Any man kissing Kali's avatar falls under her complete and total domination — there is no saving throw. This effect lasts until the avatar is destroyed. If the avatar should attack while remaining undetected (either hidden or disguised), the victim suffers a -5 modifier to his surprise roll. One member of a surprised group will be singled out and must save versus death or be immediately strangled to death when the avatar slips a knotted cord around his throat. Anyone hit by Kali's sword must also save versus death or be killed.

**Duties of the Priesthood**

Kali's priests are all members of the secret, murderous thagna cult. They are all prominent and well respected members of their community who lead double lives, stealing out at night to prove their devotion to Kali by strangling innocent travelers with their knotted cords.

**Requirements:** AB standard, but must also meet requirements for thieves; AL ce; WP knotted cord, club, any bloodless weapon; AR g; SP all, charm, combat, creation, healing, necromantic; PW 1) move silently and hide in shadows as a ranger of the same level: 10) *turn invisible*: TU turn.

**Brihaspati (intermediate god)**

Brihaspati is the teacher of the gods, the lord of prayer, and the heavenly priest. He is wisdom incarnate, and it was he who taught Indra the arts of government so that he could lead the gods when the Aryans first entered India. In order to teach his fellow gods the virtues of secular life, he wrote a treatise on married life, and he personally guided the hand of the worldly priests who wrote ancient law code that bears his name. In his true form, Brihaspati has seven mouths, a set of sharp horns, a hundred wings, and is usually armed with both an axe and a bow.

**Role-playing Notes:** Brihaspati is primarily concerned with teaching men to live well and wisely. He often sends his avatars to act as advisors to worthy rajas. Brihaspati has also been known to send an avatar to particularly cruel or inept rajas, hoping to teach them the error of their ways. Omens from Brihaspati come in the form of sudden insights and realizations.

**Statistics:** AL lg; WAL lg; AoC wisdom, worship; S) quill and scroll.

**Brihaspati's Avatar (priest 18)**

Brihaspati's avatar takes the form of an ancient sage. He can draw upon any sphere for his spells. If attacked, the avatar will not defend himself, for he will only use his weapons in order to defend a mortal being who is under attack.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 19 | Wis 20 | Cha 18 |
| MV 15 | SZ 6' | MR 15% |
| AC 2 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d8 (axe) +6 |

**Special Att/Def:** Brihaspati's avatar carries a bow that fires arrows of brilliant light which render his targets blind for 1d10 days (save versus paralyzation to negate). While carrying his axe, Brihaspati cannot be hit by any creature with a Wisdom of less than 16.

**Duties of the Priesthood**

Brihaspati's priests serve as teachers or, when possible, noble advisors. They must uphold the laws of their community, even when those laws are created by evil men for evil purposes (though, in such cases, they are expected to use every legal means at their disposal to show the evil lawmakers the errors of their ways). They may only take up arms in the lawful defense of another being.

**Requirements:** AB standard; AL lg; WP axe, bow; AR a; SP all, charm, divination, healing, protection; PW 1) *know alignment*; 10) *foresight*; TU nil.

**Rudra (intermediate god)**

Rudra is the god of storms and disease, the bringer of death, and the malevolent deity who feeds on the corpses of those slain in battle. Because he has the power to cause disease, however, he also has the power to cure it — though he utilizes this ability far too rarely. Rudra is also a lord of the animals, with the ability to spread disease or vitality among them as well. He carries a large black bow which fires invisible arrows of disease. He has the power to create a storm at will. In his true form, Rudra is a red-skinned man with a blue neck.

**Role-playing Notes:** Rudra delights in spreading disease. When he is not terrorizing some part of India with a terrible storm, he is busily firing his invisible arrows of disease at hapless mortals. If properly worshipped, by sacrificing a cow upon waste land, Rudra may be persuaded not to fire his arrows at a particular community. Omens from Rudra often take the form of illness or an unexpected storm.

**Statistics:** AL ne; WAL ne; AoC storms, disease; SY black bow.

**Rudra's Avatar (thief 15, wizard 10)**

Rudra's avatar takes the form of a pariah with a terrible skin disease. He can call upon the alteration or illusion/phantasm schools of magic for his spells.

| | | |
|---|---|---|
| Str 18 | Dex 19 | Con 18 |
| Int 18 | Wis 16 | Cha 16 |
| MV 15 | SZ 7' | MR 15% |
| AC 2 | HD 15 | HP 120 |
| #AT 1 | THAC0 5 | Dmg 1d8 (sword) +2 |

**Special Att/Def:** Any being touching the avatar must successfully save versus disease or contract a rotting disease that permanently reduces the victim's Charisma and Constitution by 1d4 points per round. A cure disease will halt the disease, but will not restore lost Charisma or Constitution points. Rudra's avatar carries a bow which fires arrows causing the same effect.

**Duties of the Priesthood**

Unlike most priests, Rudra's clerics are seldom interested in invoking their deity. Instead, they spend most of their efforts in performing rites designed to sate their god so he will stay away and leave their homes alone.

**Requirements:** AB standard; AL ne or ng; WP bow, club; AR a; SP all, animal, divination, elemental, protection, weather; PW 5) immune to all magical or mundane diseases; 10) *cure disease*; TU turn.

**Puchan (intermediate god)**

Puchan is the god who guides, watching over travelers, ushering the dead to Yama's realm, leading men to wealth or away from trouble, and showing herdsmen where to find good pastures for their cattle. He also brings all things into proper relationship with one another, blessing marriages, protecting men from those would exploit them, and determining what shall be food and who shall be the one to eat it. As the protector of travelers, he often comes into conflict with Kali, whose priests prey on travelers in order to perform their bloody rites. In his true form, Puchan appears to be a normal man, often carrying a golden lance.

**Role-playing Notes:** Puchan is a beneficent god who tries to help mortals by setting them into the proper relationships with their environment. He is especially disturbed by Kali and her worshipers, whom he considers

twisted manifestations of the cosmic order. In areas plagued by Kali's sects, Puchan's avatar is often found begging for passage with a group of travelers that seems likely to be attacked by the thagnas.

**Statistics:** AL ng; WAL ng; AoC relationships; SY golden lance.

**Puchan's Avatar (fighter 15, wizard 10)**

Puchan's avatar takes the form of an aged, itinerant traveler. He can draw upon the enchantment/charm, alteration, and greater divination schools for his spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 16 |
| MV 15 | SZ 6' | MR 15 % |
| AC 2 | HD 15 | HP 120 |
| #AT 2 | THAC0 5 | Dmg 1d8 + 5 (lance) + 4 |

**Special Att/Def:** Puchan's avatar can only be hit by magic or magical weapons. His golden lance always hits its target, and returns to his hand on the same round if he throws it.

**Duties of the Priesthood**

Puchan's priests are often called upon to perform marriages, since it is known that Puchan himself will watch over marriages performed by his clergy. They are also asked to perform funeral rites, and are consulted before herdsmen move their cows. One of the most important duties of Puchan's priests, however, remains highly secret: they are often the ones who organize resistance against unjust nobles and rajas.

**Requirements:** AB standard; AL ng; WP lance, bow, club; AR a; SP all, charm, combat, creation, divination, healing, protection, summoning; PW 5) *find the path*; 10) *raise dead*; TU turn.

**Ratri (lesser god)**

Ratri is the magnificent queen of the night. Although she is the sovereign of darkness and all things that abide in it, she is not a personification of night. Rather, she rules the darkness as a shepherd rules his herd, by watching over it without being a part of it. Ratri has the power to see anything that occurs under cover of night, and to create or dispel darkness at will. In her true form, she is the silhouette of a voluptuous woman. She has an uncountable number of eyes, which shine down on the earth as the stars.

**Role-playing Notes:** Every night, Ratri parts the clouds of darkness so that Ushas may find her way to the eastern sky and open its gates for Surya, lord of the dawn. As this action might suggest, the Queen of Darkness, Ratri is not necessarily the patroness of thieves, robbers, and murderers. When they pray to her and perform the necessary sacrifices, she sometimes helps them by concealing their activities. But she is also a fickle goddess, and if she is even slightly offended by a denizen of the night, she may cast a revealing light on his nefarious actions. For this reason, she is as much feared by thieves, scoundrels, and murderers as she is venerated. Ratri never sends omens.

**Statistics:** AL cn; WAL any; AoC night and darkness; silhouette of a woman.

**Ratri's Avatar (thief 14, bard 10)**

Ratri's avatar takes the form of a beautiful woman with black hair and eyes and a swarthy complexion. She can draw upon any school of magic for her spells and always carries a golden sitar.

| | | |
|---|---|---|
| Str 18 | Dex 19 | Con 16 |
| Int 16 | Wis 16 | Cha 18 |
| MV 15 | SZ 6' | MR 10% |
| AC 2 | HD 14 | HP 112 |
| #AT 1 | THAC0 7 | Dmg 1d6 (sword) +2 |

**Special Att/Def:** Ratri's avatar can create or dispel darkness within a 50' radius of herself. Any being struck by her sword must save versus paralyzation or be permanently blinded. She can assume the form of an incorporeal shadow at will, once per day When playing her sitar, Ratri can *charm* any creature (save versus spells to negate).

**Duties of the Priesthood**

Priests of Ratri must sleep during the day and conduct normal activities at night.

**Requirements:** AB standard; AL any chaotic; WP short sword, dagger, sling; AR b; SP all, astral, charm, divination, guardian, healing, necromantic, protection, summoning; PW 1) infravision (60'); 10) *darkness, 15' radius* and *light*; TU nil.

**Vayu (lesser god)**

Vayu is the god of the winds, sometimes gentle and life-giving, sometimes terrible and fierce. He was born of the last breath of Purusa, a primeval giant whom the gods sacrificed to create the earth.

Vayu's most notable power is the ability to give life to any item. Items that are firmly attached to the ground, such as a flagpole, receive only plant-like intelligence and can do little except grow. Items that can be moved without uprooting the earth, such as a boulder, receive animal intelligence. Only items that previously had the capacity for logical thought, such as a human skeleton, receive sentient abilities. Vayu also has the ability to create cyclones and typhoons with winds up to 150 mph. Live beings caught in such winds must save versus breath weapon every other round. Failure indicates that they have been hit by flying debris (1d6 damage for every 10 mph of wind speed). Vayu has no form and can only be sensed indirectly, such as when he brushes past one's skin or whistles through the treetops.

**Role-playing Notes:** Vayu is a fickle god, bringing moisture and breathing life into the earth one moment, and in the next wreaking terrible destruction with his angry winds. He sometimes shows special restraint when a village pays him the proper worship.

**Statistics:** AL cn; WAL cn; AoC wind, life, destruction; SY a sapling bending in the wind.

**Vayu's Avatar (wizard 14)**

Vayu's avatar is a flying lizard, similar in appearance to a small, gray dragon. He can call upon the alteration and invocation/evocation schools of magic for his spells.

| | | |

| #AT 3 | THAC0 5 | Dmg 1d8/1d8/2d10 |

**Special Att/Def:** Vayu's avatar can turn invisible at will. He can also breathe winds of 100 mph up to a range of 100'. Anyone caught in such an attack must save versus breath weapon or lose his footing.

**Duties of the Priesthood**

Priests of Vayu must live in homes that have at least one opening exposed to the wind on all sides. Their duties consist mostly of performing the proper rites so that Vayu will look kindly upon their village.

**Requirements:** AB standard; AL cn; WP bow and arrow, blowgun (with poison), whip, spear; AR a; SP all, astral, creation, elemental, healing, plant, protection, weather; PW 10) *breath of life* (animate any non-living item for 1d10 turns, or use as a *raise dead* spell on animal and human life); TU turn.

**Tvashtri (demigod)**

In the early days of the Vedic Age, Tvashtri was a priest of such power that he dared to create a son whom he hoped would deprive Indra of his position as king of the gods. When Indra jealously destroyed this son, Tvashtri created a monster so powerful that Indra had to resort to trickery to defeat it. As this story illustrates, Tvashtri is a gifted inventor, and it is no wonder that he eventually earned the gift of immortality (either through learning its secret or as a gift of the gods). Now known as Tvashtri the Artificer, he is the patron of artisans, architects, and inventors. Tvashtri spends most of his time creating the weapons of the gods, many of which he enchants so that they will never do him any harm. In his true form, Tvashtri appears to be nothing more than an ordinary man.

**Role-playing Notes:** Tvashtri loves inventions, and there is a 5% chance that he will appear to lend his aid to anybody of good alignment who is attempting to build a particularly interesting or difficult item.

**Statistics:** AL cg; WAL cg; AoC inventions and creation; SY pinwheel fan.

**Tvashtri's Avatar (wizard 20, priest 15)**

Tvashtri's avatar looks much like Tvashtri himself. He can call upon any sphere or school of magic for his spells.

| | | |
|---|---|---|
| Str 13 | Dex 18 | Con 18 |
| Int 21 | Wis 20 | Cha 17 |
| MV 15 | SZ 6' | MR 50% |
| AC -3 | HD 11 | HP 70 |
| #AT 1 | THAC0 9 | Dmg 4d4 (dagger) |

**Special Att/Def:** Whenever he roams the earth, Tvashtri's avatar wears a golden robe which gives him an AC of -3. He carries a long dagger with a triangular blade that causes permanent paralyzation in any being it strikes (save versus paralyzation to negate). Finally, he also carries a pinwheel that negates magic within 100' when he blows on it (as an *anti-magic shell*). Tvashtri can heal up to 3d10 points of damage each round by grabbing the air and using it to repair his injuries.

**Duties of the Priesthood**

Tvashtri's priests often serve their villages or companions as engineers. If they do not show resourcefulness in solving their problems, Tvashtri may express his displeasure by refusing to grant them more spells.

**Requirements:** AB standard, but Int of 16 and Wis of 15; AL cg; WP any, but must be invented by the priest himself; AR c; SP all, combat, creation, divination, elemental, guardian, healing, plant, protection, summoning; PW 10) *enchant an item* with a saving throw modifier of +4 (usable once per year); TU nil.

# Japanese Mythology

Japan is a land of contradictions. It is a land of tradition and custom, but it is a relative newcomer to the ranks of civilization (its first notable court was created 2,000 years after e first Chinese dynasty). While the same Imperial family has led Japan throughout its fifteen centuries of recorded history, the Emperor has rarely enjoyed more than a nominal control over the affairs of the country. It is a land of incredible beauty and tranquillity that (before the 20th Century) suffered only one serious attempt at invasion, yet Japan's fierce samurai warriors are well-known for practicing the grimmest kind of warfare.

Japan lies off the east coast of Asia, a chain of volcanic islands somewhat larger in area than Great Britain. It is isolated from its nearest neighbor, Korea, by 100 miles of army sea so difficult and dangerous to cross that it proved the undoing of the only invasion fleet to threaten its shores in ancient times. The islands are mostly mountainous, but there are many fertile plains and flat-bottomed river valleys in which to cultivate crops. It has a temperate climate and dependable rainfall that make it a wonderful place to live. Yet it also lies in the middle of a common hurricane path, and is savaged at least once a year by tremendously destructive typhoons. And, being built upon a chain of volcanic islands, large parts are often shaken by tremendous earthquakes or subjected to a fiery rain of molten rock and ash.

In 500 BC, while Chinese culture was flourishing on the mainland, these beautiful and violent islands were inhabited by two groups of non-Mongoloid tribesmen, one of which (the Ainu) had not yet emerged from the Stone Age. During the Second and First Centuries BC, Mongoloid peoples ventured across the Korea Strait in large numbers, bringing with them technological and agricultural knowledge (such as crude iron forging and rice-growing). They mixed with the previous inhabitants, forming the Yayoi culture.

The Yayoi culture was one of gentle, agricultural barbarians. The islands were divided into hundreds of small states led by female sorceresses. (One such ruler, a woman named Pimiko, was served inside her fortified palace by one male and 1,000 female attendants.) Like most early farming communities, they probably practiced a form of nature worship, deifying the sun, moon, rain, especially impressive mountains, etc. They practiced a form of divination, prophesying the future from baked bones.

In about 250 AD, fierce warlike horsemen (probably of same stock as Attila and his Huns) crossed the Korea Strait. Wearing iron armor and wielding finely crafted iron swords, they quickly conquered the gentle Yayoi culture and installed themselves as the local aristocracy. It was not many generations before one of their families, perhaps in alliance with native priests, won precedence over the others and established itself as the Imperial Family. The descendants of this shadowy prehistoric family still reign over Japan today.

**The Imperial Legacy**

According to legend, the first earthly member of this family was the grandson of Amaterasu, the sun goddess (it is in her honor that Japan is called the "Land of the Rising Sun"). Bearing three heavenly symbols (the curved jewel, the sword, and the mirror), this "august grandchild" descended to Kyushu (the westernmost of the four main islands). The first, semi-legendary emperor, Jimmu Tenno, was descended from this divine grandchild. In 400 AD, this early Japanese empire had stabilized as far east as the Yamato province (on the largest island, Honshu, near present day Osaka).

By then, the emperor was already cast in the role he was to fulfill for most of Japan's history — that of a divine leader, but more of religious symbol than the head of the government. The true ruler was an official similar to a prime minister, who heavily influenced (if not actually dictated) all of the emperor's pronouncements. In addition, when an emperor died, this minister often choose which prince (always from the Imperial family) became the next emperor — and it was not unusual for him to have his choice's potential rivals assassinated as insurance against future insurrection.

Although individual emperors might be dethroned or even murdered, the royal family was never displaced. Because of the line's religious significance, only an authentic descendant of Jimmu Tennu (and therefore the sun goddess Amaterasu) could be become emperor and intercede with heaven on behalf of men. That is why, after more than 1,500 years, the current emperor of Japan belongs to the same family as the first.

Japan at this time was far from a settled land. Despite the divinity of the emperor, its political organization was little more than a loosely knit assemblage of clans tolerating the supremacy of one member. Their technology was still not as advanced as that of China, there was no written language, communication was so poor that imperial influence outside of the Yamato region was tenuous at best, and much of the country was plagued by outlaws, pirates, or unsubdued Ainu.

Much of that was about to change. In 552 AD, the Korean kingdom of Paikche sent an emissary to Japan, opening the way for Chinese influence to enter the Land of the Rising Sun. Over the next two hundred and fifty years, Japan imported many Chinese innovations, such as writing, technology, and theories of centralized government. They adapted these innovations to the unique conditions of Japan, more often than not improving them in the process. It was also during this time that Buddhism, already a thousand years old, was introduced, and that Japan's native religion acquired its name, Shinto.

During the next five hundred years, Japan advanced, both culturally and technologically, at a remarkable pace. They invented an alphabet more suited to their language than Chinese, created some of the most beautiful poetry

and other literature that the world has ever known, and took the art of sword-making to heights that western artisans could not equal until many centuries later.

**The Rise of the Samurai**

Despite Japan's advances in culture and technology, they were not able to permanently consolidate a centralized government. The country remained essentially a land of clans, with powerful families vying savagely for the all-important position that allowed them to exert their influence over the emperor.

Then, in the 10th Century AD, the imperial government began to suffer a loss of tax revenues through its practice of granting large tracts of tax-free land to monasteries and powerful nobles. Eventually, the ruling family of the time, the Fujiwara, grew so weak that they had to rely upon alliances with powerful provincial families to stabilize the government — and even then, they were far from successful.

The situation grew worse when the Emperor Go Sanjo attempted to assert the power of the throne. During his four year reign, he managed to oust the Fujiwara family from control. Then, in order to free himself from the time-consuming religious ceremonies of the emperor, he abdicated in favor of his son. As the Retired Emperor, he was free to devote his energies to the real business of running the empire: politics and government.

Unfortunately, Go Sanjo never had the chance to unify the disparate clans of Japan. He died a year after becoming the Retired Emperor, and his son abdicated a short time later. A long and bitter era of bloodshed and almost incessant warfare followed as the two strongest clans, the Minamoto and Taira, vied for power. It was during this period that the warrior became respected and the samurai evolved as a distinct social class.

In many respects, the samurai was outwardly similar to the knights of medieval Europe. He was a gentleman warrior who often fought from horseback and who owed allegiance to a lord of higher rank. But there the semblance ends. Unlike European knights, the samurai were not inspired by religious fervor, chivalric ideals, or the glorification of womanhood. Instead, they were fanatically loyal to their overlords, not allowing love of family, duty to parents, or even fear of death to stand before their duty to their feudal leader.

Eventually, the samurai would acquire a code and a set of characteristics to put it widely apart from the masses of Japanese. But, as the Minamoto and Taira families fought for dominance, the Bushido was not yet a code, and the samurai were little more than fearless, merciless warriors fighting for the glory of their leader.

The conflict between the great Minamoto and Taira families continued for nearly a hundred years. In 1156, the conflict broke into an all-out war that lasted until 1185, when Minamoto Yoritomo crushed the Taira family for good. Yoritomo then began consolidating his power and, in 1192, was named the first shogun (military dictator) of Japan. For the first time, Japan had a strong central government and, under Yoritomo's leadership, it entered a period of relative unification and order.

**Shinto**

By the 12th Century, Japanese society had been heavily influenced by Buddhism. However, Buddhist mythology does not lend itself well to AD&D campaigns. Therefore, *Legends & Lore* does not go to any length in describing Buddhism, its history, or mythology. Instead, in the many countries where Buddhism has become influential, *Legends & Lore* describes, to the degree possible, the mythology of the country before the arrival of Buddhism. In Japan, the native mythology is largely derived from the beliefs surrounding Shintoism.

Shinto is not an easy religion for outsiders to understand, for it relies on spiritual insight and feeling rather than disciplined thought and learning. Were a non-practitioner to attempt to explain it in the space of a few paragraphs — or even pages — he would be doomed to failure — it is beyond the scope of *Legends & Lore*. Instead, this book presents an adjusted, much simplified version designed specifically for the purpose of adding flavor to a fantasy role-playing campaign in Japan or in a Japanese-like setting. It is in no way an examination of the true religion, much less a judgment or comment upon its validity. With that precaution in mind, the information that follows should prove helpful in adding flavor to your campaign.

Shinto is not a Japanese word, but was coined in the sixth century AD when Buddhism entered Japan. Literally, it means "the way of good spirits," which is not — at least to most westerners — a very accurate description of the religion. Shintoism is a naturalistic religion in which the forces of nature and, to a lesser extent, ancestors are deified.

These forces are called "kami," which is an extremely difficult concept to translate accurately into English. Basically, for our purposes, kami is somewhere between a "god" and a "spirit." It might be described as meaning "the beings more highly placed," "the venerated," or as "the awe-inspiring." Anything which deserves to be revered or dreaded for its extraordinary powers (especially those possessing a magical nature) deserves to be called "kami." A god, a majestic mountain, and the august personage of the emperor are all "kami." Not surprisingly, there are a lot of kamis — eight million of them, to be precise.

For our purposes, only animals of a magical nature or origin would have a kami. Thus, dragons, unicorns, and lycanthropes would all have a kami; bears, griffins, and kobolds would not. If in doubt, consider whether or not the creature has any magical abilities or magic resistance; generally, those that do have kamis, the others don't.

On earth, kamis can be found in anything, from beautiful waterfalls to majestic mountains to oddly shaped rocks. All are worshipped as fervently as other cultures worship their gods, and when walking through Japan, one is likely to come upon a small shrine to one of these kamis at any time — beside a quiet pool, at the base of a great cliff, or deep within a peaceful glade.

Most of the kamis described in *Legends & Lore* are of a different type, however. These kamis correspond more closely to conventional concepts of deities. They are the gods of the sun and moon, the beings responsible for storms and fertility, the ones who created the land and populated it with people.

For the largest part, these kami, the "Ama-Tsu-Kami" or kami of the heavens, reside "in the sky" (any of the Seven Heavens). At one time, earth was linked to the sky by a bridge, the Ama no Hashidate, which allowed the gods free and easy access to the earth. Unfortunately, this bridge has long since collapsed, forcing the gods to send their avatars when they wish to visit the world of men.

Under the earth lies the kingdom of the dead, the "Land of Darkness" or Yomi-tsu-kuni. It can be reached via a winding road that begins in the Izumo province and leads underground, or via the bottomless abyss which engulfs all the waters of the sea. It is pictured as an ugly, foul land filled with the repulsive corpses of the dead.

According to mythology, a generation of unnamed divinities were born at the same time as the heaven and the earth. They were followed by several more unnamed generations of divinities, until finally the seventh generation, containing Izanagi and Izanami, was born. Izanagi and Izanami created the islands of Japan, then went down to live on them. There, in many different manners, they began giving birth to many other kamis.

This process continued until Izanami gave birth to the god of fire, a difficult delivery which resulted in her death. After Izanami went to the Land of Darkness, the other kamis continued to procreate. Nevertheless, Izanagi missed his wife and went to retrieve her, but Izanami was furious when he saw her in her decayed form and chased him away. Afterwards, as Izanagi washed himself, he created the deities of the sea and, when he washed his left eye, Amaterasu, the goddess of the sun and the ancestor of Japanese emperors.

After this, of course, all the kamis engaged in a great many adventures — far too numerous to recount here.

**New Spells**

**Kami Absorption (Conjuration/Summoning)**

Fifth Level Priest

Sphere: Summoning
Range: Touch
Components: V, S, M
Duration: 1 round/level of caster
Casting Time: 1 round
Area of Effect: One individual
Saving Throw: none

*Kami absorption* allows the priest to invest an individual (himself or another) with the kami of another object or being. Kami may only be absorbed from something that has it, such as a supernatural beast, an awe-inspiring mountain, an ancient tree, magic weapons, or a large, strangely shaped rock. Normal objects, such small trees, common boulders, and non-magical monsters or do not have kamis. (See the previous section on "Shinto" for an explanation of kami.)

When an individual is invested with the kami of another object or being, he absorbs the essential nature of the object. This absorption manifests itself outwardly in a temporary + 6 modifier to one (and only one) of these statistics: Str, Int, Wis, Dex, Con, Cha, THAC0, AC, or MV. The statistic modified corresponds to the nature of the kami absorbed. Here are a few examples: mountain - Str; dragon - Int; ki-rin - Wis; stream - Dex; tree - Con; flower - Cha; snake - THAC0; rock - AC; wind - MV.

It is readily apparent that these correlations are extremely subjective. The DM's judgment is final in determining which statistic a particular kami modifies. However, he should weigh his decision in favor of any conceptions the player may have about which statistic a kami might modify.

The effects of this spell last only for its duration. The material component required is the object which possesses the kami in the first place (the object is not harmed by the spell). This spell can only be cast upon willing targets, and will not absorb kami from any avatar or god.

**New Magic Items**

**The Emperor's Crown**

This magical crown is decorated with a cluster of perfect gemstones sent to earth by Amaterasu with her grandson. When worn, it acts as a *helm of telepathy, teleportation*, and *comprehending languages*. The wearer automatically knows when someone in his presence is lying. The crown bestows an AC of 0, and allows the wearer to ask one question per week of Amaterasu (she responds honestly and kindly only to true descendants of the Imperial family). Although the crown continues to function if worn by someone other than the rightful Emperor, Amaterasu is sure to punish a thief by sending her avatar after him.

**The Emperor's Sword**

This samurai sword is a *sword of dancing, life stealing*, and *sharpness + 5*. It also becomes a *cursed berserking sword* in the hands of anyone but a member of the Imperial family.

**The Emperor's Mirror**

The holder of this golden mirror can hear and see into any room he has ever been in. It allows him to examine the entire room at once, or to inspect even the smallest items in close detail. If the holder wishes, he can speak to any beings in the room, or he may keep his spying a secret. All of these powers function at will. Once per week, the holder may also *teleport* any living being visible in the mirror to his location. The victim is allowed a saving throw to negate this effect, but it may be done against his will. When anyone but a legitimate member of the Imperial family uses the mirror, there is a 5% chance that Amaterasu will send her avatar through the mirror to punish the individual.

**Izangi and Izanami (greater gods)**

Izanami and Izanagi are the seventh generation descendants of the three divinities that came into being with the heavens and the earth. Of these early deities, they are the most important for men, for they were assigned the task of solidifying the earth. Izanagi, the male god, stood on the floating bridge of heaven and stirred the ocean with his lance until the water began to congeal and the island of Onokoro was formed.

Here, Izanagi and his wife, Izanami, made their home and went about the business of populating the world. At first, they produced a monster, then an island. Finally, however, they began producing more gods. Unfortunately, Izanami died while giving birth to the god of fire. The morose Izanagi went to the Land of Darkness to visit her, but was bitterly chased away after Izanami grew angry at him for seeing her in a state of decay. Back on earth, Izanagi produced several more deities, including the sun goddess Amaterasu, as he washed away the residue of the underworld.

Working together, Izanagi and Izanami have the power to create anything. In their true forms, they appear to be a statuesque man and woman of great beauty (though Izanami will appear dead and decayed if caught unawares).

**Role-playing Notes:** These two rarely involve themselves in the affairs of men.

**Statistics:** AL In; WAL any; AoC creation; SY rainbow.

**Izanagi's and Izanami's Avatars (wizard 20 and priest 20)**

Theses avatars appear to be a handsome man and beautiful woman of great size. Izanagi can draw upon any school of magic for his spells, and Izanami can draw upon any sphere for hers.

| | | |
|---|---|---|
| Str 22 | Dex 18 | Con 19 |
| Int 19 | Wis 19 | Cha 19 |
| MV 22 | SZ 10' | MR 50% |
| AC 0 | HD 20 | HP 176 |
| #AT 1 | THAC0 1 | Dmg 1d6 (lance) +10 |

**Special Att/Def:** Victims hit by Izanagi's lance must save versus death or their blood coagulates in their veins and kills them. Izanami can become a corpse, causing all who see her to save versus petrification or flee for 1d10 turns.

**Duties of the Priesthood**

Priests of Izanagi and/or Izanami dedicate themselves to the caretaking of the beautiful land their deities created.

**Requirements:** AB standard; AL ln; WP lance, spear; AR d; SP all, animal, creation, elemental, healing, necromantic; PW nil; TU turn.

**Amaterasu (intermediate god)**

Amaterasu was born when Izanagi washed his left eye after returning from the Land of the Dead. She is the goddess of the sun and rules the Plane of Heaven. Through one of her grandsons, the Imperial family is descended directly from her.

In addition to being the goddess of the sun, Amaterasu is the weaver of the gods' robes. She has the power to light the world (or any part of it), to make plants grow, to cure diseases in men, or to destroy anything she wishes with her brilliance. In her true form, Amaterasu is beautiful woman.

**Role-playing Notes:** Amaterasu is the patron goddess of Japan and watches over its welfare carefully. If the land is seriously threatened, she may beseech aid from her fellow gods in order to protect it. She also watches over the Imperial family, and will never aid those who bring harm to one of its members. If the existence of the family itself is threatened, she will not hesitate send her avatar to aid it. Omens from Amaterasu take the form of solar eclipses.

**Statistics:** AL lg; WAL any good; AoC light; SY sun.

**Amaterasu's Avatar (priest 19)**

Amaterasu's avatar is a beautiful woman with a radiant smile. She can draw upon the all, charm, creation, elemental, and sun spheres for her spells.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 18 | SZ 6' | MR 40% |
| AC -2 | HD 19 | HP 152 |
| #AT 1 | THAC0 1 | Dmg 1d6 (hand) +8 |

**Special Att/Def:** From her eyes, Amaterasu's avatar can fire blinding heat rays doing 10d10 points of damage. She is immune to any heat, cold, or fire-based attacks, as she is to any light or darkness spell.

**Duties of the Priesthood**

Priests of Amaterasu must dedicate themselves to the emperor and follow his every command. If they ever form an alliance with an enemy of the emperor's, they immediately and irrevocably lose their powers.

**Requirements:** AB standard; AL any lawful; WP spear, lance, mace; AR a; SP all, astral, charm, creation, divination, elemental, healing, protection, sun; PW 3) *light*; 10) *fly* at will, MV = 15; TU turn.

**Tsuki-Yomi (intermediate god)**

Tsuki-Yomi was born when Izanagi washed his right eye after returning from the Land of the Dead. He is the god of the moon, whose function it is to count the passing of the months. In China, a hare is often shown in the moon. and this sign has been incorporated into Tsuki-Yomi's symbol, along with a pun. In Japanese, Mochi-zuki means two things: the full moon, and to pound rice for cakes. Therefore, Tsuki-Yomi's symbol is a hare in the moon, pounding rice for cakes.

As the counter of the months, Tsuki-Yomi has the power to control time, making it pass more slowly in one place than in another, stopping it altogether, or speeding it up. He also has the power to light the darkness. In his true form, Tsuki-Yomi is a handsome man.

**Role-playing Notes:** Tsuki-Yomi's primary concern is the orderly progression of time, so that seasons change and crops mature properly. He is generally benevolent to those who rely upon and respect the cycle of nature. If his aid is requested in defending a just, established social order, there is a 5% chance that he will answer by sending his avatar. When sending omens, Tsuki-Yomi sometimes manifests the handsome blue face of his avatar in an expensive mirror.

**Statistics:** AL ng; WAL any good; AoC time, moon; SY hare in the moon, pounding rice in a mortar.

**Tsukl-Yomi's Avatar (wizard 18, fighter 14)**

Tsuki-Yomi's avatar is a massively built man with blue skin. He can draw upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 19 | Wis 16 | Cha 18 |
| MV 18 | SZ 6' | MR 35% |
| AC -2 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8 (sword) + 7 |

**Special Att/Def:** Tsuki-Yomi's avatar can employ *telekinesis* on any item of up to 500 gp weight. Victims of this power may make a saving throw versus their Dexterity score to retain their grip on an object grabbed by the avatar. He may also fly at will with a movement rate equal to his normal walking speed.

**Duties of the Priesthood**

Priests of Tsuki-Yomi must always have at least one mirror. During the full moon, they must spend the entire night looking at the moon in this mirror and praying or lose their spells until the next full moon.

**Requirements:** AB standard; AL any good; WP polearms; AR a; SP charm, creation, divination, healing, necromantic, sun; PW 1) infravision (60'); 15) *stop time* (as *temporal stasis* spell, save that the caster is the only creature within 20' that is not affected; lasts 1d4 of the caster's rounds); TU turn.

**Hachiman (intermediate god)**

Hachiman was born Ojin, son of the Empress Jingo. According to legend, Empress Jingo became pregnant while leading a military expedition against Korea. In order to delay the child's birth, she swallowed a rock. It is no wonder that, born such a woman, Ojin grew up to become a cunning and mighty warrior in his own right. In fact, his victories were so great that the Ama-Tsu-Kami granted him immortal status and made him the god of war. Hachiman always knows the location, strength, and readiness of any army. He also has that power to read the thoughts of any military commander. In his true form, Hachiman is a splendidly armored warrior.

**Role-playing Notes:** When a battle occurs, Hachiman is always watching. There is a 5% chance that he will send his avatar to rescue any warrior who does not flee when out numbered by more than four-to-one. Before a battle, any commander who has performed constant devotions to Hachiman stands a 5% chance of suddenly discovering that he "knows" the enemy's strength, location, and plan of attack. Hachiman hates cowardice in

combat and any warrior exhibiting a fear of death suffers a permanent -1 modifier to his THAC0. Hachiman does not send omens.

**Statistics:** AL ln; WAL any; AoC war; SY samurai sword.

**Hachiman's Avatar (fighter 20)**

Hachiman's avatar takes the form of a well-armed samurai. He rides a huge black horse.

| | | |
|---|---|---|
| Str 21 | Dex 18 | Con 18 |
| Int 18 | Wis 16 | Cha 18 |
| MV 15 | SZ 7' | MR 25% |
| AC -3 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 1d8 + 5 (sword) + 9 |

**Special Att/Def:** Hachiman's avatar wields a *sword of sharpness +5*. He is not affected by any spell of 5th level or less and carries a bow that never misses its target and fires up to 1,000 yards.

**Duties of the Priesthood**

Priests of Hachiman are professional soldiers. They must always be prepared to fight for their lord, can never shirk from battle, and must be in the first rank when battle is joined.

**Requirements:** AB same as for a warrior; AL any; WP swords, bow and arrows, dagger, polearm; AR a; SP all, combat, divination, healing, weather; PW 1) use THAC0 and saving throw tables of warrior; 10) favorite sword is given a kami, making it a + 3 weapon; TU nil.

**Susanoo (intermediate god)**

Susanoo is the god of storms. He was born when Izanagi washed his nose after returning from the Land of Darkness. Susanoo immediately began causing trouble, pestering his father for permission to go to the Land of Darkness and visit his mother. Eventually, Izanagi grew tired of these petitions and sent his son away. So Susanoo went to see his sister Amaterasu in the heavens, playing such a cruel trick on her that she rushed into a cave and hid, depriving the world of light. In punishment for his terrible acts, the other gods shaved Susanoo's beard, pulled out his fingernails, and ejected him from the heavens. Susanoo has the power to deprive any being of flight for up to one week. He can also send a 10d10 point *lightning bolt* to strike any being on earth. In his true form, Susanoo is a beardless man with a fierce aspect and no fingernails.

**Role-playing Notes:** Susanoo is a very unpredictable god. Sometimes, when he creates storms, the result is not so terrible, but on other occasions, he savages the land from one end to the other, ripping up trees, destroying homes, and flooding crops. He sometimes sends his lightning bolts to strike down those who have offended him. Sometimes, in fact, he sends his lightning bolts to strike someone down for no reason at all.

**Statistics:** AL cn; WAL any chaotic; AoC storms; SY lightning bolt.

**Susanoo's Avatar (priest 16, fighter 14)**

Susanoo's Avatar takes the form of a giant, ill-kept warrior. He can draw upon the elemental, sun, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 18/00 | Dex 19 | Con 19 |
| Int 16 | Wis 12 | Cha 17 |
| MV 20 | SZ 8' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 3 | Dmg 1d8 (sword) +6 |

**Special Att/Def:** Any being struck by Susanoo's blue sword suffers 2d10 lightning damage (save for half).

**Duties of the Priesthood**

Priests of Susanoo must always weather fierce storms outside of shelter. They tend to be moody, unpredictable, and unreliable. Despite these handicaps, they often find temporary work with farmers, using their weather controlling abilities to safeguard crops — usually for a good price.

**Requirements:** AB standard; AL any chaotic; WP spear, polearm, bow and arrow; AR e; SP all, combat, creation, divination, elemental, sun, weather; PW 10) *quiet storm* (reduce winds by 10 mph/level, and the amount of rain by 1"/level); TU turn.

**Raiden (intermediate god)**

Raiden is the god of thunder and the patron of fletchers. A constant companion of Susanoo's, he loves nothing better than beating his drums while the storm god rages. When he wishes, he can beat these drums so loudly that they act as *drums of panic*. Raiden is fond of eating human flesh, and receives a meal any time a man is slain by

an arrow. He can send an 8d10 lightning bolt to attack any being on earth. In his true form, Raiden has a horned, grotesque head and long, vicious looking claws.

**Role-playing Notes:** Raiden is a rather petty and jealous god. If not properly venerated, he will convince Susanoo to unleash a terrible storm on the village so that he can beat his drums and frighten the people. As the patron of fletchers, he grants every arrow-maker the power to create 10 arrows of slaying during his lifetime. The Fletcher never knows when he has created such a weapon, but does realize that he has been unusually successful in creating the arrow. Omens from Raiden take the form of dry thunder, arrow shaped clouds, and lightning bolts.

**Statistics:** AL ce; WAL any chaotic; AoC thunder, arrow-making; SY black mace with crossed lightning bolts.

**Raiden's Avatar (fighter 16, priest 14)**

Raiden's avatar takes the form of a swarthy-skinned brute with a deformed face. He can call upon the elemental and weather spheres for his spells.

| | | |
|---|---|---|
| Str 21 | Dex 18 | Con 18 |
| Int 16 | Wis 15 | Cha 18 |
| MV 18 | SZ 7' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 3 | Dmg 1d6 (mace) + 9 |

**Special Att/Def:** Any being hit by the avatar's mace suffers 3d10 lightning damage (save for half). When in battle, a fierce wind storm always rages around the avatar, preventing any non-magical missile weapons from striking him.

**Duties of the Priesthood**

Priests of Raiden must keep their god appeased so that he doesn't harass their village. Raiden especially likes to see them become ronin (mercenaries), as he does not care much for loyalty or established order.

**Requirements:** AB standard; AL any chaotic; WP spear, lance, polearm, spiked mace; AR a; SP all, combat, elemental, healing, necromantic, summoning, weather; PW 1) use THAC0 tables of warriors; TU nil.

**O-Kuni-Nushi (intermediate god)**

The son of Susanoo, O-Kuni-Nushi is the god of medicine, sorcery, master of the land, and patron of heroes. He has had a great many adventures, and has always confronted danger bravely and with a certain amount of cunning. He is able to identify and converse with any kami, and he has the power to cure any living animal of disease or completely heal it of its wounds. As master of the land, O-Kuni-Nushi can speak with any living animal. The fact that he often uses his powers to heal injured animals has earned him the undying loyalty of all natural creatures. They will do as he commands, even if it means death. In his true form, O-Kuni-Nushi is a samurai with a quiet, gentle manner and a ready smile.

**Role-playing Notes:** O-Kuni-Nushi has a special fondness for heroes of good alignment. When such a hero is in grave danger, there is a 1% chance per level that O-Kuni-Nushi will send his avatar to aid the hero. He does not take kindly to those that are unnecessarily cruel to animals, and such individuals will find that they heal at only half the normal rate (even when a spell such as *cure light wounds* or *heal* is used upon them). Omens from O-Kuni-Nushi are usually delivered by a talking animal.

**Statistics:** AL lg; WAL any good; AoC medicine, sorcery, the land; SY none.

**O-Kuni-Nushl's Avatar (druid 16, wizard 16)**

O-Kuni-Nushi's avatar wears the trappings of a samurai, but behaves as a druid. He can call upon the all, animal, divination, elemental, healing, necromantic, plant, and weather spheres for his clerical spells. He can call upon any school of magic for his wizard spells.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 17 | SZ 6' | MR 25% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 3 | Dmg 1d6 +5 (staff) +6 |

**Special Att/Def:** Any being struck by the avatar's staff must make a Strength check or fall to the ground. The avatar can summon and control 1-4 4 HD animals each round.

**Duties of the Priesthood**

O-Kuni-Nushi's priests must be great adventurers, and must always be kind to animals. They may not eat meat.

**Requirements:** AB standard, but must also meet requirements for wizards; AL any good; WP staff, club, mace, sword; AR c; SP all, animal, divination, elemental, healing, plant, weather; PW 5) *charm animal*; 12) cast wizard spells from one school of player's choice; TU turn.

**Ama-Tsu-Mara (intermediate god)**

Ama-Tsu-Mara is the god of blacksmiths (and weapon forgers). He has the power to create raw materials, such as iron ingots, charcoal, and leather, out of thin air. Using these materials, Ama-Tsu-Mara can forge any type of normal weapon in a single hour. Magical weapons take longer: one day for each power and for each +1 modifier. Any magical weapon forged by Ama-Tsu-Mara possesses a kami, which means it is automatically intelligent (see the rules for creating intelligent weapons in the *Dungeon Master's Guide*). In his true form, Ama-Tsu-Mara is a huge, manlike being with one eye located in the center of his forehead.

**Role-playing Notes:** Ama-Tsu-Mara favors blacksmiths and weapons forgers. Any time one of them is threatened, there is a 5% chance that he sends his avatar to defend the person. When he notices a weapon forger taking special pride in his work, Ama-Tsu-Mara often rewards the effort by investing the weapon with a kami and, thus, making it intelligent.

**Statistics:** AL n; WAL any; AoC blacksmithing and weapon making; SY double-edged axe.

**Ama-Tsu-Mara's Avatar** (fighter 14, priest 12)

Ama-Tsu-Mara's avatar is a huge, hairy man who purposely appears rather dull-witted. He always has a patch over his left eye, and any being lifting the patch discovers that there is no eye socket there — only a continuation of his cheekbone. Ama-Tsu-Mara's avatar can draw upon the elemental, creation, and sun spheres for his spells.

| | | |
|---|---|---|
| Str 21 | Dex 16 | Con 18 |
| Int 18 | Wis 18 | Cha 10 |
| MV 15 | SZ 7' | MR 20% |
| AC 0 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 1d12 +5 (axe) +9 |

**Special Att/Def:** The Avatar carries a huge *vorpal axe +5* that functions like a *vorpal sword*. Any time an unsuccessful attack is made on Ama-Tsu-Mara's avatar, there is a 25% (15% for magic weapons) chance that his opponent's weapon breaks as the avatar blocks his blow.

**Duties of the Priesthood**

Priests of Ama-Tsu-Mara must always have the blacksmithing non-weapons proficiency. They must always carry exceptionally fine weapons that they have crafted themselves.

**Requirements:** AB standard; AL any; WP any; AR f; SP all, combat, elemental, healing, protection, sun; PW 5) forge +l magic weapons (requires one month); 10) forge +2 magic weapons (requires three months); 15) create + 4 magic weapons (requires six months); TU nil.

**Inari (intermediate god)**

At one time the patron of smiths who forged swords, Inari has since passed that duty to Ama-Tsu-Mara so that he can spend more time in his other calling, that of rice god. He watches over the sowing and reaping of rice, as well as the preservation of the crop after it has been harvested. He can control the flow of wat ers, the growth of plants, and all insects. He can also turn water into saki (rice wine). In his true form, Inari is an old, bearded man. Sometimes, however, his worshipers mistake his messengers for the god himself and worship foxes as the rice god.

**Role-playing Notes:** Inari is generally a beneficent deity who does his best to help the people feed themselves. However, if his efforts go unappreciated, he has been known to neglect his duties. When peasants or farmers are threatened, he often sends one or more avatars to harass their oppressors. Omens from Inari are usually delivered by a fox.

**Statistics:** AL ng; WAL any; AoC rice; SY rice plant.

**Inari's Avatar (druid 14, thief 10)**

Inari's avatar usually takes the form of a fox, though he has also been known to appear as a old man (in which case he fights with a *quarterstaff +5*, one attack per round). Even when in fox form, the avatar has the normal abilities of a druid and thief, including the ability to cast spells. He can draw upon the all, animal, elemental, healing, plant, and weather spheres for his spells.

| | | |
|---|---|---|
| Str l8/00 | Dex 19 | Con 18 |
| Int 19 | Wis 18 | Cha 18 |
| MV 15 | SZ 3' | MR 25% |
| AC 2 | HD 14 | HP 112 |
| #AT 3 | THAC0 7 | Dmg 1d4/1d4/1d8 +6 |

**Special Att/Def:** Inari's avatar attacks with a claw/claw/bite sequence. Anyone bitten by Inari's avatar must save versus breath weapons or suffer a broken bone where bitten. The limb then becomes useless for moving or carrying until healed. Inari's avatar cannot be fooled by any trap.

**Duties of the Priesthood**

Priests of Inari preside over the ceremonies involved in planting and harvesting rice. They are expected to do their fair share of work in the fields and to act as defenders of peasants and foxes.

**Requirements:** AB standard; AL any good; WP sickle, spear, sling; AR a; SP all, animal, divination, elemental, healing, plant, weather; PW 1) move silently (as a ranger of equal level); 4) hide in shadows (as a ranger of equal level); 8) find/remove traps (5% per level); 12) open locks (5% per level); 16) detect noise (5% per level); 20) climb walls (5% per level); TU nil.

**Ho Masubi (intermediate god)**

Ho Masubi is the god of fire. When he was born, he caused the death of his mother, Izanami. His father, Izanagi, was so distraught that he chopped the child in two, creating two kinds of fire: kiri-bi, fire made by the friction of wood, and uchi-bi, fire made by striking sparks from steel and stone. Despite being so energetically disjointed, the fire god made his way to a mountain called Atago in the Kyoto province, where he established his home. He is one of the most feared gods in Japan, for he is a swift destroyer of houses made from wood and paper.

Ho Masubi has the power to control a fire anywhere and to kindle flames from even the tiniest spark. In his true form, he is a yellow and orange man with red hair. Around his waist, there is a terrible scar where his father cut him in half. Masubi's sacred animal is the boar, which, like him, is swift and destructive.

**Role-playing Notes:** Although destructive by his very nature, the fire god is not evil and does what he can for mankind, providing them with light, warmth, a means of cooking, and the heat for forging weapons and tools. If a village affronts him by neglecting his worship, however, he has been known to burn it to the ground.

**Statistics:** AL cn; WAL any; AoC fire; SY boar.

**Ho Masubi's Avatar (warrior 16)**

Ho Masubi's avatar is a large man with red hair and yellow and orange skin. He is often found riding a huge boar (AC 4; HD 9; SZ 9'; THAC0 11; HP 72; MV 20; #AT 1; Dmg 3d8; ML 16; XP 1,400).

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 18 | Wis 19 | Cha 18 |
| MV 18 | SZ 7' | MR 20% |
| AC -2 | HD 16 | HP 128 |
| #AT 2 | THAC0 3 | Dmg 1d10 + 10 (sword) |

**Special Att/Def:** The avatar's sword is made of fire and does 10 extra points of fire damage when it hits (but gets no Strength bonus). When someone is hit, their armor must save versus magical fire or be destroyed. Any being touching the avatar with bare hands suffers 2d10 fire damage.

**Duties of the Priesthood**

Priests of Ho Masubi must serve their god by always keeping the four methods of controlling his innate destructiveness at hand: water, the ground, river weed, and clay. They are also expected to keep a pure fire (a kiri-bi fire made from hinoki wood) burning in their homes at all times.

**Requirements:** AB standard; AL any; WP fire, bow and arrow, axe; AR a; SP all, combat, creation, healing, plant, sun; PW 2) *affect fires* (functions as *affect normal fires* spell, but applies to magical fire too); 5) *create fire* (1' area); 12) shoot flames from hands, range 25', damage 2d10; TU turn.

**Nai No Kami (intermediate god)**

Nai No Kami is the god of earthquakes. For a long time, his worship was completely neglected, to the point that the Japanese did not even include his name in their lists of the Ama-Tsu-Kami, the kami of the heavens. For a long time, Nai No Kami patiently endured this insult, sending tremors from time to time to warn the people of their error. But, after centuries of neglect, in the Seventh Century AD, he finally grew angry and demolished much of Japan with a series of violent earthquakes. Many temples to Nai No Kami were erected out of the rubble. In his true form, Nai No Kami is a large, powerfully built man.

**Role-playing Notes:** After his long neglect, Nai No Kami is a touchy god. Any village that does not maintain an adequate temple to him stands a 10% chance per year of being destroyed by an earthquake. Occasionally, he will send his avatar to the aid of a lord who has built a great temple to honor him. Omens from Nai No Kami usually come in the form of tremors or moving earth.

**Statistics:** AL ln; WAL any; AoC earthquakes; SY fist smashing a building.

**Nai No Kami's Avatar (warrior 18, druid 14)**

Nai No Kami's avatar is a ferocious looking giant. He can call upon the all, animal, elemental, healing, and weather spheres for his powers.

| | | |
|---|---|---|
| Str 24 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 13 | SZ 8' | MR 15 % |
| AC 2 | HD 18 | HP 144 |
| #AT 2 | THAC0 1 | Dmg 1d8 (hammer) +12 |

**Special Att/Def:** Any being hit by the avatar's hammer must save versus petrification or be knocked to the ground 15' from where he was standing. When struck upon the ground, the hammer causes an *earthquake* (as the spell).

**Duties of the Priesthood**

Priests of Nai No Kami must keep their temple spotlessly clean. They must bravely and honorably avenge any insult to their god, even if it means laying siege to a nobleman's castle.

**Requirements:** AB standard, but Str of at least 16; AL any; WP hammer, sling; AR a; SP all, combat, divination, elemental, healing, protection, summoning, weather; PW 10) *earthquake*; TU nil.

**O-Wata-Tsu-Mi (intermediate god)**

Also called Shio-Zuchi ("old man of the tides"), O-Wata-Tsu-Mi is the greatest of the many gods of the sea. He was created when Izanagi washed in the sea after returning from the Land of Darkness. He is the ruler of the fishes and all living things in the sea, and the controller of the tides. He has the power to command any creature that swims in the sea (including men while they are in the water), and to move the waters of the ocean at will. In his true form, he is a tremendous serpentine dragon, green in color, but he is equally comfortable in the form of an old man with gills. O-Wata-Tsu-Mi lives in a great palace at the bottom of the sea.

**Role-playing Notes:** Generally, O-Wata-Tsu-Mi is a benevolent deity. He moves the tides in an extremely regular fashion so that men may predict their action and avoid being stranded, flooded, or drowned. When someone comes to his palace, he is known to be a gracious host. Omens from O-Wata-Tsu-Mi are generally carried by his messenger, a sea monster named Wani, but they may also take the form of violent or unusual tides.

**Statistics:** AL ng; WAL any non-evil; AoC ocean creatures, tides; SY fish.

**O-Wata-Tsu-Mi's Avatar (druid 16)**

O-Wata-Tsu-Mi's avatar takes the form of an old man with gills and webbed fingers and toes. He can draw upon the all, animal, elemental, healing, plant, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 18/96 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 sw | SZ 6' | MR 20% |
| AC 3 | HD 16 | HP 128 |
| #AT 1 | THAC0 3 | Dmg 1d10 (trident) +5 |

**Special Att/Def:** When struck by the avatar's jade trident, victims must save versus petrification or be stuck on its prongs. In such cases, the avatar may elect to turn the shaft of the trident, rotating the razor sharp prongs and doing 2d10 points of automatic damage each round.

**Duties of the Priesthood**

Priests of O-Wata-Tsu-Mi are generally found in fishing villages, where they assist the local fishermen in the rites that placate O-Wata-Tsu-Mi in return for catching his fish. They must always be excellent swimmers, and are expected to know the schedule of the tides by heart.

**Requirements:** AB standard; AL any good; WP trident; AR b; SP all, animal, divination, elemental, healing, plant, weather; PW 10) breathe underwater; 15) summon and control any one sea creature of 10 HD or less; TU nil.

**Kura Okami (intermediate god)**

Kura Okami is one of the many rain gods. He dwells in the fertile valleys of Japan, providing a more or less steady supply of rain for the crops grown there. During storms, he can get caught up in Susanoo's fury and send too much rain, causing the streams and rivers to overflow their banks and flood the countryside. He is also somewhat forgetful, as he sometimes allows many weeks to go by without sending his life-giving waters. However, most of the time he is a kind and efficient god, imparting his blessing in beautiful, gentle rainfalls. Kura Okami also has the power to send snow, which he often does in the winter in order to beautify an otherwise drab landscape. In his true form, he is a translucent old man with a kindly (if somewhat vacant) expression.

There are several other rain gods, including Taka Okami, who dwells on the mountains, and Taki-Tsu-Hiko, ("Prince Cataract"), who is a rock located to the west of Mount Kaminabi.

**Role-playing Notes:** Kura Okami is a rather befuddled and absent minded deity, but a kindly and gentle one. He enjoys seeing the sights of Japan as his avatar wanders the land. Sometimes he becomes so caught up in this activity that he neglects his duties. Omens from Kura Okami usually come during a morning or evening mist.

**Statistics:** AL cg; WAL any; AoC rain and snow; SY mist obscuring a tree.

**Kura Okami's Avatar (priest 12)**

Kura Okami's avatar is a befuddled old man. He can draw upon the charm, elemental, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 9 | Wis 18 | Cha 18 |
| MV 15 | SZ 5' | MR 25% |
| AC 4 | HD 12 | HP 96 |
| #AT 1 | THAC0 9 | Dmg 1d8 (staff) +4 |

**Special Att/Def:** Kura Okami's avatar can call down a 6d10 lightning strike once per round. Upon command, his staff unleashes a torrent of water 10 feet wide, causing creatures caught in its path to save versus petrification or be washed away 2d100 yards.

**Duties of the Priesthood**

Priests of Kura Okami must constantly remind him of his duty through their worship. They are expected to be patient and kind, especially to old people, and Kura Okami will punish any transgression of this principle severely — often by revoking their spells.

**Requirements:** AB standard; AL any good; WP javelin, mace; AR a; SP all, charm, divination, elemental, healing, weather; PW 5) *create water* (five gallons); 15) *wriathform*; TU turn.

**Shina-Tsu-Hiko (intermediate god)**

Shina-Tsu-Hiko was born from the breath of Izanagi and is the god of the winds. He is not the only wind god, however. There are several more who control certain types of winds. Among them are Shina-Tsu-Hiko's daughter, Shina-To-Be, who blows away the morning mists; Tatsuta-Hiko and Tatsuta-Hime, who bring fresh air to the fields to aid in producing good harvests; and Haya-ji, the god of whirlwinds. While these gods are personifications of certain types of winds, Shina-TsuHiko is in charge of all the winds, and so is superior to them in the same way a shogun is superior to a daimyo. Shina-TsuHiko has the power to control the winds anywhere on earth, and can use this capability to bring hot, dusty conditions, pleasant rains, terrible storms, and so forth. In his true form, Shina-Tsu-Hiko appears to be a well-appointed lord.

**Role-playing Notes:** Shina-Tsu-Hiko is unpredictable and capricious. One day, he may be perfectly contented with the homage paid to him in a certain village. The next, he may find it woefully inadequate and use his power to rip the roofs from all the houses. Omens from Shina-Tsu-Hiko usually take the form of words whispered in the wind, but it is not always possible to make out the meaning of his speech.

**Statistics:** AL cn; WAL any; AoC winds; SY three curled lines.

**Shina-Tsu-Hiko's Avatar (fighter 14)**

Shina-Tsu-Hiko's avatar is a thin, well-dressed samurai.

| | | |
|---|---|---|
| Str 18/00 | Dex 19 | Con 18 |
| Int 18 | Wis 16 | Cha 18 |
| MV 18 | SZ 6' | MR 15 % |
| AC 2 | HD 14 | HP 112 |
| #AT 2 | THAC0 5 | Dmg 1d8 (sword) + 6 |

**Special Att/Def:** Because he is a slippery as the wind, Shina-Tsu-Hiko's avatar stands a 50% chance of turning away and avoiding damage when an opponent scores a hit on him. His own sword slices through any armor as though the wearer's AC was never better than 5.

**Duties of the Priesthood**

Priests dedicated to Shina-Tsu-Hiko are seldom popular, for villagers often attribute the capricious wind god's destructiveness to incompetence on their part. They usually spend most of their time trying to read omens and contact ShinaTsu-Hiko in order to determine what kind of mood he is in.

**Requirements:** AB standard; AL any; WP sword, bow; AR a; SP all, astral, combat, divination, elemental, healing, necromantic, protection, summoning, weather; PW 10) *fly* (MV 15); TU nil.

**Amatsu-Mikaboshi (intermediate god)**

Amatsu-Mikaboshi, the "august star of heaven," is the god of evil. Also known as Ama-no-Kagaseo, the "brilliant male," he sees and sanctions all things done under cover of darkness. He has the power to look into the hearts of men and women, and, if he finds too much evil there, to make them his. Because most people are basically good, Amatsu-Mikaboshi is not particularly powerful. But he is cunning, and has gathered more worshipers than people suspect. In his true form, Amatsu-Mikaboshi is a dark shadow that can never quite be seen.

**Role-playing Notes:** Amatsu-Mikaboshi gathers worshipers the old fashioned way: he entraps them. After finding a potential worshiper, Amatsu sends his avatar to tempt the victim — usually with power, money, lechery, or whatever the subject desires most. The avatar then creates a situation in which the victim can fulfill this desire by committing one hideous act. If the victim performs the act, he becomes a permanent worshiper of Amatsu-Mikaboshi and finds himself compelled to take part in a never-ending series of foul plans.

**Statistics:** AL le; WAL any evil; AoC evil; SY silhouette of a hook-nosed man.

**Amatsu-Mikaboshi's Avatar (thief 18, bard 16)**

Amatsu-Mikaboshi's avatar most often appears has a small, charming man with a bald head and a hooked nose, but the god of evil has also been known to shape his avatar in the form of an alluring woman. He can draw upon any school of magic for his bard spells.

| | | |
|---|---|---|
| Str 20 | Dex 20 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 16 | SZ 5' | MR 25% |
| AC O | HD 18 | HP 144 |
| #AT 1 | THAC0 1 | Dmg 1d6 (sword) +8 |

**Special Att/Def:** When attacked from behind, victims of Amatsu-Mikaboshi's avatar must save versus death or be hit automatically and suffer four times normal damage. Anybody hit by the avatar's sword blade suffers an additional 1d10 points of poison damage each round until the poison is neutralized.

**Duties of the Priesthood**

Amatsu-Mikaboshi's priests are those who have intentionally and willfully turned to evil. Their primary duties involve tempting others and helping their deity keep the promises which his avatar has made in order to gather worshipers.

**Requirements:** AB standard; AL any evil; WP any, with preference toward poison; AR a; SP all, charm, combat, creation, divination, guardian, healing, necromantic, protection, summoning; PW 1) *know alignment*; 10) *read thoughts* (surface thoughts only, victim may save versus spells to realize what is happening).

**Shichifukujin (lesser gods)**

The Shichifukujin are the Seven Gods of Happiness. Sometimes referred to as the Seven Gods of Luck, they come from various origins. They include Hotei (god of happiness through fortunate chance), Jurojin (god of happiness through long life), Fukurokujo (god of happiness through good health), Bishamon (god of happiness through good cheer, he also looked after his worshipers during war), Benzaiten (goddess of happiness through love), Daikoku (god of happiness through wealth), and Ebisu (god of happiness through food, he also presides over fishing and honest dealing). Each of these gods oversees a particular aspect of life. To be truly happy, a man must worship all seven gods in the proper balance. Each god can grant worshipers the particular aspect of happiness that he or she embodies. In their true forms, these gods have the following appearances: Hotei, a man with a huge stomach; Jurojin, an old man with a long white beard; Fukurokujo, long narrow head with a short stocky body; the smiling Bishamon is always dressed in full armor (to ward off war); Daikoku, a portly, balding man; Ebisu, an elderly man; and Benzaiten, a beautiful woman.

**Role-playing Notes:** The Shichifukujin respond to their worshipers as individual gods. Thus, a man who pays a great deal of attention to Ebisu and none to Benzaiten is likely to have plenty of food but no wife to share it with. They do not send omens, although the degree of happiness in a person's life might be perceived as one.

**Statistics:** AL lg, cg, ng; WAL any; AoC as listed, happiness collectively; SY varies.

**Shichifukujin Avatars (all priest 12)**

Avatars of the Shichifukujin appear very much the same as the gods themselves. They may draw upon any sphere for their spells.

| | | |
|---|---|---|
| Str 18 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 6' | MR 10-15% |
| AC 4-0 | HD 12 | HP 96 |
| #AT 1 | THAC0 9 | Dmg 1d6 (staff) +2 |

**Special Att/Def:** Any being striking the avatar of a Shichifukujin is condemned to eternal unhappiness and has his Wisdom, Constitution, and Charisma reduced by two points.

**Duties of the Priesthood**

The Shichifukujin retain separate priestly orders, with duties appropriate to the individual god.

**Requirements:** AB standard; AL any good; WP club, mace; AR a; SP all, charm, creation, divination, guardian, healing, protection, weather; PW nil; TU turn.

## Japanese Heroes

**Raiko**

Raiko is a famous fighter of enchanted monsters, giants, undead, and other ghastly things. His *sword of sharpness +3* is said to be faster than a striking serpent, and he has achieved almost inhuman speed and endurance. He also carries a longbow from which he can fire arrows at twice the normal range that do twice normal damage.

Raiko is totally unafraid of death, and will never back away from a challenge. However, he is as cunning as he is fast. If faced with a seemingly impossible task he will invariably find a way to achieve what he must without losing either his honor or his life.

**Ranger 18**

| | | |
|---|---|---|
| Str 18/00 | Dex 19 | Con 18 |
| Int 18 | Wis 11 | Cha 18 |
| AC -1 | MR nil | MV 18 |
| HP 153 | AL ng | THAC0 0 |
| #AT 2 | Dmg 1d8 +3 (sword) +6 | |

**Spells (cast as a 9th level priest):** 1) *command*, *detect magic*, *cure light wounds*; 2) *charm person or mammal*, *find traps*, *slow poison*; 3) *locate object*, *cure disease*, *dispel magic*.

**Empress Jingo**

The Empress Jingo ruled early in Japan's history, living between 170 and 269 AD. She was leading a military campaign against Korea when it became apparent that she was going to give birth soon. The Empress was so devoted to her duty that she swallowed a stone to delay the birth of her child. It is no wonder that her son, Ojin, became a great warrior in his own right, eventually becoming Hachiman, the god of war.

## Japanese Monsters

**Tanuki**

Although he bears a semblance to both the badger and raccoon family, the tanuki is actually closer to a dog. In his true form, he is a furry little animal with a long fuzzy tail and a darkened area around his eyes that resembles the mask of a raccoon. His feet have sharp claws and his teeth are razor sharp.

Despite being well-equipped for battle, the tanuki prefers to use his shapechanging abilities to play evil tricks. One of his most terrible tricks was killing a hunter's wife while he was away. He then assumed the woman's form and cooked a poisoned meal for the hunter. When the hunter returned home, tanuki, still disguised as the wife, served the meal. Then, as the man was on the verge of death, tanuki gleefully revealed what he had done.

| | | | |
|---|---|---|---|
| AC 4 | 1 | SZ 3' | XP: 2,000 |

| HD 8 | HP 64 | MR 10% | THAC0 13 |
| #AT 3 | Dmg 1d6/1d6/1d10 | | |

**Special Att/Def:** The tanuki can shape change into any object, animate or inanimate.

**Hannya**

Hannyas are the spirits of woman who were jealous in life. They have grotesque, evil faces with knobby chins, fangs, and horns upon their heads. Their eyes burn with a cold blue light. When in battle, they attack first with their clawed hands, then with their sharp horns. Just before melee is joined, a Hannya will generally scream to inflict as much damage as she can.

Hannyas are generally found in the Land of Darkness, but they have been known to venture out in order to harass an unfaithful lover, or just to take vengeance on men generally.

| #AT 3 | Dmg 1d8/1d8/1d10 | | |

**Special Att/Def:** Hannya can only be hit by magic or +2 or better weapons. Any creature hit by a Hannya's claws must save versus death or suffer 2d10 points of poison damage each round (until neutralized). A Hannya can scream once per day (but not while in melee), causing 3d10 damage to all within 25' (no save).

# Nehwon Mythology

**An overview of Nehwon**

In his Nehwon novels, Fritz Leiber introduces his reader to a wonderfully detailed and rich fantasy world. Nehwon is a pleasant mixture of historical themes and fantasy elements creating cultures and lands where the two main heroes of the storylines, Fafhrd and the Gray Mouser, live, breath, and adventure. This world comes alive for its readers because Fritz Leiber is a masterful story teller. His noble efforts have created a land that any AD&D game player can be proud to adventure in.

When you turn the pages of both the novels and the TSR modules and accessories that deal with this world, it is just as if you were walking onto the pages of the perfect adventure. You can almost feel and smell the Mingol Steppe riders baring down on you with their short bows drawn to full extension. The pageantry and splendor of the Citadel of the King of Kings leaps up to you and catches your breath with the color and wonder of its sheer size.

Sailing on the seas of Nehwon can be equally satisfying. One could start at the Claws where ice and land meet to begin the Frozen Sea. Drifting south, one quickly comes to the Dragon Rocks, full of true dragons, and the Inner Sea, which is itself full of wonders. Depending on the phase of the moon and the temperament of the sea gods the Sinking Land will either be risen and block your way or be sunken and allow you to pass. From here your voyage could lead you to the Sea of the East, but the unknown dangers here are such that even brave heroes look for the sight of land — even if that land is the Quarmall Barrens or the volcanoes of the east.

It is a world rich in magic of all types. Even the simplest of gems can become vital game players in their own right. In one story a gem from the deepest heart of the earth's core forces one of the heroes to become a tool in the cult of the Earth god. In another, a set of gems is the magical heart of a sinister tower. Naturally, when the world's best thieves, Fafhrd and the Gray Mouser come to steel these gems the tower reacts by magically bending and stretching to try and crush our two heroes. Glowing gems and powerful moonstones are often seen in the pages of the novels and the AD&D game adventures; all too often these valuables are replaced with glowing stinging hornets and smooth pieces of valueless glowing moss. Magical whistles, horns, bowls, figurines, mummy-like hands, swords, daggers, rings, scrolls, gates, and entire buildings fill the pages of the novels and role-playing adventures. These things are the stuff from which dreams and adventures are made and they come in ample supply on Nehwon.

The gods of this world take a very direct hand in the comings and goings of their worshipers. Although few of them ever directly show themselves to their people, they often curse their enemies or bless their followers. They especially take note of their more talented believers. This is why Fafhrd and the Gray Mouser often find themselves on adventures only partially of their own making. This is a world where the number of worshipers a god has dictates the amount of power they have. The greater the deeds of the heroes that have aligned themselves with a god the greater the power of that god. They are jealous beings and are quick to anger and slow to reward.

If it wasn't enough that the land itself and the gods conspire to create adventures for heroes and victims alike; there are wizards of every description who must instantly have all sorts of bits and parts of basilisks or rocs feathers or dragons' eyes for their work. Hedge Wizards and Hedge Witches are at the bottom of the magical social ladder. These people prefer to live in the country and live alone. City Wizards and Wizardresses are active in the community and often serve as guardians of their towns. Every culture has its own spell casters and these spell casters travel all over Nehwon looking for spell ingredients. All of these types serve to stir the pot of adventure and make it come to a boil.

Guilds and factions of every type and description fill the cities of Nehwon. One is either a member of a guild or faction or its enemy. Thieves are licensed and only steal when it is proper. Assassins are permitted and encouraged, but only after properly notifying the authorities of their targets. Guilds of every type from spell casters to dragon slayers (a very small guild) abound in each city. Adventurers can join whatever guild they like, but they will join or they will meet with an untimely end. Holy orders and political factions also have their share of power and will protect their own in times of trouble.

**The City of Lankhmar**

" .. .Lankhmar, where adventures begin and all too often end."

On the planet Nehwon, Lankhmar is known as the City of Adventure. It is the largest city in the world — a teeming metropolis filled with magic and danger. Heroes of all types have spent entire lifetimes questing from its streets to its dungeons and never leaving the city. A brief mention of some of its more stimulating aspects should serve to set the stage for any adventure a DM might want to run in the city.

**The Guilds**

The Guilds are many and powerful in Lankhmar.

**The Merchants' Consortium:** This organization is the controller of Lankhmar's huge trading network. Its main trade is in the wheat that grows around the city walls. This wheat business sets up a vast sea and land trading concern. The rich merchants of the city have as much power as the overlord and the nobles of the area.

**Thieves Guilds:** There are thieves guild chapters in all the cities of Nehwon. They impact the lives of every adventurer. When a large treasure is taken, the guild wants its cut. If it doesn't get a share it reacts in a violent manner. It doesn't matter if the treasure was taken from the hoard of a dragon or the purse of a lady. Fighters, wizards, and priests who do not want to pay the guild tithe had better belong to a guild of their own. All guilds respect the territory of other guilds and will leave those people alone. Those who are not members of a guild can expect escalating action from threats to beatings to assassins in the night. Benefits of being a member of the thieves guild include training on a regular basis (so that advancement in levels happens quicker) and legal aid (when arrested in any city it is possible to be released to the care of the guild for large payments to the guild master). For richer members, it is possible to receive clerical healing (for large sums of gold). Contact with the guild master in any city will uncover numerous assignments capable of generating lots of gold and jewels for interested members. Many times during the year other guilds request the use of thieves for special projects, these projects can be taken by any of the guild members. Sometimes such quests are too much for one thief to handle and the guild is always ready to lend some of its members for a larger share of a possible treasure.

**Slayers' Brotherhood:** The Slayers' Brotherhood is really a complex fighters' guild with nasty overtones. In all the cities of Nehwon this guild serves as an extra security force. If you need some fighters to guard your caravan, you call on the Brotherhood. If a fighter is down on his luck he can get employment with the Brotherhood. The evil aspect of the guild deals with assassinations. The act of assassination is a high art on Nehwon. There is a faction in every Brotherhood that does nothing but kill for pay. These guild members have thief skills as well as fighting skills. This branch of the guild is completely impartial in who they take on for money. They guarantee results and give back the gold if they fail. Each assassin has a strict code which states they can only try to slay once. If they fail and live they must stop and give back the gold. At least 90% of all guild members will warn the victim at least a day in advance that they are being stalked. Aside from this grim aspect of the Brotherhood, this guild has done a lot of good for those that it protects.

Rich merchants always have several members of the Brotherhood train merchant fighters in the arts of sword and combat. Most warriors want to join the Brotherhood because of the benefits and protection the guild gives its members. Members in good standing can expect the following: magical or mundane healing at reasonable rates, a meal and a place to rest in any city, and employment with pay depending on the skills of the fighter.

**Fire Sorcerers of the East:** These wizards are highly respected and highly feared spell casters. They are most notably the ambassadors of all of the eastern countries that wish to trade with Lankhmar and the other seven cities. They are also spies and leaders who wish to explore and understand the eight cities so that they can be easily invaded.

Fire Sorcerers are able to use all styles of fire magic. Only mid-level or higher Sorcerers appear in the eight cities. The fire magic of these sorcerers is far beyond any of the normal schools of magic. For example, there is a spell that enables the caster to hear conversations around any fire within 50 miles. In addition, the following spells are twice as damaging when caste by these wizards: *fireball*, *fire shield*, *fire trap*, *wall of fire*, *incendiary cloud*, *meteor swarm*, *fire charm*, *affect normal fires*, *burning hands*, and *summon fire elementals*. There are also a number of unusual spells only known to the Sorcerers.

Rubies and red gems of all types seem to enhance the abilities of any Fire Sorcerer. However, there are several legends of how these gems have shattered during a magical combat causing the spell caster to die.

**Other guilds** include the Blacksmiths' Guild, Carpenters' Cadre, Laborers' and Tollers' Brotherhood, Moneylenders' Guild, Scribes' Guild, Stonemasons' Guild, Toters' and Carters' Guild, Glassblowers' Guild, Leatherworkers' Guild Sweets Makers' Guild, Vinters' Guild, and the Whitesmiths' Guild.

**Cults of the Beast**

In the world of Nehwon, every type of beast has a group of thirteen protectors. These thirteen are perfect versions of that type. When Lankhmar was invaded by rats, thirteen super intelligent rats led the fight. Through the use of a special magic whistle, thirteen cats came and helped rid the city of its plague.

Cults of humans who worship these perfect creatures have sprung up all over Nehwon. The cult leaders can often summon one or two of the thirteen in order to aid the cult. Cult members often have control of the more normal members of the species. For example, a priest of the Cult of the Cat would be able to command cats of all types. These commands would never have a cat act beyond its usual nature so that a cat would not attack a troll, though the cat could be made to attack normal prey or bite through ropes.

Every type of beast has its own type of protectors. For example, there is a different group of thirteen for every feline on the planet. The same goes for every type of dog, reptile, fish, or bird. Single members of these groups of thirteen can be found roaming the planet doing good deed for their subjects. Each of these animals is highly intelligent and able to converse through telepathy. When a member of the thirteen is killed for any reason, they are instantly replaced with a more normal member of the breed that takes a year to grow in intelligence.

**Important Locations**

The city breaks itself down into many districts. Each of these has a theme identifiable by its name — Park District, Festival District, Marsh District, Plaza District, Cash District, Mercantile District, Tenderloin District, River District, Temple District, Noble District, and the Citadel District. A more complete treatment of all of these sections can be found in the TSR product Lankhmar, City of Adventure.

On the Street of the Gods there are many temples and altars. The more powerful the god the further west on the street is their temple. Over the centuries several faiths have begun at the east most end as small tents and traveled to the west end to become huge temples of gold and marble; only to travel back again to the east end and become humble tents once more. One thing never changes, though, there is a huge, black marble temple at the west most end of the Street of the Gods. It has rested at the west end since there were streets in Lankhmar. No one worships the gods in this temple, but offerings can be found on its steps, every day of the year.

Although the above ground areas appear normal and even boring, there is an entire world under the streets of the city. In one section of town a race of intelligent rats has built its own civilization. Mirroring the town above, this rodent city is filled with its own style of adventure. At one time the rats sought to take over the above ground city, but this plot was foiled. Miles and miles of natural tunnels and grottos flow out under the city and onto the Great Marsh and even out to the Inner Sea. The tunnels have been used by the older guilds for centuries. Some of the guilds send their young apprentices down into these tunnels to test their courage. There are monsters and things long dead in these grottos. Once the Overlord sent down several squads of men into the tunnels under the Rainbow palace, but they never returned. Now he has a powerful guard detail watching over the entrance.

The great salt marsh, that borders the city on the east is a dangerous mystery to most of the inhabitants of Lankhmar. It is filled with monsters, but is also home to the ruins of several ancient cities and towers. Powerful wizards, who seem to enjoy building towers overnight, live in the marsh for a century or too and then mysteriously move on for reasons of health. This has left a large number of towers all over the marsh. Places like this seem to attract curious adventurers.

**Life in Lankhmar**

Government in the city is very strict. Laws are created by the Overlord, but must be approved by several of the most powerful guilds. The city watch is a bold group of warriors easily capable of putting an end to robbers and lawbreakers who become too obvious.

Generally, life is safe and good in the city. War doesn't usually touch Lankhmar. The government of the town works to help the poor and anyone needing a job can join the army or another branch of government. All roads seem to lead to Lankhmar. Anything one might want to buy; from the feather of a giant roc to the kiss of a winged pixie can be purchased somewhere in the town. As one moves south from the Grand Gate and moves along the Great Gate Road to Grain street and the docks, one can see a normal, prosperous city of the middle ages. Knights and squires, warlocks and wizard's apprentices, court ladies and ladies of the evening all move about the city. Heading north up Nun street; across the Street of the Gods; and up Wall street one quickly comes to Kings road and the Rainbow palace. There is adventure on every street and riches to be made by the quick and clever.

**Bibliography**

All of the characters and information in this section are taken or extrapolated from a set of seven novels by Fritz Leiber. These novels detail the wonderful world of Nehwon and often mention the magical city of Lankhmar. Each of the following books is spectacular and a must for any fan of fantasy.

*Swords against deviltry*
*Swords against death*
*Swords in the mist*
*Swords against wizardry*
*The swords of Lankhmar*
*Swords and ice magic*
*The knight and knave of swords*

**Lankhmar Encounter Tables**

These tables are designed to generate a quick random monster for an encounter in Nehwon. The DM should be using two ten-sided dice to create a number that picks a monster. The humans on the chart are NPCs that usually begin hostile or suspicious, but can be turned around to the side of the PCs with a little effort.

**Gods of Lankhmar (intermediate gods)**

The Gods of Lankhmar are open to much free interpretation by the Dungeon Master. There is a special difference between the gods *of* Lankhmar, the oldest city of Nehwon, and the gods *in* Lankhmar.

The gods in Lankhmar are those of the many religions in many temples lining the Street of the Gods. Some are powerful, some are weak, and their fortunes change with the quantity and quality of their worshipers, who are a fickle lot. Although no one in the city openly worships the Gods of Lankhmar, all secretly believe in and fear these gods, who it is said, will always protect the city.

**Role-playing Notes:** These beings wish to rest in their black temple for all eternity. Lankhmar is their home and they must act if their city is threatened. The force they use often does a great deal to damage large sections of the city. There is a set of bells atop the temple that will magically ring at times of need. These bells can be

rung by hand to summon the gods, but there had better be a clear danger to the city or the ringer will answer for his crime with death (after spending a few centuries of torture in the confines of the dark temple).

Through the use of godlike power each one can use spells twice as fast as mortal spell casters. When the problem is taken care of, these beings cast about the city wreaking havoc as a reminder that they are not to be called on too often.

Their temple is a black marble cube on the outside and a huge domed structure on the inside. There are thirteen crypts underneath the dome. If, for some reason, beings were able to get into the crypts and despoil the bodies there, the next day they would find that the thirteen crypts looked as if nothing had happened. The temple itself cannot be harmed by any force in the Nehwon universe.

**Statistics:** AL ce; WAL any; AoC Lankhmar; SY skeletal hand with staff.

**Avatars of Lankhmar (lich)**

| | | |
|---|---|---|
| MV 6 | SZ 6' MR Nil | |
| AC 0 | HD 16 | HP 160 |
| #AT 1 | THAC0 10 | Dmg 1-10 |

**Special Att/Def:** These avatars have all the powers and abilities of liches. When they come out of their temple they are each carrying a fully charged staff of withering. These staves will turn to dust after using up all of their charges. From two to ten liches will appear at any given time depending on the nature of the doom coming to the city.

**Duties of the Priesthood**

No priesthood is allowed by the gods of Lankhmar. These beings do not wish to grow in power or have the living bowing and making a lot of noise in front of their temple.

**Issek (intermediate god)**

Issek appears as a tall man with twisted wrists and ankles. Issek is said to give enduring power to anyone under torture. Torture can be loosely defined and includes such things as a wife who constantly shouts at her husband or a little boy being picked on by a larger bully.

Role-playing **Notes:** Issek desires to help all those who are being oppressed in any way, although he is not the brightest or most even handed of gods. A step daughter being overworked is just as important to him as a world saving paladin fighting off the multidimensional entrance of a horde of undead.

**Statistics:** AL lg; WAL any lawful; AoC tortured souls; SY amphora.

**Issek's Avatar (fighter 15)**

Issek's avatar always appears from a male being tortured on the rack. It is the suffering of the mortal that brings on the full spirit of Issek.

| | | |
|---|---|---|
| Str 25 | Dex 22 | Con 24 |
| Int 23 | Wis 25 | Cha 24 |
| MV 15 | SZ 7' MR Nil | |
| AC 2 | HD 15 | HP 160 |
| #AT 2 | THAC0 6 | Dmg (by weapon) + 14 |

**Special Att/Def:** nil

Every avatar of Issek carries a great jug with him when he appears. This jug can pour out any liquid that the avatar of Issek needs at the time. It is not intended as a weapon and is almost always used to help the suffering souls that might be in the area.

Issek's avatar will first break out of the rack that confines his host body and then hunt down the person who ordered its confinement and torture. The avatar will pick up weapons and helpers as needed. After the victim is eliminated, Issek will disappear and return the body he possessed back to the person it belongs too. The body will be in perfect form and show no signs of the torture it underwent.

**Duties of the Priesthood**

Priests of Issek are expected to care for others and to travel from community to community, never staying more than 30 days in any one place. Priests who have been tortured on the rack are especially blessed by Issek and may roll 10-sided hit dice and cast twice the normal number of first and second level spells.

**Requirements:** AB standard; AL any good; WP any; AR a; SP all, elemental, healing, protection; PW 1) break free from any torture device in 1-4 rounds; 2) create 1 gallon of any liquid once a day; TU turn.

**Gods of Trouble (intermediate god)**

There are three energy beings that comprise the gods of trouble. They are creatures of pure chaos energy and enjoy roaming the world in astral forms, affecting all alignments equally. Their desire is to promote chaos in all

of its forms. The more chaos caused, the greater their power over Nehwon. These beings care nothing for their worshippers and inflict troubles upon them impartially.

**Role-playing Notes:** Special events attract the attention of all the gods on Nehwon. Things like large wars, unusual magical events, plagues and the like. These events become tugs of war between the gods of trouble and the other fates and gods of Nehwon. These energy beings will not take a direct hand unless they are specifically called upon by their high priests. Normally, they like to do one or two things in any particular area and then leave for other bastions of Law that they would like destroyed.

**Statistics:** AL ce; WAL any chaotic; AoC chaotic actions; SY three pointed star.

**Avatars of Trouble (wizard 1)**

Occasionally they do manifest themselves and when they do, these beings appear as bumbling wizards. These buffoons appear friendly and helpful in all ways, but are really out to ruin whatever expedition they travel on for as long as they are around. When they cause an accident to happen they are extremely apologetic. Some of these accidents even seem to do these buffoons a great deal of damage. The end result is always the same, the quest is ruined or delayed for a great deal of time.

| | | |
|---|---|---|
| Str 7 | Dex 7 | Con 24 |
| Int 7 | Wis 7 | Cha 7 |
| MV 12 | SZ 5' MR 100% | |
| AC 10 | HD 1 | HP 1 |
| l #AT 1 | THAC0 20 | Dmg 1d4 (dagger) |

**Special Att/Def:** No magical items or spells will function within 30 feet of an Avatar of Trouble. In addition, when they gaze at an individual who is attempting an action of any type, failure is guaranteed (there is no saving throw).

**Duties of the Priesthood**

Priests of this cult are supposed to cause chaos where ever they can, other than that, they are free to act as they desire.

**Requirements:** AB standard; AL any chaotic; WP large clubs or maces; AR a; SP all, charm, elemental, summoning; PW 1) *gaze of failure* (target must save versus spells or fail at whatever was being attempted) 8) *shadow walk* ; TU command.

**Hate (intermediate god)**

Hate is the god that everyone accidentally worships. When feelings of anger, jealously, or the like manifest themselves, the god of hate gains in power. This elemental emotional being purposely causes conflict to increase its power base. The Cult of Hate has only recently developed in the cities of Nehwon. Its followers enjoy conflicts of all types, because this provides a fuel for their own angers.

**Role-playing Notes:** Hate desires large scale military actions as conflicts that involve more than 50 people and are what Hate really needs to grow. This being will encourage conflicts of all types — guild battles, city to city fighting — for anything that causes strife is a suitable breeding ground for Hate.

**Statistics:** AL ce; WAL any chaotic; AoC emotional hatreds; SY foggy image with floating eyes.

**Hate's Avatar (fighter 6)**

Hate's Avatar always appears as a misty cloud bank floating from out of the darkness. There is a set of six eyes in the bank and an equal number of tentacles. This fog is capable of controlling 6 beings (as if by *charm person* spells) or manipulating 6 weapons that fight as 6th level fighters. This manifestation of the god must be generated at night by a high priest of at least the 14th level (who employs a *gate* spell) and 50 worshipers. Once called into existence, the fog can be moved up to five miles from the site of the worshipers.

| | | |
|---|---|---|
| Str N/A | Dex N/A | Con N/A |
| Int 20 | Wis 20 | Cha N/A |
| MV 15 | SZ 80' sphere | MR 100% |
| AC N/A | HD N/A | HP N/A |
| #AT 6 | THAC0 15 | Dmg (by weapon) |

**Special Att/Def:** The only way to damage the cloud is to cut the astral cord that connects it with the priest. The cord is AC -8 and any hit with a sharp weapon or a damaging spell that is specifically directed at the cord will cut it, dispelling Hate's form until the next night.

**Duties of the Priesthood**

All priests of Hate must constantly promote conflict. As a rule, they must cause a conflict that involves a number of persons equal to 10 times their level number once per month or they will lose their powers. Thus, a 6th level priest must cause conflicts that involve at least 60 persons.

**Requirements:** AB standard; AL any evil; WP any; AR a; SP all, charm, combat, summoning; PW 1) *charm person*; TU command.

**Death (intermediate god)**

It is Death's duty to end the life of all intelligent beings on Nehwon. He has a set quota to kill every hour and he never fails in his assigned task. Sometimes he is misdirected and the ones he plans on killing aren't killed at all, but even Death must bow to the fates and other more powerful gods of Nehwon. Death is not affected by time and is able to do a years worth of work in a second. He considers himself an artist and works very hard at making sure the deaths he causes are logical and necessary to his own view of life and the end of life.

**Role-playing Notes:** Death values a good hero because of their ability to cause death and destruction. Characters like Fafhrd and the Gray Mouser are especially favored by Death. When beings like these heroes are close to death, often the god will cause unusual little slips that will save their lives. Then too, sometimes his quota will call for the ending of two famous heroes and he will be forced (however reluctantly) to try killing his protégés.

**Statistics:** AL n; WAL none; AoC death; SY Death's Head.

**Death's Avatar (rogue 10)**

This being is Nehwon's personal Grim Reaper. As such, he lives in a pocket dimension that Death controls, called Shadowland. He can appear anywhere in Nehwon that he likes.

| | | |
|---|---|---|
| Str 24 | Dex 24 | Con 24 |

| MV 18 | SZ 7' MR 100% | |
| AC -5 | HD N/A | HP 350 |
| #AT 2 | THAC0 2 | Dmg Special |

**Special Att/Def:** The avatar of Death carries a sword called Slayer that kills anything it touches (no saving throw allowed). He appears as a man with a cadaverous skin color and his eyes have the power to see all the actions of a person's past life. He is able to unerringly *teleport* to any portion of Nehwon. He can be ordered to kill intermediate or lesser gods (although such individuals are entitled to a saving throw when struck with Slayer), but greater gods are beyond his skill.

**Duties of the Priesthood**

Death does not wish to have followers or priests. Because of this, when persons decide to declare themselves as his agents on Nehwon, Death sends his avatar to claim them for his own and they are never seen again.

**Kos (intermediate god)**

Kos is a northern barbarian god who loves battle and bold deeds. He is the god of dooms because he brings trouble to anyone who doesn't live up to his strict codes of honor and action. These codes and the interest of the god apply to all facets of the hard life of the northern barbarians. Kos is just as interested in the building of a safe and sturdy long house as he is in the sharpness of a warrior's axe.

**Role-playing Notes:** This god exists to make sure the people of the north do things properly. This proper order of things has been established by Kos and passed down to his priests and priestesses. When this order is not followed Kos is quick to hurl curses down on the offenders. These curses are slight at first, but will eventually cause death to the offender unless they mend their ways.

**Statistics:** AL lg; WAL any non-chaotic; AoC order; SY crossed sword and axe.

**Kos' Avatar (fighter 15/bard 15)**

Kos' avatar always appears as a human warrior. He will begin a battle with his *two-handed sword +4*, but will change to a normal battle axe if he decides that he is doing too well in the conflict.

| | | | | | |
|---|---|---|---|---|---|
| AC 0 | HD 15 | SZ 7' MR Nil | | THAC0 2 | |

| Str 19 | Dex 19 | Con 19 | Int 19 | Wis 19 | Cha 19 |

**Special Att/Def:** When his avatar is engaged in combat, Kos will send him 990 (9d10) berserkers to aid in his fight. These will remain with the avatar for as long as Kos feels they are needed or until they are slain. After one group is destroyed or disbanded, another cannot be called for 24 hours.

**Duties of the Priesthood**

Priests of Kos cannot increase in level unless they have fought an unending war against the enemies of Kos and order. They must also serve as examples of perfect action and thought. Kos does not tolerate failure and will indicate his displeasure with a priest by simply striking him dead.

**Requirements:** AB standard; AL lg; WP all; AR a; SP all, combat, divination, healing, protection; PW nil; TU nil.

**Tyaa (intermediate god)**

Tyaa, is a force of evil and chaos. She chooses to manifest her powers through the actions of malicious birds. She has created an offshoot of the raven that is both smarter and stronger than its ancestral cousin. It should be noted that, while she prefers to employ the Birds of Tyaa, she is perfectly capable of using any carnivorous bird to do her will on Nehwon. The city of Lankhmar has always been her favorite because she has the most worshippers in this place.

Tyaa's cult has been banned in Lankhmar because of its evil teachings and ways. This has only caused the movement to go underground and to other cities. There are several large caches of diamonds and jewels hidden in several abandoned manors in Lankhmar. The high priestess of the cult knows of these locations and will use these riches to support the cult and make it grow.

**Role-playing Notes:** Tyaa desires worshippers above all else. She is currently very weak and needs the support of supplicants all over Nehwon. In past centuries her evil birds have been used to steal flashy treasures from the upper story apartments of the rich. Her special ravens can tell useless fake jewelry from the real materials and are perfect thieves. Tyaa can supply large numbers of these birds to each of her priests, thus making them rich.

**Statistics:** AL ce; WAL any evil; AoC avians; SY large raven head or a black feather.

**Tyaa's Avatar (thief 15)**

Tyaa's avatar always appears as a lovely young female with a high, sharp voice. She is there to spread the cult, but very often gets caught up in stealing pretty baubles for herself.

| #AT 2 | THAC0 13 | Dmg (by weapon) |

**Special Att/Def:** Every avatar of Tyaa can summon 2-20 of her special ravens (see Birds of Tyaa) which all have poison coated claws.

**Duties of the Priesthood**

Priests of Tyaa are actually thieves with spell casting abilities.

**Requirements:** AB as thief; AL any evil; WP poisoned dagger; AR as thief; SP all, animal, summoning; PW 1) when slain, the character is *polymorphed* into a Bird of Tyaa. If slain in this form, then death is final.; 5) *shape change* into a giant Bird of Tyaa (twice normal hit dice and damage per attack) once her week; TU nil.

**Red God (intermediate god)**

This is the war god of all the eastern lands. He appears as a massive dark-skinned man with red studded leather armor, carrying a bronze shield. He is always mustachioed and wears a pointed helm. His boots and belt shine as brightly as the sun. He primarily supports the horse soldiers of the east. He is a very protective god and because there are many eastern warrior spies in the eight cities, including Lankhmar, this god has been trying to increase his number of worshipers in these cities.

**Role-playing Notes:** The Red God is a god of warriors. He favors acts of war and battle and lends support in the form of strength of arm and courage of heart to warriors who follow his faith. He spends most of his time trying to cause new battles to test the courage of his followers. He is the one responsible for turning all of the lands of the east against the eight cities.

**Statistics:** AL cg; WAL any; AoC battle and war; SY the horse sabre.

**The Red God's Avatar (fighter 15)**

This avatar always appears in the same form as the god himself. He rides a huge warhorse that will breathe short blasts of fire during battle. Anyone struck by his mount's breath must save versus breath weapons or take 1d20 points of damage.

| | | |
|---|---|---|
| Str 24 | Dex 25 | Con 24 |

| MV 15 | SZ 7' MR 50 | |
| AC 0 | HD 15 | HP 200 |

#AT 2 THAC0 6 Dmg 1d6 + 3/1d4 + 4 (sabre/dirk) +14

**Special Att/Def:** He uses a *sabre +3* in his right hand and a *dirk +4* in his left. His sabre casts an anti-magic shell that does not limit his own spell abilities. He is always wearing a *ring of protection +4*, a *helm of telepathy and teleportation*, and a *cloak of displacement* that cannot be destroyed.

**Duties of the Priesthood**

Priests of this cult have to fight and lead men into battle to advance in levels. Although they don't have to be horsemen, it helps greatly towards advancement in levels (+5% on earned experience) if they have the land-based riding non-weapon proficiency and breed warhorses.

**Requirements:** AB standard; AL any; WP all; AR a; SP all, combat, healing, protection, sun, weather; PW 1) use 10-sided hit dice when determining hit points; TU nil.

## Nehwon Heroes

**Fafhrd**

Few heroes live as long or have done as much as Fafhrd. He is a northern barbarian with flaming red hair, a strong right arm, and the courage to face any danger on Nehwon without flinching. Although he lost his left hand when he forced it down a monster's throat, has devised all sorts of attachments for this limb. His long bow attachment allows him to shoot with his normal skill. He is also considering the construction of a climbing axe attachment and a short sword attachment.

**(ranger 18, bard 5, thief 15)**

| | | |
|---|---|---|
| Str 18/00 | Dex 17 | Con 18 |
| Int 17 | Wis 16 | Cha 17 |
| AC 3 | MR nil | MV 12' |
| HP 120 | AL ng | THAC0 4 |
| #AT 2 | Dmg (by weapon) + 6 | |

Fafhrd is a highly intelligent fellow with many interests. He can read and write all the major languages of Nehwon. There is a 90% chance that he can understand any obscure language he is exposed to. Religions are a passion for him and he tries to understand the teachings of all faiths he runs into, but hardly ever commits himself to one system of belief for any period of time. Fafhrd has the soul of an engineer and constantly invents useful little tools and items to help him in his quests.

Fafhrd is an expert sailor, able to captain almost any size ship. He was raised in the far north and is completely at home in the ice and snow of the mountains. Excelling in mountain climbing, he has invented several pieces of equipment that enable him and any group he is with to climb a mountain twice as fast as normal.

This warrior always carries a bastard sword (named Graywand) and a dirk (more short sword or poniard than dagger) which he calls Heartseeker. He has been known to fight with almost every weapon known on Nehwon, but especially favors throwing axes, long bows, and two handed swords.

Fafhrd's style is the bold, intelligent frontal assault. He will always try to accomplish his quest with the quick strike of massive power. He is also a dreamer and a sad story can cause him to go questing just as easily as the promise of fabulous treasures. The generator of most of his quests is his magical mentor Ningauble of the Seven Eyes. This wizard often requires unusual items for spells and sends Fafhrd out to find them. In 90% of these adventures he travels with his best friend, the Gray Mouser. It has often been said that Fafhrd and the Gray Mouser have two halves of the same soul. While one is bold and loud, the other is secretive and cautious. The barbarian owes his life many times over to his best friend and there is nothing they wouldn't do for each other.

**Gray Mouser**

Where Fafhrd is the crushing blow of awesome power, the Gray Mouser is the quick strike from behind to deadly effect. A lightning fast thinker, he also has a passion for the city life and all it implies. He has a deep curiosity in the ways of magic, but he doesn't have the discipline to become a master at spell casting.

**(fighter 13, wizard 5, thief 19)**

| | | |
|---|---|---|
| Str 15 | Dex 18 | Con 16 |
| Int 18 | Wis 15 | Cha 18 |
| AC 2 | MR nil | MV 12' |
| HP 96 | AL N | THAC0 8 |
| #AT 2 | Dmg (by weapon) | |

No matter what rapier he uses he calls it Scalpel. He fights two handed and his throwing dagger is always called Cat's Claw. He is also highly skilled with a sling, light crossbow, garrote, and short sword.

This hero is the supreme organizer. He formulates masterful plans on an instants notice. If he does have a shortcoming it is a fondness for the complex plan. The more details he can place into an operation the happier he is.

The relationship the Gray Mouser has with his wizardess mentor Sheelba of the Eyeless Face is much the same has Fafhrd has with his wizard. The Mouser does favors for the wizardess and receives good advice and magical help in return. A good 90% of the adventures the Gray Mouser undertakes begin with suggestions and requests from Sheelba.

Besides skills as a fighter and a thief, the Gray Mouser's other passion is his interest in all things magical. He truly wants to be a wizard-type but something always goes wrong with his spells and magical attempts. During his career he has had magical weapons, whistles, scrolls, books, and other devices, but these have always slipped through his fingers or caused him a great deal of trouble when he tried to use them. When encountered, the Gray Mouser he will have some type of magic on his person. Whether it will do him more harm than good is up to the hands of fate (and several other gods).

The Gray Mouser likes luxury and all that implies. He works constantly to gain the funds to allow him to live in what he considers a comfortable state. He and Fafhrd have a sort of Robin Hood approach to stealing and almost always take from people who have no sympathy among the common folk or local constabulary — Evil robber barons, powerful assassins, and bad rulers are their prime targets. All of the eight cities of Nehwon have had visitations from the pair.

**Ningauble of the Seven Eyes**

Ningauble is not human or even humanoid. It comes from another dimension, but has made Nehwon its home. It never shows its true form because that form would drive most humans insane. Ningauble's eyes act like a *gem of true seeing* and a *crystal ball.*

**(illusionist 20, bard 13)**

| | | |
|---|---|---|
| Str 14 | Dex 16 | Con 19 |
| Int 19 | Wis 19 | Cha 16 |
| AC -2 | MR 50% | MV 9 |
| HP 150 | AL N | THAC0 7 |
| #AT 1 | Dmg (by spell) | |

Ningauble is known as the "gossiper of the gods" and loves nothing better than to listen by the hour to a good story about some important person in Lankhmar or any of the eight cities. Supplicants have come to his caves and brought especially interesting bits of gossip and been made fabulously wealthy as a result. Many claim that these individuals would have become wealthy anyway, but no one says this in front of Ningauble.

This powerful spell caster inhabits a series of enchanted caves near the sinking lands. These caves have several inter-dimensional portals that lead to other times and universes. Fafhrd and the Gray Mouser have used these magical pathways to visit earth's past in the time of Alexander the Great and the time of Arthur and Merlin. The caves are also a fine defense for Ningauble. At one time a crime lord in Lankhmar sent one hundred thieves to attack the wizard over an imagined offense. The dust of the thieves and their equipment lies just off the entrance to the caves. This is the only reminder most need that it is often dangerous to deal with a powerful wizard.

Ningauble's aims are clear. It only wants to learn more about the ways of Nehwon and further its magical abilities. Just lately it has learned that its annual success or failure in these efforts is closely connected to how Fafhrd's life is proceeding. When Fafhrd is happy and living well, so too is the way of life for Ningauble. This has turned the wizard towards being much more helpful in the desires of its charge, Fafhrd.

Although Ningauble wants Fafhrd to do well, it also watches its charge closely. When Fafhrd is about to acquire power that might take him far away from Lankhmar or gain something that might allow the thief to not need his mage advisor things happen to quickly change that situation. Warnings are given to Fafhrd's enemies, the hero is tricked out of his vast riches, or the fates become unusually unkind for no reason Fafhrd can see. All of these acts serve to drive Fafhrd right back to the caves and his ever helpful advisor.

**Sheelba Of The Eyeless Face**

Sheelba of the Eyeless Face is some type of female, reptilian creature; clearly from another universe. She never shows all of her form because it would drive most heroes totally insane. She has come to Nehwon to live and is very protective of the Gray Mouser and the city of Lankhmar. It is commonly known that demons (who can perceive Sheelba's real form) scream in horror when facing this wizardress and leave the plane of Nehwon for all eternity.

**(illusionist 20, druid 7)**

| Int 19 | Wis 17 | Cha 7 |
| AC 2 | MR 50% | MV 9' |
| HP 150 | AL N | THAC0 7 |

#AT 1 Dmg (by spell)

Sheelba's magic is not of the directly destructive sort, for she is much better at summoning other creatures to do her fighting for her. Sheelba prefers the Salt Marsh because there are so many dangerous creatures that can be easily called upon to act on her behalf. There was a time when the Overlord of Lankhmar sent five hundred troops to capture and bring back Sheelba's hut. On the first day out of Lankhmar hundreds of normally shy swamp creatures attacked and killed one hundred of the troops. The brave commander kept the men out for a second day. All of the troops ran when a house sized worm ate the commander and his war horse in one gulp. Needless to say, the subject of the hut was never brought up in the Rainbow Palace again.

Sheelba lives in a hut at the heart of the Great Salt Marsh. This magical construct is able to move 24' over the marshy landscape and is the size of a palace inside, but appears only to be a small grass hut on the outside. Sheelba rarely lets anyone inside, preferring to look down from the stilts and talk to whomever visits her. The hut also has several inter-dimensional portals that allow Sheelba and others to travel to other universes. When Sheelba is out of the hut, the magical device will not let anyone enter.

Sheelba is extremely greedy and will never act unless there is a profit of some type to be had. Until recently she has demanded much from the Gray Mouser, but that has changed slightly. She, like Ningauble of the Seven Eyes, has come to realize that her life is closely tied to the success or failures of the Gray Mouser. Now, she seeks to have the Gray Mouser close by, where he can be better kept out of planet wide deadly dangers. The schemes of Sheelba are turned towards keeping Mouser in Lankhmar and keeping Lankhmar as trouble free as possible.

**Movarl**

Movarl Is the most famous hero on the planet. His name is revered by the forces of law and feared by the minions of chaos. He is the overlord of the city of Kvarch Nar. Movarl often travels from the city on quests for the powers of good.

**Paladin 12**

| | | |

Besides his normal powers as a paladin, he is totally immune to fear and paralysis of any type. In combat he uses Astrendan, a *two-handed sword +2* that instantly kills any undead creature it touches.

Movarl rides a huge white war horse with almost human intelligence and the maximum abilities of an animal of that breed.

**Plugh**

Plugh is the most skilled fighter on Nehwon. This means he can easily use any warrior's weapon known to that world. He favors his magical spear, but this weapon is so renowned that he often goes without it to keep his identity secret. He is never without a wide range of missile weapons; from throwing daggers to heavy darts.

**Fighter 15, Cleric 5**

| | | |
|---|---|---|
| Str 17 | Dex 17 | Con 17 |
| Int 14 | Wis 17 | Cha 8 |
| AC 2 | MR nil | MV 9 |
| HP 72 | AL le | THAC0 3 |
| #AT 7 | Dmg 2d6 + 4 (Spear) + 1 | |

Constantly searching for more and greater brawls has led to the myth that he is a bully and daring killer. Plugh is actually a careful, diligent bravo who only lives for the thrill of battle in all its forms. He has been known to take on a band of knights while wielding only a single small dagger.

Hunting only the best of the best, Plugh can be found in major cities across the world of Nehwon looking for the toughest of warriors to face. His strange code of ethics has caused him to want to always face his enemies man-to-man.

**Nehwon Monsters**

**Snow Serpent (Furred Snake)**

There are forms of furred snakes to be found all over Nehwon. These creatures are warm blooded, but their fur serves a wide variety of unusual functions. The Snow Serpent of the bitter north uses its barbed hairs to gain better traction on icy surfaces. This white serpent is the largest of all furred snakes and often reaches a 100 foot length. The black furred snakes of the tropics hide perfectly well in the trees, but their air filled hair is highly

useful in the water where they often find their prey. The brown furred snake can be found in the deserts and the plains and its fur constantly emits a poisonous oil that stings at a touch, making it difficult for other creatures to pick up and eat.

| | | | |
|---|---|---|---|
| AC 6 | No. 1 | SZ 100' long | XP: 2,000 |
| MV 9 | ML 15 | AL n | Int Animal |
| HD 10 | HP 80 | MR nil | THAC0 11 |
| #AT 1 | Dmg 1d10 | | |

**Special Att/Def:** Any successful attack roll allows the creature to begin using its constriction ability on the next round. The snake will coil 10% to 40% of it's body around the target and begin to crush it. For every three feet of its length used in this manner the snake inflicts 1 point of damage per round.

**Salt Spider**

This oversized spider is about the size and color of a large boar. It has plate-sized suction pads on its feet allowing it to travel over any surface. It lives and thrives in the great salty swamps in and around Lankhmar.

The spider makes huge webs in shallow ponds and streams that flow through the marsh. These webs are almost invisible and serve to trip the unwary. When attached to a web the prey usually looses footing and gets even more tangled. At this time the spider leaps out of hiding in the middle of the web and attacks.

| | | | |
|---|---|---|---|
| AC 6 | No. 1-6 | SZ 4' long | XP: 275 |
| MV 15 | ML 11 | AL n | Int Animal |
| HD 3 | HP 15 | MR nil | THAC0 17 |
| #AT 1 | Dmg 1d8 | | |

**Special Att/Def:** The bite of a salt spider is quite dangerous and any successful attack roll requires a save versus poison to avoid death.

**Nehwon Ghoul**

Nehwon ghouls are not undead. They are a living, breathing race of almost completely transparent, human appearing beings. Their culture teaches them that any creature not of their race is food for their table.

Their transparent nature makes them completely invisible in shadows or darkness. In the light they appear as a smoky shape with their bones barely visible. They wear little or no clothing and rely on their transparent nature as their protection. Their low armor class is a reflection of this fact.

The men of this race are bold, fierce warriors who throw themselves into battle singing proud war songs. The women are also warriors of skill, but are strangely attracted to human males.

The weapons and equipment of this race are similar to those employed by normal humans. The men favor large, double-bladed axes, while the women use either a shorter double-bladed axe or a slim long sword.

| | | | |

| #AT 1 | Dmg 4d10 | | |

**Special Att/Def:** Nil

**Bird of Tyaa**

Although this avian closely resembles a large raven, the Bird of Tyaa is much more powerful. Its wings, talons, and beak have strength far beyond that of normal birds of the same size.

The wild version of this creature will often fly to poisoned berry patches and coat their talons with the juices of these berries.

These birds have a language of their own that the priests of Tyaa understand. Because of this, the birds are used as scouts and thieves. Birds of Tyaa can be trained to tell the difference between simple shiny objects and highly valuable diamonds and jewels.

| | | | |
|---|---|---|---|
| AC 7 | No. 3-30 | SZ 1' XP: 35 | SZ 20' long |
| MV 1, 18 f | ML 6 | AL ne | Int Low |
| HD ½ | HP 4 | MR nil | THAC0 20 |
| #AT 1 | Dmg 1d4 | | |

**Special Att/Def:** There is a 50% chance that any given Bird of Tyaa will have poisoned claws (as described above). In addition, they often dive toward their targets at great speed, gaining a +4 on their attack rolls.

**Astral Wolf**

Astral wolves are the ghostly spirits of wolves that have died hungry on any lonely wasteland. Their ghosts haunt the astral plane and constantly seek to fill their ever empty bellies. Astral wolves roam the wastes all over Nehwon. They look for single or paired travelers.

| | | | |
|---|---|---|---|
| AC 3 | No. 3-12 | SZ 4' XP: 175 | |
| MV 18 | ML 10 | AL ne | Int Animal |
| HD 3 | HP 24 | MR nil | THAC0 17 |
| #AT 1 | Dmg 2d4 | | |

**Special Att/Def:** When their victims go to sleep and more than five astral wolves gather, these beasts can pull the spirit of a single human onto the astral plane. There, the human is attacked and torn apart. The captured spirit has all his weapons and armor and fights just as he would on the prime material plane. All the wounds the wolves inflict on the spirit form happen to the real body.

**Water Cobra**

The water cobra is a bold attacker, normally feeding on fish and small mammals. When threatened its first attack is towards the head of the creature. Its first two strikes are lightning quick bites designed to inject a poison into its prey. After it has made two successful attacks the snake will dive and wait to determine if the creature it attacked is dead. If its victim lives, there is a 75% chance that the snake will retreat to find easier prey.

Land versions of this cobra also have the ability to change skin color to perfectly blend in with its surroundings from moment to moment. The land version also has the ability to coil and leap up to five feet towards the intended prey. The land snake will only leap if the prey is in its jumping range.

| | | | |
|---|---|---|---|
| AC 8 | No. 1-8 | SZ 4' long | XP: 175 |

| HD 3+3 | HP 27 | MR nil | THAC0 17 |
| #AT 1 | Dmg 1d4 | | |

**Special Att/Def:** The water cobra is totally invisible in water for it has the innate ability to change color and match the shade of water it swims through from moment to moment. The creature's bite injects a deadly poison (saving throw applicable).

**Marsh Vulture**

The Marsh Vulture is one of the horrors of the swamp. Unlike its smaller cousins, this bird actively attacks living creatures. These attacks are meant to drive man and beast alike into the quicksand and bogs of the marsh so that the birds can rip their now helpless prey apart with their talons and savage beak. After the first few attacks, the vulture swoops away, not expecting its prey to be killed. The bird has several dangerous marsh areas selected and if the prey flees towards them they are not attacked. In this manner the vulture hopes to force a victim into the bogs.

| HD 8 | HP 50 | MR nil | THAC0 13 |
| #AT 3 | Dmg 1d10/1d10/2d20 | | |

**Special Att/Def:** The talons and beak of this creature are so slime encrusted that there is a 95% chance of catching a marsh fever after a single successful attack that draws blood.

**Devourer**

The Devourer is an alien merchant from a magical dimension whose only purpose in life is to sell things. The junkier these things are the better the strange mind of the Devourer likes them.

Each Devourer is a 20th level Illusionist. Scout Devourers come to another plane and open single stores. These stores are filled with seemingly wondrous magical items; all at bargain store prices. Each of these items has several different types of illusions on them. If the audience for these goods is found to be large, more and more Devourers come onto the new plane and sell more and more junk. Eventually, on plane after plane, the Devourers create slave planets where the inhabitants struggle to meet the mortgage demands on piles of magical junk.

| AC 7 | No. 1 | SZ Variable | XP: 4,000 |
| MV 18 | ML 12 | AL le | Int Exceptional |
| HD 10 | HP 50 | MR 24% | THAC0 11 |
| #AT 1 | Dmg Special | | |

**Special Att/Def:** Devourers are all powerful spell casters (20th level Illusionists) and will use their magic to great advantage in all situations.

**Cold Woman**

Chopping or striking a cold woman with any weapon has no effect and all body parts that are severed immediately rejoin the parent body. Cold or ice based attacks cause her to regenerate 1 hit point for every point of damage inflicted while fire or heat based attacks do +1 per die of damage. Her body secrets a deadly acid similar to that created by a black pudding.

A cold woman will plant eggs in the remains of bodies she does not eat. The eggs hatch in 24 hours and quickly eat the host bodies. Usually, these eggs produce an ordinary white pudding, but there is a 10% chance that they will produce another cold woman (known as cold spawn).

**Special Att/Def:** A cold woman has the spell casting powers of a 20th level illusionist (but is limited in the use of spells to effects that mimic ice and snow formations). In addition, she can fire a cold ray that does 8d8 points of damage and has a 60 foot range. Anyone struck by this horror must save versus paralyzation or be stunned for 4d8 rounds.

# Norse Mythology

**The Norsemen**

By the time of his death in 814, Charlemagne had forged an empire that covered much of Europe. It included what is now Northern Spain, the low countries of Belgium and the Netherlands, France, Austria, Switzerland, West Germany, and Italy to well south of Rome. By any standards, it was a significant realm, placing a huge territory and a great diversity of peoples under the rule of a single man.

It was also a wealthy, ponderous dominion ripe for plunder and the Vikings were just the people to do so.

Toward the end of Charlemagne's reign, his domain was already suffering raids from the northmen's longships. These seaborne attacks were as brutal and ferocious as they were unpredictable and fast. Fierce beasts carved on their prows, a flotilla of longships filled with greedy and murderous warriors would simply appear out of the morning mists. By nightfall, the town would be burning, many of its inhabitants slain, and the raiders gone.

Two generations after Charlemagne's death, the ferocious attacks became so common that most people viewed them as divine retribution for society's sins. But Charlemagne's empire was not alone in suffering this scourge. The fierce Viking marauders raided locations as far apart as Constantinople and York, overwhelmed cities as powerful as Paris and London, and burned towns like Aachen and Cologne. In the second half of the Ninth Century, they pillaged Tours six times. To the common man of the time, it must have seemed like these fair-haired killers called no place but the sea their home. That was not the case, however. They inhabited much the cold, bleak land now thought of as Scandinavia, Norway, Sweden, and Denmark. In Norway and Sweden at least, the interior landscape consisted of rugged, craggy mountains that made travel difficult and agriculture all but impossible. Therefore, most Viking villages were located near the coast, where deep fjords offered protection from the harsh winter and shelter for fishing boats. Wherever they would find suitable land, they established farms, and there was no doubt an abundant supply of game for fresh meat. Their homeland was rich in natural resources: ivory, pelts, wood, and all of the essential items.

What caused a people possessed of these abundant resources to emerge so suddenly as such a far-ranging force of destruction? One important factor was overpopulation. Scandinavia had long been a thinly settled wilderness, but its population slowly and steadily grew. With its rugged inland mountains forbidding any major expansion beyond the coastal areas, the population eventually reached the point of overflowing.

In addition to overpopulation, there were several cultural conditions which contributed to their ferocity. Armed with their knowledge of the sea, the Vikings were far-ranging traders and merchants who acquired a taste for monetary wealth — a taste which they soon learned to indulge through ransacking defenseless towns. Another important factor was that most chieftains had several wives and many sons, but inheritance was only passed on to the eldest son. Consequently, a large number of elite warriors were forced to make their own way in the world. This dangerous condition, when combined with an inherent sense of adventure and their newly acquired taste for wealth, opened up the possibility of piracy on a grand scale.

Without their legendary longboats, however, the Vikings might have remained little more than bothersome barbarians from the north. The longboat was a shallow-drafted galley equally capable of sailing the high seas or a relatively shallow river. A typical model was 70 feet long and 16 feet at the beam. It could carry up to a 100 men who could man up to 30 oars. The vessel could make 10 knots under its single square sail, and was sturdy enough to make stormy Atlantic crossings. At the same time, it was light enough to dragged overland for short distances, and maneuverable enough to slip past shore defenses. It is not surprising that they often lavished the best of their spirited art on these marvelous boats, carving the heads of majestic dragons or wild beasts upon the prows.

The Vikings used these longboats for more than just hit and run raids. They were aggressive merchants, trading ivory, furs, and amber for silk, spices, glass, slaves, and other goods in mercantile centers as far away as Baghdad. The Norsemen, as they came to be called, also established colonies in Ireland, Iceland, Greenland, the low countries, France, and other European areas. After founding trading centers in the vicinities of the Volga and Dnieper rivers, they eventually merged their holdings and created the Russian state. The Vikings were even the first (albeit unsuccessful) colonists of America.

**Viking Culture**

As fierce as they were, the Vikings were more than mere barbarians. Although they lived in villages scattered along the entire length of the Scandinavian shoreline, they shared many traits that mark them as belonging to a common culture.

For most Vikings, life followed a simple pattern. After the snows melted in the spring, they would prepare their fields and plant their crops. If the household was a wealthy one, this would be done with the aid of the family slaves. Then the men would turn their attention to the sea and go raiding, trading, or fishing while their young and women stayed at home to tend the crops and herds. In the fall, the men who had gone to trade or raid would return home, hopefully laden with treasure. After the crop was harvested and the snows came, they would turn their attention to hunting and taking pelts, either for clothing or trading. Although there were certainly many

variations on this basic pattern, the lifestyles of most Vikings no doubt followed the same seasonal patterns and incorporated the same elements of constant outdoor adventure.

Considering this ruined lifestyle. it is no wonder that the Norsemen had a well-developed spirit of self-reliance and independence. Although they acknowledged the classes of king, nobleman, freeman, and slave, they were fiercely individualistic and firmly maintained that all Norsemen were equal. It was not uncommon for a group of Vikings to demonstrate this essential truth by drowning or killing a king they no longer wished to follow.

Family ties were of great importance to the Vikings. The family was a large unit of kinsmen, including uncles, brothers, and kinsmen. It stood together in all things, and to attack one member of it was to attack the entire family. In the reverse, if one member of family committed a social transgression, the consequences often fell on the entire family. For instance, if a man killed someone, the killer's cousins might be called upon to pay blood-money to the victim's family.

As the example above suggests, the Vikings had an elaborate code of laws. This code allowed for divorce, property holding among women as well as men, orderly inheritance, mutual obligations between chieftain and follower, and all of the other relationships necessary to the orderly functioning of a society. Generally speaking, in their legal code Vikings respected honesty, loyalty, honor, generosity, and individual freedom. Outside of the legal code, they also admired warlike prowess, hardihood, and courage. Notably lacking in their legal code or personal value system was any concept of mercy.

The lack of compassion among the Norsemen is probably a function of their outlook on life, which seems as bleak and cold as the climate of their native land. Although they believed in a blissful after-world, Valhalla was a realm for warriors, and the only way to gain entrance was to die courageously in battle. Here, warriors would spend their days fighting and their evenings feasting. Even then, the refuge offered by Valhalla was a temporary one. All the men and gods were doomed to vanish in Ragnarok, a final, terrible battle in which all the gods and men were destined to perish. In the face of such certain doom, the only noble response was to fight honorably as best one could, and to take what pleasure was available in life.

**Mythology**

According to Norse mythology, at first there was only a great void. To the north of the void was a region of mist and ice, Nifleheim, and to the south a region of fire, Muspellheim. Where the two realms met, the heat melted the ice and formed a great frost giant, Ymir. He created a race of giants and, from glacial ice, a cow to feed them.

The cow was fed on briny ice, and, as she licked the ice, she uncovered a being name Buri. Upon being uncovered, Buri immediately produced a son, Bor, who had three godly sons, Odin, Vili, and Ve. As soon as the giants became aware of the gods, they started a war, which was ended when the three gods killed Ymir. After killing Ymir, Odin and his brothers made the earth from the frost giant's body and the vault of the heavens from his skull. From the maggots in Ymir's body, they created dwarves.

This done, Odin and his brothers created the home of the gods, Asgard, in the plane of Gladsheim. Then Odin created more gods, the Aesir, to populate Asgard. Another group of gods, the Vanir, appeared either shortly before or after the Aesir. Their origins are rather mysterious, but they seem to have populated Vanaheim, a land close to Asgard. For a time, a terrible war raged between the Aesir and the Vanir. A peace was finally arranged when the two groups agreed to exchange hostages. The Vanir sent Niord, Frey, and Freya to live with the Aesir, and the Aesir sent Hoenir and Mimir to live with the Vanir.

After establishing themselves in Asgard, Odin, Vili, and Ve created the first man, Ask, from an ash tree. They created the first woman, Embla, from an elm. Then Odin gave them each a spirit, Vili endowed them with their five senses and the ability to move, and Ve gave them life and blood.

The entire plane of Gladsheim is supported by a giant ash tree, Yggdrasil. Its roots extend to Nifleheim (now a frozen netherworld), Jotunheim (home of the giants), Midgard (earth), and Asgard itself. The Midgard serpent surrounds the earth, devouring anyone who attempts to pass out of Midgard. Another giant serpent, Nidhogg, gnaws at the roots of the tree. When he finally kills the tree, at the end of time, the entire structure will collapse.

As Nidhogg gnaws away the last root of Yggdrasil, the giants and their allies will rise up against the gods. In a terrible battle called Ragnarok, they will defeat Odin, the other gods, and all the great warriors who have been living in Odin's hall of Valhalla. At this point, Yggdrasil will collapse and the cosmos will come to an end.

**New Spells**

**Berserk (Enchantment/Charm)**

Fifth Level Priest

Sphere: Charm
Range: 50'
Components: V, S
Duration: 1 round/level
Casting time: 1
Area of Effect: 1 person/level
Saving Throw: negates

When a *berserk* spell is cast upon a group of warriors, they change into the shapes of bears, although they retain the hands and eyes of men and continue to wield weapons. In this state, they lose all fear of death and enter a killing rage. They must attack any enemy they see and cannot be given any orders. Thus, any hope of coordinating an attack is completely lost. Due to their blind rage, they suffer a -4 modifier on ability checks involving Intelligence, Wisdom, or Charisma.

During the duration of the berserk spell, the warriors are immune to the following clerical spells: *charm person or mammal*, all spells in the charm sphere, *protection from evil, protection from evil, 10' radius*, and *dispel evil*. They are also immune to the following Wizard spells: *protection from evil, protection from evil, 10' radius, repulsion*, all spells in the enchantment/charm school, and all spells in the illusion/phantasm school. In addition, they receive a + 2 modifier on all saving throws versus magic spells.

While under the influence of a *berserk* spell, the warriors receive a +4 adjustment to their Strength score, with the accompanying modifiers to their attack and damage rolls, and their AC is modified by a + 2 (so that, for example, AC 4 becomes AC 2). A *berserk* spell prevents the warriors from having to make a morale check, and renders them immune to fire damage.

Warriors who die while under the influence of a berserk spell are assured of a place in Valhalla. This spell can only be cast on fighters, and only if they are willing recipients.

**New Magic Items**

**Sword of the Giants**

When Beowulf followed Grendel's mother into her watery lair, he found his own sword would not injure her. Fortunately, the glowing *sword of the giants* happened to be hanging on the wall where he could seize it. This sword accomplished what his own could not, and he slew the fierce ogress. It is not known what later became of the sword.

The *sword of the giants* is a *vorpal sword +5* that glows with a constant golden light. In addition, it acts as a *ring of free action* and allows its possessor to breathe water.

**Sword of Odin**

During a banquet one day, a mysterious stranger (Odin in disguise) brought this gleaming sword to the Volsung's hall and plunged it into a living tree, saying that whoever could remove it could have it. Only the hero Sigmund could pull it free. He later used it to avenge a terrible wrong done to his family, then passed it on to his son, Sigurd. Sigurd made good use of the weapon, using it to slay the dragon Fafnir and rescue the Valerie Brynhild from her imprisonment in a ring of fire. Unfortunately, the sword seems to have been lost after Sigurd's death.

The *sword of Odin* is a *dragon slayer* (see DMG), forged by the dwarfs of Asgard for the purpose of slaying red dragons. While the sword is normally a +3 weapon, against these terrible beasts it becomes a +5 weapon and does triple damage. The *sword of Odin* also shields its bearer against fire damage, whether normal or magical. It can only be wielded by one of lawful good alignment.

**Odin (greater god)**

Often referred to as the "All-Father," Odin (sometimes called "Woden," "Othinn," or "Votan") is the leader and creator of the Norse pantheon. Along with his brothers, Vili and Ve, he slew the great frost giant Ymir and made the earth out of the giant's body. He also, directly or indirectly, fathered most of the Norse gods and helped create the first man and woman. Odin's first concern is battle, but he is also the god of knowledge, wisdom, poetry, and inspiration.

Odin has many powers. When sitting on his throne in the hall Valaskialf, Odin can see anything happening anywhere. He can use *telepathy* (as the spell) on any being within three hundred miles of one of his avatars, and he can inspire a *berserk rage* (as the spell above) in up to 1,000 men at a time. Odin is also an accomplished magician, and can use any wizard spell as an 18th level wizard. He possesses a magic ring, *Draupnir*, which produces a non-magical twin of itself every night. This twin is worth 3,000 gp on the open market. Odin also carries a rune wand which has the following powers: It functions as a *rod of rulership*, can summon 1d4 elementals of Odin's choice, can store 12 spells of his choice, drain 6 life levels and 100 hit points from anyone but Odin who touches it, and cause the instantaneous death of any mortal.

Unlike most greater gods, Odin cannot raise the dead, and can himself be killed (but only during Ragnarok). Healing anyone forces him into a deep sleep for 1d10 days. Odin rarely uses this healing power, as Loki has demonstrated a great propensity for causing trouble when Odin is indisposed.

In his true form, Odin appears to be a man of about fifty with a patch over one eye (he traded the missing eye for a draft from the Well of Knowledge). He has a bald head and a long gray beard, and usually wears a gray tunic beneath a hooded cloak of blue. He is often accompanied by two old wolves and two ravens which perch on his shoulder.

**Role-playing Notes:** Heroic, proud, and stern, Odin resembles the typical Norse chieftain in temperament and outlook. He is primarily concerned with power — his own in Asgard, and that of his worshipers in Midgard. Only two things will make Odin angry with a worshiper: helping a giant or losing a battle.

Odin has several animals that aid him in maintaining his dominion over both realms. Perhaps the most impressive of these are Freke and Gere, two aged wolves with graying muzzles who wander the planes gathering information for him. These wolves can *teleport* at will throughout Gladsheim, can see any hidden object, and can sense all things magical. (AC 4, MV 24, HD 9, HP 72, AT 1, Dmg 2d10, MR 25%, INT very, ML 18, AL n, SZ 6', XP: 2,000.)

In addition, he has two ravens, Hugin (thought) and Munin (memory) who perch on his shoulder. Odin uses them as spies and messengers, sending them on various tasks to the far parts of Gladsheim. He can see through their eyes or speak through their beaks, and often uses them to gather information on particular areas of interest, or to warn his worshipers of impending attacks. They can *teleport* to or from any location in Gladsheim, and are immune to magical control. (AC 2, MV 1/48f, HD 4, HP 28, AT 1, Dmg 1d8, MR 30%, INT very, ML 18, AL n, SZ 3', XP: 975.) Omens from Odin are usually delivered by his ravens.

Odin rides an eight-legged steed named Sleipnir. This magical horse can move across any surface (including water) and fly through the air. Sleipnir can also *teleport* to or from any location in Gladsheim, and allows no one to mount him without Odin's permission. (AC -1, MV 24, HD 16, HP 128, AT 4, Dmg 2d10, MR 25%, INT very, ML 18, AL In, SZ 12', XP: 13,000.)

**Statistics:** AL cg; WAL any; AoC war, wisdom, poetry, knowledge; SY blue eye.

**Odin's Avatar (fighter 20, wizard 12)**

Odin's avatar usually takes the form of an old man with an eyepatch and a slouch hat. He carries *Gungnir* (see below) as if it were nothing more than a walking stick. If sent to Midgard to fight a battle, however, the avatar takes the form of a splendidly muscled man wearing steel armor. He can draw upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 24 | Dex 20 | Con 18 |
| Int 20 | Wis 20 | Cha 18 |
| MV 18 | SZ 6' | MR 50% |
| AC -3 | HD 24 | HP 192 |
| #AT 2 | THAC0 -3 | Dmg 1d6 + 5 (spear) + 12 |

**Special Att/Def:** Odin's avatar carries Odin's spear, *Gungnir*. This + 5 weapon has several special abilities: in battle, it points at the most powerful enemy; when held aloft, all enemies who can see it are struck with fear; anyone allowed to touch the spear is blessed with a double effect prayer; anyone that touches the weapon against the avatar's will is *polymorphed* into an ant (save to negate).

**Duties of the Priesthood**

To be a priest of Odin, one must be a chieftain of a tribe. Odin's priests must like fighting. In addition, they must be good tacticians and leaders of men. They must always be in the front lines during battle.

**Requirements:** AB must meet requirements for fighter class; AL any; WP any; AR a; SP all, animal, combat, divination, elemental, protection, summoning; PW 1) one extra hp per level; 10) THAC0 of fighter of same level; TU turn.

**Frigga (intermediate god)**

Frigga is the goddess of the clouds, sky, married love, and wives. In her role as goddess of married love, she is sometimes prayed to for fertility. Frigga is the second but principal wife of Odin, being the mother of Balder, Hoder, Hermod, and Tyr. She can foretell the future, and has the power to control all forms of weather, to view any area that has a breeze blowing through it, to assume the form of any flying animal, to spin flax into gold, and to make any husband fall madly and permanently in love with his wife. In her true form, she is a mature woman of great beauty.

**Role-playing Notes:** Though permitted to share the throne with Odin, Frigga spends most of her time in her house, Fensalir, spinning golden thread or weaving multicolored clouds. She often sends her avatar to attend to the welfare of mortal wives, either taking vengeance on cruel husbands or assuring deserving worshipers of a blissful marriage. Her wishes often conflict with those of her warrior husband, and she will not hesitate to resort to trickery to get her own way.

**Statistics:** AL ln; WAL any lawful; AoC sky, domestic life; SY spinning wheel.

**Frigga's Avatar (wizard 16, bard 10)**

Frigga's avatar is a beautiful, somewhat matronly woman. She can call upon any school of magic for her spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 17 |
| Int 18 | Wis 17 | Cha 19 |
| MV 15 | SZ 5' | MR 25% |
| AC 2 | HD 16 | HP 128 |

#AT 1 THAC0 5 Dmg 1d4 (dagger) + 4

**Special Att/Def:** Frigga's avatar wears a necklace of black opals that will charm anyone within sight of it (save to negate). Any being struck by her dagger must save versus paralyzation or be carried 2 miles away by a powerful wind.

**Duties of the Priesthood**

Priests of Frigga must be married women. They are expected to watch over their home and set a good example for other wives by not letting their husbands stray too far out of the marital fold. If the husband of a priestess of Frigga practices the common Norse custom of taking a second wife, the priestess must divorce him immediately. They must also serve as midwives.

**Requirements:** AB standard; AL any lawful; WP dagger, club; AR a; SP all, animal, charm, creation, divination, plant, sun, weather; PW 1) *detect lie*; 10) *summon storm* (doing 1d6 points of damage to all exposed people and structures, lasting 1 turn/level); TU nil.

**Thor (intermediate god)**

One of the most popular gods of the Norse pantheon, Thor is the god of thunder, weather, and crops which are unusually vulnerable to the climate. He is also well known as a warrior, for he has battled many monsters on the behalf of Midgard and his fellow Asgardians. He has complete control over the weather, and so is sometimes worshipped by merchants who depend upon his good graces to make long trading voyages safe. At will, he can control any lightning bolt (natural or magical) in Midgard. He rides through the air in a chariot pulled by two magic goats, Tanngrisner and Tanngjost. If slain, these goats magically regenerate at dawn the next day. When wielding his magic hammer, *Mjolnir*, Thor can break any object. He usually wears a magical girdle, *Meginjarder*, which gives him a Strength of 25. Thor is a large, red-bearded man, usually dressed in chain mail.

**Role-playing Notes:** Thor is direct, uncomplicated, strong, loud, and has a tremendous appetite for drink and food. He is a special friend of mankind, and there is 2% chance/level that he will send his avatar to aid one of his priests in dire need of help. Omens from Thor are usually associated with the weather, especially thunder, lightning, and storms.

**Statistics:** AL cg; WAL any good; AoC thunder, weather, sky, crops; SY hammer.

**Thor's Avatar (warrior 20, priest 15)**

Thor's avatar is a huge, red-bearded man. He often carries *Mjolnir*, which can be thrown up to 200 yards and never misses, returns to the thrower's hand in the same round, can cast 100 points of *lightning bolts* per day (broken up any way wielder desires), and requires a Strength of 25 to lift and wield. Thor's avatar can call upon the sun, elemental, or weather spheres for his spells.

| | | |
|---|---|---|
| Str 25 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 19 |
| MV 18 | SZ 7' | MR 30% |
| AC -2 | HD 18 | HP 160 |
| #AT 3 | THAC0 1 | Dmg 1d8 + 5 (hammer) + 14 |

**Special Att/Def:** Thor's avatar can be hit only by magical +1 or better weapons. When in Midgard, he carries *Mjolnir*, and wears both *Meginjarder* and the glove *Jarn Grieper* which allows him to attack three times per round and renders him immune to fire.

**Duties of the Priesthood**

Priests of Thor must be brave, friendly, and honest. They may never back down from a challenge unless it is made simply to force them into certain death.

**Requirements:** AB standard, but Str of at least 16; AL any non-evil; WP hammer; AR a; SP all, charm, combat, elemental, protection, sun, weather; PW 5) summon rain in a 1 acre area; 12) lightning strike for 1d4/level; TU turn.

**Sif (intermediate god)**

Sif is the goddess of excellence and skill, as well as being a superb warrior-woman. Married to Thor, she is also the embodiment of conjugal fidelity. Loki once played a cruel trick on her by cutting off all of her beautiful golden hair. When Sif's angry husband came to take revenge, Loki was forced to replace the hair with locks of real gold which grew just like true hair. This hair had been crafted by a pair of clever dwarves who, flushed with their success, went on to create many other wondrous items, such as Thor's hammer *Mjolnir*, Odin's spear *Gungnir*, and his ring *Draupnir*.

Sif has the power to raise any character one level. She seldom does this, however, and will never grant this boon to an individual more than once in their life. In her true form, Sif is slender woman of great beauty. She has locks of pure gold, and often carries a long sword with her.

**Role-playing Notes:** Sif looks after young warriors and all those dedicated to excellence in their pursuits. When such an individual is in dire need of aid, there is a 1% chance per level that she will send her avatar to help. If the individual is capable of wielding the avatar's sword, the avatar will leave it behind as a souvenir of Sif's blessing.

**Statistics:** AL cg; WAL any good; AoC excellence; SY upraised sword.

**Sif's Avatar (warrior 18, bard 16)**

Sif's avatar is a beautiful, golden-haired warrior maiden. Her sword cannot be wielded by anyone with a strength of less than 18/01. She can draw upon any school of magic for her bard spells.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 20 |
| MV 18 | SZ 6' | MR 35% |
| AC -2 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8 + 3 (sword) + 6 |

**Special Att/Def:** Any being hit by Sif's avatar must save versus paralyzation or be incapacitated. This effect lasts until Sif wishes it dispelled. Any spell from the enchantment/charm school or charm sphere that is cast upon Sif's avatar rebounds on the caster. Her *sword +3* renders her invulnerable to spells from the illusion/phantasm school.

**Duties of the Priesthood**

Priests of Sif must be dedicated to excellence in all things. If they are married, they must always behave within the boundaries of the conjugal relationship.

**Requirements:** AB standard; AL any good; WP any; AR a; SP all, charm, combat, divination, elemental, protection, summoning; PW 5) raise one ability score of player's choice by one point; 10) advance directly to 11th level; TU nil.

**Aegir (intermediate god)**

Although more closely related to the giants than either the Aesir or the Vanir, Aegir is the god of the ocean and personification of its strength for good or ill. He lives in a great castle on the bottom of the ocean with his wife, Ran, and their nine daughters. Aegir is sometimes called "Alebrewer" because he often throws feasts for his friends, the Aesir. Aegir has the power to create or quell storms at sea. In his true form, he is a giant standing sixty feet tall. He has a long gray beard, and carries a tree-sized club carved in the shape of a maiden which can deliver 4d10 points of damage to structures or beings.

**Role-playing Notes:** The only predictable thing about Aegir is that if ship captains don't offer a valuable sacrifice to him when beginning a voyage, they are certain to feel his wrath. When he decides to sink a ship, he often sends his avatar to smash it to bits with his club. Other times, he simply destroys it with a terrible storm. He looks with favor upon raiders and pirates. If such men make the proper sacrifices to him, Aegir is 10% likely to aid them with favorable winds, or to conceal their approach with a storm or fog.

**Statistics:** AL ce; WAL any; AoC sea; SY rough ocean waves.

**Aegir's Avatar (fighter 16, priest 14)**

Aegir's avatar is a burly old man with a crazed expression. He can draw upon the weather sphere for his spells and can invoke spells of the elemental sphere which deal with water.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 15 | Wis 15 | Cha 18 |
| MV 12, 15 sw | SZ 8' | MR 20% |
| AC 0 | HD 16 | HP 128 |
| #AT 2 | THAC0 5 | Dmg 1d8 + 4 (club) + 7 |

**Special Att/Def:** Anyone hit by the avatar's club must save versus death or fall unconscious. The avatar can shoot a stream of salt water from his mouth, doing 1d10 points of damage up to a range of 20'. He has complete freedom of movement and breathing in any watery environment.

**Duties of the Priesthood**

To be a priest of Aegir, a man must be a ship captain. Such men are fighters who worship Aegir and have been granted a few clerical powers on the side. (They are not considered dual- or multi-class; they are simply fighters with extraordinary powers.)

**Requirements:** AB fighter; AL any; WP any; AR b; SP all, weather, divination, guardian; PW 1) use spells as a priest; 10) breathe water; TU nil.

**Baldur (intermediate god)**

The son of Frigga, Baldur is the god of beauty and charisma. He is also a warrior of considerable skill, and is as wise as he is handsome. He often serves as the patron of sages. As a young god, Baldur had dreams of doom, so his mother extracted promises from all things not to injure him, overlooking only mistletoe. The gods take great delight in his resulting invulnerability, and often make contests of bouncing axes and spears off his chest. Unfortunately, Loki plans to kill Baldur one day with a spear made of mistletoe. Baldur has the power to increase the Charisma of any being to 18. **Role-playing Notes:** Despite his attractiveness, Baldur is not a vain god. He is loyal to Odin and the other Aesir, and never fails to fulfill his obligations to them. When an ugly man or woman demonstrates his worth by performing a self-sacrificing deed of great importance, Baldur often rewards the individual by increasing his or her Charisma to 18. Omens from Baldur are usually delivered by a handsome or beautiful member of the opposite sex.

**Statistics:** AL ng; WAL any non-evil; AoC beauty and charisma; SY gem-encrusted chalice.

**Baldur's Avatar (fighter 14, bard 14)**

Baldur's avatar takes the form of an incredibly handsome fighter. He can call upon any school of magic for his spells. More often than not, he is followed by an entourage of several hundred women.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 21 |
| MV 15 | SZ 6' MR 30% | |
| AC 0 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 1d8+2 (sword) +6 |

**Special Att/Def:** Baldur's avatar cannot be injured by any attack (even magic) not utilizing mistletoe as its major component. Mortal females looking upon the avatar must save versus paralyzation or become permanent worshipers of Baldur, abandoning their homes, families, and countries to follow the avatar wherever he goes.

**Duties of the Priesthood**

Although priests of Baldur must themselves be extremely handsome or beautiful, they are expected to treat the less fortunate with compassion and kindness.

**Requirements:** AB standard, but minimum Cha of 16; AL any non-evil; WP any; AR a; SP all, charm, divination, protection, summoning; PW 5) raise Cha to 18; 12) members of the opposite sex who look upon the priest must save versus spells or be permanently *charmed* (as per the spell) by the priest; TU nil.

**Bragi (intermediate god)**

Bragi is the god of poetry and song. The son of Odin and Gunlod, Bragi was born in a stalactite-hung cave, put aboard a boat made by the dwarves, presented with a magic golden harp, and set adrift. As the boat floated out of the cavern, Bragi took the harp and began to play the song of life. With his song, he has the power to make plants grow and bloom, and to charm any animal into doing his will. In his true form, Bragi resembles an old, white-bearded man with a sparkle in his eye.

**Role-playing Notes:** Whenever people sing or recite poetry, they are worshipping Bragi. Since this is a favorite pastime in almost every hall, Bragi never lacks worshipers. He is a special friend to bards, often revealing to them the location of secret treasures. Most often, this revelation occurs as a sudden insight while the bard is singing before a large crowd. If the bard interrupts his song, however, he immediately forgets the location of the treasure.

**Statistics:** AL ng; WAL any; AoC poetry, music; SY harp.

**Bragi's Avatar (bard 20)**

Bragi's avatar is an old man with a long beard. He can call upon any school of magic for his spells.

| | | |
|---|---|---|
| Str 18/83 | Dex 19 | Con 16 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 6' MR 25% | |
| AC 1 | HD 22 | HP 176 |
| #AT 1 | THAC0 -1 | Dmg 1d6 (sword) + 4 |

**Special Att/Def:** When the avatar sings, all creatures within earshot must save versus spells or fall under his control (as per the *domination* spell). He also carries a harp which modifies any creature's saving throw by -4 while it is being played.

**Duties of the Priesthood**

Most often, the village storyteller is a priest of Bragi. It is his duty to preserve knowledge of the gods and the past, passing it from generation to generation through heroic ballads and poems. It is permissible for a human worshiper of Bragi to advance as a multi-class priest/bard.

**Requirements:** AB must meet both priest and bard requirements; AL any non-evil; WP club, bow and arrow; AR a; SP all, charm, divination, healing, protection; PW 3) faultless memory (can recall anything heard); 12) dominate (as *domination* spell) with song; TU nil.

**Forseti (intermediate god)**

The wisest and most eloquent of the Aesir, Forseti serves as the god of justice and the arbiter of divine disputes. No one has ever found fault with one of his decisions, and Odin often calls upon him to decide matters in which the chieftain of the gods feels he cannot be impartial. Forseti lives in Asgard in a radiant palace called Glitnir. Forseti knows when a lie is spoken anywhere in Gladsheim and has the power to make any mortal anywhere speak the truth, whether the individual wishes to or not. In his true form, Forseti is a handsome man dressed in a tunic of gold and breeches of silver.

**Role-playing Notes:** Forseti is most concerned with justice and truth. Whenever a body of men gathers to make laws, there is a 10% chance that Forseti's avatar will come to aid them. If this body is making laws that affect more than fifty thousand people, his avatar is sure to appear at the meeting disguised as one of the lords who has a right to attend the meeting. There is a 10% chance that he will send his avatar to aid those trying to throw off the rule of an unjust tyrant.

**Statistics:** AL lg; WAL any good; AoC justice; SY scales.

**Forseti's Avatar (priest 16, fighter 12)**

Forseti's avatar takes the form of an ordinary looking man, save that he seems unusually calm and sure of himself. He can draw upon the all, charm, combat, divination, and protection spheres for his spells.

| | | |
|---|---|---|
| Str 18/00 | Dex 18 | Con 18 |
| Int 19 | Wis 19 | Cha 18 |
| MV 15 | SZ 6' MR 35% | |
| AC 2 | HD 16 | HP 128 |
| #AT 3/2 | THAC0 5 | Dmg 1d8+5 (sword) +6 |

**Special Att/Def:** When the avatar swings his sword at a being who has spoken a lie within the last seven days, it never misses. Otherwise, the weapon functions as an ordinary *sword of sharpness +5*. Any being questioned by Forseti's avatar finds himself answering honestly.

**Duties of the Priesthood**

Forseti's priests often serve as advisors to their chieftains, and are sometimes entrusted with full authority to administer the law. They must always be fair and consistent in their advice or decisions, avoiding any temptation to use their positions to further their own interests.

**Requirements:** AB standard, but minimum Wis of 16; AL lg; WP sword; AR a; SP all, charm, combat, divination, protection; PW 5) *detect lie* (no save); 12) ask one question per week of Forseti; TU turn.

**Frey (intermediate god)**

Frey is one of the Vanir sent to Asgard to guarantee peace between the Vanir and Aesir. He is a god of fertility, providing men with sunshine, rain, peace, joy, and happiness. Frey is also a patron of married couples, horses, and horsemen. Like many male gods, he is a skilled warrior. He has a fabulous ship given to him by the dwarves, Skidbladnir. Resembling a cloud in appearance, this ship can carry all the gods at once, travel to any place in Gladsheim instantaneously, and can be folded up to fit in Frey's pocket when not in use. Frey has the power to bring sunshine or rain to any place in Midgard, to make plants grow, to give any married couple conjugal bliss, and to command any horse in Midgard. In his true form, Frey resembles a handsome young man.

**Role-playing Notes:** Although a capable fighter, Frey prefers the joys of peace and will always seek a nonviolent solution before resorting to combat. He is the patron of peaceful mortals, and will often send his avatar to aid those who have become imperiled through their efforts to maintain peace. Most of Frey's temples have vast pastures of grazing horses nearby. To ride one of these horses is to offend the god. Omens from Frey usually take the form of rain and storms, but can also be delivered by horses.

**Statistics:** AL ng; WAL any non-evil; AoC sunshine, rain, fertility, horses; SY ship-shaped cloud.

**Frey's Avatar (fighter 14, priest 12)**

Frey's avatar is a handsome young man. He can call upon the all, animal, charm, creation, divination, plant, sun, and weather spheres for his spells.

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |

| | | |
|---|---|---|
| MV 15 | SZ 6' MR 25% | |
| AC 2 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 1d10 + 3 (sword) + 7 |

**Special Att/Def:** Any being struck by the avatar's sword must save versus spells or lose all desire to fight. No horse will ever ride into battle against Frey's avatar. He can summon or dispel any rain clouds in his sight in the space of 1 turn.

**Duties of the Priesthood**

Priests of Frey are expected to do what they can to keep the peace. They are also called upon to perform marriage rites.

**Requirements:** AB standard; AL any good; WP sword, club; AR a; SP all, animal, charm, divination, protection, sun, weather; PW 5) *charm horses*; 10) *dispel* or *call rain* over one acre area per level; TU turn.

**Freya (intermediate god)**

Freya is the goddess of love, unbridled passion, and human fertility. Like her twin brother, Frey, she is one of the Vanir sent to guarantee peace with the Aesir. In the sense that passion is a hot, consuming emotion, she is also associated with fire. She is the patroness of a type of magic called "seithr," in which the sorceress enters a trance in order to answer questions about the future. As the goddess of fertility, Freya also looks after women in labor. She has the power to kindle passion in any being, to control fires anywhere on Midgard, to see the future, to bless any woman with a child, and to alleviate pain and injury. Freya also has a beautiful fur-lined cloak that allows her to turn into a falcon. In her true form, Freya is a voluptuous woman of entrancing beauty.

**Role-playing Notes:** Freya is a rather vain goddess who enjoys flattery-though she is far from foolish enough to believe it. She is not above using her looks to acquire what she wants, such as her priceless necklace, Brisingamen.

**Statistics:** AL n; WAL any; AoC love, passion, human fertility; SY fire in shape of a woman.

**Freya's Avatar (wizard 16)**

Freya's avatar takes the form of an unbelievably voluptuous, beautiful woman. She can call upon the abjuration and enchantment/charm schools of magic.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 20 |
| MV 15 | SZ 5' MR 25% | |
| AC 4 | HD 16 | HP 128 |
| #AT 1 | THAC0 5 | Dmg 1d4+10 (dagger) +4 |

**Special Att/Def:** Any being struck by the avatar's fiery dagger must save versus spells or burst into flames (suffering 2d10 points of damage). These magical flames continue to burn until a successful dispel magic is used on them. Any male who looks on the avatar must save versus spells or be charmed by her.

**Duties of the Priesthood**

Priestesses of Freya are all "seithr," itinerant women who travel the countryside telling fortunes. These women are seldom welcomed into a village by wives. They have the ability to change themselves into horses, in which state they have been known to commit acts against the law for human beings.

**Requirements:** AB standard, but must be a woman of minimum Cha 15; AL any chaotic; WP daggers; AR g; SP all, animal, charm, creation, divination, healing, necromantic; PW 3) *polymorph self* into horse form; 6) predict the future of any individual with 10% per level accuracy (95% maximum); 9) create one *philter of love* each time they advance a level; TU nil.

**Heimdall (intermediate god)**

Heimdall is the god of the dawn light and guardians. He is the son of Odin and nine giant sisters. Heimdall was born on the horizon and nurtured on the strength of the earth, the moisture of the sea, and the warmth of the sun. He has the power to see a hundred miles by day or night, and his hearing is so sensitive that he can hear grass growing in Midgard. Heimdall lives in a great castle located atop the bridge Bifrost, which connected Midgard and Asgard before it was broken during a terrible battle. In his true form, he is a strapping warrior in white armor. He carries a flashing sword and the famous alarm horn, *Gjallerhorn.*

**Role-playing Notes:** Heimdall's main duty is guarding the rainbow bridge, Bifrost. He will not allow anybody to cross it without Odin's express permission. He is the one who will summon the other gods to Ragnarok by blowing upon *Gjallerhorn.* Heimdall is the sworn enemy of Loki, and will always send his avatar to aid mortals caught up in the mischief god's plots.

**Statistics:** AL ln; WAL In; AoC light and guardianship; SY horn.

**Heimdall's Avatar (fighter 18)**

Heimdall's avatar is a burly warrior dressed in gleaming white armor.

| | | |
|---|---|---|
| Str 22 | Dex 19 | Con 18 |
| Int 18 | Wis 18 | Cha 17 |
| MV 15 | SZ 7' MR 25% | |
| AC -3 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8+5 (sword) +10 |

**Special Att/Def:** Heimdall's avatar always attacks with surprise. He carries a *vorpal sword +3*, +5 versus frost giants. His white *plate armor +3* prevents him from being hit by any weapon of less than +3.

**Duties of the Priesthood**

Priests of Heimdall serve as guards for kings and other powerful men. They are expected to be unswerving in their duty, and must never allow someone to pass a post under their guard without their master's permission. Heimdall's priests hold bridges sacred and must avenge any act that destroys one.

**Requirements:** AB must meet fighter requirements; AL any lawful; WP sword, spear; AR a; SP all, combat, divination, guardian, protection, summoning, sun; PW 5) see up to 100 yards in night or day (any weather); 10) hear any sound within 500 yards; TU turn.

**Hel (intermediate god)**

Hel is the goddess of death. She receives the spirits of those who die by diseases and old age, locking them behind the impregnable walls and gates of Nifleheim, the land of mists. Located beneath the roots of Yggdrasil, Nifleheim is not a realm of eternal punishment. Nevertheless, it is not a pleasant place, either. It is a land of eternal cold, mist, and darkness.

Hel can cause plagues and pestilence upon Midgard with a wave of her hand. Any mortal looking upon her face falls ill, suffering a permanent loss of 5 hit points per round until a cure disease spell is cast on them. Even after the cure, the victim never recovers the lost hit points. In her true form, Hel is a statuesque woman completely white on the left side of her body and black on the right side. The white side of her face has no features.

**Role-playing Notes:** Hel is a grim and fierce goddess, mercilessly striking down those who offend her. Occasionally, she finds a mortal man attrac tive and will send her avatar to fetch him.

**Statistics:** AL ne; WAL any; AoC death, disease; SY her face.

**Hel's Avatar (priest 15, fighter 16)**

Hel's avatar takes the form of a woman of swarthy complexion, with coarse, black hair. She can draw upon the all, animal, charm, combat, creation, divination, healing, and necromantic spheres for her spells.

| | | |
|---|---|---|
| Str 18/76 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 18 | SZ 6' MR 35% | |
| AC -2 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8+3 (sword) +4 |

**Special Att/Def:** Any being coming within 20' of the avatar must save versus death or suffer 3d10 points of damage from her aura. Any being hit by the avatar's sword must save versus death or contract a disease that causes 5 points of damage each round until cured. The avatar cannot be hurt by any material weapon, and her kiss causes death (no saving throw allowed).

**Duties of the Priesthood**

All priests of Hel must be women. Those of good alignment generally devote themselves to placating the goddess for the good of their village. Those of evil alignment use their powers for the acquisition of personal power. Both alignments are called upon to supervise the burial or cremation of the dead.

**Requirements:** AB standard; AL any; WP sword, poison darts, AR e; SP all, charm, creation, divination, healing, necromantic; PW 5) immunity to disease and poison; 10) speak with any person who has died in the last 10 years; 15) take only half-damage from physical attacks; TU turn (if good) or command (if evil).

**Idun (intermediate god)**

Idun is the goddess of spring. She is married to Bragi, the god of poetry and song. Idun is also the goddess of youth, and the keeper of the golden apples which keep the gods of Asgard young. The body of anyone eating one of these apples becomes 10 years younger. Of course, Idun and her apples are coveted by races other than the Aesir, and the giants are constantly trying to kidnap her. Idun has the power to slow or reverse the aging process

in any being, or to awaken any dormant or sleeping thing. In her true form, she is a youthful woman of great beauty.

**Role-playing Notes:** Idun is a cheerful and friendly goddess who takes great delight in seeing things grow and remain healthy. She is extremely conscientious about making sure that every god eats one of her apples every ten years. Idun is especially protective of young girls, and there is a 10% chance that she will send her avatar to protect one who is in danger.

**Statistics:** AL cg; WAL any good; AoC youth, spring; SY apples.

**Idun's Avatar (druid 14, ranger 14)**

Idun's avatar takes the form of a spry girl in her early teens. She can call upon the all, animal, charm, divination, elemental, healing, necromantic, plant, and weather spheres for her spells. She carries a basket of apples that she can use as missile weapons. Each time she throws one in combat, the DM should determine its effects as per a *wand of wonder*.

| | | |
|---|---|---|
| Str 18/55 | Dex 18 | Con 18 |
| Int 18 | Wis 18 | Cha 18 |
| MV 15 | SZ 5' MR 25% | |
| AC 2 | HD 14 | HP 112 |
| #AT 2 | THAC0 7 | Dmg 1d6 (staff) +3 |

**Special Att/Def:** Anyone struck by the avatar's staff becomes ten years younger (save versus breath weapon to negate). If the victim's age falls below 15, he loses 1 point of Str and Wis for every two years below 15. If the victim's age falls below 8, he can no longer attack physically, and anyone falling below the age of 6 can no longer use magic.

**Duties of the Priesthood**

Only girls who dedicate themselves to Idun at a young age may become her priestesses. Their duties revolve around caring for orphans and blessing the spring planting.

**Requirements:** AB standard; AL any good; WP staff, sling; AR g; SP all, animal, charm, divination, elemental, healing, necromantic, plant, and weather; PW 1) never physically age past 18; 2) natural AC of 5; TU turn.

**Loki (intermediate god)**

Loki is the god of mischief and strife. A sly, vengeful trickster who is always causing trouble among the gods, he is tolerated in Asgard only because of the great services he has performed in the past, such as helping to create Midgard and the wall guarding Asgard. Loki has the power to change his shape into anything. If any being, including other gods, look at Loki for more than three rounds, he can exert his influence over them in the form of a suggestion spell with no saving throw. He also wears a pair of boots that allow him to walk on water, fly, and run at a movement rate of 50. In his true form, Loki is a handsome young man who is always dressed in some combination of red and black.

**Role-playing Notes:** As the god of mischief and strife, Loki is one of the most active and unpleasant of gods. Yet, there is also an attractive side to his personality: he is handsome, sociable, and has a good sense of humor. Loki is one of the few gods who is at home with giants and dwarves, and often turns to them for help in his schemes. He is invariably in some sort of trouble with his fellows and will not hesitate to turn to his worshipers for help in extracting himself. Omens from Loki usually come in the form of an illusion.

**Statistics:** AL ce; WAL any non-lawful; AoC mischief and strife; SY red and black boots.

**Loki's Avatar (illusionist 18, thief 15)**

Loki's avatar is a handsome man dressed in red and black. He can call upon the illusion/phantasm school of magic for his spells.

| | | |
|---|---|---|
| Str 18/95 | Dex 18 | Con 18 |
| Int 18 | Wis 14 | Cha 18 |
| MV 25 | SZ 6' MR 25% | |
| AC 2 | HD 18 | HP 144 |
| #AT 1 | THAC0 3 | Dmg 1d6 (sword) +5 |

**Special Att/Def:** Loki's avatar is immune to magical control and can be fooled by illusions only when they are cast by a wizard of 18th level or higher. At will, can employ a *suggestion* spell on others.

**Duties of the Priesthood**

In order to collect a large gathering of followers, Loki is rather loose in his requirements and generous in his gifts. Priests of Loki may be of any alignment except lawful, and are not required to perform any services except

those occasionally demanded by the god himself. When a priest prays to Loki for some personal gain, there is a 1% chance per level that Loki will send his avatar to help the priest (but never more than three times in a lifetime).

**Requirements:** AB standard; AL any non lawful; WP any; AR a; SP all, charm, combat, creation, divination, elemental, healing, plant, summoning; PW 5) *mass suggestion*; 12) *shape change*; TU nil.

**Tyr (intermediate god)**

Tyr is the god of the sword and courage, and watches over battles with as much interest as Odin himself. He is also the godly law enforcer, using his impressive swordsmanship to uphold order.

Tyr has only one hand, for he lost the other in the service of his fellow gods. The mighty Fenris wolf was savaging much of Asgard, and the gods were unable to stop him until the dwarves forged a golden leash capable of holding the beast. The gods bet the wolf that he could not break the leash. The suspicious wolf would not agree to the contest unless one of the gods put a hand in his mouth to guarantee his release if the leash could not be broken. The fearless Tyr complied without hesitation, and lost his hand when the wolf realized he was trapped.

Try has the power to see invisible objects and to recognize any thief within his sight. In his true form, he is a bearded, fierce-looking warrior missing one hand.

**Role-playing Notes:** As the god of swords, Tyr watches over the Valkyries and makes sure that they bring only the most valiant of mortal heroes to Valhalla. He is also the patron of courageous warriors. There is a 10% chance that he will grant an extra level to any hero of good alignment who risks his life by fighting a giant without help. He sometimes sends his avatar to punish extraordinary crimes, such as the murder of a king or the theft of a kingdom's most precious treasure. Criminals surviving such an encounter need never fear retribution from Tyr again, however, for he admires courage and skill even more than he does the law.

**Statistics:** AL lg; WAL lg; AoC swordsmanship, courage, law; SY sword.

**Tyr's Avatar (fighter 18)**

Tyr's avatar takes the form of a burly warrior who is missing one hand.

| | | |
|---|---|---|
| Str 20 | Dex 18 | Con 18 |
| Int 18 | Wis 17 | Cha 17 |
| MV 15 | SZ 6' MR 20% | |
| AC -2 | HD 18 | HP 144 |
| #AT 2 | THAC0 3 | Dmg 1d8+3 (sword) + 8 |

**Special Att/Def:** Tyr's avatar carries a *sword of sharpness +3* that also allows him to see invisible objects and to know alignment.

**Duties of the Priesthood**

Tyr's priests usually serve as a kingdom's law enforcement officers. They are often dual class fighter/priests.

**Requirements:** AB standard, but must also meet minimum requirements for fighters; AL lg; WP sword; AR d; SP all, combat, divination, guardian, healing, protection; PW 1) *hold person*; 10) *detect lie* (always active); 15) *detect invisible* (always active); TU nil.

**Norns (lesser gods)**

Although lesser goddesses, the Norns possess the most important power in Gladheim: they are the ones who dictate the fate of the newborn — for both men and gods alike. There are three Nnorns, all of whom are female. Urd embodies the past, Verdandi the present, and Skuld the future. Once they have decreed a being's fate, no force in the universe can alter their decision. Of course, the Norns can see all things in the past, present, and future, but they employ these powers only among themselves or to answer questions of slight import for very large fees. They also have the power to assume any form they wish. In their true forms, Urd is a giantess, Verdandi a beautiful female elf, and Skuld a handsome female dwarf.

**Role-playing Notes:** When a child is born, the Norns always appear, disguised as some combination of three animals, and pass their judgment on the baby's fate. If the parents recognize them and offer all three great gifts, the Norns will be persuaded to dictate a great future for the child. This is an extremely hazardous undertaking, however. If the parents do not give gifts of equal value to the Norns, or happen to miss one by offering her gift to a mundane animal, the offended Norn will grow jealous and turn the gifts of her peers into a curse.

**Statistics:** AL n; WAL any; AoC fate; SY a staff with three branches at the top.

**Norn's Avatars (fighter 12, wizard 12, priest 12)**

The Noms' avatars usually take the form of large swans, but they also appear as females of their respective species.

Verdandi's avatar can call upon conjuration/summoning, enchantment/charm, greater divination (all spells), and invocation/evocation schools of magic. Skuld's can call upon the all, charm, divination (all spells), necromantic, protection, and summoning spheres.

| | | |
|---|---|---|

**Special Att/Def:** The Noms' avatars can only be hit by magic and magic weapons.

**Note:** In the above table, the first number applies to Urd, the second to Verdandi, and the third to Skuld. In cases where only a single value is given, it applies to all three.)

**Duties of the Priesthood**

The Norns do not support a clerical order.

**Thrym and Surtr (lesser gods)**

**Thrym (fighter 20, wizard 18)**

Thrym is both the lord and deity of the frost giants. He can plunge any part of Midgard into a state of extreme cold. Like all giants, Thrym hates the Aesir and is anxiously awaiting Ragnarok. He will lend his aid to any plan that troubles the Aesir. Thrym often grants the frost giants of Midgard the ability to use wizard magic at up to the 12th level of proficiency.

**Statistics:** AL ce; WAL any evil; AoC cold and ice; SY white double-bladed axe.

**Special Att/Def:** Thrym can breathe a cone of cold to range of 100' for 10d10 damage (save versus breath weapon for half damage) and is himself immune to cold or ice based attacks. He can only be hit by +3 or better magical weapons.

**Duties of the Priesthood**

All frost giant shamans/witch doctors (as described in Monstrous Compendium One) worship Thrym.

**Surtr (fighter 20, priest 15)**

Surtr is both the lord and deity of the fire giants. He can control any fire in Midgard. Surtr resembles an immense fire giant, with crackling flames for hair and eyebrows.

Like all giants, Surtr hates the Aesir and is anxiously awaiting Ragnarok. He will lend his aid to any plan that troubles the Aesir.

**Statistics:** AL le; WAL any evil; AoC fire giants; SY flaming sword.

| | | |
|---|---|---|

| AC -2 | HD 20 | HP 160 |
| #AT 2 | THAC0 1 | Dmg 2d10 + 3 (sword) + 13 |

**Special Att/Def:** Immune to normal or magic fire. Any being touching his red-hot iron armor suffers 1d10 damage. He carries a flaming sword +3 that sets anything it touches on fire (save to negate), for 1d10 damage/round.

**Duties of the Priesthood**

All fire giant shamans/witch doctors (as described in Monstrous Compendium One) worship Surtr.

**Valkyries (lesser gods)**

The Valkyries bring fallen heroes to Valhalla. Although extremely beautiful, the Valkyries' love of battle makes them rather grim. When a battle is about to occur, they rush out of Asgard singing their deafening, foreboding song. If the battle is to occur on land, they travel on flying white horses and pour bucketfuls of gore over the battlefield. If the battle is to occur at sea, they sail into the battle in a ghastly boat under clouds of

bloody rain. While waiting in Asgard for the next battle, the Valkyries pass the time by weaving battle garments, and by serving mead and ale to Odin's warriors in Valhalla. They have the power to raise any hero who fell in combat, to see bloodshed anywhere in Midgard, and to predict the outcome of a battle. There are twenty-seven Valkyries, all svelte, beautiful, golden-haired battle-maidens.

**Role-playing Notes:** The Valkyries love combat the way mortal Norsemen love bear-baiting. They never miss a battle. Only on Odin's command will they aid either side, however. Should anyone ever slay a Valkyrie, the Valkyrie simply returns to Valhalla — and her peers turn on the killer in their full fury. Occasionally, the Norns will tell the Valkyries when a hero is fated to die in battle. In such cases, one of the Valkyries will appear to the hero and give him a lingering kiss before the battle is joined.

**Statistics:** AL ce; WAL any; AoC fallen heroes; SY woman in horned helm.

**Valkyries (Fighter 20)**

The Valkyries have no avatars, for their task requires that they always appear themselves. Their flying horses have a movement rate of 25 on land or in the air.

| | | |
|---|---|---|
| Str 22 | Dex 20 | Con 19 |
| Int 18 | Wis 14 | Cha 20 |

| AC -2 | HD 22 | HP 176 |
| #AT 2 | THAC0 -1 | Dmg 1d8+5 (spear) +10 |

**Special Att/Def:** The Valkyries are visible only to fighters in mortal danger. They are only hit by magic and +1 or better weapons and wield spears that can penetrate all armor, even if it is magical, as if the wearer's armor class were no better than 4. Further, they are immune to fire, electrical, and ice (or cold) damage.

**Duties of the Priesthood**

Priests of the Valkyries must be attractive, blond-haired women. These priestesses are always female fighters rather than clerics, though the Valkyries are permitted to grant them limited spell use.

**Requirements:** AB minimum abilities for fighters, minimum Cha of 14; AL any non-good; WP any; AR c; SP charm, combat, healing; PW 1) use combat and saving throw tables as fighters; TU turn.

## Norse Heroes

**Fjalar**

In Norse mythology there are two races of Dwarves, the Durin and the Modsognor. They are similar in many ways, their chief difference being in the type of magic they create and to whom the give it. The Durin create magic weapons and will trade them to the Aesir or frost giants with equal relish. The Modsognor create magic items of a nonviolent nature and will only give them to the Aesir. Fjalar is the battle leader of the Durin dwarves.

**Fighter 10, Thief 10**

| | | |
|---|---|---|
| Str 19 | Dex 18 | Con 18 |

| AC -3 | MR nil | MV 12 |
| HP 129 | AL n | THAC0 8 |
| #AT 3/2 | Dmg 2d10+3 (gauntlets) | |

Fjalar often defends his fellows against the fire giants, who prefer not to pay for their magic items and often try to steal them instead. Fjalar wears a pair of magic *gauntlets +3* that allow him to strike for 2d10 damage. His knowledge of magic weaponry is so great that he cannot be hit by any weapon with less than a +2 magical bonus.

**Skirnir**

Despite Skirnir's skill in battle, he is a peace-loving man who always looks for a nonviolent solution before drawing his mighty sword. Frey was so impressed by Skirnir's dedication to peace that the god brought Skirnir to Asgard and made him his shield man.

Skirnir is totally dedicated to Frey. Once, when Frey was struck with love for the giantess Gerda, Frey won her hand for his master by threatening to turn the giantess into an old maid.

**Ranger 12, Bard 12**

| | | |

**Spells:** Ranger: 1) *animal friendship*, *command*; 2) *speak with animals*, *enthrall*; 3) *prayer*.
Bard: 1) *burning hands*, *change self*, *chill touch*; 2) *continual light*, *glitterdust*, *web*; 3) *wraithform*, *delude*, *vampiric touch*; 4) *fear*, *minor creation*.

**Special Att/Def:** A split second before being struck by a fatal blow or spell, Skirnir is automatically teleported back to Asgard.

**Sigurd**

Sigurd was the son of Sigmund, the first wielder of Odin's sword. After his father died, Sigurd found the two pieces of Odin's sword and convinced the Durin Dwarves to forge it back together. He engaged in a great many adventures, including the awakening of the sleeping Valkyrie, Brynhild, and slaying the dragon Fafnir.

Despite a lifetime of honesty, Sigurd died a bitter and tragic death. After awakening Brynhild, he had promised to marry her, but forgot this due to an enchantment placed on him by the mother of Gudrun. Eventually, Brynhild married Gunnar, Sigurd's friend and Gudrun's brother. She took vengeance on Sigurd for forgetting her by persuading her husband to murder him while he slept.

**Fighter 18**

| #AT 2 | Dmg 1d8+5 (sword) +4 | |

**Special Att/Def:** Sigurd wields Odin's Sword, a *dragon slayer +4*, +5 versus red dragons. In addition to its normal magical bonus, it does triple damage to red dragons and renders him immune to all magical or mundane fire damage.

**Beowulf**

Beowulf was a great hero of the Geats who killed the monster, Grendel, who had been terrorizing the mead hall of King Hrothgar of Denmark. He also had to kill Grendel's mother, which is how he came to hold the sword of the giants. After returning home, he eventually became king of the Geats, and died battling a terrible dragon.

**Fighter 19**

| #AT 2 | Dmg 1d8+5 (sword) +7 | |

**Special Att/Def:** Beowulf wields the *sword of the giants*, a *vorpal sword +5* that casts a golden light at all times, acts as a *ring of free action*, and allows the bearer to breathe water.

## Norse Monsters

**Fafnir**

Fafnir was the son of the dwarf king Hreidmar. He killed his father for the king's treasure, then ran off and hid so he wouldn't have to share it with his brother Regin. Because of how he had acquired the treasure, he received no joy from it. After decades of brooding, he eventually turned into a red dragon — save that he had no wings and could not fly, and lacked the ability to cast most spells.

He has one weak spot in his scaley armor: an area over his heart that is only AC 2. Unfortunately for the many heroes who have tried to kill Fafnir and recover his treasure, the worm is aware of this weakness. He usually keeps the bald spot turned to the ground, where it is difficult to discover and even more difficult to hit.

| | | | |
|---|---|---|---|
| AC -5 | No. 1 | SZ 80' | XP: 17,000 |

| HD 19 | MR 35% | THAC0 3 | #AT 3 |
| HP 152 | Dmg 1d10/1d10/3d10 | | |

**Special Att/Def:** Fafnir breathes fire for 12d10+6 (save versus breathe weapon for half damage). He is immune to fire and can cast *affect normal fires* and *pyrotechnics* (both 3x/day), *heat metal* once per day.

**Garm**

Garm is a huge dog with a disproportionately large head. He guards the entrance to the cavem Gniper, where Helvig, the long and troublesome road to Nifleheim, begins. Garm will allow any being to enter Gniper, but will not willingly allow them to leave.

When his mistress, Hel, is out collecting the dead and Helvig is closed, Garm is allowed to roam freely. He can travel to any plane in Gladsheim freely, taking with him a pack of 2d10 dire wolves for company.

Over the centuries, Garm has fought and killed many heroes who went to Nifleheim in an attempt to retrieve their loved ones. There is quite a collection of magic swords, armor, and other items in Gniper.

| | | | |

| HP 200 | Dmg 6d10 (bite) | | |

**Special Att/Def:** Anyone looking upon Garm must save versus petrification or be subject to fear (as the spell). Garm can only be hit by +2 or better weapons and is immune to any type of control or charm spell.

**Fenris Wolf**

This huge wolf is the offspring of Loki and a giantess, Angur-boda. Due to an agreement among the gods not to slay each other's offspring, the wolf cannot be killed. He is so strong that he can easily break any chain placed around his neck. He wandered Asgard free for many years before the dwarves finally forged a leash he could not break. Forged from the roots of a mountain, the noise of a moving cat, and the breath of a fish, this golden leash is no thicker than a strand of silk, yet it is completely unbreakable.

Every now and then, however, the Fenris wolf slips his chain and travels to Midgard in pursuit of prey. Men often know when this has happened, for it is a time of terrible omens when the avatars of the gods walk the land in search of the terrible beast.

According to the Norns, the Fenris wolf will devour Odin during Ragnarok.

| HP 240 | Dmg 8d10 | | |

**Special Att/Def:** The fenris wolf can only hit by +2 or better magical weapons.

**Fossergrim**

Fossergrim resemble normal men, save that they live in waterfalls and are never found more than a mile away from the one which they inhabit. They mate with women who come to bathe in the pools near their waterfall, and have been known to abduct innocent maidens when no willing partner comes to their pool.

If the offspring of a Fossergrim and a woman is female, the child is human in all respects, save that she can breathe water. If the child is male, he appears normal for 5d10 years, and is then overcome by an uncontrollable urge to find a waterfall of his own. Any being touching a Fossergrim can breathe water until contact is broken.

**Special Att/Def:** Fossergrim are 100% magic resistant in splashing water; otherwise, they save as normal monsters. In splashing water, they regenerate 5 hp per round and, when fighting, they cannot miss anyone standing in water.

# Monster Mythology

# Gods of the Aarakocra

## Syranlta (Intermediate Goddess)

Syranita is the one aerial member of the asathalfinare, partly because of her great friendship with Aerdrie Faenya (who a few aarakocra revere) and consequent friendship with Deep Sashelas, and partly because she seeks as many friends among the gods as possible for her gentle and relatively weak race. She has friends among the djinn and jannee, human sky gods, Stronmaus of the giants, and Remnis the eagle god. Like Remnis, she is a superb spy and is very watchful. She greatly enjoys music and song.
Role-playing Notes: Syranita is active in using her avatars to change weather patterns on the Prime Material plane, to help aarakocra (often by driving off enemies), in assisting friendly races in similar ways, and sometimes simply to listen to a great bard practice his art. She knows something of Stillsong's fate and sometimes listens to his wanderings. She sends omens and warnings to her priests and shamans as wind-borne debris.
Statistics: AL ng; WAL ng (aarakocra); AoC aarakocra, protection, watchfulness; SY opal necklace with feather pendant.
Syramta's Avatar (Wizard 12, Druid 16)
Syranita's avatar appears as an aarakocra female with silver skin and pink-gold feathers. She uses spells from spheres listed for druids, plus guardian, protection sun, and from all wizard schools save necromancy and invocation/evocation.
Str l6 Dex l8 Int l9
Wis l9 Con 16 Cha l9

HP 120 HD 15 MR 35%
#AT 1 (2) THACO 5 Dmg d6 +1/d6 +1 (claws) or by weapon +1
Special Att/Def: The avatar has perfect vision to a range of 4 miles and cannot be surprised. No spell affecting/negating flight affects her, and no natural avian will attack her. She can summon a huge 24 HD air elemental to serve her for 12 turns, 2/day, and a huge djinn (10 HD, 80hp) once per week for 12 turns. Her magical opal necklace acts as a ring of protection +4 with all functions of a ring of shooting stars, and it radiates protection from evil 20' when she wishes it.
Duties of the Priesthood
Syranita's priests and shamans serve their communities as protectors and educators of the young. They defend them by summoning elementals (see the Monstrous Compendium} and with spells. Their religious rituals involve communal whistling and singing.
Requirements: AB std; AL ng; WP any; AR none; SP as druid, plus guardian, protection, sun; PW 3) can summon air elemental in group (see the Monstrous Compendium); 4) protection from evil 10'; 9) forbiddance; TU turn at -2 levels; LL 9; HD d4; Shamans yes.

Shamans: AB std; AR none: LL 4; HD d3.

# Gods of the Beholders

## Great Mother (Greater Goddess)

The enormous form of the Great Beholder Mother floats through the planes as she wishes, returning to a wretched sub-plane within the Abyss (whose location only she knows) when she is preparing to lay the great eggs which form the Hive Mothers on many worlds infested with beholders. Her eggs have given rise to all the beholder races, including some monstrous beasts reputed to exist which are as large as the Mother herself and which have magical powers not far short of those of her avatar. It is even said that she has mated with tanar'ri and gehre-leths and worse, always consuming them in the process, and that the dreadful offspring roam the lower planes in a variety of grotesque forms.

Silently gliding through space, this monstrous horror is mostly wrapped up in her contemplations of the philosophy of chaos and evil, and it is said that she is the ultimate sage on these topics. But she is intensely intellectually arrogant and jealous and brooks not even the possibility of her ever being in error about anything. She does not bother to acquire knowledge and magic as other major deities such as Ilsensine do, because she knows all she will ever need to know. She goes about her business of populating worlds with more great beholders unconcerned by the piffling efforts of mortals, or even of other gods.

Role-playing Statistics: The Great Mother only dispatches an avatar to defend her creations when they are under threat as a species in a world, or in a major part of it. She is most likely to intervene if the enemies are drow or some agents of lawful good. Even so, she is a creature of whim, sometimes allowing a world to be virtually depopulated of beholders, and other times becoming utterly enraged by a small pocket of her offspring being threatened. She is otherwise neglectful of her children, and certainly does not deal with trivia such as omens or signs. Some sages allege that the Great Mother is drawn to powerful planar-travelling magics, the sites of permanent gates and the like, and may send avatars to investigate these.

Statistics: AL ce; WAL ce (beholders); AoC magic, fertility, tyranny; SY egg with central eye.

Great Mother's Avatar (Wizard 18, Priest 18)

The avatar of the Great Mother appears as a truly huge, bloated beholder bearing debris all over its body-small rocks, stones, encrusted gems, scraps of armor and broken weapons, shells, dragon's teeth and all forms of debris. She draws spells from all wizard schools, and from the spheres listed for her priests (also Healing and Sun-both reversed-and Summoning).

Str l5 Int 21 Dex lO
Wis 20 Con 18 Cha 20
AC -5/-3/-2 MV fl 3 SZ H (18' diameter)
HD 20 HP 160 MR 80%
#AT l THACO 5 Dmg 4d6 (bite)

Special Att/Def: The avatar swallows whole any creature below large size on a hit roll of 19 or 20; acid damage inside the avatar is 6d6 pts/rd (internal AC is 2). Her vast body

(AC -5) takes 85% of hits and other locations 5% each (small eyes AC 2, eyestalks AC -3, 25 hp; central eye AC 2, 60 hp). The avatar can radiate to 20' distance any of the following effects at will:
fear, chill (ld8 damage per round), hopelessness (as the symbol) and repulsion, one effect only during each round. All saving throws against spell effects from her eyes are made at -4 (cumulative with any other penalties which may apply). She suffers only half damage from blunt weapons and is unharmed by non-magical weapons.
How the Priesthood Works
The Great Mother does not have regular priests who officiate at rituals, lead the faithful, gain spells through prayer, and the like. The Great Mother's magical gifts to her offspring have been so great that she feels no need for them to receive extra blessing in this way. Rather, temporary priestesses are created by the Great Mother through visits from her avatar when she deems it necessary. If, as happens very rarely, beholders flock together (or are forced together) through conflict with other races. Great Mother's avatar will temporarily empower very old female beholders with special abilities. These will be Hive Mothers if there are any present (see the SPELLJAMMER(tm) boxed set, pp. 69-70). The chosen females gain the spellcasting powers of a 9th-level priest for a period as deemed necessary by the avatar, but not exceeding 7 days (the avatar may always revisit after this time has expired, of course). Each is able to have access to up to 4 different spheres of spells from those listed below, and they gain +2 to saving throws against all spells from those selected spheres if other priests use them against the beholder-priestesses. They can also command non-intelligent Undead (skeletons and zombies) as a 9th-level priest for the same duration.
Duties of the Priesthood
Beholder priests revere the Great Mother, and use powers granted to them in strife between beholders and other races;
powers are specifically granted for this and related purposes.
Requirements: AB must be old female (hive mother); AL ce;WP any; AR none; SP all, astral, combat, divination, necromantic (rev), numbers, protection, thought, time; PW see above; TU see above; LL 9; HD n/a; Shamans no.

## Gzemnid (Lesser God)

Gzemnid is the only one of Great Mother's original batch of progeny to have become a minor deity itself. It is a subtle, wily creature, using its extensive command of spells of obscurement and area distortion. Older mortal beholders tell tales of powerful enemies who sought to rob Gzemnid of his treasures being overcome virtually through exhaustion trying to corner this elusive creature. He is sometimes known as "the gas giant" because of his mastery of spells of elemental air.
Gzemnid is less aggressive than most of its race. Like his mother, he has a cache of magical treasures and lore somewhere on the Plane of Concordant Opposition. Unlike her, he is prepared to parley and bargain in order to add to this store. Of course, Gzemnid would prefer simply to slay intruders and take their magic for itself, but if confronted with a group of obviously powerful beings who do not immediately resort to violence the

deity may negotiate (while using his magical rod to gain some leverage in discussions). He sends his avatars to the Prime Material plane to obtain such magical items and lore moderately frequently.
Role-playing Notes: Gzemnid may send an omen of the imminent arrival of its avatar to a powerful wizard who has something he wants for himself, usually in the form of a semi-substantial gaseous mass of writhing tentacles holding a "rod" and sometimes speaking directly through this manifestation. Currently, Gzemnid is believed to be most interested in increasing his powers through the acquisition of powerful magical items which can generate illusions.
Statistics: AL ce; WAL ce (beholders); AoC gases and fogs, obscurement, deception; SY bronze rod held in tentacles.
Gzemnid's Avatar
Gzemnid's avatar appears as an oversized sky-blue beholder with the usual central eye and 10 smaller eyes, but it also has a small circle of tentacle-fronds some 2' long on the crown of its head, and these are dextrous enough for the use of magical items such as rods and wands.
Str l2 Int 20 Dex l5
Con 15 Cha l6 Wis 20
AC -4/-2/3 MV fl 6 SZ L (8' diameter)
HD 14 HP 112 MR 25%
#AT 1 THACO 7 Dmg 3d4 (bite)
Special Att/Def: The avatar uses all Elemental (air) spells I/ day each as if an ISth-level spellcaster. It can also cast the following I/day each: distance distortion, guards and wards, hallucinatory terrain, phase door, screen, shadow door, vacancy, veil. It is immune to all Elemental (air) spells. It carries a rod of beguiling in the tentacles on the crown of its head.

# Gods of the Bugbears

### Hruggek (Intermediate God)

Hruggek is the dominant god of the bugbear pantheon, although he does not really rule the others. There is an understanding between the bugbear gods; no one works actively contrary to Hruggek's interests, and then Hruggek leaves them alone. This doesn't tend to filter down to the Prime Material plane servants, though, and Hruggek's priests keep a wary eye on the competition, especially given the sneakiness of Grankhul's priests.
Hruggek is a deity who delights in fairly savage combat. He is not truly a war/battle god in all respects, though. Mass battles and epic confrontation are not what the bugbear god seeks. His people are not numerous enough for this, and he prefers to see them use their stealth and wiles to pick off small groups of other creatures.
Hruggek has no specific racial enemies. The bugbears are an opportunistic race, and Hruggek has no special antipathies to other deities for past slights. He is quite happy to

see elves/ dwarves, goblins, gnomes or any other available walking target knocked on the head (or, preferably, to have its head severed). Hruggek has a tolerance for Khurgorbaeyag due to past cooperation, and he quietly urges the goblin deity to act against Maglubiyet, usually by puffing Khurgorbaeyag's pride and commenting on how sound his plans are (and how Maglubiyet s are lacking in vision). Hruggek hopes to keep the goblins divided in this way, since they can compete with bugbears for resources. He has a definite antipathy for Bargrivyek for the same reasons, and tries to stir up Maglubiyet against him. Hruggek may not be especially smart, but he is cunning and wily.

Hruggek lives in a wretched cave in Pandemonium, where he is surrounded by the severed heads of his conquered opponents-Many are cursed to speak eternal pleas for mercy and paeans to the might of the bugbear lord. It is rumoured by sages of extra-planar affairs that some of these heads have powers of magical control over creatures of their races, were Hruggek to bring them to the Prime Material plane. Magical powers of domination, mass suggestion and the ability to utter power words are reputed. How this has come to be is hard to explain; it would need magical powers well beyond Hruggek's capacity to create such artifacts. This suggests that some deity with major wizardry powers has some form of agreement with Hruggek, although the nature of this-and who the other deity may be, and what that deity has to gain-is entirely unknown.

Role-playing Notes: Hruggek watches over Prime Material plane affairs closely, but rarely sends an avatar, and will almost never do so if he thinks that another goblinoid god (save for Khurgorbaeyag) may be observing at the time. An avatar will not be sent into battle, only for skirmishes, if Hruggek has a combat purpose in mind. Hruggek may, however, send an avatar to vanquish a powerful warrior of another race if he doesn't have a severed head of that racial type among his collection.

Hruggek is relatively tolerant of his priesthood, and doesn't send many omens to them. The omens which are sent take gruesome forms: guttural utterances from the mouths of corpses (severed heads are best), a flying volley of spikes which materialize instantaneously (symbolic of his weapon), and very rarely a flash of lightning at ground level.

Statistics: AL ce; WAL ce (bugbears); AoC violence, combat;
SY morningstar.

Hruggek's Avatar (Fighter 15, Priest 9)

Hruggek's avatar appears as a monstrous, muscle-bound bugbear with great fangs and powerful, large clawed hands and feet. His spells are drawn from spheres listed for his priests (and also reversed necromantic spells).

Str 19 Dex 15 Con 16
Int 15 Wis 9 Cha 19
AC -1 MV 12 SZ L (8')
HP 144 HD 18 MR 30%
#AT 2 THACO 5 Dmg 2d8 +4 (morningstar) +7

Special Att/Def: Hruggek's avatar is immune to fear. Simply by clenching his fist, he can cause 2d8 points of shock damage to any single target within 60' (no saving throw is allowed). He can cast power word stun I/day. His huge morning star +4 is fully 7 feet long and is used two-handed. The avatar always carries ld4 javelins of lightning which affect any creature struck as a thunderclap (as for a staff of thunder and lightning).

At the DM's option, an avatar may carry one of the many severed heads from Pandemonium for specific encounters with one or more members of another race ; the DM should determine the exact powers the head will have.
Duties of the Priesthood
Priests of Hruggek are warriors and leaders, but they do not maintain rigid castes or hierarchies. They do have to keep an eye on the priests of other bugbear deities, however, to ensure that Hruggek's authority stays paramount. They cooperate cautiously with priests of Khurgorbaeyag the goblin god, while being ever-ready to pick off weak goblins for the cooking pot.
Requirements: AB Str 15; AL ce; WP club, javelin, mace, morningstar (1st), quarterstaff; AR any; SP all, combat, creation*, divination*, guardian, protection, summoning, sun (rev), war*; PW 1) command 2/day, 2 round duration; 4) enlarge self; 7} hold person; TU nil; LL 8 (Wis 18+); HD d8; Shamans yes + wd.
Shamans: AB std; AL ce, ne. en; LL 5; HD d4.

## Grankhul (Lesser God)

Grankhul is a dangerous and subtle god. He is the god who gave the bugbears their surprise abilities, and has taught them that, despite their size, swift and silent action is a very elective strategy for a race not easily able to muster great armies for battle. He is vigilant, never surprised, and never sleeps. In some worlds, he has the enmity of Gruumsh because of his symbol. He prizes dexterity, swiftness and a modicum of intelligence among his priests. He can be very violent, a god of swift death, and is prone to temper tantrums.
Role-playing Notes: Grankhul's avatars are active on the Prime Material plane, stalking the world in darkness, ambushing hapless creatures of many races. He strives to displace gobli-noids and demihumans close to bugbear groups, but is very secretive in his actions. Omens are rare, and of two distinct sorts: very subtle environmental changes (testing the intelligence of his priests) and sudden, brutal, angry ones (sudden blindness or death).
Statistics: AL ce; WAL ce (bugbears); AoC hunting, senses, surprise; SY ever-open eyes in darkness.
Grankhul's Avatar (Ranger 10, Wizard 7)
Grankhul's avatar appears as a tall, relatively lean bugbear with large, protuberant eyes and very long, slender fingers. His wizard spells are taken from the alteration and illusion/ phantasm schools.

AC -2 MV 18 SZ L (7'6")
HP 104 HD 13 MR 20%
MT 3/2 THACO 7 Dmg ld8 +3 (longsword) +3
Special Att/Def: Grankhul's avatar cannot be surprised, and has hide in shadows and move silently skills at 95%. He uses both silence 15' and improved invisibility 2/day. He carries a rod of alertness, boots of speed, and his longsword +3 strikes its victim dumb for ld4 + 2 rounds unless a saving throw versus spells is made.
Duties ot the Priesthood

Grankhul's priests are explorers and scouts, and are charged with hunting to provide food for bugbears and also to harass the settlements of other creatures with guerrila strikes. They are arrogant, confident of their superior intelligence and stealth.
Requirements: AB Dex 14 Int 10; AL ce; WP as thief; AR leather; SP all, animal, chaos*, combat, elemental (earth, water), guardian, protection*, sun* (rev), travelers*, weather*; PW 1) Hunting proficiency, track as ranger of same level; 4) 120' infra-vision; TU nil; LL 8 (Wis 18 +); HD d6; Shamans yes + wd.
Shamans: AB Dex 12 Int 9; AL ce, ne, en; LL 5; HD d3; Other leather armor only.

## Sklggaret (Demigod)

Skiggaret is the half-mad bugbear god of fear. The god prowls the world in avatar form, driving bugbears to acts of destruction and aggression through the fear he creates in them. The deity lives in a level of the Abyss which is eternally dark, populated by shadows and spectres, and where fear is an ever-radiant effect in the dismal terrain.
Role-playing Notes: Skiggaret does not have priests or shamans. Bugbears do not worship him in any way; they seek to propitiate him with sacrifices and especially torture of captives. They believe that this god and his rare omens and signs, which take the form of sudden chills, especially along the spine, the raising of hackles and fur, and magical pools of darkness, are a sign of the wrath of the gods. Skiggaret is sent to make them afraid because they have displeased the bugbear pantheon as a whole; in this sense, he is a messenger of the gods. While bugbears dread Skiggaret, they also believe that if they survive the fear he generates, they will be strengthened. They also consider that he helps to drive off oppressors who threaten to overcome bugbears, and in extremis they may appeal to this dire, dark entity for help, always by offering sacrifices.
Note that Skiggaret's avatar is powerful for a demigod; this reflects the strength other bugbear deities grant him, in his role as a messenger.
Statistics: AL ce; WAL n/a (bugbears); AoC fear; SY black claw.
Skiggaret's Avatar (Priest 12, Wizard 12)
Skiggaret's avatar appears as a jet-black bugbear with red lips, hands and feet. He always has a half-crazy smile playing about his mouth. Priest spells are taken from the charm, combat, necromantic (reversed) and sun (reversed) spheres; wizard spells from the schools of abjuration, alteration, illusion/ phantasm and necromancy (reversed spells).
Str 15 Dex 17 Con 13

AC 0 MV 15 SZ L(7'6")
HP 104 HD 13 MR 20%
#AT 1 THACO 9 Dmg ld4 +2 (dagger)
Special Att/Def: Skiggaret's avatar has a permanent cloak of fear and he can generate any of the following about himself in a 20' radius, one per round, 1 turn duration, 2/day each: darkness 15' (within which he can see), ray of enfeeblement, and radiant chill damage (ld4 damage per round; he is immune). He can slay living once per day. He is immune to fear, cold damage, paraly-zation and magical darkness. He carries a dagger +2 of venom and a wand of fear.

Duties of the Priesthood: None; Skiggaret has no priesthood.

# Gods of the Bullywugs

## Ramenos (Lesser God)

Ramenos is a sleeping god, revered now only by the bully-wugs, the degenerate descendants of races of proto-amphibians, and much more powerful but now extinct humanoid/frog creatures that used to revere their weird frog god. Periods of prolonged inactivity and taking refuge and pleasure in intoxication have reduced this god's stature, and it seems certain he will decline to demigod status over the centuries, eventually sleeping himself into extinction. Evidence of his old power can still be found in ruins of temples deep within jungles and in lost pla-teaus where huge stone statues of Ramenos, his enormous mouth open to swallow a sacrifice, dominate the plazas and open areas around the main buildings. The god may even have half-forgotten those halcyon days, sleeping in the Abyss, close to Merrshaulk, to whom he may even be related.
Role-playing Notes: The god does not send avatars forth;
save for a ritual conducted at one of the old sites or a gate, one will not be seen. He does not send omens to his shamans and has no priests.
Statistics: AL ce; WAL ce (bullywugs); AoC somnolence, intoxication, decay; SY frog.
Ramenos' Avatar (Wizard 10, Priest 10)
Con 16 Cha l8 Str l6
Dex lO Int l2 Wis l6

The avatar appears as a huge, bloated frog with a very (10') wide mouth. He uses exclusively invocation/evocation wizard spells and priest spells as a druid (plus combat and summoning).
Special Att/Def: The avatar is immune to illusion/phantasm spells. He can leap 15' forward once per turn, gaining +2 on all hit rolls, and is able to squash up to three M or one L opponent within a 15' radius for 4d6 points of damage. He swallows creatures up to M size whole on a successful hit roll of 16 + (internal AC is 4, only stabbing weapons can be used, internal digestion damage is 3d4 hp/rd.). Once per turn, he can belch a 20'-radius cloud of intoxicant gas up to 50'; those within the cloud must save versus poison or lose 4 points each of Strength and Wisdom for 10+ldl0 rounds.
Duties of the Shamans:
Bullywug shamans are primitive and weak, and their prime role is to serve the tribal leaders (to whom they are often related). They must regularly become intoxicated with plant alkaloids-Requirements: AB std; AL ce (bullywugs only); WP any; AR any; SP as druids; PW none; TU nil; LL 2; HD 1 hp/level; Shamans only.

# Gods of the Couatl

## Jazirian (Greater God)

Jazirian is the immensely powerful and wise god of the couatl. Couati theology is very subtle indeed, and it considers Jazirian to be the perfect spiritual manifestation of the World Serpent archetype. Other World Serpents are seen as immature or imperfect manifestations of this archetype, and-if evil-their evil is attributed due to ignorance, fear, or immaturity. Jazirian is held by couatl to be perfection, and the sight of the god flying the airs and ethers of the Seven Heavens is longed for by every couatl elder when it comes to the end of its days.

Jazirian is supremely wise above all. (S)he (the god is simultaneously sexless and hermaphroditic) is reflective, contemplative, a listening and attentive creature. Jazirian has no priests or shamans, having granted couatl great magical powers and wisdom within their own natures.

Role-playing Notes: Jazirian sends visions and "bright omens" (floral, insect, and bird behavior changes and the like) to elder couatl as warnings, apprehensions, or simply for information. Jazirian is believed to take all pain from a dying couatl at the end of its life by extending some of his/her power to soothe the couatl's mind. Very rarely-perhaps once per 1,000 years-Jazirian may manifest as a spiritual presence at the birth of a couatl destined to develop great magical and/or prophetic skills. The avatar never appears without other lawful good greater gods being consulted, and only does so at times of extreme peril for lawful good or major elements of creation.

Statistics: AL Ig; WAL Ig (couatl); AoC community, peace, learning, parenthood; SY uroboric couatl.

Jazirian's Avatar (Wizard 20, Priest 20)

The avatar appears as a vast rainbow-colored couatl, sinuously winding his way through the air or rotating as a great snake with its tail in its mouth. (S)he uses spells from all spheres and schools.

Str 19 Int 22 Dex 21
Wis 25 Con 22 Cha 25
AC -5 MV 30 fl 60 SZ G (30-200')
HP 192 HD 24 MR 80%
#AT 1 (2) THACO 4 Dmg 3dl0 (bite) 3dl0 (constriction)

Special Att/Def: The avatar's bite is poisonous if he so chooses (save versus poison at -8 or die immediately). The avatar can attack with an effective grapple each round; any victim grappled is helpless in the snake's coils and is crushed for 3dl0 hp per round. The avatar radiates awe to 120', such that no being seeing him/her and failing a saving throw versus spell at -4 can attack the avatar unless attacked first. The avatar is immune to all spells below 4th level, poison, paralyzation and petrifica-tion, All death magic, illusion/phantasm spells, and he cannot be affected by mind-controlling spells. Only weapons of +3 or better enchantment can affect the avatar.

# Gods of the Dark Folk

## Cegilune (Lesser Goddess)

Cegilune is the patron goddess of hags, including the wretched Night Hags of Hades whom she rules from her filthy bone-strewn cave halfway up a vast mountain of dead black rock. Cegilune stirs a great iron cauldron within her catacombs, below a small glowing replica of a full moon which hovers in the air above it, and she feeds larval souls and stolen magical treasures into her vessel to bring forth all manner of horror and evil. Cegilune rules the Night Hags with an iron grip, and she sends them forth to bring larvae for her own use and for trading with tanar'ri and liches who are forced to deal with her for their own needs. Even the great Lich-Lord Mellifleur would not dare attack Cegilune, for she has soul gems with powerful magical chain contingency spells (see Tome of Magic) buried in secret places which are hidden from his chilling gaze, and she is virtually indestructible with such protections. Cegilune begrudges each and every larva she trades to the infernal powers of the Abyss, but she has need of magic to sustain her own wretched being, and trade she must. She has no allies, although the evil giantish gods have had dealings with her; she has many enemies among the sylvan pantheon, since she often preys on faerie creatures.

Role-playing Notes: Cegilune's avatars are very frequent visitors to the Prime Material Plane. Her primary purpose is always the capture of evil souls as larvae (see Monstrous Compendium: Outer Planes) which are virtually her currency in trade in Hades. Her own Night Hags stalk such souls, but Cegilune is distrustful and ever avaricious and enjoys watching creatures die so that she can take their souls.

Cegilune's avatar may also visit coveys of hags to extract information from them. Worldly hags have no love of the crone, but dare not refuse her demands for information and, sometimes, magical items they have stolen from their own victims. Sometimes she may feast on flesh with such a covey; swanmays are her favorite food, although she also delights in the raw flesh of a powerful male human fighter whom she has dismembered with her own iron-hard talons.

Finally, Cegilune's avatar visits a small number of sacred sites-stone circles and standing stones-in some worlds to conduct obscure magical rituals about which she is intensely secretive. She will usually be accompanied by ld4 Night Hags prowling the surroundings at such times, and will have placed many hag eyes (see below) to keep watch over the area. These rituals usually take the place at the full moon, and may be preceded by hunting forays in which the avatar captures and renders helpless suitable sacrificial victims (swanmays, rangers, druids and sylvan creatures).

Statistics: AL ne; WAL ne (hags); AoC larvae, hags, the Moon; SY cauldron.

Cegilune's Avatar (Illusionist 12, Priest 12)

The avatar appears as a filthy, hateful hag with mottled yellow-brown skin and patches of lank hair which flake away from her alopecial scalp. She always carries a small iron pot,

by which she is recognizable even if she has used change self to appear instead as a young human or elven female or a homely old lady. Very rarely she chooses to appear as a scruffy goblinoid. Her priest spells are chosen from all spheres save chaos, law, and war, and she can only use reversed forms of spells from the spheres of healing, necromantic magic, and sun.

Str 21 Dex l6 Int l7
Wis l8 Con 16 Cha l
AC -1 SZ L (10') MV 18 fl 60
HP 112 HD 14 MR 35%
#AT 3 THACO 7 Dmg d8+9x2 (claws) 4d4 (bite)

Special Att/Def: The avatar is immune to weapons below +3 enchantment, and to all illusion/phantasm and mind-controlling spells, and also to death magic and poison. She takes half damage from cold and acid attacks. The avatar saves with a -2 penalty against petrification attacks. She can change self at will, create a forcecage 4/day, and 2/day can use a death gaze against a single creature within 120' (save versus death magic at - 4 or be slain). Once per week, the avatar can wail as a banshee (groaning spirit).

On the day before, on, and following a full moon, the avatar adds 10% to magic resistance. Further, saving throws against her spells are made with a - 2 penalty, cumulative with any other modifiers which may apply. On the night of the full moon, she also can use a moonbeam spell which affects creatures caught within it as a symbol of insanity (usual save versus spells applies). On the day before, on, and following a new moon, the avatar loses 10% from her magic resistance and cannot employ her death gaze power. In worlds with more than one moon, these effects apply to the moon with the shortest lunar interval (unless another moon is specifically associated with evil in the game world).

The avatar's small iron pot can be used I/day each for the following purposes: (1) to draw forth d8+8 poisonous snakes (as per the sticks to snakes spell), (2) to draw forth a vial of poison with which the avatar can coat her claws (Class D poison, three successful claw attacks remove the venom, which otherwise evaporates after one hour), (3) to draw forth and throw up to 60' a web, and (4) to project a screen.

Lastly, the avatar will always have in a small beaded bag 2dl0 hag eyes (see the MoMsrrous Compendium entry for hags). These are the shrivelled eyes from her victims which are magically treated to enable the avatar to see through them as she wills, up to 10 miles away. The avatar may place these around an area where she is active to spy about the perimeter, but she is careful to conceal them, because each, if destroyed, causes ldl2 hp of damage to the avatar.

## Kanchelsis (Intermediate God)

Kanchelsis (known as Mastraacht in some worlds) is Lord of Vampires, a god to whom even the great Elder Vampires and Vampire Lords of Ravenloft give grudging respect (and fear). His origins in myth are shrouded in secrecy, but the avatar often takes half-elven form and travels with an elven or half-elven vampiric companion, so the dreadful secret of the Seldarine may indeed be a truth. Born of intermingled human and elven

blood, Kanchelsis knows blood to be the very essence of life and magic, the forces which sustain him. His Abyssal home is awash with blood, entire rooms of his mansion being formed from living sculptures and flows of blood perfumed with opiates and alkaloids; and the vampyres, nosferatu, and worse which share his home slaver after the unattainable delight he so meagerly and sadistically rations out to their ravening hunger. Kanchelsis is a split-natured deity: part of him is the Beast, a wild and ravening thing which runs with wolves, rips out throats, rends flesh, and gulps blood as fast as it can swallow. In this aspect, some wights have a reverence for his being. His other side is the Rake, a bon vivant who savors blood as others do wine; he is a seducer, a connoisseur, a lover of finery, an expert debauch. The Rake dominates when Kanchelsis feels well with his ways; the Beast, when he is moved to hot rage (rather than his usual cold hates and sadistic triumphalism).

Role-playing Notes: Kanchelsis' avatars often stalk the Prime Material in secret. They are hungry for blood, but the Rake has other goals, too. He values rare, precious wines; fine furs and gems; and opiate drugs and unspeakable depravities as a voyeur and sadist. The Rake may be found purchasing finery in a great human city, savoring dreadful sights in Drow settlements, or even stalking a paladin or lawful good priest in order to corrupt them. Rarely, the Rake may even visit a Prime Material vampire of great age and abilities, exchanging tales or magic; he has no priesthood, but a small circle of "friends" across the worlds know of him and a wary mutual respect exists. The Rake is 50% likely to be accompanied by a female companion who will be a powerful fighter or wizard (or, his favored vassal, a female half-elven fighter/wizard). Such a companion may herself be a vampire or simply charmed and powerfully controlled by mind-affecting magic, which the avatar strongly favors.

Statistics: AL ce; WAL n/a; AoC blood, debauch, magic, vampirism; SY bat with glowing red eyes.

Kanchelsis' Avatar (Wizard 10/18, Thief 14)

Kanchelsis' avatar has two forms as noted above: the Beast and the Rake. The Beast is a wild-eyed, toussle-headed human male, powerfully muscled, with taloned claws and an excessively hairy body. The Rake is a slim, elegant human or half-elven male with slender, long hands, a winning smile, and finely-chiseled features, always immaculately dressed. Transforming from Rake to Beast requires 1 round; transforming from Beast to Rake requires 1 turn during which the avatar must be undisturbed. The avatar can effect each transformation only once per day. He uses spells from all schools and is a specialist in Necromancy. Statistics given in parenthesis below apply to the Rake only.

Str 21(19) Dex 16 (18) Int 14 (19)
Wis 9 (19) Con 19 (18) Cha 13 (20)
AC -2 SZ M(6'6") MV 15 fl 60 (bat)
HP 136 HD 17 MR 20% (40%)
#AT 1 THACO 4(5) Dmg ld6+9(+7)(claws)

Special Att/Def: Many special rules apply to the avatar's two different forms. In both forms, he has the following powers: he is immune to sleep, charm and hold spells, paralyzation, and poison, and suffers half damage from cold and electrically based attacks. Only +3 or better weapons affect him. The avatar is not repelled by garlic and mirrors, and holy symbols have no special effects on him. He can be turned as a Special undead, but treat the turning priest as 4 levels lower than normal for this purpose. The

avatar can withstand 90 minutes of exposure to sunlight without adverse effects. He suffers double normal damage from holy water, but is immune to running water. Six times per day he can throw one pint of blood up to 40' to affect a 5' radius as a 10 HD fireball, or to dispel magic as a 20th-level wizard, or to blind victims for 2d6 rounds (saving throw vs. poison at -4 negates). He can summon lOdIO giant rats or bats if they are within one mile of him, at will. Other special attacks and defenses are modified by his form as listed below.
Spell Use: The Beast is a lOth-level mage, the Rake an 18th-level mage.
Gaze Weapons: The Beast can charm person or mammal by gaze (saving throw vs. spells at -6 negates); the Rake can charm person in the same way, at will. The Rake can also cause a creature of up to 16 HD/levels to sleep by gaze for 2dl0 turns, 3/day and can create domination by gaze 3/day (in both cases, save versus spells at -6 negates).
Gaseous Form: Only the Rake can become gaseous at will. In both forms the avatar becomes gaseous at 0 hp.
Regeneration: The Beast regenerates 6 hp/rd if standing on earth. The Rake always regenerates 4 hp/rd.
Sleep/Charm Resistances: The Rake halves elven and half-elven sleep/charm resistance to his attacks.
Wolf Summoning: The Beast can summon 3d6 wolves or worgs to serve him for 12 turns if within a mile, 3/day.
Animal Growth: The Beast can cast animal growth on wolves he has summoned, at will.
Shapechange: The Beast can transform into wolf or worg shape at will; the Rake, into giant bat form only.
Breath Weapon: The Beast can breathe a fog cloud 3/day and death fog I/day, the Rake breathes a cloud of obscurement \1 turn.
Additional Properties: The Beast can pass without trace at will. He can be detected by a Moon Dog or intelligent paladin's warhorse within 60'. The Rake can cast pyrotechnics, hypnotism and rainbow pattern 3/day each.

## Mellifleur (Lesser God)

Such a harmonious and pretty name belongs to the dire Lich-Lord, patron of evil liches, but nothing could be further from his nature. The god's constant purposes are twofold. On the one hand, he delights in guiding evil wizards and priests to become liches since his own power is increased with each such step into undeath. Second, he must counter the actions of the prime evil deity whose servant's divine ascension he usurped (see introductory material in this section) through the actions of his avatars. Mellifleur himself lairs in Gehenna, where, not unlike Cegilune, he hides many magical phylacteries which can sustain his being should he be overcome or magically trapped.
Role-playing Notes: Mellifleur's avatars rarely visit Prime Material liches; when they do, it is to study new spells or magic developed by those liches, or to gain information about his evil nemesis from lich-sages. He is forced to counter his evil nemesis' actions on the Prime Material, though, and when so doing with his avatars they are paranoically fearful. His avatars do not regard a counter-attack as the best form of defense; rather, they prefer

to attack first, before the thought of attacking them has even occurred to a potential adversary.
Statistics: AL ne; WAL n/a; AoC lichdom, magic; SY crystal vial in a skeletal hand with ring on fourth finger.
Mellifleur's Avatar (Wizard 25)
The avatar appears as a typical lich, although its black robes are clean and in good repair. Its eye sockets hold a pair of glowing green gems.
Str 18/00 Dex l7 Int 23
Wis l9 Con 16 Cha l
AC -2 MV 12 SZ M (6')
HP 120 HD 15 MR 40%
#AT 1 THACO 5 Dmg 2dl0 (chill touch)
Special Att/Def: The avatar is immune to weapons below + 2 enchantment and to mind-affecting, paralyzing, cold and electrically based attacks, insanity, death magic, petrification and polymorphing. Those of 8 HD/levels or below who see him must save vs. spells or flee in terror for 6d6 rounds. His avatar is turned as a Special undead, but the priest making the attempt is treated as 4 experience levels lower for the purpose of turning. The avatar's left gem-eye can project a cone of cold 2/day and the right gem-eye can project a symbol of insanity 2/day, both effects at 25th level of magic use. The avatar wears a robe of stars which can act as a robe of scintillating colors when he so wills, a ring of shooting stars, and possesses a sphere of annihilation under the avatar's automatic mental control.

## Squerrik (Lesser God)

The cowardly and physically weak Squerrik lairs in an endless series of burrows and tunnels, infested with traps, below one of the plains of Gehenna. He is a fearful creature who ever seeks protective magic, disguises, and items for keeping his enemies at bay (not that he has many; most other deities don't consider him worth bothering with).
Role-playing Notes: Squerrik feels little emotion for wererats, and is uncaring about his own shamans, not sending any omens or warnings to them. Rarely, he may dispatch an avatar to lead a very large group of wererats out of their subterranean lairs to attack, loot, and pillage a surface community weakened by war, seige, or some other adversity. More often his avatars seek protective magical items for the god's use. The avatars are always cowardly and seek to escape combat if faced with a powerful enemy.
Statistics: AL le; WAL le (wererats); AoC thievery, disguise, concealment; SY rat's head with bared yellow teeth.
Squerrik's Avatar (Thief 14)
The avatar appears in ratman form, dressed in filthy leathers and cotton pants.
Str 14 Int l9 Dex l9
Wis l3 Con 13 Cha l2
AC 2 SZ M(5'6") MV 18
HP 96 HD 12 MR 5%
#AT 1 THACO 9 Dmg ld6 +3 (shortsword)

Special Att/Def: The avatar is immune to poison, disease, and paralyzation. Nonmagical weapons do not affect the avatar. He spider climbs at will and has 95 % skill ratings for moving silently, hiding in shadows, and spotting traps. Three times per day the avatar can change self and I/day each he can: summon lOdIO giant rats if within one mile, cause disease, dimension door, cause contagion and cast rope trick. He has a shortsword +3 of quickness and a cloak of displacement.

The Shamans

Squerrik's shamans may only memorize and use their spells in ratman form. They are not organized into any heirarchy, but lower-level shamans learn from higher-level ones and must show them respect and deference (and make offerings of treasures). Wererat shamans must be self-protective. They actively acquire protective magic and anything that aids their skills of concealment and disguise.

Requirements: AB Dex 13; AL le; WP any; AR as thieves; SP all, animal, charm, necromantic (rev), sun (rev); PW 1) 5%/ level skill in hide in shadows and move silently; TU nil; LL 5; HD 2 hp/level; Shamans only.

## Balador (Lesser God)

Balador is a protector-god, watchful over forests and woodlands, rather seclusive and shy but encouraging his followers to share their community and living space by good relationships with rangers, druids, and sylvan creatures. The god himself roams the Beastlands, taking his food from the rivers and lakes, and sometimes persuading other deities to brew the honeyed mead he enjoys so much. Balador is not smart, nor is he swift, but he is wise, tolerant, and patient, and he is powerful when roused to anger. His only enemies are the deities of evil lycan-thropes.

Role-playing Notes: Balador's avatars may wander Prime Material deep forests hunting and playing with other werebears, especially the very young. Meetings with Father Bear are the subject of many werebear tales. He often sends avatars to oppose those of the evil lycanthropic deities.

Statistics: AL cg; WAL cg (werebears); AoC werebears, protection, fraternity; SY pitcher of mead.

Balador's Avatar (Fighter 12, Druid 12)

Balador's avatar usually appears in ursine form, although he can also appear as a tall, tanned, handsome human male ranger. He uses spells from druidic spheres, plus protection and sun.

Str 18/00 Int l4 Dex l3
Wis l8 Con 18 Cha l6
AC O MV 12 SZ M/L(6'/11')
HP 120 HD 15 MR 15%
#AT 3/2 or 3 THACO 5 Dmg 1d8 +3(longsword)+6 or 2d8+6x2 (claws) and 4d4 (bite)

Special Att/Def: The avatar is immune to poison, disease, paralyzation, illusion/phantasm spells, and nonmagical weapons. He can cure disease or critical wounds by licking 3/day each and roar to create fear (as wand) I/day, in ursine form only. In ursine form, if both paws hit the same opponent in the same melee round, the bear will hug for 2dl2 +6 hp/rd

of automatic damage thereafter and also inflict maximum damage with his other attacks. The chance for breaking free is one-third of a creature's bend bars percentage. As a ranger, he carries a longsword +3 which inflicts double damage on evil lycanthropes and goblinoids.
Priests: Balador has no priests of his own, but werebear-priests do exist; they worship their own gods and receive spells from them. They also revere Balador, because his entreaties to the gods on their behalf make it possible for them to remain priests. Almost invariably, a spell-providing god is neutral good or chaotic good, or perhaps a neutral sylvan/nature deity.

## Ferrix (Lesser Goddess)

Ferrix is the insatiably curious goddess of weretigresses. She enjoys knowledge for its own sake and has accumulated a great store of knowledge, but unlike her brother she is not wise and does not separate worthwhile and trivial knowledge effectively. Despite her alignment she too roams the Beastlands, hunting and prowling (and demanding adoration from other beings as so many felines do). She is vain and often playful, but she can be cruel with prey and spiteful and vicious if teased or mocked.
Role-playing Notes: Ferrix' avatars are common visitors to the Prime Material for a variety of purposes. She may simply come to play with other weretigresses, or sometimes to mate with a male weretiger. She may come out of curiosity regarding almost anything from a hidden magical secret to an old temple ruin, or just to view some unusual geological formation or a magical tree buried in a deep forest. Ferrix' avatars are curious above all and will rarely offer hostility to those they encounter. But she has a habit of stalking creatures as if they were prey to see what their reactions are, which can lead to misunderstanding and conflict if the creatures stalked are over-fearful or aggressive. Flattery goes a long way with the avatar, as does the gift of a beautiful gem (appearance matters more than value).
Statistics: AL n; WAL n (weretigresses); AoC play, curiosity, hunting; SY green cat's eyes.
Ferrix' Avatar (Fighter 14, Druid 9)
The avatar usually appears in hybrid form, but she also hunts as a tigress. In either form, her fur has an exceptionally beautiful honey-brown sheen. She uses spells from standard druidic spheres, plus charm and combat.
Str 18/00 Int l7 Dex l7
Con 17 Cha l9 Wis l3
AC O SZ L(8'-12') MV 15 + special
HP 120 HD 15 MR 20%
#AT 3 THACO 5 Dmg 2d4 +6 x2 (claws) 4d6 (bite)
Special Att/Def: The avatar is immune to poison, disease and paralyzation, and nonmagical weapons. No natural feline will attack her and she can charm feline at will, and can also charm person or mammal 3/day (saving throw to negate is at -4). She can leap forward up to 30', up to 15' horizontally, and up to 15' backward in a round in addition to making attacks; if she leaps she gains the benefits of boots of striding and

springing. If both her front paws strike an opponent in the same melee round she can rake with her back paws for an extra 3d4/3d4 points of damage. Once per day her growl can create fear (as wand), and once per day her purr can create emotion (calm), while her lick can cure critical wounds 3/day. She wears a tiger-eye ring of human influence on her right front paw.

## Daragor (Lesser God)

Daragor is the bestial god of evil lycanthropes-werewolves and seawolves being his preferred creatures. This hateful god wanders the Lower Outer Planes, picking off whatever prey he can. He has enmity for all other deities of lycanthropes, and virtually everything else he comes across. Daragor is simply savage, bloodlusting, and elementally vicious.

Role-playing Notes: Daragor's avatars will roam the Prime Material when they can, hunting any prey he can feast upon. He enjoys disabling prey by attacking limbs to prevent movement and escape, and then rending his prey alive. The avatar stalks werebears for sport, but while he does not fear Barador he has a healthy respect for that god's strength and will flee if opposed by an avatar of the werebear god. Also, Daragor's avatar will stalk paladins and priests of lawful good and/or sylvan deities. He seeks simply to kill them and consume their flesh, which has a stimulating effect upon him.

Statistics: AL ce; WAL ce (werewolves, seawolves); AoC marauding beasts, bloodlusts, pain; SY werewolf's head.

Daragor's Avatar (Fighter 14)

The avatar can appear either as a great grey-furred wolf or as a monstrous seawolf, distinguished by his glowing red eyes and bloodstained paws and maw.

Str 18/00 Int 1O Dex l7
Wis 8 Con 17 Cha l
AC -1 SZ L (12'long) MV 36 (12, sw 27)
HP 120 HD 15 MR 15%
#AT 2 THACO 4 Dmg 4d6 (bite)

Special Att/Def: The avatar is immune to poison, paralyza-tion, and nonmagical weapons. If he kills a creature of 6 + HD/ levels and spends one full round rending its flesh and drinking its blood, he regains ld8 + 3 hp of any damage he has sustained. If that creature is a paladin, or priest of lawful good and/or a sylvan deity, the avatar is affected as per a potion of invulnerability for 3dl0 turns thereafter. He charms lupine at will (wolfweres are immune but winter wolves are affected). As a wolf, he can summon 3d8 wolves, 2d4 werewolves, and ld4 winter wolves I/day for each type if within a mile. In seawolf form he can summon 2d4 + 2 lesser seawolves and ld4 +1 greater seawolves I/day for each type if within a mile. The avatars howl can create fear (as wand) 3/day (save versus wands at -4 to negate). In wolf form, the avatar cannot be entangled or have his movement slowed by any nature-affecting spells (such as interposed plant growth, etc., but a spell such as web could restrict movement in the usual way). In seawolf form, the avatar can water breathe freely and also water walk I/day for 12 turns.

## Eshebala (Lesser Goddess)

Eshebala is the wily and supremely vain goddess of foxwo-men, although she also favors wolfweres because of their hatred of werewolves. A denizen of the Abyss, she loathes and detests tanar'ri and other infernal inhabitants of other Abyssal planes because of their ugliness, stupidity, brutish nature, or any combination thereof. She has a collection of fine gems, jewellery, furs, skins, objets d'art, and the like, which are actually rather vulgar and flashy. She dwells alone and has no allies. She regards her brother, Daragor, as an oaf, although she does not actually hate him; her primary object of loathing is Ferrix. Two vain goddesses who preen and strut do not tend to get along well together.
Role-playing Notes: Eshebala's avatars visit the Prime Material for hunting and sport when she grows bored and jaded. She prefers to overcome victims through subtlety, not direct force. She especially enjoys capturing handsome males through illusions and charm, immobilizing her victim and then dispelling the charm before she kills and then eats the unfortunate, carving off flesh with a silver dagger. She sometimes visits females whom she has infected with lycanthropy for a gossip session, and demands to be the center of flattery and attention during such visits.
Statistics: AL ce; WAL ce (foxwomen); AoC vanity, charm, greed, cunning; SY vixen.
Eshebala's Avatar (Fighter 8, Illusionist 12)
The avatar appears in the hybrid (vixen) foxwoman form or as a charming, lovely young elven maid. She always wears rich jewellery and finery, and invariably carries has a decorated silver mirror for self-admiration.

| | | |
|---|---|---|
| Str 18/10 | Dex l8 | Int l6 |

| HP 112 | HD 14 | MR 20% |
| #AT 3/2 | THACO 7 | Dmg ld8 +2 (longsword) +3 |

Special Att/Def: The avatar is immune to poison, paralyza-tion, nonmagical weapons and all enchantment/charm and illusion/phantasm spells. She can pass without trace in a rural environment, and if she escapes into undergrowth is 95% unde-tectable when seeking to hide or evade pursuit. She can sing and create lethargy as a wolf were for 3d4 rounds 3/day, and can charm person at will. She employs a longsword +2.
The avatar is always accompanied by ld4 +1 charmed male servitors. Determine their nature from the Monstrous Compendium entry for Lycanthrope, Werefox, but these sidekicks will be of levels ld6 +3 and will all be 90% likely to possess a magical hand weapon, 70% likely to possess appropriate magical armor, and be 10% per level likely to possess ld2 suitable minor miscellaneous magical items (DM's choice).

# Gods of the Dragons

## Io (Greater God)

Io, Swallower of Shades, shine in the face of your servant, for he worships you in the morning, he propitiates you in the evening. I breathe the air, the North Wind which comes from you, Be content, Lord of the Gods, for you are exalted in the firmament, and your rays over my breast are like the day.
-Invocation of Persephariel, Great Gold Wyrm
This is the tale as Dragon-sages speak of it:
Io, the Ninefold Dragon, the Concordant Dragon, the Great Eternal Wheel, moves his majestic form silently through the planes and crystal spheres, through the ether and detritus of the worlds, and he is content. lo is the Creator of all dragonkind, father of the Sleeping Deep Dragons whose spirits lie at the core of many worlds still, the god whose blood, thoughts, and life force established the ground for creation and sustain it still. Just as lo's role in the creation of the multiverse cannot be understated. neither can his unimaginable size. A single scale on the Ninefold Dragon is larger than the greatest mortal dragon which has ever flown in his skies. lo remembers everything which has happened in every world which exists, he knows all spells, owns at least one of every magical item which has ever existed, and through his singular skill as an astronomer and astrologer, he knows all the future holds.
So, why do many myths which other races have of creation not feature great lo? Because the nature of his role in creation is deep and implicit in establishing a substrate for other powers. We Dragon-sages make a distinction between the Two Voids; the first Void. wherein onlylo had existence, and the Shadow Void, where lo's willingly shed blood created the potential for existence and creation to come into being. Most non-dragon races only know of the Shadow Void. and they do not know of the earlier time outside time when only the Ninefold Dragon existed.
Are the Dragon-sages correct? If they are/ they speak of the inner mystery of the very universe itself. Some secrets may be beyond language and comprehension. Not even this tome can speak of them. Who can say?
Role-playing Notes: lo is of pure Neutral alignment and also of all alignments transcended by pure neutrality. His avatars appear in all alignments, and exceptional and wise dragons of all alignments revere him in the appropriate aspect. They only manifest on the Prime Material plane when affairs absolutely crucial to the survival of part of dragonkind, or a great globe-spanning conflict, are involved. Be unbelievably careful with using any avatar of lo. Such an appearance could change a world irrevocably. In a conflict situation, few creatures could possibly hope even to flee for survival from this avatar, let alone offer it any kind of opposition save for a great army or a very high-powered group with truly powerful magic!
The avatar may appear on some mission to worlds which have Deep Dragons asleep in the core of the earth (if they exist in the DM's game world and he/she wishes to use this myth), communing with their spiritual forms. Because many worlds do not have these deep denizens, this idea is left for the DM to develop if he/she so wishes.
Io may, very rarely, manifest part of his being by communicating with an exceptionally wise or intelligent mortal being by drawing the astralbody to fly with lo's avatar in the Astral plane. This is recalled by the being as a wondrous inspirational dream, and lo's

symbol may appear to mark the event on some hidden part of the body-the crown of the head, below hair, below a fingernail, or some similarly subtle place.
lo's Avatar (Wizard 20, Priest 20)
The avatar appears as a vast dragon with blue scales edged with silver and dark purple. This applies to any of the five functional forms the avatar can take (Ig, ng, ln= gold; cg, cn= brass; le, ne= blue; ce== red; n= special).
Str 24 Dex 24 Int 25
Wis 25 Con 25 Cha 25

HP 200 HD 25 MR 95%
#AT 3 + special THACO special Dmg 3d8 +12 x 2 (claws) 12d8 (bite)
Further Statistics: Treat Io's avatar as a Great Wyrm of the Gold Dragon variety {Monstrous Compendium), with the following modifications/additions:
Symbol: Eight-pointed star with central rising spoke.
Size: Body length 440', tail length 360'.
Breath Weapons: The avatar uses the breath weapon capabilities of the functional form the avatar has. If the avatar is pure neutral, it can use cone of cold, cloud of fire, and lightning bolt forms of breath weapon. All breath weapon ranges and areas of effect are increased by 50% above those normally used. Saves versus the avatar's breath weapon are made with a -6 penalty. Base breath weapon damage is 24d20+24.
Spells: The avatar uses spells from all spheres and schools.
Magic Resistance: In addition to standard MR, the avatar is immune to all spells below 7th level/ and to poison, paralysis, petrification, death magic, mind-affecting and controlling spells, spells such as imprisonment and trap the soul, and even to wishes if these are used to affect its true nature (e.g. , the alignment of an avatar could not be changed by this spell, nor could it be feebleminded, etc.). The avatar takes half damage from cold-, fire- and electricity-based attacks. Weapons below + 4 enchantment do not affect the avatar.
Fear: The avatars radius for fear is 200 yards. Creatures of up to 6 HD/levels are automatically affected; those allowed a save versus spell to negate do so with a -6 penalty.
THACO: The avatar's base THACO is 2. It hits any AC on a roll of 5 + on a d20. A bite swallows any creature whole, killing instantly and destroying all equipment, on a roll of 10 +.

## Tiamat (Lesser Goddess)

Avaricious, supremely vain, and profoundly Lawful Evil, Tiamat proclaims herself the creator of all of evil dragonkind, and certainly many evil dragons revere her as their creator and patron deity. She infests the uppermost of the Nine Hells with her consorts, each a Great Wyrm of different color-one red, one white, one green, one blue, and one black.
Whether or not Tiamat is truly the creator of evil dragons is a subtle question. As lo contains all alignments, evil is born from within him, and in this sense Tiamat is not a

prime creator. However, she may have been in some sense a midwife of the coming of evil dragons into the world, as Bahamut is often seen as the force who drew good dragons from lo's being. She keeps an active and eager watch over evil dragonkind and ever stirs them to further avarice, pride, and wickedness. She herself is hateful, spiteful, never forgetting any kind of slight, and she enjoys such wretched pastimes as torture, bickering, and fighting among her consorts, as well as destroying valuables and treasures which her avatars bring to her, sometimes as offerings from mortal evil dragons.

Tiamat's relations with the baatezu that populate the Hells and stray into her realm at times is the subject of considerable speculation by sages. Traditionally, she has been seen as repulsing them and attacking them, but as the tanar'ri have made a breakthrough into the Prime Material plane as alternative gods for lizard men, gnolls, and others, it may be that baatezu lords are trying to arrange some pact with her, to enable them to plane shift and serve evil dragonkind. This does not seem to have come to fruition yet because of the excessive demands made by Tiamat. If it ever does, woe betide many worlds spinning in the ether....

Role-playing Notes: As a special note, the statistics for Tiamat below are not suitable for DRAGONLANCE(r) campaigns since there Tiamat is strongly identified with Takhisis and DRAGONLANCE Adventures presents summary statistics for that deity.

Tiamat's avatars is fairly active on the Prime Material plane. She visits powerful evil dragons (especially red dragons), demanding worship, homage, and offerings. She has been known to lay waste to an area with her breath weapons, to enable evil dragons to populate the area after driving off any sentient creatures in or near the lands. Bahamut often tries to stymie such carnage and destruction, which enrages her.

Tiamat's Avatar

The avatar appears as a gigantic five-headed dragon with one head of each of the chromatic (evil) dragon types. Each head's color runs the length of the neck and into the forepart of her body as stripes/ gradually blending to three stripes of gray, blue-green, and purple over her back and hind-quarters/ then merging into a muddy dark brown tail. Her underbelly and legs are greenish white fading into her upper body colors.

Dex 20 Wis 20 Str 21

AC -12 SZ G (500') MV 18 fl 90 sw 30
HP 160 HD 20 MR 75%
THACO special #AT 6+ special Dmg 2dl2 (tail) + see below

Further Statistics: Use the additional statistics which follow:

Symbol: Five-headed dragon.

Size: Body length 280', tail length 220'.

Breath Weapons: Each of Tiamat's five heads uses a separate breath weapon, 3/day each; damage is listed separately below. All saving throws versus the avatar's breath weapons are made at -4.

Spells: The avatar uses spells from all spheres and schools save the spheres of chaos and sun, and she can only use reversed forms of healing and necromantic spells.

Magic Resistance: In addition to standard MR, the avatar is immune to all spells below 5th level, and to poison, paralysis, death magic, and mind-affecting and controlling spells. The avatar takes half damage from cold-, fire-, and electricity-based attacks. Weapons below +2 enchantment do not affect the avatar.

Fear: The avatar's radius for fear is 140 yards. Creatures of up to 5 HD/levels are automatically affected; those allowed a save versus spell to negate do so with a -5 penalty.
THACO: The avatar's base THACO is 3. It hits any AC on a roll of 8 + on ld20 with its red and blue heads, and on a roll of 9+ with any other head. Note that Tiamat's bulk and balance prevents her from using claw attacks.
Tiamat's Five Heads
In the table below, the following statistics for Tiamat's five heads are listed:
Slay: This is the total number of hit points of damage a head can sustain before being destroyed (the avatar regenerates the head in 12 hours). Damage specifically inflicted on a head does not affect the general body total.

| Head | Slay | Breath | Bite | Spells (W/P) |
|---|---|---|---|---|
| Blue | 56 | 14dl2+14 | 7d8 | 444441/22221 |
| Red | 52 | 13dl2+12 | 6d8 | 2222221/222211 |
| Green | 52 | 13dl2+13 | 6d8 | 4221/221 |
| Black | 48 | 12dl2+12 | 5d8 | 4221/221 |
| White | 44 | lldl2+ll | 4d8 | 421 |

Breath: The number shown is the damage for the breath weapon for the head in question-
Bite: This is the damage caused by a successful bite. Spells (W/P): These are the spells usable for each head, tabulated as number and level (e.g./ 222 means two spells each of 1st through 3rd level). Spells before a slash (/) are wizard spells, and those after the slash are priest spells. If there is no slash, only wizard spells are used.

## Chronepsis (Intermediate God)

Chronepsis is the draconic god of fate, death, and judgement. In his mausoleums in the plane of Concordant Opposition, the god has an infinite number of hourglasses which trickle out the lifespans of all dragon mortals and deities. Chronepsis knows the future and the fate of all of creation at the end of time. He is silent, unconcerned, dispassionate, and of absolute Neutral alignment. No dragons revere him; all respect him.
Role-playing Notes: Chronepsis' avatar will attend (in improved invisibility form) at the death of a truly exceptional Great Wyrm, greeting the spirit into the afterlife and sending it on to its Outer Plane journey, following it as it goes. The avatar may also periodically watch over the great graveyards present on some worlds, where dragons go to die, attacking any intruders or looters with his full and terrifying range of lethal attacks.
Chronepsis' Avatar (Wizard 14, Priest 22)
The avatar appears as a (usually) small, black dragon with decaying skin through which yellowed bones poke out in places. A magical brass harp (6' high) hovers above his head.

| | | |
|---|---|---|
| Dex l9 | Wis 25 | Int 24 |
| Con 21 | Cha 24 | Str l9 |
| AC -10 | SZ varies | MV special |
| HP 160 | HD 20 | MR 115% |
| #AT 3 + special | THACO special | Dmg all special |

Further Statistics: Again, treat the avatar as a Great Gold Wyrm with the following modifications/additions:
Symbol: Brass scales below a harp.
Size: Varies from 60-600' at will, 60% body, 40% tail.
Breath Weapons: The avatar has a single breath weapon, usable 6/day, and a 100' cube of disintegration (living matter only). Saving throws versus the effect are made at -1 per HD/level below 16.
Spells: The avatar uses spells from all spheres and schools.
Magic Resistance: The avatar has the same immunities and resistances (save base MR) as lo's avatar; use lo's entry above.
Fear: The avatar's radius for fear is 300 yards. Creatures of up to 8 HD/Ievels are automatically affected; those allowed a save versus spell to negate do so with a - 8 penalty.
THACO, Special Damage: The avatars base THACO is 2. It hits any AC on a roll of 7 + on a d20- Those who are touched by a claw die instantly unless they save versus death magic (save modified by HD/level as for breath weapon); those who are bitten are irrevocably destroyed on a roll of 10+, and die on a lower hit roll unless they save versus death magic (modified by HD/level as above).
Special: The magical harp above the dragon's head plays as the avatar wills and can create any of the following effects in a 50' radius: emotion (calm), symbol of persuasion, wall offeree. The avatar can slay living at will.

## Faluzure (Lesser God)

The terrifying Night Dragon picks at the wasteland of bones scattered about his burrow in Tarterus, his mindless juju zombie servants slaying any creature foolish enough to approach. Faluzure is a wretched, creeping thing no longer able to fly, but he has a terrible beauty nonetheless. Faluzure is a Neutral Evil lord of energy draining, undeath, decay, and exhaustion; he hates Bahamut and Tiamat equally, and hates and fears Chronepsis.
Role-playing Notes: Faluzure's avatars stalk some worlds seeking powerful, wise, or exceptional beings to energy drain. He steals corpses for ghastly necromantic experiments in Tarterus. All dragons fear him save shadow dragons, who revere him.
Faluzure's Avatar (Illusionist 14, Priest 18)
The avatar appears as a vast, sleek, beautiful dragon with silver-edged scales of midnight blue and vestigial wings, but he may also be polymorphed into a handsome human or comely elf.
Str 21 Dex 20 Int24
Wis 21 Cha 24 Con 23

#AT 3 + special THACO special Dmg 2d8 +9 x 2 (claws) 8d8 (bite)
Further Statistics: Treat Faluzure s avatar as a Great Wyrm of the Shadow Dragon variety {Monstrous Compendium: Greyhawk}, with the following modifications/ additions...

Symbol: Draconic skull.
Size: Body length 290', tail length 230'.
Breath Weapons: The avatar can breathe 6/day in a 30'x40'x50' cloud; victims are drained of IdIO life energy levels (save at ~5 for half this loss). Any creature reduced to zero level or below becomes a juju zombie controlled by the avatar. His breath also causes disease (saving throw versus poison at -5 to negate) which is fatal in 2d4 hours unless cured by a priest of level 12 +.
Spells: The avatar uses spells from all spheres and schools, but may only use reversed sun, healing, and necromantic spells.
Magic Resistance: In addition to standard MR, the avatar is immune to all spells below 5th level, and to poison, paralysis, petrification, death magic, and mind-affecting and controlling spells. The avatar is immune to cold- and electricity-based attacks and to weapons below +3 enchantment.
Fear: The avatar's radius for fear is 200 yards. Creatures of up to 7 HD/levels are automatically affected; those allowed a save versus spell to negate do so with a - 7 penalty.
THACO: The avatar's base THACO is 3. It hits any AC on a roll of 9+ on a d20. Any hit causes paralysis and fear; saving throws versus spell are allowed for both effects at -5. If both saves are failed, the creature becomes insane.
Special: The avatar controls undead as a 20th-level priest. It can animate dead at will and summon shadow every other round.

## Aasterinian (Lesser Goddess)

Aasterinian is a cheeky, deeply chaotic deity who enjoys learning through play, invention, and pleasure. She is deter-minedly Chaotic Neutral, with tendencies to good. She enjoys disturbing the status quo, being shocking and innovative, jolting the staid into action. She is lo's messenger for lesser communications with dragons, but is definitely distractable. Chaotic (especially brass and copper) dragons revere her.
Role-playing Notes: The avatar often travels as a messenger to Great Wyrms from lo, or is off hunting some arcane knowledge she seeks for herself. She is playful, stubborn, and vain. She may mock or taunt very lawful creatures, using spells to embarass them.
Aasterinian's Avatar (Wizard 13, Priest 13)
The avatar appears as a huge brass dragon with a fcourqoise-sheened forehead bearing a golden star in the center.
Str 21 Int 22 Dex 22

#AT 3 + special THACO special Dmg 2d8 +9 x2 (claws) 7d8 (bite)
Further Statistics: Treat Aasterinian's avatar as a Great Gold Wyrm with the following modifications/additions:
Symbol: The Morning Star.
Size: Body length 250', tail length 200'.

Breath Weapons: The avatar uses the breath weapon capabilities of a Great Brass Wyrm, plus I/day the use of a cloud of spiral of degeneration (Quest Spell; see Tome of Magic-30' radius to a range of 120'). All other breath weapon ranges and areas of effect are increased by 20% above those normally used. Saves versus the avatar's breath weapon are made with a -4 penalty. Base damage for breath weapons is 21d20+21.
Spells: The avatar uses spells from all spheres and schools, save the sphere of law.
Magic Resistance: In addition to standard MR, the avatar is immune to all spells below 5th level and to poison, paralysis, death magic, and mind-affecting and controlling spells. The avatar takes half damage from cold- and fire-based attacks. Weapons below + 2 enchantment do not affect the avatar.
Fear: The avatar's radius for fear is 100 yards. Creatures of up to 4 HD/levels are automatically affected; those allowed a save versus spell to negate do so with a - 4 penalty.
THACO: The avatar's base THACO is 3. It hits any AC on a roll of 9 + on a d20. A bite swallows any creature whole, slaying it instantly and destroying equipment/ on a roll of 14 +.
Special: The magic resistance of the avatar is increased within one hour (before or after) dawn by +15%. Saving throws against her spells are subject to a - 2 penalty (cumulative with any other penalties) during this time.

## Bahamut (Lesser God)

Bahamut, Lord of the North Wind and ever-watchful for the cause of Lawful Good, sits unsleepingly in his palace in the Seven Heavens, surrounded by seven Great Gold Wyrms. Bahamut is an active deity, ever arguing the case against evil with lo, ever watchful against the actions of Tiamat. Bahamut values wisdom, knowledge, prophecies, and song and-by dragon standards-is neither vain nor desirous of treasure. Gold, silver, and brass dragons revere Bahamut.
Role-playing Notes: Bahamut's avatar is watchful for lawful good creatures in peril, offering aid, recuperation, and knowledge, but does not act directly in the Prime Material plane unless to check Tiamat. He is stern, very disapproving of evil, and will not tolerate any offense offered by evil creatures, although he will usually polymorph them rather than kill them.
Bahamut's Avatar (Wizard 16, Priest 16)
The avatar appears as a vast platinum dragon. However, he is fond of appearing as an old, frail man.
Dex 21 Wis 23 Con 24

Further Statistics: Treat Bahamut's avatar as a Great Gold Wyrm with the following modifications/additions:

Symbol: The Pole Star above a milky nebula.

Size: Body length 280', tail length 220'.
Breath Weapons: The avatar uses the breath weapon capabilities of a Great Gold Wyrm, plus a sonic disintegration effect (as for a cone of cold), affecting up to 40 HD/levels of creatures. Saving throws versus Bahamut's breath weapons are at -4. Base breath weapon damage is 22d20+22.
Spells: The avatar uses spells from all spheres and schools, save the sphere of chaos.
Magic Resistance: In addition to standard MR, the avatar is immune to all spells below 6th level and to poison, paralysis, pet-rification, death magic, mind-affecting and controlling spells, and even to limited wishes if these are used to affect its true nature (e.g., the alignment of an avatar could not be changed by this spell, nor could it be feebleminded, etc.). The avatar takes half damage from cold-, fire-, and electricity-based attacks. Weapons below + 3 enchantment do not affect the avatar.
Fear: The avatar's radius for fear is 140 yards. Creatures of up to 5 HD/levels are automatically affected; those allowed a save versus spell to negate do so with a ~5 penalty.
THACO: The avatar's base THACO is 2. It hits any AC on a roll of 7 + on a d20. A bite swallows any creature whole, killing it and destroying all equipment, on a roll of 12 + .

# Gods of the Eagles

## Remnis (Lesser God)

Remnis, great lord of eagles, flies the planes of elemental Air, Concordant Opposition, Nirvana, Limbo and Elysium. He hunts in the Beastlands and perches atop Mount Olympus. With eyesight stretching to the horizon, the god awaits the call to service- Remnis is the mount of many sky gods in human and demi-human pantheons. He provides untiring service and brave, loyal aid in combat in return for the gods allowing his offspring isolated, safe living habitats. He is intelligent, wise, and a great hunter. His endless flights and vision show him many secrets which, in turn, he reveals to those he serves. He is also on excellent terms with Syranita and Aerdrie Faenya. Remnis does not have any especial enemies.
Role-playing Notes: Remnis sends avatars of his own accord fairly rarely, usually to hunt some magnificent beast or hunt down an evil, marauding creature. His avatar serves as a mount for many good- or neutral-aligned sky gods and members of the Seldarine. He also watches over communities of giant eagles very jealously, and his avatar may appear to drive away creatures intending to attack eagles, steal their eggs, or likewise threaten them. His avatar may appear as an omen to giant eagles, alerting them to danger. Rarely, the avatar will appear to take a final flight with a very old and wise eagle approaching the time of death, and he may advise that eagle on which of the younger members of a community should take over the role of leader when the elder dies.

Statistics: AL n(g); WAL n (giant eagles); AoC giant eagles. sky, service; SY giant eagle's head with green eyes.
Remnis' Avatar (Paladin 14, Priest 7)
The avatar appears as a gigantic golden eagle with glowing green eyes and a 55' wingspan. He uses spells from the following spheres: all, animal, combat, divination, healing, protection, sun, weather.

Special Att/Def; The avatar is immune to poison, paralyza-tion, and all spells which directly negate or adversely affect flight (leuitation, web, etc.). The avatar can create fear in natural avians at will, and such creatures will never attack him. With a wingbeat, he can create each of the following effects 1/day:
fear 20', firestorm, ice storm, repulsion (30' radius).

# Gods of the Giants

### Annam (Greater God)

Annam is The Prime, the Great Creator, the fertile progenitor of worlds. He fathers other gods, creates worlds, and provides the tools for others to create upon his substrates, and he is even said to be the creator of the elements themselves. Far across all times, planes, and worlds, Annam's greatness unfolds itself. His merest passing thoughts have given birth to worlds and the god is seen as being without peer.
Annam has a conflicted nature which proves to be his undoing. On the one hand, he is an all-knowing god of learning, philosophy, and deep meditations; Annam is omniscient, but he chooses not to know certain things, in his wisdom. But, against this vastly cerebral nature, one must set Annam's instinctual, even lustful nature. He is not a god for whom contemplations hold endless attraction. Annam is fertile and vigorous, and he makes a considerable number of mistakes when governed by his instincts. Thus, his son Stronmaus makes him proud and contented, but his other sons have been distinctly less of a blessing to him. Their endless schisms and bickering weary Annam and bring him depression and loneliness since he has no mate who is his equal. Hiatea makes him realize that his exclusive preference for male offspring was a mistake and that he realized his mistake too late. Perhaps the coming of evil to his creation was related to his fathering too many sons, among whom envy and jealousy were bound to give rise to evil, hatreds, and warped nature and bodies.
Annam has largely retreated from events in the Prime Material, grown weary of having to watch over countless worlds and conflicts. The god seeks solace in a demiplane of Concordant Opposition, which no other being, not even Stronmaus, can even locate, let

alone enter without Annam's permission (which he very rarely gives). There, Annam sits in an endless mansion with a great crystal tower wherein mobile models of all stars and planets whirl in perfect, silent motion, simulating the movements of the multiverse. No other living being has a home here. Perhaps above all, great Annam feels a sadness that he has no wife after all his conquests and consorts.

Role-playing notes: Annam will very rarely send an avatar to the Prime Material. If he does, it is because of some epoch-shaking event that will affect the course of history for an entire world, or at least a continent. In different worlds, Annam's avatars have observed the Rain of Colorless Fire, the Storms of Un-death, the passing of Netheril, and the Zephyrs of Unbecoming. If Annam had a role in them, he does not speak of it, and sages are left to devote their lives to documenting just a tittle of what has happened when the avatar has walked in their world.

And, of course, Annam does not grant omens, save, once in a lifetime, to his priest-kings. Such a priest, on attaining 10th level, may once in his life call for a precognitive vision from Annam after a period of ritual meditation not less than one month in duration. In these visions, the broad course of future history of the priest's race (or community, warband, etc.) is revealed to him.

Statistics: AL n; WAL n, ng, In; AoC magic, knowledge, fertility, philosophy; SY two hands, wrists together, with fingers facing downwards.

Annam's Avatar (Fighter 20. Wizard 18, Priest 20)

Annam's avatar appears as a giant of truly staggering size- white-haired, wearing a robe of midnight blue. He employs spells from all spheres and schools.

Str 25 Int 22 Dex 18
Wis 23 Con 24 Cha 23
AC -6 SZ G (60') MV 21 fl 36 sw 18
HP 200 HD 25 MR 70%
#AT 2 THACO 2 Dmg 7d8 (fists) +14

Special Att/Der: The avatar is immune to energy drains, strength drains, mind-controlling magic, petrification, paraly-zation, death magic, and weapons below +3 enchantment. He has a special weakness, however: a damaging blow struck directly on the crown of the avatar's head (a called shot with a - 8 penalty to the hit roll) will stun the avatar for one round, plus one-half round for each damage bonus point the striker has for exceptional strength, rounding down (thus such a blow from an opponent with 18/99 strength would stun the avatar for a total of 3 rounds; 1+ 5/2, rounding down).

By a simple wave of the hand, the avatar can create the following effects 2/day, each to a range of 200': bigby's crushing hand, earthquake, telekinesis (up to 1000 Ibs) and wall of force of double normal size. Effects are at the 20th level of magic use. The avatar mostly eschews magical items, carrying only a humble staff of power charged with ld4 wishes (in addition to being fully charged otherwise). The avatar has a base THACO of 2, but will hit any AC
on a roll of 8 + .

Duties of the Priesthood

Priests of Annam are extremely rare and many game worlds may not have any. They can only be cloud, storm, or stone giants, and they must be truly exceptional, having the blood of ancient/elder giants in them (DM's decision). They are rulers and kings,

possessed of and driven to greatness and magical prowess through acquisition of powerful magical items.
Requirements: AB Wis 17 Cha 16; AL n, ng. In; WP any; AR any; SP all, astral, charm, combat, creation, divination, elemental (all), guardian, healing, necromantic*, plant, protection, summoning, sun, thought, time, weather*; PW 1) stoneskin; 3) Cha raised to 18; 5) may use wizard spells from any two non-opposing schools, except necromancy and illusion/phantasm, as clerical spell of same level; 10) earthquake; TU turn at -4 levels; LL by race; HD dIO; Shamans no.

## Stronmaus (Greater God)

Stronmaus is the mighty giantish god of sun, skies, and weather. Given the decline in Annam's role, Stronmaus is increasingly the giantish god who watches over the affairs of all the giantish gods and may call them to account for wrongful actions, damaging dissension, and the like.
Stronmaus lives in a spectacular cloud palace in the Beastlands crarted from gold, platinum, gems, and marble, in which he has a magical opal pool which appears some 100' long to a viewer/ but which is of endless size when one swims within it. The waters of this pool can heal any creature Stronmaus chooses to allow to swim here, as well as effect restoration and regeneration. Stronmaus delights in swimming here with Trishina the dolphin goddess, with his sister Hiatea, and with Surminare the selkie queen. In the skies above his home, he rides the air currents with Aerdrie Faenya of the elves and Syranita the aarakokra goddess. Stronmaus takes pleasure in consorting with good deities of skies and seas, and he has many friends among them.
Stronmaus is a god in whom the power of life itself flows very strongly. Like his avatars, Stronmaus cannot help but be ever-smiling, and it is hard for him not to express his powerful energy in dramatic form. He delights in creating powerful storms in the Beastlands, revelling in the lightning and driving rain, whooping to the thunder he creates from his own magical hammer. This can be a terrifying spectacle for the unprepared, for the god is a very strong and powerful one and sometimes his joy in the elements makes him forget his own strength.
Role-playing notes: Stronmaus is active in sending avatars to the Prime Material plane since he is generally concerned with giantish affairs. Avatars may be disguised as ordinary storm giants, to meditate with storm giant shaman-priests of great power who always recognize the avatar for who he is. He will also send avatars to restrict the efforts of Memnor, for whom he has great antipathy. Stronmaus also enjoys sending an avatar to walk in isolated mountainous terrain, possibly visiting cloud giants and storm giants there, but mostly for the pleasure of walking in refined air and enjoying the elements. Stronmaus may send an avatar to help the good non-human sea and sea gods who he has befriended (the asathalfinare; see Gods of Seas and Skies) if their people are in serious danger. Finally, Stronmaus has some of his father's traits and is quite capable of despatching an avatar to woo and seduce some very comely giantess who has attracted his (certainly fickle) attentions.
Omens from the god take the form of storms and lightning, strangely shaped clouds which partly obscure the sun, and direct warnings of impending evils.

Statistics: AL ng (cg); WAL ng, cg (cloud and storm giants);
AoC sun, sky, weather, joy; SY forked lightning bolt descending from silver-lined cloud partly obscuring the Sun.
Stronmaus' Avatar (Paladin 20, Priest 16)
Stronmaus' avatar appears as a vastly tall, muscular giant with blue eyes and red-auburn flowing, wavy hair. The avatar wears a simple gold-edged white silk robe and always smiles. He uses priest spells from all spheres.
Str 25 Int l9 Dex 21
Con 24 Wis 22 Cha 24
AC -5 SZ G (45') MV 18 fl 48 sw 18
HP 192 HD 24 MR 60%
#AT 2 THACO 2 Dmg 6d8 +5 (hammer) +14
Special Att/Def: The avatar controls weather in a 10-mile radius at will and may call lightning 1/tum. He is immune to weapons below +3 enchantment, all magic which is mind-affecting, blinding and deafening attacks, death magic and energy drains, and all electrical attacks. Three times per day each, the avatar can cast a 20HD lightning bolt 10' wide and up to 160' long and a 20HD chain lightning effect. No non-evil avian or aquatic creature will attack the avatar, regardless of magical control, and any attempt to magically coerce such a creature into doing so automatically breaks the magical effect (charm, domination, etc.). The avatar carries a hammer of thunderbolts with all special powers (+5 enchantment and strikes any evil giant dead on a successful hit, no save). The avatar has a base THACO of 2, but hits any AC on a roll of 8 +.
Duties of the Priesthood
The cloud giant priesthood is a proud and organized one which must rid the skies of evil creatures. Each priest is expected to have at least one area of skill in music or the arts. Priests must be wealthy, dress well, and craft/possess fine jewellery. Quality of dress and jewellery is a sign of position within the heirarchy, so juniors should not dress too well.
Storm giants have to undertake an arduous personal initiation to become shaman-priests; this may involve fasting to the point of severe deprivation, travel to a sacred location and participation in extended meditation there, and the like. Such shaman-priests are solitary and have a great affinity with sky or sea creatures (as appropriate). They are visionaries, mystics, and meditators who treat each other as equals.
Requirements (Cloud Giants): AB Wis 15; AL ng, cg; WP any; AR any; SP all, animal, charm*, combat*, creation, divination, elemental (all), guardian, healing, necromantic*, summoning, sun, weather; PW 1) fly, double duration; 5) wind wall; 9} major creation; TV turn at -2 levels; LL 12; HD d6;
Shamans no.
Requirements (Storm Giants): AB Wis 17; AL cg, ng; WP any; AR any; SP as above, but add protection*, thought*, time"; PW 1) charm avians or natural sea animals (up to 30 HD); 5) after meditating for 1 hour, may summon a 12HD air or water elemental for 6 turns in subsequent 24 hours (water ele-mentals for sea-dwelling giants only); 9) vision I/week (deity never takes offense, re-roll a dice throw giving this result); TU turn at -2 levels; LL16; HD d6+l; Shamans must be "shaman-priests."
Hiatea (Greater Goddess)

Hiatea is a dual-aspect goddess, as her mythic history befits. Hidden by her mother in fear of her father Annam, she was raised by firbolgs. ignorant of her divine parentage. She thus has a strong affinity with community, agriculture, and the upbringing of the young, especially with her firbolg priests. However, on learning (from a messenger sent from her mother's death-bed) of her father's identity, she vowed to present herself to him as worthy of his acknowledgement. She undertook a series of arduous trials and quests, mostly in the woodlands where she honed her hunting skills. Thus, she has a much wilder (and more neutral-aligned) aspect as a goddess of nature, wild places, and hunting. Joining the two is a powerful concern with the balance of agriculture and settled communities with nature, wild things, and hunter-gatherers. Firbolgs often have this concern as a basis for their ecology as befits her most important servants and worshipers. Hiatea also has a small but deeply loyal following among the small giant-kin voadkyn (GREYHAWK(r) Monstrous Compendium) and is happy to take these smaller folk under her wing. She has a genuine fondness for this race and, as a result, has begun to develop friendships with some of the elven deities, notably Solonor Thelandira, with whom she enjoys archery contests by her home in Elysium.

Hiatea is a strong, confident, and proud goddess who is an exceptional huntswoman, as her sojourns in the Beastlands impress on all who dwell there- Her symbol derives from the great battle in which she slew the vast hydra she presented to her father as proof of her prowess and worth.

Role-playing notes: Hiatea does not often send avatars to the Prime Material, but she will certainly do so to protect small communities of firbolgs or voadkyn groups under attack from evil enemies (especially if these are evil giants or giant-kin). She may also send an avatar to hunt some monster of exceptional size or great cunning or which in some other way presents her with an unusual challenge (it is hard to find, hard to get to, etc.). She does, however, communicate frequently with her priests and shamans, in the form of highly distinctive omens. Pyro-mancy is common among them, and the sign of a flaming sphere within dying embers is a cardinal pointer to some important and imminent event. Her "community priests" (see below) may receive messages from the dreams of children. One special messenger of Hiatea is unique and worthy of note: to priests practicing pyromancy, she may send a unique yellow-gold moth (with a wingspan of some 2 feet) that will spiral around the flame, and from its path of flight the priest can decipher a message from Hiatea. If the priest is of at least 5th level, he can capture and swallow the moth alive, and if he does this he will be invisible in woodlands for ld4+2 days.

Statistics: AL n (ng); WAL n, ng, cg (firbolgs, voadkyn); AoC nature, agriculture, hunting, females, children; SY flaming spear.

Hiatea's Avatar (Ranger 16, Druid 10, Bard 12)

Hiatea's avatar takes the form of a tanned, lithe, long-legged giantess who wears leather armor and always carries a spear, bow, and quiver of arrows. Her red-gold hair is tied back from her face and she has large brown-hazel eyes. Her spells come from the spheres given for druids (also Sun) and from all schools of magic.

Str 23 Int 20 Dex 20
Wis l9 Con 23 Cha 21
AC -4 MV 18 SZ L/G (10'/30')
HP 160 HD 20 MR 35%
#AT 2 THACO 4 Dmg 3d8 +3(spear) +12, 2d8+6 (arrow)

Special Att/Def: Hiatea's avatar cannot be affected by weapons below +2 enchantment, and she is not affected by spells which restrict her movement in any way. She casts entangle and plant growth at will and also may employ a plant door at will. Her spear +3 becomes a flametongue weapon as she wishes. Her longbow +5 has triple normal range and she has a quiver of +3 arrows. She carries a number of magical nets which she can throw up to 120'; victims caught within a net must make a successful saving throw versus spell at -4 or be affected by the magic of the net (typically, she has nets of feeblemind, -weakness (reverse of strength}, and petrification}.
Duties of the Priesthood
Hiatea's priests typically specialize in one of two roles, although the boundary is not absolute. They may be "community priests," who must tend to agriculture and the raising, protection, and education of children, or else they may be "protector priests," who spy around the edges of their communities, patrolling natural woodlands and forests and especially keeping an eye on other races (with voadkyn, this means in part going out of their way to maintain relations with wood elves). All priesthoods maintain an absolute equality of the sexes, although females may be more numerous among the firbolg.
Requirements; AB Dex 15 or Int 15; AL n, ng, cg; WP any (spear and longbow must be first two proficiencies); AR leather;
SP all. animal, combat*, creation, divination*, elemental (all), guardian, healing, necromantic*, plant, protection, summoning, sun, travelers*, wards*, weather; PW 1) pass without trace;
3) speak with animals 3/day; 5) identify natural plants/animals as druid; 9) turn spear into flametongue weapon, I/day, 1 turn duration, + 2 to hit rolls with the weapon; TU turn at -4 levels;
LL 12 (firbolgs), 9 (voadkyn); HD d6; Shamans yes (voadkyn only).
Shamans: AB Int 12; AL any non-evil; LL 5; HD d4; Other: spear must be 1st weapon, armor must be leather.

## Grolantor (Intermediate God)

Grolantor is the evil deity of hill giants, but he also has a ragtag following among ogres and ettins. Grolantor is strong. While he can be cunning and dangerous in ambushes/ he is willfully stupid. Grolantor refuses to accept stronger giants as superiors, and this stubborn pride forces him into pointless confrontations- He has had to flee, his backside turned into a pincushion from the arrows of a wrathful Hiatea, on more than one occasion. He has enemies among the goblinoid gods, too, and above all among the dwarves, for whom Grolantor has an arbitary hatred. The deity himself is a miserable specimen, dividing his time between the Abyss and Tarterus, scheming and muttering about slights which are mostly imagined rather than real.
Role-playing notes: Grolantor often sends avatars to lead hunting and skirmishing bands of hill giants (and much more rarely, ogres), but only for a short period of time. In any confrontation with a strong enemy, the avatars are cowardly unless challenged or mocked, in which case they fight to the death. Grolantor does not grant any form of omen to his priests.

Statistics: AL ce; WAL ce (hill giants, ettins, ogres); AoC hunting, combat; SY wooden club.
Grolantor's Avatar (Fighter 14, Priest 9)
The avatar appears as a huge hill giant (or ettin) clad in furs. He uses spells from spheres listed for his priests.
Str 21 Dex 17 Con 18
Int 12 Wis 8 Cha 19
AC 0 MV 15 SZ H (18')
HP 144 HD 18 MR 20%
#AT 2 THACO 4 Dmg 2dl2 +1 (dub) + 9
Special Att/Def: The avatar gains + 3 to all surprise rolls. He can hurl rocks up to 400', and at ranges below 100', he adds his strength bonus to normal damage (2d8). The avatar catches rocks and other large missiles thrown at him 70% of the time. His club +1 inflicts double damage on dwarves (4dl2 +2 + 9).
Duties of the Priesthood
Crolantor's priests must endeavor to wipe out weaker races- any goblinoids that get in their way and indeed pretty much anything else. They must never treat other giants as superior, and they regularly organize hunting parties and skirmishing warbands.
Requirements: AB std; AL ce; WP any (club 1st); AR any; SP all, animal*, combat, elemental (earth), healing (rev), necromantic* (rev), summoning, sun* (rev), war*; PW none; TU nil; LL 11 (hill giants), 8 (ogres), 7 (ettins): HD d8 (hill giants), d6 (ogres); Shamans yes.
Shamans: AB std; AL ce; LL 7 (hill giants), 4 (ogres), 3 (ettins); Other club must be 1st weapon.

## Iallanis (Lesser Goddess)

Iallanis is the goddess of love, forgiveness, mercy, and beauty who turns away no giant who is of good nature or who has repented their evil. She despises no part of her father's creation and ever seeks to re-unite the giants in harmony. She is said to have a close friendship with Fionnghuala the swanmay goddess, although why this is so is unknown. Among giant races, she has worshipers among cloud and storm giants, small groups of fir-bolg, and a scattering of voadkyn, but she is accepted among stone giants for her fairness of face and kindness of being.
Role-playing Notes: Iallanis will send an avatar to occasions of joy and delight among giants: the wedding of a king, the consecration of a magnificent building, the final touches put to a great work of art. She sends omens to priests in the form of floral scents, tinkling sounds, and similar gentle signs.
Statistics: AL ng; WAL any non-evil (giants); AoC love, mercy, beauty; SY garland of flowers.
Iallanis' Avatar (Druid 16)
Iallanis' avatar appears as a graceful, fair-skinned giantess wearing a short green dress from which living flowers grow. As with many other love goddesses, her avatar is

recognizable for always being bare legged and bare footed. She uses spells from the spheres allowed to druids, plus Sun and Time.
Sir 19 Int 16 Con 19
Dex 21 Wis 23 Cha 24
AC O MV 21 SZ H (13')
HP 128 HD 16 MR 20%
#AT 1 THACO 5 Dmg ldl2 (fists) +7
Special Att/Def: The avatar is immune to energy drains, diseases, poison, blindness, and cause wound spells. She can charm person or giant at will; victims save at -4, except for giants, who save at -8. She can remove any mortal curse 3/day.
Duties of the Priesthood
Iallanis will accept any good-aligned true giant as a priest or shaman on equal terms. Her priests must strive to bring giantkind into the fold of good, to show mercy to all, and to cooperate with all other good creatures. They must create things of beauty-arts, crafts, gardens, etc. Priests and shamans must be happily married in order to attain 3rd or higher level.
Requirements: AB std; AL any good; WP bow and arrows, mancatcher, net, quarterstaff; AR leather; SP all, animal*, creation, guardian, healing, necromantic*, plant*, protection, sun, time*, wards; PW 1} charm person or giant; 5) charm monster; 9) symbol of persuasion; TU turn at -2 levels; LL 12 (all races save storm giants for whom LL is 16); HD d4; Shamans yes.
Shamans: AB std; AL any good; LL 7 (all races); Other: weap on restrictions as above.

## Karontor (Lesser God)

Karontor is a wicked, misshapen god whose hatred of giantkind reflects his own deep self-loathing. He associates with the equally wicked and warped fomorian giants, but evil ver-beeg also carry his mark and prove superior spellcasting servants, given their higher mental capacity. Karontor dwells in a mausoleum of beast and giantish bones in a desolate, frozen, wind-swept plain of Tarterus where his pack of ever-hungry winter wolves awaits his signal to rage across the miles beyond. Here he grows ever more embittered by his banishment by An-nam, which stripped him of his own spellcasting powers. An-nam did not truly detest Karontor, he simply grew weary of endless sibling fights and dispatched Karontor because it was the easiest thing to do; thus, this evil god's grievance has some justification.
Role-playing Notes: Karontor is seemingly uncaring on the Prime Material plane because of his endless introverted reflections. He sends avatars only in unpredictable fits of rage, to slay and murder. He does not send omens to priests.
Statistics: AL ne; WAL ne (fomorians, verbeeg); AoC deformity, hatred, beasts; SY winter wolf's head.
Karontor's Avatar (Fighter 13, Thief 8)
Karontor's avatar appears as a uniquely hideous fomorian giant clad in rotting, stinking furs, using a club, or else as a huge winter wolf - Changing form takes one round.
Str 20 Dex l5 Int 14

Wis 16 Con 19 Cha 1 (all races)
ACO MV 9 SZ H (18')
HP 120 HD 15 MR 30%
#AT 2 THACO 5 Dmg 3d8 +1 (club) +8 or 3d6 bite
Special Att/Def: The avatar carries a humble giantish club +1, but always has several other magical items; typically, rings of invisibility and mammal control, a brooch of shielding, and an efreeti bottle. He often carries a flask of curses to leave for some unfortunate who he encounters. In wolf form, he has MV 36 and can breathe a cone of cold for 10d6 hp of damage I/day.
Duties of the Priesthood
Karontor's vicious priests are urged to fight all good creatures, using trained beasts (especially wolves) for this purpose. They constantly urge their own groups to conflict and war.
Requirements: AB std; AL ne; WP any (club 1st); AR any; SP all, animal/ combat, healing (rev), protection*, sun* (rev), war; PWnone; TU command at -6 levels; LL 11 (verbeeg), 8 (fomorians); HD d6; Shamans yes.
Shamans: AB std; AL ne; LL 7 (verbeeg), 4 (fomorians).

## Memnor (Intermediate God)

Memnor is subtle, charming, intelligent, cultured-and deeply, intensely evil. His sin is pride, the desire to usurp An-nam even in the prime god's withdrawn aspect, and to rule all of the affairs of giantkind. His chosen instruments are evil cloud giants, the only priests he accepts. He corrupted them by constantly telling them of their superiority, stressing their first-born status in the worlds, and by belittling other giant races. He taught his evil followers the secrets of harnessing wyverns and dominating them through force of will. and he ever bends his will toward increasing the power of evil giantkind.
Role-playing Notes: Memnor is subtle and wily and does not send avatars into the Prime Material to fight, although the avatars will fight rashly if their pride is challenged. His concern is to increase the prestige and power of his strongest priests. Omens take the form of visions accompanied by splitting headaches, but they are powerfully veridical.
Statistics: AL ne; WAL ne (cloud giants); AoC pride, mental prowess and control; SY black obelisk.
Memnor's Avatar (Priest 18)
Memnor's avatar appears as a kindly, golden-skinned cloud giant with piercing eyes, wearing a deep blue robe. His priest spells are drawn from all spheres.
Str 21 Dex 19 Con 19
Int 22 Wis 21 Cha 22
AC 1 MV 18 fl 36 SZ G (30')
HP 160 HD 20 MR 40%
#AT 1 THACO 4 Dmg 4d8 +3 (morningstar) + 9
Special Att/Def: The avatar is immune to illusion/phantasm spells, but may use these freely among his own spells. He is immune to nonmagical weapons and mind-affecting spells. Once per day he may cast: mass suggestion, symbol of persuasion, and weather

summoning. His morningstar +3 strikes with a feebleminding effect 3/day, as the avatar chooses.
Duties of the Priesthood
Memnor's priests must proclaim the superiority of giants in general and cloud giants in particular, belittling other giants save for storm giants, who are hated and hunted. They must be proud, well dressed, and regal of manner. A priest must have a trained personal wyvern to progress beyond 8th level.
Requirements: AB Wis 15; AI. ne (cloud giants only); WP any (morningstar first); AR any non-metal (magical robes etc. preferred); SP all, astral, charm, divination, numbers*, summoning, sun (rev), thought*, time*; PW 1) forget; 3) suggestion; 7) magic jar; 8) speak with wyvern 3/day; 10) aerial servant; TU nil; LL 12; HD d8; Shamans no.

## Skoraeus Stonebones (Intermediate God)

Skoraeus Stonebones is one of Annam's three sons, with Surtr and Thrym. Skoraeus has evaded the schisms in the giantish pantheon by withdrawing below the earth, concerning himself solely with the affairs of stone giants. He is an expressionless, dour deity who cares nothing for any other race save the stone giants, although he does occasionally deal with gods of the dwarves and svirfnebli (of necessity rather than desire). Skoraeus is deeply knowledgeable about banes, magics, and wonders buried in the cores of worlds, but he keeps this knowledge strictly to himself.
Role-playing Notes: Skoraeus deploys avatars sparingly, to protect stone giants or to lead them to new homes- Rarely, he will lead them to, or away from, some secret buried magical caverns or very rich veins of prime stone or ore. More often, he guides priests with very subtle omens in rock colors, growth of stalactites, and growth of underground mosses and lichens. Only stone giants can discern such changes and signs.
Statistics: AL n; WAL n (stone giants); AoC stone giants; SY stalactite.
Skoraeus' Avatar (Priest 14)
The avatar appears as a huge, granite-skinned stone giant with well-muscled forearms covered in corded veins. He uses spells from spheres listed for his priests.
Str 21 Dex l5 Con 21
Cha l8 Int l7 Wis l9
AC O MV 9 br 9 SZ H (24')
HP 144 HD 18 MR 40%
#AT 1 THACO 5 Dmg 3-30 (fists) +9
Special Att/Def: Skoraeus' avatar is immune to all elemental (earth) spells, acid, and petrification. He regenerates 3 hp/rd if any part of him is in contact with stone. He can summon ld4 16HD earth elementals I/day to serve for 12 turns, casts cry-stalbrittle 2/day and earthquake I/day. He carries a wand of earth or stone which can be fully recharged each day.
Duties of the Priesthood
Skoraeus' priests dominate stone giant society and create an inward-looking, stifling orthodoxy that repulses attempts at contact by other races most of the time. They are grave, serious giants who especially avoid contact with others of giantkind.

Requirements: AB Con 15; AL n (stone giants only); WP any;
ARnone; SP all, animal*, creation, elemental (earth), guardian, healing, necromantic*, protection, summoning, wards; PW 2) stone shape; 4) stoneskin; 7) pass-wall; 10} flesh to stone or stone tell; TU nil; LL 11; HD d8; Shamans yes.
Shamans: AB std; AL n (stone giants only); HD d8; LL 7.

## Diancastra (Heroine/Demi goddess)

Diancastra is a trickster-goddess with many faces and wiles. Her father is Annam and her mother a giant of unspecified race (but assumed to be a storm or cloud giant). Thus, she is half-divine in origin, like Hiatea (whose birth predates hers).
Diancastra sought, as a young giantess, to claim her divine inheritance from Annam, but unlike Hiatea, she used wit and wile to do this rather than striving to perform heroic feats in battle. Several aspects of her character are revealed in mythic tales told of her youthful career. She is brave to the point of foolishness, although she prepares and disguises herself carefully. Thus, she stole a magical necklace from Blibdoolpoolp by disguising herself as a kuo-toan and carefully watching the changing of guards at the kuo-toan goddesses' palace. Once inside the palace, she used illusions and magical aids to swiftly grasp her prize.
Diancastra is also impudent, even arrogant. She taunts stupid but proud enemies, enraging them and driving them into snares of illusion. Her taunting of a nameless demigod servitor of Surtr allowed her to lead him through a merry dance of illusions while her magical owl stole his spellbooks, which she in turn exchanged for illusionist spellbooks with a powerful human illusionist. She added a little something to that bargain, however, which brings us to another of her characteristics.
Diancastra considerably enjoys worldly pleasures, but this enjoyment also has the happy knack of furthering her own fortunes. She drinks to excess and won a famous drinking contest at the Seelie Court (sylvan gods), which further won her some admiration and tutelage in bardic skills. Like Freya the Norse goddess (with whom she is on good terms), she is disposed to lavishing her favors on males who reward her with magic, knowledge, and skills. The mark she has on her shoulder comes from her rising from the watery bower of Deep Sashelas, who gave her the gift of water breathing and stretched out one exhausted hand to touch her as she left.
This aspect gives Diancastra a burgeoning role as a minor fertility deity among the non-evil giants, some of whom invoke her name if they wish their partnerships to be blessed with children. This is a double-edged invocation, though, for it is thought that it invites the birth of a cheeky, willful, naughty child. Her cult is still very small and she has no priests or shamans (statistics given for her below are in "heroic" form, and for deity form for reference). To invite one of "Diancastra's brood" into one's life is also to hazard the child being strange or fey in some way, according to giantish lore, but this may be superstition.
Diancastra travels in search of proving herself to Annam by the use of her wits in solving sphinx riddles, making solemn sages laugh with her punning and loquacity, deciphering an infamous and lethal "crossword maze" filled with cyphers by a long-dead lich-king

who, in his boredom, had filled its inner recesses with magic (and elementals which had to be fought), and much else. When she presented herself to Annam, citing Hiatea's presence among the gods as a precedent for her own divine ascension, the Creator told her to circle the earth in an hour or less and he would grant this, knowing well that she had no magical talents or items to aid her. Diancastra simply retrieved an atlas of the worlds from Stronmaus' library, opened it at the appropriate illuminated page, tore it out (making the gods gasp) and drew a circle around the picture of the earth. Annam made her a demigoddess, and it is said that he did only this because the one way back into the world for him would be for his despair to be lifted by further demonstrations of her spunk and wit. But she is still keeping him waiting, willful as she is.
Role-playing Notes: Diancastra is always attracted by the opportunity to learn more of magical illusion, acquire bardic magical items and very obscure legend lore, and the like. If such opportunities are provided by reasonably handsome males, so much the better.
Statistics: AL cg; WAL cg, ng, n, en; AoC trickery, wit, impudence, pleasure; SY sea-green streak.
Diancastra's Avatar (Ranger 13, Illusionist 12, Bard 10)
Diancastra can appear in various forms, from a four-foot slender elf-maiden to a 25' tall giantess, as she wishes- She is always recognizable by two physical characteristics, however:green-flecked amber eyes and a streak of sea-green skin along her left shoulderblade.

| | | |
|---|---|---|
| Str 23 | Dex 19 | Con 18 |
| Int 22 | Wis 16 | Cha 21 |
| AC-3 | MV 15 sw 15 | SZ Varies |
| HP 136 | MR 10% | AL cg |
| #AT 2 | THACO 3 | Dmg by weapon type +11 |

Special Att/Def: Diancastra can cast charm person or giant 6/ day by gaze to 240' {males save at -6). Any sentient creature booking directly into her eyes is affected as by a rainbow pattern, which also allows her to telepathically implant a suggestion. She is immune to fear and confusion and casts all elemental (water) spells as an Ifith-level wizard- Her skin is enchanted as stoneskin which renews itself 1 turn after being dispelled. She can water walk and breathe underwater freely. She has a magical string of black pearls from which she can create 2d4 randomly generated types from the Dungeon Master's Guide each week, the magic of each lasting for 20 + d20 days (but she can have no more than 8 magical pearls on the necklace at any one time). She owns a serpentine owl and a broom of flying.

## Kostchtchle (Interloper Demigod)

Kostchtchie is another emerging tanar'ri power with a small but growing cult among frost giants. As with all his infernal kind, he is a murderous and brutal creature, and the giants who have come to revere him are especially aggressive and violent, even attacking other frost giants who do not serve Kostchtchie. Kostchtchie is torn between aggrandisement, seeking to convert more frost giants to his cause, and caution, fearing to push Thrym into retaliation.

From his frozen halls in the Abyss, the tanar'ri lord has plans for his giantish servitors. If possible, he will bring intelligent frost giants to the Abyss, to train them as frost wizards with the aid of tanar'ri who serve him there. The fruits of his work are well-hidden. Perhaps the tanar'ri will not unleash frost wizards on the Prime Material until he has enough for his deeper purposes. What these may be, only time will tell.
Role-playing notes: Kostchtchie's avatar can only enter the Prime Material if gated in or by using his amulet of the planes;
because he only has one such device, he is extremely careful, and his avatar does not risk major damage to itself in combats. The avatar is desperately eager to obtain other such planar traveling devices-a major goal of its appearances. The avatar is also dispatched, very rarely, to assist frost giants in major battles, especially if capture of magic is possible.
The Wynnkin: Kostchtchie has no spellcasting priests or shamans, but he has intelligent "wynnkin" servants among the giants. Their ability is to summon more powerful white dragons than is usually possible (age category 3+d4, and all subdual blows by the wyrmkin are at +2 to hit and damage). This power is one which helps bring more giants to Kostchtchie's service.
Statistics: AL ce; WAL ce (frost giants); AoC strength, violence; SY hammer.
Kostchtchie's Avatar (Fighter 13)
The avatar appears as a great, hunched frost giant, sometimes with blue skin. He is mostly bald, and muscle-bound.
Str 18/00 Dex l5 Int l6
Wis l8 Con 17 Cha l8
AC O MV 12 SZ G (28')
HP 120 HD 15 MR 20%
#AT 2 THAC0 5 Dmg 2d8 +3 (hammer) +6
Special Att/Def: The avatar is immune to cold-based and gaseous attacks, poison, weapons below +2 enchantment, and he suffers half damage from electrical attacks. He casts all cold-based spells as an ISth-level wizard, and 3/day each he can use the following; darkness 15', poison, protection from good 10'. He wears an amulet of the planes. A strike from the avatar's hammer +3 will stun a victim failing a saving throw versus spell for 2 rounds.

# Gods of the Gnolls

### Yeenoghu (Interloper Lesser God)

Yeenoghu is a tanar'ri lord dwelling in an exceptionally dismal and fetid layer of the Abyss, who has risen to become the patron deity of gnolls. He has displaced Gorellik from the broad following of gnolls, not the least because his priests have spellcast-ing and undead-controlling powers over the shamans of the older deity. Yeenoghu follows a tricky course with respect to the giantish gods, for gnolls dislike giants while admiring

the power of evil giantish gods; thus, his avatar is giant-sized to inspire gnolls, but his priests avoid gnoll/giant contacts.
Role-playing Notes: Yeenoghu's avatar cannot appear on the Prime Material unless gated in. Thus he is very active in instructing his priests by direct telepathic communication.
Statistics: AL ce; WAL ce (gnolls, flinds); AoC ghouls, gnolls, paralysis; SY triple-headed flail.
Yeenoghu's Avatar (Fighter 13, Priest 7)
Yeenoghu's avatar has a generally gnoll-like appearance, but he has the head of a hyena, a canine chest, and paws rather than hands and feet. He is almost skeletally thin, and his only body hair is a mangy yellow crest of fur from head to mid-back. He uses spells from those spheres listed for his priests.
Str 19 Int l4 Dex l7
Wis l7 Con 15 Cha l8
AC O MV 15 SZ L (10')
HP 112 HD 14 MR 20%
AT 2 (6) THACO 7 Dmg 3d6 (flail) +7
Special Att/Def: The avatar is immune to electrical attacks, poison, and nomnagical weapons, and he suffers half damage from fire and cold based or gaseous attacks. He uses darkness 10' radius at will and each of the following 3/day-hold person, hold monster, paralyzation; and each of the following I/day- fear (as wand), fly, invisibility, polymorph self. He can summon 3d8 gnolls and 2d6 ghouls I/day each. The flail the avatar carries counts as a + 3 weapon, and three hit rolls are made for each strike: the first determines whether physical damage is caused, the second causes fear unless the victim saves versus spell, and the third causes confusion unless a separate saving throw versus spell is made.
Duties of the Priesthood
Yeenoghu's priests must oppose hordes who revere Gorellik or a giantish god, and they must strive to increase their power and influence. They often feast on raw flesh, in imitation of ghouls.
Requirements: AB std; AL ce; WP any (flail 1st); AR any; SP all, chaos, combat, guardian*, healing*, protection, summoning, sun* (rev); PW none; TU command (at +2 levels for ghouls); LL 9; HD d6; Shamans yes + wd.
Shamans: AB std; AL ce; LL 5.

## Gorelllk (Demigod)

Gorellik is a god in decline. In pre-history, the deity was at least a lesser god, but his atavistic cult has remorselessly declined, originally due to gnolls turning to giantish gods and later due to the rise of Yeenoghu and the power of his priests compared with Gorellik's shamans (who have no witch-doctor abilities). Even early gnoll myths do not tell of a creation of their race, so this role was not one the god could hold on to his worshipers with; they simply revered force and power. In the face of this decline, the god has grown more feral and animalistic. Originally, it was he who taught gnolls how to charm and master hyenas that were used for hunting, and the powerful hyenadon is the god's symbol. As Gorellik has declined, he increasingly takes the form of this totemic

animal, even as he prowls Pandemonium and the Abyss, which does not increase his attractiveness to flinds in particular.
Role-playing Notes: Corellik's sole avatar is able to travel the planes, a last residue of the god's former power, but only rarely and at unpredictable intervals (around once every two to five years). Often the avatar simply runs in a pack with hyenas, hunting anything in its path; sometimes it will manifest before a gnoll horde and demand reverence. Neither the god nor the avatar are typified by intelligent tactical awareness or wise planning. Gorellik does not send any form of omen to his shamans.
Statistics: AL ce; WAL ce (gnolls); AoC hunting, hyenas, hyenadons; SY white, mottled hyeandon's head.
Gorellik's Avatar (Fighter 12)
The avatar can appear either as a tall, mangy gnoll or as a mottled white hyenadon.
Sir 17 Int l2 Dex l7
Wis 12 Con 15 Cha l5
AC O MV 12 or 30 SZ L (9' tall/long)
HP 96 HD 12 MR 10%
#AT 3/2 (3) THACO 9 Dmg d6/d6/2d8 or by weapon type +1
Special Att/Def: The avatar is 25% likely to be accompanied by ld4 hyenadons of largest size (8hp/die), and he communicates with them and ordinary hyenas at will. No natural canine will attack the avatar, who can charm canine 2/day.
The Shamans: Gorellik's shamans must be trained hunters and lead gnoll hunting groups. They have no specific duties otherwise. Requirements: AB std; AL ce (gnolls); WP any; AR any; SP all, animal, creation*, necromantic*, protection, travelers*; PW 1) animal friendship, speak with animals 3/day, both with hyeans and hyenadons only; TU nil; LL 5; HD d4; Shamans only.

# Gods of the Goblins

## Maglubiyet (Greater God)

Maglubiyet is the patron god of both goblins and hobgoblins (and either race can be speciality priests or shamans and attain the same maximum level of experience). Maglubiyet is similar in many ways to Gruumsh, the orcish god; he wishes to see war waged for the glory of his people, and eternally urges them on to conflict and strife. Maglubiyet's favored targets for this warfare are slightly different. Whilst ores drive ever on to virtually any new habitat they can find, goblins have a stronger affinity with underground environments. Maglubiyet wishes to see his people destroy surface races, of course, but this is for the glory of war and carnage rather than for territory. The prime enemies and competitors for the goblins are dwarves and gnomes, and these are the races Maglubiyet drives his servants to destroy whenever they find them.
Maglubiyet favors a rigid heirarchy among goblins and hobgoblins. There is an exact pecking order in tribes; each member knows who is above him and who is below him.

Nonetheless, rulers rule by virtue of strength. When that wanes, they are swiftly disposed of as Maglubiyet wishes. Goblins have a natural life span of up to 50 years or so, but few of the leaders live that long.

Maglubiyet's priesthood and shamans are of major importance to this deity. The god himself is forced to spend much of his time dealing with the eternal warring of spirits between goblins and ores in the Hells. Unlike Gruumsh, Maglubiyet doesn't have a number of capable second-rank intermediate gods such as Ilneval to command these troops when needs be, so he has to spend much time watching over this conflict. So, the priests are vital tools for Maglubiyet's purposes on the Prime Material plane, and they have major influence in goblin tribes. This is just as true of shamans as it is of the much less numerous specialty priests. Shamans are sometimes tribal leaders in their own right, but much more often they are the right-hand goblin of the warrior-chief, and their role in preparing for warfare, improving the morale of their tribe, and advising the chief is considerable.

Maglubiyet is a deity who demands sacrifices from his priesthood. These are always sacrificed by beheading with an axe, and the priesthood teaches that these sacrifices yield up life-energy which Maglubiyet consumes and uses in his sacred war against the treacherous ore spirits in the Hells.

Maglubiyet is also a paranoid deity, never allowing other deities within the pantheon to achieve true power. He eternally watches over the lesser and demigods to make sure they do not conspire to overthrow him. He has no trusted son or lieutenant, as Gruumsh has both Bahgtru and Ilneval. and feels this lack keenly.

Role-playing Notes: Maglubiyet dispatches his avatars infrequently to the Prime Material plane; he is fearful of extendingany of his strength away from his dismal base in the Hells- Avatars are sent mostly for dwarves or gnomes from their homes. A battle isn't enough; it must have the potential for decimating some significant area for an avatar to be dispatched. Maglubiyet communicates fairly frequently with his priesthood through omens and direct messages, since they are so important to his plans. Omens take the form of blood seeping from the edge of an axe, unusual behavior by the worgs and wolves goblins keep for mounts, and by direct utterances from shamans in a trance state.

Statistics: AL le; WAL le (goblins); AoC war, rulership; SY bloody axe.

Maglubiyet's Avatar (Fighter 16, Priest 12)

Maglubiyet's avatar appears as a terrifying, huge goblin with ebony skin, glowing red eyes around which flames lick and sputter, and with sharp fangs and clawed hands at the end of powerfuly-muscled arms. He uses priest spells from all spheres, using reversed spells where applicable.

Str 19 Dex 17 Con 18
Int 15 Wis 15 Cha 19
AC -3 MV 12 SZ L (9')
HP 160 HD 20 MR 30%
#AT 2 THAC0 4 Dmg 2d8 +4 (axe) +7

Special Att/Def: The avatar can project burning hands for 16hp damage I/turn, haste himself I/day, and speak an unholy word I/day. If the avatar is slain, the body explodes as a 10HD fireball. Maglubiyet's avatar employs a huge, bloodied coal-black axe +4 which has the property of a sword of sharpness.

Duties of the Priesthood

Maglubiyet's priests are aggressive, pushy creatures who must constantly strive for rulership and influence. Those aspiring to tribal leadership are encouraged to help the current incumbents along to the next plane of existence, usually without their permission. They are war leaders from the front, and constantly stir up goblins for the purpose of war. They make regular sacrifices to Maglubiyet/ at least once per month. Ideally, captured dwarves and/or gnomes should be offered up; then, any other demihumans or humans; and, failing this, other goblinoids or even hapless Junior members of the cult.
Requirements: AB Str 13 Cha 10; AL le; WP any (battle axe 1st); AR any; SP all, charm*/ combat, creation*, divination, guardian*, healing, necromantic (rev for 4th- and higher-level spells), protection*, summoning*, sun (rev), war, wards*; PW 1) charm person; 5) strength, affects ld4 targets by touch; 10) touch ld6 weapons to create double damage for 1 turn; TU command at -2 levels; LL 11; HD d4; Shamans yes + wd.
Shamans: AB Str 11 Cha 9; AL le, ne; LL 7; HD d3.

## Khurgorbaeyag (Lesser God)

Khurgorbaeyag is as trusted a lieutenant of Maglubiyet as any deity is, and is the patron god of goblins as a specific race. He is a god of rigid hierarchy like Maglubiyet, and also one of slavery and oppression. He delights in the use of demihumans as slaves to undertake menial work while goblins go to war, and is not averse to seeing his priest's whips used for torture as well as chastisement.
Role-playing Notes: Khurgorbaeyag allows his shamans to work with those of bugbears, because Hruggek once aided him in a battle with Bahgtru and Ilneval. His avatar is dispatched to oversee the efforts of goblin tribes in acquiring slaves, and his omens appear as whipcracks, glowing bars of light (as in his for-cecage), and sudden onsets of depression.
Statistics: AL le; WAL le (goblins); AoC slavery, oppression, morale; SY red and yellow striped whip.
Khurgorbaeyag's Avatar (Warrior 13, Priest 7)
Khurgorbaeyag's avatar appears as a tall, well-muscled goblin with flame-red skin, speckled with orange and yellow scales. He always carries a whip/ and wears scale mail. He uses spells from the spheres listed for his priests.
Str 17 Dex 17 Con 16
Int 14 Wis 12 Cha 16
AC 2 MV 12 SZ L(9')
HP 112 HD 14 MR 20%
#AT 2 THACO 7 Dmg 2d6 +3 (whip) +1
Special Att/Def: The avatar cannot be subdued by spells such as symbol of hopelessness, domination, charm, etc. He can use mass charm and domination I/day each. His whip +3 can fly up to 30' as a rope of entanglement and a blow from it acts as a symbol of hopelessness, the effect lasting for a number of days equal to 20, minus the Wisdom of the creature struck. He carries a small copper cube which can be thrown at a target to expand into a 10' x 10' x 10' forcecage; those inside are affected as by a symbol of hopelessness (normal save versus spells to negate).

Duties of the Priesthood
Khurgorbaeyag's priests must maintain rigid social castes, and are commanded to procure, discipline and look after slaves. They should attempt to take slaves in combat rather than kill everyone in sight. Whips are used as unholy symbols, not in combat.
Requirements: AB std; AL le; WP any blunt weapons (mace and club 1st, 2nd); AR any (scale mail if possible); SP all, charm*, combat, healing (rev), necromantic* (rev), protection, sun (rev); PW 1) cause fear: 5) cloak of fear; 8) +2 to saving throws versus spells from chaotic-aligned spellcasters, and vs. domination/fear/charm: TU nil; LL 9 (Wis 16+); HD d4; Shamans yes + wd.
Shamans: AB Str 11 Cha 9; AL le, ne; LL 4; HD d3.

## Nomog-Geaya (Lesser God)

Nomog-Ceaya is the patron deity of hobgoblins, and exemplifies their traits of brutality, stoicism, courage and coldbloodedness. He has no expression other than a look of grim, tight-lipped, tyrannical authority. He is feared and respected as a great military commander despite his status as a lesser god, and he is very valuable to Maglubiyet: Too weak to be a threat but good as a war-commander. Nomog-Geaya has barely controlled disgust for Bargrivyek, believing him cowardly and weak.
Role-playing Notes: Nomog-Geaya's avatar is sent to deal with matters of hobgoblin discipline, but may be drawn into conflict with goblins if somehow tricked or manipulated. His omens take the form of involuntary utterances from captives undergoing torture by his priests and shamans.
Statistics: AL le; WAL le (hobgoblins); AoC war, authority;
SY crossed broadsword and hand axe.
Nomog-Geaya's Avatar (Fighter 15, Priest 7)
Nomog-Geaya's avatar is a powerful, huge hobgoblin with ash-gray skin, cold orange eyes, and shark-like teeth. He uses priest spells from spheres listed for his priests.
Str 18/90 Dex 17 Int 14
Wis 12 Con 16 Cha 16
AC 1 MV 12 SZ L (10')
HP 112 HD 14 MR 20%
#AT 2 (4) THACO 7 Dmg 2d4+3 (broadsword) +7 ld8+2 (hand axe) +7
Special Att/Def: The avatar strikes with two weapons ror each of his attack sequences (total four attacks per round). He is immune to any strength-draining magic, fear, and hopelessness, His broadsword +3 has the property of wounding, and his hand axe +2 has the same effects as a symbol of pain when it hits (normal saving throw versus spells to negate).
Duties of the Priesthood
Nonomg-Geaya's priests are fanatics. They are cold, cruel, and rigidly disctylined, and encourage those traits among others. They don't stir up violence against goblins, but they do preach the unquestioned superiority of hobgoblins to that undisciplined rabble. They officiate at gruesome feasts after battles. So dire is this cult that some junior priests have been executed for laughing in public.

Requirements: AB std; AL le; WP broadsword and hand axe or battle axe; AR any; SP all, combat, creation*, healing (rev), necromantic (rev), protection, sun (rev), war; PW 1) fight with broadsword and hand axe as two weapons without "to hit" penalties; 4) ray of enfeeblement; 10) symbol of pain; TU command at -3 levels; LL 10 (Wis 18 +); HD d6; Shamans yes + wd.
Shamans: AB std; AL le; LL 5; HD d3; Other axe 1st weapon.

## Bargrivyek (Lesser God)

Bargrivyek is an aggressive, territorial deity, but he is smart enough to realize that unity is strength. So, this deity and his servants work to minimize and mediate disputes within goblin tribes, and also between them. Bargrivyek is pleased by displays of unity and discipline (so he has Fair relations with Khurgor-baeyag), and the successful mediation of disputes. He is no pacifist, however; unity is a means to and end-ever-expanding control of territory. Bargrivyek is impatient with goblins staying underground and rewards priests who bring tribes to new above-ground settlement areas.
Role-playing Notes: Bargrivyek always fears displeasing Maglubiyet or Nomog-Geaya, so only sends an avatar to mediate disputes if a major tribal conclave is truly needed. His omens take the form of atmospheric events at distant locations (e.g., a falling star leading goblins to new territory), speaking in strange languages, and automatic speech following violent stammering.
Statistics: AL le; WAL le (goblins); AoC co-operation, territory; SY white-tipped flail.
Bargrivyek's Avatar (Warrior 10, Priest 14)
Bargrivyek's avatar appears as an over-sized goblin with a calm expression, high domed forehead, carrying a white-tipped flail. His spells come from all spheres listed for his priests.
Str l6 Int l6 Dex l5
Wis l6 Con 16 Cha l9
AC O MV 12 SZ L (8')
HP 96 HD 12 MR 20%
#AT 3/2 THACO 9 Dmg ld6 +4 (flail) +1
Special Att/Def: The avatar speaks all goblinoid and demi-human languages, and can use any spell which permits direct communication {speak with animals, plants, dead; whispering wind, etc.) I/day each. He can use fear (as the wand) 2/day. His flail +3 will stun an opponent struck for ld6 rounds unless they make a saving throw versus spells.
Duties of the Priesthood
Bargrivyek's priests work to minimize conflicts between goblin tribes, and also within them. Their work is directed at unifying goblin efforts, often by pointing out and stirring up ill-feeling against external targets. They seek to establish goblin tribes as widely as possible.
Requirements: AB Int 10 or Wis 14; AL le; WP any blunt weapons (flail 1st); AR any; SP all, charm*, combat*, divination, elemental (air, earth), guardian, healing*, protection, war*, wards*; PW 1) whispering wind or friends; 3) +lCha;5) charm person: 7} gain 1

goblinoid/demihuman language per two subsequent levels gained; TU nil; LL 9 (Wis 16+); HD d4; Shamans yes + wd.
Shamans: AB std; AL le, ne; LL 5; HD d3.

# Other Goblinoid Deities

## Kuraulyek (Demigod)

Kuraulyek is the patron deity of urds. In mythology, he was a servant of Kurtulmak who stole a pair of magical feathered wings the kobold god had captured from Syranita, the aarako-cra goddess; he then flew away and created the urds as rivals to the kobolds. Kuraulyek is a cowardly demigod, ever fearful that Kurtulmak will come to extract revenge. He hides in a gloomy cave in Hades, seldom leaving his dismal home. He has a force of monstrous mobats, which defend his lair, and shuns all contact with other deities and inhabitants of Hades.
Role-playing Notes: Kuraulyek is deeply cowardly and will not dispatch his single avatar unless his race is in desperate peril on the Prime Material plane. More often, he will send one of his huge mobats (see avatar statistics below) to aid one of his shamans in combat, adding to it some minor magical ability (such as causing fear}. Even so, the god avoids direct confrontation unless this is absolutely unavoidable (defending urds in their homes). Kuraulyek does not have specialty priests, only shamans; some urds revere Kurtulmak, and a prime task for Ku-raulyek's shamans is putting a stop to such misplaced devotions.
Statistics: AL ne; WAL ne (urds); AoC urds; SY pair of feathered wings.
Kuraulyek's Avatar (Wizard 5, Priest 9. Thief 9)
Kuraulyek's avatar appears as a blue-skinned urd with feathered wings. He uses spells from those spheres listed for his shamans, and illusion/phantasm and (reversed) necromantic wizard spells.
Str lO Dex l7 Int 15
Wis 12 Con 12 Cha l6
AC 2 MV 9 fl 24 SZ S (4')
HP 80 HD 10 MR 10%
#AT 1 THACO 11 Dmg ld4 + 2 (dagger)
Special Att/Def: The avatar rides a huge bat (treat as mobat. but with AC2, 8HD, 64hp, 10% magic resistance, 4d4 bite, MV fl 36), although he can fly himself. From his magical wings, he can pluck ld4 feathers per day; each can be transformed into an 8HD air elemental (64 hp) which serves him for 6 turns. He employs a simple dagger +2 as a melee weapon.
The Shamans
Kuraulyeks shamans oppose urds who revere Kurtulmak, and provide defense for their own gens. They have no other specific duties.

Shamans: AB std; AL le, ne; LL 5; HD 1 hp/level; Other weapon must be dagger, spells from following spheres: all, animal, charm, combat*, divination*, elemental (air), guardian, healing*, sun (rev).

## Meriadar (Intermediate God)

Meriadar is a god of patience, long-suffering, and tolerance. As his people, the mongrelmen, are drawn from many races and are frequently oppressed by others who willfully misunderstand and even despise them, Meriadar has had to suffer the enmity of many goblinoid gods. He has been forced to spurn the help of good-aligned gods of demihumanity and humans, for his sphere of concern is those goblinoids who are not irrevocably drawn to evil, and any affinity with the gods of their enemies would alienate those he seeks to bring into his fold.

Meriadar is a god who seeks peaceful solutions to conflicts, but he is not well-disposed to chaos, and he has an antipathy for the bugbear gods. He especially prizes bugbears drawn to his service. While Meriadar is peaceful, he will oppose over-aggressive actions with "passive force"; he uses protective and warding spells powerfully and very intelligently.

Meriadar espouses the practicality of arts and crafts as an important avenue for exploring peacefulness. Those who respect each others creativity and skill are unlikely to take up arms against each other, and different races have something to leam from each others' skills. His symbol, the decorated bowl, is both a craft and an art in its decoration, and it is used for sacramental feasting and the sharing of food. Since food is indispensable to life, those who share from Meriadar's dish to eat participate in a basic sharing of life; so how can they strive to bring each other death?

Meriadar's mongrelman priests and shamans use this symbol and its practical qualities as an exemplary attribute of their god and their religion. It also serves as a springboard for their philosophical concerns; mongrelman priests debate the quality of the "eternal now" as having its origins in spiritual parallels to the act of drawing sustenance, and the immediacy (and "newness") of the most basic earthly drive, that of hunger. Despite the sometimes stifling quality of lawful neutrality, the priests concern themselves with some subtle spiritual and philosophical questions, and Meriadar smiles on this.

Role-playing Notes: Meriadar's cult is unique in that any goblinoid or demihuman race can become a specialty priest and attain the same maximum experience level as that of mongrelmen. Of course, such priests are very rare, and usually exiles from their own race, but Meriadar's universal appeal to like-minded creatures ensure that this cult has a growing number of devotees in many worlds.

The deity himself is usually pacifistic and sends avatars for defensive purposes. Meriadar is never prepared to see mongrelmen wiped out as whole communities, although there is a quality of suffering-god about him and his cult which allows him to see oppression of mongrelmen as a road to higher spiritual understanding. His avatars are nonetheless forceful when confronted.

Omens from the god are frequently dispatched. They may take the form of automatic speech and speaking in tongues during philosophical debates, sudden artistic inspirations and automatic drawing and sculpting, bubblings in bowls of soup which release smoky

vaporous symbolic images, and strange scents which alert mongrelmen to imminent danger.
Statistics: AL In; WAL any non-evil (mongrelmen, non-evil goblinoids); AoC patience, meditation, tolerance, arts and crafts; SY decorated bowl.
Meriadar's Avatar (Priest 16)
Str 18/49 Dex l7 Int 16
Wis l9 Con 16 Cha l9
HP 128 HD 16 MR 40%
AC -1 MV 12 SZ L (8')
#AT 1 THAC0 5 Dmg ldl0 +3(staff) +3
Meriadar's avatar has a variable appearance: he can appear as a tall figure of any goblinoid race when he needs to do so, although his typical appearance is that of a mongrelman, admixing many races. He always dresses simply in plain brown robes. He uses spells from any priest sphere (never reversed forms).
Special Att/Def: Meriadar's avatar is extremely peaceful, but if he needs to employ a demonstration of power he can use power word stun and power word blind 1/day each. He can also employ Otilukes resilient sphere, Otiluke's telekinetic sphere and forcecage 2/day each. The avatar carries a wand of size alteration with which he can reduce hostile creatures down to 10% of their normal size to negate their offensive capability. He carries a quarterstaff +3 which affects any goblinoid struck by it as a symbol of persuasion (normal save).
Duties of the Priesthood
Meriadar's priests preach peace, but they also defend mongrelman communities. They are peaceful, but not pacifistic when threatened with force. They are "political" creatures, directed to get close to chiefs and determine "social" policy. They support hierarchies/ laws, and established leaders unless these are grossly unjust- They preach the need to tolerate goblinods and other races, that all living things have their place, and the need for an ordered society and an ordered world.
Requirements: AB Int 12 or Wis 16; AL In; WF bow and arrows, mancatcher, mace, net, quarterstaff; AR leather, chain;
SP all, astral*, charm, creation*, divination, guardian, healing, law, necromantic*, plant*, protection, thought, time*, wards;

Other weapon and armor restrictions as for priests.

## Stalker (Demigod)

The entity known simply as "Stalker" is an elemental entity related to the racial root stock of all goblinoid races. Stalker is always held in creation myths to have emerged from a dark underground complex into which the goblinoid race telling the tale entered in pre-history. Their intrusion drove Stalker out from his domain/ and the demigod has sought revenge ever since.

Stalker is a solitary entity, without priests or shamans; gobli-noids usually don't even attempt to propitiate it (a rare exception is the employment of ritual dancing to terminal exhaustion with the promises of a battle, and deaths/souls to be devoured, offered to this dire entity). The deaths of goblinoids strengthen the hate and anger which rules the deity and its power/ so it always seeks conflict, war and death (which may be why other goblinoid gods don't attempt to destroy it). It has a ravening, eternal, hateful hunger for lives and souls, but it is not powerful enough to directly oppose the stronger goblinoid gods such as Gruumsh and Maglubiyet. For this reason, it focuses its hate on bugbears, kobolds, urds, gnolls and mongrelmen. It has an especial hatred of Meriadar, the deity who attempts to bring back some semblance of respect for life to goblinoids. In many worlds. Stalker has some form of alliance with Skiggaret; while the two do not work together, there is some form of mutual tolerance.
Role-playing Notes: Stalker will send its single avatar when there is a good prospect of preying on weak communities or damaged populations (after a mass battle, for example). The goblinoid gods often permit "Stalker's share" of souls after such a conflict.
Statistics: AL ne; WAL n/a; AoC hate, death, cold; SY creeping shadow.
Stalker's Avatar (Priest 12)
Stalkers avatar takes the form of a slow shadow from 2-20 feet in length as Stalker desires. Spells are drawn from all priest spheres, always reversed where appropriate.
Str 18/70 Int l7 Dex l7
Wis l5 Con 12 Cha 1 (all races)
AC -1 SZ Varies MV fl 30
HP 96 HD 12 MR 30%
#AT 2 THAC0 9 Dmg ld8 +4 (claw) ld8 (chill)
Special Att/Def: Within a 10' radius of Stalker's form there is a continually radiating fear. The avatar is immune to all fear, illusions, mind-affecting spells, caused wounds, paralyzation, gas attacks, energy drains and symbols. Blunt weapons do one-half damage to the avatar. It can absorb 50hp per day of cold damage without being harmed and can reflect the relevant attacks as a cone of cold. The avatar uses all cold-based spells I/ day at 18th level of experience.
Duties of the Piresthood: None; the Stalker has no priesthood.

# Gods of the Illithids

### Ilsensine (Greater God)

Ilsensine is a mental/spiritual deity manifesting as a glowing green brain; the god itself has an infinite number of tentacles of infinite length which radiate through all planes from its base on the Plane of Concordant Opposition. Its motivation is for the illithid race to conquer all planes through superiority and mental domination, through superior knowledge and magic which is an expression of will and mental force. Fortunately for

other beings, Ilsensine is such a supremely arrogant entity that it spends much time in brooding fantasies of domination and is often too self-absorbed to actually act.
Role-playing Notes: This being will send an avatar to attend and observe illithid conclaves when these concern major territorial aggressions and scheming which will take decades to bring to fruition. Rarely, it visits the Prime Material plane to absorb the brains of great scholars and sages who have been captured by illithids, and which are offered to Ilsensine in homage. The deity may reward the illithids concerned by granting them the use of ld4 wizard spells of levels 1-6 for ld4 days, as determined by the DM. Communications from the deity are by direct tele-pathic contact with its most prized servants. Of course, the deity demands that the illithids strive always to dominate other races, and has been known to send an avatar to make this clear to those illithids who have displeased it, usually by eating about half their number to encourage the others.
Statistics: AL le; WAL le (illithids); AoC mental dominion, magic; SY glowing brain with two tentacles.
IIsensine's Avatar (Wizard 23)
Ilsensine appears as a huge, glowing green spectral brain with two tentacles, levitating in mid-air. It uses wizard spells from all schools.

| | | |
|---|---|---|
| Str n/a | Dex n/a | Int 22 |
| Con n/a | Cha 20 | Wis 23 |
| AC -5 | MV fl 12 | SZ L (8' diameter) |
| HP 160 | HD 20 | MR 80% |
| #AT 2 | THACO 5 | Dmg special |

Special Att/Def: The avatar is immune to spells below 4th level and weapons below +2 enchantment. It is immune to spells of mental control (charm, domination, suggestion, etc.) and to caused wounds, energy drains, paralysis, petrification and spells which directly affect physical stats (fumble, ray of en-feeblement, etc.). Its tentacle attacks negate armor bonuses to AC (except magical pluses), and any hit drains ld6 points of intelligence or wisdom (as Ilsensine chooses) and restores ld6 hp to the avatar. A victim reduced to 0 Int or Wis becomes a juju zombie under the avatar's control. The avatar uses mass charm and mass suggestion 3/day each and a mind blast at will, and may project a prismatic spray 1/day.

## Maanzecorian (Intermediate God)

Like Ilsensine, Maanzecorian holds the illithids to be the natural dominators of all planes and worlds and other races only fit for food and slavery. However, he considers that there are things which illithids may profitably learn from other brains before they eat them, and eating is a pleasure which is most delightful after lingering anticipation. He is a philosopher-god, one who has a vast library of arcane works in his own palace. The god is vain and his palace is sumptuously furnished with jet, jade, ivory, marble and the skins of many creatures. He is always deferential to Ilsensine, although he doesn't necessarily pass on all he knows to the greater god.
Role-playing Notes: Maanzecorian attends conclaves of his priests in avatar form, for discussion, sharing of knowledge and meditation (such meetings are rare, because

priesthoods are small). He may even appear as a negotiator between illithids and other races if he deems the occasion highly propitious. He shares knowledge directly rather than through omens.
Statistics: AL le; WAL le (illithids); AoC knowledge, philosophy; SY silver crown set with red gem.
Maanzecorian's Avatar (Wizard 14, Priest 12)
The avatar appears as a very tall illithid, with purple/green skin and yellowed tusks on either side of his tentacles. His silver crown levitates above his head. He uses spells from spheres listed for his priests, and from all wizard schools.
Str 16 Int 20 Dex 18
Wis 20 Con 16 Cha 20
AC O MV 12 SZ L (10')
HP 136 HD 17 MR 40%
#AT 4 THACO 5 Dmg special
Special Att/Def: The avatar can use the following 3/day each:
domination, hypnotism, hypnotic pattern, rainbow pattern, power word stun; and I/day he can create a Mordenkainen's disjunction, call down a weird on one group of creatures within 60' and create a screen. His levitating crown holds a gem of brightness (no adverse effects on illithids within the area of effect).
Duties of the Priesthood
This priesthood is a small and select one, concerned with the pursuit of knowledge, exploration of new territory and the exploiting of knowledge gained therefrom, and with negotiations and dealings with other races-which must always be from a position of strength and include an element of condescension.
Requirements: AB Wis 16; AL le; WP any; AR none; SP all, astral, charm, divination, law, numbers, sun (rev), thought, time; PW none; TU nil; LL 12; HD d4; Shamans no.

# Gods of the Ixitxachitl

## Demogorgon (Lesser God)

Demogorgon is another of the tanar'ri lords who, like Juiblex and Yeenoghu and others, has managed to extend his influence beyond the Abyss. Why he chose the ixixachiti to become his worshipers, and why that race of sentient rays has chosen to follow him, is very hard to determine. Demogorgon may wish to use the ixixachiti to further the ambitions of the tanar'ri in the Blood War, although how they could help him is not clear. What is known is that Demogorgon has a hatred of Sekolah the sa-huagin god; some myths portray the tanar'ri as a one-time vassal of Sekolah, magically compelled to service through an artifact. Demogorgon does not direct ixixachiti attacks specifically at sahuagin, but he is pleased if his servants happen to find themselves in a position where sahuagin are the logical next target for their massed attacks.

From the ixixachitl's point of view, they may be gaining power from their association with Demogorgon-as is the tanar'ri lord himself. Through some strange warp in the Abyss, it may be that the actions of vampiric ixixachiti in energy draining victims (in sacrifices in many instances) somehow transfer magical energy to Demogorgon and strengthen him. This twist in the planar fabric may somehow amplify and transform this energy, and some of it appears to create a backlash on the ixixachiti, who have become more powerful spellcasters than they once were. The fact that vampiric ixixachiti alone can become the most powerful priests seems to support this hypothesis.

In some worlds, a handful of half-insane human cultists revere Demogorgon; bloodthirsty pirates and cutthroats may be drawn to him. As yet, Demogorgon has no human priests, but in some world at some time this may yet come to pass. Certainly the tanar'ri lord seems to be growing in power, as his use of planar shirting magic (usually not possible for tanar'ri) shows.

Role-playing Notes: Demogorgon usually restricts dispatching his avatars carefully. They are mostly sent in secret to advise and scheme with vampiric ixixachiti priests, and to confer short-term additional powers on them in preparation for battle. De-mogorgon's avatar will not readily become involved in any combats, but may lurk in the background, supporting his servants with spells and magic use.

Statistics; AL ce; WAL ce (ixixachiti); AoC energy drains, domination; SY forked tail.

Demogorgon's Avatar (Priest 14)

The avatar appears as a huge double-headed reptilian with babboonlike heads/ scaly blue-green skin, and powerful lizard-like legs- He has a thick, forked tail. He uses spells from all priest spheres, always using reversed spells where applicable.

Str l7 Dex l7 Con 18
Int 19 Wis 19 Cha 19
AC 0 MV 15 sw 15 SZ H (18')
HP 112 HD 14 MR 20%
#AT 3 THACO 7 Dmg d4+1 / d4+1 (claws) d6+l (tail)

Special Att/Def: The avatar takes half damage from cold- and fire-based attacks and gaseous attacks, and he is immune to energy drains, poison, electrical attacks, and mind-controlling magic. The avatar's claws cause disease that is fatal in 24 hours unless magically cured; even within 6 turns, the disease causes the loss of one limb which simply drops off, the victim losing 20% of current hit points. A tail hit energy drains 1-2 levels unless a successful saving throw versus death magic is made (at -4). Once per day he may cast: charm person, charm monster. domination, ESP, feeblemind, improved invisibility, polymorph self, and plane shift. Once per day, each, the avatar can use gaze weapons to 60'; from his left head beguiling and from his right head insanity (as the symbol).

Duties of the Priesthood

Demogorgon's ixixachiti priests must protect and strengthen their communities and lairs, building up strength for massive all-out attacks on neighboring sentient creatures. They then settle part of the newly-decimated area, build and strengthen themselves again, and may wait decades before making new major forays against other creatures.

The vampiric ixixachiti priests are of major importance and will not often be in the front line of combat. They will attempt to control the others, to ensure a good supply of captured creatures which can be energy drained in sacrifice rather than slain out of hand.

The priests may even keep captives of immature age (sea elves, tritons, and the like), waiting for them to attain adulthood so that they have more life energy to drain during their terrible ritual sacrifices.

Requirements:AB Wis 13; AL ce (ixixachiti only); WP any;AR any; SP all, animal*, chaos*, combat, divination, guardian*, healing (rev), necromantic (rev), protection*, summoning*, sun (rev); PW 1) Half-damage from cold-based attacks; 5) Half-damage from fire-based attacks; 10) if the priest energy drains a victim it regains 2d4 spell levels of cast spells; TU command at - 4 levels; LL 8 (12 if vampiric and has exceptional Wisdom); HD 1+1 per 2 levels gained after 2nd; Shamans no.

Special notes: For level limits, ordinary ixixachiti priests can attain 8th level, maximum, with any wisdom score higher than 13 (the basic requirement for being an ixixachiti priest). Vampiric ixixachiti priests can progress to 9th level with Wisdom 14-15, 10th level with Wisdom 16-17, llth level with Wisdom 18 and 12th level with Wisdom 19 +. The hit dice progression in full is:
Prl-3,l+lHD;Pr4-5,2+2HD;Pr6-7,3+3HD;Pr8-9,4+4 HD; Pr 10-11, 5 + 5 HD; Pr 12, 6 + 6 HD.

# Gods of the Kenku

### Quorlinn (Lesser God)

Quorlinn is a strange god who is featured in many obscure myths as a botched experiment in creation by a powerful non-lawful sky god too embarassed to admit his failure. However, Quorlinn proves his worth in a series of dubious escapades involving trickery, deceit, disguise, and thievery, often escaping with some tail feathers missing, to bring his creator some choice item. The greater god relents and Quorlinn has a race created in his image.

Unfortunately, Quorlinn isn't enthralled by this. He doesn't want the responsibility of his own race and whines continually about being weighed down by it; possibly, this is a defense because he isn't uncaring, but may feel himself too weak to be a good protector. Hence, he teaches kenku thievery, disguise, and magical skills and hopes they can stand up for themselves.

Role-playing Notes: Quorlinn is irritable, irascible, and fickle, but not evil. He doesn't send avatars (so his stats are for reference only) or omens, and his priests have to whine for their spells, which are 25% unlikely to be granted each day.

Statistics: AL n; WAL n (kenku); AoC trickery, disguise, thievery; SY mask with large false nose.

Quorlinn's Avatar (Illusionist 10, Thief 14)

The avatar appears as a normal kenku wearing a black mask and fairly nondescript clothing, if it appears at all.

Str l5 Dex 19 Int 20
Wis l5 Con 15 Cha l8

ACO MV 9 fl 36 SZ M (6')
HP 96 HD 12 MR 15%
#AT 3 (1) THACO 9 Dmg d8/d8 (claws) and dl2 (beak) or by weapon
Special Att/Def; The avatar can use each of the following 2/ day: alter self', change self, dimension door, improved invisibility. rope trick, shadow door. taunt. No natural avian will attack the avatar. He usually employs a shortsword +3 of quickness if forced to fight.
Duties of the Priesthood
Quorlinn's priests and shamans are an exceptionally devious and tricky bunch- They mastermind kidnappings, ambushes, and traps. They are fine spies, and different cells of priests collect and harbor all kinds of secrets (many banal or trivial) which they childishly refuse to share with priests from other groups. They must always attempt to rescue enslaved kenku.
Requirements: AB Dex 15 Int 12; AL n (kenku only); WP as thief; AR as thief; SP all, animal*, chaos, charm*, creation, divination, healing*, plant, weather; PW none; TU nil; LL 9; HD d4; Shamans yes.
Shamans: AB Dex 11; AL n; LL 4; HD d3.

# Gods of the Ki-rin

### Koriel (Intermediate God)

Koriel is the sky-roaming god of ki-rin, a powerful and stern god of lawful good. In some myths, this great steed allows himself to be ridden by a prime Creator Cod or the major lawful good god of a pantheon, and often he, together with that god, will bring creative forces down to the earth or will ride together at the end of all things. His association with this supreme-god figure strengthens the formidable magical powers both of the god and, by association, of the race of ki-rin Koriel created. He has no shamans or priests since his magical creations are powerful enough not to need any further blessings.
Koriel is watchful and vigilant. He flies at astounding speeds through the Outer Planes, looking for any encroachments of evil, just as the ki-rin do in the Prime Material. He will not often act without consulting other deities, but he is utterly ruthless when he must fight. His great speed also makes him a great traveler, restless and ever-curious, eager to discover new knowledge in the many worlds and planes.
Role-playing Notes; Koriel has no priesthood, but will commune with individual ki-rin when he chooses (or sometimes if invoked). He does not interfere greatly with the affairs of other creatures unless actively evil beings cause him offense by persecuting weaker creatures or by using powerful magic. Only in extreme need will he send an avatar to deal with this, preferring to alert mortal ki-rin to such dangers and wickedness.
Statistics: AL lg; WAL lg (ki-rin); AoC learning, protection, vigilance against evil; SY ki-rin horns and eyes.
Koriel's Avatar (Paladin 20, Wizard 18, Priest 18)

Koriel's avatar appears as a great ki-rin with gold and silver fur and a mane of rainbow hues. He uses spells from all spheres and schools.
Str l9 Int 24 Dex l9
Wis 24 Con 19 Cha 24
AC -7 MV 36 fl 600 SZ H (16'long)
HP 144 HD 16 MR 50%
#AT 3 THACO 5 Dmg 4d4/4d4 (hooves) 6d6 (horn)
Special Att/Def: The avatar's wizard powers are those of a normal ki-rin. His saving throws are never worse than 2, regardless of modifiers, and he is allowed a saving throw against no-save spells (this is a base save of 4). Any evil creature struck by his horn is slain outright unless it makes a successful save versus death magic with a -4 penalty; if the creature is not from the Prime Material, it is banished even if it does save. Koriel's song dispels any elementals and other conjured/summoned creatures within 200' if the avatar so chooses (save versus spell at -4 to negate). Once each per day, the avatar can speak a holy word and effect a resurrection.

# Gods of the Kobolds

### Kurtulmak (Intermediate God)

Kurtulmak is the chief deity of the kobold pantheon. He is a hateful deity, one who despises all life, save kobolds. He has an especial antipathy for brownies, pixies, sprites and their kin- and most of all, gnomes. Kurtulmak is prepared to enter into any alliance in order to defeat Garl Glittergold or any other gnomish god, even ignoring alignment considerations (and all others!) for this end.
Kurtulmak is not a stupid deity. He has skills; he taught the first kobolds the skills of mining and tunnelling, and also the skills of ambushing, although Gaknulak is now the more important influence in this sphere. Rather, Kurtulmak is a creature dominated by his emotions and hates.
Thus, Kurtulmak is intelligent, but he is not wise. He is fairly easily trapped or tricked and out-manuevered if his weaknesses are played upon. He is arrogant in his hatred of his enemies, and loves to gloat over his successes at length. It is this weakness which Garl exploited when he demolished Kurtulak's cavern;
rather than putting the gnome straight to death, Kurtulmak wanted to gloat and watch Garl grovel, and this was his undoing.
Kurtulmak has the psychology of the small creature written large all over him. He carries grudges, and has a huge chip on his small shoulder. He hates being bettered by any means, especially by deception or by some "frivolous" means such as illusion or practical joking. Kurtulmak has absolutely no sense of humor. He makes characteristic errors as a result of this weakness. He often tries to gain revenge over his enemies in the same ways that they gained an advantage over him. Thus, dragging Gaknulak along for support (despite the demigod s misgivings) he attempted to booby-trap a citadel of the gnomish

gods, only to fail miserably as the first group of guards easily detected him (Kurtulmak is hardly subtle). The gnomish gods captured him, tied his tail in a knot which took a score of years to unravel, stuck a false red wax nose on his face and hung a luminous stuffed chicken to his waist, and packed him off home. No wonder Kurtulmak hates gnomes above everything.

Nonetheless, Kurtulmak should not be underestimated. He is a savage deity who is always attentive to events on the Prime Material plane, and who is always active in trying to secure some advantage for4us people on that plane. He is reluctant to oppose other goblinoid gods, especially Maglubiyet whom he fears (while he considers Gruumsh and the orcish gods stupid and oafish), and thus while his people often contest with other goblinoid races for living space, Kurtulmak will rarely over-actively intervene in such conflicts.

Role-playing Notes: Kurtulmak will not send an avatar to oppose actions by other goblinoid gods, unless they have acted first and he feels himself forced to respond. He will always send an avatar to deal with strife between kobolds and gnomes when this becomes more than mere skirmishing, and is eager to send
an avatar to despoil sylvan lands if he thinks he can get away with this. Kurtulmak does not bother with omens; he instructs his priests directly through commands which are given in dreams, dozing, daydreaming and other states of mind when the threshold of consciousness is lowered. Priests who do not act immediately on the basis of these commands are simply snuffed out of existence by the god.

Statistics: AL le; WAL le (kobolds); AoC war, mining; SY gnomish skull.

Kurtulmak's Avatar (Fighter 16, Priest 7)

Kurtulmak's avatar appears as a double normal-size kobold with a long, stingered tail and large horns which curve backwards from his forehead. His skin is mottled black and green. His priest spells are drawn from all spheres (reversed when appropriate).

Str 18/30 Dex l7 Int l6
Wis 9 Con 15 Cha l9
AC -1 MV 12 SZ M (5' 6")
HP 120 HD 15 MR 35%
#AT 3 THACO 5 Dmg 2dl2 +4 (spear) +3, ld6 (tail)

Special Att/Def: The avatar's skin is very tough with scales of steel, and edged weapons below +2 enchantment are 25% likely to break when struck against it. The avatar can smell gnomes up to a mile away, and is permanently enraged by gnomes if able to see or fight them. In his enraged state, Kurtulmak's avatar cannot be forced to leave combat with a gnome or a group of creatures including gnomes by any means, including all magical means. He has an aura of fear which forces enemies within 20 feet to save versus spells (- 4 penalty for gnomes) or flee in panic. His tail has a poisonous stinger (poison F), and he carries a spear +4.

Duties of the Priesthood

Kurtulmak's priests are the commanders of war bands and many are also expert miners; priests are expected to specialize in one or other role. Whichever role is adopted, priests strive to unite kobolds and undertake the tasks of war, and mining and underground exploration, with a large force of kobolds; there is strength in numbers. Kobolds hate most other life, and this attitude is encouraged by the aggressive priests. The priests wear orange robes with a white death's head sigil on the chest.

Requirements: AB std; AL le; WP any (spear 1st); AR any; SP all, combat, divination*, elemental (earth), healing*, necromantic*, protection, summoning, sun (rev), war, wards*; PW 1) +1 hit versus gnomes; 4) scare (affects gnomes only, but affects ld4 targets); 7) enlarge self to double size, sight of the transformation causes fear in gnomes within 20' and line of sight, normal saving throw versus spells negates; TU nil; LL 9; HD d2; Shamans yes + wd.
Shamans: AB std; AL le, ne; LL 5; HD 1 hp/level; Other spear 1st weapon proficiency.

## Gaknulak (Demigod)

Gaknulak is the kobold demigod of trickery, ambushing, and setting traps. He is a highly intelligent and sneaky deity with a magical cauldron from which he pulls tools, unpredictable minor magical items, and diverse resources for the ingenious-and to fool others. He is the deity who protects and defends kobolds, and teaches them practical trickery. He is a supreme pragmatist, and in this way is a very lawful trickster.
Role-playing Notes: Gaknulak is always ready to send his avatar to instruct kobolds in new arts of defense through creative innovation. He avoids direct confrontation with other avatars and races, preferring defense and trickery. His omens are subtle, and/or hard to decipher, challenging his priests to understand or perceive them: subtly triggered trap defenses, misplaced tools and everyday items, and weapons/clothing subtly rearranged.
Statistics: AL le (ne); WAL le, ne (kobolds); AoC protection, stealth, trickery, traps; SY cauldron with whirling ellipses.
Gaknulak's Avatar (Wizard 12, Thief 12)
Gaknulak's avatar appears as a small dark-skinned kobold with white hair, a cloak with bulging pockets, and a hand axe. He uses spells from the alteration and illusion/phantasm schools.
Str lO Int l9 Dex l9
Wis l6 Con 12 Cha l9
AC 1 SZ S(3'6") MV 18 fl 36 sw 12
HP 80 HD 10 MR 20%
#AT 1 THACO 11 Dmg ld6 +3 (hand axe)
Special Att/Def: The avatar wears 2 (randomly selected) ioun stones and always carries many magical items related to spying, escape, and detections: typically boots of speed, wand of magic detection, ring of chameleon power and a wand of poly-morphing for attacks (targets are turned into piglets for eating). He carries a +3 hand axe and is immune to illusion/phantasm spells.
Duties of the Priesthood
Gaknulak's priests are spies and scouts. They also are experts in setting traps and amushes of all kinds, and in the construction of defenses. They are defenders of lairs and homelands above all.
Requirements: AB Int 13; AL le, ne; WP blowgun, dagger, dart, hand axe, hand crossbow, sling; AR leather; SP all, charm, combat*, divination, elemental (air, earth), guardian, protection, summoning*, wards; PW 1) 10%/level skill in hide in shadows and spot traps, may set traps so that enemies' spot traps chance is reduced by 5% /level of

priest; 3) may use illusion/phantasm spells of 1st and 2nd level; 7) rainbow pattern; TU nil; LL 8 (Wis 18+); HD d2; Shamans yes + wd.
Shamans: AB std; AL le, ne; LL 5; HD 1 hp/level.

# Gods of the Kuo-Toa

## Blibdoolpoolp (Intermediate Goddess)

Blibdoolpoolp is an ancient deity of a race driven back ^rom their earliest habitats, below and near the oceans, mostly by humans and allied demihumans. Now her people populate only the Underdark, in competition with illithids and drow. Blibdoolpoolp is consequently a deity warped by hatreds. She hates humans and most demihumans (especially elves) for driving her race away from their homes and slaughtering them, and she hates the deities of drow and illithids as competitors for the little space her race has left. She does not actually have special enmity for aquatic races, save sea elves, since they did not play a major role in the extinction of the surface kuo-toa.
Added to this festering hatred, or possibly because of it, is a questionable mental status. Blibdoolpoolp may not quite be insane, but she is very unpredictable, irrational, and prone to wild mood swings. The area she occupies in the plane of elemental Water is churned and swirling with the emanations of her emotions, a clear demarcation of where she dwells. She surrounds herself with huge lobsters, crayfish, and other primitive crustaceans which have changed little in form over the eons, as if to reassure herself that her powers have not changed or diminished either.
As an ancient deity, Blibdoolpoolp is said to know deep magical secrets that are part of the fundamental fabric of the universe. At least she thinks she does, as she broods over those secrets and holds them unto herself. Because she shuns contacts with all other deities, and doesn't share her knowledge, there is no way of knowing.
Role-playing Notes: Blibdoolpoolp dispatches an avatar to attend great sacrificial rituals at major temple complexes when many humans and demihumans are drowned by her priests and monitors. She does not send omens other than signs of her pleasure or displeasure, which are arbitarily affected by her moods; changes in the coloration of the large sacred black pearls the priests keep in her temples are favored omens, as are unusual activity or quietude on the part of the huge lobsters that also reside there.
Statistics: AL ne (ce); WAL ne, ce (kuo-toa); AoC darkness, insanity, revenge; SY lobster head, black pearl.
Blibdoolpoolp's Avatar (Wizard 12, Priest 14)
The avatar appears as a huge nude human female with the head of a lobster, articulated shell covers on her shoulders, and with lobster-clawed forearms. She uses priest spells from those spheres listed for her priests, plus summoning spells and wizard spells from all schools save those of elemental (fire).
Str 18/00 Dex 16 Con 16
Int 17 Wis 14 Cha 18

AC -2 MV 12 sw 36 SZ H (15')
HP 128 HD 16 MR 55%
#AT 2 THACO 5 Dmg 3d6 +6 x 2 (claws)
Special Att/Def: The avatar is immune to poison, paralyza-tion, elemental (water) spells, and illusion/phantasm spells below 6th level. If both her claw attacks strike an opponent in the same melee round, the victim is dragged towards Blibdoolpoolp's eyes and forced to look into them; the victim must save versus spell at -4 or become insane immediately. Once per turn, the avatar can summon 2d8 giant lobsters (use statistics for giant crayfish from the Monstrous Compendium:
"Crustacean, Giant") to fight for her for up to 3 turns. Once per day, she can summon ld416HD water elementals which remain to do her bidding for up to 4 hours. The avatar can cast a symbol of insanity once per day and owns a ring of human influence and a wand of fear.
Duties of the Priesthood:
Blibdoolpoolp's priests have a central role in kuo-toan society. They oversee the growth and culling of fingerlings (young kuo-toa) and perform appropriate rituals during the breeding season. They have no special role in arts or crafts, but they are responsible for making the unique gummy substance with which kuo-toans treat their shields for battle. Just as they are the judges and juries within kuo-toan society, they are responsible for most dealings with other races. These usually take place, if kuo-toans wish such contacts, in their specially devoted and consecrated temple complexes that are very extensive and just as well-hidden. The priests of different communities usually only cooperate with each other in the maintenance and defense of these special temple sites. Kuo-toan priests must always organize forays to repel illithids that live anywhere close by kuo-toan settlements in the Underdark.
Some 30-70% of the priests (percentage varies by community) are priest-thieves (as described in the kuo-toa entry in the Monstrous Compendium}. Only a priest-thief can rise above the 10th level of experience as a priest. For any priest to rise above 8th level, a weapon proficiency in the pincer staff is mandatory.
Requirements: AB Dex 14 for priest-thief, otherwise std; AL ne, ce; WP any, but must have pincer-staff proficiency to progress beyond 8th level; AR any (priest-thieves restricted to leather or equivalent); SP all, charm*, combat, divination, elemental (earth, water), healing*, necromantic* (rev), sun (rev), war*, weather*. PW 1) lightning stroke by 2 or more priests (as detailed in Monstrous Compendium); 4) lower/raise water; 7) ice storm; 10) symbol of insanity; TU nil; LL 10 (12 for priest-thieves); HD d6 (d4 for priest-thieves); Shamans no.

# Gods of the Lizard Men

**Semuanya (Lesser God)**

Semuanya is an amoral and unfeeling deity whose only consideration and purpose is survival and propagation. Any action aiding survival is acceptable; any action which has no bearing on this is an irrelevance and not to be bothered with. Unsurprisingly, the god has neither allies nor particular enemies. More surprisingly, the deity does not yet seem to have reacted to Sus-s'innek's increasing influence over his realm, but he may yet feel driven to do so.
Role-playing Notes: The deity will send an avatar to deal with any major event that threatens lizard man communities on the grand scale (climatic change, major incursions of predators, etc.), but very rarely otherwise. He does not send omens to his shamans.
Statistics: AL n; WAL n (lizard men); AoC survival, propagation; SY egg.
Semuanya's Avatar (Fighter 13, Wizard 9, Priest 9)
Semuanya's avatar appears as an oversized lizard man bearing a club with many embedded razor-sharp shells. He wears a loincloth only. His spells come from spheres listed for his shamans, and from wizard spells other than illusion/phantasm and conjuration/summoning.

| | | |
|---|---|---|
| Str 18/49 | Dex l7 | Int l3 |
| Wis l7 | Con 17 | Cha l6 |
| AC O | MV 15 | SZ L (10') |
| HP 112 | HD 14 | MR 30% |
| #AT 2 | THACO 7 | Dmg 2d8(club) +3 |

Special Att/Def: The avatar's scaly skin makes him immune to nonmagical blunt weapons, and he suffers only half damage from magical blunt weapons. Any bolt spell is 25% likely to be reflected from his body. He has 90% magic resistance versus all illusion/phantasm spells.
Duties of the Priesthood
Semuanya's shamans are not an organized priesthood and have no interest in any affairs beyond their own tribe. They are general carers for their tribes, especially with healing and medicine. They counsel avoidance of all races other than their own and even dissuade contacts with other tribes, except for interbreeding. They must breed every season, and as soon as a shaman loses fertility, he loses one level of experience per month. Many shamans, at this time, commit ritual suicide.
Requirements: AB std; AL n; WP any (club 1st); AR any; SP all, animal, combat*, divination*, healing, necromantic*, plant, protection*, weather*; PW none; TU nil; LL 7; HD 2 hp/ level; Shamans only.

## Sess'innek (Demigod)

Sess'innek is a powerful tanar'ri lord who has grown weary of the Blood War with the baatezu and seeks to establish dominion elsewhere. He is responsible for the appearance of Lizard Kings, the chaotic evil corruption of Semuanya's creation, and he uses them as his favored servants. Recently he has been able to project his power as spellcasting abilities, conferred on a handful of shamans; this is testimony to his burgeoning power within the Abyss. The tanar'ri lord even sacrifices some of his own magical and innate skills to project this power, so his avatar is weaker than many,

Role-playing Notes: Sess'innek will dispatch his avatar carefully, being extremely apprehensive of losing the magical sword which allows him to plane shift the avatar. He often uses its appearance to awe lizard men into his worship; it is invoked by a shamanic servant in a carefully staged ceremony at which he receives homage and sacrifice. He does not send omens to shamans.
Statistics: AL ce; WAL n, ce (lizard men, lizard kings); AoC "civilization", dominion; SY clawed green reptilian hand.
Sess'innek's Avatar (Wizard 10, Priest 10)
The avatar appears as a six-armed Lizard King with vestigial green/brown leathery wings folded along its back. It uses spells from spheres listed for its shamans, and wizard spells from all schools save alteration, abjuration and illusion/phantasm.
Str 18/12 Con 15 Cha l9
Dex l6 Wis l5 Int 18
AC O MV 15 SZ H (16')
HP 96 HD 12 MR 20%
#AT 6 (5) THACO 9 Dmg 1d6 +3 (claws) or by weapon + 3
Special Att/Def: The avatar takes half damage from cold- and fire-based attacks and is immune to electrical attacks. It usually employs four +2 long swords with a +4 two-handed sword that can plane shift (sword-wielder only) I/month and dispel magic, 30' radius to a range of 120' 3/day.
Duties of the Shamans
As yet, Sess'innek has very few shamans; some 40% of them are Lizard Kings. Any lizard man shaman is chaotic evil. The shamans must be aggressive in wiping out other lizard men after trying to convert them to the cult, but shamans of Semuanya must be slain on sight. Sess'innek's shamans are aggressive, territorially dominant, and rapacious.
Requirements: AB Str 14; AL ce (lizard men, lizard kings);
WP any; AR any; SP all, combat, elemental (water), necromantic (rev), summoning, sun (rev), war*. PW none; TU nil; LL 4 (lizard men), 7 (lizard kings); HD d4; Shamans only.

# Gods of the Mermen

### Eadro (Intermediate God)

Eadro is an aloof god. caring only for the locathah and mermen he created (both races consider the other to have been an experiment by Eadro which nearly worked before he got it right making them). Eadro watches his races carefully, knowing that they can come into conflict over territory; this as much as anything determines his affiliation with the asathalfinare. He is aware of the damaging potential of conflict between non-evil races while evil lurks and bides its time. Eadro lives on the elemental plane of Water and has a magical water mirror which can show him any underwater scene in the Prime Material.
Role-playing Notes: Eadro very rarely sends avatars to the Prime Material; he is a conservative god who prefers the status quo. He sends warning omens to his peoples in

the form of unusual behavior by moray (or related) eels, often by delivering colored pebbles or shells to shamans and priests.
Statistics: AL n; WAL n (locathah, mermen); AoC locathah, mermen; SY spiral.
Eadro's Avatar (Priest 16)
The avatar appears as a tall locathah or merman who can change in one round into an amorphous watery bloblike being with eight pseudopods. He uses spells from spheres listed for his priests.
Str 18/00 Dex l6 Int l7
Wis l9 Con 19 Cha l7
AC -2 MV 9 sw 24 SZ L (8')
HP 136 HD 17 MR 35%
#AT 1 (8) THAC0 5 Dmg by weapon +6 or d8 x 8
Special Att/Def: The avatar is immune to elemental (water) and cold-based attacks, and no natural sea creature will attack him. The avatar can negate water breathing at will within 60' (no save). He summons ld416HD water elementals, for up to 12 turns, 2/day. He uses all wizard elemental (water) spells as a 20th-level wizard.
Duties of the Priesthood
Eadro's priests are primarily community priests, upholding the traditional values of merfolk and locathah society (which differ significantly). Mermen priests are suspicious, stern, and intolerant of outsiders, and 90% are male, while locathah priests are more worldly, but cautious and thoughtful. Shamans are in a majority over priests in both races.
Requirements: AB std; AL n (locathah, merfolk only); WP any; AR any; SP all, animal*, combat*, creation, divination, elemental (water), guardian, healing, necromantic, protection. summoning,; PW 1) may use elemental (water) spells from wizard spell list as if clerical spells: 3) augury; 6) summon 12HD water elemental for 6 turns; TU nil; LL 7; HD d4; Shamans yes.
Shamans: AB std; AL n; LL 3; HD d3.

# Gods of the Minotaurs

## Baphomet (Lesser God)

Baphomet is a great tanar'ri power who has increasingly attracted the worship of minotaurs. Myths of the birth of mino-taurs are obscure and place their origin in pre-history, where a terrible and ancient curse condemned a number of wicked humans (who may have had dealings with tanar'ri) to this shape. This curse somehow drew Baphomet's attention to the newly-created monsters.
Baphomet is a hateful, vicious power who delights only in brute force and violence. He seeks power over the minotaurs to enlist their aid in his own schemes, notably his enmity and running battles with Yeenoghu (so that gnolls and minotaurs are on very bad terms indeed).

Role-playing Notes: Baphomet cannot send avatars of his own to the Prime Material of his own volition; they can only be gated in by evil wizards who have dealings with minotaurs. Baphomet will form pacts with such wizards, commanding minotaurs to serve the wizard enabling his avatar to walk the Prime Material (always to slay or to gain powerful combat-related magical items). Likewise, Baphomet does not have a priesthood or shamans, but he can sometimes bless a minotaur with a single use of a maze or wall of stone spell (the latter is often used to impress other minotaurs). Creatures affected by one of these granted maze spells are 1 % likely to be plane shifted to Baphomet's home plane in the Abyss! It may be that this is an "emergent power" of Baphomet, a stepping-slone to being able to grant his followers priest spells, and certainly it explains why minotaurs have turned from giantish gods (which some still revere at least in token) to the worship of this being.
Statistics: AL ce; WAL ce {minotaurs); AoC minotaurs, battle; SY maze.
Baphomet's Avatar (Fighter 14, Priest 7)
Baphomet's avatar appears as huge bull-headed ogre. His priest spells come from the spheres: all, animal, combat, healing (rev) and sun (rev).
Str 19 Dex 15 Con 19
Wis 16 Cha 19 Int 16
AC 0 MV 18 SZ L {12')
HP 120 HD 15 MR 20%
#AT 2 (6) THACO 7 Dmg 2dl0 + 3 (bardiche) + 7, 2d6 (butt), d4+4 (bite)
Special Att/Def; The avatar can detect good, invisibility and magic at will- He can cast each of the following 3/day: dispel magic (at 16th level), maze, wall of stone. Twice per day, he can summon ld4 +2 minotaurs to fight with him. His maze spells are 2% likely to transport the affected creature to his home plane in the Abyss. He takes half damage from cold- and fire-based attacks and gaseous attacks, and he is immune to poison and electrical attacks. He is only affected by weapons above +1 enchantment.

# Gods of the Myconids

### Psilofyr (Intermediate God)

Psilofyr, the benevolent myconid god, is a meditator-deity dwelling in Nirvana. He is a teacher-god, one who taught the first myconids the secrets of potion-making through direct revelation. He is often depicted as a type of fungal world-tree, his mycelia reaching down through the planes into the home of the myconid-King. Psilofyr's only concerns are the protection of the myconid race and the pursuit of perfection through meditation.
Role-playing Notes: Psilofyr selects about one myconid king in 20 to become a priest, and always guides myconids in their selection of a new king through intuitive guidance. Rarely, he will send an avatar to commune with a myconid-king if a community is greatly threatened by enemies, disease, and the like;

the king then gains the spell-casting ability of the avatar for ld4 days after 24 hours shared meditations. Psilofyr has no need of omens since he constantly shares thoughts with his kings.
Statistics: AL In; WAL In (myconids); AoC community, healing, philosophy; SY mycelium basket holding a crystal vial.
Psilofyr's Avatar (Wizard 10, Priest 18)
Psilofyr appears as a gigantic myconid with a vast mycelium complex drifting behind him as he travels by levitation just above the ground. He is able to change color to match environment, or his moods (usually he is blue-gray), as desired. He uses spells from all spheres and schools.
Str l6 Int l8 Con 16
Dex l9 Wis l2 Cha l9
MV16 AC 4 SZ M (6')
HP 120 HD 15 MR 60%
#AT 1 THACO 5 Dmg 15d4 (fists) +1
Special Att/Def: The avatar can fire a spore attack as a jet (5' wide by 60' long) or targeted at one creature within 120' to cause disease, create a cloudkill, or as dust of sneezing and choking, 2/day per effect. It can, at will, create a radiant effect by emitting spores about itself. These affect all within a 10' radius initially, spreading to a maximum of 80' after 8 rounds. The possible spore effects include sleep, weakness (reversed strength} or pacification (as a normal myconid). It suffers half damage from blunt weapons and from water-and cold-based attacks, and communicates by telepathy to 240' range.
Duties of the Priesthood
Only singular myconid kings become priest-kings, and their duties are as for normal kings.
Requirements: AB Wis 18, myconid king; AL In; WP any; AR none; SP all, astral, creation, divination, elemental (earth, water), guardian, healing, law, necromantic*, numbers, protection, thought, wards; PW none; TU turn at -4 levels; LL 12; HD d4; Shamans no.

# Gods of the Naga

### Shekinester (Greater Goddess)

This extremely complex and powerful goddess is the creator of nagas and a being of great wisdom. She is triple-aspected/ appearing as the Weaver, the Empowerer, and the Preserver. The Weaver is the principle of active destruction/ the crone-face of the goddess who destroys in order to create room for new existence; but she is also a manifestation of connections and knowledge (as a Weaver, she brings together disparate strands of knowledge to create new understandings). The Empowerer is a bestower of wisdom in her role as guardian of the young and uninitiated; she is kindly and merciful/

but she may force the unwilling into initiations and knowledge which can cause "growing pains." The Preserver is the great maintainer of existence. She is not a creator, but rather a keeper of the flame within the Court of Light, where the goddess has her being on the plane of Concordant Opposition. The Preserver is also a guardian of the spirits of the dead, greeting them with sustenance symbolized as water, fruit, and bread. Adding still further complexity to this triplicity is the fact that the Empowerer is capable of being bi-aspected; as a beautiful young maiden she is an initiator and granter of safe passage, but she also has an aspect as an ugly messenger, one who draws the attention of the young, naive, or uninitiated to the presence of an opportunity for growth and learning.
Shekinester is such a complex and all-embracing deity that, in different worlds, she can have a myriad number of inter-relations with other gods. She may cooperate with a god in one world while opposing him in another since she is highly pragmatic in nature. She represents an elemental force of the process of "magical life" and transcendence, and cultures which accept reincarnation often revere her as a guardian, initiator, and protector.
Role-playing Notes: This deity is complex indeed! The Weaver avatar inhabits lost and decaying places/ seeking to destroy those who enter unless they have the wisdom and strength to overcome her-and also use the wisdom and gifts she conceals, including her own magical webs. The Empowerer avatar actively seeks opportunities to grant initiation and wisdom to those who perhaps haven't even yet realized that they have need of this, and her appearances can be unheralded and startling; to the unwary, her messenger form may appear first guiding the new seeker to the Empowerer herself. The Preserver protects the souls of the dead, especially those of her own nagas, but sometimes others as allowed by other gods. On the Prime Material plane, she gives sustenance to those threatened by extinction, overwhelming force, mass starvation, or some equally terrible threat if they are of non-evil alignment.
Statistics: AL n (ce, Ig); WAL n, ce, Ig (nagas); AoC vary by aspect, see below; SY mask (the Weaver), mirror (the Empowerer), or grain jar (the Preserver).
Shekinester's Avatars (powers vary)
Shekinester's avatars appear as: the Weaver (chaotic evil manifestation as a spirit naga Crone), the Empowerer (neutral manifestation as a beautiful young Maiden water naga), and the Preserver (lawful good manifestation as a sublimely featured guardian naga Mother), The Maiden can vary her form further as an ugly young female-faced water naga with pitted skin and lank, greasy hair. The summary statistics vary by aspect (see below).

| | | |
|---|---|---|
| Str l7 | Int 20 | Cha varies |
| Dex l9 | Wis 24 | Con 18 |
| AC -5 | MV 24 | SZ H (15' long) |
| HP 160 | HD 20 | MR 75% |
| #AT 1 | THAC0 3 | Dmg ld8 (bite) + special |

Statistical Variation: The Weaver-Crone has Str 12 and Cha 1, and the special attack form of her bite is lethal poison (save versus poison at -4 or die immediately). The Empowerer-Maiden has Int 18, Cha 23, and the special attack form of her bite is paralysis (save versus poison at -4 to negate). The Preserver-Mother has 22 HD and 176 hit points, Con 20, Cha 22, and 85% magic resistance. The special attack form of her bite is as a symbol of persuasion (saving throw versus spell at -6 to negate).

Special Att/Def and Spellcasting: In all forms, the avatar is immune fro poison, paralyzation, gaseous attacks, death magic, and all mind-controlling spells. All avatars have access to all spell spheres and schools, although they have different preferences. The Weaver-Crone has the powers of a 12th-level wizard and a 12th-level priestess, preferring spells from the schools of illusion/phantasm, invocation/evocation, and necromancy. She can cast a web spell 3/day; if the strands of the web are collected and spun into a cloth (using a spell such as mending or a carefully-deployed major creation with the web as a material component), the spinner may wear the cloth for one hour and gain the ability to commune with the goddess once per week for 2d4 weeks. Only one being can gain this benefit and then only if female. She also has a crystalline heart which, if taken from her body, allows the user to cast divination I/week and legend lore I/day, but the user is 1% likely each day to suffer an alignment change to chaotic evil, 2% if the user is male.
The Empowerer-Maiden has the powers of a 14th-level priestess and fith-level wizard, preferring spells from the schools of alteration, abjuration, and enchantment/charm. She can force any creature within 120' to possess true seeing for 1 turn as she chooses. She can charm any creature which is young (less than 10% of total lifespan) at will (no save). By touch, she can drain a being of ld3 points of Wisdom (save versus spells at -4 to negate) or restore up to three points of Wisdom lost by a creature (to lamia attacks, etc.).
The Preserver-Mother has the powers of a 22nd-level priestess, using spells from all spheres save chaos and war. She can cast forbiddance 1/turn and a wall of force at will, can vomit created food and water 1/turn (in the form of water, bread and fruit), and can dispel evil 1/turn.

# Gods of the Ogres

### Vaprak (Lesser God)

Vaprak is known simply as "The Destroyer." This deity has a quality of elemental savagery well suited to the ogre race, which holds him as a patron. Rapacious and violent, Vaprak is nonetheless in awe of the giantish gods and lives in fear that his race may abandon him to worship them- Vaprak's behavior and edicts to his ogre priests and shamans is thus driven and somewhat frenetic; he constantly urges his followers to combat, aggression, and frenzy, born of his own anxieties and as a manic defense against those fears. Vaprak does not plan, scheme, or contemplate. He simply expends his energies in destruction and uncompromising ferocity.
Role-playing Notes: Vaprak sends an avatar to assist ogres when they are on the verge of conquering a clan, tribe, or race with whom they compete for resources, and also to decimate any group of ogres who have turned to revere of any of the evil giantish deities. He does not send omens to his priests.
Statistics: AL ce; WAL ce (ogres); AoC combat, greed; SY tal-oned claw.
Vaprak's Avatar (Fighter 14)

The avatar appears as a huge, exceedingly horrid, mottled brown and green ogre with powerful taloned hands.
Str 19 Dex l4 Int l3
Wis 9 Con 17 Cha l8
AC O MV 12 SZ H (15')
HP 120 HD 15 MR 15%
#AT 2 (4) THACO 5 Dmg 2dl0 (club) +7 or 2d8+7/2d8+7 (claws)
Special Att/Def: The avatar regenerates 3hp/rd and 3/day can become berserk for the duration of one melee combat ( +2 hit and damage, +2 penalty to AC). Vaprak's avatar negates/ dispels all spells which directly and adversely affect hit and damage rolls to itself (stoneskins on enemies are negated by touch, with full damage applying, prayer is negated, ray of en-feeblement does not work against the avatar, etc.)
Duties of the Priesthood
Vaprak's priests must be aggressive, ever seeking combat. They must also eat greedily, but must also maintain physical fitness, so they often exercise in club-bashing rituals.
Requirements: AB Str 18 Con 15; AL ce; WP any (club 1st); AR any; SP all, combat, divination, healing, protection, sun (rev); PW 4) berserk rage 1 turn (as for avatar); TU nil; LL 7; HD d6; Shamans yes.
Shamans: AB Str 16 Con 12; AL ce; LL 3.

# Gods of the Orcs

### Gruumsh (Greater God)

Gruumsh is the undisputed head of the pantheon of the ores. In pre-history, one or two now-unknown ore gods conspired to depose He-who-never-sleeps, and were destroyed utterly. Since that time, Gruumsh has ruled the other ore gods with an iron grip. He is a fearsome, brutal god who revels in warfare, and ever seeks new territory for his race. This drive to acquire territory and living space is Gruumsh's greatest motivation. He has always felt cheated by the way the gods of humanity and demihumans divided up the world, casting aside the ores (and himself!) without any respect. Gruumsh drives his people relentlessly, through the work of his priests and shamans, to colonize new lands. And his deep and abiding hatred of the other gods ensures that he strives to achieve such dominion through warfare, constant and unceasing. Gruumsh tolerates no sign of peaceability from his people. Indeed, ores have no word for "peace" in their language, only a guttural expletive which means, roughly, "temporary respite from strife".
Gruumsh has an abiding hatred of Corellon Larethian for defeating him in battle. Ore religion denies that Gruumsh lost an eye to Corellon, as their story of "in the beginning..." demonstrates. They hold that Gruumsh was tricked and cheated by Corellon's magic, and that the elf-god could not win in a fair fight. Gruumsh seeks to have his people raze and destroy elvish homelands whenever possible. It is as well for the elves that they usually live in homelands far distant from the ore clans.

But then, Gruumsh has an equally deep hatred of dwarves and their gods. The shamanic tales of how Gruumsh and the Elder Ores fought for control of the mountains would weary the patience of any listener. Ores desire mountains for their stark and barren quality; they are despoilers, and love the bare and bleak. Still, they'll take whatever they can get, and a major strength of the race is their ability to survive almost anywhere.
That property, too, is close to Gruumsh's heart. He and his priests weed out ores who are sick, weak, lame, or unfit for the prosecution of war. Gruumsh is a harsh and lawful deity, and iron rule and weeding out the weak is a key element of ore thinking. Since males are physically stronger than females, females are usually relegated to the roles of child-rearing and making sure the warriors have food on the table after a hard day's pillaging and slaughter. "If Gruumsh intended females to be the equal of males he'd have given them bigger muscles" is a less brutish translation of an orcish saying among the warrior caste.
Fortunately for the races of the Prime Material plane, much of Gruumsh's attention is taken up with the eternal battle of ore and goblin spirits in the Hells, where he directs the warfare against them from his iron fortress. But Gruumsh is ever watchful over his race, and is especially watchful for transgressions...
Role-playing Notes: Gruumsh will only send an avatar if this is needed for a great battle, and where Ilneval and Bahgtru cannot be entrusted with the matter at hand. Very rarely, he will send one to stymie some appearance of an elven avatar. His omens usually take such agreeable forms as the sudden snapping of a young shaman's neck vertebrae, or more leniently a cloud of drifting toxic black smoke.
Statistics: AL le; WAL le (orcs); AoC war, territory; SY single unwinking eye.
Gruumsh's Avatar (Fighter 20, Priest 9)
Gruumsh's avatar appears as a huge, battle-scarred ore in black full plate, with one central eye. He uses spells from all priest spheres (reversed forms only where appropriate).
Str 22 Dex 16 Con 21
Int 15 Wis 12 Cha 20
AC -4 MV 12 SZ L(IO')
HP 160 HD 20 MR 50%
#AT 2 (3) THACO 3 Dmg 2d8 +4 (spear) +10 / 3d6 (torch)
Special Att/Def: Gruumsh's avatar cannot be pacified by any means {emotion, charm, suggestion, etc.) once combat has begun. He has 80% magic resistance against spells cast by elves. His spear +4 paralyzes for 2d4 turns when it strikes (saving throw versus paralysis at -4 to negate). His ever-burning torch cannot be dimmed (by fire quench, etc.) and he strikes once per round with it if he chooses; he can cast cloudkill 3/day and death fog 3/ day from it. He always carries a horn of blasting or a glass vessel with 2d4 applications of dust of sneezing and choking which he can light with the torch (he is immune to its effects) to generate a 20' radius effect for ld4 rounds per application.
Duties of the Priesthood
Fully 50% of Gruumsh's priesthood are clan shamans and witch-doctors; only large clans have specialty priests. They strive to become warrior-leaders (or key advisers to such), and wage war. They maintain physical fitness, and spread the worship of Gruumsh through inspiration, fear, and iron rule. To become a shaman of Gruumsh, an orc must pluck out his own left eye. Proper worship of Gruumsh requires blood in large quantities (elven is best of all).

Requirements: AB Str 15; AL le; WP any (spear 1st); AR any;
SP all, combat, divination*, elemental* (earth, fire), healing*, law, necromantic*, protection*, summoning, sun (rev), war, wards*; PW 1) +1 hit versus elves; 3) aid, self only; 6) heal self for ld8 hp for each sentient creature slain in previous 24 hours; 8) can enchant spear to do double damage, 2 rounds/level; TU command at -2 levels; LL 9; HD d8; Shamans yes + wd.
Shamans: AB Str 13; AL any evil; LL 5; HD d4 +1; Spear 1st weapon proficiency, witch-doctors may only use reversed forms of spells where appropriate (darkness, not light, etc.).

## Bahgtru (Intermediate God)

Bahgtru is Gruumsh's awesomely stupid son and unfailingly loyal lieutenant. He may have the intelligence of a rock, but his might is incredible, and the other orcish gods both fear him and call on him for assistance when they have need. Bahgtru's symbol derives from a battle when he slew a huge multi-legged reptile from another world by breaking all of its legs. Bhagtru scorns all magic, armor, and weapons, and values physical strength alone.
Role-Playing Notes; Bahgtru sends his avatar into the Prime Material plane only at the urging of other orcish gods (usually Gruumsh or Luthic); he is too stupid to do this of his own accord. If he sends an omen, it is in the form of a splitting headache ("Bahgtru's pat" is the term used for this).
Statistics: AL le; WAL le (ores); AoC strength, combat; SY broken thigh bone.
Bahgtru's Avatar (Fighter 18)
Bahgtru's avatar appears as a gigantic orc, hugely muscular, with dirty tan skin and dull green eyes; the tusks which protrude on either side of his mouth are white from bone-gnawing. He wears heavily studded leather armor and gauntlets.
Str 24 Dex 10 Con 22
Int 5 Wis 5 Cha 19
AC 0 MV 9 SZ H(16')
HP 160 HD 20 MR 20%
#AT 2 THACO 2 Dmg 2dl2 +12 (fists)
Special Att/Def: Bahgtru's avatar a immune to any strength-draining effects (ray of enfeeblement. etc.) and any magic which directly reduces hit/damage rolls {chant, prayer, etc.). No magic reduces or eliminates damage from his blows (stoneskin, etc.). If he hits with both fist attacks in the same round, he grapples and crushes his opponent for an additional 3dl2 +12 hp of damage.
Duties of the Priesthood
Bahgtru's priesthood must strive to dominate their clans and put any others in the shade (save for that of Gruumsh). They must at all times undergo strenuous physical regimes of training, and train young orcs in the same way. They encourage clan rivalries, always attempting to convert other clans to Bahgtru's cult.
Requirements: AB Str 16 Int 8 or less; AL le; WP any (but see below); AR studded leather; SP all, combat, healing (rev), protection, summoning, war; PW 1) strength

(allows exceptional scores); 5) fist damage becomes ld6 basic if wearing studded leather gauntlets, at this level the only allowed weapon; 7) Str increased to 18 and exceptional Str roll allowed; TU nil; LL 9; HD d8; Shamans yes.
Shamans: AB Str 13; AL any evil; LL 5; HD d6; Other as shaman -5, fists do ld6 in gauntlets, only weapon allowed (as priest).

## Ilneval (Intermediate God)

Ilneval is Gruumsh's battle lieutenant, to whom he trusts the command of warfare when he does not wish to exercise it himself. Ilneval is a war leader's god rather than one of the common orc, and is thus revered by many orogs. He is the archetype of the leader-from-the-front, the one who plunges into battle with nothing but victory and destruction on his mind. He has deposed one or two orcish demigods, quite possibly because he secretly covets Gruumsh's position. Gruumsh doesn't trust Ilneval, but with Bahgtru on his side, chooses not to take action.
Role-playing Notes: Ilneval will only send an avatar at Gruumsh's command, and only for important battles. His avatar will never battle together with that of Bahgtru. His omen is characteristic: blood seeping from chainmail.
Statistics: AL le; WAL le (orcs); AoC warfare; SY bloodied broadsword.
Ilneval's Avatar (Fighter 15, Priest 7)
Ilneval appears as a tall/ unsmiling ore clad in red chainmail, very heavily battle-scarred about his face and arms. His priest spells come from the spheres listed for his priests.
Str 19 Dex 18 Con 18
Int 15 Wis 12 Cha 16
AC -2 MV 12 SZ L (9')
HP 144 HD 18 MR 30%
#AT 2 THACO 4 Dmg 4d4 +4 (broadsword) +7
Special Att/Def: Ilneval's avatar is immune to missiles of below +3 enchantment. He can cast domination 3/day. He wears red chain mail +4 which deflects all bolt and ray spells and spell-like effects {polymorph wand, the ray version of Otiluke's freezing sphere, etc.). His dreadful broadsword +3 causes bleeding wounds (lose ld4 hp/rd until cure serious wounds or a higher-level healing spell is cast).
Duties of the Priesthood
Ilneval's priests are leaders and officers in armies. They also strive to ensure that Ilneval's cult is dominant over all others within their clans. Priests wear red-colored chain mail at all times. At the DM's option, orogs may become fighter/priest servants of Ilneval.
Requirements: AB Str 13 Cha 12; AL le; WP any (broadsword 1st); AR chain; SP all, combat, creation*, guardian*, protection*, summoning*, sun (rev), war, wards*; PW 1) +1 hit/damage with broadsword; 5) prayer; 8) domination l/ week; TU nil; LL 8 (Wis 18 +); HD d8; Shamans yes + wd.
Shamans: AB Str 11 Cha 9; AL le, ne; LL 4; HD d6; Other broadsword 1st weapon.

## Luthic (Lesser Goddess)

Luthic governs several spheres. She is the goddess of female ores, and of fertility (mostly for female ores; many male ores take Gruumsh as the male fertility god). She is also a goddess of caves and caverns and dark places, and of female servitude (as she serves Gruumsh). Lastly, she is goddess of primitive medicine and healing, and she also helps to restore orcish morale. Luthic is a goddess whose affinity with the earth is strong; many ores rub themselves in dirt to ensure they have many children, while making an invocation to her. Luthic is very close to her son Bahgtru; he always follows her commands, even above Gruumsh's.
Role-playing Notes: Luthic does not take kindly to anyone abusing her name, and may inflict a wasting disease on them (save versus death magic at -4 or die in ld4 +4 days). Her avatar is dispatched after great battles, to heal, and sometimes to observe and protect orcs during fertility rites. Her omens may appear as claw marks in rock, a magical darkening of some area, or as a rumbling in a cave mouth.
Statistics: AL le; WAL le (orcs); AoC fertility, medicine, servitude; SY cave entrance rune.
Luthic's Avatar (Warrior 10, Priest 12)
Luthic's avatar appears as a huge female ore with unbreakable black claws four feet long. Her hair and eyes are dull black and her skin is dark brown, lighter around the nose and ears. She uses priest spells from all spheres listed for her priests.
Str l7 Int l4 Dex l7
Wis l5 Con 16 Cha l5
AC O SZ L(8'6'') MV 12
HP 104 HD 13 MR 15%
#AT 3/2 THAC0 7 Dmg 4d4 +l (claws)
Special Att/Def: Luthic's avatar cannot be paralyzed/ petrified, blinded or deafened if underground or in darkness. She regenerates 2 hp/rd underground. She carries a stone controlling earth elementals and a potion of extra-healing.
Duties of the Priesthood
Luthic's priesthood uses healing skills to tend those injured in battle/ and to teach simple healing and herbalism to orcs. They tend to the young and females in childbirth. They are always subservient to priests of Gruumsh.
Requirements: AB std; AL le male, any evil female; WP edged weapons only (not arrows); AR leather; SP all, charm*, combat*, creation, elemental (earth), guardian, healing, necromantic*/ protection, sun (rev); PW 1) lay on hands Ihp/lvl, once/ore, after battle; 4) darkness, double duration; 7) regenerate Ihp/rd, 1 turn. underground; TU nil; LL 7 (Wis 16+); HD d6; Shamans yes.
Shamans: AB std; AL le males, any evil females; LL 4; HD d4;
Other leather armor only.

## Shargaas (Intermediate God)

Shargaas the Night Lord lives in a tremendous cavern system below the fiery plain of Chamada, the second level of Gehenna. His caves extend infinitely, and are darker than the deepest night; no creature can see within them save for Shargaas and his servants. Shargaas is a god of thieves, stealth, darkness and Un-dead, and his hatred of non-ore races is rooted in a basic hatred of life itself. His scheming is colder, and more considered, than that of the other orcish gods.
Role-playing Notes: Shargaas sends an avatar only to concern himself with opposition between ores and other underground-dwelling races (such as dwarves and gnomes). He also seeks underground war, to carry off corpses for animation. His omens take the form of sudden chills in the air, lamenting moans, and dreaded "cold fevers" which inflict great pain.
Statistics: AL ne; WAL any evil (ores); AoC darkness, thieves; SY red crescent moon with a skull between the moon's horns.
Shargaas' Avatar (Illusionist 5, Thief 16)
Shargaas' avatar appears as a tall, gaunt ore with jet-black eyes and skin, wearing a black cloak.
Str 18/78 Dex 18 Int I8
Wis 16 Con 17 Cha l2
AC O MV 12 SZ L (8')
HP 144 HD 18 MR Varies
#AT 1 THACO 5 Dmg ld6 +3 (staff) +4
Special Att/Def: Shargaas' avatar is utterly blinded by sunlight, but can see for a mile in absolute or magical darkness. He has no magic resistance in daylight, 25% in partial light, and 50% in absolute darkness. He climbs any surface without slipping. His magical cloak is one of protection +2 and allows him to cast a 10HD cone of cold I/day. He can cast darkness at will and enervation 3/day, and has 99% hide in shadows ability in partial light or darkness. He commands undead as an I8th-level priest, and employs a quarterstaff +3.
Duties of the Priesthood
Shargaas' priests are thieves and assassins, sneak killers who practice their thiefly skills continually. They are scouts and advance spies for armies, but only operate in darkness. Shargaas' own clans are always underground dwellers.
Requirements: AB Dex 13; AL ne; WP as thieves; AR leather. silenced chain; SPall, combat, creation*, healing (rev), elemental (earth)*/ sun (rev), travelers*; PW 1) gain thief skills as thief of half priest level, rounded up; 5) continual darkness; 7} cloak of fear combined with darkness 15' in which priest can see, 1 rd/level; TU command; LL 7 (Wis 16 +); HD d6; Shamans yes + wd.
Shamans: AB Dex 9; AL any evil; LL 4; HD d4; Other armor must be leather.

## Yurtrus (Intermediate God)

Yurtrus is the terrifying ore god of death and disease, dreaded by almost all ores; they fear and seek to propitiate him. The god himself is unspeaking, non-communicative, and is simply an embodiment of life-destructive principles.

Role-playing Notes: Yurtrus' avatar is only dispatched to spread plagues and pandemics, much at the god's whim. His omens usually take the form of such disease outbreaks.
Statistics: AL ne (le); WAL any evil (ores); AoC death, disease; SY white hand on a dark background.
Yurtrus's Avatar (Priest 16)
Yurtrus' avatar appears as a huge, vaguely orcish giant covered with peeling and rotting green flesh. His hands are entirely normal save for being chalk-white. He has no mouth, and never communicates (ores say "when White-Hands speaks" as a way of saying "Never"). He uses spells from all priest spheres (always reversed where appropriate).
Str l6 Int 18 Dex l5
Wis l9 Con 17 Cha 1 (all races)
AC O MV 6 SZ L (12')
HP 128 HD 16 MR 30%
#AT l THACO 5 Dmg 3d4+l (touch)
Special Att/Def: Yurtrus' avatar is immune to disease and poisons. Any hit from him causes a rotting disease fatal in ld4 days (unless heal is cast), and the victim must make a successful saving throw vs. death or lose hit points permanently. His avatar is surrounded by a cloud of stinking gas with a 20' radius. In this area, creatures of 1-4 HD/levels are affected as if by dust of sneezing and choking; those with 5-8 HD/levels as by a stinking cloud; those of 9 + HD/levels as by a stinking cloud but a saving throw against poison is allowed to negate.
Duties of the Priesthood
Yurtrus' priests are not clan leaders, but are found in all clans. They wear pale white gloves made from human, demihuman, or goblinoid creatures they have killed. They wear thin "armor" made of the same material. They plead with their deity when a clan is affected by disease and plague, but are also fighters with their reversed spells and special maces.
Requirements: AB Con 13, Cha 6 or below; AL ne, le; WP mace with head in shape of white fist; AR "leather"; SP all, combat*, healing (rev), necromantic (rev), summoning*, protection*, sun* (rev); PW 2) stinking cloud; 4) +2 saves versus poison, disease; 6) contagion; 8) +1 Con; TU command at -2 levels; LL 8 (Wis 18+); HD d6; Shamans yes + wd.
Shamans: AB Con 10; AL any evil; LL 5; HD d4; Other must use skin gloves and armor and maces as priests, witch-doctors must use reversed spells where applicable, all immune to disease.

## Gerdreg (Orc Hero)

Orcish hero myths are not exactly subtle. The themes they embody are reduced to a simple formula: Might is right and strength is joy. The tale of Gerdreg fits this formula perfectly, but also contains some subsidiary themes which are typical of this paranoid and aggressive race.
Gerdregs clan was wiped out by a competing ore clan when he was a child/ and his father was disemboweled before his eyes (moral: Other clans are Bad Guys. The clan taking this

role is always a current enemy of the clan of the shaman telling the tale at the time). He was fostered by the murderous clan and, despite continual cruelty and abuse from them, became a powerful young warrior (moral: Get strong. Strong is good. Develop your own strength: no one else is going to do it for you.). After helping to kill groups of dwarves in the mountains, he commanded a small group of ores which burned down an elven woodland enclave and killed all the elves as they fled for their lives (Morals: Be a leader. Leadership means respect. Kill elves;the cowards always run away when you burn their homes, so shoot them in the back when they do).
After these, and other, good times spent killing demihumans Gerdreg returned to his adopted clan and beheaded the chieftain, backstabbed his son and proclaimed himself clan leader (Moral: Might is right.). He gave a magical ring he had taken from one of the elves to the tribal shaman (Morals: Magic is for wimps, but keep on the right side of shamans; an important protective consideration in tale-telling, since shamans are the ones who tell the stories, after all). Gerdreg took several wives, and had many sons who grew into fine fighters like their father (Moral: Females are for child-bearing. Sons are good, who'd want daughters?). Gerdreg died in his old age, in the act of slaying the greatest dwarf chieftain in the entire world. (The only way to die. In some versions, Gerdreg is backstabbed by a son impatient to take over clan leadership, illustrating the moral lesson that you can't, and shouldn't, trust anyone, especially someone who wants to be what you are).
Gerdreg's Avatar (Fighter 15)
Str 18/00 Int 1O Dex l5
Wis 14 Con 17 Cha 16
AC l MV 12 SZ L (9')
HP 105 MR 30% AL le
#AT 2 THACO 3 Dmg by weapon type +6
Special Att/Def: Gerdreg wears chain mail +3. No particular weapon is associated with him; save that whether this is an axe, or sword, or flail, it is always a two-handed weapon, and will be of +2 enchantment. The lack of auxiliary magic is also a theme of orcish heroes; they triumph by strength alone. Magic is for the weak (except for tribal shamans and witch doctors; that's different, of course).

# Gods of the Sahuagin

### Sekolah (Intermediate God)

The vicious, ever-hungry Sekolah is a deity with almost no allies whatsoever. He represents an elemental force of uncaring viciousness and brutality, and he drives his race to plunder, slaughter, and dominion, their fecund nature ensuring they can never be wiped out. The great shark swims throughout the Hells and no baatezu dare approach him, due to his uncompromising ferocity. Sekolah will go to some lengths to find kraken. squid,

and similar marine monsters of vast size, to provide him with a worthwhile hunt anywhere he can reach across the planes.
Role-playing Notes: The deity usually sends his avatars on monster hunts, and because he has no allies and many enemies, he will very rarely dare to assist sahuagin by sending one to assist their raiding. He may send one to help with the climax of a raid which is already guaranteed of success, gratefully receiving sacrifical homage by his priests. He does not bother with anything as subtle as omens.
Statistics: AL le; WAL le (sahuagin); AoC plunder, hunting, tyranny; SY white shark.
Sekolah's Avatar (Fighter 17) The avatar appears as a great white shark.
Str l9 Int l7 Dex l7
Wis l7 Con 19 Cha l8
AC -3 MV sw 36 SZ G (35' long)
HP 144 HD 18 MR 30%
#AT 2 THACO 3 Dmg 3dl0 +7 (bite)
Special Att/Def: The avatar cannot be affected by magic which drains strength, causes fear, or pacifies {symbol of persuasion, etc.). It ignores all illusions. It swallows creatures up to and including size M whole on a successful hit roll of 16 + (victims suffer 2-20 points of internal acid damage per round, internal AC is 0). The avatar casts stoneskin 3/day and radiates a permanent cloak of fear to all non-sahuagin.
Duties of the Priesthood
Sahuagin priests are hierarchically organized and tyrannical, seniors ruling juniors by fear. They lead raiding parties, take their choice of the spoils after nobles (and up), and officiate at sacrifical rituals. The Intelligence requirement for priests does not reflect any valuing of brains by Sekolah, simply that the priesthood only accepts sahuagin who are smart enough to plan raids carefully. A priest must have a shark companion to progress beyond 2nd level-Requirements: AB Int 12; AL le; WP dagger, spear, trident;
AR none; SP all, animal*, combat, healing (rev), protection, war; PW 1) charm shark; 4) fear; 7) cloak of fear; 9) stoneskin;
TU nil; LL 9; HD d6; Shamans no.

# Gods of Evil Sea Creatures

### Panzuriel (Intermediate God)

Panzuriel is a hateful figure, a creeping and slithering creature of evil part-banished from the Prime Material and likewise constrained in a fetid, stinking, briny pool in Hades. Deep Sashelas and (varied) greater gods tried to banish Panzuriel's evil from corrupting the denizens of the depths, but as the god was driven out of the Prime Material in pre-history, a strike from the elven god severed Panzuriel's left foot, which remained on the sea bed. overlooked by the gods, as Panzuriel fled screaming to the Abyss. The severed foot left part of his being on the Prime Material and the god has managed, slowly over

eons, to reestablish something of his malign presence there, but only on the sea bed and with those creatures which are attracted to the murky depths.

Panzuriel is bitter and enraged at his banishment. He ever seeks to slay sea elves, the servitors of good aquatic deities, and lay havoc and waste to the seas. He seeks revenge and nothing pleases him more than a simulation of his planned torture and murder of Deep Sashelas himself. If he can find a mortal elf to play the god's role, so much the better. Despite this viciousness, Panzuriel is cool in his planning. He knows he has much work to do and many followers to attract before he can wage war against the sea elves.

Role-playing Notes: Panzuriel will accept virtually any race as shamans and priests if they have the capacity to serve him. Kraken are his favored species of monster, but many others find something appealing in the darkness of this savage, embittered god- In the details of the shamans and priests below, the DM is free to exclude races which do not fit with his campaign (Panzuriel certainly does not have kraken or scrag or vodyanoi shamans/priests on all worlds, for example).

Appearances of Panzuriel's avatar are strictly limited, for if an avatar is slain or dispelled on the Prime Material plane, it takes Panzuriel 20 years to reform it (this may vary in different worlds, and is also shortening over milennia). Thus, he avoids direct conflicts and relies on his priests to do his bidding. He does not send omens to others than the kraken, to whom he may send veridical visions of ships and communities to be destroyed.

Statistics: AL ne; WAL any evil (koalinths, kraken, merrow, sahuagin, scrags, vodyanoi); AoC murder, confusion, subversion; SY (left) foot(print), or kraken head.

Panzuriel's Avatar (Fighter 15, Priest 18)

The avatar appears as a hunched, old humanoid male with gills, green skin, and scaly skin that is green on ventral surfaces and yellow on dorsal ones, wearing a tattered black robe; he drags his left leg behind him as he walks, and that leg ends in a crystalline foot. His green eyes shine slightly and his taloned hands clutch to his staff for support. He can transform into a giant octopus (size L, 10') in one round. His priest spells are drawn from spheres listed for his priests, and also the Thought sphere.

Str 19 Dex l6 Int 20
Wis 21 Con 18 Cha l5
AC -2 MV 6 sw 6 SZ M (6'}
HP 144 HD 18 MR 35%
#AT 2 (9) THACO 5 Dmg ld6+ldl0+4(staff) +7 and ld6+7(kick)or ld8(x8)/3d6

Special Att/Def: The avatar's crystalline foot is treated as a +3 magical weapon and the avatar can kick with this in addition to an attack from his powerful quarterstaff +4, which delivers 1d1O points of electrical damage in addition to normal melee damage (a saving throw versus spell is allowed to halve this electrical damage). The avatar can summon ld3 kraken (original AD&D(r) Monster Manual II-substitute ld4+2 giant octopi if you do not have this volume) 1/day for up to 6 turns. The avatar has perfect infravision to 200' and can see in magical darkness. He uses continual darkness and darkness 30' radius at will, and 3/day can create a mud/coral storm which has the effects of both Type I and Type II ice storms in a 20' radius. Three times per day, he can cast charm person, charm monster and cause confusion.

However, the avatar has weaknesses. He must maintain some part of his body on the sea bed at all times, and if forced to leave it (by levitation, etc.), he loses ld6hp/rd. He cannot enter shallow waters (50' or less deep) and cannot be magically compelled to do so. The

avatar saves at - 4 against all spells from the Sun sphere and against wizard versions of light, continual light, and any other spells which create strong luminance as a primary effect (including sunray, etc.). "Bright" spells such as lightning bolt, chain lightning, and the like will blind the avatar for ld2 rounds unless he makes a saving throw versus spell with a -4 penalty.
Duties of the Priesthood
Panzuriel's priests and shamans are a rabble raised wherever he can find creatures wicked and depraved enough to serve him. They must establish lairs on the sea bed and attack anything that approaches them. They must especially attack sea elves, and then may not flee from any combat with elves or else the deity will simply snuff out their existence. Any magical items retrieved from their depredations must be left as sacrifices and offerings for the god (kraken priests are exempt from this and may retain usable items for themselves).
Requirements: AB std; AL any evil; WP any; AR any; SP all, animal*, charm*, combat, divination, elemental (earth, water), heating (rev), summoning*, sun (rev), war; PW none; TU command at - 4 levels; LL by race (kraken 12, scrags shamans only, vodyanoi 9; HD by race (default d6); Shamans yes.
Shamans: AB std; AL any evil; LL by race (kraken 7, scrags 3, vodyanoi 5; HD by race (default d6).

# Gods of the Selkies

### Surminare (Lesser Goddess)

Surminare is a quiet, gentle, and reflective goddess who is reclusive and shy even in the company of the asathalfinare she trusts and loves. She can be playful, though, and her delight in simple beauties and pastimes is shown in the playful demeanor of her selkie folk. She detests confrontations, but is brave when she has to be. Surminare does not leave the waters of Thalasia and has her own carefully-obscured lair there, hidden by seaweeds, mazes, and false cavern complexes.
Role-playing Notes: Surminare will not send an avatar to the Prime Material unless accompanied by at least one other asathalfinare deity's avatar or that of an equally trusted friend, or unless a selkie community is in imminent danger of extinction by evil enemies. She does not have a priesthood, only shamans who serve the venerable leaders of selkie groups; she often sends omens to both, as weather changes or discolorations in pearls kept by shamans for divination purposes.
Statistics: AL n(g); WAL n(g) (selkies); AoC selkies, beauty, peace; SY pearl held in selkie's paw.
Surminare's Avatar (Paladin 9, Druid 14)
The avatar appears as a selkie with silver-streaked golden fur and brilliant blue eyes, or as a sea elf or human female richly dressed and of beautiful appearance. She uses spells from spheres listed for druids and her own shamans.

Str l5 Int 18 Dex 18
Wis 20 Con 16 Cha 21
AC O MV 12 sw 48 SZ M (6')
HP 96 HD 12 MR 20%
#AT 3/2 THACO 9 Dmg by weapon
Special Att/Def: Surminare's avatar is immune to elemental (water) spells, poison, death magic, and caused wounds. She wears a ring of protection +4, a brooch of shielding, and a ring of spell turning. The avatar usually avoids combats unless a friend is in need, using her swimming speed to escape.
The Shamans
Surminare's shamans always defer to the venerable selkie leaders (see the Monstrous Compendium) who have 17+ Wisdom. They support the leaders, defend selkies, and cooperate with other good-aligned aquatic races as the leaders direct. Shamans often trade in human form, quietly using their friends/ charm spells to help negotiations along a little. They must be firm protectors of marine environments, opposing exploitation.
Requirements: AB Wis 11 Cha 11; AL n(g) (selkies only); WP dagger, net, quarterstaff; AR none; SP all, animal, charm, creation, divination, healing, necromantic*, protection, wards*. weather; PW 1) locate pearls within 120'; 3) friends; 5) charm monster; TU turn; LL 5; HD d4; Shamans only.

# Gods of the Svirfnebli

### Callarduran Smoothhands (Intermediate God)

Callarduran is a patron god of svirfnebli, on very good terms with the other gnomish gods and secondary to Garl Glittergold. His hands are perfectly smooth from his constant polishing of a massive stone controlling earth elementals which he holds at the centre of the world (in svirfnebli legend), granting his race their summoning abilities. He is a benign but secretive deity, caring only for his own people and their defense against drow. Solitary and thoughtful, Callarduran rarely consorts even with other gnomish gods.
Role-playing Notes: The deity is very involved with his people. He frequently sends avatars to protect them, and may leave a deposit of smoothed stone or a stone shaped ring, to guide poor svirfnebli to a cache of gems (his avatar can create one star gem, worth 5,000 gp, from its ring when pressed against stone). The presence of the avatar is often signalled to svirfnebli by its humming, which can be heard through solid rock.
Statistics: AL n (ng); WAL n, ng (svirfnebli); AoC protection, earth, mining; SY gold ring with star pattern.
Callarduran's Avatar (Wizard 12, Priest 14)
Callarduran's avatar appears as a handsome, brown-skinned svirfneblin wearing chain mail and a gold ring with a star pattern. He uses spells from the alteration, elemental (earth) and abjuration schools, and from spheres listed for his priests.
Str l6 Dex 18 Int 19

Wis 17 Con 17 Cha l9
AC -3 SZ M (4'6") MV 12 br 6
HP 128 HD 16 MR 35%
#AT l THACO 5 Dmg ld8 +3 (axe) +1
Special Att/Def: The avatar can summon any creature from the Plane of Elemental Earth, three summonings per day (as for ordinary svirfnebli). He is 50% likely to be accompanied by a huge xorn (16 HD, attacks do double damage) which is wholly obedient. His chain +4 confers 80% magic resistance against spells cast by drow. His axe +3 kills drow outright on a hit roll of 17 + (no save).
Duties of the Priesthood
Svirfnebli priests are vigilant against drow incursions and expeditions to repulse of the dark elves from svirfnebli lands. They are also teachers of magic, and some 50% are illusionist/priests.
Requirements: AB Int 12 Wis 12; AL n, ng; WP any (axe 1st);
AR chain; SP all, charm, combat*, creation, divination*, elemental (earth), healing, necromantic*, protection, wards; PW 1) +2 saves versus drow spells; 4) may subtract 5%/level from magic resistance of drow; 7) 5% chance/level to summon 16 HD earth elemental, 6 turns; TU turn at -4 levels; LL 13; HD d6;
Shamans yes. Shamans: AB std; AL any non-evil; LL 5; HD d4.

# Gods of the Tritons

### Persana (Intermediate God)

Persana is the god who created tritons out of magically treated water from the fountain of the elemental plane of Water. Now his race is populous and powerful in the oceans, and he encourages their building underwater cities. Persana appears to have little direct interest in anything other than his people, but will cooperate readily with other sea deities to reach agreements concerning division of territories for the slightly xenophobic tritons. He may even act as a servitor for powerful greater gods of the sea if this is to the advantage of the triton race.
Role-playing notes: Persana's avatar may act in the interests of other deities (see above) and possibly accompany their avatars. His priests have no special powers (exceptional tritons exist, instead, as an additional manifestation of Persana's power) and, hence, he guides them by having his avatar appear at triton courts (rarely) and with omens taking the form of lucky finds of pearls, living caverns, or localized underwater whirlpools.
Statistics: AL n(g); WAL n(g) (tritons); AoC tritons, architecture; SY trident and conch.
Persana's Avatar (Fighter 13, Wizard 12, Priest 12)
Persana's avatar is a green-skinned, muscular, tall triton bearing a large pink and green conch. He uses spells from spheres listed for his priests and from all wizard schools save necromancy and illusion/phantasm.
Str 18/00 Dex 17 Int l9

Wis 20 Con 18 Cha l9
AC -2 MV sw 30 SZ L (10')
HP 144 HD 18 MR 30%
#AT 2 THACO 5
Dmg 2dl0 +3 (trident) +6
Special Att/Def: The avatar is immune to elemental (water) spells, fear. and his sharkskin leather armor +4 makes him immune to all touch spells. The avatar can summon 3d6 sea lions by blowing his conch 3/day, to serve for up to 6 turns. He can call tritons telepathically with a range of 2 miles. His trident +3 paralyzes opponents by touch for 3d4 turns unless a successful saving throw is made versus paralyzation at -2.
Duties of the Priesthood
Triton priests are ministers of justice at triton courts, architects of undersea cities, or battle leaders, usually specializing in one of these roles. The architects and builders are pre-eminent within triton society.
Requirements: AB Wis 13 and Str 13 or Dex 13 or Cha 13; AL n(g) (tritons only); WP dagger, net, spear, trident; AR sharkskin (AC4); SP all, animal, charm*, combat*, creation, divination, elemental (water), healing, necromantic, protection, summoning, wards*; PW none; TU nil; LL 11; HD d4 (d6 for battle-priests with Str 13 +); Shamans no.

# Gods of the Troglodytes

### Laogzed (Demigod)

Laogzed is a disgusting creature whose function among the fullness of creation is very questionable. Its only apparent desire and purpose is to eat any thing it comes across, although it has an instinctual evil that leads it to prefer organic matter, preferably with plenty of juices (blood) and still wriggling, which gives it pleasurable sensations as it chews and swallows its food. Its origins are always mythologically ascribed to the coupling of an evil god with a reptilian tanar'ri female; sometimes Panzuriel is considered to be this monster's father, else a demented deity of darkness such as the Elder Elemental God. Other gods tolerate it as a necessary evil scavenger with some kind of cleansing role.
Role-playing Notes: Laogzed's avatar eats things, including any troglodytes stupid or unlucky enough to be around when it appears. No rationale other than eating affects its presence. Laogzed does not send omens to troglodyte shamans and its only interest in them is how edible they are.
Statistics: AL ce; WAL ce (troglodytes); AoC eating; SY lizard's head.
Laogzed's Avatar (Priest 12)
The avatar appears as a disgusting toad/lizard cross, more reptilian than amphibian. Its oozing skin is covered with loose patches of dead flesh. It uses spells from the spheres listed for its shamans, plus charm, chaos (minor access), and creation.

Str l6 Int l4 Dex l5
Wis lO Con 16 Cha l8
AC 2 MV 12 SZ L (12' long)
HP 80 HD 10 MR 10%
#AT l THACO 11 Dmg 3dl0 (bite)
Special Att/Def: The slimy ooze on the avatar's skin is an acidic poison; any creature touching it suffers 3d6 points of acid damage and must successfully save versus poison at -4 or be slain. Weapons (or other objects) striking or touching the skin must successfully save vs. an acid attack or be destroyed (+1 bonus per +1 of enchantment where applicable). The avatar can create a stinking cloud once per turn and is immune to poison and paralyzation.
Duties of the Shamans:
Laogzed's shamans are prime advisers to the troglodyte chiefs, but must not develop personal relations with them (so they can be free to safely serve a new chief when Laogzed eats the old one). They officiate at the ritual shedding of skins each year. They must make strenuous efforts to have their own steel javelin as a mark of status.
Requirements: AB std; AL ce; WP any (javelin 1st); AR any;
SP all, animal, combat, necromantic (rev), plant, protection;
PW none; TU nil; LL 3; HD 2hp/ level; Shamans only.

# Gods of the Yuan-ti

## Merrshaulk (Intermediate God)

Merrshaulk is still a powerful god, but like Ramenos, he has begun to decline into slumber, spending years at a time barely conscious within his snake-infested Abyssal pit. Couati mythology, which has most to say apart from yuan-ti sources (which are wildly misleading, seeing the deity as all-powerful), paints Merrshaulk as an aspect of a pre-existent World Serpent, but an inferior one which is undergoing a long process of separation from the core creative principle of the universe. Thus, he and his race must remorselessly decline.
Role-playing Notes: Merrshaulk very rarely sends an avatar for any reason, and it takes very high-level yuan-ti priests with powerful magic and sacrificial rituals to invoke such an appearance. The avatar may dispense wisdom or grant some temporary magical benefit, but is lethargic and avoids confrontation. The god does not send omens to his priests.
Statistics: AL ce; WAL ce (yuan-ti); AoC poison, somnolence;
SY cobra head.
Merrshauk's Avatar (Fighter 10, Wizard 12, Priest 12)
The avatar appears as a vast yuan-ti abomination with a male human head and stubby forearms with the green and yellow coloration of a cobra. He uses spells from spheres listed for his priests, and wizard spells from all schools save abjuration and necromancy.

Str 18/00 Dex 16 Con 17
Int l8 Wis l5 Cha l7
AC -2 MV 15 SZ G (40' long)
HP 128 HD 16 MR 60%
#AT 3 THACO 5 Dmg ld8 +3 +6 (longsword)
Special Att/Def: The avatar is immune to poisons and illusion/phantasm spells. He can levitate at a rate of up to 307 rd, and casts sticks to snakes as a 20th level priest 6/day. He employs a pair of +3 long swords which he can envenom by licking them (venom causes 2d8 points of acidic damage, saving throw versus poison for half damage). Once per turn, he can spit a 5'-radius globe of poison, causing damage as the blade venom to a maximum range of 40'.
Duties of the Priesthood
Only yuan-ti abominations can become priests, and they rule and lead yuan-ti society. They must be skillful ambushers and preparers of traps, and lead hunting expeditions. They must plan defenses of temples and lairs.
Requirements: AB Wis 14 Dex 12/ yuan-ti abominations only; AL ce; WP any; AR none; SP all, animal, chaos*, charm*, combat*, divination, healing (rev), plant; PW 1) immune to poison; 5) sticks to snakes, snakes are always poisonous; TU nil; LL 10 (12 if human-headed); HD 2 hp/level; Shamans no.

# Other Gods

### Stillsong (Unknown)

Stillsong is a god in transition, developing and transcending his way through the elements in an ordered progression; now he is in his final development, in the element of Air. His manifestation in the Prime Material is as a sphere of song which approaches without warning and which is unheard outside the sphere, although its effects may linger (see below). It is believed to be paralleled by spiritual presences which travel the Outer Planes of Good and the elemental plane of Air, where effects similar to those given below occur. Some few gods know of Stillsong's purpose and destiny, but none tell their priests of this.
Role-playing Notes: Stillsong's manifestation may be a harbinger or warning, a strengthening which comes to the aid of good creatures in peril (often accompanied by ld4 Moon Dogs), but which does not engage directly in combat and ignores attacks made upon it. The manifestation otherwise travels the Prime Material plane, following its own inscrutable purpose, although it is known to lead creatures of exceptional goodness to sacred lost sites and refuge.
Statistics: AL ng; WAL n/a; AoC unknown; SY translucent golden crystal sphere.
Stillsong's Manifestation
Statistics: MV fl 144; SZ G (40' diameter sphere); MR special;
HDeq 18; hp 144; Dmg special; Magic use at 25th level.

Those within the radius of the song effect hear an unearthly chorus singing polyphonies of heart-rending beauty. All who hear the song are entranced for as long as the sphere is stationary and for ld6 rounds thereafter, and they cannot engage in offensive action. A saving throw versus spell is allowed at -10 to negate the effect. If a creature hearing the song is of neutral good alignment and fails a system shock roll, that creature gains 1 point of wisdom permanently. Good-aligned creatures are affected as if hearing the song of a 20th-]evel bard, for purposes of morale, etc.
Three times per day, the manifestation can leave behind a 20' radius globe of invulnerability when it departs. Three times per day also, its song can create emotion (hope) within its area, or cause fear to evil creatures. Once per day, within the area of effect, the song can change key to create a time stop that lasts for ld6 +1 rounds or until the sphere moves, and likewise once per day the song can change key to sing a holy word as a mantra.
Stillsong cannot be affected by mind-influencing spells, and elemental (air, fire) spells have no power against him. Since the manifestation is noncorporeal, no weapons can affect it, nor can spells which primarily affect the body {enfeeb lement, etc.).
Minor benign manifestations are also associated with Stillsong. Typically, good-aligned creatures may hear distant singing at night, waking to find such creations as created food and water or even a Mordenkainens magnificent mansion which contains a heroes feast if the creatures are in dire need.

## Water Lion (Lesser God)

Water Lion's home across the planes is not known, but his avatars roam the Prime Material ceaselessly. There are many myths concerning his purpose. Sometimes he is seen seeking a lost child or a lost god who is his best friend, and from loyalty he roams the planes forever seeking; the myths which place the latter as Stillsong are perhaps closest to the truth. Although it is not part of his quest. Water Lion hates sharks and attacks them on sight.
Role-playing Notes: Water Lion is very playful and may roar for the pleasure for it, sometimes with unfortunate effects- Water Lion is enchanted by song and can sense bards within a mile;
he will reward a bard who sings for him with a gift of a pearl or some retrieved treasure from the sea bed. Usually, though. Water Lion appears to ignore communications directed at him and simply goes about his own business.
Water Lion also has bouts of black melancholy, during which time he is almost unapproachable and may ferociously attack anyone who comes too close. Only paladins, dolphins, and sea elves are tolerated as potential contacts during such times, and they must stay silent to be allowed to approach. Water Lion's tears during these dark hours are equivalent to potions of extra-healing if gathered in a vessel within an hour of their being shed. Anyone drinking such a potion, however, must make a save versus spell or be affected by melancholia for 2d4 hours; the drinker is 50% likely to be affected by a dream spell the following night.
Statistics: AL n(g); WAL n/a; AoC unknown, but hates sharks; SY sea lion's head.
Water Lion's Avatar (Wizard 10, Priest 10)

Water Lion's avatar appears as a huge sea lion whose body is composed of water that appears more viscous than brine, contained in an elastic plasma membrane giving it shape. He casts spells from all druidic spheres and also combat, guardian, and travelers. Wizard spells come from the abjuration, elemental (water), and enchantment/charm schools.
Str 18/00 Int l7 Dex l6
Wis l8 Con 18 Cha l8
AC 2 MV sw 24 SZ H (15'Iong)
HP 112 HD 14 MR 20%
#AT 3 THAC0 7 Dmg dl0 +6/dl0 +6 (claws) 2dl2 (bite)
Special Att/Def: The avatar is immune to elemental (water) spells, but saves at -2 against elemental (fire) spells. He is immune to all illusion/phantasm and mind-affecting spells. Three times per day. Water Lion can roar, affecting all creatures hearing him within 60'; creatures must save versus spell or be deafened for 2d4 rounds and lose 2d4 memorized spell levels (if applicable), and they are also confused for 2 rounds.

## Parrafaire (Demigod)

Parrafaire is a guardian of magical secrets and hidden places usually far below the ground. He serves more than one god in this way, both his own mother Shekinester and a very diverse assortment of other gods, including even such unlikely candidates as Dumathoin of the dwarves.
Parrafaire's role is not to prevent access to such secrets and magic entirely, though. Rather, he tests the wisdom and resourcefulness of those who come seeking. He places (non-lethal) traps, decoys, diversions, mazes, cryptic clues, and the like to challenge the adventurous, and will himself present riddles and puzzles which demand an answer if he is to permit questers to pass by him. He is unconcerned with morality or ethics, simply caring for mental resourcefulness and skill.
Role-playing Notes: Although Parrafaire is a demigod, his mother's ability governs his avatars so far as planar travel, number/ and replacement times are concerned. Parrafaire has just one weakness: flattery which focuses on the smartness of his riddling and expressed admiration for his skills. A comment such as a heartfelt "that was sneaky, we had a lot of trouble dealing with that" will gain some mileage with the wise but slightly vain Parrafaire. Attempts to deceive or trick him do not go down well unless they are spectacularly well-planned and executed.
Parrafaire does not have any form of priesthood and has no known worshipers.
Statistics: AL en; WAL n/a; AoC guardianship; SY male naga head with feathered ears.
Parrafaire's Avatar (Illusionist 12. Thief 12)
The avatar appears as a water naga with a male human head and feathered ears and a skin color which can change to suit his environment (or as he wishes). He also has feathered wings which similarly change color.
Str l7 Dex l9 Con 15
Int I8 Wis 20 Cha l7
AC O MV 12 fl 48 SZ L (10' long)
HP 96 HD 12 MR 60%

#AT l THACO 9 Dmg ld8 (bite)
Special Att/Def: The avatar is immune to poison, paralysis, gaseous attacks, and to mind-controlling and illusion/phantasm spells. Three times per day, he can create each of the following: fear (as wand), feeblemind, globe of invulnerability, maze. The avatar is always mind blanked. His bite has a unique poison (save versus poison or be confused for 1 turn). He has a gold band about his tail which functions as a ring of fire resistance and a ring of warmth and also gives a +4 bonus to all saving throws.

# The Lost Gods

## Juiblex (Lesser God)

There is no question that Juiblex, the Faceless Lord, is the most disgusting and loathsome of all dieties. Believed to be related to tanar'ri, he dwells in the Abyss in a dismal, acrid cavern populated by oozes, slimes and jellies of all kinds. Juiblex's purposes are wholly inscrutable; he simply appears to be worshipped, to go about spreading disease, and to enjoy the company of oozes and slimes. Juiblex is beyond mortal comprehension.
Role-playing Notes: Juiblex's avatar only appears if summoned by cultists or priests using a gate spell. It does not use omens.
Special Note on Priests: A few aboleth revere this deity, having the strange belief that it is responsible for maintaining the integrity of their moist skins and the environment in which they dwell, and that Juiblex holds arcane lost magical secrets he will reveal to them in the fullness of time. The only other reverers known are handfuls of mad, usually human, cultists.
Statistics: AL ce; WAL ce; AoC unknown; SY raised pseudo-pod dripping slime.
Juiblex's Avatar
The avatar has no set form. It can spread itself into a vast pool of slime, form a blob, or raise up into a towering pillar of ordure 18 feet high. It is always covered in thick mucus and dripping with foul brown, green, yellow, and gray slime and caustic secretions. From this mass protrude several red, garing eyes.
Str 16 Dex 10 Con 16
Int 18 Wis 17 Cha 1
MV 3 sw 6 SZ L(9') MR 35%
AC -3 HD 12 HP 96
#AT 1 THACO 9 Dmg 2dl0 (acid spurt)
Special Att/Def: The avatar is immune to all acid- and water-based attacks, and suffers half damage from cold- and fire-based attacks, and also electrical and gaseous attacks. It is unharmed by nonmagical weapons. It uses darkness 15' at will, has 120' infra-vision (and sees through magical darkness) and can detect invisible within 30'. It regenerates 1 hp/rd. It can use any of the following, one per round, I/day each: charm monster, cause disease, death fog, dispel magic, domination, ESP, Evard's black tentacles, hold monster, invisibility 10', phase door, project image, putrify food and water, and telekinesis. Once

per day it can summon ld4 black puddings to serve it for 6 turns. Once per turn it can spew 3 cubic feet of a combination of ochre jelly and green slime.
Duties of the Priesthood
The sole duty of the priesthood appears to be to serve Juiblex;
cultists do this from a demented sense of reverence, aboleths because they believe Juiblex maintains the integrity of their skins and environment and must be propitiated.
Requirements: AB std; AL any evil; WP any; AR any; SP all, charm, combat*, divination, elemental (earth, water), healing (rev), necromantic (rev), numbers*, summoning. PW 1) immune to disease; 5) Evard's black tentacles; 9) summon black pudding to serve for 3 turns if underground; TU command at - 4 levels; LL by race (aboleths 16); HD by race (aboleths d6); Shamans no.

## The Dark God (Intermediate/Lesser God: Power Varies)

This god is sometimes known as "the god at the end of all things", the one who will stand alone when all time and worlds have ended, filled with the power of eternal darkness. This dread god drains sanity and strength from soul and body, but his acceptance of his reverers into the cold eternity of his being has a terrible lure for some insane creatures. Perhaps the Dark God is banished as is the Elder Elemental God, perhaps he has simply faded into an eternal night; or perhaps he stands outside space and time, waiting for his rebirth at the end of all things.
Role-playing Notes: The Dark God is not able to use an avatar, or send omens, in most worlds; only if he has an active cult is this possible. He would only wish to do so for the purpose of consuming life energies and bodies into himself.
Special note on Shrines: Like those of the Elder Elemental God, this deity's lost shrines are awful places, but more chilling: Exhaustion, fatigue, mind-bending illusions, catatonia, depression and paralysis await those who enter. But so do arcane secrets, unique magical treasures, and great books of lore.
Statistics: AL ne; WAL any evil; AoC eternal darkness, cold, decay, enfeeblement, paralysis; SY black robe and iron torch.
The Dark God's Avatar (Wizard 14, Priest 14)
The Dark God's avatar appears in wraithform without a solid body, and is black and faceless. It wears a spectral cloak and glides soundlessly. It uses spells from all schools and spheres, always employing reversed spells where applicable.
Str 12 Dex 17 Int l9
Wis 21 Con 15 Cha l
MV fl 24 SZ M (6') MR 70%
AC -7 HD 18 HP 144
#AT 1 THACO 5 Dmg 3dl0 (chill touch)
Special Att/Def: The avatar is immune to paralyzation and cold-based attacks. His touch causes paralysis (saving throw at -4 to negate) and any creature struck more than once must make a saving throw vs. death magic for each subsequent hit or be slain instantly. The avatar uses all cold-based spells as a 20th-level wizard, I/day each in addition to other spells. It may use imprisonment, symbol of insanity and trap the soul I/day each.

Duties of the Priesthood
The Dark God's priests are extinct on most worlds. Their sole duty is to attempt to locate their lost god and bring his power back into the world. They can rise to 10th level of experience, but gain no spells above 2nd level unless the DM decides that they have managed to contact the god and draw on his power.
Requirements: AB Wis 15; AL any evil; WP blunt weapons;
AR none; SP all, astral, charm*, divination, elemental (all), healing (rev), numbers, sun (rev), thought, time, wards*; PW 1) may use all cold-based wizard spells as priest spells of same level; 5) suggestion (with accompanying visual illusion if appropriate); 9) wall of ice; TU command; LL 10 (and by race); HD by race (humans d6); Shamans no.

## The Elder Elemental God (Greater God)

This uncaring "lost god" is something of a mystery to say the least. Even the greater creator gods will not speak to their most senior priests of it. But it is known to be banished to a unique demiplane, to be constantly struggling for release, and desperate to gain power from rituals and obeisances carried out on the Prime Material plane, although it is utterly indifferent to the fates of its servitors.
Role-playing Notes: This is a terrible, blindly destructive deity readily driven to unknowable rages. How it manages to manifest itself on the Prime Material plane is unknown; clearly it cannot be wholly bound and is able to project some of its power. It does not truly dispatch an "avatar", since its appearances are unpredictable and owe less to whether or not the god wishes to manifest as it does to whether it is able to do so. The performance of rituals by its servants has a minor role in this, but more important are the waxing and waning of magical fluxes about its extraplanar interdiction.
The god also manifests itself in physical phenomena as well as its "avatars." Some of these manifestations still linger as permanent effects in its oldest shrines, or perhaps it is just that these represent "weak points" where the power of the god can best be channelled. These manifestations include: Suckered tentacles emerging from an altar which energy drain a victim or suck it into the altar to be irrevocably destroyed, the appearance of a glowing golden eye which strikes viewers blind or drives them insane or prematurely aged, and the transformation of that magical orb into a stone egg which hatches salamanders that blindly attack every living thing within range.
If the Elder Elemental God is drawn into game play, this can be done through tracking down and slaying an evil priesthood and/ or discovering some lost shrine complex. Facing a priesthood allows the DM to generate some truly worthy clerical battle enemies, but dealing with a lost shrine complex is even more demanding. The DM should develop a range of special effects tied to the locale which reflect themes of elemental magic, madness, sudden rages and aggressions, loss of sensory functions and awareness and the like. Items such as intelligent magic-using altars and religious icons, minor magical artifacts with intelligence and several malign powers, undead-spawning mausoleums, and items/places which generate standard magical effects but which are of bizarre appearance should be employed liberally.

Statistics: AL ne; WAL any evil (the insane); AoC unknown, but include elemental forces, magic; SY black metal triangle with an inverted Y within it.

The Elder Elemental God's "Avatar"

The "avatar" of this god can appear in several forms: As a huge, mottled, tentacled being some 20' in length, resembling a vast slime/slug cross; or as a 24' tall pillar of vast elemental force with a body of burning magma, radiating a steamy haze.

Str 22 Dex 12 Int 22
Wis 20 Con 22 Cha 20
MV 15 SZ H (24') AC -2 (4 as slug)
HP 160 HD 20 MR 50%
#AT 1 THACO 3 Dmg 5dl0 +10 (blows)

Special Att/Def: The avatar's movement is 15 with the special movement of its type. The "avatar" is wholly immune to Elemental spells of all types. It can use the following spells I/day each as a 24th-level wizard: cause blindness, cause deafness, (continual) darkness, darkness 15', dispel magic, forcecage, and each of the power word spells. It is unaffected by gases, poisons, and all forms of mind-controlling and paralyzing attacks. It can summon ld3 elementals of each type I/day (16HD each) which serve for up to 12 turns, requiring no concentration to maintain control.

Duties of the Priesthood

Priests of the Elder Elemental God bend all their being to revering the god and attempting to locate and enact the rituals which will draw more of his power into the Prime Material plane. They make many sacrifices of sentient beings to this end, including members of their own cults and even themselves if this is demanded. They locate lost shrines of the Elder God and cleanse them, re-dedicating them to the service of the deity. It is unknown which races can become priests of this deity and which cannot since the god has no known racial affinities, but certainly humans, drow elves, and evil dwarves are known to have become priests.

Priests may devote themselves to revering all elemental aspects of the god, or specializing in a single element (thus, revering the element of fire, air, earth or water), and different specialty priests gain slightly different powers.

Requirements: AB std; AL any evil and/or insane; WP any;
AR any; SP all, astral, combat, divination, elemental (all), guardian, healing (rev), necromantic (rev), numbers, sun (rev), weather*; PW 3) can use all elemental wizard spells as priest spells of same level; 5) protection from good; 7) gain +1 saves against all elemental spells ("generic" priests), or +4 saves ver-sus spells of "own" element, -2 saves against spells of "opposed" element (air/earth, fire/water) and +1 saves against spells of other elements (element-specific priests); 10) summon elemental I/day for 6 turns (generic priest)/12 turns (specific priest)-generic priests get 8HD elemental of any type, specific priests get 12HD elemental from own element; TU command;
LL 12 (generic priests) or 16 (specific priests); HD vary by race (humans d8, elves/drow d6, dwarves d6+l); Shamans no.

## Forward

Whew, another big project behind me! Never did I realize when I started work on the *Tome of Magic* that it would become such an undertaking. After all, it seemed so simple. At that point, I should have known better.

It all started with a seemingly innocent comment, something like, "There are a lot of gaps in the spell lists for wizards and priests. Maybe we should do something about it." I don't know if I said that, or if it was someone else's idea, but whoever said it was right. I knew they were right because I could see them clearly by the time the AD&D® 2nd Edition *Player's Handbook* was finished.

These gaps were not yawning chasms in the game system. They were little things, like, "Gee, it would be nice to have a spell that did X--or Y, or Z, or whatever. "Sometimes they were things to help explain the weirdness people were always putting in adventures or little touches that would smooth things out for players and DMs alike. The *Tome of Magic* could be just the place to get some of these ideas into the AD&D® game system. Months later (because months always pass between the idea and actually doing the work), it was time to make all this real.

That's when I discovered the warts on the great idea--two in particular. First, filling a book with a mis-matched collection of spells was not enough. How many variations on *fireball*, *lightning bolt*, and *confusion* did you really need? Second, a book of odds and

ends didn't sound exciting for either a game designer or for the players. The *Tome of Magic* needed something--a hook--to make it interesting.

As a result, the *Tome of Magic* is much more than just a collection of spells. There are many new ideas about the types and uses of magic in these pages--wild magic, cooperative magic, focuses, elementalists, and more. In the end, the *Tome of Magic* offers more than just spells--it gives breadth and range to wizards and priests. In many ways, it is a peek inside the Pandora's box of magic.

On top of these concerns was a problem of mental health. If I alone had to fill all these pages with spells and magical items, I'd be writing from the nut-house by now. There was no way I could create all these new spells and remain sane. That's why there is a host of designers listed in the credits. Taking often the barest of my ideas and suggestions, these creative conspirators produced a wide variety of spells and items. After weeding out spells too similar in form and function, I can offer you the cleverness and diversity of six different designers, not just one! For myself and the other designers, we hope you find the *Tome of Magic* both entertaining and useful. Let it be your guide to just how much further wizards and priests can go in the AD&D game.

# How to use Tome of Magic

*An apprentice stands in the laboratory of his ancient wizard master. The youth's eyes stray across tables cluttered with alembics, retorts, beakers, bat wings, and phials, and beyond to shelves of scrolls and books. A musty old volume, bound in cracked green leather with glittering silver hinges, catches his attention. His master is elsewhere, so the curious student pulls the heavy volume from the shelf and, with a puff of breath, blows away a thick layer of dust. "Tome of Magic" it reads, spelled out in silver leaf on the brittle cover.*

*The apprentice can't believe his discovery. He's never seen this book before. What secrets has his master been keeping from him? What secrets will he discover inside? With trembling fingers, the apprentice opens the creaking cover.*

*"Ahem, O callow youth! Perhaps you are dissatisfied with my training and would like to seek another master!" booms the master's voice from behind the apprentice. The youth startles and guiltily slams the cover shut. Turning, he smiles sheepishly at his master.*

*The old wizard, bald and portly, takes the book from his apprentice's hands. "Before you can learn secrets like these, you must first master the basics, which I sometimes doubt you ever will. Now tell me, what are the three Greater Gesticulations used in casting a light spell?" The wizard deftly slides the tome back into place on the shelf as he speaks.*

*Flustered, the apprentice stammers out what feels like an elementary reply. But in his heart, he knows that someday he will read the secrets of that tome.*

***Someday is now!***

## How to Use This Book

With over two hundred new spells for wizards and priests and a host of new magical items, the question of how to use this book may seem fairly obvious to most players. It appears to be a simple matter of opening the pages, selecting spells and magical items, and tossing these into a campaign.

Of course, it can be done that way, but players and DMs who take this route will miss many of the new possibilities and expansions the *Tome of Magic* has to offer. On the surface, the *Tome of Magic* may appear to be just a collection of spells and magical items. But it contains new game rules and information that goes much deeper.

This volume introduces a new type of wizard magic, expanded specializations, new priest spheres, and new variations on priest magic. These rules have the potential to impact a campaign in a way greater than a first glance might suggest. To benefit the most from these expansions, the DM should carefully consider how to introduce and use the new rules.

## Who Is It For?

The *Tome of Magic* is written with both the DM and player in mind. Dungeon Masters who keep this book out the hands of their players are doing their game a disservice. Likewise, players who want this book only to learn about the new magical items are missing the point. Both player and DM can use this book to improve and expand the game.

## Wizards

In the game world of wizards, there are two significant additions--wild magic and elementalists. Wild magic is a strange, new type of magical power, just being explored and discovered for the first time. Wild mages are rare and exotic. Long before encountering such a wizard, characters may hear tell of a new type of magic in reports from travelers to distant lands. Of course, every adventurer knows that these reports tend to be exaggerated--more fiction than fact.

The first appearance of a wild mage is best presented by the DM as a mysterious NPC. The wild mage may join the party briefly or may be the springboard for an adventure. He should not be a henchman or hireling, but someone who is the characters' equal or superior. This gives players the opportunity to experience the wonders (and terrors) of wild magic before immersing themselves in this new art. After the characters have learned something of this strange magic, wild mage player characters may be introduced, perhaps as apprentices of the same NPC. Gradually, these new mages will

become accepted members of the campaign world.

Elementalists can be introduced in a similar fashion, although their arrival is likely to be less mysterious. The first appearance of the specialization could be a small school or guild in a nearby town, established by an elementalist from distant lands (where such magic is common). The newly established wizard is likely to be looking for an apprentice; new characters are eligible to join the school. Of course, established mages may take an interest (both positive and negative) in his activities.

## Priests

The introduction of new priest spheres can pose a logical problem in some campaigns--if an existing Power has influence in a certain sphere, why did his priests never have these spells before? Why do they wake up one morning and suddenly have access to spells never before seen?

The DM can use several solutions to this question. The first is most effective for such esoteric spheres as Thought and Numbers. In this case, few (if any) existing Powers have access to these spheres. Instead, priests arrive (as did wild mages) from distant lands, spreading the word of their god. These NPC priests have strange powers never before seen. In some locations, they may be accepted, while in others, they may be driven out with vengeance. As new player characters are created, this "new" faith with all its advantages and disadvantages becomes an option.

Another explanation, particularly useful for the spheres of War and Wards, is that the Power always had access to these spells, but never had the need to grant them. A deity of war could reasonably withhold spells of the War sphere until the threat of war exists. To introduce the War sphere into the campaign, the DM need only create a little border tension and massing of troops -- the perfect background for many adventures.

Certain deities may be too aloof or remote to become involved in the affairs of men until the need arises. This is particularly appropriate for the spheres of Law and Chaos. A shift in the "harmony of the universe" might warrant the attention of these Powers to "set things right."

The introduction of subdivisions in the elemental sphere can be effected in a similar manner. Foreign priests may enter the campaign region and introduce the concept, or existing priests might discover their own deities suddenly taking a more active interest in their spells. Conflict or rivalry on the elemental planes can be used to justify rigid adherence to a particular element. A fire god, feeling the rising power of a sea god, may enforce strict elemental selection to bolster the devotion of his priests.

Of all the new priest material, quest spells are the easiest to introduce. These are given by the DM only when special conditions warrant. It is easy to justify that conditions have never yet warranted the need for quest spells.

## Magical Items

Of all the new material in this book, magical items require the least effort to introduce. Many are simply treasures that can be discovered in a newly-won hoard. In this case, DMs are encouraged not to reveal all the powers of a newly-found item. Rather,

the player should be forced to puzzle out an item's powers. For example, the characters find a magical quill. What does it do? How is it used? Answering these questions is a goal that players can set for their characters. After spending time, spells, and money on research and possibly more adventures, the characters may discover that they own a *quill of law*.

Another effective and logical method for introducing never-before-seen magical items is for NPCs to possess these fascinating new devices. Thus, a wild mage might own a *rod of disruption* or an elementalist a *wand of corridors*.

## Patience, Patience, Patience

An important thing for both the DM and players to remember is that the existence of *Tome of Magic* does not mean that everything in it needs to be rushed into play. If the need for a particular spell does not exist right away, don't worry. Sooner or later, a player or DM will discover that it suits his needs perfectly. Properly used, the *Tome of Magic* will become a source of surprises and inspiration for many adventures to come.

## New Rules for Wizards

Mages and magic, great and small, are a key element of a fantasy campaign. While endowed with considerable powers, there are still vast horizons for mages to explore. Just a small portion of these possibilities is explored in the *Tome of Magic* --wild magic, elemental specialists, and metamagic.

## Wild Magic

One of the newest discoveries from the great lands of the Forgotten Realms is wild magic. Originally considered little more than the unfortunate by-product of an epic struggle among the gods of that world, the strange effects of the wild lands (as those areas affected by wild magic are known) have attracted the attention of many a curious or scholarly wizard.

In general, two types of wizards are drawn to these strange areas. The first are the researchers: wizards devoted to the study of the theoretical underpinnings of magic. For them, the wild areas expose long-hidden secrets of the magical universe and give new insights into how magical energy functions. From their work have evolved the beginnings of a theory of random magic--one that defies the traditional schools.

The second type of wizard drawn to the wild lands is far less rigorous and methodical. These spellcasters are attracted by the sheer randomness and uncertainty of the wild lands. Such mages seek to incorporate wild magic into their spells by combining traditional magic with the new theories of random magic, throwing in a dose of their own chaotic natures as an extra measure. These wizards are the true wild mages who have been seen recently in various lands.

Although initially discovered and researched on Toril, the FORGOTTEN REALMS® campaign world, the art of wild magic has quickly spread to other places. Wild mages, through teleporting, spelljamming, planar hopping, and even walking, have carried the

precepts of wild magic to lands and worlds far removed from Toril.

## Wild Mages

With the discovery of wild magic has come the appearance of wizards devoted to its study. Like their traditional specialist brethren, wild mages have thrown themselves into the intense study of a single aspect of magic. This has given them unique benefits and restrictions on their powers. Wild magic is so different from traditional magic that only those devoted to its study may cast wild magic; no wizard other than a wild mage may attempt to use the spells of wild magic.

Wild mages are by no means specialist wizards--at least not in the traditional sense. Wild mages do not study within the confines of schools. Instead, their research into new theories of wild magic carries them into all different fields. Wild magic has strengths in some areas (particularly divination and evocation), but it is not confined to any single school of magic. The proponents of wild magic proudly trumpet their art's broad base and flexibility as its great advantages.

Of course, these same advocates are quick to downplay wild magic's drawbacks. First and foremost, it is *wild* magic. On rare occasions, any spell can have dangerously unpredictable results, including backfiring or creating an entirely different effect from what was desired. More commonly, the magnitude of a spell--range, duration, area of effect, or even damage--may fluctuate from casting to casting. Spells cast by wild mages are inherently unpredictable.

Only characters with Intelligence of 16 or greater are qualified to become wild mages. The theories of wild magic are breaking new ground, and only characters of high intelligence are able to decipher the arcane convolutions of its meta-mathematical theory. Although wild magic is chaotic on the surface, study in this field requires diligence and discipline.

There are no restrictions to the alignment of a wild mage. The race of a wild mage is limited to those races with competency at magic; thus, only humans, elves, and half-elves can be wild mages. Gnomes have some magical talent, but lack the broad base of skills and knowledge necessary to master this new field.

Wild mages must abide by the normal restrictions for all wizards concerning weapons and armor. They use the same THAC0 and saving throw values of traditional wizards. They progress in level according to the Wizard Experience Levels and Wizard Spell Progression tables (Tables 20 and 21 in the *Player's Handbook* ).

Wild mages have several abilities and restrictions. Like specialists, wild mages are able to memorize one extra spell per spell level. This spell must be a wild magic spell, although it can be from any school; wild mages have no opposition schools as do specialists.

Wild mages receive a bonus of +10% when learning new wild magic spells and a -5% penalty when learning other spells. Because wild magic is somewhat "fast and loose," wild mages can research new spells as if they were one level less difficult, decreasing the amount of time and money needed to create new spells.

Certain magical items behave differently in the hands of a wild mage. This is due to his understanding of the random processes that power them. Most notable of these is the

*wand of wonder*. The wild mage has a 50% chance of controlling the wand, allowing him to use charges from the wand to cast any spell he already knows (but does not need to have memorized). The number of charges used by the wand is equal to the number of levels of the spell desired. If the attempt fails, only one charge is used and a random effect is generated.

The wild mage can control the following items 50% of the time, thereby allowing him to select the result or item instead of relying on chance: *amulet of the planes, bag of beans, bag of tricks, deck of illusions, deck of many things,* and the *well of many worlds*.

# Table 1: LEVEL VARIATION

| **True** | **----------Die Roll (D20)----------** | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Level | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** | **10** | **11** | **12** | **13** | **14** | **15** | **16** | **17** | **18** | **19** | **20** |
| 1 | -1 | -1 | -1 | -1 | -1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | +1 | +1 | +1 | +1 | **+1** |
| 2 | -1 | -1 | -1 | -1 | -1 | -1 | 0 | 0 | 0 | 0 | 0 | 0 | **0** | 0 | +1 | +1 | +1 | +1 | +1 | +1 |
| 3 | -2 | -1 | -1 | -1 | -1 | -1 | -1 | 0 | 0 | 0 | 0 | **0** | 0 | +1 | +1 | +1 | +1 | +1 | +1 | +2 |
| 4 | -2 | -2 | -1 | -1 | -1 | -1 | -1 | -1 | 0 | 0 | 0 | 0 | +1 | +1 | +1 | +1 | +1 | +1 | **+2** | +2 |
| 5 | -3 | -2 | -2 | -1 | -1 | -1 | -1 | **-1** | -1 | 0 | 0 | +1 | +1 | +1 | +1 | +1 | +1 | +2 | +2 | +3 |
| 6 | -3 | -3 | -2 | -2 | **-1** | -1 | -1 | -1 | -1 | 0 | 0 | +1 | +1 | +1 | +1 | +1 | +2 | +2 | +3 | +3 |
| 7 | -4 | -3 | -3 | -2 | -2 | -1 | -1 | -1 | -1 | 0 | **0** | +1 | +1 | +1 | +1 | +2 | +2 | +3 | +3 | +4 |
| 8 | -4 | -4 | -3 | -3 | -2 | -2 | -1 | -1 | -1 | 0 | 0 | +1 | +1 | +1 | **+2** | +2 | +3 | +3 | +4 | +4 |
| 9+ | -5 | -4 | -4 | -3 | -3 | -2 | -2 | -1 | **-1** | 0 | 0 | +1 | +1 | +2 | +2 | +3 | +3 | +4 | +4 | +5 |

**Boldface** results indicate a *wild surge*; consult Table 2; Wild Surge Results.

# Level Variations

The most broad-reaching aspect of the wild mage's powers is his approach to spells. The wild mage's work with the principles of uncertainty affects all spells that have a level variable for range, duration, area of effect, or damage. Each time a wild mage uses a spell with a level variable, he randomly determines the resulting casting level of the spell. The spell may function at lesser, equal, or greater effect than normal. The degree of variation depends on the true level of the caster, as shown in

To determine the level at which the spell is cast, the player must roll 1d20 at the moment the spell is cast. The variation from the caster's actual level is found at the point where the character's true level and the die roll intersect. (True level refers to the current experience level of the wild mage.) If the result is a positive number, that many levels are added to the caster's true level for purposes of casting the spell. If the result is a negative number, that many levels are subtracted from the caster's true level. If the result is 0, the spell is cast normally. The variation of a spell's power has no permanent effect on the mage's experience level or casting ability.

For example, Theos, a 7th-level wild mage, casts a *fireball*. He wishes it to take effect 70 yards away at the site of a band of advancing orcs. *Fireball* has level variables for range (10 yds.+10 yds./level) and damage (1d6/level). A die roll is made on the Level Variation Table with a result of 19, indicating a level variation of +3. The *fireball* functions as if cast by a 10th-level wizard (7+3) and easily reaches its target, causing 10d6 points of damage. If the level variation had been -3 (die roll of 2), the spell would

have operated as if it were 4th level. In this case, the *fireball* would have fallen short since its maximum range would have been 50 yards (10 yds+ 10 yds 1d4).

One additional effect can occur when casting level-variable spells. If the result from Table 1 is boldfaced, the caster has inadvertently created a *wild surge* in the spell in addition to the spell's effects. A wild surge briefly opens a doorway through which raw magical energy pours. The energy is incompletely controlled by the actions of the spellcaster. The result, often spectacular, is seldom what the caster intended and is sometimes a smaller or greater version of the desired spell. At other times, wildly improbable results occur. Songs may fill the air, people might appear out of nowhere, or the floor may become a pool of grease. Whatever happens, it is the essence of wildness.

When a wild surge occurs, the DM must roll on Table 2. Unlike many other instances in the AD&D® game in which the DM is encouraged to choose a suitable result, wild surges are best resolved by random chance. Actively choosing a result biases the nature of wild magic. DMs are encouraged to be random and have fun.

## Table 2: WILD SURGE RESULTS

| **D100 Roll** | **Result** |
|---|---|
| 01 | *Wall of force* appears in front of caster |
| 02 | Caster smells like a skunk for spell duration |
| 03 | Caster shoots forth eight non-poisonous snakes from fingertips. Snakes do not attack. |
| 04 | Caster's clothes itch (+2 to initiative) |
| 05 | Caster glows as per a *light* spell |
| 06 | Spell effect has 60' radius centered on caster |
| 07 | Next phrase spoken by caster becomes true, lasting for 1 turn |
| 08 | Caster's hair grows one foot in length |
| 09 | Caster pivots 180 degrees |
| 10 | Caster's face is blackened by small explosion |
| 11 | Caster develops allergy to his magical items. Character cannot control sneezing until all magical items are removed. Allergy lasts 1d6 turns. |
| 12 | Caster's head enlarges for 1d3 turns |
| 13 | Caster *reduces* (reversed *enlarge*) for 1d3 turns |
| 14 | Caster falls madly in love with target until a *remove curse* is cast |
| 15 | Spell cannot be canceled at will by caster |
| 16 | Caster *polymorphs* randomly |
| 17 | Colorful bubbles come out of caster's mouth instead of words. Words are released when bubbles pop. Spells with verbal components cannot be cast for 1 turn. |
| 18 | Reversed *tongues* affects all within 60 feet of caster |
| 19 | *Wall of fire* encircles caster |
| 20 | Caster's feet enlarge, reducing movement to half normal and adding +4 to initiative rolls for 1d3 turns |
| 21 | Caster suffers same spell effect as target |
| 22 | Caster levitates 20' for 1d4 turns |
| 23 | *Cause fear* with 60' radius centered on caster. All within radius except the caster |

must make a saving throw.

24 Caster speaks in a squeaky voice for 1d6 days
25 Caster gains X-ray vision for 1d6 rounds
26 Caster ages 10 years
27 *Silence, 15' radius* centers on caster
28 10'x10' pit appears immediately in front of caster, 5' deep per level of the caster
29 *Reverse gravity* beneath caster's feet for 1 round
30 Colored streamers pour from caster's fingertips
31 Spell effect rebounds on caster
32 Caster becomes *invisible*
33 *Color spray* from caster's fingertips
34 Stream of butterflies pours from caster's mouth
35 Caster leaves monster-shaped footprints instead of his own until a *dispel magic* is cast
36 3-30 gems shoot from caster's fingertips. Each gem is worth 1d6 x 10 gp.
37 Music fills the air
38 *Create food and water*
39 All normal fires within 60' of caster are extinguished
40 One magical item within 30' of caster (randomly chosen) is permanently drained
41 One normal item within 30' of caster (randomly chosen) becomes permanently magical
42 All magical weapons within 30' of caster are increased by +2 for 1 turn
43 Smoke trickles from the ears of all creatures within 60' of caster for 1 turn
44 *Dancing lights*
45 All creatures within 30' of caster begin to hiccup (+1 to casting times, -1 to THAC0)
46 All normal doors, secret doors, portcullises, etc. (including those locked or barred) within 60' of caster swing open
47 Caster and target exchange places
48 Spell affects random target within 60' of the caster
49 Spell fails but is not wiped from caster's mind
50 *Monster summoning II*
51 Sudden change in weather (temperature rise, snow, rain, etc.) lasting 1d6 turns
52 Deafening bang affects everyone within 60'. All those who can hear must save vs. spell or be stunned for 1d3 rounds.
53 Caster and target exchange voices until a *remove curse* is cast
54 Gate opens to randomly chosen outer plane; 50% chance for extra-planar creature to appear.
55 Spell functions but shrieks like a shrieker
56 Spell effectiveness (range, duration, area of effect, damage, etc.) decreases 50%
57 Spell reversed, if reverse is possible
58 Spell takes physical form of free-willed elemental and cannot be controlled by caster. Elemental remains for duration of spell. Touch of the elemental causes spell effect (THAC0 equal to caster's).
59 All weapons within 60' of caster glow for 1d4 rounds
60 Spell functions; any applicable saving throw is not allowed
61 Spell appears to fail when cast, but occurs 1-4 rounds later

62 All magical items within 60' of caster glow for 2d8 days
63 Caster and target switch personalities for 2d10 rounds
64 *Slow* spell centered on target
65 Target *deluded*
66 *Lightning bolt* shoots toward target
67 Target *enlarged*
68 *Darkness* centered on target
69 *Plant growth* centered on target
70 1,000 lbs. of non-living matter within 10' of target *vanishes*
71 *Fireball* centers on target
72 Target turns to stone
73 Spell is cast; material components and memory of spell are retained
74 Everyone within 10' of caster receives the benefits of a *heal*
75 Target becomes dizzy (-4 AC and THAC0, cannot cast spells) for 2d4 rounds
76 *Wall of fire* encircles target
77 Target levitates 20' for 1d3 turns
78 Target suffers *blindness*
79 Target is charmed as per *charm monster*
80 Target *forgets*
81 Target's feet enlarge, reducing movement to half normal and adding +4 to all initiative rolls for 1-3 turns
82 Rust monster appears in front of target
83 Target *polymorphs* randomly
84 Target falls madly in love with caster until a *dispel magic* is cast.
85 Target changes sex
86 Small, black raincloud forms over target
87 *Stinking cloud* centers on target
88 Heavy object (boulder, anvil, safe, etc.) appears over target and falls for 2d20 points of damage
89 Target begins sneezing. No spells can be cast until fit passes (1d6 rounds).
90 Spell effect has 60' radius centered on target (all within radius suffer the effect)
91 Target's clothes itch (+2 to initiative for 1d10 rounds)
92 Target's race randomly changes until canceled by *dispel magic*
93 Target turns ethereal for 2d4 rounds
94 Target *hastened*
95 All cloth on target crumbles to dust
96 Target sprouts leaves (no damage caused, can be pruned without harm)
97 Target sprouts new useless appendage (wings, arm, ear, etc.) which remains until *dispel magic* is cast
98 Target changes color (canceled by *dispel magic*)
99 Spell has a minimum duration of 1 turn (i.e., a *fireball* creates a ball of flame that remains for 1 turn, a *lightning bolt* bounces and continues, possibly rebounding, for 1 turn, etc.)
100 Spell effectiveness (range, duration, area of effect, damage, etc.) increases 200%

Unless otherwise noted, all spells created by a wild surge occur at the designated target point and function normally (appropriate saving throws are allowed). The caster's true level is used when calculating range, duration, area of effect, etc. of these spells.

The above list, while long, is only a small fraction of the possible results of a wild surge. The DM is free to create his own tables for wild surges.

Tables like the one above cannot take into account the situation at the instant of casting. It is not feasible to create tailored effects for every spell used in every possible way. Therefore, it is quite likely that some wild magic results will make no sense, be impossible, or have no visible effect. In these cases, the wild surge has no effect. For example, if a mage were casting a wizard lock on a door and triggered a wild surge with the result "Target changes sex," no effect would be visible, since doors do not have a sex (at least as far as we know). Likewise, a rock might be *hastened* or a snake might have its feet *enlarged*. In these cases, nothing happens--at least nothing that affects play. When determining the result of wild magic, the DM must use his best judgment.

Finally, not even the randomness of wild surges should be allowed to ruin the story of an adventure. As ultimate storyteller and arbiter of the game, the DM can overrule any wild surge he deems too destructive to the adventure. If this happens, reroll the dice to get a new result. In a case such as this, do not treat a wild surge as having no effect.

Clearly, wild mages are a risky proposition. Not every player will want to play a wild mage; not every party will want a wild mage. The DM should not add benefits to the wild mage, hoping to the make the class more "attractive" to his players. Players who like wild mages will play them without bribery. They will find the uncertainty and randomness of wild mages irresistible; these are the players for whom the wild mage was created.

## Elemental Wizards

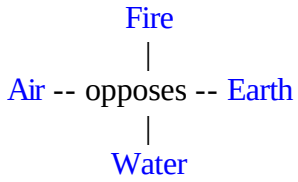
The elemental wizard is a new variety of specialist mage beginning to appear throughout the lands. These wizards scorn the "accepted" theories of magical classification (the rigid school structure) in favor of a holistic, natural understanding of magic. The result is elementalism.

Elementalism is not a school in itself; it is an area of specialization focusing on spells involving the four prime elements of air, earth, fire, and water. These spells may be from any of the nine schools of magic. The *fireball* spell, for example, belongs to the evocation school, but according to elementalists, it is also a spell of elemental fire.

Unlike other specialists, an elementalist does not specialize in a single school of magic, but may learn and cast spells belonging to any school. Although this may seem to be a great advantage, elementalists suffer considerable penalties when learning and casting spells that do not relate directly to the elements. The exception to this penalty is the spells of the school of lesser divination, which every wizard may learn.

Each element has a diametrical opposite: air opposes earth, fire opposes water, and vice versa. Every elementalist must choose one element as his specialty. He may learn and cast any spells relating to his chosen element and gains advantages when doing so. He may also cast spells of the two elements which do not oppose his specialty, for which he receives no bonuses or penalties. Consequently, he may not learn or cast any spells associated with the element that opposes his element of specialty. For example, a fire

elementalist may cast spells relating to fire, air, or earth, but may not cast spells of elemental water. A specialist is also prohibited from using magical items that duplicate spell effects of his oppositional element.



Although their repertoire of spells is small, elementalists are potent wizards, for they gain the following advantages when involved with spells of their chosen element:

- Elementalists receive a bonus of +25% when attempting to learn spells of their element and a bonus of +15% when learning other elemental spells. They suffer a penalty of -25% when trying to learn spells that do not relate to the elements.
- An elementalist may memorize one extra spell per level, providing that at least one of the memorized spells is from his element of specialty.
- Because elementalists have an enhanced understanding of spells within their element, they receive a +2 bonus when making saving throws against those spells. Other creatures suffer a -2 penalty when making saving throws against an elementalist casting spells from his specialty.
- Once per day, an elementalist may choose to cast one memorized spell from his element of specialty as if he were 1d4 levels higher. He must declare his decision to do this immediately prior to casting the spell. This affects range, duration, area of effect, and damage; it does not allow the wizard to cast a spell from a level which he normally could not use.
- When an elementalist attempts to create a new spell relating to his specialty element, the DM should count the new spell as one level less (for determining difficulty).
- Upon reaching 15th level, an elementalist does not need to concentrate when controlling elementals of his specialty element summoned by the 5th-level spell *conjure elemental* . The normal 5% chance of the elemental turning upon its summoner remains in effect.
- At 20th level, there is no chance of a summoned elemental turning upon an elementalist if the creature is of the wizard's specialty element.

A complete listing of elemental spells arranged by each element can be found in Appendix 1.

# Metamagic

Metamagic is a special term used by erudite and educated wizards to describe a single class of spells and magical items--those powers that alter or affect other magical spells and items. Met a magic spells do not directly affect people, objects, or events. Instead, the powers of metamagic are used to alter the fabric of spells themselves. Through metamagic spells, such as *far reaching* or *squaring the circle*, the once inviolable limits

of a spell can be altered. Range, duration, casting time, area of effect, and even sound and color can be tailored through the use of metamagical spells.

Although the concept of metamagic has existed since the beginning of magical study, it has generally been ignored by most wizards, who have been far more interested in spectacular effects and immediate results. However, a few independent researchers have continued to explore and expand this esoteric field of study.

# New Rules for Priests

Priests are hardly the unglamorous and weak adventurers that they are sometimes portrayed to be. They are an important part of any society, serving as more than just handy doctors. Priests have great responsibilities for the defense, guidance, welfare, and protection of a community. Because of this, their spells reflect more diversity and application when compared with wizard spells. The *Tome of Magic* provides priests with more tools to help them achieve their goals.

## Quest Spells

Priests and clerics are the servants of Powers--immortal entities with abilities far beyond those of mere mortals. Yet these servants do not wield magical forces equal to those of wizards; priests have nothing to compare with the wish spell, for example. Circumstances will arise when a priest should be able to call upon the magical energies controlled by his Power to achieve something extraordinary in serving a sacred duty. Quest spells are designed to satisfy these extremes and allow the priest to wield high-powered magic without drastically altering the scope of his magic.

Quest spells are a category of powerful spells without an assigned level. They should not be confused with the 5th-level spell quest, which is a specific single spell.

While quest spells are powerful, they are not as powerful as the energies used by Powers. If a god chose to flatten a mountain or raise an island, he could probably do so. Priests cannot achieve such huge effects; they are still mortal beings. But quest spells do provide a priest with magic more powerful than any other priestly magic; a quest spell could easily mean the difference between success or failure in a mission. Quest spells are capable of affecting large areas or numbers of creatures and allow the shaping of great energies; they are often difficult or impossible to resist or dispel.

Quest spells are not part of a priest's normal repertoire. These spells are granted powers, bestowed directly by one's deity to achieve special goals.

## Why Quest Spells

Two circumstances are most likely to warrant the granting of a quest spell to a priest. First, a Power may contact the priest in a dream or omen, or by sending a servant or avatar. In this case, the Power requests that the priest perform a vital service on behalf of the Power (the nature of such a request is discussed later). The priest is effectively commanded to go on a quest--hence, the generic title of quest spell.

A second case for the granting of a quest spell may occur if a priest were to discover something of fundamental importance to the faith which the Power must be appraised of (not all powers are omniscient). A priest contacting the Power (with a commune spell or by prayer) might beseech the Power to grant him some exceptional magic to address the situation. The request for a quest spell must never be motivated by selfish considerations on the priest's part (such hubris is grossly offensive to any Power), and circumstances must be truly exceptional. The Power then considers the priest's request and responds accordingly.

In game terms, the first condition translates to the DM using a quest spell as a plot device to spice up a quest for the priest and his party. The second condition translates to a player requesting exceptional aid for his priest PC followed by the DM's decision whether to allow this.

## Conditions for Quest Spells

*The circumstances which prompt a Power or priest to seek the use of a quest spell are usually related to a major sphere of concern of the Power.* A god of druids is not likely to grant a quest spell to address a matter of warfare, commerce, politics, knightly virtue, or other irrelevance (as this Power would view them). However, destruction of a huge swathe of forest by fire is entirely different. To protect or regenerate a great natural resource, a druidic Power would surely consider dispatching his most powerful servants with awesome magic. A major challenge demands a major response.

*A Power may choose to equip followers with a quest spell in preparation for a major conflict with servants of a hostile Power.* This may be true for both sides in the conflict; the NPCs as well as the PCS might be equipped with quest spells. In this manner, two Powers avoid fighting each other directly; their servants carry out the warfare instead. This will be a major event in any campaign setting! Milder variations on this theme would include the razing of a major temple of the enemy Power or the destruction of a major resource belonging to the Power's servants.

This is a situation in which a DM must exercise caution. This kind of conflict can easily swerve out of control and threaten the destruction of the game world; no Power wants this. Only if a Power has stepped out of line is the retribution by a rival Power tolerable among the community of Powers. If an evil temple has stood in the capital of an evil land for centuries, it is unacceptable for a good deity to strike at it. If an evil temple is hidden in nonevil lands, it is reasonable for a good Power to strike it down. It is important that game balance and the status quo are maintained.

*A Power is likely to grant a quest spell when there is a major threat to his followers, church, consecrated grounds, or territories.* These situations may become considerably extended; a Power of healing may extend the use of quest magic to help his priests cure a virulent plague affecting ordinary folk. For such a Power, the welfare of the common man is important. In cases such as this, game balance must be maintained by granting quest spells only in true catastrophes.

*Exceptional and unique circumstances will arise which will draw quest magic into the game.* This may include racial interests (for elves, dwarves, etc.) such as defense of the homelands or protection of great fortresses, or it may include communities of exceptional

artisans wishing to draw quest magic from Powers. The discovery of an intensely magical artifact or place important to the Power may necessitate the use of quest magic to secure it. Establishing and developing a major sacred location may justify the use of quest magic (especially with spheres such as Creation, Guardian, Protection, and Wards). Such cases will be individually determined by the DM as major elements of a campaign story line.

## Situations Unworthy of Quest Spells

What types of requests do not warrant a Power granting a quest spell? Generally, a quest spell is not needed for events which affect only a minor sphere of interest for the deity and events that are part of normal Prime Material conflict; a senior priest being killed by an agent of an evil Power isn't enough to justify the use of a quest spell. Any problem that has limited scale or should resolve itself in time through the normal efforts of priests does not need quest magic.

The DM must consider whether a problem is out of the ordinary. Only under extraordinary circumstances should a quest spell be granted. If the DM is in doubt, a simple question may provide the answer: Could the problem have a fair chance of resolution through the use of upper-level priest spells if wisely used? Only if the answer is "no" should quest magic be considered.

## Which Priests Receive Quest Spells

Only true and faithful servants of a Power who have successfully used powerful magic are eligible for quest spells. This limits quest spells to priests; although a paladin may be true and faithful, his experience is not sufficient to command the magical energies of potent quest magic.

Level limitations are important. It is very rare for a priest of lower than 12th level to be granted quest magic. Priests of 9th level and lower cannot use quest magic; the strain of holding and shaping such magic is too great.

A priest must possess Wisdom of 17 or better in order to cast quest spells. It is quite possible that a priest could be granted a quest spell but not possess the wisdom to cast 7th-level clerical spells; Powers sometimes work in mysterious ways.

Under normal conditions, quest spells are granted to high-level priests rather than their junior counterparts (when such an option exists, such as in a large temple). If the hierarchy of a temple has been destroyed, then the best of the junior echelons may be granted quest spells.

Some cases may not offer as many options as to the recipient of a quest spell. If the nearest priest to the site of a mission is of a lower level than priests at a faraway temple, the chances are good that this priest will be granted a quest spell rather than awaiting the arrival of a faraway superior. Similarly, if the senior priests of a temple are too old to travel or are needed to maintain order at the temple, a priest of a lower level may be granted the quest spell.

In some situations, a Power will recognize an extremely devoted follower by granting him a quest spell, passing up older, more experienced colleagues. Age and experience do

not indicate devotion or worthiness. Prodigies exist in all walks of life; clerics are no exception.

Faithfulness and piety of the priest are important but are difficult to judge. The priest must be unswerving in his alignment and have an exemplary record of service to the Power. It is reasonable to ignore an offense committed due to magical influence even if atonement was required (or voluntarily undergone) as a result.

Obviously, these criteria depend on DM judgment. The DM must remember that priests are mortals--and mortals have weaknesses. While a priest who has not been zealous in defense of the faith is a noncandidate for quest spells, a priest who is pure of heart but who has made a few errors might still be considered for quest magic. However, such a priest may be asked to undertake a preliminary quest to prove his worthiness to the Power. This is especially likely if there is no time pressure for the greater quest or if the priest has asked the Power for quest magic rather than the Power commanding the priest.

A preliminary quest is not a trivial affair; it should present a stiff challenge. In a campaign, it will be especially appropriate if such a quest doubles as a test of the priest's mettle and as an opportunity to acquire a new resource (magical items, henchmen, followers, NPC co-operation, etc.) which might assist the greater quest to come.

## How Is the Quest Spell Granted

A priest must undergo specific preparations to receive a quest spell. Isolated prayer and meditation for 24 hours are required (double this if he has Wisdom of only 17 or is below 12th level). If this period is interrupted, the priest must begin anew. Following this period, the priest needs one hour to establish and maintain a direct mental link with his deity and receive the spell into his mind. During this communion, the priest is in a state of exultation and is oblivious to the outside world. He cannot be roused from this reverie.

The DM may rule that specific ceremonies be carried out by the priest during the time of meditation and the time of the granting of the spell. These ceremonies should be determined in accordance with the nature of the religion. The priest may be required to be in a major church or temple for the ceremony. The presence of junior priests and acolytes, perhaps united in mass prayer, may also be needed. However, these are only suggestions and should not be rigidly enforced--a god of travelers would not require a quest spell to be granted in a temple, for example.

## Introducing the Quest Spell

Bringing a quest spell into a campaign should be a major event. It should create a powerful atmosphere that includes elements of pageantry, solemnity, and ceremony to make the event come alive in the game. Such considerations of staging and flavor are left to DM discretion and the demands of the campaign.

## The Cost of Quest Spells

Quest spells are not granted without a price. A priest receiving a quest spell is unable to memorize spells of the highest level which he is allowed. He loses any memorized

spells of that level (e.g., a 13th-level cleric is unable to use 6th-level spells).

Once a cleric has been granted a quest spell, he does not gain the ability to automatically cast it again. Each time a priest wishes to use a quest spell, he must repeat the described procedures.

## Adjudicating Quest Spells

The rules which follow apply to all quest spells. The DM should avoid altering these rules in order to use quest spells consistently and fairly.

**Components:** Material components are never needed for a quest spell. All quest spells use verbal and somatic components. Since this is invariant, components are therefore not included in the spell descriptions.

**Duration:** In the spell descriptions, the term "day" is often used. Day means "until the next dawn" if the spellcaster casts the spell during daylight hours and "until the next dusk" if he casts the spell during nighttime hours.

**Countering Quest Spells:** Most quest spells cannot be dispelled. Because of their semidivine origin, mortal *dispel magic* spells simply do not affect them. In most cases, only other quest magic will directly counter quest magic.

This also applies to attempts to counter specific elements of quest spells. For example, certain quest spells include the effect of a *prayer* spell in the area of effect of the quest spell. Such a *prayer* effect cannot be countered by the use of a mortal *prayer* spell. The quest prayer overrides the ordinary *prayer* spell.

**Saving Throws:** Target creatures at whom quest spells are cast are usually allowed no saving throws. Magical items which would normally protect them against the type of effect (e.g., a ring of free action against a hold/paralysis effect) allow a weakened saving throw of 18. Magic resistance functions, but at only one-half normal. If a quest spell has multiple magical effects, magic resistance checks must be made for each effect.

## Faith Magic

A unique feature of clerical magic is faith magic. Using this special category of priest spells, clerics can create semipermanent wards, sanctify ground, ensure good harvests, or even improve the health of followers. In short, this amplified magic allows certain clerical spells to be increased and intensified through the combined efforts of priests and worshipers. Range, area of effect, duration, and even damage can be altered through devotion and combined spellcasting.

To gain this ability, priests and their worshipers form groups to create faith magic. Clerics of nearly all religions seek out worshipers, establish temples, retire to monasteries, and establish seminaries. While there are many mundane reasons to form such groups, priests' attitudes are also shaped by this important difference between clerical and wizardly magic -- the ability to combine magical power. Wizard spells lack this property--even a large number of wizards cannot combine their spells into a whole. Thus, wizards gain no magical benefits from founding monasteries or attracting followers.

## Devotional Power

The core of faith magic is devotional power. This power comes from the dedication of ardent followers and priests. It is not something that can be manipulated directly (like a spell), although it is the source of power for spells. Unlike magical energy, devotional energy is not tied to a particular character class. Ordinary people are as much a source of this power as are adventurers. Only priests are significantly different, their lifelong dedication to their god being the wellspring for even greater power.

Not everyone is a source of devotional energy. Almost every character generates a small amount of power, but only those persons dedicated in their beliefs provide the amounts needed for faith magic. Even at this level, the total energy provided by each person is very small. Thus, faith magic can be used only when large numbers of sincere worshipers gather, such as particularly devout congregations, monasteries, seminaries, and universities operated by a religious order. Sincere belief is the most important factor. While persons attending a service may be numerous, casual followers do not contribute to the effect.

Before its power can be harnessed, the devotional energy of a group must be gathered and concentrated toward a single effect. This is known as focusing the effect. Once focused, the devotional energy provides power needed to maintain a spell effect, increase its area of effect, or create a number of other different results. A focus is created by means of the spell *focus*.

Once the devotional energy has been focused, the cleric or clerics can cast the spell to be amplified. Using the devotional energy gathered by the *focus*, the spell's effect is increased in area of effect and duration. The exact increase depends on the level of the priest who casts the *focus*. Such amplified spells typically affect a building (such as a church or hospital), group of buildings, or even an estate.

The spell remains in effect as long as the *focus* exists. This requires a minimum number of worshipers and periodic renewals of the spell. Since the duration of a *focus* is long, these renewals often coincide with important festivals of the religion, when numerous worshipers are present to provide devotional energy.

## Cooperative Magic

Cooperative spells are unique to priests. These spells allow several priests to combine their abilities to create a greater effect. *Combine* is one type of cooperative spell.

Cooperative spells do not require a focus or devotional energy; all that is required are two or more clerics of sufficient level to cast any cooperative spell. Casting times for cooperative spells are not excessive and their results are spectacular, making cooperative magic practical and useful to adventuring priests.

All priests who attempt cooperative magic must know the spell to be cast and must be of the same ethos. Generally, only priests of the same religion can use cooperative magic. However, priests of deities known to work in close harmony are sometimes able to use cooperative magic with each other. The decision lies with the DM, since the relations between different deities vary greatly from campaign to campaign.

# New Spheres

In addition to the new types of clerical magic, a number of new spheres are introduced in *Tome of Magic*. These spheres help to round out and complete the priest class.

## Chaos

Most of the spells in the Sphere of Chaos give the spellcaster the ability to add randomness and confusion to the world around him. Some of the spells change the probability of the outcomes of events, while others offer protection against Lawful influences.

Many of the spells of this sphere are tricky; while they usually help the spellcaster, there are times when the spell might harm the priest. Such is the way of Chaos--anyone who draws upon chaotic energy knows that nothing is certain, not even the influences of his god.

Powers that operate in this sphere are deities of mischief, trickery, ill luck, and those gods devoted to the power of the individual.

## Law

The Sphere of Law is based on two principles. The first is that the group is more powerful than the sum of the individuals who make up the group. The second is that the individual must obey established rules whether or not he personally thinks they are good rules. In both cases, the idea of order is exploited, sometimes beneficially, sometimes harmfully.

The beneficial spells of the Sphere of Law draw upon the first principle. Such spells coordinate the power of a group of characters. By using spells of this sphere, individuals who work closely together can become focused into a strong, united force.

The harmful spells of the sphere draw upon the second principle; they take the concept of law one step too far and prevent the individual from operating with a free will. These spells limit a person's choices and obliterate spontaneity and individual thought and action. Whereas beneficial spells draw a group together, harmful spells isolate the individual or even subjugate him to the commands of another person.

Deities of rulership, kingship, community, and culture are likely to act in this sphere.

## Numbers

The Sphere of Numbers revolves around the concept that numbers and mathematical relationships between numbers represent the "core truths" of reality or the "secrets of the universe." By studying numbers and their relationships, some scholars believe they can learn truths otherwise inaccessible; by manipulating numbers, they believe they can actually alter the fabric of reality.

This sphere uses spells that allow a priest to comprehend and use the mysteries of

numbers. Since many of these spells are incredibly intricate and depend on very esoteric concepts in mathematics and hypermathematics, only priests with relatively high intelligence (13 or higher) are allowed access to these spells.

Spells from this sphere are most likely to be granted by deities of knowledge (particularly arcane or hidden knowledge).

Many of the philosophies central to this sphere sound unusual, illogical, or even insane -- things one might expect to hear from the lips of a senile "prophet" who has discovered the "truth of All" in the pseudomathematical scratchings he makes in his notebooks. There are many cranks and charlatans claiming to predict the future who are often mistaken for true practitioners of this sphere and vice versa. A priest who is granted spells from the Sphere of Numbers may sound like a crank when he claims the birth dates of kings predict the date of Doomsday, but there is one fundamental difference between him and the charlatan: The priest's spells work.

## Thought

The Sphere of Thought is rooted in the philosophy of mentation and the effects of mental acts and structures on reality. Priests of this sphere believe that the common conception of the thought (i.e., a more-or-less objective analysis of sensory input which is in turn an objective perception of reality) is fallacious and misleading. These philosophers maintain that thought is and must be tied closely to reality. In effect, they believe that the thinker, the thought, and the subject of that thought somehow interact. Thus, thinking about an object or condition can sometimes cause a physical change in that object or condition.

Philosophers of this sphere also believe that once a thought has been created ("once a thought is thought"), it exists as a "freestanding mental object." This "thought object" can sometimes be detected and manipulated.

This sphere uses spells related to these philosophical beliefs. Like the Sphere of Numbers, these spells are intricate and are based on some esoteric concepts of philosophy. It is suggested that only priests with relatively high intelligence (13 or higher) be allowed access to these spells.

Spells of this sphere are most likely to be granted by deities of thought or knowledge (especially arcane or hidden knowledge). This sphere might have as its patrons certain deities who rule and exist in the abstract realms of thought. Certain isolated philosophers discuss the existence of a deity of solipsism (the philosophical belief that only the self exists). Since such a deity would believe that it exists alone in the universe, it would have no worshipers.

## Time

The spells of the Sphere of Time explore ways in which time can be altered and perceived. These spells manipulate the effects of the passage of time on objects and creatures and can also affect the passage of time itself. Such spells are often the province of deities associated with nature, philosophy, divination, and trickery.

## Travelers

Spells of this sphere provide aid and comfort to travelers, making their journeys safer, easier, and more enjoyable. Deities sympathetic to the well-being of explorers, nomads, and other wayfarers often allow access to this sphere.

## War

The Sphere of War involves magic specifically for use on the battlefield--in mass combat between large units. Usually, these spells are granted by deities of war: those Powers who believe that victory and courage in battle are the ultimate goals for mortals.

Priests who follow these gods are sometimes generals or leaders of armies. For these priests, tactical and strategic brilliance are as important as personal skill in combat.

There are significant differences between the spheres of War and Combat. Combat spells are those the priest can use in personal altercations. These spells inflict physical damage on an opponent or improve the combat abilities of the priest and several comrades. War spells, on the other hand, are concerned with aspects of large-scale battles other than direct infliction of damage: observation, identification, movement, morale, and the like. Few spells of this sphere inflict physical damage on the enemy.

Unlike spells of other spheres, most War spells can be cast only on a single military "unit." The definition of a "unit" is that which is used in the BATTLESYSTEM™ rules; however, the DM may rule that any large group of troops accompanied by PCS may qualify as a unit. Units can be infantry or cavalry (ground or airborne), human or non-human, of regular or irregular formation. In general, they must be organized as a single unit and must be at least five individuals in number. These spells are generally useless in individual combat.

Spells from the Sphere of War are designed to be used in large-scale battles like those played using BATTLESYSTEM™ rules; thus, these spells refer to concepts from this game system. Distances are referred to in linear inches (not game inches) and times are referred to in BATTLESYSTEM turns, but the DM is free to modify these statistics to suit combat outside the BATTLESYSTEM rules.

The deities who preside over the Sphere of War are careful when granting these spells to their priests. They will generally grant such spells only when a priest is about to enter battle. In the case of the more militant war gods, a priest who petitions for these spells inappropriately or misuses them may suffer dire consequences.

## Wards

This sphere includes spells that provide protection of clearly defined areas, ranging from small objects to entire villages. The magical boundaries established by these spells prevent entry or negate the effects of specific creatures, energies, or conditions. Many of the spells take advantage of cooperative magic, involving the casting of a spell by a number of assembled priests to enchant exceptionally large areas (refer to specific spells and the sections in this book on Faith Magic, Devotional Power, and Cooperative Magic for more information). Deities of war and protection, as well as those associated with

benevolence and mercy, might bestow these spells.

# Chapter 2: Wizard Spells

## Wizard Spells

### 1st Level

Conjure Spell Component
Fire Burst
Fist of Stone
Hornung's Guess*
Lasting Breath
Metamorphose Liquids
Murdock's Feathery Flyer
Nahal's Reckless Dweomer*
Patternweave*

### 2nd Level

Chaos Shield*
Hornung's Baneful Deflector*
Insatiable Thirst
Maximilian's Earthen Grasp
Nahal's Nonsensical Nullifier*
Past Life
Protection From Paralysis
Ride the Wind
Sense Shifting

### 3rd Level

Alacrity
Alamir's Fundamental Breakdown
Alternate Reality*
Augmentation I
Far Reaching I
Fireflow*
Fool's Speech*
Lorloveim's Creeping Shadow
Maximilian's Stony Grasp
Minor Malison
Spirit Armor
Squaring the Circle
Watery Double
Wizard Sight

## 4th Level

Dilation I
Divination Enhancement
Far Reaching II
Greater Malison
Locate Creature
Mask of Death
Minor Spell Turning
Mordenkainen's Celerity
Summon Lycanthrope
There/Not There*
Thunder Staff
*Turn Pebble to Boulder*
Unluck*

## 5th Level

Far Reaching III
Khazid's Procurement
Lower Resistance
Magic Staff
Mind Fog
Safeguarding
Von Gasik's Refusal
Vortex*
Waveform*

## 6th Level

Augmentation II
Bloodstone's Spectral Steed
Claws of the Umber Hulk
Dilation II
Forest's Fiery Constrictor
Lorloveim's Shadowy Transformation
Wildshield*
Wildstrike*

## 7th Level

Acid Storm
Bloodstone's Frightful Joining
Hatch the Stone From the Egg
Hornung's Surge Selector*
Intensify Summoning
Malec-Keth's Flame Fist
Shadowcat
Spell Shape*
Steal Enchantment
Suffocate

### 8th Level
Abi-Dalzim's Horrid Wilting
Airboat
Gunther's Kaleidoscopic Strike
Homunculus Shield
Hornung's Random Dispatcher*
Wildzone*

### 9th Level
Chain Contingency
Elemental Aura
Estate Transference
Glorious Transmutation
Stabilize*
Wail of the Banshee
Wildfire*
Wildwind*

*Italicized* spell is reversible.
An asterisk (*) indicates a wild magic spell.

# First-Level Spells

### Conjure Spell Component (Conjuration/Summoning)
Range: 1 mile/level
Components: V, S
Duration: 1 round
Casting Time: 1
Area of Effect: 3 components/level
Saving Throw: None

When this spell is cast, the wizard teleports desired items directly to his hand. The objects must be naturally occurring components for spells the wizard knows and they must be within spell range. The components must be items commonly found in the area, such as a twig, feather, firefly, or bit of beeswax in a forest.

If the components lie underground or underwater at a depth greater than 10 feet, they cannot be conjured, even if the caster is at a similar depth (such as in a cavern or at the bottom of a lake).

The spell will not cause the appearance of components whose value exceeds 1 gp. Thus, it is impossible to summon gemstones, crystals, metals, pearls, etc. Additionally, components cannot be manmade or altered from their natural state (coins, jewelry, cut or crushed gems, mirrors, etc.), nor can they be taken from someone else's possession.

A single *conjure spell component* spell will summon three components per level of the caster. They may be three different components or multiples of a single component.

Attempts to conjure an animal's body parts (such as bat fur) produce unpredictable

results. The DM should roll on the table below.

**D4**

| **Roll** | **Result** |
|---|---|
| 1 | Desired component appears. |
| 2 | Component does not appear. |
| 3 | Creature is teleported to the caster. |
| 4 | Caster is teleported to the creature. |

Only animals with Intelligence scores of 1-4 can be affected by this spell. Humanoids and fantastic animals (dragons, bugbears, unicorns, etc.) cannot be affected.

In all cases, the DM must use common sense to determine the likelihood of the component being located within spell range.

**Fire Burst (Alteration, Evocation)**
Range: 5 yards/level
Components: V, S
Duration: Instantaneous
Casting Time: 1
Area of Effect: One 10'-radius circle
Saving Throw: Neg.

When this spell is cast upon a nonmagical fire (such as a campfire, lantern, or candle), it causes the fire to flash and shoot arrows of flame. All creatures within 10 feet of the fire source suffer 1 point of damage per level of the caster (maximum of 10 points). Victims who roll a saving throw successfully suffer no damage.

**Fist of Stone (Alteration)**
Range: 0
Components: V, S
Duration: 1 round/level
Casting Time: 1
Area of Effect: The caster's hand
Saving Throw: None

Upon completion of this spell, one of the caster's hands (his choice) turns to stone. It is flexible and can be used to punch, smash, or crush objects and opponents as if the wizard had Strength of 18/00. Combat bonuses for Strength do not apply if the caster uses any weapon other than his fist.

While the spell is in effect, the wizard cannot cast spells requiring somatic components.

**Hornung's Guess* (Divination)**
Range: 300 yards
Component: V
Duration: Instantaneous
Casting Time: 2

Area of Effect: Special
Saving Throw: None

Hornung, one of the leading wizards in the field of wild magic (before his untimely disappearance while experimenting with *wildwind* ), developed this spell to improve the accuracy of his estimates. The spell provides a wizard with an instant and highly accurate estimate of the number of persons or objects in a group.

The spell's area of effect is one group of a general class of objects. All objects of the group must be within spell range and the group as a whole must be visible to the caster. The wizard need not see every individual in the group, merely the general limits of the group's size and area. For example, a wizard on a hill could look down on a forest and estimate the number of trees in all or part of it. He could not get an estimate of the number of goblins within the forest, however, since the group as a whole (the goblins) is concealed from sight.

The estimate generated is accurate to the largest factor of ten (rounded up). For example, if *Hornung's guess* were cast on a group of 439 horsemen, the estimate would be 400. If there were 2,670 horsemen, the spell would estimate 3,000. If there were 37 horsemen, the answer would be 40. Clearly, using the spell on small groups (especially those with fewer than 10 members) is pointless.

*Hornung's guess* can be used to quickly estimate the size of treasure hoards and army units. It is particularly popular with moneylenders and generals.

**Lasting Breath (Alteration)**
Range: 5 yards/level
Components: V, S
Duration: 1d4 rounds +1 round/level
Casting Time: 1
Area of Effect: One creature/level
Saving Throw: None

This spell increases the amount of time a character can hold his breath. As described in the *Player's Handbook*, a character can hold his breath for a number of rounds equal to one-third his Constitution score. The effect of this spell is added to that figure.

The duration of the spell is always unknown to the recipient; the DM secretly rolls 1d4 to determine the exact duration. At the end of this time, the character must succeed a Constitution check or be forced to take a breath as per the rules.

**Metamorphose Liquids (Alteration)**
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: 1'-cube/level
Saving Throw: Special

This spell transmutes one type of liquid into an equal amount of a different,

nonmagical fluid (water, wine, blood, oil, apple cider, etc.). The caster must touch the fluid itself (not simply its container) for the spell to take effect.

Magical liquids (such as potions) receive a saving throw vs. disintegration with a +3 bonus to avoid the spell's effect. Fluids can be transmuted only into nonmagical liquids; it is not possible to change a magical liquid into another type of magical liquid. Poisons may be rendered harmless through use of this spell, but the spell has no effect on poisons already consumed.

Living creatures are unaffected by the spell, excluding those from the elemental plane of water. Such creatures are allowed a saving throw vs. spell. Failure results in 1d4 points of damage per level of the caster, while success indicates half damage. Only one creature can be affected by a single casting of this spell, regardless of the creature's size.

The material component is a drop of the liquid that the caster intends to create, which must be placed on the wizard's tongue and consumed. Creating poisons through use of this spell is especially dangerous.

**Murdock's Feathery Flyer (Alteration)**
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 1
Area of Effect: The caster
Saving Throw: None Upon casting this spell, a feathery membrane grows under the wizard's arms, extending along his sides all the way to his feet. The membrane appears to merge with the caster's skin and clothing.

If the caster spreads his arms and jumps from a height, he may glide through the air. For each foot of elevation, the wizard can glide five feet horizontally. Thus, a wizard jumping from a 10-foot wall could glide up to 50 feet. Gliding characters have a movement rate of 12 and Maneuverability Class E. A wizard attempting to carry more than his normal weight allowance plummets to the earth upon takeoff.

When the spell expires, the feathers instantly disappear. If the wizard is airborne, he immediately plummets toward the ground.

The material component is an eagle's feather.

**Nahal's Reckless Dweomer* (Invocation/Evocation)**
Range: Special
Components: V, S
Duration: Special
Casting Time: 5
Area of Effect: Special
Saving Throw: Special

This spell is the wild mage's ultimate last-resort spell. When cast, the mage releases a sudden flood of wild magical energy in the hope of seizing and shaping that energy into a desired spell effect. The attempt usually fails, but something almost always occurs in the process.

Before casting the spell, the mage announces the spell effect he is trying to create. The mage must be able to cast the spell (i.e., have it in his spell books), but need not have it memorized. After announcing the spell (along with the target and any other conditions required by the spell), the wild mage casts *Nahal's reckless dweomer*. A burst of magical energy is released, which the wild mage tries to manipulate into the desired form. The actual effect of the spell is rolled randomly on Table 2: Wild Surge Results.

Because the release of energy is planned by the mage, his level is added to the dice roll. If the result indicates success, the mage has shaped the magical energy into the desired effect. More often than not, the effect is completely unexpected. The result may be beneficial to the mage or it may be completely disastrous; this is the risk the mage takes in casting *Nahal's reckless dweomer*.

**Patternweave* (Divination)**
Range: 10 yards
Components: V, S, M
Duration: 1 round
Casting Time: 3
Area of Effect: 10-foot square
Saving Throw: Special

*Patternweave* allows the caster to make sense of apparent chaos. The caster can see such things as pottery shards reformed into a whole pot, shreds of paper formed into a page, scattered parts as a working machine, or specific trails appearing out of overlapping footprints.

After casting the spell, the mage studies seemingly random elements--broken bits of glass, shreds of paper, intermingled trails, etc. The items to be studied must be tangible--coded flashing lights, garbled speech, or thoughts of any kind cannot be studied.

The wizard must study the random elements for one round, after which the DM secretly makes a saving throw vs. spell for the wizard. If the saving throw is failed, the spell fails. However, if the saving throw is successful, the caster sees in his mind the pattern these objects form. If the items studied are truly random, no information is gained.

After the caster has visualized the pattern, he can attempt to reassemble the parts into their original form. This requires another saving throw vs. spell to determine whether the mage remembers sufficient details to accomplish the task. The amount of time required and the quality of restoration vary according to the complexity of the pattern. Reassembling a shredded map may be easy; reassembling a broken clock is significantly more difficult; rebuilding a shattered mosaic is extremely difficult. In any case, the wizard can make only a reasonable copy of the item. He can use this spell to restore works of art, but they will be worth only a small percentage of their original value.

The material component is a small hand lens through which the caster studies the objects. The lens is not consumed in the casting.

# Second-Level Spells

**Chaos Shield*** **(Abjuration)**
Range: 0
Components: V, S
Duration: 1d10 rounds+2 rounds/level
Casting Time: 2
Area of Effect: The caster
Saving Throw: Special

Following the discovery of wild magic came the discovery of wild surges and the personal danger such surges create. After several wild mages destroyed themselves by rather spectacular means (or suffered very odd side effects), the *chaos shield* was created as protection from these surges.

This spell imbues the wild mage with special protection against the effects of wild surges. It protects only against wild surges caused by the caster's own spells, not from the effects of another mage's wild surges.

When a wild surge affects a caster protected by *chaos shield*, he is allowed a saving throw vs. magic. If the saving throw is successful, the effect of the surge on the caster is negated. If the saving throw is failed, the caster is affected normally by the surge. The spell does not protect against wild surges that might be caused by its own casting.

The *chaos shield* protects only the caster and does not negate the effects of a wild surge for other characters who might be in the area of effect. The caster cannot voluntarily cancel the protection once he has learned the nature of a wild surge; the *chaos shield* protects from both good and harmful effects. Thus, if a wild surge resulted in a *heal* spell for all characters within 10 feet of the caster, the protected caster might not benefit, while all others in the radius would be *healed*.

The spell remains in effect until it negates a wild surge or the spell duration expires.

**Hornung's Baneful Deflector*** **(Evocation)**
Range: Touch
Components: V, S, M
Duration: 2 rounds/level
Casting Time: 2
Area of Effect: One creature
Saving Throw: None

This spell partially surrounds the recipient in a shimmering, hemispherical field of force. The field is transparent and moves with the subject, forming a shell about one foot away from his body. The shell serves as a shield against all forms of individually targeted missile attacks (including magic missiles and other spells). The caster designates the position of the shell (protecting the front, rear, side, or top of the recipient). The spell does not protect against area effect spells or other attacks that strike several creatures at once.

Whenever an individual missile attack is directed at a protected creature, the baneful deflector activates. Instead of striking the target creature, the missile's target is determined randomly among all creatures within a 15-foot hemisphere of the protected creature, including the protected creature. The missile then changes course toward its new

target with normal chances to hit. If the new target is beyond the range of the missile, no target is hit. If the protected creature is struck, the spell immediately fails. If several people are protected by *baneful deflector*, a missile will change course several times before reaching its target.

The material component is a small prism that shatters when the spell is cast.

**Insatiable Thirst (Enchantment/Charm)**
Range: 5 yards/level
Components: V, S
Duration: 1 round/level
Casting Time: 2
Area of Effect: One creature
Saving Throw: Neg.

This spell instills in the victim an uncontrollable desire to drink. The victim is allowed a saving throw to avoid the effect. If the roll is failed, the creature must consume any potable liquids it can find (including magical potions, which might result in strange effects if potions are mixed). Although poisons are not considered potable, a victim may not realize that a liquid is poisonous. The victim will not consume a liquid he knows to be poisonous.

No matter how much the creature drinks, its magical thirst is not quenched until the spell ends. During this time, the creature can do nothing but drink or look for liquids to drink. Victims of this spell believe they are dying of thirst and (depending upon their nature) may be willing to kill for drinkable fluids.

**Maximilian's Earthen Grasp (Evocation)**
Range: 10 yards+10 yards/level
Components: V, S, M
Duration: 3 rounds+1 round/level
Casting Time: 2
Area of Effect: One creature
Saving Throw: Special

This spell causes an arm made of compacted soil to rise from the ground. The spell must be cast on open turf, such as a grassy field or a dirt floor.

The earthen arm and hand (which are about the same size as a normal human limb) arise from the ground beneath one creature targeted by the caster. The hand attempts to grasp the creature's leg. The victim must attempt a saving throw; if successful, the hand sinks into the ground. Each round thereafter (until the spell ends or the target moves out of spell range), the hand has a 5% chance per level of the caster of reappearing beneath the targeted creature, at which time another saving throw is required.

If a saving throw is missed, the earthen limb firmly grasps and holds the creature in place. An individual held by the hand suffers a movement rate of 0, Armor Class penalty of -2, and attack penalty of -2. All Dexterity combat bonuses are negated. The hand causes no physical damage to the victim.

The arm may be attacked by any creature, including the arm's victim. The arm has

AC 5 and hit points equal to double the caster's maximum hit points. For example, a caster who normally has 15 hit points can create an earthen hand with 30 hit points. The maximum number of hit points that an earthen hand may have is 40. When the arm's hit points are reduced to zero or when the spell duration ends, the hand crumbles.

The material component is a miniature hand sculpted from clay, which crumbles to dust when the spell is cast.

**Nahal's Nonsensical Nullifier* (Abjuration)**
Range: Touch
Components: V, S, M
Duration: 1d6 rounds+1 round/level
Casting Time: 2
Area of Effect: Creature touched
Saving Throw: None

This spell scrambles the aura of the affected creature, giving random results to *know alignment*, *detect evil*, and *detect lie* spells cast on that creature.

When a protected creature is the focus of one of these divinations, the information gained is randomly determined. Thus, if *know alignment* is used against a chaotic evil creature protected by the *nonsensical nullifier*, the response could be any alignment combination. If two characters both use the same divination on the same target, two random results are generated.

A new random result is generated each round; thus, continued observation of a protected creature usually results in different answers. The table below should be used to determine the random alignment.

**D10**

| Roll | Alignment |
|---|---|
| 1 | Lawful Good |
| 2 | Lawful Neutral |
| 3 | Lawful Evil |
| 4 | Neutral Good |
| 5 | Neutral |
| 6 | Neutral Evil |
| 7 | Chaotic Good |
| 8 | Chaotic Evil |
| 9 | Chaotic Neutral |
| 10 | No alignment |

The material component is a small amount of egg yolk smeared into the hair of the recipient.

**Past Life (Divination)**
Range: Touch
Components: V, S
Duration: Special
Casting Time: 1 round

Area of Effect: One creature
Saving Throw: None

By touching the remains of a dead creature, this spell allows a caster to gain a mental image of the deceased's former appearance. The remains can be of any age and only a tiny fragment is required, such as a bone splinter or a strand of hair.

When cast by a wizard of at least 7th level, he is able to view the final minute of the subject's life from the subject's point of view.

When cast by a wizard of at least 9th level, a personal possession (a ring, a favorite walking stick, etc.) may be substituted for bodily remains.

**Protection From Paralysis (Abjuration)**
Range: Touch
Components: V, S, M
Duration: 1 turn/level
Casting Time: 2
Area of Effect: One creature
Saving Throw: None

The recipient of this spell receives total immunity to magical paralysis. Spells such as *hold person* and *slow* have no effect on the individual. This spell also provides protection against the paralysis attacks of monsters (a ghoul's touch, for example). This spell offers no protection against physical damage.

The material component is a bit of cloth taken from a priest's robes.

**Ride the Wind (Alteration)**
Range: 5 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 2
Area of Effect: One creature/level
Saving Throw: Neg.

This spell allows creatures targeted by the caster to become virtually weightless and be lifted upon the wind. Affected creatures can control their altitude by rising or descending at a movement rate of 12, but are at the mercy of the wind for speed and direction. Recipients can stop forward movement only by grasping something to anchor them in place. If no wind is present, this spell has no effect.

Unwilling targets are allowed a saving throw to resist the effect.

Each subject and his equipment must weigh less than 100 pounds per level of the caster. Thus, a 6th-level wizard could affect six creatures each weighing 600lbs. or less. This spell may be cast only on living creatures.

The material components are a small handful of straw and a dry leaf.

**Sense Shifting (Alteration)**
Range: 0

Components: V, S, M
Duration: 3 turns
Casting Time: 2
Area of Effect: The caster
Saving Throw: None

*Sense shifting* allows the wizard to affect all spells of levels 1 through 3 that he casts within the duration of the spell. For each spell, he can modify one of three sensory features pertaining to the spell: color, sound, or patterned visual appearance of the spell effect. The changes produced by this spell do not affect the functions of the affected spell nor any saving throws that apply against their effects.

*Sense shifting* might be used to produce green *fireballs*, *magic missiles* that streak through the air with a scream, colored *continual light* globes, customized designs for a *hypnotic pattern*, or a *spectral hand* that makes scrabbling sounds as it attempts to grasp a target.

*Sense shifting* cannot create any form of invisibility. It cannot completely silence a spell effect (thus, a *fireball's* blast might be muted, but not wholly eliminated).

The material component is a twist of multi-colored ribbon with a small silver bell fastened to its end.

# Third-Level Spells

**Alacrity (Alteration)**
Range: 0
Components: V, S, M
Duration: 1 turn+1 round/level
Casting Time: 1
Area of Effect: The caster
Saving Throw: None

The use of an *alacrity* spell allows the wizard to speed up the casting of spells of 5th level and lower. Only spells that are cast within the *alacrity* spell's duration are affected.

Casting times of 2-5 are reduced by 1; casting times of 6-9 are reduced by 2; and a casting time of one round is reduced to a casting time of 8. Casting times for spells which require more than 1 round are reduced by 20% (e.g., an *animate dead* spell affected by *alacrity* could be cast in only 4 rounds). Spells which have a casting time of 1 are not affected by this spell.

The material component is a miniature hourglass which is destroyed when the spell is cast.

**Alamir's Fundamental Breakdown (Divination)**
Range: Touch
Components: V, S, M
Duration: Special

Casting Time: 1 round
Area of Effect: One item
Saving Throw: Special

By casting this spell, the wizard learns what ingredients and formulas were used to create a chemical mixture or magical item.

The information instantly appears in the caster's mind but may be lost if the wizard cannot comprehend it. The caster must roll an Intelligence check; if successful, the wizard understands the formula and retains it in his memory. If the roll is missed, the caster cannot comprehend what he has learned and the information is immediately forgotten. If the spell is cast a second time on the same substance, the spell automatically fails unless the wizard has advanced to the next experience level.

The caster's level determines the type of information gleaned:

*5th Level:* The type and quantity of ingredients and the preparation process required to produce a non-magical mixture are learned. For example, the wizard could learn how to produce Greek fire or gunpowder, or could learn the recipe for something simple, like chocolate cake.

*9th Level:* The wizard may learn the proper ingredients and formula for making a magical liquid (potion, scroll ink, etc.).

*14th Level:* The caster may learn the formula for creating any type of magical object, excluding unique items and objects of extreme power (artifacts and relics).

In all cases, simply knowing the proper formula does not mean the wizard can successfully create the item or material. The construction of alchemical mixtures and magical items is a time-consuming and expensive undertaking.

This spell has detrimental effects on the magical item analyzed. Single-use items (potions, oils, etc.) are automatically destroyed; the spell consumes the item in the process of analyzing it. Reusable magical items must make a saving throw vs. disintegration. If the saving throw is failed, *Alamir's fundamental breakdown* releases the magic of the item in an explosive blast, rendering it permanently nonmagical. The caster suffers 4d8 points of damage from the explosion.

The material component is a wand cut from a 100-year-old oak tree. The wand is used to touch the item in question, and vanishes in a puff of smoke when the spell is complete.

**Alternate Reality*** **(Alteration)**
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 3
Area of Effect: Creature touched
Saving Throw: None

With this spell, the caster creates a small variation in probabilities. This variation lasts only a moment, but creates alternate results for one recent event. When the spell is cast, any one event attempted by the recipient during the previous round is recalculated, essentially allowing (or forcing) the creature to make new die rolls.

Only events that begin and end in a single round can be affected. Only one die roll

can be rerolled. If the creature touched is a willing recipient, the player can choose which roll (the original or the new roll) affects him, more than likely picking the most successful. If the creature is unwilling, he must redo the action. The second result, whatever its outcome, cannot be changed.

Typical uses of this spell include allowing a fighter to reroll an attack, forcing an opponent to reroll a saving throw, or allowing a wizard to reroll the damage caused by a fireball.

The material component is a small, unmarked die.

**Augmentation I (Invocation/Evocation)**
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 2
Area of Effect: Special
Saving Throw: None

This spell augments the damage inflicted by any spell of levels 1-3. For each die of damage rolled, the caster adds one point to the damage total.

The *augmentation I* spell affects only one spell cast on the round immediately following the *augmentation*. If an entire round or more elapses, the *augmentation* is wasted.

Only spells which cause direct physical damage are affected by *augmentation*; for example, monsters gained through *monster summoning I* gain no bonuses to their damage.

The material component is a pair of concentric circles of bronze or silver.

**Far Reaching I (Alteration)**
Range: 0
Component: V
Duration: Special
Casting Time: 2
Area of Effect: Special
Saving Throw: None

This spell allows the wizard to extend the range of any one 1st- or 2nd-level spell by 50% or any one 3rd-level spell by 25%. The spell to be affected must be cast on the round immediately following the *far reaching I* spell. If a complete round or more elapses, the *far reaching I* is wasted.

*Far reaching I* affects only a spell cast by the same wizard. *Far reaching I* does not affect spells that have range of 0 or touch.

**Fireflow* (Alteration)**
Range: 30 yards
Components: V, S, M
Duration: 1 round/level

Casting Time: 3
Area of Effect: One fire source
Saving Throw: None

This spell allows a wizard to control natural fires by manipulating randomness and adjusting probabilities to cause them to spread and take shape in any direction he desires. Once cast, the wizard points at any fire within range. He can then cause that fire to move in any direction desired within spell range, as long as the flames contact a solid surface (the fire may not be raised in the air).

The caster must maintain concentration or the spell fails. The flames can be spread at the rate of 50 square feet per turn. Thus, if a caster affects a campfire, he could create a flaming line 1 foot wide and 50 feet long or fill a 5' 0 10' square in a single round.

The flames are not limited by a lack of burnable material and can be directed to spread over water, snow, ice, and other nonflammable surfaces. The surface is not harmed, but objects and creatures caught in the flames suffer damage as if they had stepped into the original fire source. Thus, a character caught in flames created from a candle will suffer only minor damage, while a character caught in a blaze that originated from a huge bonfire will be severely burned.

The material components are a small paintbrush and a pot of pitch.

**Fool's Speech*** **(Alteration)**
Range: Touch
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 turn
Area of Effect: Caster+1 creature/level
Saving Throw: None

With this spell, the wizard empowers himself and others of his choosing with the ability to speak a secret language incomprehensible to others. Creatures designated to speak the language must be touching each other when the spell is cast.

Once cast, the characters can choose to speak normally or in their secret tongue. They can speak and understand this mysterious language fluently.

*Fool's speech* is not recognizable as any known language, nor does it remotely sound like any language. A *comprehend languages* or *tongues* spell will not translate it. It can be understood by a character wearing a *helm of comprehending languages and reading magic*, although the normal percentage chances apply.

The material component is a small whistle made of bone.

**Lorloveim's Creeping Shadow** **(Illusion)**
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 7
Area of Effect: The caster's shadow
Saving Throw: None

This spell causes the wizard's shadow to elongate, stretching away from his body at a rate of 15 yards per round. It can elongate a maximum distance of 10 yards per level of the caster.

The shadow moves as an ordinary shadow, along floors and up walls. The caster may maneuver in any manner feasible to place the shadow where he desires. A caster might position his shadow over a high window in a tower in order to spy on the tower's occupants. The shadow makes no sound and is 90% undetectable in all but the brightest surroundings.

While the spell lasts, the illusionist can see, hear, and speak through his shadow. The shadow cannot physically touch, pick up, or attack creatures or objects. It can be struck only by spells, magical weapons of +1 or better, or other special attacks (such as a dragon's breath). The shadow has the same Armor Class as the caster. Hit points lost by the shadow are suffered by the caster.

To cast the spell, a light source of at least the brightness of a candle must be present.

The material component is a small statuette of the caster sculpted from a piece of obsidian worth at least 1,000 gp.

**Maximilian's Stony Grasp (Evocation)**
Range: 20 yards+10 yards/level
Components: V, S, M
Duration: 5 rounds+1 round/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: Special

This spell must be cast on stony ground, such as a manmade stone floor, a natural cavern floor, or a boulder-strewn field. It is not possible to cast the spell on a stone wall or ceiling. The spell causes an arm made of stone (about the same size as a normal human limb) to rise from the ground beneath any creature targeted by the caster. The stony hand attempts to grasp the leg of the targeted creature, who is allowed a saving throw to avoid the effect; if the save is successful, the hand disappears. Each round thereafter, the hand has a 5% chance per level of the caster of reappearing and attacking.

Creatures grasped by the hand suffer a movement rate of 0, AC penalty of -2, and attack penalty of -2. Grasped characters lose any Dexterity bonuses. The hand causes no damage to its victim.

The stony limb has AC 2 and hit points equal to triple the caster's maximum hit points. The maximum number of hit points a stony hand may have is 60.

The material component is a miniature hand sculpted from stone, which crumbles to dust when the conjured hand is destroyed or the spell expires.

**Minor Malison (Enchantment/Charm)**
Range: 60 feet
Component: V
Duration: 2 rounds/level
Casting Time: 2

Area of Effect: 30-foot-radius sphere
Saving Throw: None

This spell allows a wizard to adversely affect all the saving throws of his enemies. Opponents under the influence of this spell make all saving throws at a penalty of -1.

Alternatively, the wizard may select any one school of magic and cause his enemies to make all saving throws against magic from that school at -2. This penalty is not cumulative with a saving throw penalty derived from the wizard being a specialist; the penalty is not increased to -3.

**Spirit Armor (Necromancy)**
Range: 0
Components: V, S
Duration: 2 rounds/level
Casting Time: 3
Area of Effect: The caster
Saving Throw: Special

This spell allows the wizard to surround himself with a portion of his own life essence, which takes the form of a shimmering aura. The *spirit armor* offers protection equivalent to splint mail (AC 4) and grants the wizard a +3 bonus to saving throws vs. magical attacks. The *spirit armor's* effects are not cumulative with other types of armor or magical protection, but Dexterity bonuses apply.

The *spirit armor* is effective against magical and nonmagical weapons and attacks. It does not hinder movement or add weight or encumbrance. It does not interfere with spellcasting.

When the spell ends, the aura dissipates and the caster temporarily loses a bit of his life essence, suffering 2d3 points of damage unless he succeeds at a saving throw vs. spell. No damage is sustained if the save is successful. The hit points lost can be regained only through magical healing.

**Squaring the Circle (Alteration)**
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: Special
Saving Throw: None

*Squaring the circle* allows a wizard to alter the shape of the area of effect of one spell of 1st- through 5th-level spells. The spell to be affected must be cast within the duration of the *squaring the circle spell*.

Square or cubic areas of effect can be transformed into circular or spherical areas of effect. Circular or spherical areas of effect can likewise be transformed into square or cubic areas of effect. In both cases, the length of a side of a square area is equated to the diameter of a circular or spherical area.

Alternatively, a square or cubic area can be transformed into a rectangle. The rectangle cannot cover more or less square footage than the standard square area of the spell.

Similarly, a circular or spherical area can be transformed into an oval or egg shape. The area covered by the oval or egg shape cannot cover more or less square footage than the original area of the spell.

The material component is a small pendant of any precious metal with a circle fashioned inside a square.

**Watery Double (Conjuration/Summoning, Enchantment)**
Range: Touch
Components: V, S
Duration: Special; max. 10 rounds
Casting Time: 3
Area of Effect: One body of liquid
Saving Throw: Neg.

This spell may be cast on any body of liquid as large as an ocean or as small as a glass of wine. The first creature whose reflection is cast on the surface of the liquid releases the spell. When the spell is triggered, the liquid immediately forms an exact three-dimensional image of the reflected creature. If more than one creature casts a reflection simultaneously, only one watery double forms. Each creature has an equal chance of being the victim of the spell (roll randomly).

The size of the *watery double* is restricted by the volume of fluid available. If the spell were cast on a full mug of ale, the double would form from the ale, becoming a mug-sized duplicate of the victim. The *watery double* will never exceed the actual size of the victim regardless of the size of the body of liquid.

When the spell is cast on the liquid, its duration is considered permanent until the power is released by a creature's reflection. The liquid will not evaporate until the spell is triggered. When the *watery double* forms, it remains animated for 1 round per experience level of the caster, to a maximum of 10 rounds.

The *watery double* attempts to touch the creature it has duplicated. It can affect only the creature that it resembles. It has the same THAC0 and current hit points as the creature it duplicates, but cannot cast spells or use any of the creature's magical items or special abilities. The *watery double* is AC 6 and its movement rate is double that of the victim. It may seep under doors and through cracks.

If the *watery double* succeeds in touching the creature, it merges with the individual, covering his entire body in a skin of liquid. The victim must attempt a saving throw. If successful, the creature has resisted the spell's effect and the *watery double* "dies," becoming normal fluid (and soaking the creature in the process). If the saving throw is failed, the *watery double* begins forcing its way into the victim's body, inflicting 1d8 points of damage per round until it is destroyed.

The *watery double* dissipates if reduced to zero hit points or when the spell's duration expires. Striking the watery double while it is wrapped around its victim causes an equal amount of damage to the victim. *Part water, lower water*, and *transmute water to dust* spells instantly destroy a *watery double*.

**Wizard Sight (Divination)**
Range: 0
Components: V, S
Duration: 1 round/level
Casting Time: 3
Area of Effect: The caster
Saving Throw: None

Upon completion of this spell, the caster's eyes glow blue and he is able to see the magical auras of spellcasters and enchanted objects. Only the auras of those things normally visible to the caster are seen; this spell does not grant the wizard the ability to see invisible objects, nor does it give him X-ray vision. This spell does not reveal the presence of good or evil or reveal alignment.

While *wizard sight* is in effect, a wizard is able to see whether someone is a spellcaster and whether that person is a priest or a wizard (and what type of specialist, if any). He can sense if a nonspellcaster has the potential to learn and cast wizard spells (e.g., whether a fighter will someday gain the ability to cast a spell).

Although a spellcaster's level cannot be discerned, the wizard can see the intensity of a spellcaster's aura and guess at the individual's magical power (dim, faint, moderate, strong, overwhelming). This can be extremely ambiguous even when a wizard has some method of comparison; the DM might announce that a subject's intensity is roughly equivalent to that of a companion, or he might announce that a subject's aura is the strongest the wizard has ever encountered.

An object's magical abilities cannot be discerned. The fact that it is magical and the type of magic (abjuration, alteration, etc.) are obvious. The wizard can see the intensity of an item's magical aura and guess at its power, but cannot tell whether a magical item is cursed.

# Fourth-Level Spells

**Dilation I (Alteration)**
Range: 0
Component: V
Duration: Special
Casting Time: 4
Area of Effect: Special
Saving Throw: None

*Dilation I* allows a wizard to increase the area of effect of any one spell of levels 1-3. The area of effect is increased by 25%; thus, a *stinking cloud* would fill a 25-foot cube, while a slow spell would affect creatures in a 50-foot cube. Fractions of feet or yards (as appropriate to the spell) are dropped.

*Dilation I* must be cast immediately prior to the spell to be dilated; if a complete round or more elapses, the dilation is wasted. The dilation spell affects only spells which have areas of effect defined in feet or yards (numbers of creatures cannot be increased).

The dilation affects only spells cast by the same wizard.

**Divination Enhancement (Evocation)**
Range: 0
Component: V
Duration: 2 turns+2 rounds/level
Casting Time: 4
Area of Effect: The caster
Saving Throw: None

This spell allows a wizard to extend both the duration and range of the *wizard eye* spell and any divination spells of levels 1-4. Duration and range are both increased by 50% for the length of the *divination enhancement*.

All divination spells cast within the duration of the enhancement are increased. The expiration of the enhancement cancels all divination spells in effect.

**Far Reaching II (Alteration)**
Range: 0
Component: V
Duration: Special
Casting Time: 4
Area of Effect: Special
Saving Throw: None

This spell's function is identical to the 3rd-level *far reaching I* spell, except that a spell of 1st or 2nd level has its range doubled and a spell of 3rd level has its range increased by 50%. In addition, any spell of 4th level has its range extended by 25%.

**Greater Malison (Enchantment/Charm)**
Range: 60 feet
Component: V
Duration: 2 rounds/level
Casting Time: 4
Area of Effect: 30-foot-radius sphere
Saving Throw: None

This spell operates exactly like the 3rd-level *minor malison* spell except that the wizard places a -2 penalty on all saving throws of all hostile creatures within the area of effect. Optionally, the wizard may create a -3 penalty to saving throws against spells from one school of magic. This penalty is not cumulative with a saving throw penalty which derived from the wizard being a specialist; the penalty is not increased to -4.

**Locate Creature (Divination)**
Range: 50 yards/level
Components: V, S, M
Duration: 1 turn/level

Casting Time: 5
Area of Effect: One creature
Saving Throw: None

This spell is similar to the 2nd-level *locate object* spell. Instead of finding an inanimate object, however, it allows the wizard to find a creature. The wizard casts the spell, slowly turns, and is able to sense the direction of the person or creature, provided the subject is within range. The wizard learns how far away the creature is and in what direction it is moving (if at all).

This spell can locate a general species of creature (a horse or umber hulk, for instance) or can be used to find a specific individual. The wizard must have physically seen the individual or the type of creature at least once from a distance of no more than 10 yards.

Unlike *locate object*, this spell is not blocked by lead. It is blocked, however, by running water (such as a river or stream). Objects cannot be found through use of this spell.

The material component is a bit of a bloodhound's fur.

**Mask of Death (Necromancy)**
Range: Touch
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

By casting this spell, a wizard can change a corpse's features to make it appear to be someone else. The caster must possess an accurate portrait of the individual to be duplicated, or must have a clear mental image of the person based on personal experience.

If *animate dead* is cast on the body, it can be animated to become a zombie that looks exactly like the copied person. The double is a mindless automaton, however, having all the characteristics of a normal zombie.

This spell may be cast on a creature that has already become a zombie. The wizard must successfully touch the zombie in combat, unless the zombie is controlled by the caster.

The material component of this spell is a drop of doppleganger's blood.

**Minor Spell Turning (Abjuration)**
Range: 0
Components: V, S, M
Duration: 3 rounds/level
Casting Time: 4
Area of Effect: The caster
Saving Throw: None

This spell is similar to the 7th-level *spell turning*, which causes spells cast against the wizard to rebound on the original caster. This includes spells cast from scrolls and innate spell-like abilities, but excludes the following: area effects that are not centered directly upon the protected wizard, spell effects delivered by touch, and spell effects from devices such as wands, staves, and so forth. Thus, a *light* spell cast to blind the protected wizard could be turned back upon and possibly blind the caster, while the same spell would be unaffected if cast to light an area in which the protected wizard were standing.

One to four (1d4) spell levels may be turned. The exact number is secretly rolled by the DM; the player never knows how effective the spell is.

Unlike the 7th level version of this spell, *minor spell turning* is not capable of partially turning a spell. For example, if a wizard has three levels of spell turning, he can turn three 1st-level spells, one 1st and one 2nd, or one 3rd-level spell. He can in no way turn spells of 4th level or above. If the caster is the target of a spell of a higher level than he is capable of turning, the caster receives the full brunt of the spell.

If the protected wizard and a spellcasting attacker both have spell turning effects operating, a resonating field is created that has the following effects:

| **D100 Roll** | **Effect** |
|---|---|
| 01-70 | Spell drains away without effect |
| 71-80 | Spell affects both equally at full damage |
| 81-97 | Both turning effects are rendered non-functional for 1d4 turns |
| 98-00 | Both casters are sucked through a rift into the Positive Material plane |

The material component of this spell is a smoothly polished silver coin.

**Mordenkainen's Celerity (Alteration, Invocation)**
Range: 0
Components: V, S, M
Duration: 1 turn
Casting Time: 4
Area of Effect: Special
Saving Throw: None

*Mordenkainen's celerity* affects spells of levels 1-3 which alter the movement of the wizard such as *feather fall, jump, spider climb, levitate, fly*, and *haste*. Spells to be affected must be cast within 1 turn of the casting of the celerity. Spells do not expire when the celerity expires.

Spells cast following the celerity receive a 25% bonus to duration. This effect may not be gained in conjunction with other means of magically extending a spell's duration. In addition, the caster's movement rate is increased by 25%. *Feather fall* is an exception; the rate of descent may be reduced by 25% at the caster's option.

The area of effect is always the caster, except in the case of the *haste* spell, for which the effects of the celerity will operate on 1d4 creatures in addition to the wizard. The celerity will not affect the other creatures in any other manner.

The celerity gives the wizard a +2 bonus to his saving throws against spells of levels 1-3 which directly affect his movement. This includes *web, hold person*, and *slow*. The

wizard also gains a +2 bonus on all saving throws against magical paralysis attacks.

The material component is a small pouch or vessel containing centipede or millipede legs.

**Summon Lycanthrope (Conjuration/Summoning)**
Range: Special
Components: V, S, M
Duration: Special
Casting Time: 1 turn
Area of Effect: One creature
Saving Throw: Neg.

This spell is effective only on the night of a full moon and one night immediately preceding and following it.

For the spell to be effective, the caster and the lycanthrope must be on the same plane of existence; there is no other range limitation. When the spell is cast, the nearest lycanthrope (as determined by the DM) of the chosen species must attempt a saving throw. If successful, the creature is unaffected. If it fails, the lycanthrope instantly appears near the caster.

Upon arrival, the creature can freely attack the wizard unless the caster has created a warding circle. If a circle is present, the lycanthrope appears in the circle; otherwise, it appears 1d10 feet away from the caster in a random direction (the DM should use the scatter diagram for grenade-like missiles found in the *DUNGEON MASTER*® Guide to determine direction).

A warding circle is a temporary prison drawn with specially prepared pigments laced with silver filings. These pigments cost 100 gp for each foot of diameter of the circle (thus, a circle 10 feet across costs 1,000 gp). A warding circle must be at least 5 feet in diameter; if smaller, the lycanthrope is automatically freed. Preparing the circle takes one turn per foot of diameter.

Even with such protection, the lycanthrope can break out of the circle and wreak vengeance upon the summoner. The creature's base chance of success is 20%, modified by the difference between its Hit Dice and the wizard's experience level. If the spellcaster is of a higher level, the difference is subtracted from the creature's chance of escaping the circle. If the lycanthrope is of higher Hit Dice than the wizard's level, the difference is added to its chance. Each creature is allowed only one attempt to escape.

Any break in the circle spoils the power of the spell and enables the lycanthrope to break free. Even a straw dropped across the line of a magic circle destroys its power. Fortunately, the creature cannot take any action against any portion of the ward, for the magic of the barrier absolutely prevents this.

Once safely ensnared, the lycanthrope can be held for as long as the summoner dares. The creature cannot leave the circle, nor can any of its attacks or powers penetrate the magical barrier. When the full moon sets, the lycanthrope reverts to its human form. At this time, it is free of the spell and may leave the circle.

The material components are a drop of blood from any animal, a human hair, and a moonstone worth at least 150 gp. If the caster elects to create the warding circle, the components described above are also required.

**There/Not There*** **(Evocation)**
Range: 30 yards
Components: V, S, M
Duration: 1-6 turns
Casting Time: 1 round
Area of Effect: 10' cube
Saving Throw: None

This peculiar wild magic creates a random fluctuation in the probabilities of existence. The spell can be cast only upon nonliving objects and can affect only materials within a 10'x10'x10' cube.

Objects in the area of effect either remain normal and visible or they disappear (50% chance). The state of existence for any object is determined randomly and changes with each viewing and viewer. Thus, a single object could appear and disappear several times during the course of the spell. Furthermore, it might be "there" for one onlooker, but "not there" for another.

For example, a wild mage casts this spell on a doorway. The DM rolls percentile dice and determines the door is "there" for the wizard. The wizard's companion also looks at the door. The DM rolls and determines that the door is "not there" for the companion. The pair studies the door for several minutes, during which time the door does not change (this counts as a single viewing for each character).

The wizard and his companion then close their eyes. When they look at the door again, new checks for each character reveal the door is "not there" for both characters. The pair steps through the open archway and turns around to look at the door once again. This time it is "not there" for the wizard, but "there" for his companion. This random changing continues throughout the duration of the spell.

Objects that are "there" are normal in all respects. Doors can be opened, chests can be picked up and carried, and rocks can be used as barricades. Objects that are "not there" are gone, although their absence does not cause ceilings to collapse or other damage. A wizard could walk through a "not there" wall without difficulty.

When two parties perceive a *there/not there* object differently, the object functions for each party according to its own perceptions. For example, a wizard hides behind a rock that he sees as "there." Her enemy, a fighter, perceives the rock as "not there" and fires arrows at the wizard. The wizard would perceive the arrows as bouncing off the rock, while the fighter would perceive the arrows as missing their target or falling short. The fighter would be subject to a check before firing each arrow to determine whether his perception changes (assume that the fighter must look away from the rock every time he nocks an arrow; each time he takes aim, this counts as a new viewing).

After the spell is cast, any objects removed from the area of effect retain their uncertain existence for the duration of the spell. Thus, a pair of heroes could pick up a treasure chest, carry it down the hall, set it down, and discover it had vanished while their backs were turned. Worse still, one might see the chest and the other not!
The material component is a small piece of cat fur sealed inside a small box.

**Thunder Staff** **(Invocation/Evocation)**

Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 4
Area of Effect: 20'x40' cone
Saving Throw: 1/2

Upon completion of this spell, the wizard raps his staff on the ground and produces a thundering cone of force 5' wide at the apex, 20' wide at the base, and 40' long. All creatures wholly or partially within this cone must roll a successful saving throw or be stunned for 1d3 rounds. Stunned creatures are unable to think coherently or act during this time and are deafened for 1d3+1 rounds. Additionally, those who fail the save are hurled 4d4+4 feet by the wave of force, suffering 1 point of damage per two feet thrown. Intervening surfaces (walls, doors, etc.) may restrict this distance, but damage remains the same (4d4+4).

If the save is successful, the victim is not stunned, but is deafened for 1d3+1 rounds and is hurled only half the distance.

Giant-sized or larger creatures who succeed at their saving throws are deafened but are not thrown, suffer no loss of hit points, and are not stunned. If the saving throw is failed, such creatures are hurled 2d4+2 feet, suffer one point of damage per two feet thrown, and are deafened and stunned.

The cone of force is considered to have a Strength of 19 for purposes of opening locked, barred, or magically held doors. This spell can move objects weighing up to 640 pounds a maximum distance of 4d4+4 feet. Fragile items must make a saving throw vs. crushing blow or be destroyed.

The material components are a vial of rain gathered during a thunderstorm and the wizard's staff, which must be made of oak. The staff is not destroyed during casting.

**Turn Pebble to Boulder (Alteration) Reversible**
Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 4
Area of Effect: Special
Saving Throw: None

At the culmination of this spell, the caster hurls a pebble which grows and increases in speed, becoming a deadly boulder that inflicts 3d6+8 points of damage if it strikes the target. (The rules for boulders as missile weapons apply as described in the *DUNGEON MASTER* Guide. ) The caster's THAC0 is used to determine success, and the caster is considered to be proficient with the thrown pebble and receives no penalty for range. The maximum range of attack is equal to 50 feet plus 10 feet per level of the caster. Only the caster may throw the pebble.

The wizard can enchant one stone at 7th level and gains one stone per three levels of experience thereafter (two stones at 10th level, three at 13th level, etc.). Only one pebble may be thrown per round, and pebbles must be hurled in consecutive rounds. The spell

has a duration in rounds equal to the number of pebbles enchanted. Each pebble requires a separate attack roll. Pebbles may be thrown at different targets within range.

The material components are pebbles, which revert to normal size when the spell expires.

The reverse of this spell, *turn boulder to pebble*, shrinks a boulder to the size of a pebble. It affects only naturally occurring rocks and can not be used to shrink a statue or a cut gemstone.

The number of rocks that may be affected is equal to the number of experience levels of the caster. Boulders must not exceed one cubic foot per level of the caster. Thus, a 10th-level wizard could shrink 10 rocks, each of which is equal to or less than 10 cubic feet in size. All rocks are affected in the same round the spell is cast. Though they need not be touched, the boulders must be within 50 feet of the caster. Boulders that have been shrunk remain so until dispelled.

**Unluck*** **(Evocation)**
Range: 10 yards
Components: V, S, M
Duration: 2d10 rounds
Casting Time: 4
Area of Effect: One creature
Saving Throw: Neg.

With this spell, the wild mage creates a negative pattern in the random forces surrounding one creature. The creature is allowed a saving throw; if successful, the spell fails. If the saving throw is failed, random chance falls into an unlucky pattern. Any action involving random chance (i.e., any time a die roll affects the character) performed by the victim during the next 2-20 rounds requires two separate attempts; the worse result is always applied. (The victim rolls twice for attacks, damages, saving throws, etc., always using the worse die roll.)

A *luckstone* or similar magical device will negate *unluck*. Doing so, however, prevents the magical item from functioning for 2d10 rounds.

The material component is a piece of a broken mirror.

# Fifth-Level Spells

**Far Reaching III** **(Alteration)**
Range: 0
Component: V
Duration: Special
Casting Time: 5
Area of Effect: Special
Saving Throw: None

This spell operates exactly like the 3rd-level *far reaching I* spell except that the range of any spell of levels 1-3 is increased by 150% and the range of any 4th- or 5th-level spell is increased by 50%.

**Khazid's Procurement (Divination, Summoning)**
Range: Special
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell allows the caster to more easily access rare or dangerous spell components. The wizard casts this spell upon a silver mirror while concentrating on a mental image of the material he desires. The base chance of success is 50%, modified by the following factors:

- +1% per level of the caster
- +10% if the caster has seen the same type of substance or object before; this bonus is not cumulative with the following bonus
- +20% if the caster has a sample of the material or the same type of object in his possession; this bonus is not cumulative with the bonus above
- +30% if the wizard knows the location of the desired object
- -50% if the caster has never seen the same type of material or item before

If the percentile roll indicates failure, the caster is unable to locate the desired ingredient and the spell ends. If the roll indicates success, the wizard has located the object or substance and the mirror becomes a magical gate through which the caster can see the target. The size of the gate is determined by the size of the mirror, to a maximum size of 3 feet by 2 feet.

The gate always appears within arm's length of the target, allowing the wizard to reach through the mirror, grasp the object of his desire, and draw it back through the gate. The wizard must risk his own safety--the gate does not allow the use of probes, long-handled ladles, tongs, or other equipment to gather the material. The caster cannot move completely through the gate.

The gate vanishes when the spell's duration expires or when the target or the wizard moves more than 10' away from it.

The gate is visible from both sides, and other creatures can reach through the gate. Breath weapons, gaze attacks, missiles, spells, and similar attacks cannot be cast through the gate. Because creatures can pass their limbs through the gate, physical attacks and touch spells can be used.

The only limit to the range of this spell is that the caster and the target must be on the same plane of existence. Elemental forces (not creatures) will not pass through the gate. Thus, the wizard does not run the risk of flooding his laboratory by opening a gate beneath the sea, for example. However, the spell does not provide any sort of protection against a hostile environment.

The material components are an exquisite silver mirror of no less than 10,000 gp value and a black opal worth at least 1,000 gp which must be powdered and sprinkled on the mirror. The mirror is not lost after casting and may be used again, but the powdered opal is consumed in the casting.

**Lower Resistance (Abjuration, Alteration)**
Range: 60 yards
Components: V, S, M
Duration: 1 turn+1 round/level
Casting Time: 5
Area of Effect: One creature
Saving Throw: None

Using this spell, a wizard may attempt to reduce the magic resistance of a target creature. The magic resistance of the victim works against the *lower resistance* spell itself, but at only half its normal value. No saving throw is permitted in addition to magic resistance.

If the victim does not resist the effects of this spell, his magic resistance is reduced by a base 30% plus 1% per experience level of the wizard casting the spell.

This spell has no effect on creatures that have no magic resistance.

The material component is a broken iron rod.

**Magic Staff (Enchantment/Charm)**
Range: Touch
Components: V, S, M
Duration: Special
Casting Time: Special
Area of Effect: The wizard's staff
Saving Throw: None

This spell allows a wizard's staff to store one spell level for every three levels of the caster. Thus, a 9th-level wizard can store three spell levels (three 1st-level spells, one 1st and one 2nd, or one 3rd-level spell).

Spells that are to be stored in the staff must be memorized normally by the wizard. The spells are then cast as normal when charging the staff; casting requires the spell's normal casting time plus one round. The spell is wiped from memory and material components are consumed. All spells to be stored must be cast into the staff within 1 turn.

All stored spells have a casting time of 1.

Spells remain in the staff until cast or dispelled, or up to 1 hour per level of the caster. After this time, all stored spells fade away.

Only wizards who know the *magic staff* spell can cast spells from another wizard's staff. This applies to wizards who have never learned or could not normally cast the spells stored in a staff. It is common, however, for the staff's owner to implement a command word which must be known by anyone wishing to use the staff.

The material component for this spell is a staff cut from an ash tree. For each spell level the wizard intends to imbue into the staff, it must be inlaid with rubies worth at least 1,000 gp.

**Mind Fog (Enchantment/Charm)**
Range: 80 yards

Components: V, S
Duration: 3 turns
Casting Time: 3
Area of Effect: 20-foot cube
Saving Throw: Neg.

A *mind fog* is a physical block of fog that enables the wizard to weaken the mental resistance of his victims. Victims are allowed a saving throw at a -2 penalty to avoid the effects.

A creature who falls victim to the *mind fog* suffers -2 penalties to all saving throws against two categories of magic: all spells of the illusion/phantasm and enchantment/charm schools that affect the mind directly; and spells of 1st through 5th level which affect the mind directly. For example, *phantasmal force* is a mind-affecting spell; *phantom steed* is not.

The penalty to saving throws operates cumulatively with any penalties that operate for other reasons. Affected creatures suffer the penalty as long as they remain in the fog and for 2d6 rounds thereafter.

**Safeguarding (Abjuration)**
Range: 0
Components: V, S, M
Duration: 1 turn+1 turn/level
Casting Time: 5
Area of Effect: 15-foot-radius sphere
Saving Throw: None

Use of this spell protects the wizard and anyone in the area of effect from damage caused by the rebounding of the wizard's spells. This includes damage from a *fireball* cast in an area too small for its effects, a reflected *lightning bolt*, or any other offensive area spell that overlaps the *safeguarding's* area of effect. The protection is effective against spells of 7th level and lower. The protection does not apply to damage from spells rebounded by any form of magical spell turning. This spell does not protect the wizard against damage from spells or attacks cast by enemies or other party members.

A wizard who has cast *safeguarding* is free to move and act normally. The spell's effect is always centered on him, regardless of his actions. Other creatures are free to enter and exit the area of effect.

An area spell cast by the wizard will take effect normally, but its effects will be negated within the area of the *safeguarding* spell. This applies *only* to area spells centered outside the radius of the *safeguarding* spell. If the wizard casts an offensive area spell within the area of the *safeguarding*, the *safeguarding* is immediately negated and those within the area suffer full damage from the spell. The wizard is free to cast non-offensive area spells and individually targeted spells within the area of the *safeguarding*.

The material component is a piece of preserved skin from any creature that possesses natural magic resistance.

**Von Gasik's Refusal (Abjuration)**

Range: 10 yards/level
Components: V, S, M
Duration: 1 hour/level
Casting Time: 5
Area of Effect: 20-foot-square/level
Saving Throw: None

This powerful spell is designed to prevent unauthorized spellcasters from entering a hallway, doorway, window, or other point of entry.

The spell creates an invisible barrier that blocks the targeted area. Any nonspellcasters and those spellcasters specifically named by the caster may pass freely. All other spellcasters collide with the invisible barrier. Members of classes with lesser spellcasting abilities (paladins, rangers, and bards) are blocked only if the character is of sufficient level to cast spells.

The wizard is able to ward one area up to 20'-square for each level of his experience. Thus, a 12th-level wizard may protect a square area 240 feet on a side. The area of effect may be divided among several smaller portals as long as the total area does not exceed the caster's limit. Each portal must be in range and sight of the caster at the time the spell is cast.

The barriers exist for one hour per level of the caster unless they are dismissed by the caster or dispelled by a *dispel magic* spell. A *disintegrate* spell immediately destroys a barrier, as does a *rod of cancellation* or a *sphere of annihilation*.

The invisible walls are not affected by physical blows, cold, heat, or electricity. Thrown and projected weapons (both magical and mundane) are not repelled by the barrier and may pass through the area normally. Spells can be cast through the barrier. *Dimension door, teleport*, and similar effects can bypass the barriers.

The material component is a pinch of dust from any wizard's tomb.

**Vortex* (Evocation)**
Range: 30 yards
Components: V, S, M
Duration: 1d4 rounds+1 round/level
Casting Time: 5
Area of effect: 5-foot-diameter circle
Saving Throw: ½

A *vortex* is a swirling mass of magical energy, barely controllable by the caster. On the round of casting, a small sparkle of lights fills the air at the desired position. On the second round, a 7'-tall, multicolored tornado appears. From this moment on, the caster must maintain concentration in order for the *vortex* to remain.

Each round, the caster can move the *vortex* 60 feet. However, control of direction is not perfect. The caster has complete control over distance, but can only suggest the desired direction. The caster has a 50% chance of moving the *vortex* in the direction he desires; if the die roll indicates failure, the *vortex* moves according to the scatter diagram for grenade-like missiles. Thus, the *vortex* usually moves in the general direction desired, but on occasion, it may move to either side or directly toward the caster.

The *vortex* cannot pass through objects larger than its area of effect (it could move through a sapling but not an ancient oak tree) and will be redirected by these, rebounding along the general line of movement. For example, if cast in a narrow hallway, the *vortex* might ricochet down the hall, bouncing from side to side.

The *vortex* is composed of raw magical energy. Nonmagical creatures struck by the *vortex* suffer 1d4 points of damage per level of the caster. Magical creatures and spellcasters suffer 1d6 points of damage per level of the caster. Creatures struck are allowed a saving throw vs. magic to suffer only half damage.

Each time a creature is struck, there is a 5% chance that the *vortex* will explode in a wild surge. Use Table 2 to determine the results of any wild surge. If the *vortex* causes a wild surge, the spell ends immediately.

The material components are a silk streamer and a handful of straw.

**Waveform* (Alteration)**
Range: 40 yards
Components: S, M
Duration: 1d10 rounds
Casting Time: 5
Area of Effect: 10-foot-cube/level
Saving Throw: ½

By means of this spell, the wild mage is able to shape and direct the patterns of water currents, allowing him to mold liquids into a variety of forms. The spell affects a quantity of liquid no larger than the area of effect. If cast onto a larger body, such as an ocean or large lake, the spell affects only the water within the area of effect.

After casting *waveform*, the mage can form the water into any desired shape. The spell does not bind the liquid together in any fashion; it is still limited by its fluid properties and gravity. Thus, a mage could not use *waveform* to create a humanoid creature with arms and legs and direct it to walk across land. He could, however, create a roughly human shape with flowing arms that rises out of the water, crashes forward in a huge splash, then rises and repeats the process. Other possible shapes include gigantic waves, geysers, whirlpools, and troughs.

The shape takes one round to form, after which it can be maintained by concentration. The shape can be directed to move in any direction at the rate of 90 feet per round. If the *waveform* moves into or through a body of water, the form loses no intensity. However, if the wave is moved over dry ground, it loses one die of damage for every 10 feet crossed.

If propelled against a target, the *waveform* causes 1d4 points of damage per level of the caster to creatures in its path. The *waveform* can be directed against creatures on the surface or underwater. Those struck are allowed a saving throw; success indicates half damage.

If the victims are in or on a body of water, the shape will sweep them along. Creatures of small size are carried with the form, moving at its speed. Medium and large size creatures are swept along at half the water's speed. Creatures larger than this resist the movement. Those caught in the current can make a Strength check each round to swim free of the current.

Boats and ships are particularly vulnerable to the *waveform*. If the *waveform* is twice

the size of the vessel or more, the ship must make a seaworthiness check (as described in Table 77 of the DMG ). Vessels passing the check suffer damage as described above, reducing seaworthiness ratings for future checks by 2d6 points until repairs are made.

Alternatively, this spell can be cast directly at a single water-based creature--a water weird, water elemental, or other creature from the elemental plane of water. In this case, the spell causes 1d6 points of damage per level of the caster. The effect is instantaneous and the spell ends immediately after the attack is made.

The material component is a small, carved oar decorated with aquamarines worth at least 500 gp. The oar disintegrates when the spell is cast.

# Sixth-Level Spells

**Augmentation II (Evocation)**
Range: 0
Components: V, S, M
Duration: 3 turns
Casting Time: 6
Area of Effect: Special
Saving Throw: None

This spell functions exactly like the 3rd-level *augmentation I* spell except that five spells of levels 1-3 may be affected. For each die of damage caused by augmented spells, one hit point is added to the damage total.

*Augmentation II* affects the first five spells which cause direct damage that are cast within the duration of the *augmentation II* spell. Only spells that cause direct physical damage are affected by this spell.

The material component is a pair of concentric circles of gold or platinum.

**Bloodstone's Spectral Steed (Necromancy)**
Range: 10 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell allows a wizard to create a quasi-real, vulturelike creature. The flying steed can carry the caster and one other person per three levels of the wizard's experience (four at 12th level, five at 15th, etc.). All passengers must be specifically named during the casting.

The spectral steed looks like a huge, skeletal vulture with tattered wings. As it flies, it utters hideous screeches that echo through the sky. The spectral steed flies at a movement rate of 4 per level of the caster, to a maximum movement rate of 48. It appears with a bit and bridle, plus one saddle per passenger.

All normal animals shun the spectral steed and only monsters will attack it. The

mount has AC 2 and 10 hit points plus 1 hit point per level of the caster. If it loses all of its hit points, the spectral steed disappears. It has no attack mode.

The material component is a hollow bone from a vulture's wing, which must be carved into a whistle and blown when the spell is cast.

**Claws of the Umber Hulk (Alteration)**
Range: Touch
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

When this spell is cast, the subject's hands widen and his fingernails thicken and grow, becoming equivalent in size and power to the iron-like claws of an umber hulk. The transformation takes one full round and is excruciatingly painful, requiring a system shock roll. A failed roll causes the subject to suffer 3d4 points of damage.

The subject can burrow as an umber hulk, cutting through 10 feet of solid stone or 60 feet of soil per turn. The only limitation to this is the subject's stamina; at the end of each turn of burrowing, the subject must succeed a Constitution check or be forced to rest for one turn.

Burrowing through soil does not necessarily create a passable tunnel. If the subject wishes to make a passage in which others can travel or that he can exit when the spell ends, he must dig at a rate of 30 feet per turn. Cutting a tunnel through solid rock does not require extra care or time.

The recipient of this spell can make two claw attacks per round, each inflicting 2d6 points of damage plus any Strength bonuses. Each attack is made with a -2 penalty to hit. This penalty applies until the subject has made two successful consecutive attacks (not necessarily in the same round), at which time he is accustomed to using the claws. The penalty is dropped for the remainder of the spell.

The material component is an umber hulk's claw.

**Dilation II (Alteration)**
Range: 0
Component: V
Duration: Special
Casting Time: 5
Area of Effect: Special
Saving Throw: None

This spell functions exactly like the 4th-level *dilation I* spell, except that the area of effect of a 1st-, 2nd-, or 3rd- level spell is extended by 50%. Alternatively, the wizard may extend the area of effect of one 4th- or 5th-level spell by 25%.

**Forest's Fiery Constrictor (Conjuration/Summoning)**
Range: 10 yards/level

Components: V, S, M
Duration: 1 round/level
Casting Time: 6
Area of Effect: One source of fire
Saving Throw: Special

This spell causes a tentacle of magical flame to snake forth from any existing source of natural or magical fire. The flaming tendril is 10 feet long, has AC 7, can be hit only by magical weapons of +2 or better, and has hit points equal to double the caster's level.

Any creature within 20 feet of the tentacle is subject to attack as directed by the caster. The victim must attempt a saving throw; if successful, the subject has avoided entanglement, but suffers 1d6 points of fire damage from contact with the tendril. If the saving throw is failed, the victim is entangled by the flaming serpent and suffers 3d6 points of fire damage each round until the tendril is destroyed or the spell expires.

If the fire source from which the tentacle emanates is extinguished, the remaining time that the fiery constrictor may exist is cut in half.

The material component is a red dragon's scale.

**Lorloveim's Shadowy Transformation (Illusion)**
Range: Touch
Components: V, S
Duration: 1d4 rounds+1 round/level
Casting Time: 6
Area of Effect: Special
Saving Throw: Neg.

When this spell is cast, the illusionist transforms one creature or a specified amount of non-living material into shadow, making it insubstantial. Thus, a door could be turned to shadow and entered. The maximum amount of inanimate material that may be transformed is one cubic foot per level of the caster.

Unwilling creatures are allowed a saving throw to resist the *shadowy transformation*. Magical items and the magical effects of spells (such as *Bigby's forceful hand* or a *wall of stone* ) cannot be affected.

A transformed creature and all its gear become insubstantial. The creature can pass through small holes, narrow openings, and the smallest cracks. The creature cannot fly without additional magic.

No form of attack is possible when in shadow form except against creatures that exist on the Ethereal plane. In this case, all attacks are normal; however, the shadowy creature may be harmed only by magical weapons of +1 or greater or by creatures able to affect those struck only by magical weapons. Spells and special attacks have normal effects.

Most undead creatures will ignore a creature in shadow form, believing it to be a wraith or spectre; however, liches and powerful undead may save vs. spell with a -4 penalty to recognize the spell. A successful *dispel magic* spell forces the creature in shadow form back to normal form.

**Wildshield* (Alteration)**

Range: 0
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

This spell cloaks the caster in a whirling band of scintillating colors, completely concealing him. The caster is able to see normally within and outside the shield.

The *wildshield* protects the caster from the effects of spells and magical items. The shield can completely absorb 2d6 spell levels (i.e., if the roll of 2d6 results in 10, the shield could absorb ten 1st-level spells, two 5th-level spells, or any similar combination), thereby negating their effects on the caster. Both area effect spells and those individually targeted at the wild mage can be absorbed. In the case of area spells, the *wildshield* protects only the mage. All others in the area of effect suffer normal effects from the spell.

*Wildshield* also protects against wild surges, whether caused by the caster's magic or by an outside source. Each wild surge is considered equal to 1d6 spell levels.

The spell remains in effect until it is either canceled by the caster or it reaches its spell level capacity. If the capacity is met exactly, the *wildshield* simply ceases to function. However, if the *wildshield* is struck by more spell levels than it can absorb, it explodes in a wild surge. The spell that triggered the surge is completely negated, its energy instead transformed into a wild surge (see Table 2). Since the shield no longer functions, the formerly protected wizard is subject to full effects of this wild surge.

The material component is a small sponge.

**Wildstrike* (Conjuration/Summoning)**
Range: 30 yards
Components: V, S, M
Duration: 2d4 rounds
Casting Time: 6
Area of Effect: One creature
Saving Throw: Neg.

This spell is used primarily against hostile spellcasters. It distorts all attempts at spellcasting, converting spell energy into wild surges.

The victim of a *wildstrike* is allowed a saving throw; if successful, the spell has no effect. If the saving throw is failed, the target is enclosed within a field of wild magic. If the victim casts spells or uses a charge from a magical item, a wild surge is automatically created (refer to Table 2). When determining the effects of this surge, the true level of the wild mage who cast the *wildstrike* is subtracted from the die roll, making the effects of the wild surge more likely to affect the victim.

The material component is a small glass tube that is shattered in the casting.

# Seventh-Level Spells

**Acid Storm (Evocation)**
Range: 10 yards/level
Components: V, S, M
Duration: 1 round/level
Casting Time: 7
Area of Effect: 40-foot-diameter circle
Saving Throw: ½

This deadly spell unleashes a downpour of magical, gelatinous acid droplets. All creatures within the area of effect are coated by globs of gooey acid. The acid can be washed off only with wine, vinegar, or by a successful *dispel magic* or similar spell. The acid remains present for 1 round per level of the caster, then vanishes.

Creatures coated by the acid suffer 1d4 hit points of damage each round during rounds 1-3, 1d6 points in each of rounds 4-6, and 1d8 points on each round thereafter. Characters who successfully save vs. spells during the first round suffer only half damage from the acid for the remaining rounds. When the spell expires, no further damage is inflicted.

Acid damage can be healed through any means except regeneration. The material component is a drop of acid.

**Bloodstone's Frightful Joining (Necromancy)**
Range: Touch
Components: V, S
Duration: 1 turn/level
Casting Time: 7
Area of Effect: One undead creature
Saving Throw: Special

When this powerful spell is employed, the wizard transfers his spirit to the body of an undead creature, totally dominating it. If the undead creature has intelligence, it is allowed a saving throw vs. spell to resist the joining. If the save is successful, the caster's spirit is forced back into his own body. The wizard must make a system shock roll; if the roll fails, the wizard suffers 5d6 points of damage. If the roll succeeds, the wizard suffers half this damage.

If the creature's save fails, the necromancer joins his life essence with that of the undead. While in the creature's body, the caster can use all of its special attacks and innate abilities, excluding spells memorized by the creature.

The wizard's body remains comatose, is subject to all regular attacks, and suffers damage normally. The wizard's spirit can travel an unlimited distance from his physical body as long as they remain on the same plane of existence.

If intelligent, the possessed undead continually tries to purge the caster with mental threats that can be heard only by the wizard. The thoughts of the undead are ghastly. During the first minute of each hour of possession, the caster must succeed an Intelligence check in order to retain his sanity. The roll is modified by the difference

between the creature's Intelligence and that of the spellcaster. If the undead has a higher score, the difference is added to the die roll. If the necromancer has a higher Intelligence, the difference is subtracted from the roll.

If the roll is successful, nothing happens and the caster may continue to possess the undead. If the Intelligence roll fails, the wizard's intellect degenerates, making him a raving, homicidal maniac. His spirit is immediately forced to return to his body, and he must attempt a system shock roll with damage occurring as outlined above. The caster remains dangerously insane until a *heal* or *wish* spell is used to restore his intellect.

This spell can be very useful when combined with the *mask of death* spell.

When the spell's duration expires, the necromancer's spirit immediately returns to his body.

**Hatch the Stone from the Egg (Alteration, Enchantment, Evocation)**
Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 1d4+4 hours
Area of Effect: One alchemical mixture
Saving Throw: None

When a wizard wishes to create the magical item known as the *philosopher's stone*, he must first discover its alchemical formula, which tells him the necessary ingredients and the method of preparing them. This information is not provided by this spell, and this spell is useless without the formula. (The exact ingredients and formula are decided by the Dungeon Master and must be discovered by the wizard by adventuring.)

When the formula has been discovered and the ingredients prepared, the wizard enchants the alchemical mixture with the *enchant an item* spell. *Hatch the stone from the egg* is then cast upon the mixture. This spell slowly transmutes the mixture into its final form as the philosopher's stone. The process is completed with a *permanency* spell.

The material component for this spell is a magical item known as the *philosopher's egg*, which is an enchanted retort used to hold the alchemical mixture. The egg is not destroyed upon completion of the spell and may be used again. (Further details about the *philosopher's egg* are found in Chapter 4 of this book.)

**Hornung's Surge Selector* (Alteration)**
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

The great Hornung, having been blasted more than once by his own wild surges, devised a method of improving the results of wild magic and, not incidentally, his own chances of survival. The result was *Hornung's surge selector*.

By casting this spell, the wild mage gains greater control over wild surges. When the

caster's spell creates a wild surge, two separate results are determined from Table 2. The caster can then choose which of the two results will take effect. This spell can be used in conjunction with *Nahal's reckless dweomer*.

The spell's duration is a fixed number of surges or 12 hours, whichever comes first. The wild mage is able to shape one wild surge per five levels of his experience; thus, a 15th-level caster could shape three wild surges within a 12-hour period. At the end of 12 hours, the spell expires, regardless of the number of surges remaining.

The material component is a brass spinner.

**Intensify Summoning (Conjuration/Summoning, Necromancy)**
Range: Special
Components: V, S, M
Duration: 1 turn
Casting Time: 6
Area of Effect: Special
Saving Throw: None

This spell enhances the strength of creatures summoned by the caster via 1st through 6th level conjuration/summoning spells. Only spells which bring summoned creatures to the wizard are affected.

The first two conjuration/summoning spells cast by the wizard within one turn following the intensify summoning spell are affected. Summoned creatures gain 2 hit points per hit die. The affected creatures retain their bonus hit points until the normal expiration of the spell that summoned them.

The material components are a small leather pouch and a miniature silver candelabra.

**Malec-Keth's Flame Fist (Evocation)**
Range: 0
Components: V, S
Duration: 1 round/level
Casting Time: 1
Area of Effect: One creature or object
Saving Throw: Special

When this spell is completed, one of the caster's hands (his choice) bursts into light and is surrounded by an aura of flame. The caster suffers no damage from this effect. Illumination is equal to that of a torch.

If the wizard successfully touches an opponent, the subject must attempt a saving throw. If the roll is successful, the flame remains on the caster's hand (and he may use it to make further attacks until the spell's duration expires) and the touched creature suffers 1d4+2 points of fire damage. If the save is failed, the flame leaves the caster's hand to surround the victim's body in an aura of searing fire. The superheated aura burns for 1 round, inflicting 1d4 points of damage per level of the caster.

Instead of attacking a creature, the caster may choose to touch any single object, which is automatically surrounded by the searing aura for 1 round and must succeed at an item saving throw vs. magical fire or be destroyed. The aura can surround an object up to

5 cubic feet in volume per level of the caster.

**Shadowcat (Illusion)**
Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 3
Area of Effect: Special
Saving Throw: None

When this spell is cast, the wizard brings into being a cat made of shadow. The *shadowcat* is the size of a normal cat and may be either grey or black at the caster's option. The caster has complete telepathic control of the feline; he can see, hear, and even speak through it as long as it remains within range. At the moment it moves out of range, the *shadowcat* vanishes. The caster does not need to concentrate on the *shadowcat*.

The shadowy feline is insubstantial, making subject only to magical or special attacks, including those by weapons of +1 or better. It has AC 5, a movement rate of 18, and saving throws equal to those of the caster. The cat dissipates if it loses hit points equal to one-half the caster's total hit points. The *shadowcat* has no attacks of its own and cannot touch or carry objects. A successful *dispel magic* spell causes the cat to vanish.

A *shadowcat* makes no sound as it moves. It is 90% undetectable in all but the brightest conditions. It can pass through small holes or narrow openings.

The material components of this spell are a black pearl of at least 100 gp value and a claw from a grey or black cat.

**Spell Shape* (Alteration)**
Range: 0
Components: V, S, M
Duration: 1d4+1 rounds
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: Special

This spell gives the wild mage the ability to seize magical energy directed at him and reshape it as he desires. While it is in effect, the spell gives no visible sign of its existence. It offers no protection against area effect spells.

If a wild mage is the target of a spell or magical item, this spell automatically allows him a saving throw. If the saving throw is failed, the opponent's spell has normal effects. If the saving throw is successful, the *spell shape* absorbs the magical energy of the opponent's spell. The wild mage can then choose to let the energy dissipate or he can instantly use it to cast a spell back at the opposing mage. The return spell must be of an equal or lesser spell level than the original one and must be currently memorized by the mage. The act of returning the spell does not cost the wild mage any of his memorized spells. Spell energy cannot be saved; if not used immediately, it dissipates.

For example, Hamos, a wild mage, is protected by a *spell shape* and is struck by a *finger of death* (a 7th-level spell). He succeeds at his saving throw and is now able to cast

a spell of 7th level or lower. Hamos currently has *feeblemind* memorized. Since it is only a 5th-level spell, he chooses to cast it back at his enemy. He makes his level variation check (and doesn't get a wild surge) and the *feeblemind* is sent hurtling back at his foe. Hamos still has his original *feeblemind* memorized. The remaining two spell levels are lost, since they were not used in the same round.

If a wild mage is struck by two spells at once, he may choose which spell to shape. He suffers all effects of the remaining spell.

The material component is a diamond worth no less than 2,000 gp. When the spell is cast, the diamond is transformed into a lump of coal.

**Steal Enchantment (Enchantment)**
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 hour
Area of Effect: One item
Saving Throw: Neg.

This spell "steals" the enchantment from a magical item and places it within another, non-magical item (the material component). Both objects must be touched by the wizard during casting. The two items must be of the same category (blunt weapon, edged weapon, ring, amulet, shield, armor, wand, etc.).

The enchantment can be transferred only to a nonmagical item. Only the energy of one item can be transferred; it is not possible to combine two magical items into one item. The new item has all the properties of the original magical item (including the same number of charges, if any).

At the culmination of the spell, the original magical object is allowed an item saving throw vs. disintegration with all modifiers it is allowed as a magical item. Exceptionally powerful objects (such as artifacts) may be considered to automatically succeed the saving throw at the DM's discretion.

If the saving throw is successful, the magical object resists the effect and the spell ends in failure. If the roll is failed, the magical item loses all of its powers, which are transferred to the previously nonmagical object.

Even if the magical item fails its saving throw, the spell's success is not guaranteed. There is a chance that the enchantment might be lost. The base chance of this occurring is 100%, modified by -5% per level of the caster. Thus, a 20th-level wizard has no chance of losing the magic. If the enchantment is lost, both items become nonmagical.

The material component is the nonmagical item which is to receive the enchantment. It must be of equal or greater value than the object to be drained.

**Suffocate (Alteration, Necromancy)**
Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 7
Area of Effect: 10-foot-radius circle

Saving Throw: Neg.

This spell draws the breath out of all creatures within the area of effect who fail a saving throw. Their breath is placed within a small silk bag held by the caster.

Each round, a victim of this spell must attempt a Constitution check. If failed, the creature suffers 2d4 points of damage. If successful, the subject has taken in enough air to reduce the damage to 1d4.

As they struggle and gasp for air, affected creatures move and attack at half their normal rates, have a -4 Armor Class penalty, an attack penalty of -4, and lose all Dexterity combat bonuses.

Effects of this spell continue each round regardless of whether the victims remain in the original area of effect. The damage accumulates until the spell expires, the silk bag is opened, or a successful *dispel magic* spell is cast upon the bag. The penalties to combat remain in effect for 1d3 rounds after the spell ends.

The material component is a small silk bag studded with black opals worth a total of no less than 5,000 gp. The bag is not destroyed during casting, but becomes useless for future castings if a successful dispel magic spell is used on it.

# Eighth-Level Spells

**Abi-Dalzim's Horrid Wilting (Alteration, Necromancy)**
Range: 20 yards/level
Components: V, S, M
Duration: Instantaneous
Casting Time: 8
Area of Effect: 30-foot cube
Saving Throw: ½

This spell evaporates moisture from the bodies of every living creature within the area of effect, inflicting 1d8 points of damage per level of the caster. Affected creatures are allowed a saving throw, with success indicating half damage.

This spell is especially devastating to water elementals and plant creatures, who receive a penalty of -2 to their saving throws.

The material component is a bit of sponge.

**Airboat (Alteration, Enchantment)**
Range: 1 mile
Components: V, S
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell must be cast under a cloudy sky. The caster points at a cloud, which immediately descends toward him. As it comes closer, the cloud changes shape,

becoming any sort of vessel imagined by the wizard (a dragon-shaped galley, a one-man dinghy, etc.).

Although the airboat is made of cloud, it feels solid and can support the weight of the caster plus one passenger per level of the wizard. It can fly at any speed up to 5 miles per hour per level of the caster (to a maximum of 90 miles per hour).

The caster maintains total telepathic control over the airboat's speed and direction. While controlling the vessel, the wizard is able to perform other actions but may not cast other spells.

**Gunther's Kaleidoscopic Strike (Invocation/Evocation)**
Range: 5 yards/level
Components: V, S
Duration: Instantaneous
Casting Time: 8
Area of Effect: One creature
Saving Throw: Neg.

When this spell is cast, a thin beam of shimmering, kaleidoscopic light shoots from the wizard's fingertips toward his target. The victim is allowed a saving throw to resist the beam.

This spell has no effect on nonspellcasters, causing them no harm whatsoever. Creatures with innate spell-like abilities are also unaffected. Against wizards and priests, this spell can be devastating. It "short-circuits" the arcane energy stored in a spellcaster's mind, wiping away a number of memorized spells. Lost spells must be rememorized.

The number of spells drained is equal to the caster's level minus 1d20. Thus, a 16th-level wizard drains a maximum of 15 spells, but could drain no spells depending on the die roll. After subtracting the die roll from the caster's level, any result of zero or a negative number indicates that the victim loses no spells.

Spells are drained from the wizard's memorized spells beginning with 1st-level spells and working up to higher level spells. Any decision regarding which spell should be drained from a specific level should be determined randomly.

**Homunculus Shield (Evocation, Necromancy)**
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 3
Area of Effect: The caster
Saving Throw: None

By creating a *homunculus shield*, the wizard separates a portion of his mind in the form of an exteriorized magical homunculus. This creature is invisible to all but the caster and appears as a miniature version of the caster perched atop the wizard's head.

The wizard may move and act normally while this spell is in effect. The magical homunculus operates as an independent spellcaster. It may cast only *teleport*, *contingency*, and protective spells of 4th level and lower. It casts only spells from the

wizard's memorized store of spells, but any spells cast by the homunculus are done so with a casting time of 1. The wizard selects which spells are cast by his homunculus; after they are cast, they are wiped from the caster's memory.

The homunculus has 1 hit point per two levels of the caster. These points are "borrowed" from the caster; while the homunculus is present, the wizard's hit points are reduced by this amount.

The homunculus cannot be struck by melee or missile weapons separately from the wizard. It can be damaged separately from the wizard (e.g., by a *magic missile* targeted at the homunculus or by area effect spells). The homunculus has the attributes and saving throws of the wizard.

At the end of the spell's duration, the homunculus disappears and any hit points it had are restored to the wizard. Hit points lost by the homunculus can be regained only by magical healing.

If the wizard's hit points are reduced to zero at any time during the spell, the wizard is dead even if the homunculus had hit points remaining.

A wizard with an active *homunculus shield* suffers a -4 saving throw penalty against magic jar spells cast upon him due to the division of his mental energy.

The material component is a miniature sculpted bust of the spellcaster.

**Hornung's Random Dispatcher* (Abjuration)**
Range: 30 yards
Component: V
Duration: Instantaneous
Casting Time: 2
Area of Effect: One creature
Saving Throw: Neg.

With the utterance of a few words, this spell can hurl a creature to a random plane and leave him there. The target, if unwilling, is allowed a saving throw. If successful, the spell fails. If unsuccessful, the victim and all items carried by him are sent to a random plane. To determine the plane, roll on the table below.

| D100 Roll | Plane |
|---|---|
| 01-03 | Abyss |
| 04-06 | Acheron |
| 07-12 | Alternate Prime Material Plane |
| 13-17 | Arcadia |
| 18-23 | Astral Plane |
| 24-27 | Beastlands (Happy Hunting Grounds) |
| 28-30 | Concordant Opposition |
| 31-35 | Elemental Plane (Air, Fire, Earth, or Water) |
| 36-38 | Elysium |
| 39-44 | Ethereal Plane |
| 45-47 | Gehenna |
| 48-50 | Gladsheim |

| | |
|---|---|
| 51-53 | Hades |
| 54-58 | Limbo |
| 59-61 | Negative Material Plane |
| 62-64 | Negative Quasi-Plane (Vacuum, Ash, Dust, or Salt) |
| 65-67 | Nine Hells |
| 68-70 | Nirvana |
| 71-73 | Olympus |
| 74-76 | Pandemonium |
| 77-79 | Para-Elemental Plane (Smoke, Magma, Ooze, or Ice) |
| 80-82 | Positive Material Plane |
| 83-85 | Positive Quasi-Plane (Lightning, Radiance, Minerals, or Steam) |
| 86-91 | Prime Material Plane* |
| 92-94 | Seven Heavens |
| 95-97 | Tarterus |
| 98-100 | Twin Paradises |

* Characters sent to the Prime Material plane are teleported elsewhere in the same world.

The caster has no control over the destination of the target. The conditions at the destination may kill the target (for example, arriving in the elemental plane of fire) or merely make life difficult. This determination is left to the DM.

**Wildzone* (Conjuration/Summoning)**
Range: 0
Components: V, S, M
Duration: 2d6 turns
Casting Time: 1d6 rounds
Area of Effect: 300'x300' square
Saving Throw: None

This powerful spell creates a disruption in magical forces similar to the conditions found in wild magic regions (areas where the effects of magic have been permanently altered). This spell has only a temporary effect, although the effects of *wildzone* could possibly be rendered permanent.

The spell creates a wild magic region centered on the caster. The area of effect cannot be shaped in any way; it is *always* a square 300 feet long on each side (90,000 square feet).

Within the *wildzone*, wild magic reigns. Any spell cast in the area of effect is automatically treated as a wild surge (see Table 2). Effects from magical items that expend charges are also treated as wild surges when used in the area. Other magical items function normally.

Spells cast into the *wildzone* from outside the area of effect function normally, but spells cannot be cast out of the area of effect without triggering a wild surge.

The material components are several pots of paint which must be spilled across a sheet of hammered silver worth no less than 2,000 gp.

# Ninth-Level Spells

**Chain Contingency (Evocation)**
Range: 0
Components: V, S, M
Duration: 1 day/level
Casting Time: 2 turns
Area of Effect: The caster
Saving Throw: None

This powerful spell is similar to the 6th-level *contingency* spell.

*Chain contingency* allows the caster to designate either two or three spells that will take effect automatically under a specific set of conditions. In other words, when a set of conditions is met, the designated spells are "cast" immediately without the caster's intervention.

*Chain contingency* must be cast together with the spells it is to trigger. The caster may choose either two spells to occur simultaneously or three spells to occur consecutively, one per round. Spells must be of 8th level or lower. Only the 6th-level *contingency* spell may not be included. The casting time of 2 turns includes the casting of the spells to be triggered.

Unlike the *contingency* spell, spells "stored" in *chain contingency* can affect creatures other than the caster. These instructions must be carefully worded; the spell obeys the letter of its instructions and not the caster's intentions.

In casting *chain contingency*, the wizard defines the conditions that will trigger the "stored" spells. This definition must be carefully worded, but may be as limiting or general as the caster desires. The caster also states the exact order, target, range, and manner in which the stored spells are to be cast.

The spell has several limitations in triggering its spells. It does not have any powers of discernment; thus, an instruction to "target the highest-level enemy" is not possible. Furthermore, the conditions cannot involve a delay; a spell cannot be ordered to trigger "three turns after I sneeze."

When the named conditions are met, the *chain contingency* is automatically triggered. If all specifics of casting a spell are not specified (e.g., target or area of effect), the effect is automatically centered on the caster.

Possible triggers might include a fall from a distance greater than the caster's height, the appearance of the first beholder within 30 feet of the caster, or the wizard pointing his finger and pronouncing a specified word.

Only one *chain contingency* can be placed on the spellcaster at any one time. If a second is cast, the first *chain contingency* is cancelled. It is possible to have both a *contingency* and a *chain contingency* operating at the same time, provided that there is no overlap in the conditions specified for triggering the two spells.

Spells triggered by the *chain contingency* have a casting time of 1. If the spell is triggered under conditions that are impossible to fulfill, it fails. If one of the spells in a series cannot be fulfilled, the remaining spells in the series are lost. Normal conditions, including line of sight to the target, must be fulfilled. All spells originate from the caster;

thus, it is not possible for a caster to *teleport* and leave behind a series of *fireballs* to blast his enemies. In this case, the *fireballs* would either fail or destroy something at the caster's destination.

The material components are (in addition to those of the companion spells) 500 gp worth of quicksilver; a gem of at least 1,000 gp value; an eyelash from an ogre mage, ki-rin, or similar spell-using creature; and an ivory statuette of the wizard (which is not destroyed in the casting of the spell) which must be carried by the spellcaster in order for the *chain contingency* to perform its function when triggered.

**Elemental Aura (Abjuration, Evocation)**
Range: 0
Component: V
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

This spell has four very different effects depending on the type (air, earth, fire, water) of *elemental aura* cast. Only the caster may receive an elemental aura, and it is not possible to benefit from more than one aura at one time.

Each aura is three inches thick and covers the caster's entire body. An aura of air is hazy white in color, an aura of earth is dull grey, an aura of fire is flickering red, and an aura of water is shimmering blue. The auras have these effects:

**Air**
- immunity to gas and air-based attacks
- total protection from physical attacks by creatures of the elemental plane of Air
- ability to cast *fly* and *protection from normal missiles* once each

**Earth**
- immunity to attacks from nonmagical weapons made of stone or metal
- immunity to physical attacks by creatures of the elemental plane of Earth
- ability to breathe and move at full movement rate within the element of earth
- ability to cast *wall of stone* once

**Fire**
- immunity to normal and magical fire
- total protection from physical attacks by creatures of the elemental plane of Fire
- ability to breathe and move at full movement rate within the element of fire
- total protection from hostile environmental effects while traveling plane of Fire
- ability to cast *wall of fire* once

**Water**
- immunity to water- and cold-based attacks
- total protection from physical attacks by creatures of the plane of Water
- ability to breathe and move at full movement rate within the element of water

• ability to cast *wall of ice* once

The auras do not restrict the caster in any way. He is free to move and act normally while under the influence of an aura.

**Estate Transference (Alteration)**
Range: 0
Components: V, S, M
Duration: Permanent
Casting Time: 10 turns
Area of Effect: 1,000 square feet/level
Saving Throw: None

This powerful spell allows a caster to transfer a large area of land in the Prime Material plane to any of the elemental planes. All buildings, people, and wildlife within the area of effect are also transported. The land forms a pocket of the Prime Material plane within the elemental plane. The pocket is a sphere with a diameter equal to the diameter of the land. The surface of the pocket allows creatures to enter or exit the pocket, but prevents the elements from entering the pocket.

Inside the pocket, the land is surrounded by air of a temperature matching that of the Prime Material plane at the moment the land was moved. In addition, a source of water is created within the pocket.

Before the spell is cast, the area to be moved must be surrounded by solid markers of material from the destination plane. Thus, if a wizard wants to move his castle to the Elemental Plane of Fire, he must first surround the area with solid blocks of matter from the Elemental Plane of Fire, such as hardened magma or magically-crystallized fire. The blocks must be spaced no more than five feet apart and may be placed above ground or under the surface (at a depth of no more than three feet).

The wizard must be within the area to be moved when he casts the spell. When the land moves, a hemispherical crater is left behind in the Prime Material plane. Inside its pocket on the desired plane, the land continues its existence as if nothing changed, with the exception of occasional visits from planar creatures.

Any land that is moved in this manner can never again be moved with this spell.

The material component (in addition to the markers) is the appropriate magical device to control elementals of the desired plane (*bowl commanding water elementals, brazier commanding fire elementals, censer controlling air elementals*, or *stone controlling earth elementals*). The item must be permanently placed at the heart of the area of effect and cannot be used for any other purpose. If the device is disturbed in any way, the spell immediately fails, allowing the energies of the elemental plane to flood into the protected area.

**Glorious Transmutation (Alteration)**
Range: Touch
Components: V, S, M
Duration: Permanent

Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell turns iron into silver or lead into gold at the caster's option. The prime ingredient for this spell is a magical item called the *philosopher's stone*, which must be touched by the wizard and alchemically combined with the metal during casting. The formula for mixing the stone and the metal must be known by the caster; this information is not provided by this spell and the spell is useless without it. (The exact ingredients and formula are decided by the Dungeon Master and must be discovered by the wizard in the course of adventuring.)

*Philosopher's stones* vary in quality so much that each is capable of transmuting either 1d10x50 pounds of iron into an equal quantity of silver or 1d10x10 pounds of lead into the same amount of gold. It is not possible to know how much metal can be transmuted until the process is complete. If the caster has more iron or lead prepared than the spell is capable of changing, any excess is unchanged.

The entire transmutation must be made at one time. Only one stone may be used per casting of the spell. The entire *philosopher's stone* is consumed in the process.

**Stabilize* (Abjuration)**
Range: 0
Components: V, S
Duration: 1d4+1 turns
Casting Time: 1 turn
Area of Effect: 30-foot-radius circle
Saving Throw: None

This spell requires immense magical effort to cast, relegating it to the highest spell level. *Stabilize* negates the effects of wild magic regions, allowing the caster and all creatures in a 30-foot radius to cast spells and use magical items normally. The spell is centered on the caster and follows his movements.

The caster's own spells never cause wild surges when cast within the duration of a *stabilize* spell, nor do the effects of wild surges extend into the protected area. Furthermore, the wild mage's spells function at his true level; Table 2 is *not* used to determine level variation. The spell affects *wildstrike, wildzone,* and *wildwind*.

**Wail of the Banshee (Necromancy)**
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 9
Area of Effect: 30-foot-radius sphere
Saving Throw: Neg.

At the culmination of this dreadful spell, the wizard screams like a banshee (a groaning spirit). For each level of the caster, one listener within 30 feet hears the wail.

Those who fail a saving throw vs. death magic die instantly.

The wizard cannot be the victim of his own spell, nor can he choose who will be affected. If there are more potential victims than the level of the caster, the DM must randomly determine which creatures are affected. Creatures who cannot hear (due to ear plugs, deafness, etc.) can be targets, but cannot be affected and are considered to automatically make their saving throws.

The material component is a lock of hair from an evil female elf.

**Wildfire* (Invocation/Evocation)**
Range: 0
Component: V
Duration: Variable
Casting Time: 1
Area of Effect: Variable
Saving Throw: Variable

By means of this spell, the wild mage is able to channel raw magical energy through himself, shaping it into any form or effect he desires. The energy is similar in many ways to a *wish* spell, but has unique differences.

*Wildfire* allows the caster to create the effect of any wizard spell of 8th level or lower. He need only have general knowledge of the spell and its effects; the spell does not need to be in his own spellbooks.

Any normal saving throws vs. the spell effects are made at a -2 penalty.

*Wildfire* can also be used in the creation of magical items. The energy created by the spell may be used to generate effects that are not created by known spells.

*Wildfire* can also be used to create items out of nothing. The magical energy can be shaped and hardened to form solid objects. These objects have a greenish, glowing tinge and radiate magic. These objects are stronger than steel yet possess almost no weight. They are immune to fire, cold, electricity, and all forms of magical attack except *dispel magic* and *wish* spells. Even if they are subjected to these spells, a saving throw is allowed (equal to the creator's saving throw vs. spell).

When creating objects, the caster is limited only by his own skill and the dimensions of the object. Items larger than a 10-foot-radius sphere cannot be fashioned. Creating the object requires only one round, regardless of size. Thus, a wizard could make an impenetrable dome or a small boat with this spell.

Objects made of *wildfire* are neither stable nor permanent. Since the object is made of magic separated from the magical continuum, the material gradually deteriorates until the magical bonds become too weak to hold the *wildfire* in the chosen form. This decay takes 1d6+4 hours.

**Wildwind* (Conjuration/Summoning)**
Range: 100 yards
Components: V, S
Duration: 1d3 turns
Casting Time: 8
Area of Effect: Special

Saving Throw: None

This spell is similar in effect to *wildstrike* and *wildzone*. When cast, a wall of faint, multi-colored lights springs into existence at the point indicated by the caster. These lights form a line 150 feet long. After the first round of the spell, the wizard can move the wall of lights. Each round, the caster can move the wall in the same direction or as much as 45 degrees to either side. Once the wall is set in motion, it cannot be stopped unless the spell is cancelled or dispelled. The lights can move 60 feet per round.

The *wildwind* has two significant effects. First, all creatures struck by the magical lights suffer 2d6 points of damage. Second, any spellcaster struck while attempting to cast a spell automatically triggers a wild surge (use Table 2). Magical items that expend charges that touch the wall of lights automatically release one charge, also resulting in a wild surge.

# Chapter 3: Priest Spells

## Priest Spells

### 1st Level

Analyze Balance
Anti-Vermin Barrier
Call Upon Faith
Courage
Emotion Read
Know Age
Know Direction
Know Time
Log of Everburning

# First-Level Spells

**Analyze Balance (Divination)**
Sphere: Numbers, Divination
Range: 80 yards
Components: V, S, M
Duration: 5 rounds+1 round/level
Casting Time: 1 round
Area of Effect: One creature, object, or 10' square
Saving Throw: None

This spell allows a priest to sense how far a character, creature, object, or area is from a condition of balance -- in other words, the degree to which its alignment is removed from true Neutral. The spell gives no indication of the "direction" in which the alignment is removed from true Neutral except under certain conditions which follow. The spell does, however, indicate along which axis or axes of alignment the variation lies.

For example, a priest uses this spell to analyze the balance of a Chaotic Neutral creature. The spell indicates that the creature is removed from Neutral by one grade, and the variation is along the Law/Chaos axis; thus, the creature must be either Chaotic Neutral or Lawful Neutral. If the creature were Chaotic Evil, the spell would indicate that

it is removed from balance by two grades, one along each axis; thus, the creature must be Chaotic Evil, Chaotic Good, Lawful Evil, or Lawful Good.

A priest has a 5% chance per level of correctly determining the direction of variation along one randomly chosen axis. This means that a 10th-level priest evaluating the balance of a Chaotic Neutral creature would have a 50% chance of learning that the creature is Chaotic (and hence Chaotic Neutral, since it is only one step away from balance).

Similar to spells such as *detect evil*, this spell will not yield a result on a hidden trap. If cast on a creature with an intelligence level of "animal" or "non-," it will always read true Neutral (i.e., zero steps removed from balance).

The material components are four iron coins which the priest tosses in his hand while concentrating on the spell. The coins are not consumed in the casting.

**Anti-Vermin Barrier (Abjuration)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1
Area of Effect: 10-foot cube/level
Saving Throw: None

With this spell, the caster creates an invisible force field that repels nonmagical insects, rodents, spiders, snakes, worms, and similar vermin of less than 1 Hit Die. The spell has no effect on giant-sized versions of these creatures unless they are less than 1 Hit Die. The barrier affects summoned creatures, such as those called by a summon insects spell.

Any vermin within the area of effect when the spell is cast are not affected; however, when these creatures exit the area, they cannot return.

The spell affects a cubic area whose sides are 10 feet times the caster's level (for instance, a 2nd-level priest could affect a 20'x 20'x 20' cube.

The material components are the caster's holy symbol and a rodent's whisker.

**Call Upon Faith (Invocation)**
Sphere: Summoning
Range: 0
Components: V, S, M
Duration: 1 round
Casting Time: 1
Area of Effect: The caster
Saving Throw: None

Before attempting a difficult task, the priest may cast *call upon faith* to aid his performance. If the priest has been true to his faith (as determined by the DM), the priest gains a +3 (or +15%) bonus to one die roll (his choice) needed to complete the task. The bonus may be used to affect a saving throw, attack roll, ability check, etc. For example, if

a priest were about to cross a narrow log high above a chasm, he could cast this spell and gain a +3 bonus to his Dexterity ability check.

The material component is the priest's holy symbol.

**Courage (Enchantment/Charm)**
Sphere: War
Range: 240 yards
Components: V, S, M
Duration: Special
Casting Time: 1 turn
Area of Effect: One unit up to 200 individuals
Saving Throw: None

This spell imbues the target unit with a temporary burst of courage. To cast this spell, the priest must have an uninterrupted line of sight to the target unit.

A *courage* spell enables a unit to automatically pass its first morale check following the casting of this spell. When circumstances arise that would necessitate a morale check, no die roll is made and the unit is assumed to have passed the check. After this occurs, the spell ends and the unit must make all future morale checks normally.

If a unit under the influence of a *courage* spell is not forced to make any morale checks, the spell expires at the first sunset.

When several different events simultaneously trigger morale checks, the BATTLESYSTEM™ rules apply penalties to a single morale check. If this occurs to a unit under the influence of a *courage* spell, the player commanding the unit selects one such event and its modifier is ignored.

No more than one *courage* spell can affect a unit at one time. Once the spell has expired, a priest can cast the spell again on the same unit.

The material component is a cube of cast iron.

**Emotion Read (Divination)**
Sphere: Thought
Range: 5 yards/level
Components: V, S, M
Duration: Instantaneous
Casting Time: 3
Area of Effect: One creature
Saving Throw: Neg.

This spell allows the priest to perform an instantaneous reading of a single subject's emotional state. It can be used on any subject possessing Intelligence of 3 or better. This reading is neither deep nor specific and cannot pick out mixed emotions or intricate details. For example, it might tell the priest that the subject is fearful, but the spell cannot reveal what the subject is afraid of or why he is afraid.

*Emotion read* does not reveal individual thoughts or the subject's motivation. Thus, the spell might reveal that the subject is coldly unemotional at the moment, but not the fact that the subject is contemplating the cold-blooded murder of the priest.

Note that this reading is instantaneous. It reveals only the emotion that is strongest at the instant the spell is used. While this will usually be related to the subject's overall emotional state, it is always possible that the subject might be distracted for a moment or remember and respond to past events.

The subject is allowed a normal saving throw vs. spells to resist this spell. If the saving throw is successful, the priest receives no reading at all. If the subject's roll exceeds the necessary number by six or more, the priest perceives an emotion diametrically opposite to the subject's true emotion.

The material component is a square of unmarked white wax.

**Know Age (Divination)**
Sphere: Time
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 1
Area of Effect: One object or creature
Saving Throw: None

This spell enables the caster to instantly know the age of any single person, creature, or object on which he concentrates. The age is accurate to the nearest year.

The material component is a calendar page.

**Know Direction (Divination)**
Sphere: Travelers
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 1
Area of Effect: Special
Saving Throw: None

*Know direction* allows the caster to instantly know the direction of north. The spell is effective in any environment, whether underwater, underground, or in darkness (including magical darkness).

The material component is a small scrap of a parchment map that is at least 100 years old.

**Know Time (Divination)**
Sphere: Time
Range: 0
Components: V, S
Duration: Instantaneous
Casting Time: 1
Area of Effect: The caster
Saving Throw: None

*Know time* is particularly useful when the caster has been unconscious. This spell enables the caster to know the precise time of day to the nearest minute, including the current hour, day, month, and year.

**Log of Everburning (Enchantment)**
Sphere: Elemental Fire, Plant
Range: Touch
Components: V, S
Duration: 1 hour/level
Casting Time: 1
Area of Effect: Special
Saving Throw: None

This spell increases the amount of time that a wooden object will burn before being consumed. Wood that is enchanted in this manner burns brightly without being consumed for the duration of the spell. When the spell ends, the wooden object crumbles to ash.

This spell does not cause the wood to catch fire; it must be ignited normally. While it burns, the wood gives off twice the normal amount of heat; thus, a single log can make a cozy fire.

The affected wood radiates magic. The priest may enchant up to 1 cubic foot of wood per level of experience. The spell is effective on torches.

**Mistaken Missive (Alteration)**
Sphere: Chaos
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1
Area of Effect: One page/level
Saving Throw: None

This spell alters the appearance of words written in ink. When the spell is cast upon a written page, the ink imperceptibly begins to move. Over the next few days, the message becomes progressively more illegible. If the page is left undisturbed for six days, an entirely new message forms on the page. The new message is completely legible and is recognizable as the handwriting of the original author, but is contrary in content to the original message.

After the spell is cast, the message will appear different every day. The DM decides the message that the page will carry after the sixth day has passed. Following is a sample of the changes that could take place in a message.

*Day One:* The words of the letter appear faint, as if the author of the letter was running out of ink as he wrote.

*Day Two:* The words have moved slightly from their original positions, as if the person writing the letter were shaking or in a moving carriage when the letter was written.

*Days Three and Four:* The message is gibberish. Although the ink forms groups of letters arranged in lines with punctuation, nearly all the words are meaningless. This may appear to be some sort of code, but it means nothing.

*Day Five:* The ink has formed real words. However, the sentence construction is still meaningless (e.g., Egg west worse green!).

*Day Six (and beyond):* The message is coherent, but the opposite intent of the original message has been created. If the original letter read, "Send troops quickly," the new letter reads, "All is fine. Keep your men in reserve."

If *mistaken missive* is cast on the pages of a spellbook or a scroll, the ink on the page reforms into a new spell of the same level as the original spell. Thus, a *darkness* spell might become a *maze* spell. However, the spell formula will be wrong. Although it will look like a proper spell, it will not function when cast.

A coded message that is subjected to *mistaken missive* will appear as a coded message on the sixth day but will hold a different meaning than the original message.

A *glass of preserved words* will allow the original message to be read correctly. *Dispel magic* will restore the message to its original form.

The material component is three drops of ink.

**Morale (Enchantment/Charm)**
Sphere: War
Range: Special
Components: V, S, M
Duration: Special
Casting Time: Special
Area of Effect: One unit up to 200 individuals
Saving Throw: None

This spell can be used in two distinct ways. The first is appropriate for battlefield use. The priest can cast this spell on any unit within 240 yards in an uninterrupted line of sight. The casting time for this use is one turn and the material component is a gem of at least 100 gp value which is consumed during the casting.

At the conclusion of this use of the spell, the target unit's morale is modified by 1, either positively or negatively, as the caster desires. This modification remains in effect for 1d4+2 turns.

The second and more powerful use of the spell requires lengthy preparations. Casting must take place inside or within 100 yards of a place of worship dedicated to the casting priest's deity. Both the priest and the unit to be affected must be present. The casting time for this use is 5 turns. The material component is the priest's holy symbol.

At the conclusion of this use of the spell, the unit's morale is raised by 3 (maximum of 19). This morale increase lasts until the next sunset. Only priests of 10th level or higher can cast this version of the spell.

**Personal Reading (Divination)**
Sphere: Numbers
Range: 0
Components: V, S, M

Duration: Special
Casting Time: 2 turns
Area of Effect: One creature
Saving Throw: None

This spell allows the priest to mathematically analyze personal information about one human or demihuman character and learn valuable facts about that character. To cast this spell, the priest must know the subject's real name (the name the subject was given as a child) or the date and place of the character's birth. The priest analyzes this information and is able to build a rough picture of the character's life history and personal specifics.

The "historical" information discovered through this spell is generally vague. For example, the priest might learn that the subject was born in the woods and moved to the city only after hardship made his life untenable. Specific information is up to the DM. The DM might provide some or all of the following information.

- The subject's character class or career
  The subject's approximate level (stated in terms such as "novice," "highly skilled," "moderately competent," etc.)
- The subject's standing in the community ("highly respected," "mistrusted," "considered an enigma," etc.)
- The subject's success or failure in his profession
- The subject's prevailing character traits or mannerisms

If the priest casts the spell based on an alias or incorrect birth information, the reading will be inaccurate. The DM should develop a history and personality at odds with the truth. This might allow the priest to determine whether the name of the subject is correct--a reading giving information that conflicts with what the priest already knows should be a clue that the name is incorrect.

The subject need not be present during the casting. The priest can cast the spell without ever having met the subject.

The material component is a small book of numerological formulae and notes (different from the book used in *telethaumaturgy*). The book is not consumed in the casting.

A DM may rule that this spell can be cast on humanoids or monstrous creatures. The information available will be similar (considering that words like "profession" will mean something different when applied to an ogre). This spell will categorically fail on creatures that have no concept of a personal name.

**Ring of Hands (Abjuration) Reversible**
Sphere: Protection
Range: 0
Components: V, S
Duration: 2d10 rounds
Casting Time: 5
Area of Effect: Special
Saving Throw: None

This is a cooperative magic spell. It requires a minimum of two priests and can accommodate a maximum of ten. Each priest must cast *ring of hands* on the same round. At the end of the casting, the priests involved join hands, thus completing the spell. If any priest breaks the circle, the spell immediately ceases. The priests may not move from their locations but are free to speak. They may not cast spells requiring a somatic or material component while the ring is formed.

The *ring of hands* forms a protective barrier around the priests and everything within their circle. For each priest, assume a five-foot circumference of the circle; thus, three priests would create a circle of 15-foot circumference. For easy calculation, assume that for each priest, the circle can accommodate four persons.

The barrier functions as a *protection from evil spell*. Attacks by evil creatures suffer a -1 penalty for every priest forming the circle. Saving throws made by the priests or anyone in the circle against attacks from such creatures receive a +1 bonus for every priest in the circle.

Attempts at mental control over protected creatures are blocked. Extraplanar and conjured creatures are unable to touch the priests and those within the circle, although melee attacks against such creatures by those within the ring break the barrier.

Because the priests casting the spell cannot move and must hold hands, they do not receive any Dexterity bonuses to Armor Class. Furthermore, opponents gain a +2 bonus on attack rolls against the priests, since there is little they can do to avoid a blow. Creatures within the ring are free to act as they wish. Melee attacks by those within the ring are limited to piercing weapons and suffer a -1 penalty to attack rolls since the priests intervene.

The reverse of this spell, *ring of woe*, functions as detailed above except the effect applies to good creatures as would a *protection from good* spell.

**Sacred Guardian (Enchantment/Charm)**
Sphere: Guardian
Range: Touch
Components: V, S, M
Duration: 1 day/level
Casting Time: 1
Area of Effect: Creature touched
Saving Throw: None

By use of this spell, a priest becomes instantly aware when the recipient of the spell is in danger, regardless of the distance between the priest and the recipient. The recipient may be on a different plane of existence than the priest.

When this spell is cast by a priest of at least 3rd level, he receives a mental image of the endangered person's situation. At no time, however, does the priest know the person's location through the use of this spell.

The material component is a rose petal that has been kissed by the spell recipient.

**Speak With Astral Traveler (Alteration)**
Sphere: Astral
Range: Touch

Components: V, S
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

When a priest casts the 7th-level *astral spell*, he leaves his physical body in suspended animation while his astral body travels. By touching the comatose body and casting *speak with astral traveler*, a priest can mentally communicate with the projected individual. Although communication is mental, it takes the same amount of time as a normal, verbal dialogue. The spell ends abruptly when its duration expires.

**Thought Capture (Divination)**
Sphere: Thought
Range: 0
Components: V, S
Duration: Instantaneous
Casting Time: 3
Area of Effect: 10 yards
Saving Throw: None

One of the more bizarre contentions held by priests of the School of Thought is generally scoffed at by outsiders. The theory states that once a thought has occurred in someone's brain, it exists as a "freestanding mental object." This "thought object" usually remains inside the brain of the creature that created it, but sometimes it escapes (this supposedly explains why people forget things). When this happens, the thought object stays in the geographical area where it was lost. Any receptive brain (usually the brain of the creature that initially created the thought) can pick it up again simply by bumping into the invisible, free-floating thought. According to the theory, this is the reason that people can regain a lost thought by going back to the location where the thought was lost. This supposedly works because the free-floating thought is recaptured, not because the locale reminds them of the thought. Unfortunately for philosophers who disagree with this, *thought capture* seems to be extremely strong evidence for this theory.

This spell makes the priest's brain something of a magnet that attracts thought objects in close proximity. The priest can sense strong thoughts and emotions and can sometimes even see momentary visions of creatures who died or suffered some powerful emotion in the immediate vicinity. Thought objects are always attracted to the priest in the order of the strongest (those attached to powerful emotions or significant events) to the weakest. Thus, if several thought objects share the same vicinity, the priest will perceive information about the most interesting or significant event. The priest might pick up images of a battle from the point of view of a warrior who died there, or he might gain information about the victor of the battle.

The DM dictates the information provided to the priest, and thus can use this spell to provide players with important background information or can add texture to a campaign world. The information provided might be highly cryptic or symbolic, perhaps in the form of a rhyme or riddle.

The priest gains one thought object per casting of the spell. The spell may be cast a number of times in the same locale, with the priest gaining a different thought object with each casting. A locale contains a finite number of thoughts, however, and once the priest has gained all of them (per the DM), the spell will fail in that locale.

**Weighty Chest (Alteration)**
Sphere: Wards
Range: Touch
Components: V, S, M
Duration: 1 day/level
Casting Time: 1
Area of Effect: 5-foot cube
Saving Throw: None

This spell enables the caster to enchant a chest, book, package, or any other nonliving object no larger than a 5'x5'x5' cube. When the enchanted object is touched by anyone other than the caster, the apparent weight of the object increases, becoming 2-5 (1d4+1) times the weight of the person or persons touching it. This condition makes the object extremely difficult to move for anyone but the caster. The caster can move the object normally throughout the duration of the spell.

The material component is a lead ball.

# Second-Level Spells

**Aura of Comfort (Evocation)**
Sphere: Travelers
Range: Touch
Components: V, S
Duration: 1 hour/level
Casting Time: 2
Area of Effect: Creature touched
Saving Throw: None

When this spell is cast, a faintly shimmering aura surrounds the recipient. The aura insulates the recipient from the effects of nonmagical heat and cold in a range of -20 F. to 140 F. Any time a traveler encounters temperatures in this range, he maintains a comfortable temperature of 70 F., regardless of prevailing weather conditions. Additionally, the spell acts as a shield against rain, snow, and hail, which are blocked by the aura.

If a recipient encounters a temperature above or below the stated range, the temperature within the aura is altered by an equal number of degrees. For example, a recipient who encounters a temperature of 150 will actually experience a temperature of 80°F.

All physical objects other than rain, snow, and hail can pass through the aura. The recipient can cast spells normally while the *aura of comfort* is in effect. The spell offers

no protection against magically generated weather, such as that caused by *weather summoning* and *ice storm*. It does not protect against fire, nor does it shield against fire- or cold-based attacks.

**Calm Chaos (Enchantment/Charm)**
Sphere: Law
Range: 20 yards
Components: V, S
Duration: Special
Casting Time: 1
Area of Effect: 1d6 creatures/level
Saving Throw: Special

This spell temporarily calms a chaotic situation involving a group of people. The situation may involve any range of emotions from violence (as in a barroom brawl) to joy and merrymaking (as in a festival or carnival).

Unlike the *emotion* spell, *calm chaos* does not cause a change in the emotions of affected creatures--anger, fear, or intense joy remain in each individual. The emotion is simply restrained rather than released. Thus, an angry character intent on attacking someone will still feel the desire to do so, but he will withhold his action as long as the spell remains in effect.

Creatures to be affected are allowed a saving throw vs. spell at a -4 penalty to avoid the effects. If more creatures are present than can be affected, creatures nearest the caster are affected first.

After casting the spell, the priest makes a Charisma check. If successful, all characters affected by the spell are compelled to stop what they are doing. They are filled with the sensation that something important is about to occur. At this time, the priest or a character of his choosing must gain the attention of the affected creatures by giving a speech, performing for the crowd, or casting spells with intriguing visual effects (such as *dancing lights*). The attention of the crowd is then held for as long as the distraction continues. A character could filibuster and maintain control over the affected characters for hours or days.

Two conditions will cause the group to resume its original actions. In the first, the method of entertaining the crowd ceases for one round--the speech ends or the spell expires. If this action is not replaced with another distraction within one round, the crowd is freed of the spell.

In the second condition, if an event occurs that is more immediate than the distraction, the crowd will divert its attention to that event. Thus, if the spell were used to stop a barroom brawl and the building caught fire or was attacked, the crowd's attention would be diverted and the individuals could act freely.

Creatures whose attention is held by the spell cannot be instructed to attack or perform any action. Such creatures will ignore suggestions of this nature. Depending on the nature of the request, the DM may deem that the suggestion causes a distraction that ends the spell.

**Create Holy Symbol (Conjuration)**

Sphere: Creation
Range: 0
Component: V
Duration: Permanent
Casting Time: 2
Area of Effect: The caster
Saving Throw: None

When the words of this spell are uttered, a holy symbol appropriate to the priest's deity appears out of thin air. The item appears in the priest's hands. It may be used as a component for spells or for any other purpose for which the priest would normally use his holy symbol (such as turning undead). He may also opt to give it to a lower level priest of the same deity. The holy symbol is a permanent object.

**Dissension's Feast (Enchantment/Charm, Alteration)**
Sphere: Chaos
Range: Touch
Components: V, S
Duration: 5 turns+2 turns/level
Casting Time: 2 turns
Area of Effect: Special
Saving Throw: Neg.

This spell must be cast by a priest during the preparation of food for a meal. The spell is cast on any one quantity of food; thus, the priest could cast the spell on the batter of a wedding cake, or he could cast the spell on a quantity of onions as they are diced for both a salad and a stew. The spell affects 10 pounds of food per level of the caster. Anyone who eats the affected food (even a character who eats the salad but not the stew) is subject to the effects of the spell.

The effects of the spell begin five rounds after the food has been eaten. At that time, creatures who have eaten the affected food are allowed a saving throw; success indicates that a creature is not affected.

Affected creatures quickly become agitated. Petty events ranging from poor table manners to loud talking bother everyone. After five minutes, tempers flare, characters feel compelled to shout at and insult one another, and threats are hurled. Even normally calm characters will feel compelled to vent their frustrations violently.

Creatures maintain no alliances while under the effect of *dissension's feast*. A king and his wife who are normally madly in love will find themselves bickering with each other in a matter of minutes. Members of a diplomatic delegation might come to blows with each other within minutes of eating the food.

At the end of the spell duration, characters undergo the sensation of waking up. All are free to behave as they wish. Characters at the meal will still be angry, although they will have no idea why they became angry.

**Draw Upon Holy Might (Invocation)**
Sphere: Summoning

Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: The caster
Saving Throw: None

When this spell is cast, the priest's body shudders and glows with a shimmering aura as it becomes a vessel for the power of his god. As a result, the caster may choose to increase one ability score (only Strength, Dexterity, Constitution, and Charisma are eligible) by +1 per three levels of his experience (+1 at 3rd level, +2 at 6th, etc.).

Only one attribute may be increased. The effect lasts for the duration of the spell. Attributes may be increased above the normal restrictions due to race and class, to a maximum of +6. All benefits for exceptional attributes listed in the *Player's Handbook* apply; however, the divine abilities found in the *Legends & Lore* book cannot be gained by use of this spell.

For example, an 18th-level priest with Strength 15 could increase his Strength to 21 for 18 rounds, granting him a +4 attack bonus, a +9 damage adjustment, etc.

When the spell ends, the energy abruptly leaves the priest's body, leaving him physically and mentally drained. He is nearly comatose and can do nothing but rest for the next 4d6 turns. A successful Constitution check (at the priest's normal attribute score) reduces this time by 50%.

The material components are the priest's holy symbol and a vial of holy water that has been blessed by the high priest of the character's faith.

**Emotion Perception (Divination)**
Sphere: War
Range: 300 yards
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 turn
Area of Effect: One unit/five levels
Saving Throw: None

This spell allows the caster to sense the emotional state and the level of determination of one or more military units. The priest must have an uninterrupted line of sight to the entire target unit. When this spell is cast, the priest instantly learns the current morale rating and morale status of the target unit. The DM describes morale using the appropriate term; for example, steady, elite, etc.

The material component is the priest's holy symbol.

**Frisky Chest (Enchantment/Charm)**
Sphere: Wards
Range: Touch
Components: V, S, M
Duration: Permanent

Casting Time: 2
Area of Effect: 10-foot cube
Saving Throw: None

With this spell, the caster can enchant a chest, book, or any other nonliving object no larger than a 10'x10'x10' cube. When any creature other than the caster comes within three feet of the enchanted object, it instantly sprouts appendages and moves away from the creature as quickly as possible. The enchanted object continues to move until it is at least 10 feet away from the nearest creatures in the area.

After the enchanted object has moved a satisfactory distance from the nearest creature, the appendages disappear. When a creature again comes within three feet of the enchanted object, the enchanted object sprouts appendages and flees. This process continues until the enchantment is negated (through a *dispel magic* or similar spell) or the enchanted object is subdued or destroyed.

The enchanted object can sprout feet (MV 24), wings (Fl 24, maneuverability class B), or fins (Sw 24), whichever is most advantageous. Thus, a book on a shelf might sprout wings and fly away, while a table might gallop around a room. The enchanted object can freely and instantly trade appendages as necessary.

The enchanted object will move only through open spaces. It will not crash through windows, shatter a closed door, or dig through the earth. It cannot attack or take any actions other than movement. If surrounded or cornered, the enchanted object moves in random directions until it is restrained or destroyed.

The enchantment ends if the caster voluntarily negates it, if the enchanted object is destroyed (the object has the same vulnerabilities as it has in its normal state), or if the enchanted object is restrained for 2-5 (1d4+1) consecutive rounds. Restraint means that the object is prevented from fleeing; if a creature is able to grapple, lift, or sit on the object, it is considered restrained. A creature capable of lifting the object in its normal state is considered strong enough to restrain it (for instance, a person capable of lifting a 50-pound box is also capable of restraining such a box enchanted by *frisky chest*). The object may also be restrained by tossing a net or heavy blanket over it or by surrounding it with several characters.

The material components are a dried frog's leg, a feather, and a fish scale.

**Hesitation (Enchantment/Charm)**
Sphere: Time
Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: 20-foot-radius circle
Saving Throw: Neg.

Creatures affected by this spell hesitate before executing their intended actions. This causes them to modify their initiative rolls by +4. The initiative modifier occurs in the round following the round in which *hesitation* is cast.

The spell affects 2-8 Hit Dice or levels of creatures, although only one creature of 4

or more Hit Dice can be affected regardless of the number rolled. All possible victims are allowed saving throws vs. spells; those failing their saving throws modify their initiative rolls by +4 for a number of rounds equal to the caster's level.

The material component is a fragment of a turtle's shell.

**Idea (Divination)**
Sphere: Thought
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 4
Area of Effect: The caster
Saving Throw: None

This spell stimulates the priest's mind to experience a flash of insight. In game terms, the DM reminds the priest's player of a fact or event that has been forgotten, overlooked, or discounted. Thus, the DM might remind the player about an important clue that the priest discovered but the player did not consider significant.

If there are no forgotten facts, the DM may, at his discretion, tell the player of new information relevant to the condition at hand.

The DM must be careful in adjudicating use of this spell. The reminder or information should always be relevant and useful but should not be unbalancing to the situation. The reminder can be cryptic, depending on the DM's campaign.

The material component is a gold coin. This spell can be cast only once in any six hour period.

**Lighten Load (Alteration)**
Sphere: Travelers
Range: 30 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 2
Area of Effect: 10-foot cube
Saving Throw: None

This spell reduces the weight of equipment, supplies, and other objects by 50%. Weapons, supplies, and even disabled characters can all be made more portable by use of a *lighten load* spell.

This spell affects one pile of objects whose volume is equivalent to a 10-foot cube; after the spell has been cast, the affected objects can be divided among several characters or mounts. The spell has no effect on magical items.

An object affected by *lighten load* can be used normally; the spell has no effect on an object's mass, texture, size, strength, or other physical features.

The material components are a feather and a slip of paper moistened by a soap bubble.

**Mind Read (Divination)**
Sphere: Thought
Range: 5 yards/level
Components: V, S
Duration: 1 round/level
Casting Time: 2
Area of Effect: Special
Saving Throw: None

This spell is a sensitive version of the wizard spell *ESP*. In addition to detecting the surface thoughts of any creatures in range, the priest is able to probe deeper into the mind of a single creature. *Mind read* will always reveal the kind of creature being probed, although this identity may be couched in the creature's own language or in a (possibly distorted) body image. The spell has a 20% chance of revealing the character class of an individual.

The details and the usefulness of the creature's thoughts will depend on the intelligence of the subject. While a priest could read the thoughts of an animal, he would probably receive only a confused jumble of emotions and instincts. Reading the mind of a highly intelligent wizard, however, would be much more illuminating; the priest might be amazed by the crystal clarity and deep insight of the wizard's mental processes.

If *mind read* is used as part of an interrogation, an intelligent and wary subject receives a saving throw at a -2 penalty. If successful, the creature resists the spell's effects and the priest learns no information. If the saving throw is failed, the priest may learn additional information according to the DM's ruling.

**Moment (Divination)**
Sphere: Numbers
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: 50-foot radius
Saving Throw: None

Theoretically, every action has a particular moment at which it will have its greatest possible effect. Using the arcane mathematics of this spell, the priest can determine the "ideal moment" for any single action in each round that the spell is in effect. This action must be performed by a character other than the priest.

In practice, another character informs the priest of an action he wants to undertake in a round. The priest concentrates on the action, then informs the character when the "correct moment" has come. The character then gains a bonus of 20% (+4 on a d20) to the success of his action. The spell can affect only a single action in a given round. When used in combat, the priest can advise the best moment to initiate an action (affecting initiative) or what moment offers the greatest success in striking (affecting the chance to hit).

If the character seeks advice concerning initiative, he gains a -2 modifier to the

initiative roll, but only at the cost of -2 on his chance to hit. Characters who seek the best attack frequently delay their actions. These characters suffer a +1 on their initiative roll but gain a +4 on their chance to hit. The spell cannot affect the amount of damage caused, since the act (striking) has already succeeded at that point.

Characters are not obliged to wait for the moment specified by the priest. For example, a fighter might decide that striking first is more important than gaining +4 to hit. The character can act normally, based on his or her unmodified initiative. The character gains no bonus from the *moment* spell, and the priest can affect no other action in that round.

Noncombat actions can also benefit from the *moment* spell. For example, a thief planning to climb a wall may wait to start her climb until the priest informs her that the moment is right. If she waits, she gains a bonus of 20% to her Climb Walls roll (in this case, the bonus is subtracted from her roll).

While concentrating on this spell, the priest can take no other action. A break in the priest's concentration--taking damage in combat, for example--terminates the spell instantly.

The material component is a set of three silver dice, which the priest tosses in his hand while concentrating on the spell. The dice are not consumed in the casting.

**Music of the Spheres (Enchantment/Charm)**

Sphere: Numbers, Charm
Range: 50 yards
Components: V, S, M
Duration: 1 turn+1 round/level
Casting Time: 4
Area of Effect: 20-foot-diameter circle
Saving Throw: Neg.

With this spell, the priest creates tones and harmonies of such unearthly beauty and complexity that they entrance the listener, making it difficult for the listener to attack or otherwise harm the priest. The listener receives a normal saving throw against this effect. Failure means that the listener is entranced and is unable to attack the priest for the duration of the spell.

In addition, the music makes the subject gullible and more susceptible to charm magics such as *charm person, suggestion*, and *hypnotism*. While the music spell is in effect, the subject saves against charm spells with a -3 penalty.

This spell does not protect other characters in company with the priest; listeners who have fallen prey to the music are free to attack anyone else. The spell effect ends instantly if the priest takes any hostile action against a creature under the influence of the spell.

*Music of the spheres* can affect one creature per three levels of the priest (one subject at 3rd level, two at 6th level, etc.). Subjects must be within a 20-foot-diameter circle.

Potential victims must have Intelligence of at least 1 (necessary to understand the concept of music) and must be able to hear the music (i.e., they cannot be deaf and there can be nothing obstructing the victim's ears). This also means that the level of background noise must be low enough for the music to be audible. The DM should assume that the music is the same volume as an average human's normal speaking voice.

If the potential subject could not hear speech at the appropriate range under prevailing conditions, the spell cannot affect that subject. The spell would be virtually useless in the midst of a full-scale battle or during a hurricane.

The material component comprises a set of three small bows made from fine silver, each costing 100 gp. The lengths of the bows must be in the ratio of 1 to 4 to 9. The priest strokes these bows together in an intricate sequence while casting the spell. The bows are not consumed in the casting.

**Mystic Transfer (Invocation)**
Sphere: Charm
Range: 0
Components: V, S
Duration: 9 rounds
Casting Time: 1 round
Area of Effect: The caster
Saving Throw: None

This spell is one of the few cooperative spells that requires one priest to cast the transfer spell, but another priest to use its effect. On one round, a priest (or priests) casts the mystic transfer. The spell is then active for the remaining nine rounds of the turn.

*Mystic transfer* allows a priest to receive spells from another priest of the same ethos. Any priest of the same religion can cast a spell and transfer it to a second priest within that spell's maximum range. The spell does not take effect; instead, it is channelled through the *mystic transfer* into the receiving priest. This priest must immediately cast the spell or pass it to another priest cloaked in a *mystic transfer* within the spell's range. Any number of transfers can be made in the same round, provided each new recipient is within spell range of the previous recipient. If the spell is not transferred, the spell takes effect.

For example, a 3rd-level priest casts a *mystic transfer*. On the following round, a 10th-level priest "passes" a *flame strike* to the 3rd-level priest. The two priests could be 60 yards apart (the maximum range of the *flame strike*). The 3rd-level priest could then use the *flame strike* to attack any target within 60 yards, or could pass the spell on to another priest who has an active *mystic transfer*.

The spell passed by the *mystic transfer* has the range, area of effect, damage, and other effects equal to the level of the original caster. In the example above, the flame strike would function as if cast by a 10th-level priest.

The *mystic transfer* does not require concentration. However, on any round in which a priest is receiving and/or transferring a spell, the caster cannot take any other significant action.

A priest can receive spells only from priests who worship the same deity and who specifically target spells to him. Area effect spells may be passed. A priest can never use *mystic transfer* to pluck an opponent's spells out of the air.

**Nap (Alteration)**
Sphere: Time
Range: Touch
Components: V, S, M

Duration: Special
Casting Time: 2
Area of Effect: One creature/level
Saving Throw: None

Creatures affected by this spell are put to sleep for one hour. Upon awakening, the creature is as refreshed as if he had slept for eight hours. The affected person recovers lost hit points as if he rested for a full night. Wizards can memorize spells as if real time had passed.

Because the rest is so complete and rejuvenating, a character does not feel fatigued after waking. Attempts to use *nap* more than once in an 18-hour period are ineffective (the character simply is not sleepy). Only willing subjects can be affected by *nap*.

The material components are a scrap of pillow ticking, a feather, and a pebble that the caster has kept in his pocket for seven nights.

**Rally (Enchantment/Charm)**
Sphere: War
Range: 240 yards
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 turn
Area of Effect: One unit of up to 300 individuals
Saving Throw: None

This spell allows the subject unit to make an immediate rally check. It allows the check during the Magic Phase, rather than forcing the unit to wait for the Rally Phase in the BATTLESYSTEM™ rules. If the priest casting the spell is of 12th level or higher, the subject unit receives a +1 bonus to its rally check die roll. The priest must have an uninterrupted line of sight to the unit.

The material component is a miniature duplicate of a pennant or standard that represents the cause for which the unit is fighting (such as a national flag or the blazon of the unit's liege lord). The pennant is consumed in the casting.

**Sanctify (Conjuration/Summoning) Reversible**
Sphere: All
Range: 10 yards
Components: V, S, M
Duration: Special
Casting Time: 1 turn
Area of Effect: 10 yard 0 10 yard square/priest
Saving Throw: None

This cooperative spell allows the priests to create a beneficial atmosphere within a specified area. Companions of similar alignment to the casters will feel fortified and encouraged while in the sanctified area. The spell can be cast by a single priest or a group of priests.

After casting *sanctify*, the affected area is imbued with the deity's majesty. For followers of that deity, the area radiates a holy aura. These followers gain a +2 bonus to saving throws against all fear- and charm-based powers (a +2 to morale for BATTLESYSTEM™ rules units). Persons of the same alignment as the caster but of different faiths gain a +1 to saving throws (+1 in BATTLESYSTEM rules). The effect applies only as long as the characters remain in the sanctified area.

Creatures intent on harming the priest or his followers suffer a -1 on saving throws vs. fear and charm (-1 to morale for BATTLESYSTEM rules units) when on sanctified ground.

Undead creatures within the area are easier to turn; any priest standing on sanctified ground turns undead as if he were one level higher.

Although this spell can be cast by a single priest, it is most effective when cast by several priests at once. The duration of the spell is equal to one round per level of the caster. When several priests cast the spell, the level of the most powerful priest is used, with two rounds added for every contributing priest. Thus, one 8th-level and three 6th-level priests would give the spell a duration of 14 rounds (8+2+2+2).

*Sanctify* is often used in conjunction with focus to protect the grounds of a temple or encourage men defending a castle.

The material components are the priest's holy symbol and a handful of dirt from the grounds of an existing temple of the same faith.

The reverse of this spell, *defile*, functions in an identical manner with respect to saving throws for charm and fear. However, priests standing on defiled ground who attempt to turn undead do so at one level lower than their current level.

The material components for the reverse are the priest's holy symbol and a handful of earth from a grave.

**Zone of Truth (Enchantment/Charm)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 2
Area of Effect: 5-foot square/level
Saving Throw: Neg.

This spell prevents creatures within the area of effect (or those who enter it) from speaking any deliberate and knowing lies. Creatures are allowed a saving throw to avoid the effects; those who fail the save are affected fully. Affected characters are aware of this enchantment; therefore, they may avoid answering questions to which they would normally respond with a lie or they may be evasive as long as they remain within the boundaries of the truth. When a character leaves the area, he is free to speak as he chooses.

The spell affects a square whose sides are five feet long per level of the caster; thus, a 4th-level priest could affect a 20 foot by 20 foot square.

The material components are the priest's holy symbol and a phony emerald, ruby, or diamond.

# Third-Level Spells

**Accelerate Healing (Alteration)**
Sphere: Time
Range: Touch
Components: V, S
Duration: 1-4 days
Casting Time: 1 turn
Area of Effect: One creature
Saving Throw: None

This spell enables the affected creature to experience natural healing at twice the normal rate for 1-4 days. In other words, a person affected by *accelerate healing* regains 2 hit points per day of normal rest or 6 hit points per day spent resting in bed. The spell has no effect on *potions of healing* or other magical forms of healing.

**Adaptation (Enchantment/Charm, Alteration)**
Sphere: War
Range: Special
Components: V, S, M
Duration: Special
Casting Time: Special
Area of Effect: One unit of up to 200 individuals
Saving Throw: None

This spell can be cast in two different ways. The first, appropriate for battlefield use, has a range of 180 yards, a casting time of one turn, and duration of 1d4+2 turns. During this period, the affected unit can fight in one specific type of terrain (specified by the caster) as if it were the favored terrain (per BATTLESYSTEM™ rules) for that unit. While this spell is in effect, the unit gains no benefit when fighting in their actual favored terrain; the magically-enforced favored terrain takes precedence. The priest can cancel the spell before the duration expires if desired.

The material component is a pinch of clay dust.

The second effect requires preparation in advance. The priest and unit must be within 100 yards of a place of worship dedicated to the casting priest's deity. The casting time is 5 turns.

At the conclusion of the casting, the unit gains the benefit described above, with two main differences. First, the unit does not lose the benefit of fighting in its own actual favored terrain (the unit effectively has two favored terrains). Second, the spell endures until the next sunset. Only priests of 12th level and higher can cast this variation.

The material component is the priest's holy symbol.

**Astral Window (Divination)**
Sphere: Astral

Range: 5 yards
Components: V, S
Duration: 2 rounds/level
Casting Time: 3
Area of Effect: 10'x10' area
Saving Throw: None

When this spell is cast, a "window" appears in the air before the priest, through which he (and any others present) can see into the Astral plane. The astral window ranges in size from one square foot up to a 10'x10' square, at the caster's choosing. The window is not mobile, and if the priest moves more than 5 yards away from it, it immediately vanishes and the spell ends.

By stating a subject's name, the priest may view a specific creature or object in the window. More than one subject may be viewed during the spell's duration. Each time a new subject is chosen, the window becomes streaked with grey as the Astral plane flies past. This continues for 1d4 rounds, until the window finally focuses upon the chosen subject. If the person is not in the Astral plane, the window instead chooses a random location.

The window operates from both sides; creatures in the Astral plane can see the priest as easily as he can see them. Verbal communication is not possible, however.

Normally, creatures cannot pass through the window. If an attempt is made, there is a base 5% chance of success. This is modified by +1% per level or Hit Dice of the individual. In order to pass through, the creature or object must be small enough to fit through the window; otherwise, only a portion of the subject may reach through (such as a monster's arm or searching tongue).

By casting the *astral window* spell, a character who subsequently casts the 7th-level *astral* spell may choose to arrive in the Astral plane at the place shown in the window.

**Caltrops (Evocation)**
Sphere: War
Range: 20 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell allows a priest to plant a section of ground with magically created caltrops. The spell can create two kinds of caltrops: infantry and cavalry. The first are of small size and are designed to harm foot soldiers. The latter are larger and cause serious damage to cavalry or units composed of size L or larger creatures. Cavalry caltrops are so large that size M or smaller creatures can easily step around them. This prevents damage to infantry units.

Each time a unit moves into a planted area, the unit suffers an attack of AD4 (for infantry caltrops) or AD6 (for cavalry caltrops). Units charging through a planted area suffer double damage. If a unit ends its movement in a caltrop-sown region, it suffers

another attack when it moves out of the area.

This spell can create a rectangular field of infantry caltrops up to 160 square yards in area (e.g., 4 yards x 40 yards, 2 yards x 80 yards, etc.), or a field of cavalry caltrops up to 90 square yards in area (e.g., 3 yards x 30 yards, 2 yards x 45 yards, etc.).

Ordinary caltrops make no distinction between friend or foe; all creatures entering a caltrop-sown area suffer the same consequences. The same is true of magical caltrops, with one exception: the casting priest can terminate the spell at any time, causing the caltrops to vanish and leaving the terrain clear.

Unlike normal caltrops, a region sown with magical caltrops cannot be "swept" clear; the magical caltrops remain in place until the spell terminates.

The material component is a golden caltrop.

**Choose Future (Divination)**
Sphere: Time
Range: Touch
Components: V, S, M
Duration: 1 round
Casting Time: 3
Area of Effect: One creature
Saving Throw: None

In the round immediately following the casting of this spell, the affected creature is allowed two rolls for any normal attack roll, initiative roll, or saving throw. The affected creature can then choose the roll he prefers.
For example, a priest casts *choose future* on a warrior companion. In the next round, the warrior attacks an enemy with his sword. The warrior makes two attack rolls instead of one, then chooses which roll will determine the outcome of his attack.

The material components are two grains of sand and a rose petal.

**Create Campsite (Conjuration/Summoning) Reversible**
Sphere: Travelers
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 3
Area of Effect: 50-foot radius
Saving Throw: None

With this spell, the caster generates a squadron of tiny invisible servants who create a campsite for the caster and his companions. The caster indicates the desired area for the campsite (an area of 50-foot radius or less) and the number of persons the campsite is to accommodate (a number of persons equal to three times the level of the caster).

The servants clear the area of debris, set up tents and bedrolls, start a campfire, fetch water, and prepare a bland meal. The campsite is so skillfully prepared that it blends with the surrounding terrain, reducing the chance that the camp could be noticed by 50%. Campfires, loud noises, and other activities can negate this.

The entire process takes 4-16 (4d4) rounds to complete.

The servants make camp with the gear and equipment provided for them; otherwise, the servants will improvise with materials available in the immediate area (50 yards of the designated campsite). For instance, if the party has no tents or beds, the servants will construct crude but comfortable beds of weeds and grass and temporary shelters of leaves and branches. If no materials are available, such as in the desert or similarly barren terrain, the servants will do their best to make the party as comfortable as possible within the environmental limitations.

The servants cannot fight for the party, deliver messages, or take any other actions other than creating the campsite.

The material components are a piece of string, a bit of wood, and a drop of water.

The reverse, break camp, causes the invisible servants to strike a campsite (an area of 50-foot radius or less). The servants extinguish fires, dispose of debris, and pack gear for a number of people equal to three times the level of the caster. The entire process takes 4-16 (4d4) rounds to complete. When completed, all traces of the campsite are eliminated. The material components are the same as those for *create campsite*.

**Efficacious Monster Ward (Abjuration)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 3
Area of Effect: 10-foot cube/level
Saving Throw: Neg.

This spell prevents monsters of 2 or fewer Hit Dice from entering the area of effect. Such creatures are allowed a saving throw; success indicates that they avoid the spell's effects and are able to enter the area of effect.

The spell affects a cubic area whose sides equal the caster's level times 10 feet (for example, a 9th-level caster could affect an area equal to a 90' x 90'x 90' cube).

Monsters within the area of effect when the spell is cast are not affected; however, when they leave the area of effect, they cannot return. Monsters outside the area of effect can hurl rocks, spears, and other missile weapons at targets inside and can also cast spells into the warded area.

The material components are the priest's holy symbol and a pinch of salt.

**Emotion Control (Alteration, Enchantment/Charm)**
Sphere: Thought, Charm
Range: 10 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 5
Area of Effect: One creature/5 levels of the caster within a 20' cube
Saving Throw: Special

This spell can be cast in one of two ways: in a manner that affects the priest, or in a manner that affects a subject other than the priest.

The first method affects only the priest and allows him to shield his true emotions from magical examination. Thus, it can block wizard spells such as *ESP* or priest spells such as *emotion read*. While *emotion control* is in effect, anyone using one of these spells will sense the emotion designated by the priest rather than his true emotions. When the priest casts *emotion control*, he designates the false emotion he wishes to be revealed.

This use of *emotion control* also gives the priest a +2 bonus to saving throws against the following spells: *spook, taunt, irritation, know alignment, scare, emotion, fear,* and *phantasmal killer*. When any of these spells are cast on the priest, he is immediately aware of the attempt, although he does not learn the source of the spell.

If another character casts *emotion read, ESP*, or a similar spell on the priest, the priest must make a saving throw vs. spells with a +1 bonus for each 5 levels of the priest. If the priest successfully saves, the other spellcaster reads the false emotion; if the priest fails the saving throw, the spellcaster reads the priest's true emotion.

The second use of this spell allows the priest to create a single emotional reaction in the subject(s) (similar to the wizard spell *emotion*). Some typical emotions follow, but the DM may allow other similar effects.

*Courage:* The subject becomes berserk, gaining +1 to attack rolls and +3 to damage, and temporarily gaining 4 hit points (damage against the subject is deducted from these temporary points first). The subject need never check morale, and receives a +5 bonus to saving throws against the various forms of *fear*. Courage counters (and is countered by) *fea*r.

*Fear*: The subject flees from the priest for the duration of the spell, even if this takes him out of spell range. Fear counters (and is countered by) courage.

*Friendship:* The subject reacts positively to any encounter; in game terms, any result of a roll on the Encounter Reactions table (Table 59 in the DMG ) is moved one column to the left. Thus, a threatening PC becomes cautious, an indifferent PC becomes friendly, etc. Friendship counters (and is countered by) hate.

*Happiness:* The subject experiences feelings of warmth, well-being, and confidence, modifying all reaction rolls by +3. The subject is unlikely to attack unless provoked. Happiness counters (and is countered by) sadness.

*Hate:* The subject reacts negatively to any encounter; in game terms, any result of a roll on the Encounter Reactions table is moved one column to the right (i.e., a friendly PC becomes indifferent, a cautious PC becomes threatening, etc.). Hate counters (and is countered by) friendship.

*Hope:* The subject's morale is improved by +2. His saving throw rolls, attack, and damage rolls are all improved by +1 while this emotion is in effect. Hope counters (and is countered by) hopelessness.

*Hopelessness:* The subject's morale suffers a -10 penalty. In addition, in the round in which the emotion is initially established, all subjects must immediately make a morale check. Hopelessness counters (and is countered by) hope.

*Sadness:* The subject feels uncontrollably glum and is prone to fits of morose introspection. All attack rolls suffer a -1 penalty and initiative rolls suffer a +1 penalty. The subject's chance of being surprised is increased by -2. Sadness counters (and is countered by) happiness.

All subjects of the second version, even willing targets, must save vs. spell to resist the emotion. In addition to all other modifiers, the saving throw is modified by -1 for every three levels of the priest casting the spell.
The material component for both versions of the spell is a small bunch of fleece or uncarded wool that is consumed in the casting.

**Extradimensional Detection (Divination)**
Sphere: Numbers, Divination
Range: 0
Components: V, S
Duration: 1 round/level
Casting Time: 3
Area of Effect: One 10'-wide path, 60 feet long
Saving Throw: None

When *extradimensional detection* is cast, the priest detects the existence of any extradimensional spaces or pockets in a path 10 feet wide and 60 feet long in the direction he is facing. The priest may turn, scanning a 60 arc each round, or may move slowly while the spell is in effect to change the sweep of the detection.

Extradimensional spaces include those created by spells such as *rope trick* and those contained within such items as *bags of holding* and *portable holes*. The priest does not automatically know the size of the space or its source.

This spell detects interplanar gates and the "gate" opened by the spell *extradimensional folding*.

The spell can be blocked by a stone wall of one foot thickness or more, a one-inch thickness of solid metal, or one yard or more of solid wood.

**Helping Hand (Evocation)**
Sphere: Travelers
Range: Special
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

When a priest is trapped or otherwise endangered, this spell can summon help. The spell creates a hovering, ghostly image of a hand about one foot high. The caster can command it to locate a character or creature of the caster's choice based on a physical description. The caster can specify race, sex, and appearance, but not ambiguous factors such as level, alignment, or class.

After the hand receives its orders, it begins to search for the indicated creature, flying at a movement rate of 48. The hand can search within a 5-mile radius of the caster.

If the hand is unable to locate the indicated creature, it returns to the caster (provided he is still within the area of effect). The hand displays an outstretched palm, indicating that no such character or creature could be found. The hand then disappears.

If the hand locates the indicated subject, the hand beckons the subject to follow it. If the subject follows, the hand points in the direction of the caster, leading the subject in the most direct, feasible route. The hand hovers 10 feet in front of the subject, moving before him. Once the hand leads the subject to the caster, it disappears.

The subject is not compelled to follow the hand or help the caster. If the subject chooses not to follow the hand, the hand continues to beckon for the duration of the spell, then disappears. If the spell expires while the subject is en route to the caster, the hand disappears; the subject will have to rely on his own devices to locate the caster.

If there is more than one subject within a 5-mile radius that meets the caster's description, the hand locates the closest creature. If that creature refuses to follow the hand, the hand will not seek out a second subject.

The ghostly hand has no physical form. The hand can be seen only by the caster and potential targets. It cannot engage in combat or execute any other task aside from locating the subject and leading him back to the caster. The hand will not pass through solid objects, but can pass through small cracks and slits.

The material component is a black silk glove.

**Invisibility Purge (Abjuration)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 10-foot square/priest
Saving Throw: None

All invisible creatures who enter an area enchanted with *invisibility purge* instantly become visible. *Invisibility* -related spells do not take effect within the boundaries of the enchanted area, and magical devices such as *potions of invisibility* do not function. Creatures with the natural ability to become invisible are unable to use this ability within the area of effect. Invisible objects carried into the warded area also become visible.

Invisible creatures or persons within the area of effect when *invisibility purge* is cast remain invisible; however, if such creatures exit the area of effect and later re-enter, they instantly become visible. Such creatures also lose any natural ability to turn invisible as long as they remain within the area of effect.

A creature who consumes a *potion of invisibility* outside the warded area becomes invisible normally, but becomes visible when he enters the area of effect; if the duration of the *potion of invisibility* has not yet expired when he exits the area of effect, he becomes invisible again outside the area.

Creatures who are invisible in their natural state or have no visible form (such as invisible stalkers) are not affected by this spell.

The material components are the priest's holy symbol and a silver mirror no more than three inches in diameter.

The *invisibility purge* can be cast as a cooperative magic spell. The potency of this spell can be increased if several priests cast it at the same time. The duration of the spell is then equal to one turn per level of the most powerful priest, plus one turn for every

contributing priest. Each priest also increases the area of effect by one 10'x 10' square (these areas must be contiguous). Thus, a 9th-level priest and two 5th-level priests could create a 30'x 10' *invisibility purge* area having a duration of 11 turns.

**Know Customs (Divination)**
Sphere: Travelers
Range: Special
Components: V, S
Duration: Special
Casting Time: 3
Area of Effect: The caster
Saving Throw: Neg.

This spell allows a caster to gain general knowledge of the customs, laws, and social etiquette of a tribe or village. The caster must be within 30 yards of a member of the tribe or village for the spell to have effect. The selected villager must possess the knowledge sought by the caster; for instance, he cannot be an infant, nor can he be mentally unstable or dead (although he can be asleep or unconscious).

The selected villager is allowed a saving throw; if he succeeds, the spell fails.

If the saving throw fails, the caster gains a general knowledge of the villager's local laws and customs, including those that apply to relevant tribal or clan types (such as customs observed by all giants). Typical information revealed by *know customs* includes common courtesies (outsiders must avert their eyes when addressing local officials), local restrictions (no animals or unaccompanied elves within the city limits), important festivals, and common passwords that are known by the majority of citizens (such as a phrase necessary to pass the guards at the main gate). Additionally, the spell gives the caster a +1 reaction adjustment to encounters with members of the relevant tribe or village.

Knowing the local laws and customs does not guarantee that the caster will conduct himself properly. *Know customs* is to be used as a guide; the DM is free to adjust the quality of information provided by a villager.

**Line of Protection (Abjuration) Reversible**
Sphere: Protection
Range: 0
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: 30-yard line
Saving Throw: Neg.

This cooperative spell requires at least two priests to cast the spell simultaneously. During the casting, the priests determine whether the line will be stationary or portable.

If the spell is stationary, each priest must inscribe a magical sigil on parallel facing surfaces, such as facing walls of a gatehouse or two tree trunks. If the spell is portable, the priests must stand at each end of the line, thereby anchoring it.

After the spell is cast, a shimmering field of force appears between the two anchors (the sigils or priests). The field is 10 feet high and sparkles with energy. Objects on the opposite side of the translucent field, while recognizable, are hazy and indistinct.

The field causes 1d3 points of damage to all creatures passing through it; evil creatures and undead suffer 1d8 points of damage from the field. Creatures that roll a successful saving throw suffer no damage. Creatures that can fly over the field, burrow under it, or *teleport* to the other side are immune to damage.

If the spell is cast in its portable form, the priests can move at half their movement rates (limited to the rate of the slower priest). The priests can take no other action, since all their energy is spent in walking and maintaining the field.

Once created, the field cannot be increased or decreased in length and must remain straight. The priests could maneuver by pivoting, but could not walk toward each other or bend the field around a corner. If the line of sight between the two priests is blocked by any object of greater than 5' diameter, the spell immediately fails. Thus, creatures, low walls, young trees, pillars, and similar objects will not disrupt the spell.

As a cooperative spell, several priests can link together to create a longer field. Each priest (or sigil) forms the end of one field and the beginning of another, much like fenceposts. Each section of the spell must extend in a straight line, but the field can be bent at each junction. Four priests could form a long line, a square, or a Z pattern. The restrictions on moving the fields apply as outlined above. The DM may apply movement penalties depending on the complexity of the pattern.

The material components are the priests' croziers, staves, or religious standards, held aloft by each caster.

The reverse of this spell, *line of destruction*, causes 1d3 damage to all creatures passing through it. It causes 1d8 damage to paladins and creatures of good alignment who pass through it. Creatures that roll a successful saving throw suffer no damage.

**Memory Read (Divination)**
Sphere: Thought
Range: 5 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: Neg.

This spell allows the priest to read the memory of a single subject. The priest experiences the memory with the same intensity as the subject. The time required to view a memory is one-fiftieth of the time that the actual event lasted. Thus, a priest can view the memory of an event that lasted for one hour in a little more than one round. The subject experiences the memory at the same time the caster reads it.

The subject must have an Intelligence score of 5 or more and must remain within range of the priest throughout the time it takes to read the desired memory. Priests can cast this spell on unconscious, sleeping, *held*, or *paralyzed* creatures.

The subject receives a saving throw when the priest casts the spell (this saving throw is allowed even if the subject is asleep or otherwise unaware of the attempt). In addition,

if the memory that the priest wants to view concerns something the subject wants to keep secret, or is something that the subject is trying to suppress, the subject receives a +5 bonus to the saving throw. If the memory the priest wishes to view is more than six months old, the subject receives a second saving throw, with bonuses depending on the age of the memory as follows:

| **Age of Memory** | **Bonus** |
|---|---|
| 6-12 months | 0 |
| 1 to 4 years | +1 |
| 5 years or more | +3 |

If the subject succeeds either of these saving throws, the spell fails.

This spell creates a mental drain on the priest, causing him to temporarily lose 1-3 points of Constitution. These can be regained only after eight hours of rest. The spell cannot be cast again until the priest's constitution is restored.

The material component is a small piece of linen cloth with threads of gold interspersed throughout its weave. This is consumed during the casting.

**Miscast Magic (Invocation/Evocation)**
Sphere: Chaos
Range: 40 yards+10 yards/level
Components: V, S
Duration: Special
Casting Time: 2
Area of Effect: One creature
Saving Throw: Neg.

*Miscast magic* can be cast only on a wizard. It causes the next spell cast by the affected wizard to be chosen randomly from his memorized spells of the same or lower level. Thus, if a wizard affected by *miscast magic* had four 1st-level spells memorized ( *armor*, *feather fall*, *jump*, and *sleep*) and he attempted to cast the sleep spell, the DM would determine the resulting spell randomly from the wizard's four memorized spells. The wizard has only a 25% chance of casting the *sleep* spell.

Only spells currently memorized are eligible to be exchanged with the desired spell. If a wizard had only one spell memorized, the *miscast magic* would have no effect and the wizard's spell would be cast normally.

The miscast spell operates normally. If a wizard tried to *levitate* a companion but a *web* spell resulted, the companion would be trapped by the webs and subject to all resulting effects. If the target of the spell were in range of the *levitate* spell but not in range of the *web*, the spell would be lost in a fizzle of energy and the *web* spell would be wiped from the caster's memory.

The wizard who casts the spell performs the proper verbal and somatic components of the spell he wishes to cast; he does not discover the altered results until the wrong spell takes effect. The wizard will also discover that the material component for the resulting spell has vanished (in addition to the material component for the desired spell).

Wizards who are targets of *miscast magic* are allowed a saving throw vs. spell to

avoid the effect.

**Moment Reading (Divination)**
Sphere: Numbers
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell allows the priest to determine the "tenor of the now"--in other words, to learn the "force" that is most dominant at the time. To cast the spell, the priest generates a series of random numbers and then studies the pattern contained in that string of numbers. This pattern contains information about current conditions.

In game terms, when this spell is cast, the DM communicates to the priest's player a single word or short phrase (no more than five words) describing the "tone" of the situation. Examples of suitable "tones" are "imminent danger" (the DM knows a dragon is approaching the area); "peace and tranquility" (the woods in which the PCS camp may look threatening, but the area is actually free of evil influence); or "betrayal" (one of the PCS' hirelings is actually a spy of their enemy). The DM can make this comment cryptic, but it should always be accurate and contain some useful information.

This spell has no specified area of effect. The result of *moment reading* will always concern the priest and anyone else in his immediate vicinity, but the definition of "vicinity" will vary depending on the circumstances. For example, the tenor of the moment might be "severe danger" if the priest is entering the territory of a dragon who attacks interlopers on sight.

The tenor of the moment is always personally applicable to the priest. For example, even if the priest is in a nation dangerously close to war with its neighbor, this condition will not appear in the tenor of the moment unless the priest is personally involved (if he's currently in the direct path of an invading army, for instance).

One casting of this spell tends to "taint" subsequent castings of the same spell unless they are separated by a minimum length of time. If a priest casts this spell twice within 12 hours, the second reading gives the same result as the first, regardless of the actual situation. If a second priest casts the spell within 12 hours of another priest's use of the spell, he receives an accurate reading.

The material component is a set of 36 small disks made of polished bone engraved with runes that represent numbers. These disks are not consumed in the casting.

**Random Causality (Alteration)**
Sphere: Chaos
Range: 10 yards
Components: V, S, M
Duration: Special
Casting Time: 3 rounds+1 round/level
Area of Effect: One weapon

Saving Throw: Neg.

This spell creates a rift in the nature of cause and effect. The spell is cast upon an opponent's weapon. When the weapon is used, it hits and causes damage normally, but the damage is not applied to the creature struck by the weapon. Instead, the person wielding the weapon or one of his companions suffers the damage. If the weapon misses its target on any round, no damage is caused in that round.

Using a die roll, the DM randomly determines the victim of the damage. The DM selects a die with a value nearest the number of eligible creatures (the wielder of the weapon and his companions). If the number of creatures does not equate to highest value of a die, the wielder of the enchanted weapon takes the extra chances to be hit. For example, if a goblin wields a sword affected by this spell, he and his six companions are eligible to receive the damage. The DM rolls 1d8. On a roll of 1-6, one of the goblin's companions suffers the damage; on a roll of 7 or 8, the goblin with the affected weapon suffers the damage.

The weapon is affected for 3 rounds+1 round/level of the spell caster. If the wielder of the weapon changes weapons while the spell is in effect, the discarded weapon remains enchanted.

The material component is a bronze die.

**Rigid Thinking (Enchantment/Charm)**
Sphere: Law
Range: 60 yards
Components: V, S
Duration: 1 round/level
Casting Time: 1 turn
Area of Effect: One creature
Saving Throw: Neg.

*Rigid thinking* can be cast only upon a creature with Intelligence of 3 or greater. The creature is allowed a saving throw to avoid the effects.

The creature affected by *rigid thinking* is in capable of performing any action other than the activity he is involved in when the spell takes effect. The creature's mind simply cannot decide on another course of action--it becomes frozen into a single thought and cannot change even if new circumstances would suggest otherwise. Thus, a warrior fighting a kobold will ignore the arrival of a beholder, and a thief picking a lock will pay no heed to the arrival of three guards.

The affected creature does not mechanically repeat the action; he is not an automaton. He will not continue to fire his bow at a dragon if he runs out of arrows, but will choose another means of attacking the dragon to the exclusion of all other activities.

A spellcaster in the process of casting a spell when *rigid thinking* takes effect will not attempt to repeat the spell (unless the spell has been memorized more than once). The spellcaster will, however, devote his attention to the target of that spell until his goal is met (e.g., if the caster were attacking a creature, he would continue to direct attacks at that creature; if the caster were trying to open a door, he would continue to work on the door until it opens).

The spell expires when the creature accomplishes his goal (i.e., the kobold is killed or the lock is opened) or when the duration of the spell has ended.

**Slow Rot (Abjuration)**
Sphere: Plant
Range: Touch
Components: V, S, M
Duration: 1 week/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell increases the amount of time that fruits, vegetables, and grains remain wholesome and ripe. The spell will not take effect upon meat of any kind.

The caster can affect as much as 100 cubic feet of plant material per level. Thus, even a low level priest could effectively keep a farmer's grain from rotting while in storage or keep the fruit on the trees in his orchard ripe until they are harvested. This spell does not prevent pests (such as rats) from eating the food.

The material component is a pinch of sugar.

**Squeaking Floors (Evocation)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 3
Area of Effect: 10-foot square/level
Saving Throw: None

A surface affected by *squeaking floors* squeaks loudly when any creature larger than a normal rat (larger than one-half cubic foot or weighing more than three pounds) steps on it or touches it. The spell affects a square whose sides equal the caster's level times 10 feet (a 9th-level priest could affect a square whose sides are 90 feet long).

The squeaks can be heard in a 100-foot radius, regardless of interposing barriers such as walls and doors. The squeaks occur regardless of the surface, whether wood, stone, dirt, or any other solid material. Listeners automatically know the direction of the sounds.

Characters who successfully move silently reduce the radius of the noise to 50 feet. Those able to *fly* or otherwise avoid direct contact with the affected surface will not activate the *squeaking floor*.

The material component is a rusty iron hinge that squeaks when moved.

**Strength of One (Alteration)**
Sphere: Law
Range: 10 yards
Components: V, S
Duration: 2d6 rounds

Casting Time: 3
Area of Effect: One creature+1creature/2 levels
Saving Throw: None

By casting this spell on a group of lawful creatures, the priest imbues each creature with a Strength bonus equal to that of the strongest creature in the group. To be affected by the spell, all creatures must touch the hand of the priest at the time of casting. Only human, demihuman, and humanoid creatures of man-size or smaller may be affected. The characters can be a mixed group of Lawful Neutral, Lawful Good, or Lawful Evil alignments. The spell will not take effect if any creature of Neutral or Chaotic alignment is included in the group.

Prior to casting, one creature is designated the keystone. There may never be more than one keystone in a group, even if another creature has equal strength.

Upon completion of the spell, all affected characters gain a bonus to damage equal to the keystone's bonus to damage from Strength. Any magical bonuses belonging to the keystone are not added; only the keystone's natural strength is conferred on the group.

This bonus supersedes any bonus a character might normally receive. Thus, a warrior with 16 Strength (a +1 bonus to damage) who benefits from this spell with a keystone who has Strength 18/07 (a damage bonus of +3) gains a total bonus of +3 to damage (not +4 to damage). The keystone receives no bonus.

Affected creatures gain no improvements to THAC0, bend bars/lift gates, or other functions of Strength.

The spell ends if the keystone is killed before the duration expires. The bonus and duration are not affected if a member of the group is killed within the duration of the spell.

**Telepathy (Divination, Alteration)**
Sphere: Thought
Range: 30 yards
Components: V, S
Duration: 1 turn+2 rounds/level
Casting Time: 5
Area of Effect: One creature
Saving Throw: Neg.

This spell establishes direct, two-way mental contact between the priest and a single subject. The subject must have Intelligence of at least 5 for the spell to take effect. While the spell is in effect, the two participants can communicate silently and rapidly, regardless of whether they share a common language.

*Telepathy* does not give either participant access to the other's thoughts, memories, or emotions. Participants can only "hear" the thoughts that the other participant actively "sends."

Mind-to-mind communication is approximately four times faster than verbal communication. The level of complexity that can be communicated is only that which can be expressed through language. Gestures, expressions, and body language cannot be conveyed.

A priest can establish separate "telepathic channels" to multiple individuals. Each linkage is established through a separate casting of the spell. There is no network between the channels. For example, Balfas the priest establishes *telepathy* with Alra the warrior and Zymor the thief by casting this spell twice. Balfas can communicate a single thought to both Alra and Zymor, but Alra and Zymor cannot communicate with each other. Balfas, however, can "target" a thought so that only one of the two participants receives it.

If the priest casts this spell on an unwilling subject (for example, if the priest wants to silently threaten or taunt the subject), the subject receives a saving throw vs. spell to resist the effect. Willing subjects need not make a saving throw.

Lead sheeting of more than ½ " thickness will totally block *telepathy*.

**Telethaumaturgy (Enchantment/Charm)**
Sphere: Numbers
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 2 rounds
Area of Effect: One creature
Saving Throw: None

This spell requires the priest to perform a numerological analysis of a subject's correct name. The result is that the priest may cast another spell that affects the subject individual at a range much greater than normal. In other words, by gaining deep knowledge of the individual, the priest creates a "channel" to that individual that makes a subsequent spell easier to cast on that subject.

Only certain spells can benefit from *telethaumaturgy*:

*bless**
*command*
*charm person or mammal*
*detect charm*
*hold person*
*know alignment*
*remove curse**
*probability control*
*quest*
*confusion* (one creature only)
*exaction*

For spells marked with an asterisk (*), *telethaumaturgy* also increases the range of the reversed spell. Unless indicated, *telethaumaturgy* does not increase the range of the reversed spells.

The increase in range depends on the level of the priest casting *telethaumaturgy*:

| Level Range | Multiplier |
|---|---|
| 1-6 | x2 |

| | |
|---|---|
| 7-11 | x3 |
| 12-16 | x4 |
| 17+ | x5 |

Thus, a 12th-level priest who has cast *telethaumaturgy* on an individual could subsequently cast charm person on that individual at a range of 320 yards, rather than the normal range of 80 yards.

A spell to be enhanced by *telethaumaturgy* must be cast on the round immediately following the completion of *telethaumaturgy*. Spells that normally affect more than one individual (such as confusion ) will affect only the selected subject when cast following *telethaumaturgy*.

When *telethaumaturgy* is cast by a priest of 11th level or higher, it has an additional effect. If the target is within the normal range of the subsequent spell (e.g., 80 yards for *charm person*), the subject's saving throw suffers a penalty of -2.

Like the *personal reading* spell, *telethaumaturgy* functions only if the priest knows the correct name of his subject. If the priest casts the spell using an alias, he will not know that *telethaumaturgy* has not taken effect until the subsequent spell fails. The priest does not automatically know why the subsequent spell failed (the subject might simply have made a successful saving throw).

The material component is a small book of numerological formulae and notes. This book is different from the book used in *personal reading*. The book is not consumed in the casting.

**Thief's Lament (Alteration)**
Sphere: Wards
Range: 10 yards/level
Components: V, S, M
Duration: 1 hour/level
Casting Time: 3
Area of Effect: 5-foot cube/level
Saving Throw: Neg.

A thief entering an area enchanted with *thief's lament* suffers a great reduction in his thieving skills. The thief is allowed a saving throw to resist the effects of the spell; failure indicates that he suffers the full effects of the lament. All attempts to pick pockets, open locks, find/remove traps, move silently, detect noise, climb walls, and hide in shadows are reduced by 25% (although a skill cannot be reduced below 5%, presuming the character has at least a score of 5% in any skill).

The spell affects a cube whose sides equal the caster's level times five feet (a 10th-level caster could affect a cube whose sides equal 50 feet).

The material components are the priest's holy symbol and a silver key.

**Unearthly Choir (Invocation)**
Sphere: Combat
Range: 0
Component: V

Duration: Instantaneous
Casting Time: 5
Area of Effect: Special
Saving Throw: ½

This cooperative spell requires at least three priests casting the spell simultaneously. At the time of casting, the priests must be within 10 feet of each other. Upon completion of the spell, the priests sing a single, dissonant chord. The result of the spell depends on the number of voices in the choir.

**Trio.** In this form, the spell projects a cone of sonic force 120 feet long and 40 feet wide at the base. All creatures within the area of effect must save vs. spells or suffer 2d4 points of damage. Those who successfully save suffer only 1d4 points. Undead suffer a -2 penalty to their saving throws.

**Quartet**. With four voices, the spell has the same area of effect as described above. However, all those who fail their saving throw suffer 2d4 points of damage and are deafened for one round. Those who successfully save suffer half damage and are not deafened. Undead creatures are not allowed a saving throw.

**Quintet.** Five singers produce a chord of major power. All within the area of effect suffer 3d4 points of damage (saving throw for half damage). Undead are not allowed a saving throw. All creatures are deafened for one round. Furthermore, pottery, glassware, crystal, and similar breakable goods must save vs. fall or be shattered.

**Ensemble.** An ensemble of singers consists of six to ten priests. In this case, the area of effect increases to a cone 180 feet long and 60 feet wide at the base. All creatures within this area suffer 1d4 points of damage per priest and are deafened for 1d4 rounds. A successful saving throw vs. spell reduces the damage and duration of deafness by half. Undead creatures of 3 hit dice or less are immediately destroyed. All other undead suffer normal damage, but are not allowed a saving throw. Glass, pottery, crystal, bone, and all wooden items that are the strength of a door or less (chests, tables, chairs, etc.) must save vs. crushing blow or be shattered.

**Choir**. The most powerful group, a choir, requires eleven or more priests. In this case, the area of effect expands to a cone 300 feet long and 100 feet wide at the base. All within the area of effect suffer 1d6 points of damage per priest to a maximum of 20d6. A saving throw vs. spells reduces the damage to half. Those who fail to save are deafened for 1d10 rounds; those who succeed are deafened only 1d6 rounds. Undead creatures of 5 hit dice or less are immediately destroyed. Undead with more hit dice are not allowed a saving throw. Structures within the area of effect are damaged as if they suffered a direct hit from a catapult (one hit per four priests in the choir). Doors, chests, and other breakable items are instantly shattered.

### Zone of Sweet Air (Abjuration)

Sphere: Wards
Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 3
Area of Effect: 10-foot cube/level

Saving Throw: None

*Zone of sweet air* creates an invisible barrier around the area of effect that repels all noxious elements from poisonous vapors, including those created magically (such as a *stinking cloud*). The spell offers no protection against poisonous vapors created by a dragon's breath weapon (such as the chlorine gas of a green dragon). Noxious gases already within the area of effect when the spell is cast are not affected. Fresh air passes into the area normally.

If a poisonous vapor is expelled within the area of effect (for example, a *stinking cloud* is cast), the spell takes effect normally but dissipates in half the time normally required.

The spell affects a cube whose sides equal the caster's level times 10 feet (for instance, a 10th-level caster could affect a cube whose sides are 100 feet long).

The material components are the priest's holy symbol, a silk handkerchief, and a strand of spider web.

# Fourth-Level Spells

**Addition (Alteration)**
Sphere: Numbers, Creation
Range: 30 yards
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

The philosophy of the Sphere of Numbers holds that the structure of reality--the "equation of the moment"--can be analyzed and modified by someone with sufficient knowledge and power. The *addition* spell allows a priest to add a new mathematical term to the equation of the moment. This effectively allows a new object or even a living creature to be brought into existence temporarily.

The effect of this spell varies depending on the level of the caster. At 10th level or lower, *addition* can create a single, inanimate object weighing up to 10 pounds. The spell gives the priest only rudimentary control over the creation process, so the object cannot be complex. The object must be described in a single word or short phrase (e.g., "a water pitcher" or "a block of stone"). The caster has no control over elements such as shape or color; thus, the water pitcher might be short, squat, and blue, or tall, slender, and red.

Objects created with this spell cannot be of any greater mechanical complexity or technological level than a crossbow. If the priest tries to create an object that breaks this prohibition, the spell fails and nothing is created. Thus, if the priest tried to create "a pistol," assuming he had heard the word somewhere, the spell would fail.

Objects cannot contain any information in an abstract form such as writing or diagrams. If the priest tries to create an object that breaks this prohibition, there are two possible results: the spell may fail, or the object may be created without the information.

Thus, if the priest were to attempt to create "a spellbook," the result would be either a book similar to a spellbook with blank pages, or nothing at all.

The object appears at whatever location the caster wills, as long as it is within spell range. The object cannot appear in the same space occupied by another object or creature, or within a hollow object (for example, the priest cannot create an object blocking the trachea of an enemy).

The object created by *addition* remains in existence for 1 turn per level of the caster. During this time, it obeys all the laws of physics as if it were a "real" object. The object cannot be disbelieved and spells such as *true seeing* cannot distinguish it from a naturally-occurring object.

Priests of 11th to 15th level can create a single inanimate object of up to 20 pounds in mass or two identical objects, each of up to five pounds in mass. The object(s) so created remains in existence for two hours (12 turns) per level of the caster.

Priests of 16th to 19th level can create a single inanimate object of up to 50 pounds in mass or up to 10 identical objects, each of up to five pounds in mass. The object(s) is permanent unless destroyed. Since these objects are not magical constructs, but real additions to the "equation of the moment," *dispel magic* has no effect on them. Alternatively, the caster can create a single normal (nonmonstrous) living creature of up to 20 pounds in weight. The creature, once created, behaves as a normal member of its species; the caster has no control over its actions. This creature remains in existence for 5 rounds per level of the caster.

Priests of 20th level and above can create a single inanimate object of up to 100 pounds in mass or up to 10 identical objects, each of up to 10 pounds in mass. The object(s) are permanent. Alternatively, the caster can create a single normal (nonmonstrous) living creature of up to 100 pounds in weight and up to 2 hit dice. The creature, once created, behaves as a normal member of its species; the caster has no control over its actions. This creature remains in existence for 2 turns per level of the caster.

The material component is a small table of numerological formulae inscribed on an ivory plaque, plus a length of silken cord. During the casting, the priest ties the cord into a complex knot. As the magical energy is discharged, the cord vanishes in a flash of light. The plaque is not consumed in the casting.

**Age Plant (Alteration)**
Sphere: Time
Range: 30 yards
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: One plant, seed, or tree/level
Saving Throw: None

This spell enables the caster to affect the aging of any plant, seed, or tree. The process can operate either forward or backward, causing flowers to blossom, seeds to sprout and grow, and trees to bear fruit; or fruit to turn to blossoms, trees to become saplings, and new shoots to turn to seeds.

The change in age, either forward or backward, is chosen by the priest at the time of casting. The changes associated with normal or reversed growth occur instantaneously. Plants can be altered in age up to 10 years per level of the caster. The caster can stop the aging at any point within the limits imposed by his level; he could cause a tree to grow from a sapling until it withers and dies from old age or he could stop the tree's growth at a stage at which it would shelter his home.

The spell does not alter the appearance or characteristics of a plant except those that result from normal aging (or regression). *Age plant* has no effect on magically-generated plants or plant-type monsters.

The material components are the priest's holy symbol and the petal from an apple blossom.

**Blessed Warmth (Alteration)**
Sphere: Sun
Range: Touch
Components: V, S
Duration: 1 round/level
Casting Time: 4
Area of Effect: Special
Saving Throw: None

When this spell is cast, a narrow shaft of light shines down upon the priest, making him immune to the effects of natural cold (such as a blizzard) and granting him a +3 bonus to saving throws vs. magical cold (such as a white dragon's breath weapon).

For each level of the priest above 7th, an additional beam of light may be created to protect another creature, who must be standing within 3' of the priest. Thus, a 10th-level priest could protect four other creatures in a 3' radius.

**Body Clock (Alteration)**
Sphere: Time
Range: Touch
Components: V, S, M
Duration: 1 hour/level
Casting Time: 4
Area of Effect: One creature
Saving Throw: None

*Body clock* affects a subject in the following ways.

• The subject's need for sleep is reduced. For every hour that a subject sleeps, he is as refreshed as if he slept 10 hours. For every two hours that a subject sleeps during the spell (20 hours of rest), he regains hit points as if he spent a day of complete rest. However, wizards are not able to memorize spells; "real" time must pass for this to occur.

• The subject's need to breathe is reduced. He breathes only 10% as often as normal for the duration of the spell, enabling him to hold his breath 10 times longer than normal and use less air in enclosed situations.

• The subject can set an internal "alarm clock" to alert him when a specific amount of

time has passed. The subject then hears a brief ringing in his ears, audible only to him. The ringing is loud enough to wake the subject. He can set as many internal alarm clocks as he wishes, as long as they all occur within the duration of the spell.

The spell has no effect on movement, spellcasting, or any other normal activities.

The material components are a kernel of corn, a drop of water, and a stoppered glass bottle.

**Chaotic Combat (Invocation/Evocation)**
Sphere: Chaos
Range: 30 yards
Components: V, S
Duration: 1 round/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: None

When *chaotic combat* is cast on a fighter, he is inspired beyond his years of training and is suddenly struck with numerous insights for variations on the standard moves of attack and defense. The spell affects only warriors.

Unfortunately, these insights are helpful in only two-thirds of the warrior's attacks. In the remaining attacks, the spell actually impairs the warrior's standard performance. At the beginning of each round, after the player has declared his character's actions, 1d6 is rolled for the affected warrior. On a roll of 1, 2, 3, or 4, the warrior gains bonuses of +2 to attack rolls and +2 to armor class. On a roll of 5 or 6, the warrior suffers a -2 penalty to attack rolls and a -2 penalty to armor class. This must be determined at the beginning of the round so that both the warrior and his opponents can apply the necessary changes.

The insight imparted by this spell is lost after the spell expires. The insight is generated by chaos, which is nearly impossible to contain. After the spell expires, the warrior remembers the battle but not the specifics of his actions. He is unable to duplicate the maneuvers.

**Chaotic Sleep (Alteration)**
Sphere: Chaos
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 turn
Area of Effect: One creature
Saving Throw: Neg.

After casting this spell, the priest must successfully touch his victim. The victim is then allowed a saving throw to avoid the spell's effect. If the saving throw is failed, the spell takes effect at the next sunrise or sunset (whichever comes first).

From the time the spell takes effect until the spell is negated, the sleeping pattern of the victim is randomly disrupted. At sunset and sunrise of every day, a check is made to determine the effects of *chaotic sleep*. In the 12-hour period that follows the check, there

is an equal chance that the character will be unable to sleep or unable to remain awake (roll 1d6; on a roll of 1-3, the character is awake, on a roll of 4-6, he sleeps). This condition lasts until the next sunrise (or sunset) when the check is made again.

For example, a fighter fails to save against *chaotic sleep*. For the next few hours, the spell has no effect. At sundown, the first check is made, resulting in a 2. The fighter does not notice anything until he tries to sleep that night, at which time he is wide awake, fidgeting and restless. At sunrise, another die roll is made, resulting in a 6. The fighter is suddenly exhausted and sleeps until sunset.

Characters who sleep as a result of this spell can be roused only by physical stimuli--a slap or a wound, for example. Once awake, the character remains conscious only as long as there are active stimuli around him, such as a fight. Walking through caves or riding a horse will not keep the character awake. Unlike a *sleep* spell, characters affected by *chaotic sleep* doze off as soon as they are left relatively undisturbed. Keeping an affected character awake is difficult at best.

Lack of sleep will eventually take a physical toll on any character under the influence of the spell. For every 12-hour period that a character remains awake beyond the first, he suffers a -1 penalty to THAC0. Such characters do not regain hit points as a result of normal healing. Spellcasters cannot memorize spells until they have had sufficient sleep.

*Chaotic sleep* can be removed with a remove curse.

The material components are a pinch of sand and three coffee beans.

**Circle of Privacy (Alteration)**
Sphere: Travelers
Range: Special
Components: V, S, M
Duration: 1 hour/level
Casting Time: 4
Area of Effect: 50-foot-diameter circle
Saving Throw: None

This spell helps to discourage predators and trespassers from disturbing a campsite. The caster sprinkles salt in a circle enclosing an area up to 50 feet in diameter. For the duration of the spell, all sounds and scents generated within the circle are muted, making the area less noticeable to those outside the circle. Therefore, the group's chance of encounter is reduced by 50% for the duration of the spell. The spell provides no protection against infravision or other forms of magical detection.

The material components are a hair from a skunk, a whisker from a mouse, and enough salt to make a 50-foot-diameter circle.

**Compulsive Order (Enchantment/Charm)**
Sphere: Law
Range: 10 yards
Components: V, S, M
Duration: Permanent
Casting Time: 5
Area of Effect: One creature

Saving Throw: Neg.

The victim of *compulsive order* is compelled to place everything he encounters into perfect order. If he discovers treasure, he divides it into tidy piles or containers of silver, gold, and copper. He is reluctant to enter a dungeon because it is a messy place, but once inside, he is obsessed with cleaning it. A character under the power of this spell will sweep dirt from dungeon corridors into neat piles, arrange the corpses of a defeated orc band according to size, dash forward to remove a bit of lint on clothing, and insist that the party organize themselves alphabetically, then by size, and then by age. While the spell does not affect a character's abilities, the overwhelming desire for order impairs the character's usefulness in most adventures.

When a character afflicted by this spell attempts to undertake a new event (begin a battle, haggle with the merchant, etc.), the player must rationalize the action on the basis of his compulsion for order. Thus, the character cannot simply attack a goblin; he must announce a condition such as attacking the tallest goblin and fighting his way down according to size. Once stated, the character must follow through with this plan.

If the player cannot conceive a rationale for his character's behavior, the character is forced to delay his actions for 1d6 rounds, with the time spent in preparation for the subsequent action. The character spends time arranging spell components artistically, deciding how to hold his sword, cleaning his weapon, etc.

Anyone affected by *compulsive order* may become violent if he is prevented from being neat. He will do what he must to make the world around him more orderly. If he is allowed to organize his surroundings, he will quickly calm down again. The victim will constantly petition the people around him to be neat and organized.

The victim is allowed a saving throw to avoid the effects of the spell. *Compulsive order* can be removed with a *dispel magic* spell.

The material component is a perfect cube made of metal.

**Defensive Harmony (Enchantment/Charm)**
Sphere: Law
Range: 5 yards
Components: V, S
Duration: 1 round+2d4 rounds
Casting Time: 1
Area of Effect: One creature/two levels
Saving Throw: None

This spell must be cast on at least two creatures. The priest may affect one creature per two levels of his experience, and all creatures to be affected must be within three feet of each other at the time of casting. After the spell is completed, affected characters may move about freely.

*Defensive harmony* grants affected creatures a defensive bonus by bestowing an enhanced coordination of their attacks and defenses. The affected creatures must be involved in a single battle so that their efforts harmonize to the benefit of all involved. For example, the affected creatures can attack one dragon or a group of orcs in a single area. They can also attack additional enemy forces that arrive in the same combat. If the

enemy forces divide and flee, the affected creatures can follow, continue to attack, and benefit from the spell. If the affected group is split into two smaller groups when attacked, however, it gains no benefit from *defensive harmony*.

While the spell is in effect, each affected creature gains a +1 bonus to armor class for every other creature benefitting from the spell, to a maximum bonus of +5 (although more than five characters may be affected by the spell). Thus, if four creatures are affected by *defensive harmony*, each creature gains a +3 bonus to armor class.

This bonus represents a mystical coordination of effort on the part of all affected creatures. A fighter will naturally wage his attack to distract the troll attacking the thief. The ranger will instinctively block the swing of an orc, thereby protecting the wizard. Creatures affected by the spell are not consciously aware of these efforts, and they are unable to create specific strategies and tactics.

**Dimensional Folding (Alteration)**
Sphere: Numbers
Range: 5 feet
Components: V, S, M
Duration: 1 round
Casting Time: 1 round
Area of Effect: 10-foot circle
Saving Throw: None

This spell allows the caster to selectively warp the fabric of space, folding it into higher dimensions.

This effect can be best explained through an example. If an ant crawling along the west edge of a map decided to travel to the east edge of the map, it would have to crawl the full width of the map. But if the map were folded in two so that the east and west edges were touching, the ant would travel almost no distance at all. The ant's world (the map) would have been folded through the third dimension. The *dimensional folding* spell does something similar with the three-dimensional world: it folds it through a higher dimension (the fourth), allowing instantaneous travel between two locales on the same plane of existence.

Although this effect may seem similar to the wizard spell *teleport*, in practice, it is much different. The *dimensional folding* spell opens a gate that allows instantaneous, bidirectional access to a distant locale on the same plane. This gate is circular, of any size up to 10' in diameter, and remains in existence for up to 1 full round. The caster and any other creatures can pass through the gate in either direction while it remains open. Missile weapons and magic spells can also pass through the gate.

The gate appears as a shimmering ring, glowing with a faint light equivalent to starshine. Vision through the gate is clear and unobstructed in both directions, allowing the priest to "look before he leaps." However, anyone on the other side of the gate is able to see the priest and his point of origin.

The "near side" of the gate always appears within 5 feet of the priest. The location of the "far side" of the gate always opens within 5 feet of the place the priest desires. Thus, there is no chance of arriving at the wrong destination, as with the wizard spell teleport.

There is a risk involved in using *dimensional folding*, however. Many philosophers

believe that what we know as time is simply another dimension, and the behavior of this spell seems to support this thesis. Unless the priest is extremely familiar with the destination, there is a significant chance that any creature passing through a *dimensional folding* gate will suffer instantaneous aging. Theorists believe that this is the same kind of "slippage" that can cause a *teleporting* wizard to land high or low, except that in this case, the slippage is in the time dimension.

The chance of this instantaneous aging occurring depends on how familiar the priest is with the destination. The table that follows outlines the conditions and effects of aging.

| **Destination is:** | **Chance of aging** | **Amount of aging** |
|---|---|---|
| Very familiar* | 2% | 1 year |
| Studied carefully | 5% | 1d2 years |
| Seen casually | 10% | 1d3 years |
| Viewed once | 15% | 1d6 years |
| Never seen | 25% | 1d10 years |

* Use this row if the desired location is within view of the priest.

If the die roll indicates that aging occurs, every creature that passes through the gate in either direction suffers the aging effect. Multiple creatures passing through the gate in the same direction all age by the same amount determined by a single die roll. Although the chance of aging is low and the potential amount of aging is minimal for familiar destinations, the effects can add up and become significant over time.

Although the word "destination" is used to refer to the "far end" of the gate, the priest need not be the one doing the traveling. For example, a priest may open the gate near a distant ally so he may travel instantaneously to join the priest.

The material component is a sheet of platinum "tissue" worth at least 15 gp, which the priest folds intricately during the casting. The tissue is consumed when the gate closes.

**Fire Purge (Abjuration)**
Sphere: Wards
Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 10-yard square/priest
Saving Throw: None

An area enchanted with *fire purge* is protected against all types of normal and magical fires. Normal fires (including camp fires, torches, and oil fires) cannot burn in the area of effect. Magical fires (including fiery dragon breath, other creature-generated fires, and spell-related fires such as *burning hands* and *fireball*) cause only 50% of their normal damage. Additionally, creatures within the area of effect receive a +4 bonus to saving throws made vs. fire attacks, regardless of whether the attacks originate inside or outside the warded area.

*Fire purge* has no effect on fires that are within the area of effect when the spell is

cast, (i.e., it does not extinguish existing fires).

The material components are the priest's holy symbol and a scorched sliver of wood.

*Fire purge* can be cast as cooperative magic. If a number of priests cast this spell simultaneously, its effectiveness is significantly increased. The duration of the spell is then equal to 1 turn per level of the most powerful priest plus 1 turn for every other contributing priest. The area of effect is a square whose sides equal the number of priests times 10 yards (thus, six priests could create a 60-yard by 60-yard square of protection).

**Focus (Invocation)**
Sphere: All
Range: 10 feet
Components: V, S, M
Duration: Special
Casting Time: 1 day
Area of Effect: Special
Saving Throw: None

This spell creates the necessary conditions for devotional energy to be used. For faith magic to work, the priest must create a focus to harness the necessary devotional energy. This spell creates that focus. *A focus cannot function without a source of devotional energy*.

The focus gathers devotional energy and reshapes it in order to amplify other spells cast by the priest (or priests). The same energy keeps the focus in existence. If the spell is cast and there is no immediate source of devotional energy within 100 feet, the *focus* immediately fails.

Once created, most foci cannot be moved. This condition and the need for a constant supply of devotional energy tends to limit the use of foci to temples, churches, monasteries, shrines, and seminaries--permanent structures where followers of the religion gather on a regular basis. Sometimes a focus is created for a special gathering such as a holy day, conclave, grand wedding, or yearly festival.

Not all foci are identical. The particular form of the focus depends on the power and nature of the spell being amplified. All foci can be seen by *detect magic*. There are three basic types of foci: site, item, and living.

**Site foci** are connected to a place, whether a room, building, field, or forest. Once cast, the foci cannot be moved. It causes no disturbance in the surroundings; it is invisible and intangible.

**Item foci** are centered on a single object. Customarily, this object is large and immovable, such as an altar, but it is possible for the focus to be as small as is practical. The item can be as elaborate or plain as desired, but should have some significance to the religion.

**Living foci** are the rarest of all types. In this case, the focus is created on a living plant, animal, or person. *Detect charm* reveals the person is somehow enchanted, although not under the influence of a typical charm spell.

The type of focus created (site, item, or living) depends on the religion and nature of the spell amplified. These choices are listed in Table 3: Focused Spell Effects.

Casting the *focus* spell is a long and complicated process, accompanied by many

ceremonies and rituals. During the day spent casting the spell, the priest will need the assistance of at least two other priests of the same faith. These aides need not memorize the spell (or even be capable of casting it). Their duty is to provide the extra hands and voices needed at specific points of the casting. A large number of worshipers must also be present since the focus requires their energy. Not surprisingly, the casting of this spell is often incorporated into important holy festivals or special occasions.

The duration of the focus is one year. If the devotional energy falls below a minimum level, the spell ends sooner. A focus requires the devotional energy of at least 100 devout worshipers. Lay monks (those dedicated to the religion but not priests) count as two worshipers, while priests (of any level) count as ten. A focus could be maintained by a congregation of 100, a monastery of fifty, or a seminary of as few as 10 priests (or any combination of the above). The focus must receive this energy for at least 10 hours out of every day. If these conditions are not met, the focus weakens. The area of effect of the amplified spell decreases by 20% each day until it fades away completely.

Once the focus is created, the priest or priests have 1 turn in which to cast the desired spell upon the focus. A focus can amplify only one spell, and each item, creature, or place can receive only one focus. Spells that can be cast upon a focus are listed on Table 3.

### Table 3: FOCUSED SPELL EFFECTS

| Spell | Possible Focus Type |
|---|---|
| *Anti-animal shell* | S/I/L |
| *Anti-plant shell* | S/I/L |
| *Bless* | S/I |
| *Control temperature, 10' radius* | S* |
| *Control winds* | S/I* |
| *Cure disease* | I/L |
| *Cure blindness or deafness* | I/L |
| *Detect poison* | S/I |
| *Detect lie* | I |
| *Detect magic* | I |
| *Dispel evil* | S/I |
| *Endure cold/endure heat* | S* |
| *Know alignment* | I/L |
| *Negative plane protection* | S/I |
| *Protection from evil* | S/I |
| *Protection from lightning* | S |
| *Protections from fire* | S |
| *Purify food and drink* | I |
| *Remove fear* | S/I/L |
| *Remove curse* | I |
| *Repel insects* | S/I |
| *Resist fire/resist cold* | S |
| *Speak with animals* | S/I/L |
| *Tongues* | S/I |
| *True seeing* | S |

** The caster must state a desired range (temperature, wind strength, etc.) within the spell's normal limitations at the time it is cast.*

Once the spell is cast, the normal duration and area of effect for that spell are ignored. The focus begins to increase these factors of the spell's power. After one day, the amplified spell reaches its full area of effect. Thereafter, it remains over that area until the focus fails.

The area affected by the focus (and its amplified spell) depends on the level of the caster. The spell expands in a radius from the focus, 20 feet per level of the caster, although it can deliberately be created smaller. Within that area of effect, the amplified spell exerts its normal effect. A 13th-level priest could create a focus up to 260 feet in diameter.

The material components are many, including special vestments, incense, oils, waters, and other equipment the DM deems appropriate. The cost of these materials is never less than 1,000 gp plus 100 gp per level of spell being amplified. These items are given up as offerings to the deity (perhaps to be distributed to the poor), and new ones must be obtained each time the spell is cast.

**Fortify (Necromancy)**
Sphere: Healing
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 6
Area of Effect: Creature touched
Saving Throw: None

This is a simple cooperative magic spell. Only one priest can cast the spell, but like *mystic transfer*, another priest is required for the spell to have any effect. Through this spell, the priest improves the quality of another priest's healing spells.

For the *fortify* spell to work, it must be cast simultaneously with a *cure light wounds*, *cure serious wounds*, or *cure critical wounds*. The priest casting *fortify* must lay his hand on the priest attempting the cure. When both spells are cast, additional energy flows through the second priest and into the creature being healed. *Fortify* automatically causes the cure spell to function at maximum effect. Thus, a *cure serious wounds* would automatically heal 17 points of damage and a *cure critical wounds* would heal 27 points of damage.

The material component is the priest's holy symbol.

**Genius (Divination)**
Sphere: Thought
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 5

Area of Effect: Caster
Saving Throw: None

This spell is similar to *idea*, except that the priest's player can ask the DM one question about any event occurring at the moment. The question must be somehow related to evaluation of the current situation, such as "What are these monsters?" Speculation about the future, such as "What's on the other side of the door?" is not permitted.

As with *idea*, the DM must be careful in adjudicating this spell. The answer to the question should always be relevant and correct, although not necessarily complete, and should not be unbalancing to the situation. The answer can also be cryptic, in the form of a riddle or rhyme, depending on the DM's assessment of the situation. In general, the answer will be a single word or a short phrase of no more than five words.

The material component is a gem of at least 50 gp value. This spell can be cast only once in any 12-hour period. Subsequent attempts to cast the spell result in no answer.

**Inverted Ethics (Enchantment/Charm)**
Sphere: Chaos
Range: 120 yards
Components: V, S, M
Duration: 1 turn
Casting Time: 1
Area of Effect: Special
Saving Throw: Neg.

This spell reverses the ethics of a person or group of people. While under the influence of this spell, a creature behaves in a manner opposite to the way he normally would behave. Thus, a shopkeeper influenced by inverted ethics will think it perfectly normal for someone to pick up an item from his shop and walk out the door without paying for it. If someone tried to pay for an item, he would be insulted. If the spell is cast on a shopper in a store, he would find it natural to steal the item, thinking that he is behaving in a proper way. If the spell is cast on a professed thief, he will no longer steal, choosing to pay for his goods instead.

*Inverted ethics* does not cause a creature to actively commit evil deeds (or good deeds). Thus, an affected creature will not go on a shoplifting rampage; he will steal only as the opportunity presents itself.

The spell affects one character per level of the caster within a 20' radius. Each target of the spell is allowed a saving throw vs. spell to avoid the effect.

The material component is a miniature golden balance (i.e., similar to the scales of justice).

**Join With Astral Traveler (Alteration)**
Sphere: Astral
Range: 0
Components: V, S
Duration: Special

Casting Time: 1 turn
Area of Effect: The caster
Saving Throw: None

When a priest casts the 7th-level *astral spell*, he leaves his physical body in suspended animation while his astral body travels. By touching the comatose body and casting *join with astral traveler*, a priest can cause his own astral body to leave his physical body in suspended animation. His astral body then travels along the silver cord of the originally projected priest. The caster joins the projected priest as if he were part of the original casting of the *astral spell*; i.e., his own silver cord is connected to the priest's silver cord, and he is dependent upon the originally projected priest.

A priest who casts the 7th-level *astral spell* can project as many as seven other creatures along with himself. However, priests casting *join with astral traveler* are an exception to this limit. Any number of priests may join another priest in the Astral plane by use of this spell.

**Leadership (Enchantment/Charm, Alteration) Reversible**
Sphere: War
Range: Special
Components: V, S, M
Duration: Special
Casting Time: Special
Area of Effect: One creature
Saving Throw: None

This spell can be cast in one of two variations. The first, appropriate for battlefield use, has a range of 240 yards, duration of 1d4+6 turns, and a casting time of 1 turn. The priest can cast the spell on any single individual (a commander or hero) within his line of sight.

While under the influence of this spell, the subject's command radius is increased by 50% (round fractions up).

The reverse of this variation, *doubt*, requires the target to make a saving throw vs. spell. If failed, *doubt* halves the command radius (round fractions down) of the targeted individual for 1d3+4 turns.

The material component for this variation is a pinch of steel dust.

The second variation must take place in or within 100' of a place of worship officially dedicated to the casting priest's deity. Both the priest and the individual to be affected must be present. The casting time is 5 turns and involves an intricate ritual and many prayers. At the conclusion of the spell, the subject's command radius is doubled. This effect lasts 2d12 hours.

The priest can cast either aspect (but not both at once) on himself. No individual can be the subject of more than one casting of this spell at one time, whether different aspects or cast by different priests. If more than one spell is attempted on the individual, only the most recent casting takes effect.

The material component for the second variation is the priest's holy symbol.

**Mental Domination (Enchantment/Charm)**
Sphere: Thought
Range: 50 yards
Components: V, S, M
Duration: 3 rounds/level
Casting Time: 4
Area of Effect: One creature
Saving Throw: Neg.

This spell is similar to the wizard spell *domination* in that it establishes a telepathic link between the priest and the subject through which the priest can control the subject's bodily movements. There are some significant differences between the spells, however.

Elves and half-elves have no innate resistance to this spell. Priest and subject need not share a common language. The priest can force the subject into combat, but the subject's attack rolls suffer a -2 penalty. The priest cannot force the subject to cast spells or use any innate magical or magiclike abilities. The priest can force the subject to speak, although the priest cannot inject a full range of emotions into the subject's voice (everything said by the subject is in a monotone).

This spell gives the priest no access to the subject's thoughts, memory, or sensory apparatus. Thus, the priest cannot see through the subject's eyes. To control the subject, the priest must be within the range of the spell *and* must be able to see the subject. Breaking either of these conditions causes the spell to terminate immediately.

This spell requires a moderate level of concentration by the priest. While maintaining this spell, he can move or enter combat, but cannot cast another spell. If the priest is wounded, rendered unconscious, or killed, the spell immediately terminates.

If the priest is 10th level or lower, he or she cannot force the subject to perform particularly delicate actions, such as picking a lock. At 11th level or higher, however, this restriction is removed. The priest could thus force a thief to pick a lock. Any such delicate actions suffer a -15% penalty (or -3 on 1d20) to reflect the "remote control" nature of the action.

The material component is a mesh of fine threads that the priest loops around the fingertips of one hand and manipulates in the way that a puppeteer controls a puppet.

**Modify Memory (Enchantment/Charm)**
Sphere: Time
Range: 30 feet
Components: V, S
Duration: Permanent
Casting Time: Special
Area of Effect: One creature
Saving Throw: Neg.

This spell enables the caster to reach into the subject's mind and modify up to five minutes of his memory in one of the following ways:

•Eliminate all memory of an event the subject actually experienced. This spell cannot negate *charm*, *suggestion*, *geas*, *quest*, or similar spells.

•Allow the subject to recall with perfect clarity an event he actually experienced. For instance, he could recall every word from a five-minute conversation or every detail from a passage in a book.

•Change the details of an event the subject actually experienced.

•Implant a memory of an event the subject never experienced.

Casting the spell takes one round. If the subject fails to save vs. spell, the caster proceeds with the spell by spending up to five minutes visualizing the memory he wishes to modify in the subject. If the caster's concentration is disturbed before the visualization is complete, the spell is lost.

*Modified memory* will not necessarily affect the subject's actions, particularly if they contradict his natural inclinations. An illogical *modified memory*, such as the subject recalling how much he enjoyed drinking poison, will be dismissed by the subject as a bad dream or a memory muddied by too much wine. More useful applications of *modified memory* include implanting memories of friendly encounters with the caster (inclining the subject to act favorably toward the caster), changing the details of orders given to the subject by a superior, or causing the subject to forget that the caster cheated him in a card game. The DM reserves the right to decide whether a *modified memory* is too nonsensical to significantly affect the subject.

**Probability Control (Alteration)**
Sphere: Numbers
Range: 30 yards
Components: V, S, M
Duration: Special
Casting Time: 4
Area of Effect: One creature
Saving Throw: Neg.

This spell allows the priest to increase or decrease by a small margin the probability of success for one action. This action can be anything that requires a die roll--an attack, a saving throw, an attempt to use thieving skills, an ability check, or even an attempt to successfully *teleport* on target. The action must be something performed by a single creature.

The basic modification is 15% (15 on 1d100 or 3 on 1d20), plus an additional 5% per five levels of the caster. This modification can be either positive or negative, as deemed by the spellcaster. Thus, a 10th-level priest can modify a subject's saving throw or attack roll by +5 or -5, or a thief's "climb walls" roll by +25% or -25%. The priest may cast this spell on himself.

For a noncombat action such as an attempt to climb a wall, the priest simply casts the spell on the subject immediately before the action is attempted, informing the DM whether the modification is positive or negative. To use this spell in combat, the priest must specify the action to be affected (e.g., the target's next attack roll) and whether the modification will be positive or negative. The spell remains in effect until the subject attempts the specified action or until a number of rounds equal to the caster's level passes. If the latter occurs, the spell ends without effect.

Once the spell is cast, the priest does not need to maintain any level of concentration;

the spell will function even if the casting priest is killed before the spell takes effect.

The subject of the spell has no way of knowing whether any modification made by this spell is positive or negative (or even whether he was the subject of the spell at all). Thus, a lying priest could claim to raise a thief's chance of climbing the wall, while actually lowering it. The thief would be none the wiser. However, an unwilling subject of this spell receives a normal saving throw to negate its effect.

The material components are a small cube of a thickened sugar-and-milk mixture and a cubic die of matching size. Both are consumed in the casting.

**Rapport (Divination, Alteration)**
Sphere: Thought
Range: 30 yards
Components: V, S
Duration: 1 turn+1 round/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

This spell is a deeper and more intense version of *telepathy*. It allows the priest to communicate silently and instantly with a single willing subject. Participants may share deeper thoughts than with *telepathy*, including emotions and memories. Each participant sees, hears, and otherwise senses everything experienced by the other, although such vicarious experiences feel diluted and cannot be mistaken for direct sensations.

The participants can quickly share such personal concepts as plans, hopes, and fears, but they *cannot* share skills or spells. Thus, it is impossible to communicate the procedure for casting a particular spell or for picking a lock.

Communication through *rapport* is approximately 15 times faster than verbal communication. As with *telepathy*, the priest can establish separate "channels" to multiple individuals; each such linkage costs one casting of the spell. There is no "crosstalk" between the channels, however.

*Rapport* cannot be used on unwilling subjects.

**Solipsism (Alteration)**
Sphere: Thought
Range: 10 yards/level
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: 100 sq. ft.+100 sq. ft./level
Saving Throw: Special

This unusual spell is similar to *phantasmal force* and other illusion magic, except that the priest who casts the spell is the only creature who automatically believes the results of the spell. The spell creates the illusion of any object, creature, or force, as long as it is within the boundaries of the spell's area of effect. The illusion is visual and tactile (that is, it can be seen and felt), but no other sensory stimuli are created.

*Solipsism* is the opposite of normal illusions in that anyone other than the caster must make an active effort to *believe* (rather than dis believe) the illusion. Characters trying to believe the reality of a solipsistic illusion must make a saving throw vs. breath weapon, modified by the magical defense adjustment for Wisdom. A successful save means that the character believes the illusion and it is part of reality for him. A failed save means that the character cannot convince himself of the illusion's reality, and the illusion has no effect on him. A character can make a single attempt to believe each round.

Unlike true illusions, the image created by this spell does more than just duplicate reality. The image formed is *real* for those who believe in it. The illusion has all the normal properties that its form and function allow. Thus, a solipsistic bridge spanning a chasm could be crossed by the priest and those who believed. All others would see the priest apparently walking out onto nothingness. Likewise, a solipsistic giant would cause real damage to those who believed it.

The illusion remains in effect for as long as the priest continues to concentrate on it, until the priest is struck in combat, or until he is rendered unconscious. The level of concentration required is not extreme; the priest can move normally and may engage in combat, but is unable to cast any spell while maintaining a *solipsistic* illusion.

*Solipsism* can create only illusions that are external to the priest. Thus, the priest cannot create an illusion that he is the size of a giant, is unwounded, or has sprouted wings.

The material components are a lotus blossom that the priest must swallow and a bit of fleece.

**Tanglefoot (Alteration, Abjuration) Reversible**
Sphere: War
Range: 240 yards
Components: V, S, M
Duration: 2 turns/level
Casting Time: 2 turns
Area of Effect: 100 sq. yards/level
Saving Throw: None

This spell temporarily doubles the movement cost of one region of ground. Units allied to the priest are unaffected and movement is made at normal cost; only enemy units suffer the penalty.

A variety of effects result from the spell depending on the terrain: grass twists hinderingly around troops' ankles, swamp becomes more viscous, rocks and gravel shift underfoot, etc.
The spell affects only units--that is, groups of soldiers moving in regular or irregular formation. The spell does not affect individuals or monsters moving and operating alone. (When using the BATTLESYSTEM™ rules, figures that represent individual heroes are not affected by this spell.)

When casting this spell, the priest must have an uninterrupted line of sight to the terrain to be affected. The priest can choose the shape of the area, up to the maximum area of effect. This spell can create only one continuous area of *tanglefoot*. There is no way of detecting that a particular area is under the influence of this spell simply by

looking at the area. *Detect magic* will reveal that the area is magically affected.

The reverse of this spell, *selective passage*, cuts the movement cost of an area in half (round fractions up) for friendly units. Again, individual heroes and creatures are not affected by this spell (which means that advancing troops must be careful not to leave their leader behind!).

The material component is a drop of molasses for tanglefoot, and a pinch of powdered graphite for selective passage.

**Thought Broadcast (Alteration)**
Sphere: Thought
Range: 30 yards
Components: V, S, M
Duration: 1 turn+3 rounds/level
Casting Time: 5
Area of Effect: One creature
Saving Throw: Neg.

This spell turns the subject into a "thought broadcaster." For the duration of the spell, everyone within 30 yards of the subject senses the subject's thoughts, making it impossible for him to lie, keep secrets, conceal motives, etc. The subject is not automatically aware that his thoughts are being sensed. Everyone who senses these thoughts, on the other hand, knows their source.

This spell causes the broadcast of only surface thoughts and motivations, not memories. There is no need for a common language between broadcaster and receivers; for this purpose, thoughts are considered to be symbolic, not dependent on language. The detail level of the thoughts is insufficient for others to learn specific skills from the subject. Thus, if the subject casts a spell, everyone within range knows what spell is being cast before it takes effect, but no one learns any knowledge about how the spell is cast.

If the broadcaster is *invisible* or hiding in shadows, the broadcast functions normally, and all receivers are aware that someone is in the vicinity whom they cannot see. While receivers cannot pinpoint the broadcaster's location, the broadcaster's thoughts will inevitably reveal his general position ("Oh no, he's looking right at me," etc.). A character hiding in shadows will be automatically detected, while attacks against an *invisible* broadcaster suffer a -2 penalty, rather than the normal -4. This spell totally negates the chance of surprise by the broadcaster.

The subject must have an Intelligence score of 1 or more to become a broadcaster, and must have a "normal" mind as understood by PCs. Thoughts that are broadcast can be received only by individuals with Intelligence scores of 3 or better. An unwilling subject receives a normal saving throw vs. spell to avoid the effects. A willing subject can waive this saving throw.

The material component is small balloon that the priest inflates upon casting. This balloon is consumed in the casting.

**Tree Steed (Alteration, Enchantment/Charm)**
Sphere: Travelers

Range: 10 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 4
Area of Effect: One log or plank
Saving Throw: None

This spell enchants a log, plank, or similar piece of wood to become a temporary steed. The log or plank must be at least one foot wide, three inches thick, and three to ten feet long. Any type of wood is suitable.

When the spell is cast, the log sprouts four wooden, horselike legs. The *tree steed* may be ridden like a normal horse and may be used to carry equipment. The *tree steed* can carry up to 600 pounds of riders and gear before breaking. If the *tree steed* breaks under the weight of the riders or gear, the enchantment instantly ends and the *tree steed* again becomes a normal (although broken) log or plank.

The *tree steed* obeys all of the caster's verbal commands to move, slow, speed up, stop, and turn. It has a movement rate of 12 on land. It can move in the water (Sw 6), floating on the surface and paddling with its legs. The *tree steed* must remain within 10 yards of the caster in order to move; if the distance between the *tree steed* and the caster exceeds 10 yards, the *tree steed* stops until the caster is again within range.

The *tree steed* will not fight for the caster and is incapable of any action other than movement. The *tree steed* does not become fatigued and does not eat. It has all the vulnerabilities of normal wood, including fire, and can be damaged by both magical and physical attacks. It has AC 8 and 20 hit points.

The material components are a log or plank of suitable size and a horseshoe.

**Uplift (Alteration)**
Sphere: All
Range: 0
Components: V, M
Duration: 1 turn
Casting Time: 12 hours
Area of Effect: One priest
Saving Throw: None

*Uplift* bestows increased spellcasting ability on one priest, including additional spells per level and use of spells beyond the caster's normal level. This cooperative spell requires two priests who must spend the day casting this spell. During the casting, the priests must decide which additional spells (of all levels) are desired. Upon completion of the casting, the priests touch palms, and the priest of higher level receives a charge of magical energy. This charge temporarily boosts the level of the priest for spellcasting purposes. The amount of increase is one level per five levels of the lower level caster (fractions rounded up). If both priests are of equal level, the casters must decide who benefits from the spell.

The spell grants the priest the spellcasting ability of the new level. It does not improve hit points, attack rolls, or other abilities. If the increase allows more spells per

level, the additional spells are instantly placed in the character's memory. A priest is also enabled to cast spells normally beyond his level. Range, duration, area of effect, and other variables are all based on the character's temporary level.

The increased effect lasts only 1 turn. At the end of the turn, all additional spells are lost and the character reverts to his normal level.

As an example, consider a party with a fallen comrade. The two priests in the party are 7th and 8th level, both unable to cast *raise dead*. After a night's rest, each priest adds *uplift* to his memorized spells. After casting the spell, the 8th-level priest suddenly gains the casting abilities of a 10th-level priest, including the ability to cast *raise dead*. At the end of one turn, the priest's abilities revert to 8th-level.

Casting this spell is an arduous task, causing a severe drain on the priests. When the spell expires, the uplifted character suffers 2d6 points of damage from mental exhaustion. This damage cannot be healed by any means until the character has had at least eight hours of rest.

The material components are the priests' holy symbols and an offering worth at least 500 gp from each priest.

**Weather Stasis (Abjuration)**
Sphere: Wards, Weather
Range: 30 yards
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 turn
Area of Effect: 10-foot cube/level
Saving Throw: None

*Weather stasis* maintains the weather conditions prevalent in the area of effect when the spell is cast. The spell affects a cube whose sides equal the caster's level times 10 feet (a 10th-level caster could affect a 100' x 100' x 100' cube).

An area protected by *weather stasis* is unaffected by temperature variations in the surrounding environment. The spell also acts as a shield against rain, snow, and hail, which cannot enter the protected area. If conditions of precipitation existed in the area of effect when the spell was cast, the identical weather will continue for the duration of the spell.

For example, *weather stasis* is cast in an area where the temperature is 75 F. and no precipitation is falling. Half an hour later, the temperature drops to 60 degrees and rain begins to fall. The protected area remains dry and the temperature stays at 75 degrees. If the spell had been cast while rain was falling in the area of effect, rain would continue to fall for the duration of the spell, even after it stopped raining in the surrounding area.

All physical objects other than rain, snow, and hail can pass into the protected area. All creatures and characters can move freely into and out of the area. The spell does not prevent water-based spells or water-based creatures (such as water elementals) from operating in the area.

The spell protects against both natural and magically generated weather. Night and day pass normally in the protected area, although temperature variations associated with night and day do not occur.

The material components are the priest's holy symbol and a drop of rain.

# Fifth-Level Spells

### Age Object (Alteration) Reversible

Sphere: Time
Range: 10 yards
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: 1 cubic foot/level
Saving Throw: None

With this spell, the caster can cause an amount of nonliving, nonmagical matter to age dramatically. Matter can be aged up to 20 years per level of the caster. The following table gives typical results of 100 years of aging for various objects, arranged in order of descending severity:

| Object | Result of Aging |
|---|---|
| diamond | none |
| silver | becomes tarnished |
| masonry | cracks and weakens |
| iron | rusts and corrodes |
| parchment | cracks, turns brittle |
| wood | rots, crumbles, turns to sawdust |

The caster controls the extent of the aging; thus, he could age a book so its pages become yellowed and brittle but stop short of causing the book to crumble to dust. As a guideline, each additional 100 years of aging causes an increasingly severe reaction. Thus, after 200 years, parchment might become little more than powder, while iron might begin to flake away at a touch.

Many items (especially gems) show little reaction to age. The DM must adjudicate all effects.

The material components are a flask of seawater and a piece of coal.

The reverse of this spell, *youthful object*, returns an object ravaged by the effects of time to its original condition; thus, rusty iron becomes strong and shiny, crumbled masonry becomes firm, and rotten wood becomes solid. The age of matter can be reduced by 20 years per level of the caster.

The material components for *youthful object* are a piece of eggshell and a hair from the head of a human or humanoid infant.

### Barrier of Retention (Abjuration)

Sphere: Wards
Range: Special
Components: V, S, M

Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 10'-cube/level
Saving Throw: Neg.

This spell creates a one-way invisible force field around the area of effect. The spell creates one 10' x 10' x 10' cube for every level of the caster. These can be arranged into any rectangular shape the caster desires.

Intruders entering the protected area suffer no ill effects, but the *barrier of retention* prevents them from leaving. The spell affects all creatures who fail a saving throw vs. spell. The caster can pass in and out of the barrier freely.

Intruders trapped by the *barrier of retention* can cast spells out of the barrier and can use spells such as *teleport* to escape the protected area. Objects cannot be hurled out of the barrier but can be carried out by an escaping creature. *Dispel magic* and similar spells negate the *barrier*.

The material component is a small cage made of silver wire. The caster must walk around the perimeter of the area of effect when casting.

**Blessed Abundance (Conjuration)**
Sphere: Creation
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: 1 cubic foot/level
Saving Throw: None

This spell allows a priest to duplicate a specified amount of animal or vegetable matter. Magical items and minerals (including rocks, metals, and gemstones) cannot be duplicated. Although organic materials (such as food or living plants) can be duplicated, living creatures cannot be copied by this spell.

The caster can create 1 cubic foot of material per his experience level. The material to be duplicated must be equal to or less than 1 cubic foot in size or volume. For example, a 9th-level priest can create up to 9 cubic feet of animal or vegetable matter. Using a loaf of bread 1 cubic foot in size, he can produce nine such loaves; using a bucket of apples totaling 1 cubic foot in volume, he can create nine such buckets.

The material component is the priest's holy symbol.

**Champion's Strength (Alteration)**
Sphere: Law
Range: 0
Components: V, S, M
Duration: Special
Casting Time: 2
Area of Effect: Special
Saving Throw: None

*Champion's strength* bestows one member of a group with attack and damage bonuses from the rest of the group. The recipient of the spell can then fight as the group's champion.

The spell draws bonuses from one person for every two levels of the priest. All characters involved must be within a 30'-radius of the priest. At the time of casting, the priest designates the recipient of the spell and the contributors. All characters who contribute to the spell must do so willingly.

When the spell is completed, the designated character (the group's champion) gains any non-magical bonuses to THAC0 and damage possessed by the characters who contributed to the spell. Characters without bonuses or with combat penalties could conceivably be included in the spell; such characters count against the maximum number of creatures that can be affected. Penalties are likewise applied to the champion; contributors to this spell must be chosen carefully.

The bonuses gained through this spell are added to the character's own bonuses (if any). The champion channels the energy of others through himself, improving his fighting ability.

The champion must be in the line of sight and within 30 feet of the characters aiding him. Characters who contribute their bonuses must concentrate on the champion for the duration of the spell. If this concentration is broken (by moving more than 10 feet per round, fighting, being struck, or losing sight of the champion), that character's contribution is immediately lost.

The spell expires when the last character contributing power to the champion ceases concentration.

A champion may benefit from only one *champion's strength* spell at one time. Contributors can aid only one champion at one time.

The material component is a chain of five gold links worth at least 1,000 gp.

**Chaotic Commands (Enchantment/Charm)**
Sphere: Chaos
Range: Touch
Components: V, S, M
Duration: 1 turn/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: Special

*Chaotic commands* renders a creature immune to magical commands. *Taunt, forget, suggestion, domination, geas, demand, succor, command, enthrall, quest, exaction,* and other spells that place a direct verbal command upon a single individual automatically fail.

In addition, anyone casting one of these spells on a creature protected by *chaotic commands* must save vs. spell. Failure means that the caster must obey his own magic; the spell's effect has backfired on the caster.

The material component is a piece of eelskin.

**Clear Path (Alteration) Reversible**
Sphere: Travelers
Range: 0
Components: V, S, M
Duration: 1 hour/level
Casting Time: 5
Area of Effect: Special
Saving Throw: None

This spell clears away weeds, stones, and other debris in a 10-foot-wide path extending 10 feet in front of the caster. The caster can create a continuous path for the duration of the spell, clearing a 10-foot-square ahead of him as long as he continues to move forward. The spell affects jungles, forests, rocky ground, and snow.

The result of the cleared path is that movement costs are reduced by half. This is reflected in a reduction of the penalty against movement in rough terrain. (See Table 74 of the *Dungeon Master's Guide* for terrain costs for movement.) For example, if *clear path* is used in heavy jungle, the movement cost is reduced from 8 to 4. In no case can *clear path* reduce movement cost below 1.

*Clear path* has no effect on rivers, lakes, or other bodies of water, nor does it affect quicksand, lava, or similar natural obstacles. It also has no effect on magically-created terrain or manmade barricades.

A priest using the *clear path* spell can be tracked easily. Tracking proficiency is not required.

The material components are a knife blade and a straw from a broom.

The reverse, *clutter path*, causes weeds, small stones, and similar debris to litter a 10-foot path extending 10 feet behind the caster. This hides a trail, making tracking more difficult. The caster can create a continuous path for the duration of the spell. The chance to successfully track on a cluttered path is reduced by 50%.

The material components are a handful of pebbles and a handful of weeds.

**Cloud of Purification (Evocation)**
Sphere: Elemental Air, Water
Range: 30 yards
Components: V, S
Duration: 1 round/level
Casting Time: 5
Area of Effect: 20-foot cube
Saving Throw: None

This spell creates a billowy cloud of magical vapors that moves in the direction of the prevailing wind at a rate of 20 feet per round. A strong wind (greater than 15 miles per hour) breaks it up in 4 rounds, and a greater wind (25 MPH or more) prevents the use of the spell. Thick vegetation disperses the cloud in 2 rounds.

The *cloud of purification* transmutes organic filth, garbage, and vermin (mice, rats, rot grubs, and so on) into an equal quantity of pure water. For example, a nest of rot grubs caught in the cloud would "melt," becoming small puddles of clean water. If the

spell is cast over a body of water, the cloud merges with a portion of the water equal to its own size, transmuting any filth, microbes, small fish, or other "impurities" into clean water.

The cloud's vapors are heavier than air, so they sink to the lowest level of the land (even down holes in the ground). Thus, this spell is perfect for cleansing a sewer or well.

This spell in no way affects magical creatures or creatures larger than a normal rat.

**Consequence (Divination)**
Sphere: Numbers, Divination
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell allows the priest to determine how one recent event fits into the "grand scheme." By casting this spell, the priest can determine whether the sequence or situation that gave rise to the specific event is complete or whether it is ongoing; whether it was a significant or insignificant event in the larger picture; or whether it will continue to have repercussions for the participants.

Using his knowledge of circumstances, the DM communicates these facts to the caster's player. This "arcane message" is normally straightforward and easy to understand, but in the case of highly complex circumstances, the message might be cryptic. In any case, the message will always be truthful.

As an example, consider a priest and his party who are on a holy quest to retrieve an item of power. On the way to the location of this item, the party is ambushed by evil creatures from the Inner Planes but manages to defeat them. Concerned that these creatures might be outlying guards protecting the item of interest, the priest casts *consequence*, hoping for guidance. The DM knows that these creatures have nothing to do with the quest; the encounter was coincidental. However, the surviving monsters will soon be returning with reinforcements to avenge their dead. Therefore, the DM tells the priest's player, "To your goals these have no place, but still they can cause more woe."

Casting this spell "taints" subsequent castings of the same spell within a 24-hour span. A second attempt within this period always results in the same message as the first, regardless of the true situation. If a second priest casts the spell within 24 hours of another casting, he receives an accurate reading.

The material component is three special coins or dice made of platinum (total value of at least 1,000 gp), which the priest tosses in his hand while concentrating on the spell. The coins or dice are not consumed in the casting.

**Disguise (Illusion/Phantasm)**
Sphere: War
Range: 200 yards
Components: V, S, M
Duration: 1 turn/3 levels

Casting Time: 2 turns
Area of Effect: One unit up to 300 individuals
Saving Throw: None

This spell changes the appearance of a single unit so it resembles another unit. The *disguise* can cause the affected creatures to appear to be of another class, nationality, rank, race, alignment, or military affiliation (i.e., a unit from one army may appear wearing the armor and carrying the colors of another army). *Disguise* cannot change the size category of the unit's members. Thus, a unit of humans may appear to be a unit of elves, but may not appear as a unit of giants or halflings. The spell does not affect the size of the overall unit; a unit of 50 creatures will still appear to be a unit of 50 creatures.

The disguised unit may appear to be carrying any melee or personal missile weapons (e.g., axes, long swords, crossbows, etc.), and may appear to be wearing any type of armor. In combat, however, the unit attacks and defends with its real weapons and armor regardless of the gear they may appear to be carrying.

*Disguise* is most effective at long range. If another unit moves within 20 yards of a disguised unit, it automatically sees through the illusion.

The caster automatically sees through the illusion. Members of the subject unit see no change in their appearance. *True seeing* or similar magic is required for other individuals to see through the disguise (unless they move within 20 yards of the unit).

The material components are a fine silk veil and a length of woven platinum wire. The wire is consumed during the casting.

**Easy March (Invocation)**
Sphere: Travelers
Range: 50 feet
Components: V, S, M
Duration: 1 day/level
Casting Time: 1 turn
Area of Effect: One creature/level
Saving Throw: None

This spell enables a number of creatures equal to the caster's level to force march for a number of days equal to the caster's level. Creatures affected by *easy march* can travel 2 ½ times their normal movement rate without any risk of fatigue; thus, they are not required to make a Constitution check at the end of the day.

All creatures affected by this spell suffer a -1 penalty to their attack rolls for the duration of the spell; this modifier is not cumulative (that is, a party experiencing its second day of *easy march* suffers only a -1 penalty). The modifier cannot be negated by resting.

*Easy march* has no effect on modifiers to movement due to terrain, fatigue, weather, or other normal factors. (Refer to Chapter 14 of the *Player's Handbook* for more about force marching.)

The material component is a piece of shoe leather.

**Elemental Forbiddance (Abjuration)**

Sphere: Wards, Elemental--Air, Earth, Fire, Water
Range: Special
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 5'-cube/level
Saving Throw: None

This spell prevents the entry of all elementals into the area of effect. Further, elementals outside the area of effect cannot make physical attacks against those inside. Spells and missile attacks can be cast into the area by elementals.

The spell affects a cube whose sides equal the caster's level times 5 feet (a 12th-level priest could affect an area equal to a 60' x 60'x 60' cube).

*Elemental forbiddance* has no effect on elementals that are within the area of effect when the spell is cast. If such elementals leave the area of effect, they cannot reenter.

The material components are the priest's holy symbol and four glass beads, each of a different color (green, blue, red, and yellow). The priest must pace out the perimeter of the warded area at the time of casting.

**Extradimensional Manipulation (Alteration)**
Sphere: Numbers
Range: 10 yards
Components: V, S, M
Duration: 2d12 rounds+4 rounds/level
Casting Time: 5
Area of Effect: One extradimensional space up to
20 feet x 20 feet
Saving Throw: Special

This spell allows the priest to alter the characteristics of certain extradimensional spaces such as those created by rope trick and similar spells or those contained in items like *bags of holding* or *portable holes*.
*Extradimensional manipulation* can increase or reduce the size of a single extradimensional space. The amount of increase or decrease depends on the level of the caster:

| Level | Multiplier |
|---|---|
| Up to 10 | x2 |
| 11 to 16 | x3 |
| 17 or above | x4 |

This means that a 10th-level priest can double the capacity of a *bag of holding* or decrease it to half its normal size. A 15th-level priest can triple the capacity or reduce it to one-third capacity.

If the size and capacity of an extradimensional space is decreased, any contents of the space that exceed the current capacity are expelled (determined randomly). These contents are expelled from the space in the same way they originally entered it, if that

path is still open. If the path is closed, as it would be if a bag of holding were tied shut or a portable hole were folded up, the "extra" contents are expelled into the Astral plane. Any items in an enlarged space when the spell duration expires suffer the same fate.

Placing an extradimensional space inside another such space, such as placing a *bag of holding* inside a *portable hole* (see the *Dungeon Master's Guide*), is a dangerous undertaking. *Extradimensional manipulation* may be cast for the purpose of removing this danger. When used in this manner, the size of the space cannot be affected. However, while this version is in effect, the affected extradimensional space can be placed within another such space (or another extradimensional space may be placed within the affected space) with no adverse consequences. If one space is within the other when the spell expires, the usual consequences ensue immediately.

If the space to be affected is being maintained by a spellcaster, as in the case of a *rope trick*, that spellcaster receives a saving throw to resist the manipulation. If the space is created by a magical item, however, no saving throw is allowed.

The material component is a strip of gold tissue worth at least 5 gp that is twisted into a Moebius strip. The strip is consumed in the casting.

**Extradimensional Pocket (Alteration)**
Sphere: Numbers
Range: Touch
Components: V, S, M
Duration: 1d12 rounds+2 turns/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell allows the priest to create a single extradimensional space or pocket like the one inside a *bag of holding*. The spell must be cast on a container such as a sack, bag, or backpack. Once under the influence of the spell, the container opens into a nondimensional space and is much larger inside than its outside dimensions. The container always weighs a fixed amount, regardless of what is put inside. This weight and the capacity of the extradimensional space depend on the level of the caster:

| Level | Apparent Weight | Weight Cap. | Volume Cap. |
|---|---|---|---|
| 9-13 | 15 lbs | 250 lbs | 30 cu.ft. |
| 14-16 | 25 lbs | 500 lbs | 70 cu.ft. |
| 17-19 | 35 lbs | 750 lbs | 100 cu.ft. |
| 20+ | 60 lbs | 1,000 lbs | 150 cu.ft. |

If the container is overloaded or if it is pierced by a sharp object, the bag immediately ruptures and the contents are lost into the Astral plane. Any items within the bag when the spell duration ends are also lost in the Astral plane.

The material components, in addition to the container, are 200 gp worth of powdered diamond and a sheet of platinum worth 500 gp. The platinum sheet must be inscribed with a drawing of a Klein bottle (a paradoxical figure with only one surface--the three-dimensional analogue of the Moebius strip). The diamond dust is consumed during the

casting--the platinum sheet is not.

**Grounding (Abjuration)**
Sphere: Wards
Range: 30 yards
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 10-yard square/priest
Saving Throw: None

*Grounding* offers protection against normal and magical electrical attacks within the area of effect. The protected area and creatures within it suffer no damage from normal electrical attacks (such as those caused by lightning bolts in a thunderstorm and nonmagical creatures such as electric eels). Magical electrical attacks (including lightning bolt breath weapons) cause only 50% of their normal damage. Additionally, creatures within the area of effect receive a +2 bonus to saving throws made against electrical attacks, regardless of whether the attacks originate inside or outside the warded area.

The material components are the priest's holy symbol and a coil of silver wire.

**Illusory Artillery (Enchantment/Charm)**
Sphere: War
Range: 300 yards
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 turn
Area of Effect: 30 yard x 30 yard square
Saving Throw: None

This spell creates a vivid illusion of incoming artillery fire (ballista bolts, catapult stones, etc.) at a target indicated by the caster. The illusion is complete, comprising both audial and visual elements. It is impossible for victims to determine where the missiles were fired from; creatures under attack notice the missiles only when they are about to strike.

The missiles never actually strike--they vanish inches above the victims' heads and do no damage. The illusion is so terrifying, however, that victims must immediately make a morale check. The first time a group or unit is the target of this spell, this morale check is made with no modifier. The second and subsequent times that the same unit is attacked with this spell, the unit receives a +1 bonus to its morale score (for checks against this effect only) *unless* the unit has been the target of *real* artillery fire in the interim. In this case, the bonus does not apply.

The material component is a small, empty cylinder made of brass.

**Impeding Permission (Enchantment/Charm)**
Sphere: Law
Range: 150 yards

Components: V, S
Duration: 1 turn/level
Casting Time: 3
Area of Effect: One creature
Saving Throw: Neg.

This spell may be cast only on creatures with Intelligence of 2 or greater and the ability to communicate with the caster. The spell interferes with the victim's ability to make decisions. It prevents the victim from performing any action without first gaining the permission of the caster or a character designated by the caster. The victim will heed only the person designated by the caster.

Before the victim undertakes any action, he must gain permission. He will not follow through with an action until he gains permission. If permission is denied, the victim cannot act until he thinks of an alternate action and gains permission for that action.

Every round, the victim must decide his action for that round; at the victim's initiative, he must ask permission to perform his action. If permission is denied, the victim can take no other action that round.

The only actions exempt from the need for permission are involuntary actions such as breathing.

Asking and gaining permission takes only a short amount of time in most cases. A simple request, such as asking for permission to swing a sword in the middle of combat, can be accomplished quickly. Complicated requests, such as getting permission to act on a complicated plan, will naturally take more time. The DM may consider adding a modifier to the victim's initiative roll in such cases.

**Meld (Enchantment)**
Sphere: Charm
Range: 10 yards
Components: V, S, M
Duration: 12 hours
Casting Time: 1 turn
Area of Effect: One priest
Saving Throw: Special

This cooperative spell requires only one priest to cast it, but can be cast only on another priest of the same faith. The recipient of the spell must voluntarily surrender himself to the spell. The recipient becomes a host for the caster. While the recipient does not lose his own persona or ability to act, the host can be dominated by the caster at any time. For the most part, this domination is complete.

For the duration of the spell, the caster is essentially detached from his own body. He can neither move nor act on his own. His mind is connected to the host's. He sees, hears, smells, tastes, and otherwise senses everything the host does. He can telepathically communicate with the host. Once the spell is completed, there is no limit to the range over which it can function. However, both the caster and host must remain on the same plane. Since the spell relies on telepathic communication, thin lead sheeting will effectively block the connection.

When desired, the caster can dominate the host. When this happens, the host's own mind is pushed to the background and the caster's personality dominates. The host's personality, memories, proficiencies, and spells are temporarily replaced by those of the caster. While occupying the host, the caster can cast any spell he himself has memorized, provided that the necessary components are on hand. These spells function exactly as if the priest had cast them from his own body.

The caster can return control to the host at any time, restoring the character's abilities and personality without harm.

The spell is not without limitations and risks. The domination must be voluntary. If the host resists the casting of the spell, it automatically fails. Once the spell is in effect, the host can attempt to resist the domination. He is then allowed a saving throw. If successful, the spell immediately ends.

Whenever the host suffers damage, the caster must make a saving throw vs. death to maintain the spell. If the save is failed, a wave of pain is transmitted to the priest, causing 1d6 points of damage and canceling the spell. If the host should die, the caster must make a system shock roll with the risk of suffering instant death.

The material component is a chalice worth no less than 1,000 gp. This chalice must be given as a gift to the host (who cannot return it to the donor for any reason).

**Memory Wrack (Alteration, Enchantment/Charm)**
Sphere: Thought
Range: 10 yards
Components: V, S, M
Duration: 2 rounds/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: Neg.

This nasty spell "disconnects" the subject's short-term and long-term memory. While the spell is in effect, the subject is incapable of storing information in long-term memory. Every moment is virtually an independent event for the subject; he or she can remember recent events, thoughts, and sensations for no more than a few seconds (the amount of time they remain in short-term memory).

Memories of events that happened before the onset of the spell are not affected at all; these are safely stored in long-term memory. This means that the subject can cast any spells memorized before the *memory wrack* took effect, but he is likely to have difficulty casting the spell as described below.

The subject of this spell has a limited ability to act. He is restricted to one action at a time and must concentrate mightily to keep the situation and any planned actions in short-term memory. As long as the subject is able to maintain concentration, he may act normally within these limits.

If the subject is distracted (he is struck in combat, affected by a spell, startled, surprised, or a similar event occurs), he forgets everything that occurred from the onset of the spell to the moment of distraction. The subject must re-evaluate the situation as if it had just come to pass.

Consider the following example. The subject of the spell is a soldier assigned to

guard the entrance to a building. The priest arrives and casts *memory wrack* on the guard. The guard has no problem remembering his orders, since he received them before the onset of the spell. He also remembers the arrival of the priest. The priest now tries to convince the guard that he is authorized to enter the building. The guard refuses him entry. The priest now picks up a rock and throws it at the guard, striking him and distracting him. The guard forgets everything that happened between the onset of the spell and the moment the rock struck. He forgets that the priest has already tried to con him and that he threw a rock at him. He must reevaluate the situation as though the priest had just arrived. The priest is free to make another attempt at entering the building.

When the spell expires, the subject remembers nothing that happened while the spell was in effect, possibly leading to amusing consequences ("By the gods, how did I get here?").

The material component is a ruby of at least 200 gp value, which is crushed during the casting.

**Mindshatter (Enchantment/Charm)**
Sphere: Thought
Range: 3 yards/level
Components: V, S, M
Duration: Special
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: Neg.

This spell allows the priest to create one specific form of insanity in the subject. Five forms of insanity are possible through this spell.

*Schizophrenia:* This form of insanity is characterized by personality loss. The subject has no personality of his own, so he selects a role model and makes every possible attempt to behave like that character. The chosen role model will be as different from the subject as possible. (Thus, an insane wizard might begin to follow the habits of a warrior.) Obviously, a warrior who believes himself to be a wizard will be unable to cast spells (he might *think* that he's casting spells, or he might construct a sophisticated series of excuses explaining why he's "not in the mood for magic" at the moment). A character who emulates a member of another class does not gain any of the skills of that class and makes all attacks and saving throws as appropriate to his true class. Certain consequences might arise if the character's emulation causes him to break restrictions of his class. For example, a priest emulating a warrior might break his deity's prohibition against edged weapons, or a paladin might emulate a Neutral Evil thief. Both will suffer the appropriate consequences as if they had been compelled to violate their beliefs while *charmed*. Such characters will certainly have to atone for their actions once they return to normal.

*Dementia praecox:* The subject is totally uninterested in any undertaking. Nothing seems worthwhile, and the individual is lethargic and filled with tremendous feelings of boredom and dissatisfaction. No matter how important the situation, it is 50% likely that the subject will ignore it as meaningless.

*Delusional insanity:* The subject is convinced that he is a famous figure: a monarch, demi-god, or similar personage. Characters who fail to recognize the subject with the

honor he deserves incur great hostility or disbelief. The subject acts appropriately to a station that he does not hold. He directs orders at real and imaginary creatures and draws upon resources that do not exist.

*Paranoia:* The subject is convinced that "they" (whoever they are) are spying on him and plotting against him. Everyone around the subject, even friends and allies, is part of the plot. If any other character acts in a way that the subject can interpret as reinforcing this delusion, the subject has a 20% chance of reacting with violence.

*Hallucinatory insanity:* The subject sees, hears, and otherwise senses things that do not exist. The more stressful the situation is to the subject, the more likely he will hallucinate. Although most hallucinations are external to the subject (that is, he perceives creatures, objects, and conditions that do not exist), there is a 10% chance that any hallucination will involve the subject's self-perception. For example, the subject might suddenly believe and act as if he had sprouted wings, grown to giant size, etc.

When this spell is cast by a priest of 13th level or lower, the DM chooses or randomly selects one of these forms of insanity (and should feel free to invent other interesting symptoms). If the priest is 14th level or higher, he can personally select the form of insanity to afflict the subject.

While under the effect of this spell, the subject can cast spells and use innate powers; the use of these abilities will be in accordance with the symptoms of the insanity, however. Player characters affected by this spell should be encouraged to role-play the appropriate effects to the limit.

The duration of this spell depends on the sum of the subject's Intelligence and Wisdom scores. A saving throw is allowed on a periodic basis depending on this total. The spell is broken if a successful saving throw is rolled. Refer to the table that follows.

| **Int+Wis** | **Time Between Checks** |
|---|---|
| 8 or less | 1 month |
| 9 to 18 | 3 weeks |
| 19 to 24 | 2 weeks |
| 25 to 30 | 1 week |
| 31 to 35 | 3 days |
| 36 or more | 1 day |

The effects of this spell can be removed by a *limited wish*, *wish* (or equally powerful magic), or by a *heal* spell cast for this specific purpose.

The material component is a small bust of a human head, about 3" in height, made from fine, delicate china. The priest shatters this bust during the casting.

### Repeat Action (Enchantment/Charm)

Sphere: Time
Range: 30 yards
Components: V, S
Duration: Special
Casting Time: 5
Area of Effect: One creature
Saving Throw: Neg.

This spell compels its victim to repeat the action of the previous round. The result of the repetition is always identical to the original result.

For example, if a character fired an arrow and inflicted 4 points of damage, a *repeat action* spell will cause him to fire a second arrow that will also inflict 4 points of damage. As long as the victim of the first arrow is within range, the subject affected by *repeat action* will adjust his aim and fire the second arrow at him. If the victim of the arrow moves out of range, the subject will fire his second arrow in the direction of the recipient. If the recipient is out of sight, the subject will fire in the direction of the recipient's original location.

The subject of a *repeat action* spell must be capable of performing the indicated action a second time. If a character has no arrows in his quiver, he cannot fire an arrow. If a wizard were ordered to repeat a spell, he would attempt the spell only if he had the spell memorized and had sufficient material components. If a subject discovered a gem during a given round, *repeat action* will only compel him to hunt again; he will not recover another gem unless a second gem is actually present.

An unwilling subject is allowed a saving throw vs. spell to resist the effects of *repeat action*.

The material components are two identical glass spheres, each an inch or less in diameter.

**Shrieking Walls (Enchantment)**
Sphere: Wards
Range: Touch
Components: V, S, M
Duration: 1 day/level
Casting Time: 1 turn
Area of Effect: 20'-cube
Saving Throw: None

This spell enchants any single room no larger than the area of effect. When any creature larger than a normal rat (larger than one-half cubic foot or weighing more than three pounds) enters the room, shrill shrieks begin to emanate from the walls. The shrieks persist for 2-5 (1d4+1) rounds. The walls do not undergo any physical change.

The shrieks can be heard only by creatures inside the room. Creatures hearing the shrieks experience no ill effects on the first round, allowing them time to leave the room or cover their ears. *Silence, 15' radius* protects against the effects.

Creatures who remain in the room during the second or subsequent rounds of the shrieks who have not protected their hearing are penalized as follows:

- Creatures whose levels or Hit Dice are greater than the level of the caster are stunned for 2-8 (2d4) rounds.
- Creatures whose levels or Hit Dice are less than or equal to the level of the caster become deaf for 1-4 hours, suffering a -1 penalty to surprise; deafened spellcasters have a 20% chance of miscasting any spell with a verbal component.

The material components are a small golden bell and a bee's wing.

**Thoughtwave (Divination)**

Sphere: Divination
Range: 0
Components: V, S
Duration: Instantaneous
Casting Time: 1
Area of Effect: Special
Saving Throw: Special

This cooperative spell can be cast by either a single priest or a group of priests. *Thoughtwave* allows the priest to send a short but powerful message to one or more specific individuals, informing them of his situation and general location. The spell instantly generates a powerful mental impulse indicative of the caster's general mental state--anger, fear, pain, despair, etc.

The caster can designate as many as ten persons to receive this message, provided they can all be specifically named or grouped in a general category. Thus, the caster could designate a group of characters by name or could target "fellow priests," "superiors," "adventuring companions," "knights of Lord Harcourt," or "villagers of Dopp." If more than ten individuals are in the group, those closest to the source will receive the impulse.

There is no range limitation to the spell, although it cannot be projected outside the plane occupied by the caster.

Creatures receiving the impulse automatically know who sent it (even if they have never met the priest before) and gain a clear indication of the mood and situation of the caster. Recipients also intuitively know the general source of the spell, although they are unable to pinpoint rooms, dungeon levels, or landmarks. For example, a fighter could suddenly be struck by an image of Father Rastibon, who is injured and in great pain somewhere along the forest road. A priest might suddenly sense that his patriarch is being tortured in the dungeons of Castle Varrack.

The spell can also be cast by more than one priest, allowing them to either contact greater numbers of individuals or increase the intensity of the message. If greater numbers are desired, ten characters are contacted per priest involved in the casting.

Increasing the intensity of the message makes it more compelling. Doubling the intensity (requiring at least three priests) causes the message to act as a *suggestion*. In this case, the effect is limited to a single target. Tripling the intensity (requiring at least five priests) gives the spell the force of a *quest*. This effect is also limited to a single target. In both cases, the target is allowed a saving throw to avoid the effect of the *suggestion* or *quest*.

**Time Pool (Divination)**
Sphere: Time
Range: Touch
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell allows the caster to cause a mirror, a pool of water, or any other reflective surface to reveal a specific event from the past. The image provides a perfectly clear picture with normal sounds, as if the caster were present at the scene. The image continues for the duration of the spell.

*Time pool* will not reveal images from other planes of existence.

The spell's success is not automatic. The caster must know the general nature of the event he wishes to view (i.e., "Show me the murder of King Thamak"). The caster's base chance of viewing the desired scene is 50%, modified as follows, to a maximum of 90%:

- Add 5% for each point of the caster's Wisdom above 15.
- Add 20% if the caster has successfully used *time pool* to observe the same event before.

Only one of the following may apply:

- Add 20% if the event is one in which the caster participated.
- Add 10% if the caster is well informed about the event.
- Add 5% if the caster is slightly informed about the event.

The caster cannot communicate or otherwise interact with the image. Spells cannot be cast into the *time pool*.

The material components are a suitable reflective surface and a pinch of powdered quartz.

**Unceasing Vigilance of the Holy Sentinel (Alteration)**
Sphere: Guardian
Range: 0
Components: V, S, M
Duration: 1 hour/level
Casting Time: 1 turn
Area of Effect: 5-foot-radius sphere
Saving Throw: None

This spell enhances a priest's ability to guard a person, place, or object. The spell's effect must be centered on a specific area, for it creates an invisible spherical boundary up to 10 feet in diameter. The effect is not mobile; it cannot move with a living creature.

While within the area of effect of this spell, the priest (and only the priest) gains several special abilities:

- His sense of sight is magically enhanced. He can see through normal darkness and can see invisible creatures and objects. He cannot see through solid objects, however, and the range of his magical sight is limited to 60 feet.
- The priest has no need for food, water, or rest. He does not feel fatigue and regenerates 1 hit point per hour spent within the circle. However, he does not actually rest and therefore cannot regain spells until he sleeps.
- He is totally immune to the effects of magical and natural fear, as well as *sleep* and *charm* spells.

If the priest leaves the circle, the spell is broken. When the spell ends, the priest must rest for 1 turn per hour (or portion thereof) spent in the circle. If the priest is forced into action (by being attacked, for example), he can move at only half his normal movement

rate, has an Armor Class penalty of -2, an attack penalty of -2, and loses all Dexterity combat bonuses.

To cast this spell, the priest must trace a circle of sigils and runes 10 feet in diameter using a special ink containing the powder of a crushed sapphire (at least 1,000 gp value) and a drop of holy water. This procedure takes 1 turn to complete.

**Undead Ward (Abjuration, Necromancy)**
Sphere: Wards
Range: Special
Components: V, S, M
Duration: 1 turn/level
Casting Time: 2 turns
Area of Effect: 5-foot cube/level
Saving Throw: None

This spell prevents most types of undead creatures from entering the area of effect (a cube whose sides equal the caster's level times 5 feet--a 15th-level caster could affect a cube whose sides equal 75 feet).

When an undead creature attempts to enter the protected area, the creature is affected by the ward as if it were being turned by a priest two levels lower than the caster. The casting priest need not have the ability to turn undead himself. Thus, an *undead ward* created by a 10th-level priest would turn creatures as if by an 8th-level priest.

The results of the turning attempt are calculated normally. If a large number of undead assault the warded area, not all of them are turned by the spell, since the normal limitations apply. Undead who are unaffected by the turning attempt ignore the *undead ward* for its duration. Undead within the area of effect when the spell is cast are not affected. However, when such undead leave the area of effect, they are subject to the effects of the spell if they attempt to reenter.

The material component is the priest's holy symbol, which must be carried around the perimeter of the area to be warded.

# Sixth-Level Spells

**Age Creature (Alteration) Reversible**
Sphere: Time
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: Neg.

This spell ages the targeted creature one year per level of the caster. Unwilling subjects may attempt a saving throw to resist the spell. Subjects affected by *age creature* must make a successful system shock roll to survive the change.

Subjects cannot be aged beyond their natural life spans. If the priest's level indicates that a creature would be aged beyond this level, the creature is aged to one year short of his maximum age. The spell cannot cause a subject to die.

Human and humanoid characters affected by the spell experience changes in appearance associated with increased age, such as gray hair and wrinkles. More significantly, they suffer losses in Strength, Dexterity, and Constitution when they reach certain age levels. These are summarized in Table 12: Aging Effects in the *Player's Handbook*. The *Player's Handbook* also provides rules for determining a character's base age.

Nonmagical monsters can be affected by *age creature*. The DM determines a monster's current age and natural life span based on its description in the *MONSTROUS COMPENDIUM* or based on his own judgment. To determine the effects of aging on a monster, assume the following: a monster is middle-aged when it reaches half its natural life span; a monster reaches old age at two-thirds of its natural life span; a monster reaches venerable age in the last one-sixth of its years. A monster suffers the penalties which follow when it reaches these age levels. The penalties are *cumulative and permanent* (unless the affected monster becomes younger).

| **Age** | **Penalty** |
|---|---|
| Middle Age | -1 to all saving throws |
| Old Age | -1 to all saving throws |
| | -1 to all attack rolls |
| Venerable | -1 to all saving throws |
| | -1 to all attack rolls |

The material component is a pinch of powdered emerald.

The reverse of this spell, *restore youth*, permanently restores age that has been lost as a result of magic (such as an *age creature* spell). *Restore youth* reduces the age of the targeted creature by one year per level of the caster. The subject must make a successful system shock roll to survive the change. Subjects who become younger regain the lost ability scores described above. A subject cannot become younger than his actual age as a result of this spell.

The material component is a pinch of powdered ruby.

**Crushing Walls (Enchantment)**
Sphere: Wards
Range: Touch
Components: V, S, M
Duration: Permanent until activated
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This spell enables the caster to enchant a floor, ceiling, or single wall of a room to crush intruders. The enchanted surface can be no larger than a square whose sides equal the caster's level times 2 feet (a 13th-level priest could affect a 26' x 26' surface).

The spell activates 1d4 rounds after any creature other than the caster enters the room.

The intruder must be larger than a normal rat (larger than one-half cubic foot or weighing more than three pounds). When activated, the enchanted surface moves toward the opposite surface at a rate of 3 feet per round. Unless the spell is canceled by the caster, the enchanted surface continues to move until one of the following events occurs:

- A creature with sufficient Strength (minimum score of 19) stops the enchanted surface from moving by succeeding a Strength check. Such a creature suffers no damage from the enchanted surface. If the creature prevents the enchanted surface from moving for three consecutive rounds, the wall returns to its original position and the spell is negated. If multiple creatures attempt to stop the wall, the highest strength score is used as a base score; one point is added to that score for every creature assisting. Thus, a creature with 16 Strength assisted by three creatures could attempt to stop the wall.
- A strong or heavy object made of stone, wood, or metal is placed in the path of the wall. If the item survives a saving throw vs. crushing blow, the object successfully braces the wall. If the object holds for three consecutive rounds, the surface returns to its original position and the spell is negated. The DM must use discretion in determining the types of objects that will brace the wall.
- *Dispel magic* or a similar spell or magical item is used to cancel the crushing wall.

Creatures can avoid being crushed by using a *potion of diminution, potion of gaseous form*, or other devices or spells that reduce size. The *crushing wall* almost never touches the opposite wall, usually being stopped by debris. A gap of two inches or more usually remains between the walls.

If the wall is not stopped, it causes crushing damage to everyone in the room. All creatures must make a saving throw vs. death. Those who fail are crushed to death. Those who save successfully suffer 5d10 points of damage. When the wall can move no farther, it returns to its original position and the spell is negated.

The material components are a 1-inch iron cube and a walnut shell.

**Disbelief (Enchantment/Charm)**
Sphere: Thought
Range: 0
Components: V, S
Duration: 1 round/level
Casting Time: 5
Area of Effect: Special
Saving Throw: Special

This spell allows the caster to temporarily convince himself that certain objects or as many as four creatures within the area of effect do not actually exist. While *disbelief* remains in effect, these objects or creatures cannot harm or hinder the caster. He can pass through them as if they did not exist and takes no damage from their attacks or actions. However, since these objects or creatures temporarily do not exist for the priest, he can take no action against them. If the creatures attack, the caster receives no Dexterity bonus to armor class (since this bonus represents dodging, and the priest is unable to dodge a creature that does not exist for him).

The caster can attempt to disbelieve as many as four creatures within 60 feet of his position at the time of casting. He disbelieves the same four creatures for the duration of

the spell. Alternatively, the priest can disbelieve any or all inanimate objects of up to 20-cubic-yard volume (thus, he may disbelieve a 12 foot by 15 foot area of 3-foot-thick wall). This volume must be centered on a point no more than 20 yards from the caster. These two options are mutually exclusive; the priest can disbelieve only creatures or objects, not a combination of both.

Disbelieving a creature includes all gear, equipment, or treasure carried or worn by that creature; it does not include other objects that come into contact with that creature, such as walls, doors, chairs, etc.

*Disbelief* is not automatic; it requires an extreme effort. To successfully disbelieve, the priest must make a saving throw vs. paralyzation. A *successful* save means the priest has disbelieved; an *unsuccessful* check means that the spell has failed and the priest has not convinced himself of the creatures' or objects' non-existence.

While this spell is in effect, the DM must record any damage suffered by the priest from disbelieved creatures. When the spell ends, the caster makes a saving throw vs. spell. If the saving throw is successful, the priest suffers only one-eighth of any damage inflicted by the creatures (round all fractions down); if the priest fails the saving throw, he suffers one-half of any damage inflicted (round fractions down).

**Dragonbane (Abjuration)**
Sphere: Wards
Range: 10 yards/level
Components: V, S, M
Duration: 1d4 rounds+1 round/2 levels
Casting Time: 1 round
Area of Effect: 5'-cube/level
Saving Throw: Neg.

This spell prevents any dragon who fails its saving throw from entering the area of effect. The spell affects a cubic area whose sides equal the caster's level times 5 feet; thus, a 16th-level caster could affect a cube whose sides each equal 80 feet. The dragon can cast spells, blast breath weapon, or hurl missiles (if possible) into the area of effect.

Dragons within the area of effect when the spell is cast are not affected. If such dragons leave the area of effect, they must succeed a saving throw to reenter the area.

The material components are the priest's holy symbol and a dragon scale.

The spell's effectiveness can be greatly increased with the casting of a *focus* spell.

**Gravity Variation (Alteration)**
Sphere: War
Range: 10 yards/level
Components: V, S, M
Duration: 1 turn/3 levels
Casting Time: 2 turns
Area of Effect: 120-yard x 120-yard square
Saving Throw: None

This spell changes the characteristics of a square region of terrain. The area can be no

more than 120 yards on a side. The priest can effectively turn a flat plain into a slope of any direction, or may flatten an existing slope. The spell does not allow the priest to alter the pull of gravity, however.

This spell lets the priest create or negate a height differential of as much as 20 feet (a 2" slope in BATTLE SYSTEM™ rules measurements) within the area of effect. This can have various consequences; the best way to discuss the effects is by example.

**Example 1:** Two units face each other on a flat plain. The priest can alter the slope of the terrain so that one unit is 2" of elevation higher than the other. The unit that is upslope gains the combat benefits for higher ground, and the unit that is downslope must pay the movement cost for moving uphill if it wishes to approach the other unit.

**Example 2:** One unit is on flat terrain; another unit, 6" away, is on a hill of 2" elevation. Using this spell, the priest can effectively eliminate this difference in elevation (raising the low ground or lowering the high ground). All combat and movement involving these two units is then conducted as if there were no elevation difference (i.e., no movement penalty, no combat benefit for higher ground, etc.). Alternatively, the priest could increase the height differential by 2". Combat and movement would now be conducted as if the total difference in elevation were 4".

**Example 3:** A unit faces a hill of 3" elevation. The priest casts *gravity variation*, decreasing the effective elevation of the hill to 1". The unit pays a lower movement point cost to climb the hill. Alternatively, if the unit facing the hill were an enemy unit, the priest could increase the effective elevation to 5".

The priest must specify the degree and direction of change at the moment of casting. These parameters cannot be changed while the spell remains in effect.

*Gravity variation* can have dramatic effects on siege engines and towers. Most siege engines can be moved only on the most gentle of slopes. By raising or lowering the effective elevation of siege engines by 2", the priest can totally immobilize them by positioning them on a slope too steep to negotiate. In the case of siege towers, there is a 50% chance that the structures will topple over (totally destroying them).

The material component is a tiny plumb bob; the plumb line must be made of platinum wire while the bob itself must be a gem of at least 1,000 gp value. The device is consumed in the casting.

### The Great Circle (Abjuration) Reversible

Sphere: Sun
Range: 0
Components: V, S
Duration: 1 round
Casting Time: 6 turns
Area of Effect: Special
Saving Throw: Special

*The great circle* is a powerful cooperative spell that can be used only by four or more priests, each casting the spell simultaneously. Because of the nature of this spell and its casting time, it is often used to cleanse grounds in preparation for the construction of a temple or sanctuary.

When casting *the great circle*, the priests stand in a circle of no more than 20-foot

diameter. Each faces inward; when the spell is completed, each priest faces outward, directing the energy of the spell.

When the casting is complete, the spell takes the form of a radiant halo of golden light 20 feet above the ground. This halo quickly expands in a shimmering wave. It can pass through objects, with small arcs of the halo disappearing momentarily and reappearing on the far side. As the halo moves, it generates a high-pitched hum that varies in pitch, almost like a chorus. The halo moves slowly at first, but builds speed, reaching its maximum range at the end of one round.

The radius of the golden halo is dependent on the number of priests casting the spell. Each priest adds 60 feet to the radius. Thus, four priests could generate a halo that extends 240 feet in all directions from the circle of priests. Theoretically, there is no limit to the number of priests who may contribute to this spell, but the need for the priests to be within a 20-foot diameter circle sets a practical limit of 20 casters.

The halo is pure energy tapped from the Positive Material plane. It causes harm to undead and evil beings within the area of effect. Undead creatures of 8 or fewer hit dice are instantly destroyed and are not allowed a saving throw to avoid the effect. More powerful undead suffer 1d8 points of damage per caster. A successful saving throw vs. death magic reduces this damage to half. Creatures of evil alignment suffer 1d6 points of damage per caster (a saving throw is allowed for half-damage).

The reverse of this spell, *the black circle*, creates a ring of shimmering black energy. Paladins and priests of good alignment suffer 1d10 points of damage per priest in the circle. All other good creatures suffer 1d4 points of damage per caster. Affected creatures are allowed a saving throw vs. death magic to reduce the damage to one-half.

**Group Mind (Divination, Enchantment/Charm)**
Sphere: Thought
Range: 0
Components: V, S
Duration: 1 turn+1 round/level
Casting Time: 1 round
Area of Effect: 30-yard-diameter circle
Saving Throw: None

This spell is a deeper and more extensive version of *rapport*, in that it lets the priest communicate silently and instantly with several willing subjects. The number of subjects (in addition to the priest) depends on the caster's level:

| Level | Number of participants |
|---|---|
| 13 and below | 2 |
| 14-16 | 4 |
| 17 | 6 |
| 18 | 7 |
| 19+ | 8 |

As with *rapport*, the spell lets the participants share thoughts, emotions, and memories. Each participant sees, hears, and otherwise senses everything experienced by the other, although such "vicarious" experiences feel weak and cannot be mistaken for

direct sensations. Participants can shut off these experiences at will if they find them confusing or distracting.

The participants can share such personal concepts as plans, hopes, and fears, although they cannot communicate complex or detailed information. It is impossible to communicate the procedure for casting a spell or picking a lock.

Communication through *group mind* is approximately 30 times faster than verbal communication. The priest can maintain only one group mind spell at any time; thus, he cannot communicate with multiple groups.

This spell cannot be used on unwilling subjects.

**Land of Stability (Abjuration)**
Sphere: Wards
Range: 10 yards/level
Components: V, S, M
Duration: 1 day/level
Casting Time: 6
Area of Effect: 10-foot-cube/level
Saving Throw: None

*Land of stability* protects the area of effect and all creatures and objects within it from the following natural disasters:

- Earthquakes--vibrations do not affect the warded area and fissures will not open beneath the warded area;
- Floods--the warded area remains dry, even if submerged;
- Windstorms--the warded area suffers no damage from strong winds and objects cannot be blown into the warded area;
- Lava and ash eruptions--lava and ash flow around the warded area; and
- Avalanches--stones and snow will not fall on the warded area.

*Land of stability* offers no protection against magically-generated disasters or spells that duplicate natural disasters. Disasters in progress in the area when the spell is cast are not affected.

This spell affects a cubic area whose sides equal the caster's level times 10 feet; thus, a 15th-level caster could affect a 150' x 150' x 150' cube.

The material components are the priest's holy symbol and a pinch of volcanic ash.

**Legal Thoughts (Enchantment/Charm)**
Sphere: Law
Range: 10 yards
Components: V, S
Duration: Permanent
Casting Time: 1 turn
Area of Effect: One creature
Saving Throw: Neg.

A priest casting this spell forces the victim of the spell to follow one specific law. The

priest may choose any law prevalent in the area in which the priest and the victim currently reside. Thus, if a city has no laws about murder, the priest cannot command the person not to kill.

The victim of the spell is forced to obey the letter of the law to the best of his ability. Thus, if a victim were commanded not to commit murder, he would go to any length to avoid murdering someone.

Since the essence of this spell is tied to legal (and not moral) interpretation, characters may find loopholes that will allow them to work around the law in specific cases or to ignore the law in light of extenuating circumstances.

When casting the spell, the priest must speak the law to the recipient in such a way that he can hear it. The victim is allowed a saving throw vs. spell to avoid the effect. If the save is failed, the victim will never willingly violate the stated law as long as the spell is in effect.

*Legal thoughts* can be negated by *dispel magic*. The victim of this spell never perceives anything wrong with adhering to the law, and therefore never seeks to have the spell removed.

**Monster Mount (Enchantment/Charm)**
Sphere: Travelers
Range: 30 yards
Components: V, S
Duration: 1 hour/level
Casting Time: 6
Area of Effect: 20-foot radius circle
Saving Throw: Neg.

This spell compels one or more living creatures to serve as mounts for the caster and his companions. The spell affects up to 10 Hit Dice or levels of creatures with Intelligence of 4 or lower. Creatures used as mounts must be of suitable size to carry at least one rider; smaller creatures can be used as pack animals.

Each intended mount receives a saving throw vs. spell. Creatures failing their rolls become docile and obedient, allowing riders to mount them, and moving at the speed and direction indicated by the caster.

To maintain the enchantment, the caster must remain within 10 yards of one of the affected creatures, and each affected creature must remain within 10 yards of another. The affected creatures will do nothing for the caster other than carrying riders and gear; they will not fight (although they will fight to defend themselves), nor will they intentionally endanger themselves. Any overtly hostile act by the caster or a rider against any mount breaks the enchantment for all the mounts.

When the enchantment ends or is broken, the creatures take no action for one round, then behave as their natural instincts direct.

**Physical Mirror (Alteration)**
Sphere: Numbers
Range: 30 yards
Components: V, S, M

Duration: 1d4+8 rounds
Casting Time: 6
Area of Effect: Special
Saving Throw: None

This spell causes a localized folding of space. The folded space takes the form of an invisible disk up to 20 feet in diameter. Any missile weapon or spell that intersects this disk is instantaneously reversed in direction. Melee factors such as speed, range, and damage are unaffected; the direction of the object or force is simply rotated through a 180 degree arc. The sender of the spell or missile finds himself the target of his own attack.

The *physical mirror* operates from only one direction; that is, only one side of the mirror reflects attacks. The caster of the mirror may direct spells and missile attacks normally through the space occupied by the mirror.

In the case of physical attacks, the attacker must roll to hit himself (without the armor class benefits of Dexterity or shield). Spells turned back may require the caster to make a saving throw vs. his own spell. In both of these cases, range is important. If the distance between the initiator of the attack and the *physical mirror* is more than twice the range of the attack, the attacker is safe; the attack has insufficient range to travel from the attacker to the mirror and back again.

When the priest casts the spell, he must specify the location and orientation of the *physical mirror* disk. Once it is created, the disk cannot be moved.

If two *physical mirror* disks touch or intersect, they destructively interact and both immediately vanish. The resulting "ripples" in the space-time continuum are exceedingly destructive and inflict 3d10 hit points of damage on any creature within 35 yards (a saving throw is allowed for half-damage). This always includes the casters of the physical mirror spells.

The material component is a tiny mirror of polished platinum, worth at least 500 gp.

**Reverse Time (Alteration)**
Sphere: Time
Range: 30 yards
Components: V, S, M
Duration: 1-4 rounds
Casting Time: 6
Area of Effect: One creature
Saving Throw: Neg.

This spell is similar to the 9th-level wizard spell *time stop*. When *reverse time* is cast, time stops within a 30-foot diameter of the subject. All creatures and items in the area of effect stand motionless, rivers stop running, and arrows hang suspended in the air. Any creature, person, or object entering the area of effect is likewise frozen in time. The caster is affected if he is within the area of effect, unless he is the subject of the spell.

An unwilling subject is allowed a saving throw vs. spell; if successful, the spell is immediately negated. Otherwise, the victim is forced to relive all the actions taken in the previous 1-4 rounds in reverse. Beginning with the most recent round, the subject moves backward, arrows fired by the subject return to his bow, and so on. All effects of these

actions are negated. At the end of the spell's duration, normal time resumes and all creatures immediately continue their activities, picking up right where they had stopped.

Consider the following example. A party is battling a spellcasting red dragon. In the first round, the dragon breathes fire, roasting the party's wizard. The rest of the group attacks and injures the dragon. On the second round, the dragon bites and kills the group's thief. More damage is caused to the beast, but it is still alive in the third round, when it uses *magic missile* to kill the ranger. At this point, the priest casts reverse time on the beast. Fortunately, it fails its saving throw and is forced to reverse the last four rounds. While everyone else freezes, the dragon goes into reverse. The *magic missiles* zoom back to the dragon (and it regains the ability to cast that spell), it "unbites" the thief (removing that damage from the character), and then inhales its fiery breath (leaving the roasted wizard alive and uncooked). The dragon is then reversed through one more round--the round before it encounterd the party. The spell then ends and actions resume.
